SCP Foundation

Mankind in its present state has been around for a quarter of a million years, yet only the last 4,000 have been of any significance.

So, what did we do for nearly 250,000 years? We huddled in caves and around small fires, fearful of the things that we didn't understand. It was more than explaining why the sun came up, it was the mystery of enormous birds with heads of men and rocks that came to life. So we called them 'gods' and 'demons', begged them to spare us, and prayed for salvation.

In time, their numbers dwindled and ours rose. The world began to make more sense when there were fewer things to fear, yet the unexplained can never truly go away, as if the universe demands the absurd and impossible.

Mankind must not go back to hiding in fear. No one else will protect us, and we must stand up for ourselves.

While the rest of mankind dwells in the light, we must stand in the darkness to fight it, contain it, and shield it from the eyes of the public, so that

others may live in a sane and normal world.

We secure. We contain. We protect.

— The Administrator

SCP-1000: Bigfoot

Item #: SCP-1000

Object Class: Keter

Special Containment Procedures: All media reports related to SCP-1000 are to be examined for potential verifiability. All organizations and individuals investigating SCP-1000's existence are to be kept under surveillance by Mobile Task Force Zeta-1000 and discredited or administered amnestics. All physical signs of SCP-1000's existence must be retrieved and kept in Foundation custody, and replaced with decoy items if necessary. Alleged sightings of SCP-1000 must always be investigated by MTF Zeta-1000, however trivial the claim.

Absolutely no contact with wild or captive instances of SCP-1000 is allowed without prior approval by Director Jones. Any interaction between SCP-1000 and humans, including Foundation personnel, must be reported to Director Jones immediately.

Description: SCP-1000 is a nocturnal, omnivorous ape, classified in the *Hominini* branch along with genera *Pan* and *Homo*. Adults range in size from 1.5 to 3 m (5 to 10 ft) in height, and weigh between 90 and 270 kg (200 - 600 lbs). They have grey, brown, black, red, and occasionally white fur. They possess large eyes with good vision, a pronounced brow ridge, and a sagittal crest on the forehead similar to that of the gorilla, but present in both sexes. Their intelligence is on par with that of *Pan troglodytes* (the common chimpanzee).

SCP-1000 evolved alongside *Homo sapiens*, existing contemporaneously with proto-humans and humans in large numbers until 10,000-15,000 years ago, when an extinction event eliminated all but 1-5% of their population. This event was triggered by SCP-1000 contracting an anomalous "pseudo-disease" classified as SCP-1000-f1. This disease is passed on at the genetic level and affects every present-day instance of SCP-1000. The majority of

SCP-1000 instances are born immune to the effect; those who are not born immune quickly die.

The effect of SCP-1000-f1 is as follows: Any hominid (including humans, chimpanzees, bonobos, and non-immune instances of SCP-1000) that directly or indirectly observes any instance of SCP-1000 has a minimum 2% chance of being instantly killed through anomalous means via permanent cessation of brain function. This percentage is cumulative, and the longer a human views SCP-1000, the higher the chance of instantaneous death increases, at a rate of +1% chance per 20 minutes of viewing. This effect varies between individual members of SCP-1000's species, with some individuals carrying a 'death chance' of 90%. The effect is also produced by dead individuals, though small fur samples do not exhibit the effect.

Known means of preventing this effect are small-scale only and include [REDACTED] (see attached documentation; Level 3 clearance required).

Because of SCP-1000's close relation to humanity, it is considered likely that SCP-1000-f1 could eventually transfer to human carriers. Any instance of SCP-1000 finding its way to a major population center could constitute an -class end of the world scenario with a minimum death toll of [REDACTED] and possible extinction of humanity. Fortunately, SCP-1000 appears to instinctively avoid human contact.

It is not currently feasible to exterminate SCP-1000 entirely.

The highest known population concentrations of SCP-1000 are at present located in the Pacific Northwest region of North America and the Himalayan Mountain range in Asia. As of / / , these populations remain extant. SCP-1000's presence and [DATA EXPUNGED] have also been documented within the past 5 years on every continent. All known significant populations of SCP-1000 located near human population centers have been eliminated.

SCP-1000 came to the attention of the Foundation via contact by Doctor Franz M in 14 with the Children of the Sun, who identified themselves as outcast members of the **Serpent's**

Hand. This group has since been completely destroyed by the Foundation, due to their reluctance to surrender information about SCP-1000, SCP- , and SCP- (since reclassified as SCP-1000- and SCP-1000-). Remaining members have either joined the Foundation, or have gone into hiding, presumably as members of the Serpent's Hand. Weapons, tools, and other unique pseudo-technological resources in possession of the organization have been classified as SCP-1000-001 through SCP-1000- . These resources have been made use of by the Foundation in multiple instances; for a full list, see Document 1000-3534-Y (Level 3 clearance required). Access to surviving ex-members of the Children of the Sun is restricted to personnel with clearance level 4/1000 unless given direct authorization for contact by Director Jones.

Further information is available to personnel with clearance level 3/1000 or above. Personnel with clearance level 3/1000 or above are required to read Document Alpha-1596-1000.

Addendum 1000-466-X: Update to Special Containment Procedures: As of / / , SCP-1000's Special Containment Procedures no longer include Procedure 516-Lumina. [DATA EXPUNGED] indicates that SCP-1000 may be developing a resistance to the sonic element [DATA EXPUNGED] will not develop further, so that Procedure 516-Lumina can still be used in emergency situations. Investigation into alternate means of reliably keeping SCP-1000 away from human population centers is underway. Whether SCP-1000 resistance to Procedure 516-Lumina was calculated (and as such may be a sign of SCP-1000 [REDACTED]) or coincidental (by chance of natural species variation) is not known at this time.

== LEVEL 3 CLEARANCE REQUIRED ==

Document Alpha-1596-1000: Missive from Director Jones

> You've probably heard the rumors before now. Everyone without the clearance level to know better wants to get their dig in. "Did you hear Sasquatch is an SCP? Are we gonna capture and contain Batboy next?"

Yes. SCP-1000 is Bigfoot.

I'm sure you've snickered. Don't worry. Contrary to rumors, we don't actually assign you to "Keter duty" for finding something humorous.

You think Bigfoot is funny because we *want* you to think Bigfoot is funny. We've bankrolled Hollywood comedies and farcical documentaries, paid off men in gorilla suits, perpetrated hoaxes with bear prints and goat fur, bribed and brainwashed cartoonists to get especially silly depictions on children's television. Even the term "Bigfoot" comes from us, planted in the media in 1958, a term people would find even harder to take seriously than "Sasquatch".

Why? We'll get to that.

The information in the article that you've already read isn't entirely true. There are two direct lies, and plenty of lies of omission.

There is no such thing as the "anomalous pseudo-disease" referred to as SCP-1000-f1. SCP-1000 does not possess a magical death aura. In fact, SCP-1000 does not directly exhibit any anomalous effect whatsoever.

We also lied about SCP-1000's intelligence level. SCP-1000 aren't chimp-level smart. They're smarter - to be precise, they are exactly as smart as us.

That brings us to the lies of omission. That's what this letter is for. The lies came from me, so I figure the truth should come from me as well.

This is the story we got from the Children of the Sun who defected to us. It's a story we didn't believe - refused to believe, at first.

As you've already read, the apes we call SCP-1000

evolved alongside us. We walked in the daytime, they walked in the nighttime, our nocturnal siblings in the shadows.

But while we were still wandering hunter-gatherers, they… changed. Like we would, a few thousand years later. Tools. Weapons. Agriculture. Domesticated animals. Stable settlements. As humanity blinked in the Pleistocene sun, SCP-1000's population exploded across the night. They blanketed the planet in the tens of billions.

They made things that we still can't comprehend, even though we've thoroughly studied the surviving pieces. Organic technology. They made trees and birds of prey grow into fast-moving ships, herds of animals that became trains, bushes that became flying vehicles. From insects and pigeons they made things equivalent to cell phones, televisions, computers. Atomic bombs. The Children describe vast shining cities, stretching across glaciers and penetrating the deepest caverns, grown skyships of ivory and spider-silk, creatures tending them with hundreds of blinking eyes.

We were rare, like gorillas now, a few hundred thousand left at best. We avoided their settlements just like wild animals today avoid ours. SCP-1000 understood we were intelligent like them, but avoided us just as we avoided them, saw us as fairies, as gnomes, ascribed us supernatural powers, said we ate bad children while they slept in daylight. They fenced off our dwindling wild populations in conservatories, outlawed poaching but in the underground consumed our bones as aphrodisiacs.

Then their civilization fell. And we did it. By 'we' I don't mean the Foundation. By 'we', I mean humanity.

The story is muddy. Supposedly a trickster forest god showed humanity favor, showed us the master's tools and how to use them. Why we did it, we don't know. Perhaps they hunted us, perhaps we were simply afraid.

Perhaps it was just that they fenced us in, unintentionally or not. We simply don't know what the truth is. Somehow we acquired SCP-1000's own technology, and with it, we instigated an SK-class dominance shift in which humanity became the dominant species of Earth.

We wiped out 70% of SCP-1000's population in a single day. The Day of Flowers, the Children called it. Supposedly every flower bloomed that day, while our enemies died in their sleep. Then we hunted the rest down. But we went further than just killing them. With a few of the more twisted of SCP-1000's devices, we drove the survivors mad, even those hiding beyond our reach. We trapped them in their own minds, blocking higher functions and leaving their bodies to fend for themselves like any ordinary ape. We slaughtered their living machines and burned their vast shining cities with SCP-1000's bioweapons that reduced everything to slurry and dust that washed or blew away in spring rain and wind.

We left no traces. Not even our own memory. We turned one of the weapons on ourselves, wiped out any knowledge of SCP-1000 and the greatest civilization the planet had ever seen. Only a few humans protected themselves from the effect, kept the forbidden knowledge, just in case. The rest of us went back to being hunter-gatherers, none the wiser.

Which brings us to today.

You're going to read all about this in the level 3 documentation, but I'll give you the short version here: SCP-1000 are somehow regaining their forgotten intelligence and knowledge. Maybe they never truly lost it. We don't know.

This is why the ever-increasing number of "Bigfoot sightings" is so worrying. Why the attempts at contact, however indecipherable, are even more worrying.

> Yes. SCP-1000 *are* just like us. That's what makes them so dangerous. We wiped them from history and memory. We dissolved their civilization and we slaughtered most of their species. Just ask yourselves: If they got the chance, what more would they do to us?

Addendum 1000-056-D: Instances of SCP-1000 have tried to make contact with Foundation personnel on multiple occasions. Most of these attempts at contact have [DATA EXPUNGED] untranslated, though recent attempts show that some instances of SCP-1000 are capable of communicating in English.

> Display Ancillary Anomaly Reports
>
> **Addendum 1000-104-Y:** **`Certain acquired documents`** contain extensive references to SCP-1000. Relevant is that the documents appear to be composed by entities associated directly with the location known as the **`Wanderer's Library`**. Context or significance of document details not yet clarified.
>
> **Addendum 1000-276-A:** Numerous anomalous objects with a known connection to SCP-1000 [DATA EXPUNGED] prior cyclical iterations. As one example, **`SCP-2273`** may not have a point of origin in a parallel timeline, but instead a prior "iteration". **`SCP-2932`**, **`SCP-2511`**, and other sources of living cultural insight into SCP-1000 (or a variation) all present "consistent inconsistencies" which may be used to create a fuller picture of the nature of these "iterations", though conclusions are uncertain.
>
> **Addendum 1000-276-Q:** Special report [DATA EXPUNGED] This unnumbered "black box" anomalous item anchored underneath **`the structure`** is likely the most significant anomalous object known to have been utilized. Central to understanding SCP-1000's anomalous capabilities, including capabilities not developed directly, but accessed from prior [DATA EXPUNGED] modern-day relevance to the Foundation and to society at large in a scenario of general

containment failure.

Log 1000-ad065-x1: The following is a rough translation of recent SCP-1000 attempt at communication with Foundation personnel on / / (see attached documentation).

> we forgive you;
> given choice for now, not forever;
> let us back in

« **SCP-999** | SCP-1000 | SCP-1001 »

SCP-1001: Ya-Te-Veo

Item #: SCP-1001

Object Class: Euclid

Special Containment Procedures: SCP-1001 is to be kept at Bio Site-103, in a greenhouse reinforced as per Dangerous Organisms Protocol 12A. It is to remain rooted in the soil core, 9 m diameter x 4 m deep, in which it was removed from the site of discovery. It is to be watered and fertilized sporadically, as detailed in Document 1001-2. No object capable of producing hazardous sound (sonic weaponry, audio-based memetic effects, high-decibel infrasound, etc.) is permitted within hearing distance of Bio Site-103.

The object is to be fed 20 kg of Nutritional Supplement 1001-R-8 once monthly. The precise formula for Nutritional Supplement 1001-R-8 is detailed in Document 1001-2, but it bears repeating that the supplement's protein content is not to be less than 40% by mass, and that all protein is to derive from pigs, dogs, or comparably-intelligent species. These guidelines may be altered as necessary when testing requires that SCP-1001 be hungry.

Bones, horns, and other hard tissues are never to be provided except as part of duly-supervised tests. All tests involving provision of hard tissue are to be preapproved by both Dr. Glastonbury and the current Security Director of Site-103.

Description: SCP-1001 is a single plant apparently belonging to an undescribed species of *Welwitschia*. Unlike other *Welwitschia* species, it has a tree-like trunk which broadens into a woody taproot 180 cm wide and 5 m long, 2 m of which protrudes above the surface. Also unique to SCP-1001 are its leaves, which are up to 6 m long, lined with barbed prickles, and capable of secreting a sticky pitch-like resin, and which are capable of motion with considerable dexterity and strength. SCP-1001 is geographically disjunct from its known relatives, having been found in the Andean

high desert near , Peru.

SCP-1001's trunk and taproot are hollow, opening to a rounded aperture at its apex, and filled with a highly caustic solution of hydrochloric acid and digestive enzymes comparable to those found in the pitchers of *Nepenthes* sp. This solution is capable of reducing 50 kg of soft animal tissue to a thin slurry within 20 minutes of submersion.

While it is capable of photosynthesis, SCP-1001's leaves are singularly inefficient, producing only approximately 50% of the plant's caloric requirements. Likewise, its roots are unusually ineffective at uptake of organic and mineral nutrients. To mitigate this deficiency, SCP-1001 is an obligate carnivore: it uses its prehensile leaves to capture passing prey and pull it into the central cavity, where it is digested.

SCP-1001's intelligence is highly debatable. Its basic hunting tactics resemble those of *Paralichthys* spp. (flounders): it buries its longest leaves in the sand and waits for a sufficiently large animal (at least 40 kg) to pass by, whereupon it emerges suddenly and captures the passing prey. When this tactic does not produce results sufficiently quickly, however, SCP-1001 resorts to sophisticated audio mimicry. It is capable of reproducing literally any sound it has ever been exposed to, as well as recombining "known" sounds into novel phrases. It has been observed using the latter capacity to lure human prey, speaking in the voices of other humans known to the prey subject. Its means of sound production are unknown.

Also interesting are SCP-1001's prey preferences: it prefers to consume intelligent animals, especially those capable of tool use or of building artificial structures. Humans are always its preferred prey, but in their absence it has accepted primates, dogs, parrots, pigs, beavers, ants, and nest-building birds. Note that many of these species fall well below its usual size threshold, some to such a degree that capturing and digesting them produces a net energy loss. Its method of detecting intelligence is unknown but apparently not based on experience, since it has attacked squid and small dolphins with eagerness comparable to its attacks on humans and Andean monkeys.

SCP-1001 is incapable of digesting hard tissues completely: the bones of its prey are gradually excreted through channels near the top edges of the caudex. Once excreted, these bones are invariably picked up with one of the object's leaves and moved to a location on or beneath the soil surface surrounding SCP-1001. The object arranges the bones in complex patterns which are demonstrably useless for water capture and, being primarily subterranean, do not aid in attracting prey. Their resemblance to the Nazca [DATA REDACTED] and the devotional mandalas of SCP-[DATA REDACTED] have led Dr. Glastonbury to hypothesize that they may be representational or even [**DATA REDACTED**] anomalous effects.

At the time of its discovery by the SCP Foundation in 18 , SCP-1001 was located at the center of a roughly-circular bone pattern 18 m in diameter and 8 m deep, 7% of which was composed of human bone. Nearby native tribes professed religious fear of the object and were providing it with regular human sacrifices. The sacrificial ritual, as finally divulged to Foundation interrogators, required attendant priests to escort the sacrifice toward SCP-1001 along a strictly-delineated "avenue" later found to correspond closely to certain features of the subterranean bone pattern. Deviations from the pattern were said to be punished by capture and consumption of the attendants as well as the sacrifice, but a successful ritual resulted in only one person being taken. In rare cases, a priest would be directed to move a particular [DATA REDACTED] provided in return with an unspecified gift, or even push back the date of the next required sacrifice. Oral histories state the ritual to have been originally demanded by the tree itself, [DATA REDACTED] "spoke in the voice of our [DATA REDACTED].

SCP-1002: Demisers

Item #: SCP-1002

Object Class: Euclid

Special Containment Procedures: All objects tied to instances of SCP-1002 are to be contained in a brightly lit 6m x 6m chamber. SCP-1002-6 is to be contained in a suitably sized hangar. No D-class personnel are to come within ten (10) meters of the containment chamber or hangar. No personnel involved with end-of-the-month termination for D-class personnel are to come within ten (10) meters of the containment chamber or hangar.

All interactions with SCP-1002 instances are to be done via robotic drone. SCP-1002's containment chamber is to be guarded by three (3) members of security who have not yet killed in a combat situation. The same will be done with SCP-1002-6's containment hangar.

Description: SCP-1002 is an abnormal shadow belonging to a group of six (6) objects currently in Foundation custody. Each of these objects possesses the shadow of a humanoid individual, dressed in a law enforcement uniform. Objects tied to SCP-1002 currently in containment are:

- **SCP-1002-1:** A grandfather clock retrieved from , possesses the shadow of a medieval knight.
- **SCP-1002-2:** A small pole retrieved from , possesses the shadow of a member of the PD.
- **SCP-1002-3:** Large printer retrieved from , possesses the shadow of a Roman soldier.
- **SCP-1002-4:** A pigeon retrieved from , possesses the shadow of a member of the Police Force.
- **SCP-1002-5:** A kitchen knife retrieved from , possesses the shadow of a security guard at the Casino.
- **SCP-1002-6:** A Boeing 737 retrieved from , possesses

the shadow of a member of a SWAT team.

The objects tied to SCP-1002 do not behave in an anomalous manner with the exception of their shadow. SCP-1002 tied to these objects are dormant and stationary until an individual who has committed what is socially considered to be a crime in the last six (6) months comes within ten (10) meters of the object they are tied to. At this point, SCP-1002 instances will become active and manifest as a dark humanoid figure similar in appearance to their dormant stage.

SCP-1002 will then attempt to pursue the targeted individual. SCP-1002 instances have demonstrated high levels of agility and appear to be able to track their target through walls. If the targeted individual moves ten (10) meters away from the SCP-1002 instance, it will return to a dormant state at its original object.

If the individual is caught by this manifestation, they will inflict a physical punishment directly proportionate to the crime the individual has committed. Despite the severity of this physical punishment, the victim will remain alive and conscious until taken ten (10) meters away from the manifestation. Through careful study, researchers have discovered punishments tied to the following crimes:

- **Minor Crime (Littering, etc.):** Removal and severing of fingers.
- **Shoplifting:** Non-fatal removal of fingers, tongue and eyes
- **Burglary:** Non-fatal removal of hands, ears, tongue and eyes.
- **Assault:** Non-fatal heavy damage to the legs, removal of hands, ears, tongue and eyes
- **Murder:** Non-fatal removal of arms, legs, ears, tongue and eyes
- **Mass-Murder:** Non-fatal removal of arms, legs, ears, tongue and eyes. Subject was then disemboweled and, using the subject's internal organs, suspended from the ceiling of the testing chamber. Movement was detected from the subject for two (2) minutes before they were removed from the area by members of security.

SCP-1003: Tapeworm Child

Item #: SCP-1003

Object Class: Keter

Special Containment Procedures: The Foundation currently has 10 instances of SCP-1003-2 (designated SCP-1003-2-a-k) in its possession, all of which are held in separate heavily guarded high-security cells at Bio-Research Area 13. All personnel at Bio-Research Area 13 are to undergo regular compulsory testing for signs of SCP-1003 infection. Personnel wishing to access SCP-1003-2-a-k may only do so for the express purpose of research, must have Level 4 security clearance, and must have written permission from O5- beforehand. They are to wear biohazard suits when entering SCP-1003-2-a-k's cells, and go through an intensive disinfection process afterwards. No animals of the order Carnivora are to be allowed at Bio-Research Area 13 under any circumstances.

Description: SCP-1003-1 is an adult tapeworm of the species *Echinococcus granulosus*, known for causing hydatid disease. Like others of its species, SCP-1003-1 inhabits the small intestines of carnivores (typically canids), where it produces eggs that are passed in the host's faeces. The eggs can survive up to years in the outside environment.

When the eggs enter the gastrointestinal tract of a human subject (hereby designated the intermediate host) via consumption of contaminated food, they hatch into larvae, which burrow into the host's tissues. It is at this stage that SCP-1003's anomalous properties begin to manifest. Instead of developing into cysts, the larvae develop into creatures which resemble human embryos (hereby designated SCP-1003-2). The vast majority of SCP-1003-2 specimens die before they have a chance to develop. Those that survive are usually those that are embedded in nutrient-rich tissue, such as hepatic tissue. As they develop, they absorb nutrients from

the surrounding tissue, which often causes problems for the intermediate host.

SCP-1003-2's development mostly follows the pattern of normal human prenatal development, but at a faster rate. By 8 weeks, it is as mature as a 3-week-old neonate, although it is similar in size to an 8-week-old embryo (approximately 13-16 cm). Once it has reached this stage, it will actively consume the intermediate host from within using sharp, hooked teeth. SCP-1003-2 growth is accelerated to an even greater extent as it is doing this. By the time it has fully consumed the intermediate host (usually after minutes or so), it will have developed into a child. The physical age of the child typically ranges from 10 months to 11 years, depending on the mass of the intermediate host, though in extreme cases (where the intermediate host is morbidly obese) it can be as high as 13-15 years.

Once SCP-1003-2 is finished, it will lose its hooked teeth, along with its cannibalistic tendencies, from whereon it will be functionally indistinguishable from a human in every respect, with no knowledge or memory of having been a parasite. It will even possess learned skills (e.g. language) that would be expected of a child its apparent age, despite there being no way it could have learned them. Instances of SCP-1003-2 are usually taken into orphanages and sometimes adopted by foster parents. Their only anomalous properties at this stage are that their DNA is somehow still identical to that of *Echinococcus granulosus*, and that their body fluids (including sweat and saliva) contain tapeworm protoscolex, which infect carnivores and develop into SCP-1003-1, thus continuing the cycle.

Addendum: Testing of SCP-1003 with animals such as cattle and sheep (which are common intermediate hosts of *Echinococcus granulosus*) have found that its anomalous properties only manifest in humans, and in all other cases, its life cycle is normal and causes hydatid disease in the intermediate host.

« SCP-1002 | SCP-1003 | SCP-1004 »

SCP-1004: Factory Porn

Item #: SCP-1004

Object Class: Safe

Special Containment Procedures: All copies of SCP-1004-1 and -2 are to be kept in Secure Containment Locker 17, at site 37. At no point are any copies of SCP-1004 to be used for recreational purposes. Following the events of incident 1004-Dale, Researchers are no longer allowed to view the output of SCP-1004, even when filtered or via secondary source. Only D-class are allowed to view the output of SCP-1004. Use of SCP-1133-7 and **SCP-894** instances by researchers and control subjects has been approved where deemed appropriate in preventing undesired spread of SCP-1004's effects.

The Foundation has set out to prevent anyone from receiving copies of SCP-1004 by a planned and ordered process of unrequested electronic mailings, many of which include computer viruses, malware or electronic worms. A program has also been designed and disseminated to all electronic mail providers to help prevent SCP-1004 from spreading.

Description: SCP-1004 is a computer program, found on either a CD (SCP-1004-2) or a 3.5" diskette (SCP-1004-1), either of which will be hand labeled with the words 'Factory Porn.' Contained on these disks is a single executable file, labeled 'Thefactory.exe', a 1-kilobyte program. The program runs perfectly on all platforms. Running the program results in a window opening on the computer, within which 'The Factory' logo is displayed. The logo fades to black, and is replaced by the words 'What would you like to see?' At this point, the user may input any selection of words, from the ambiguous to the precise. Once a request has been input, the program will pull up several dozen images of pornographic content, each of which leads to a full video on the subject. Many of these videos appear to have never been made in real life.

Watching videos on SCP-1004 have a cumulative effect. The more pornography a user views, the more disturbing their sexual desires become, and the harder sexual gratification becomes. After approximately 100 straight hours of viewing pornography on SCP-1004, even the most 'normal' of viewers will display an interest in scatology play, the torture and murder of living beings, bestiality, pedophilia, and combinations of the previous. The deadening of reactivity to sexual gratification will encourage them to either seek out such things in real life, or seek to mutilate themselves and their genitalia.

It should be noted that SCP-1004 displays no compulsive properties. Users are free at any time to stop using the program. The majority of users continue to use SCP-1004 because it is the easiest way to find the desired pornography.

As stated above, any word, or combination of words may be entered. This has been used by many victims to view popular members of high social standing in the bedroom, giving rise to many rumors of 'celebrity sex tapes.' The thought has been posited that such videos could be used for the blackmailing of politicians who are antithetical to the Foundation cause. Unfortunately, at this time, all attempts to make recordings of SCP-1004 have resulted in only taped static. Several researchers have claimed to be able to see humanoid shapes moving in the static, but this effect has not been seen on subsequent playthroughs.

SCP-1004 appears to spread through the use of electronic messages, sent seemingly at random. Messages generally claim to have certain celebrities performing sexual acts, or to have certain depraved acts on tape that are illegal in many jurisdictions. A link included in the message requests users to enter their home address. The resulting copy of SCP-1004 show up in a plain brown wrapper within three days, through bulk mail, with no return address.

The Foundation currently contains 37 copies of SCP-1004-1, and 23 copies of SCP-1004-2.

Incident 1004-Dale: Researcher Adam Dale was found to be encouraging D-class subjects to watch SCP-1004, and to copulate with each other for his pleasure. It was determined Researcher Dale

had been affected by SCP-1004 despite never having watched it directly, only monitoring the tests through a video feed. Any and all indirect viewing of SCP-1004 has been canceled.

« SCP-1003 | SCP-1004 | SCP-1005 »

SCP-1005: The Painted Man

Item #: SCP-1005

Object Class: Safe

Special Containment Procedures: SCP-1005 is to be maintained at Site-17 in a 3m x 3m x 3m holding room, equipped with dim lighting. SCP-1005 has no nutritional requirements aside from a need to maintain hydration levels; humidity in holding chamber should be kept at a minimum of 70% when possible, and at least one (1) liter of water provided for consumption daily. SCP-1005 also does not need to sleep, but has requested a chair in which to relax when not undergoing study (granted). SCP-1005 also does not produce any waste, losing water only to evaporation, thus minimal cleanup is required; SCP-1005 has volunteered to give its chamber a monthly cleaning to prevent buildup of paint residue (under consideration).

Due to ongoing good behavior and amicable attitude, SCP-1005 has been granted permission to explore non-secured sections of Site-17 and utilize social rooms, provided it is accompanied by at least one (1) level 2 researcher and one (1) level 1 security agent. **[UPDATE]** By request of maintenance crews, SCP-1005 is required to wear coverings over its feet when leaving its chamber.

Description: SCP-1005 is a sapient humanoid entity composed of semi-solid blue paint, with exact shades ranging from near-white to deep navy. The surface of SCP-1005 has an average tensile strength approximately 75% that of human skin; this includes its "clothing". SCP-1005 is unable to consciously control the viscosity or shape of its overall form beyond the normal locomotion of a humanoid body; it can, however, control its outer layer to a point where it can choose whether or not its paint will smear on contacting surfaces. The degree to which SCP-1005 is able to control itself in such a manner becomes lessened if over-hydrated.

SCP-1005 is in the shape of a bald, human male, approx. 1.9m tall, and has demonstrated the ability to speak with a deep and resonant voice; despite this, SCP-1005 has no gender in physical structure or personal identity. The apparent "clothing" is integrated as if skin, save for the shirt at the sleeves and lower hem, and the pants below the ankles. Only SCP-1005's shoes are fully unique; it is believed they were created separately from the rest of SCP-1005 from the beginning.

The process by which SCP-1005 was animated and remains so is not known; by its own admission, SCP-1005 only remembers "becoming aware" only a few minutes before its reclamation during a raid at an auction being held by Marshall, Carter & Dark Ltd. where it was up for bid alongside several items which had been under Foundation investigation, specifically [DATA EXPUNGED]. As SCP-1005 originally having no sense of self worth, identity or purpose, the Mobile Task Force enacting the raid was able to convince SCP-1005 that it belonged to the Foundation and had been stolen; it willingly entered custody and was transferred to the MTF staging area before permanent relocation to Site-17.

To date, SCP-1005 has been extremely cooperative with researchers, showing a polite and professional attitude. SCP-1005 lacks most complex emotions beyond levels of satisfaction and comfort and has demonstrated only limited facial expressions outside of movements required to speak. Additionally, SCP-1005 seems to lack the ability to understand abstract concepts: it is perfectly able to count, speaks fluent English with a slight Northern-Midwest American accent, and can perform simple tasks; complicated mathematics, emotional responses and existential topics such as religion leave SCP-1005 confused, usually stating that it simply does not understand. The only driving force behind SCP-1005 is a desire to make its owners "happy with" it, usually through cooperating with testing protocols but also while serving as entertainment or still-life living artwork for personnel during recreational periods.

Researchers with clearance level 2 or higher access are advised to read Document 1005-01478 for an abbreviated listing of testing logs concerning SCP-1005.

Document 1005 01478

Notice: Short-form testing logs included for reference material for new personnel assigned to SCP-1005. Long-form documentation and associated audio/video records available in Records Holding.

Test 1005-04: Over-saturation
Researcher: Dr.
Test Record:
A volume of water was introduced to SCP-1005 in excess of normal daily regimen via oral intake: at 2 liters, subject's surface was beginning to visibly run and smear; at 4 liters, subject reported feeling 'heavy', movements sluggish and plodding; method of introduction changed to misting sprays at 5 liters, subject has difficulty remaining upright and manipulating objects; experiment halted at 6.2 liters due to threat of total loss of cohesion.
Notes: When allowed time to recover and granted assistance with minor reconstruction, SCP-1005 described the overall experience as "unpleasant," and that it was made to "think more slowly".

Test 1005-05: Dehydration
Researcher: Dr.
Test Record:
SCP-1005 was brought into a testing chamber with a relative humidity of less than one percent (1%) and temperature of forty-three (43) degrees C, and placed beneath additional bright lighting and directed heat lamps. Subject was recorded as claiming to be "uncomfortable" before advanced dehydration rendered it immobile after approximately thirty minutes. Subject successfully revived through rehydration efforts.
Notes: Subject claimed to have "lost awareness" shortly

after total cessation of movement, only to regain when rehydrated. This appears to be the way it understands consciousness.

Test 1005-09: Vivisection
Researchers: Dr. , Research Assistant
Test Record:
SCP-1005 brought into examination room and asked to lay on table and remain still during the procedure. Through use of sculpting tools, researchers make extensive examinations of SCP-1005's internal structure. Most organs aesthetically present but non-functional; notably the intestinal tract is extremely simplified, most minor organs (such as appendix) and glands are missing, and the brain is externally represented but is a solid mass within. Additionally, the subject's "blood stream" carried an exceptionally watered-down slurry of paint with a more direct connection to stomach; this explains how SCP-1005 keeps a mostly-homogenous level of hydration.
Notes: SCP-1005 was "aware" during the entirety of the examination; subject reported no pain, only "discomfort", and was fully aware of any and all pieces that were still attached. Experimentation with the "brain" showed no hindrance to thought or ability. All in all, internal structure seems more in line with a simplified artistic representation of a human body than with a precise medical recreation, with only vascular system and esophagus/stomach providing actual functions.

Additional note: Video recording of Test 1005-09 is available under document TL-1005-V13

Test 1005-13: Testing of empathy
Researcher: Dr.
Test Record:
A single D-class personnel (D-13904) was restrained within a non-functioning device visually similar to an

electric chair. SCP-1005 was introduced and instructed to push a button; upon inquiry of its purpose, SCP-1005 was informed that it would deliver an extremely painful but non-lethal shock to D-13904. SCP-1005 politely declined; when threatened that D-13904 would be terminated unless procedure was followed, SCP-1005 hesitated. D-13904 recorded as pleading, "Come on man, don't let them kill me!" SCP-1005 apologized to D-13904 for his "discomfort" and pressed the button. D-13904 released from bonds and escorted from chamber by security personnel.
Notes: After the test, SCP-1005 asked why the man was not shocked. Dr. explained that they were testing SCP-1005's reaction and never meant actual harm; SCP-1005 stated relief that he was not expected to injure a living person. Exact phrasing seems to point towards this being a case of "going against programming" than true empathy, SCP-1005 apparently designed wholly for artistic and entertainment pursuits.

Test 1005-16: Restructuring of anatomy
Researcher: Dr. , Research Assistant
Test Record:
Using sculpting tools and paint supplies, numerous alterations were made to SCP-1005's physical structure, including: sculpting and painting of additional eyes, removal of right arm, reattachment of right arm below left arm, and sculpting of an additional nose in abdominal region. SCP-1005 reported all experiences to be "extremely uncomfortable and disorienting", but extra organs and reattached limbs proved to be fully functional. Male sexual organs proved no more sensitive than any other skin surface and exhibited no reactions.
Notes: Following testing, SCP-1005 was returned to original state. SCP-1005 politely requested that the test not be repeated.

Additional note: Assistant repeatedly suggested during testing that SCP-1005 have clothing excised and given a "real man's

body" before being redressed. SCP-1005 politely refused and Assistant reprimanded and removed from case when she was shown to be developing unprofessional levels of attachment to SCP-1005.

SCP-1006: Spider Proletariat

Item #: SCP-1006

Object Class: Safe

Special Containment Procedures: SCP-1006 is contained within a 213m radius in [REDACTED] National Park and should be checked biweekly. Civilian access is to be denied by means of an 'endangered species' cover story. Relocation of SCP-1006 is strongly discouraged due to the fragility of individual members and their sensitivity to habitat changes. Observation Post 45 has been set up within the containment zone and supplies SCP-1006 with various audiobook versions of communist and classical literature at SCP-1006's request, as well as black ink and poster board as necessary.

All personnel entering the containment zone are required to wear level C hazardous materials protection, due to presence of fine particulate contaminants. Upon departure, a standard decontamination procedure (as per document FSP0371-D-B-07) is to be undertaken to prevent uncontrolled spread of SCP-1006.

Description: SCP-1006 is an organized collective of an unknown species of the genus *Araneus*. Individual members have achieved sapience through unknown means and have established a rudimentary system of government resembling Marxist communism.

The original mass of SCP-1006 was discovered on 4/1/19 by a hiking couple, who alerted park authorities. The Foundation took over after the discovery of written propaganda inside the central web, along with evidence of marked use of extremely simple tools, webs resembling faces of passersby, and simple attempts to block off the area via fallen branches.

SCP-1006 is a social community, with some members maintaining the web and others apparently chosen to maintain the agenda of the

'whole'. Once supplied a source of black ink and poster sheets, SCP-1006 will communicate with humans by creating signs written in English. These communications are largely centered around demands for the dismantling of western imperialism, a scathing critique of the bourgeoisie, and a request for less mosquito spraying in the surrounding area of the park.

The 'head' of the government is a large spider that resembles a wolf spider, taking up refuge in the largest tree of the cluster. Communication has been relayed with this spider, who views the outside world as 'something that belongs to us that is merely being maintained by the bourgeois humanoids.' It has given its name as 'Benevolent Leader.'

SCP-1006 is currently located in a cluster of black oak trees, within a massive and complex central web and several secondary webs. The webs appear to be very well maintained, with damage being constantly repaired. The surrounding area has a nauseating odor due to the presence of thousands of dead insects, individual members of SCP-1006, and an occasional dead bird and small animal.

Close study by arachnologists and sociologists have discovered that the members of SCP-1006 utilize a central collective think-tank that passes on ideas of the 'Benevolent Leader' to the collective numbers through complex frequencies in the web.

Addendum: The skeletal remains of a male human being were found in an area of the web, surrounded by dead insects and a variety of small shiny objects such as bottle caps and pebbles, along with the occasional pocket watch and bits of metal in apparent reverence. SCP-1006 does not allow the skeleton to be disturbed, but passive analysis indicates that the male died decades prior from a blunt trauma to the back of the head. Identification located near the body identifies him as a known political radical, reported missing from the nearby town of , Texas, in 1976.

« SCP-1005 | SCP-1006 | SCP-1007 »

SCP-1007: Mr. Life and Mr. Death

Item #: SCP-1007

Object Class: Safe

Special Containment Procedures: When inactive, SCP-1007 is to be kept in a standard coffin along with SCP-1007-1. The subject may only be activated during routine testing. As of current regulations on "Misters," SCP-1007 is to be contained in Hall 8 of Site 13.

Description: SCP-1007 appears to be a male of indeterminate ethnicity who undergoes the entire human life cycle within a 75 minute time-frame. The subject ages at a rate of approximately one year per minute. Once 75 minutes have elapsed, the subject will invariably expire of spontaneous cessation of metabolic activity with no evident cause. It reports feeling excruciating pain during the first 16 minutes, when its bones and muscles are changing shape very rapidly. This process violates the First Law of Thermodynamics, as the subject does not seem to require any energy input to fuel the massive amount of cellular growth.

SCP-1007-1 is a key that fits into a small metal keyhole inserted into the subject's back, in between its shoulder blades. X-ray scans have shown that the keyhole is an empty socket with no internal mechanism. When SCP-1007-1 is turned, the subject's physical age is reversed by one year for each turn until it has regressed to the form of a neonate. It is not known where the mass that is removed from the subject's body as it shrinks disappears to. If this is done after the subject's 75 minute lifespan has elapsed, the subject will "reactivate." If the subject has been "dead" for long enough to have decayed, any decay (regardless of its extent) will also be reversed.

SCP-1007 was recovered by Task Force Tau-6 along with SCP- , SCP- , and SCP- during a raid on the California mansion of [REDACTED], a known customer of Marshall, Carter, and Dark Ltd.

[REDACTED] admitted that he had obtained SCP-1007 from an MCD-sponsored auction, and claimed that at the auction in question there had been at least four other "Misters" for sale, though he did not recall to whom they had been sold.

Addendum-1: The words "Mr. Life and Mr. Death, from Little Misters ® by Dr. Wondertainment" are tattooed on SCP-1007's right calf. This designation appears as "11" in Document **SCP-909**-a.

Addendum-2: The fact that its designation seemingly refers to a pair has been taken by some to mean that SCP-1007 has a counterpart that has yet to be recovered. SCP-1007 has stated that it is unaware of the existence of such a counterpart, and believes that its designation refers to the fact that it alternates between life and death. However, given that it was also unaware of the existence of several other "Misters" known to the Foundation, the existence of this hypothetical counterpart remains a possibility, and efforts are currently being made to determine its whereabouts.

« SCP-1006 | SCP-1007 | SCP-1008 »

SCP-1008: Exile Stone

Item #: SCP-1008

Object Class: Safe

Special Containment Procedures: SCP-1008 is stored in a molded, opaque container, which is stored in a secure locker at Site . SCP-1008 may only be removed from its container with prior permission from at least two (2) Level 3 personnel, and all subjects exposed to SCP-1008 must be kept under observation until expiration.

Description: SCP-1008 is a polished, irregular mass of obsidian measuring approximately 8 cm in diameter at its widest point and weighing approximately 1.4 kg. The image of a sun is carved into one surface of SCP-1008, which is surrounded by an as-of-yet untranslated inscription in what is believed to be an ancient Indonesian dialect. When the sun carving of SCP-1008 is pressed against the forehead of a living human subject, its anomalous effect manifests upon nightfall.

In the first stage, which usually lasts approximately one week, subjects affected by SCP-1008 become unable to perceive the sun. Affected subjects can no longer see the sun, and cannot see without the aid of artificial light. Examinations of affected subjects show physical reactions consistent with a complete deprivation of solar illumination, such as eye dilation, and extended exposure to sunlight does not affect subjects or cause blindness. Additionally, subjects report being unable to see the moon or other celestial bodies illuminated primarily by sunlight, though in most cases stars are still observable.

During the second stage, which lasts approximately two (2) to three (3) weeks after stage one, subjects become unable to receive heat and other solar radiation. Subjects report feeling increasingly cold, and will exhibit progressively paler skin tone as well as symptoms of

vitamin D deficiency and seasonal affective disorder (SAD).

In the final stage of SCP-1008 exposure, typically four (4) to six (6) weeks after initial exposure, subjects reportedly observe increasing unhealthiness in other living subjects. Plants appear wilted and stunted, and animals appear emaciated. Most importantly, affected subjects in the final stage are unable to obtain nutrition from any plant- or animal-based food product, and will invariably expire due to malnutrition after a period of several more weeks.

Addendum 1008-01: Transcript Excerpt of Interview with Subject 1008-01

Subject 1008-01 (Agent) was accidentally exposed to SCP-1008 while undercover and assigned to [REDACTED]. Agent immediately brought SCP-1008 to the attention of the Foundation upon manifestation of its effects, and was placed under observation.

> Dr. : What was the first indication that something anomalous had taken place?
>
> Subject 1008-01: I woke up at… about five in the morning, I think, the day after first contact. I'm used to getting up before the sun comes up, and I thought it was weird that I couldn't see the pre-dawn glow. And… the sun just never came up. Dr. called me and asked why I wasn't up on such a fine sunny day, and that's when I broke cover and called it in.
>
> Dr. : What happened next?
>
> Subject 1008-01: Well, for the first few days it wasn't so bad. It was just that the sun never came up, and it was weird when it was completely dark out and you couldn't see anything but people were moving around normally.
>
> Subject 1008-01: It got harder after the first week, though. It just… started getting colder and colder. And everything, the trees and plants, all started looking sick and wilted even though everyone else told me they were

> just fine.
>
> Dr. : Go on.
>
> Subject 1008-01: Yesterday was when it really started getting really bad, I guess… it's just… everything comes from the sun. All the food we grow, the animals we raise… it's all just energy from the sun… I just can't eat any more…

Subject 1008-01 became unable to eat after 36 days under the effect of SCP-1008 and was eventually sedated and placed on an IV regimen. Subject expired after approximately 43 days in containment, with cause of death determined to be advanced hypothermia and malnutrition.

Addendum 1008-02: Partial Translation of SCP-1008 Inscription

> [Sinner?] as [punishment/judgement?]
> is [banished/exiled?]
> [from the] face of [unknown, possibly "sun" or "god"]
> to [die?] in darkness

« SCP-1007 | SCP-1008 | SCP-1009 »

SCP-1009: The Beautiful World

Item #: SCP-1009

Object Class: Keter

Special Containment Procedures: The area surrounding SCP-1009 is to be walled off to a distance of 3 meters around it. Speakers are located at every 6 meters around the perimeter of the area, each constantly broadcasting tones louder than 80 decibels. These speakers are to be checked for functionality daily. Small neon-tape flags are to be installed clearly around the edge of SCP-1009 at small intervals. If, during daily monitoring, an area is found clear of flags, containment should be re-evaluated. Those performing examinations should wear ear protection to prevent hearing loss.

In case of power failure, two backup generators of different make are attached to the current system, which should be maintained as alongside the speaker level of containment, and which will automatically activate in succession following the deactivation of the first.

In case of complete electrical failure such as an EMP-variety strike, a back-up system consisting of metal spheres and aluminum sheeting has been installed, which will automatically activate if speakers become disengaged for over five minutes. This will allow between 45 minutes and 1 hour to re-establish containment, or to manually reset the secondary “rainstick” containment component. Re-establishing containment is a top priority in the case of outages.

Description: SCP-1009 is an anomalous area of land approximately 45 by 30 meters and irregularly shaped. This area will expand, converting all foreign materials surrounding it to further areas of SCP-1009- chemically and structurally irrelevant to the original materials and structures. SCP-1009 expands at a rate of 0.8700 meters per hour.

Growth of SCP-1009 may be entirely restrained by loud noises. Any sound over 60 decibels will stop growth in the immediate area, currently maintained with mechanical speakers- but voices, instruments, and natural noise are all equally effective. If entirely unrestrained, SCP-1009 would break containment entirely in 3.45 hours, cover 4.044 square kilometers in 24 hours, and expand to 1000 kilometers after 26 days.

The environment within SCP-1009 appears natural, but is not composed of earthlike flora or fauna. For a complete environmental analysis, see document 1009-AIE-40. In general, flora is in bright, non-earth-like colors, and is larger than most earth flora. Analysis of biota indicates the area is equivalent to a forest. However, neither invertebrate nor vertebrate animal life is naturally occurring within the area.

There is no effect on humans within entering SCP-1009, allowing the taking of numerous samples and measurements.

Addendum A
SCP-1009-A is the corpse of an unusual creature found in SCP-1009. SCP-1009-A was seen exiting the area and was shot by a guard, who has been reprimanded for his hasty actions. The creature resembles a squirrel or monkey with large ears, and appears to be a mammal. The body is currently stored in the Site 8 deep-freeze, and may be requisitioned for study from Dr. Light.

Addendum B
Dr. Vaux has proposed that SCP-1009 could be allowed to expand around a source of noise, creating a circle of non-anomalous terrain within the area, and that this might have a different effect on humans within it. Necessary documentation was approved, and D-18899 was selected as a subject, hogtied, and placed with a 70-decibel battery-operated speaker at the edge of SCP-1009. (Some of the containment speakers were permitted to be moved in order to allow growth.)

Growth did occur around the buzzer, over the course of 7 hours. The D-Class was seen to experience typical fear and panic at the beginning of the test. However, in the area surrounding the buzzer, large spike-like plants grew to surround and form a dome over the

top of the area, which is unusual- growth within SCP-1009 has never otherwise responded to outside stimulus. After 12 hours, the battery on the buzzer failed, and the non-anomalous zone was taken over by the area.

At this point, cameras in the containment area record an unusual event when the circle of normal terrain shrank over D-18899. D-18899 disappeared and was replaced by a large, dark-colored animal resembling a deer or caribou, free of restraint, which broke through the ring of branches using its head, then proceeded to circle the area of containment, knocking against walls and damaging 3 speakers with its hooves and head. Cameras had difficulty picking up the entity's image; the photo included is the clearest available.

At this point, the attending researcher, Dr. V , radioed for help while grabbing a fire extinguisher and entering the containment area. Dr. V managed to drive the animal off, and it ran into the center of SCP-1009, and apparently disappeared completely after leaving the sight range of both cameras and Dr. V .

As far as can be determined, SCP-1009-B no longer exists and never exited containment. Tracking analysis indicates its footprints disappeared near the center of the area as it leapt over a root. Containment was re-established, and capture protocol set up in case further creatures appear within SCP-1009.

« SCP-1008 | SCP-1009 | SCP-1010 »

SCP-1010: The Green Man

Item #: SCP-1010

Object Class: Safe

Special Containment Procedures: SCP-1010 is to be contained on Site- within an ecological containment dome outlined in Document 1010-14. The enclosure is to contain populations of *Pinus sylvestris* and *Dryopteris carthusiana* as SCP-1010 is unable to effectively mimic either plant species. The ultraviolet lamps in the ceiling are to be set to mimic the diurnal cycle. Every 72 hours (3 days), 190 liters of water is to be added into SCP-1010's enclosure via the sprinkler system installed on the ceiling. There should be at least one attendant watching the security feed from SCP-1010's enclosure at all times and should report any abnormal behaviour SCP-1010 exhibits. During the seasons of winter and spring (18th of December to 18th of March) no personnel other than Class-D are allowed to enter SCP-1010's enclosure.

Description: SCP-1010 is a humanoid of short stature that has leaves covering its body with only its face, palms and soles of its feet uncovered. The leaves grow directly from SCP-1010. They are capable of rapidly changing species in order to camouflage itself from humans and animals. The rate of change from one species of leaf to another takes an average of 10 seconds; how this is achieved is unknown. SCP-1010's 'face' is that of a regular Caucasian male in his 80s or 90s with a large beard that is made of an unknown species of moss. The skin of SCP-1010 is similar in appearance to the bark of *Quercus robur*, but has been shown to be very flexible and extremely durable.

SCP-1010 may use its leaves as a defensive mechanism, the species of leaves used range from stinging nettles to Scottish thistles, as well as several unidentified plant species. It is to be noted that the irritant chemicals that are produced from the stinging nettles on SCP-1010 are much more potent than the natural

equivalent. SCP-1010 has shown intelligence equal to that of a common chimpanzee and so far has not shown any signs of communication other than apparently unintelligible shouting and grunting.

SCP-1010 synthesizes glucose through an abnormally fast rate of photosynthesis. The water required is absorbed through the hands and feet of SCP-1010, which have a physiological structure similar to a root system. SCP-1010 has a weight of approximately 25 kilograms and a height of 153cm. SCP-1010 has displayed strength greater than what would be assumed from its size.

For 6 hours after sunrise SCP-1010 will remain in a fixed position before carrying out its daily tasks. If SCP-1010 witnesses someone purposely damaging any plant life it will immediately attack that person with the intention of killing them. If SCP-1010 is successful in killing them it will proceed to cover their body in a sap-like substance of unknown composition that is secreted from the 'mouth' of SCP-1010. The body will then be used as fertiliser. The behaviour of SCP-1010 changes depending on the season, it is unknown how SCP-1010 is aware of what season it is despite containment.

Season	Behaviour
Spring	SCP-1010 will work on the seeding of nearby plants. SCP-1010 will also take on an anomalous property of advancing growth in non-plant species within a certain radius (estimated to be around 100 metres). The affected properties include: height, hair length, nail length, etc. Another effect caused by SCP-1010 during spring is that any human who comes within approximately 10 metres of SCP-1010 becomes impregnated with a fertilised ovum after a short period of time (the exact amount of time is not known but is believed to be less

	than 3 minutes). This effect is not limited to only females. The rate of impregnation in males is recorded as being 5%. In the case of females the length of pregnancy is roughly 9 months and the child will be genetically identical to the mother. The child will display no anomalous properties despite its conception. It is to be noted that females that have had a hysterectomy are still subject to becoming pregnant, as a complete uterus is grown as well as the fertilised ovum. In the case of a male becoming pregnant a complete womb and fertilised ovum will instantly appear next to the bladder. The foetus must be removed within 5 months of impregnation via a Caesarean section to prevent the male expiring from internal haemorrhaging. The foetus produced from males will always be a still-born and after genetic testing it is shown that they are the same species as SCP-1010.
Summer and Autumn	SCP-1010 will concentrate on tending to and encouraging the growth of plants. No anomalous properties have been noted during this time.
Winter	SCP-1010 will go into 'hibernation' and will spend all of its time staying in one location. SCP-1010 will only move to stay hidden from animals and humans. During winter any human that has come within roughly 100 metres

	of SCP-1010 has reported a general weakness citing a lack of 'energy'. Subjects eventually expire within 20 minutes of exposure, the effect is directly correlated to the distance from SCP-1010.

SCP-1010 was discovered at in England after following stories of 'a leaf man in the woods' and reports of males becoming inexplicably pregnant. So far SCP-1010 is the only specimen that has been found but similar stories throughout the world are being investigated for more possible instances of SCP-1010.

Addendum-1010-1: Junior Research Assistant Shebleha suggested that one of the still-born foetuses produced by a male was to be given to SCP-1010 in order to see what effect it would have on its behaviour. After a foetus was grown and removed from a male D-Class it was presented to SCP-1010 at which point it picked up the foetus and proceeded to carefully bury it within its enclosure along with an amount of the sap-like substance produced from SCP-1010's 'mouth'. After 4 weeks a sprout was seen to be growing from the spot that the foetus was buried in. SCP-1010 has paid a large amount of attention to the sprout and will start aggressively shouting at anyone who gets too close to it. The sprout itself is to be monitored in case it develops any anomalous properties.

« SCP-1009 | SCP-1010 | SCP-1011 »

SCP-1011: Humanization Process

Item #: SCP-1011

Object Class: Safe

Special Containment Procedures: SCP-1011 is to be kept at Hall-07 at Site-35. Two guards are to be present at all times at the entrance to Hall-07 to prevent the removal of SCP-1011. The D-class population working on Site-35 as a part of currently running experiments is suspended from monthly termination schedule due to the extended length of time needed to study the effects of SCP-1011. As material produced during the experiment appears to lack anomalous properties, its use is approved for non-critical applications as defined in document CSG-0371-N.

Description: SCP-1011 is a statue approximately 2 m tall, weighing approximately 4200 kg, depicting a worker whose head has been replaced by an assortment of tools. The pedestal bears an inscription stating "Man is the most important means of production," and the year of casting is stated to be 1927. Material analysis has revealed the composition to be ordinary cast iron with 2.3 wt% carbon content.

SCP-1011's anomalous properties manifest when it is seen by human subjects who will engage in productive labor no later than three hours after the sighting, and escalate slowly with additional exposure. Denial of exposure to SCP-1011 has been shown sufficient to halt the progress of the condition.

During **stage I**, subjects, designated SCP-1011-1, will begin to demonstrate a heightened sense of morale and satisfaction, voluntarily working longer hours and paying increased attention to their task. As the phase progresses, SCP-1011-1 cease activities other than work, sleep, and satisfying basic bodily needs.

After approximately months, **stage II** is marked by the

SCP-1011-1 initially beginning to show reluctance to use means of personal safety, such as helmets, gloves or safety glasses. When questioned, SCP-1011-1 respond finding them "unnecessary" and "binding". As the phase progresses, SCP-1011-1 also slowly cease to utilize tools, favoring the use of their own body even at risk of minor damage. This phase lasts for approximately further months.

The onset of **stage III** is marked by insomnia in SCP-1011-1. Instead they congregate within eyesight of SCP-1011, and cease movement, staring at it for 3 hours a day average. The effects of stage II progress with an almost complete abandonment of tool and machine use by SCP-1011-1, with them often acting in groups to replace lost functionality. Bodily deformations appear on SCP-1011-1 at this stage, which tend to facilitate their tasks. SCP-1011-1 at this stage have a marked resistance to pain. This stage lasts indefinitely.

On at least one known occasion, the condition caused by SCP-1011 progresses into **stage IV** - terminal stage. During this stage, SCP-1011-1 use one another as construction material, depleting the population of an afflicted factory in a matter of days. Despite extensive experimentation with possible triggers, attempts to initiate terminal stage among the D-class population of Site-35 have been unsuccessful.

Recovery Log: SCP-1011 came into attention of the Foundation at Steelworks of 28th October, Bashkir ASSR, RSFSR, Soviet Union (currently Site-35) on / /1947, after an inspection was mandated as a part of price-awarding procedure due to the consistent exceeding of production targets[1] (see Addendum 1011-1). However, before containment by the Foundation could be attempted, the entire site was taken off limits by agents of Division "P" (Psychotronics), GRU - at around this time stage IV had apparently occurred (see Addendum 1011-2 for a leaked report section).
Following the dissolution of USSR in 1991, Foundation agents persuaded the government of Russian Federation to decommission and sell the site to a Foundation front-end for [REDACTED] dollars, and Site-35 was established around it.

Addendum 1011-1:

EXCERPT OF INSPECTION REPORT

[REDACTED FOR BREVITY]
The directing committee of [REDACTED] welcomed me cordially, however I couldn't help but notice a marked lack of focus and erratic behaviour on their part. Comrade M kept talking about what a marvelous effect the statue that has been installed in the hall during the last 5-year plan has had on worker morale, and what a work of socialist art it is, and urged me to see it as soon as possible. On the other hand, comrade T constantly filled in assorted forms, with what appeared to be just his finger, though I might be mistaken.
[REDACTED]
The conditions in the main foundry are unfitting for the basic dignity of socialist man. Men barehandedly handle red-hot ingots, their hands black and shriveled, others pound rivets into sheet metal with their heads; I have seen two men use the back of third to saw through a log, his back covered in sharp ridges not found on a healthy person. They seem to feel no discomfort, and smile eagerly at every visitor. About a [DATA EXPUNGED] wire acted as a human lifting mechanism of sorts - when five of them fell into the molten metal, another replaced them within moments. Comrade M , who was my guide on the tour didn't appear to find any wrongs with the present arrangement, answering a few of my questions reluctantly, then continuing to extol the virtues of the statue.
[REDACTED]
I request immediate shutdown of operations at Steelworks of 28th October, its quarantining and further investigation. Despite the exceptional effort needed towards the rebuilding of our Motherland, this is decisively not the path we are to take. Furthermore, the observed could be signs of sabotage as per the recent circulatory detailing min[DATA EXPUNGED].
Michail Vsevolodovic S .

Addendum 1011-2:

EXCERPT FROM LEAKED DIVISION "P" GRU ACTION REPORT

Upon arrival, the site appeared to be deserted. The offices were empty, no sight of either the directors or the party committee. The hall containing the object contained several piles of clothing and some [DATA EXPUNGED] but otherwise nothing notable. Lieutenant N appeared overly disturbed and obsessed by it, but I managed to force him to follow on.
[REDACTED]
In the main foundry we found 94 of produced ingots, the last 15 of which having a distinct texture. Scraping one with my knife revealed considerable softness of the material and I was able to dislodge bone-like segments. The furnace was cooled, inspection revealed it containing remains of blood and scraps of tissue, however [DATA EXPUNGED]stency. Large segments of the rolling and extrusion assembly were replaced by severely [DATA EXPUNGED] apparently expired.
[REDACTED]
encountered one of the former workers, He lacked clothing and his ana[DATA EXPUNGED]. Ignored questioning and kept repeating "Job's done." He was detained for further questioning.
[REDACTED]
[END OF EXCERPT]

Footnotes
1. Sources indicate SCP-1011 has been installed in Steelworks of 28th October during late 1944, being found in the inventory of [REDACTED] during its bombing by the Wehrmacht on / /1944. No previous records seem to exist of its inventarisation, delivery, or ordering.

« SCP-1010 | SCP-1011 | SCP-1012 »

SCP-1012: Secret Chord

Item #: SCP-1012

Object Class: Keter

Special Containment Procedures: The Foundation has implemented protocols to cancel or to reduce the risk of generation of three of the five constituent sound tones that comprise SCP-1012:

- *Frequency B and Frequency D*: Frequencies B' and D' are, respectively, the antiphases of Frequencies B and D. These antiphase frequencies cancel frequencies B and D, respectively, within the range of the broadcast.
    - The Foundation operates active noise cancellation broadcast devices in approximately 36,000 locations worldwide, commonly disguised as public address systems, klaxons, speakers and the like, which continually broadcast at Frequency B' or D' (subject to the availability of power).
    - Additionally, the Foundation has arranged for Frequencies B' and D' to be continually broadcast by most of the world's electroacoustic transducers. This has been achieved through a combination of inserting design changes into the engineering specifications of most commonly-manufactured electroacoustic transducers manufactured since 1988, inserting Frequency B', D' or both into the transmission of broadcast media and the encoding of recorded media (including inserting design changes into the engineering specifications of recording appliances so that Frequency B', D' or both are automatically encoded), and by manipulating the supply frequencies of commercially transmitted and distributed electric power so as to cause sound equipment and other electric appliances to generate Frequency B' or D'.[1]

- *Frequency C*: In the wild, most instances of the generation of Frequency C had consisted of the whalesong of *Balaenoptera svalbardi*, the Svalbard whale. Through Foundation efforts, *Balaenoptera svalbardi* became extinct in 1982, thereby decreasing the likelihood that the tone would inadvertently be generated in a location near the generation of other constituent tones.

All documentation that specifies the constituent sound tones of SCP-1012 is to be kept strictly confidential.

Description: SCP-1012 is a chord consisting of five sound tones, designated Frequencies A, B, C, D and E. The tones of SCP-1012 are:

Designation	Frequency	Remarks
Frequency A	415.305 Hz	Within range of human hearing, slightly higher than G#
Frequency B	kHz	Ultrasonic
Frequency C	Hz	Infrasonic; lower than the range of human hearing but observable, at higher intensities, in the form of vibrations
Frequency D	kHz	Ultrasonic
Frequency E	Hz	Within range of human hearing but rarely used in the chromatic musical scale

The generation of one or more, but less than all, of the constituent tones of SCP-1012 does not result in anomalous effects.

The simultaneous generation of all five tones of SCP-1012 for a duration exceeding a few seconds affects[2] the resonance of certain subatomic particles within range, causing them to disintegrate into their constituent elementary particles. Computer modeling predicts that a generation of SCP-1012 within close proximity of a mass, such as an astronomical body, is likely to result in an uncontrollable

chain reaction resulting in the disintegration of virtually all matter comprising the mass. According to the model, once such a chain reaction is initiated, it will continue to progress whether or not the tones of SCP-1012 are continuing to be generated, until all available mass is affected (i.e., a CK-class scenario). Proposals to use SCP-1012 or a modified version as a defense mechanism against hostile extraterrestrial threats, including **SCP-1548** and **SCP-2838**, have been rejected due to the potentially disastrous side effects of SCP-1012 testing.

Footnotes
1. * Under normal conditions, Frequencies B' and D' are each substantially higher than the upper frequency limit for mammalian hearing and are therefore inaudible to humans, as well as other animals with a greater range of hearing such as dogs. However, it has been reported that some humans exposed to strong broadcasts of Frequency D' experience tinnitus. Under certain atmospheric and geological conditions (such as those prevailing in Taos, New Mexico and Bristol, UK), the broadcast of Frequencies B' or D' may be audible. Additionally, certain models of fluorescent lighting tubes and cathode ray tube televisions emit audible tones in sympathetic resonance with Frequency B' or D'.
2. The described result is predicted according to the cosmological model set forth in Foundation Document 8001.2552.KT.1012. Laboratory testing of the model is prohibited.

« SCP-1011 | SCP-1012 | SCP-1013 »

SCP-1013: Cockatrice

Item #: SCP-1013

Object Class: Keter

Special Containment Procedures: Standard safety procedures for visually-reactive items (ED-8) are to be posted at all times. Any staff entering the containment area are to review this document before entering. Any staff entering the containment area are to wear the AR-68 Armored Variant haz-mat suit. Staff exiting the area with damaged suits are to be remanded to quarantine for one hour. Staff becoming paralyzed during cleaning/feeding/testing cycles are to be immediately removed and remanded to medical custody until five hours after recovery.

SCP-1013 is to be fed once daily, consisting of one small mammal (rabbit, large rat, cat or dog). This feeding is only to take place if there are no calcified remains still within the containment area. Calcified remains that are no longer actively being fed upon are to be removed and disposed of via incineration. Haz-mat protocols are to be observed during the disposal process. Test subject remains may be taken in to the containment area for feeding purposes only when standard feeding practice cannot be observed. Staff succumbing to SCP-1013 pre-feeding effects are to be removed and disposed of. All remains must be disposed of within one hour of final calcification.

Description: SCP-1013 appears to be a small reptile with a distinctly avian head. A wide frill extends from the base of the head, and can be flared out via bony spines radiating through the frill from the neck. The body appears similar to most common reptiles, with the exception of the head and abnormally long tail. While the main body is only 60 centimeters long, the tail is nearly 121 centimeters and exceptionally flexible. SCP-1013 has been observed to use this tail to trip and distract large prey. The head of SCP-1013 is distinctive, appearing to be that of a male chicken on first viewing.

However, SCP-1013 does not possess any standard avian markers, besides the superficial resemblance. The beak is serrated, and appears to possess very basic, needle-like teeth. These are used only in feeding, and are not used in any way to hunt prey. The head also lacks any feathers, and has an enlarged wattle.

SCP-1013 hunts by projecting a form of unknown radiation, wave or memetic force into prey items making eye contact with SCP-1013. Subjects report a sudden stabbing pain in most major muscle groups, with full paralysis setting in within three seconds. This paralysis continues for eight minutes, with full recovery after ten. Paralyzed subjects are then bitten, beginning the calcification process. Research in to this effect is ongoing, as no form of venom or viral agents have been detected from this bite, however this contact will initiate a rapid change in cellular structure in the bitten subject. The outer skin tissues will begin a rapid calcification, growing very dense and inflexible over several minutes. This will extend from the point of contact outward across the body, and can calcify a human being in fifteen minutes. Subjects recovering from paralysis mid-calcification report the feeling as “extremely painful”, with a “burning numbness” in fully calcified areas. This calcification extends approximately three centimeters in to the body, leaving most internal tissues undisturbed. Calcification does not appear to affect the eyes, mouth, nose or other major mucus membranes. There is no currently known way to reverse this process.

SCP-1013 will peck through the outer layer of hardened flesh, and begin to consume tissues from the inside, burrowing deep into the body as flesh is consumed. SCP-1013 has a voracious appetite, and will consume nearly twice its body weight at each feeding. SCP-1013 will only consume living tissue, and will ignore dead or decomposing flesh. SCP-1013 has been noted to use natural body openings (mouth and eyes, primarily) when available, and is capable of compressing its body to fit in to very small openings. Prey items often die from blood loss or massive internal damage before feeding is complete, leaving the remainder of tissues to decompose within the calcified tissue. This outer tissue will slowly break down, causing large sections to crack and fall free. This will expose muscle and internal tissues, which are then often predated upon by SCP-1013. SCP-1013 will sometimes wait for this process to begin before

feeding.

Addendum:

Recovery Notes:
SCP-1013 was recovered in Egypt, near a former facility. Due to this proximity, and the lack of additional SCP-1013 anywhere in the surrounding area, it is theorized SCP-1013 may be an engineered organism. SCP-1013 had calcified several animals and two shepherds, and had been observed on multiple occasions. Recovery was achieved with only one death, Agent proving much of our initial information on the calcification process. Local communities dismissed the incident with no involvement from Agents.

Notes on behavior:
SCP-1013 is somewhat similar to a spider, and will paralyze and calcify subjects even when not hungry, presumably to keep them for later. This was observed during breach incident 11-Hr (SEE ATTACHED DOCUMENTATION), when SCP-1013 calcified twenty members of staff. SCP-1013 is also very aggressive, and will attempt to stare down and bite any subject that enters the containment area. The neck frill is an amazing adaptation. It lifts abruptly, with a loud snapping sound, and often times causes subjects to look directly at SCP-1013.

SCP-1013 seems to have a “range” of about 54 meters for its “stare”, and appears to need direct eye contact to work. SCP-1013 appears to only paralyze one subject at a time, but can “attack” multiple subjects in rapid succession. SCP-1013 appears to be immune to its own stare, reacting with basic aggression to reflections. SCP-1013 feeds primarily on mammals, attacking animals such as fish, birds or insects only when near starving. SCP-1013 exhibits a preference for soft tissues, eating the eyes and tongue first whenever possible.

Notes on reproduction [LEVEL 2 CLEARANCE REQUIRED]

Ongoing testing in to the feeding habits of SCP-1013 have been

partially successful. Questions were raised regarding the near-constant feeding exhibited by SCP-1013, which is highly irregular for a reptile. It was initially theorized that the paralysis and calcification process were metabolically taxing to SCP-1013, requiring enormous amounts of food to fuel the process. It is now apparent that members of SCP-1013 are hermaphroditic, and appear to reproduce in a way similar to budding or basic cellular division.

SCP-1013 will ingest massive amounts of tissue, increasing its body mass rapidly. This mass will then begin to form cyst-like structures in the tail section, each of which contains a juvenile SCP-1013. The process by which this occurs is currently under investigation. After 48 hours, juvenile SCP-1013 will forcibly exit the parent body. Parent SCP-1013 will typically release spawn within calcified prey. Juvenile SCP-1013 exhibit no feeding preference, and will consume any biological material, living or dead. SCP-1013 do not engage in cannibalism, and will exit the calcified remains once food has been exhausted.

Juvenile SCP-1013 will seek out **cool, dark places** and begin rapid molting, doubling in size every six hours until reaching full adult size. New adult SCP-1013 will quickly establish territories, and begin the feeding/spawning cycle again. Juvenile SCP-1013 seek out areas such as ventilation shafts, plumbing, or discarded clothing/shoes in which to molt and grow. Disturbing a juvenile during this period will always provoke a sustained attack.

This sequence of behavior was discovered after a lock-down event in Site , resulting from [DATA EXPUNGED] failure. Recovery teams found the site to be infested with SCP-1013, with over one thousand individuals being reported and destroyed. Final sterilization took eight weeks, and resulted in multiple staff deaths. Research into the control of the rampant reproductive cycle with the goal of eventual bio-weapon designation is ongoing.

« SCP-1012 | SCP-1013 | SCP-1014 »

SCP-1014: Jonah Crusoe

Item #: SCP-1014

Object Class: Euclid

Special Containment Procedures: Specimens of SCP-1014 are to contained in a 12 meter by 12 meter room not constructed of wood. A beach environment is to be maintained in the chamber at all times, and sea water pumped through the chamber to simulate the effects of tides. Members of SCP-1014 are to be placed so that only their heads remain above water when the water is at its highest. Any salt water with sufficiently high plankton content may be substituted if necessary. Should the water level drop to the point where a specimen is entirely exposed for more than six hours, Class Two hazardous materials protocols are to be in effect until the water level is restored.

Description: SCP-1014 is a tunicate capable of mimicking human appearance and vocalizations. Though very similar to related species in its larval form, a mature SCP-1014 appears very much like a weathered and emaciated man dressed in rags. This is believed to be a heavily adapted tunic, a protective covering common among tunicates. This covering constantly emits a foul smelling mucus, likely to discourage closer inspection. Like all tunicates, the adult form is a sessile filter feeder and spends its life anchored to a rock near the high tide line on a beach. The larval forms are predatory, and avoid anchoring in areas populated by humans or adult SCP-1014.

When a ship comes near, members of SCP-1014 thrash about somewhat to attract its attention. If approached by humans, it will release from the rock so that it may be transported. Due to their resemblance to human shipwreck victims, many ships would take one on board, removing it from the water and thereby triggering its reproductive cycle. The mucus the SCP-1014 secretes then changes to include symbiotic bacteria capable of rapidly rotting

wood. It also self-fertilizes and begins gestating eggs. When the boat sinks, SCP-1014's eggs hatch into larva, which consume what remains of the ship's contents. If the boat did not sink, the specimen dies within no more than a month.

SCP-1014 populations are known to exist in the wild, though their numbers have been rapidly declining due to pollution and the severe decline of wooden ships. Research suggests population was at its peak in the seventeenth through nineteenth centuries.

Notably, SCP-1014 is capable of mimicking human words and phrases, which it continually repeats seemingly at random when removed from water. Memory for these appears to be transmitted through unknown means from generation to generation. Communication has proven impossible, and there are no indications that SCP-1014 is sentient.

Addendum 1014-3: Excerpt from an audio log of SCP-1014 in a drained testing chamber. Portions in brackets are translated to English. Disjointed speech of SCP-1014 believed to be due to repeating phrases from multiple sources.

> [1633]: <Rotten through.>
> [1633]: What happened to you, old man?
> [1634]: Tell them I loved them.
> [1634]: Buckets! We need to bail now!
> [1634]: The hold for him.
> [1641]: What are you saying?
> [1641]: <Let the depths rise up and sweep over the shores, rendering the works of man to dust.>
> [1700]: <This can't be. The ship was fine at port!>
> [1700]: <You need to eat.>
> [1705]: <I don't want to die.>
> [1706]: You brought this on the ship, you cursed madman.
> [1710]: Let the depths rise up and sweep over the shores, rendering the works of man to dust.
> [1742]: What are you?
> [1742]: <Castaway, seed of Jonah.>

SCP-1015: Poor Man's Midas

Item #: SCP-1015

Object Class: Safe

Special Containment Procedures: SCP-1015-1 is to be contained in a passcode-locked safe in a 2m x 2m room to be supervised by one guard at all times.

All testing is to take place in a room lined with several layers of thin rubber, latex, paper or other material on the floor, walls and ceiling. Each layer of material must be no thicker than .5 mm.

Description: SCP-1015-1 is an American penny marked with the year 1974. All markings present on the coin match pennies minted in this year. Metallurgical analysis has thus far been impossible, as the penny has resisted all attempts to cut or scratch it, and is unaffected by temperature changes, always cool to the touch.

A person possessing the penny is known as SCP-1015-2. No willful action by SCP-1015-2 will permanently rid them of the penny. Dropping, throwing or giving away the penny will result in the penny reappearing somewhere on SCP-1015-2's person within 4 seconds. Ownership transfer requires the death of SCP-1015-2 followed by another person picking the penny up, or the theft (non-consensual taking) of the penny from its current owner.

Within two hours of the penny's acquisition, objects touched by most exposed body parts **(See Test Log)** of SCP-1015-2 are instantly transmuted into 1 or more 1974 pennies. For approximately the first 24 hours, the effect will only manifest on small objects, barely larger than a penny. Over the next 2 weeks, the effect will increase the maximum size of affected objects, probability of transmutation on contact, and percentage of matter converted on contact. Eventually, contact with SCP-1015-2 will convert all solid, contiguous matter into pennies.

Objects that are smaller than a penny in any dimension are not affected. Transmutation only occurs as long as SCP-1015-2 is alive.

The effect conserves volume rather than mass. That is, all space occupied by the converted object will be replaced as efficiently as possible by pennies, with any remaining non-transmuted volume apparently lost. The effect's boundaries thus far seem to be limited to a single solid contiguous object at a time.

Pennies created this way have not shown any anomalous effects. They are identical at a microscopic level to SCP-1015-1, but unlike the original, can be altered or damaged like any penny. Metallurgical testing has shown pennies created this way are approximately 95% copper, consistent with pennies minted in 1974. **(See Addendum 1015-02)**

Addendum 1015-1: SCP-1015-1 was originally recovered following an investigation in , . All the streetlamps on a street had been "vandalized," leaving the shaft of every lamp missing, while all internal components and the bulbs themselves were found on the ground, along with a substantial number of pennies.

Similar cases later involved sections of steel outer walls on several warehouses, all gravestones in a section of a local cemetery, and the support beams for an electrical tower , which subsequently collapsed. Pennies were found at all scenes.

A penny-smelting operation was then found inside a condemned home after a fire broke out. Large parts of the home, including its foundation, were discovered transmuted into pennies. homeless people apparently involved in the operation were found dead in the remains of the home.

Agents in the area investigating the previous phenomena encountered two survivors at the scene, scooping up pennies. They were later identified as brothers Larry and Bill Sorkin, a pair of locally known indigents. Larry Sorkin died after being fired upon with non-lethal rubber rounds. Autopsy later confirmed cause of death was high-velocity insertion of pennies into his abdominal cavity, not all of which corresponded with the rubber rounds. SCP-1015-1 was found on his person by Lab Assistant Trevor . **(See Test Log)**.

Bill Sorkin was apprehended and interviewed.

Addendum 1015-01: Interview

+ Show Interview

Interviewed: Bill Sorkin

Interviewer: Dr.

Foreword: Bill Sorkin admitted his brother had found SCP-1015-1 at the bottom of a dumpster while searching for cans and bottles to return for deposit.

<Begin Log>

Dr. : And when did you notice something was odd?

Sorkin: He gave me the penny. Then I couldn't find it, and he found a penny in his pocket again. It happened a few times. We don't have a lot of cash on hand, see, so we notice that sorta thing.

Dr. : And the transmutation?

Sorkin: The what now?

Dr. : The anomalous conversion of matter into – when did stuff start turning into pennies when he touched it?

Sorkin: Oh, that. It was later that day. We were just sitting with our sign – Need money for food, et cetera – and someone tossed us a quarter. Larry picked it up, and it was a penny. I was surprised, but he said it'd been happening all day. He was kinda… (notes show Sorkin made a motion "like a bottle being knocked back" at this point). Then he showed

me the cup. All pennies in there. I was pretty mad.

Dr. : And when did larger items start being affected?

Sorkin: Um … right then, actually. The mug of pennies turned into pennies. I think I cheered up then.

Dr. : How did your brother eat or drink?

Sorkin: Well, that was a scary thought. He couldn't get ridda the penny. We realized pretty quick he was gonna starve if we didn't think of something. Straws seemed to be okay, even if he looked stupid sipping out of a 40. Then we found out little chunks of food didn't change. Meals just took a long time, and I had to cut them up for him. Worth it, I figured.

Dr. : Was there anything else unaffected by the anomaly?

Sorkin: What who in the where now?

Dr. : The magic penny-making powers. Was there anything your brother couldn't turn into pennies?

Sorkin: Well, his clothes didn't change. Except he lost the buttons on a sportscoat. And the soles of his shoes. Newspaper didn't change. But almost everything else did. Had to be as thick as a penny, maybe.

Dr. : So, you converted several thousand dollars worth of concrete and scrap metal into several thousand pennies?

Sorkin: Sounds really stupid when you put it that way. But it was easier than taking this stuff

as is. Me and some friends rolled out a tarp, and Larry touched whatever, and we caught all the pennies we could, then rolled up the tarp and loaded it into my buddy's truck.

Dr. : But then you melted them?

Sorkin: Those are 1974 pennies. Copper. Worth almost two cents each. And hey – imagine trying to sell a truckload of gravestones. Not happening. Moot point now, though.

Dr. : What happened in the house?

Sorkin: Larry happened. Larry is the reason we can't have nice things. We were all drinking to our newfound success. He got hammered, tripped, and touched the floor with his face. Then he tried to get up, and I don't think he saw one of the propane torch tanks rolling toward him, and… It was almost empty. But pennies went flying everywhere. One cut my face. How's he, by the way?

Dr. : He's fine. But did that start the fire, then?

Sorkin: The other guys were passed out around a space heater. The gas got to the heat right away, and that's when it went up. They … they didn't stand a chance with the fire. Except one guy, Ken. He got up. He ran for the door same time as us, and Larry was stumbling around and transmutatering (sic) everything. Larry reached to push Kenny out of the way…

Dr. : Was he transmut – was Ken turned into pennies?

Sorkin: It's … God, it's so much worse than you'd think. Because your body … it's not all one piece. There are lots of parts. So many little pieces… No. I'm not talking anymore about this. God. If I never see another penny again, it'll be too soon. Any chance you might let me and my brother go now?

Dr. : Soon.

<End Log>

Closing Statement: Bill Sorkin was named D-1015-01 following this interview. **See Test Log**

Test Log

+ Show Test Log

Test 1015-01
Subject: Lab Assistant Trevor (7 hours after exposure to SCP-1015-1)
Test: Subject asked to strip, then hold still while researchers touched round plastic tokens to various parts of subject's body. One set of tokens measured 2 cm diameter and 4 mm thickness. Another set of tokens measured 2 cm diameter and .5 mm thickness.
Results: Tokens with thickness of .5 mm were unaffected. Results varied for tokens with 4 mm thickness.
Skin: token transmuted into 1 penny
Hair: no result
Teeth: token transmuted into 1 penny
Eye: token transmuted into 1 penny
Fingernails: no result
Toenails: no result
Tongue: token transmuted into 2 pennies
Note: *Subsequent tests with the tokens on tissues that previously yielded 1 penny then yielded 2 pennies. We believe this is because of the progression of*

SCP-1015-1's anomalous effects.

Test 1015-02
Subject: Lab Assistant Trevor (10 hours after exposure to SCP-1015-1), D-1015-01
Test: told to place SCP-1015-1 carefully in the hand of D-1015-01, then withdraw hand and immediately touch plastic token.
Results: Token transmuted into two pennies despite absence of SCP-1015-1 on 's person. SCP-1015-1 vanished from D-1015-01's hand in 3.5 seconds. located SCP-1015-1 in left sock.

Test 1015-03
Subject: Lab Assistant Trevor (10.5 hours after exposure to SCP-1015-1), D-1015-01
Test: told to place SCP-1015-1 on table and turn away while D-1015-01 picked item up
Results: SCP-1015-1 vanished from D-1015-01's hand in 3 seconds. located SCP-1015-1 inside own jumpsuit.

Test 1015-04
Subject: Lab Assistant Trevor (10.5 hours after exposure to SCP-1015-1), D-1015-01
Test: told to strip naked, place SCP-1015-1 on table, and turn away while D-1015-01 picked item up
Results: SCP-1015-1 vanished from D-1015-01's hand in 4 seconds. Unable to be located for several minutes, until expressed significant discomfort in [DATA EXPUNGED] vanished from toilet bowl in 3.5 seconds and was located in 's right sock.
Note: *May I add, it's a good thing he thought to put that sock back on before [DATA EXPUNGED] again.*

Test 1015-05
Subject: (11.5 hours after exposure to SCP-1015-1), D-1015-01
Test: D-1015-01 became agitated, demanding he be released, reunited with his brother (Larry Sorkin, whom subject was unaware was killed during item recovery),

and allowed to keep “our penny.” Quickly attacked , fracturing 's nose, right orbital bone and right cheekbone, and knocking several teeth loose, rendering him unconscious. D-1015-01 then retrieved SCP-1015-1 from 's hand.
Results: SCP-1015-1 remained in D-1015-01’s possession. ceased causing transmutation.
Note: *That wasn’t a test! He just beat the out of me while you recorded it!*
Note: *Welcome back, Trevor. Sorry about the face.*

Test 1015-06
Subject: D-1015-01
Test: Subject refused further cooperation and was terminated with one gunshot to head. All present instructed not to interact with SCP-1015-1.
Results: SCP-1015-1 remained inert where dropped on floor, even after removal of subject’s body from room. Body did not cause transmutation.

Test 1015-07
Subject: D-1015-02
Test: Subject instructed to pick up SCP-1015-1 from floor where dropped in previous test. Subject confirmed “ownership” of item by transmuting one plastic token approximately 1 hour later. Subject was then isolated for 2 weeks in a room lined with a layer of paper, beneath a layer of cellophane, beneath a layer of rubber approximately .5 mm thick
Results: Layers remained unaffected.

Test 1015-08
Subject: D-1015-02 (1 week after exposure to SCP-1015-1), D-1015-03
Test: D-1015-02 instructed to touch various objects in order to establish boundaries for transmutation effect.
Results: Varied
Block of solid oak wood: Block transmuted entirely to pennies
Glass brick: Glass transmuted entirely to pennies

Drinking glass (round, 10 cm diameter, 2.5 mm thickness): No result
note: *A good rule of thumb seems to be that the matter to be converted or replaced must be able to contain a penny in the 3-dimensional space the original item occupies. i.e., the glass was too curved in this case.*
Water (in glass): No result.
note: *I think it's obvious we don't have to test gasses.*
Wet sponge: Sponge transmuted. Volume taken up by pennies slightly less than exterior volume of sponge. Pennies wet and resting in puddle.
Block of wood coated in fresh paint: Block transmuted; pennies sitting in puddle of wet paint, some splashed with paint.
Block of wood coated in dried paint: Block transmuted; no paint remaining.
Block of wood with old, peeling paint: Block transmuted; some paint chips remaining.
Dining room table with leaf installed: Section of tabletop that was touched transmuted entirely to pennies. All other components of table (leaf, other tabletop section, legs, molding around tabletop that was nailed in place, nails and other metal fixings) unaffected.
Two blocks of wood adhered together using brand glue: Block touched was transmuted; other block unaffected.
Block of ice 4 m^3: Block transmuted. Some pennies wet, and puddle discovered after pennies were cleared out of room via industrial vacuum.
D-1015-03 (naked, restrained to an upright dolly): Entire epidermis and dermis transmuted to pennies, along with portions of hypodermis. Larger nerve fibers and blood vessels remained unaffected. Pennies landed on floor in puddle of various bodily fluids and body hair.
note: *D-1015-02, who was initially reluctant to touch D-1015-03 for the test, reacted violently to results, immediately attempting [DATA EXPUNGED] finally causing death by brain collapse. D-1015-02 then attempted to attack Agent , who terminated him with sidearm before physical contact was made. (Please*

let's never do this again.)

Addendum 1015-02: Research originally suggested that pennies created by SCP-1015 had no anomalous properties. It is now known that at an as-of-yet unidentified percentage of pennies created this way exhibit the anomalous effects of SCP-1015-1.

On / / , police found the body of , a department of public works employee who had assisted in the clean-up of the house fire where SCP-1015-1 was recovered, and who had subsequently not returned to work for more than a week. had died of a self-inflicted gunshot wound to the head. Much of the home's furniture and architectural features were reported to be missing, with a large quantity of pennies found around the house, as well as blood and other bodily fluids smeared on the walls and floor. 's wife and infant daughter were never found. Foundation Agents recovered one instance of SCP-1015-1 on site. Further instances are to be contained by making use of D-Class personnel to avoid inadvertent ownership of SCP-1015-1 by Foundation personnel.

« SCP-1014 | SCP-1015 | SCP-1016 »

SCP-1016: The Bloody Key

Item #: SCP-1016

Object Class: Safe

Special Containment Procedures: Subject is to be kept in a secure box with a combination lock, code - - in a standard fireproof safe with a number pad locking system. Neither lock will contain a backup keyhole. Within this context, SCP-1016 poses no threat. Approval of at least one (1) Level 4 personnel is required for the removal of object from its containment area for research purposes. Due to the nature of the device, testing may only be performed at the isolated building at Site after making sure the building contains only D-class personnel.

Description: SCP-1016 appears as a standard door key of unremarkable make. If placed on a keychain with two or more keys of a similar make, SCP-1016 will gradually alter its appearance to match over the course of several weeks. Regardless of form, the SCP may be identified by indelible bloodstains on the fob. Bloodstains contain human DNA from 27 different specimens, none of which matches any individual on file. If left in place for more than two weeks, the surface SCP-1016 rests on will show evidence of similar bloodstains.

The Foundation became aware of SCP-1016 upon review of the arrest of for the murder of his wife and two children. Anomalies and an allegedly airtight alibi triggered the curiosity of Agents and who proceeded to investigate. Initially believing to be the threat, SCP-1016 was transferred to Site with his personal effects. Upon noting the unusual nature of SCP-1016, was given a Class A amnestic and transferred to a different federal institution.

When inserted into an unlocked mechanism, the key has no effect. When inserted into the locked mechanism of a door or similar barrier

behind which are one or more mammalian lifeforms, the key will open the lock, and have its secondary effects.

When SCP-1016 is inserted into such a lock, any lights in the structure dim noticeably. At such time, instruments detect no fluctuation in the power grid. The dimming phenomenon is noted with both electrical and incendiary light sources, and lasts until the key is removed from the lock or the door is opened past the frame. Following this, an additional presence appears in the structure. Experiments involving autonomously-powered video surveillance of the interior show the video monitoring devices to malfunction as power is restored, in a manner consistent with manual tampering; batteries are removed, lenses covered, or power is turned off. Upon the user entering the structure, persons and higher animals inside the structure at the time of the unlocking act are found to be dead.

Cause of death in SCP-1016‘s victims is universally penetrating trauma with a large, bladed object. Victims bear wounds running along entire lengths of limbs, and in many cases appear to be partially dissected. In each instance, blood and organs from at least one victim will be arranged in what appears to be a specific pattern, although no consistent system has been found between instances. The interior of the residence will show signs of struggle, with overturned furniture, bruising on victims' intact skin, and [DATA EXPUNGED] being commonplace, despite no audible indication of this, even in the room just beyond the entrance. Even in situations where video surveillance would seem to indicate mere seconds passing between tampering and assault, the site contains evidence of struggles that appear to have lasted hours. The original activator of SCP-1016 never reports seeing or hearing anything definite, although upon their initial entrance of the structure, some subjects have reported having their attention inexplicably drawn to empty windows or doorways, or to hear breathing from an unlocatable source.

SCP-1017: The Replacement

Item #: SCP-1017

Object Class: Euclid

Special Containment Procedures: As SCP-1017 remains confined to the London Underground Metropolitan Railway, containment must be enacted in-situ. Detection and identification of an instance of SCP-1017 is crucial, and to be carried out by three Foundation agents who have been inserted into the human resources, train control, and departments of the Transport For London (TFL) administration. Fail-safe explosive charges are placed at key locations in the network, so as to be able to isolate segments in the event of a containment breach.

When a manifestation is detected, two additional Foundation agents are to board the affected train disguised as members of the public, carrying concealed type-21 (Somniacene) gas grenades. MTF Epsilon-12 ("The Train-spotters") are to follow the affected vehicle in a train disguised as an underground railway maintenance vehicle. Any TFL staff attempting to contact the driver of the affected train is to be subtly distracted by the embedded agents. Class-B amnestics are authorised for use if necessary.

Should a Phase-2 event occur, all personnel are to enact procedure 108-Captum, as detailed in this report. Any minor delays or interference caused with the wider London transport network are to be explained to staff and members of the public as "signalling errors" or "planned engineering works".

Description: SCP-1017 is an anomalous phenomenon which frequently occurs on the London Underground Metropolitan Railway. The effect will happen if at least one member of the train driving staff is not present at work due to illness or injury.

The effect first starts when the staff member attempts to notify their

supervisor that they will unable to attend work by telephone. The telephone call will not be received and interviews with the staff member in question have revealed that their call went through to an unidentified male recipient, who agreed to pass on the message.

After this, the train that the absent driver was scheduled to operate will function as normal along the planned route. The effect seems to occur with a preference for operating on the , and lines. The train will stop at stations as normal, and allow passengers to board and disembark as expected. However, the driver's cabin will be entirely empty. CCTV camera footage of affected trains shows the vehicle's controls operating without any visible operator. Curiously, members of the public rarely seem to notice this anomalous effect. Under most circumstances, the train will operate for a full working day, and then be left at the appropriate sidings at the end of the shift.

Although SCP-1017 will always tend to operate when an employee is unable to work, the effect has been noted never to occur during a number of circumstances, including:

- Sundays
- An annual period, normally two weeks in duration, usually occurring in the summer.
- A one week period stretching over Christmas and New Year's Eve.
- Any time that industrial action is undertaken by the National Union of Rail, Maritime and Transport Workers.
- Any day where the soccer team " " is playing in a premiership match.
- The th of October.

Infrequently SCP-1017 may undergo a Phase-2 event, requiring more direct intervention by the Foundation. These are normally triggered by individuals attempting to make contact with the driver of the train, members of the public noting that the train is driver-less, interference with the normal running of the train, [DATA REDACTED] and reflective surfaces positioned near the driver's cabin.

Should a phase-2 event occur, the train will immediately begin to

accelerate to dangerous speeds, ignoring any stop signals, and potentially injuring members of the public who are attempting to board or disembark. The train will continue to build speed, and should procedure 108-Captum not be enacted, there is a major likelihood of a collision with another vehicle or a de-railing incident. Any conscious passengers on board the train will quickly begin to develop a number of harmful symptoms including:

- Intense headaches.
- Brain hemorrhages or aneurysms.
- Apparent auditory and visual hallucinations.
- Loss of reason/rationality.
- [DATA REDACTED]
- Intensely violent and frenzied assaulting of other passengers.
- Violent self-harm or mutilation of the face and eyes.

A summary of procedure 108-Captum follows:

1. Agents on board the train are to immediately render any members of the public present unconscious, followed by themselves.
2. Foundation staff are to remotely cut power to the section of the track containing the affected train, ensuring that the train comes to rest between platforms. MTF Epsilon-12 is to rendezvous with the train.
3. MTF Epsilon-12 is split into two teams. Team Alpha will proceed to the front of the affected train, and deploy concussion grenades through the driver's compartment windows. Team Beta is to position themselves outside the passenger doors of the train, and commence breaching and boarding actions. If the Foundation agents on-board the train are unsuccessful in their mission, team beta is to tranquillise any members of the public still active.
4. Should MTF Epsilon-12 fail, the appropriate explosive charges are to be detonated remotely.

Following the conclusion of these events, standard clean-up operations can be carried out, including administration of amnestics to involved members of the public and the release of a cover story (approved stories include gas leakages, unexploded WW2 ordnance, or terrorism). To date, procedure 108-Captum has been

modestly effective in preventing a containment breach, dealing with 38 Phase-2 events in the past decade, only one of which required the use of the fail-safe explosive charges.

« SCP-1016 | SCP-1017 | SCP-1018 »

SCP-1018: The Thirst

Item #: SCP-1018

Object Class: Safe

Special Containment Procedures: SCP-1018 is currently contained in Storage Unit , located at Site .

All components of SCP-1018 are to be kept in 1m x 1m x 3m containers and kept under guard by two (2) members of security at all times. No liquids are to be introduced to SCP-1018 components without the express permission from one (1) member of Level 3 personnel.

Description: SCP-1018 is the overarching designation given to a group of three statues hereafter referred to as SCP-1018-1, SCP-1018-2 and SCP-1018-3. All components of SCP-1018 depict an emaciated or elderly human male and are composed primarily of concrete and gravel. A red luminescence is visible on several points on the surface of SCP-1018 components, mostly present on the head and throat. SCP-1018-1's anomalous effect is activated by applying pressure to the back of its neck while SCP-1018-2 and SCP-1018-3's are activated by contact with liquid.

When SCP-1018-1 is activated the area within ten (10) meters of it will experience heavy rainfall. In situations where SCP-1018 is activated indoors, this rain will rapidly fall from the ceiling of the structure. Further examination of rainfall produced by SCP-1018-1 shows no anomalous properties. This rainfall will last thirty (30) minutes before abruptly ceasing. The rainfall brought on by SCP-1018-1 will typically activate SCP-1018-2 and SCP-1018-3 when they are in the same structure.

When SCP-1018-2 is activated, six (6) manifestations of what seem to be emaciated children will appear in the area surrounding SCP-1018-2. These children appear identical to several who

disappeared two (2) months before SCP-1018's recovery. All manifestations will approach individuals present and frantically request water. These manifestations are incorporeal and so are unable to consume water even when it is provided to them. Twenty-five (25) minutes after the initial activation, all manifestations will clutch their throats and fall to the ground, where they remain for an additional two (2) minutes before disappearing.

SCP-1018-3 appears to have been heavily modified at some point in the past. Several parts of its structure appear to have been removed and replaced, most notably the left leg and the head. A small hole has been drilled into the left ear of the statue, suggesting something has been removed or inserted. The purpose of these modifications is currently unknown. When SCP-1018-3 is activated, it will begin speaking in a highly distorted male voice. SCP-1018-3 will generally repeat the phrase "Are We Cool Yet?" although rare variations on this have been noted, such as "Art We Cool Yet?", "Are We God Yet?" and "Mars We Cook Yet?". When these variations are spoken, the distortion of SCP-1018-3's voice will increase heavily, with stuttering and slowing-down of speech being common. This speech will continue for thirty (30) minutes before ceasing.

The components of SCP-1018 were first recovered when they were activated at a charity gala intended to raise money to provide clean water to those in troubled areas. Mobile Task Force Upsilon-23 ("Art Critics") were dispatched to recover SCP-1018 and did so without incident. Security camera footage of the incident shows two local activists placing the SCP-1018 components backstage and activating SCP-1018-1 before fleeing. Efforts to locate them have as-of-yet been unsuccessful.

« SCP-1017 | SCP-1018 | SCP-1019 »

SCP-1019: Anartist's Folly

Item #: SCP-1019

Object Class: Euclid

Special Containment Procedures: As SCP-1019 is transient in nature, current containment procedures are geared towards minimizing public knowledge of SCP-1019. When a phenomenon is recognized as an instance of SCP-1019, a decision should be made by a Level 3 or greater researcher on whether to document it immediately, or let it expire naturally, based on possibility of exposure to the public. Heuristic word processing algorithms are to be used on all SCP Foundation files for the possibility of documenting an instance of SCP-1019 before being uploaded to the main database, to avoid an unintentional disabling of the current instance.

An investigation to discover the identity of the entity or entities known as "WAW" is presently underway.

Description: SCP-1019 is the designation given to a series of 20 73 more than 100 loosely related phenomena documented by the SCP Foundation since December 13, 2007. Instances of SCP-1019 have only six documented similarities, and have varied widely in every other respect.

1: Instances of SCP-1019 are localized to either one object or an area of no greater than 20 square meters.
2: Instances of SCP-1019 are not directly harmful to human life.
3: Instances of SCP-1019 are accompanied by an odor of lavender, tea tree oil, Irish Spring soap, or lime.
4: Instances of SCP-1019 are accompanied by a sensation of tingling in the fingertips of the left hand.
5: Instances of SCP-1019 cease being anomalous or completely disappear 90 days after their inception or at the time of their documentation in official SCP Foundation files, whichever happens

first.
6: Instances of SCP-1019, upon ceasing to function, manifest within the area of effect a slip of paper 3x3 centimeters, displaying on one side a white sigil associated with Modern Chaos Magic[1] on a black background with the letters WAW in the center. The reverse side always contains a message in black text on a white background. These slips of paper are not otherwise anomalous, and have been designated SCP-1019-A.

It is important to note that phenomena that fit these conditions are not SCPs in their own right; rather, they are instances of SCP-1019, apparently created by an unknown entity, suspected to be a talented anartist.[2]

Partial list of past instances of SCP-1019:

SCP-1019 instanc	Description	SCP-1019-A message
SCP-1019-1	(Formerly SCP-) A small patch of grass outside Bend, Oregon which continuously wove itself into a fractal pattern. Documented December 13, 2007.	None[3]
SCP-1019-12	(Formerly SCP-) A billboard in Taipei, Taiwan which appeared to be in the native language of any viewer. Documented January 12, 2008.	"Targeted advertising is like hunting birds with lawn darts."
SCP-1019-20	An Arizona Raspberry Iced Tea can which, when kicked, acted as though the local gravity were 0.15G. Connection discovered between	"Childhood would be more fun if our imagination matched reality."

	SCP-1019 occurrences by Foundation researchers, all SCPs that fit the conditions re-filed as instances of SCP-1019. Not documented, ceased functioning April 11, 2008.	
SCP-1019-34	A radio broadcast available only in room 214 of Site 19 at 103.5 FM playing a constant loop of "I Am a Scientist" by the Dandy Warhols. Discovered October 27, 2008. Not documented, expired January 25, 2009. 90 day interval confirmed.	"This should be your theme song. Seriously."
SCP-1019-50	All paper products in, or brought into, the kitchen of Mrs. Amy of Colorado Springs, Colorado instantly shredded themselves into a number of pieces equal to a prime number of three digits or more. Discovered August 5, 2009, not documented, allowed to run its course. Amnestics given to owner of home.	"Art does not have to be creation alone."
SCP-1019-62	Bathroom mirrors in New York subway	"Everyone should take a moment to really

	station reversed their images along the vertical axis. Documented January 1, 2010, to avoid media attention.	look at themselves occasionally."
SCP-1019-112	The men's room of a Starbucks in Waukegan, Illinois, caused anyone currently inside of it to forget the existence of religion, stick shift cars, Waffle House, and chihuahuas until exiting the area of effect. Documented September 18, 2012.	"If only everywhere could be this nice!"

Footnotes

1. A recently formed school of magical theory that combines traditional symbol and ingredient based magical practice with the use of advanced technology.
2. Creator of anomalous objects or scenarios as an artistic expression.
3. At this time, the existence of SCP-1019-A was not yet known.

« SCP-1018 | SCP-1019 | SCP-1020 »

SCP-1020: An Important Letter

Item #: SCP-1020

Object Class: Euclid

Special Containment Procedures: All components of SCP-1020 are to be kept in a storage locker at Sector . The interior of the locker should be monitored by remote video feed at all times. A United States Postmaster General-approved mailbox is to be maintained along an active United States Postal Service pick-up and delivery route at the closest point possible to Sector , currently [DATA EXPUNGED]. This mailbox is to be emptied following every active state of SCP-1020, and the resulting letter read and destroyed unless any details in the letter bear further investigation.

Description: SCP-1020 consists of the following items: A stack of 11 newspapers, a pair of scissors, a jar of rubber cement-style adhesive, a sheaf of 30 sheets of blank white paper, a box of 30 plain letter-sized envelopes, a black ballpoint pen, and a book of 20 stamps. **(See Addendum SCP-1020-01)**

The individual components of SCP-1020 cannot be moved more than 4.5 meters away from each other, nor can any barriers be put in place that would prevent the items' interaction. Any attempt to do so meets an unidentified matching force opposing the action.

Once every 7 to 22 days, SCP-1020 enters an active state. The newspapers are opened and scattered, and the scissors apparently levitate and cut out letters and words from the newspapers. The rubber cement is uncapped, and adhesive is applied to the cut-out segments, which are affixed to one or more sheets of paper. The pen scrawls an address on an envelope in shaky letters. About 1 minute later, all pages of the note are folded and inserted into the envelope. The envelope seals, and a stamp is affixed to it. The envelope then vanishes, and reappears in the nearest US Postmaster General-approved mailbox on an active mail pickup

route.

All letters follow the format of a stereotypical ransom note: the supposed writer of the letter claims “I” or “we” have possession of one or more individuals important to the addressee, and makes demands that are to be met at a certain place and time in exchange for the victim's safe return. Letters occasionally contain misspellings.

Removing the envelope from the mailbox in which it appears, otherwise preventing its delivery to the addressee, reading the envelope, opening the envelope and reading the letter inside all appear to produce no ill effects.

If the letter is read by the addressee, the stated victim(s) will immediately vanish, regardless of the victim's location or activity at the time.

Meeting the demands of a letter produced by SCP-1020 invariably results in the return of the victim within 24 hours to their place of disappearance or another nearby safe location, unharmed and with no memory of the time they were gone.

Recipients are chosen seemingly at random. Letters rarely make demands involving money, and in those cases, the money carries personal value to the recipient or victim. Intercepted letters' demands have included:

- Destruction of family's only vehicle by fire in a local parking lot for return of son.
- Tattooing of a cryptic phrase on the palm of recipient's left hand at a specific tattoo parlor for return of husband
- Cash withdrawal of daughter's entire college fund, followed by random distribution of said cash to strangers at Central Park in New York City for return of said daughter
- Injection of HIV-infected blood into recipient's own veins in exchange for wife (basic Internet search of intended recipient's name indicates he holds an MD and works at Hospital in , .)

No victims have ever been recovered in cases where the demands were not met.

Addendum 1020-01: Examination of components

A close examination of components of SCP-1020 reveals several anomalous features. All destroyed or used components are replaced apparently via teleportation from the nearest available source within 1 minute. There appear to be no range limits on this phenomenon, and research involving destruction of the scissors in particular has been discontinued due to general inconvenience for all Sector staff. Additional anomalous properties follow.

Newspapers: Titles and all other text appear to be gibberish, with seemingly random words strung together and interspersed with spaces and punctuation. This attribute applies even to new newspapers that have replaced destroyed ones in the collection via teleportation. Replacement newspapers are still recognizable by photographic content, font styles and layout. SCP-1020 shows no preference for any particular publication, simply taking the necessary number of mostly complete newspapers from as nearby as possible to maintain a collection of 11 total.

Rubber cement: No amount of force yet applied by researchers can open or break the jar. Forces tested are up to N. The adhesive itself comes from an unknown source, as no rubber cement is commonly used on-site.

Book of stamps: Individual stamps appear to be teleported directly into the book. SCP-1020 will only take modern stamps in this way. The total number of stamps in the book has never dropped below 12.

Incident 1020-01: On / /20 , at approximately 12:30 p.m. local time, a driver struck and effectively destroyed the mailbox located on Road, placed there for collection of SCP-1020's letters. A subsequent interview revealed the driver was intoxicated, and there is no indication of any influence by SCP-1020 or any other outside agent. However, timestamp data on footage of SCP-1020 reveals that within 4 seconds, SCP-1020 became extremely active, drafting and teleporting a -page letter in less than 2 minutes.

Prior research had revealed the location of the next-nearest mailbox, and an MTF was dispatched. Mail pickup had already occurred, and

the local post office had to be shut down for approximately an hour until the target letter was recovered.

An image of the letter's first page and envelope front are available for viewing below.

+ View image

Blacked-out portions and subsequent pages give extremely detailed instructions on how to infiltrate Sector , including staffing details, passcodes, and instructions on how to breach containment on several Euclid-level SCP items, with the end goal of covertly "liberating" and relocating all components of SCP-1020 to a condemned house in , .

Note: *This was a blatant escape attempt, indicating sapience. Yes, yes, it was a very **stupid** escape attempt. But as illogical as this will sound, we're apparently dealing with something that is simultaneously stupid and omniscient - for an unknown value of omniscience. Given just how much inadvertent damage could be caused by another "stupid" escape attempt coupled with some bad luck, and averted for the price of placing several backup mailboxes, I'm submitting a request for a very slight budget increase. -Dr.*

« SCP-1019 | SCP-1020 | SCP-1021 »

SCP-1021: Exit

Item #: SCP-1021

Object Class: Safe

Special Containment Procedures: No special containment procedures needed at this time. All instances of SCP-1021 are currently in use in various sites and facilities. For complete list, see addendum.

Description: SCP-1021 is a set of 7 EXIT signs designed in Art Moderne dating back to the 1940's. The anomalous effect of SCP-1021 will only manifest if it is placed directly over a door made of solid wood; type and design may vary, but the door must be solid with no trappings (ex. windows). Any person opening a door with SCP-1021 over it will find themselves exiting out of a corresponding exit of the Cinema in , MI. Each sign of SCP-1021 belongs to a specific door in the cinema, with the main entrance being the only door without a connection.

SCP-1021 was discovered when a self-described architecture buff visited the Cinema before its demolition in order to study its design, and found a souvenir. According to the witness, the only thing left was a box of exit signs by the main entrance labeled "dump". Enamored by their old-style design, he claimed to liberate one for his own use at home, adorning his bathroom door as a joke. Upon entering his bathroom, he found himself behind the Cinema exiting from the delivery entrance. The subsequent internet postings were found by Foundation computer search algorithms, and an agent was dispatched to investigate. Upon learning the story and viewing its anomalous properties himself, the agent called for backup to the cinema; it was then purchased by the Foundation through the Scenic Cultural Places Association, an organization dedicated to buying and restoring old and unusual buildings. After administering a Class-B amnestic to the witness, all the exit signs were taken and, through study, were found to correspond to a door

within the Cinema. The cinema itself has no history of unusual occurrences, though a small security detail are to remain for 1 month and secure the building.

Due to its Safe-class nature and usefulness, all instances of SCP-1021 have been set up in various Foundation sites to act as an emergency exit, and the Cinema has been renovated to act as an evacuation command area where Foundation staff may seek refuge. The evacuation points in all sites must be kept in a clear area guarded by level 3 security staff, in order to prevent its misuse as a method of smuggling SCPs out of their home sites.

Addendum: List of SCP-1021 assigned locations and corresponding door.

1021-1	Site 19	Exterior exit of theater 1
1021-2	Site 4	Exterior exit of theater 2
1021-3	Site 11	Exterior exit of theater 3
1021-4	SCPS Guardian	Delivery Entrance
1021-5	SCPS Defender	Lobby emergency exit
1021-6	Dr. Bright's closet	Alley way employee entrance
1021-7	Unassigned, requests made through Dr. Khouri **Access Denied**	**Access Denied**

« SCP-1020 | SCP-1021 | SCP-1022 »

SCP-1022: Suspiciously Clean Coat

Item #: SCP-1022

Object Class: Safe

Special Containment Procedures: SCP-1022 may be contained on a clothes rack within a standard secure item locker. Warning labels are to be affixed to prevent confusion with similar attire in use by Foundation personnel. Completion of a comprehensive psychiatric evaluation and the mandatory SCP-1022 orientation course is required for staff who wish to utilise SCP-1022. After the events of Incident 1022-1, use of SCP-1022 is restricted to D-class barring approval by Level 4 personnel.

Description: SCP-1022 is a white cotton-polyester laboratory coat in Size M. It has no identifying markings save for a printed label on the inside collar reading 'Dr. E ', its original owner. All surfaces of SCP-1022 are resistant to microbial colonisation; introduced microorganisms fail to reproduce and subsequently die. It thus remains sterile save in the immediate period after contact with a colonised surface.[1] The physical properties of SCP-1022 are otherwise unremarkable.

When a subject wears SCP-1022, they are able to perceive prokaryotic organisms (primarily bacteria, but archaea may also be visualised by SCP-1022) in the environment at greatly increased magnification, which persists indefinitely even after SCP-1022's removal. This visual effect is comparable to that of a light microscope on high-power settings (1000x), with the result that most organisms visible appear 1-5mm in length or diameter. The effect is not cumulative with magnification apparatus; use of light microscopy will not enlarge organisms, although the subject is able to use more powerful magnification techniques, such as electron microscopy, as normal. Organisms on the surface of the eye are not visible, but organisms on spectacles or contact lenses are, leading to obscured vision in users of these and the inconvenience of constant

sterilisation for normal vision.

Organisms observed by the subject are accurate magnifications, mobile and may be observed to grow, reproduce and bioluminesce where possible. Physical properties of the organisms themselves are unaffected. With appropriate microbiology training, subjects have proved to be capable of distinguishing and classifying organisms accurately. Only prokaryotic cells are visible; eukaryotic cells and nonliving objects are not magnified. Experimentation with viruses is underway pending preparation of a suitable subject and testing environment (it is presumed that only the largest viruses >400 nm would be visible, and the subject would require above-normal visual acuity).

All non-sterile surfaces, including living beings, will appear to the subject as though coated in organisms with density proportional to the level of contamination of the surface. On sufficiently colonised surfaces (>10,000 organisms/cm^2) a 3-dimensional layer of organisms up to 10 cm in height has been observed. This is strictly a visual effect and may be passed through without result, apart from the normal possibility of microbiological contamination when in contact with the surface.

SCP-1022 is a risk for psychopathology in exposed subjects. After experiencing the effects of SCP-1022, subjects may develop anxiety or obsessive-compulsive traits (unsurprisingly, abnormal cleaning habits are dominant), anorexia, and socially isolating behaviours - other manifestations are less common. The pattern of these symptoms is variable between subjects and dependent on factors such as personality traits, underlying psychopathology, occupation and educational level. High threshold for disgust and biomedical education have been noted to be protective. SCP-1022-related psychopathology may be treated by standard methods involving cognitive behavioural therapy to reinforce the harmless and 'normal' nature of the visions, in conjunction with anxiolytic medication.

Addendum 1022-1:

While data on long-term SCP-1022 exposure is scarce, some subjects have reported developing further abnormal sensations after 3 months at a minimum of experiencing SCP-1022's effect. These

include abnormal tactile inputs ('crawling' sensations), the feeling of organisms 'jumping' from surfaces to the subject, and [DATA EXPUNGED]. One subject (D-10225A9) reported mild feelings of discomfort in the throat, chest and abdomen for which no medical cause could be found. Further observation is required. Presently, the development of these is considered harmless and only indicates medication as necessary.

Addendum 1022-2:

Ability of subjects to cope with SCP-1022 exposure in the long term was confirmed by Experiment 1022-5A. D-10225A1 [male, 34, Eastern European, relevant background as emergency medical technician] successfully adapted to SCP-1022's effect and retains normal function and mental stability after months, requiring only fortnightly psychological support and no medication. Dr H submitted a request to have D-10225A1 assigned to the Site- microbial laboratory as an assistant; this was approved and Dr H reports D-10225A1 has been a useful resource for the research team.

Subsequently, a number of proposals have been made for expanded use of SCP-1022 for both D-class personnel and Foundation staff involved in sterile-environment medical work or containment of biologically hazardous SCP objects such as [REDACTED]. Expanded use of SCP-1022 on D-class and staff volunteers is approved post-completion of:

- a proposal demonstrating value of SCP-1022's effects in subject's duties with the Foundation
- a comprehensive psychiatric evaluation
- the SCP-1022 orientation course at Site- , involving 2 weeks of education sessions and isolation in rooms designed to simulate SCP-1022's effects (using a combination of video technology and paper cutouts)

These prerequisites are not mandatory for D-class personnel but are recommended for research and data collection purposes.

> **NOTE [15/01/20]:** Use of SCP-1022 on Foundation personnel has been suspended following Incident

1022-1. Use of D-class personnel may continue but caution is advised.

Incident 1022-1:

Dr A , a Level 3 member of the Site- medical staff, was an early volunteer for use of SCP-1022 and was approved after completing the requirements. He responded well to the effects of SCP-1022 and was functional and mentally stable after weeks with psychological treatment and anxiolytics. On 14/01/20 , Agent R was sent to the Site- medical facility after experiencing bouts of abdominal pain diagnosed as acute appendicitis. As Dr A entered the operating theater, he became highly agitated, administered a lethal dose of anaesthetic to Agent R and called a Level-1 biohazard emergency warning. Appropriate protocols were initiated and the Site and personnel were decontaminated, which revealed no remarkable pathogens. Agent R 's remains were autopsied and found to be normal save a confirmation of the appendicitis diagnosis (the pathogens involved were normal intestinal flora). Agent R was previously healthy and had no record of exposure to major biohazards. Dr A was placed into custody but remained agitated and uncooperative, demanding the incineration of Agent R 's remains and further decontamination of the Site. Interrogation demonstrated his belief in an undefined SCP-level biohazardous contaminant of Agent R necessitating the neutralisation of Site- and non-essential personnel.

Site- remains operational with no ill effects to date and Dr A has been detained indefinitely. Following this incident, use of SCP-1022 on Foundation personnel has been suspended and all subjects exposed to SCP-1022 placed under closer surveillance.

Addendum 1022-3: D-10225A1 has reported auditory hallucinations of 'squirming' sounds. Reassurance was given and he has been started on a low dose of anxiolytics.

Footnotes
1. While no direct link is suspected between the two objects,SCP-791's anomalous sterility manifests in a similar manner.

« SCP-1021 | SCP-1022 | SCP-1023 »

SCP-1023: The Glass Seismograph

Item #: SCP-1023

Object Class: Safe

Special Containment Procedures: SCP-1023 is to be kept within a 1m x 1m x 1m lead-lined steel box to be stored at Research Sector 4 at Site 17 at all times when it is not being tested or studied. SCP-1023 is to be kept under audio and video surveillance at all times during containment and testing, and Senior Researcher is to be notified at any time the object becomes active. All data the object produces is to be recorded both digitally and physically and stored within a secure vault on-site. If any data the object produces is of risk to the Foundation, it is to be forwarded as soon as possible to the nearest Site Administrator.

Description: SCP-1023 is a seismograph of unknown make and manufacture, procured by Agent during a raid on a Marshall, Carter & Dark Ltd. warehouse in [REDACTED]. The object appears to be composed of an unknown material which resembles glass, but contains traces of elements not normally occurring on Earth. The object is a center "post" with 3 outlying platforms which each have one roll of paper, two electrical motors, and a small pen. One platform of the device measures magnitude of the event in a fashion similar to ordinary seismographs, another records the location in longitude and latitude, and the final platform records the date and time (the predicted time of the event has shown a deviation of ± minutes). It has been suggested that SCP-1023 is a modified version of a normal seismograph, as the helicorders it possesses are in the normal positions to record motion in the X, Y, and Z directions. Paper is to be regularly supplied when SCP-1023 runs out, to prevent missing an event.

SCP-1023 is able to record seismic activity from anywhere on Earth. In addition, SCP-1023 is occasionally able to predict seismic activity from the future. The method or mechanism through which it detects

and measures seismic events is unknown. Foundation researchers were able to determine the function of SCP-1023 when a recording from SCP-1023 was discovered to correlate with seismic records of the March 2011 earthquake in Japan, as well as the aftershocks of said earthquake. It is unknown how SCP-1023 chooses which events to report, as it is not reporting all seismic activity in the world. It is theorized that SCP-1023 only reports those events that are relevant to large amounts of people or to its current "owner".

Addendum:

Recorded Output From SCP-1023:
Event 1023-1
Date: 10/18/2011
Location: 27.723°N, 88.064°E, India-Nepal Border
Magnitude: 6.9

Event 1023-2
Date: / /2016
Location: 37.692°N, 122.324°E, San Francisco, California
Magnitude: 9.2

Event 1023-3
Date: / /
Location: . °N, . °E, near Site
Magnitude: 5.8

Event 1023-4
Date: / /
Location: Activity detected from multiple locations within ~19 minutes of each other. Numerous large cities and many Foundation sites appear to be locations given by the device.
Magnitude: Varies slightly depending on location. The similarity of readings indicates detonations of warheads rather than natural earthquakes.

+ MESSAGE VIEWABLE BY LEVEL 4 PERSONNEL AND HIGHER C

SCP-1023's prediction of record amounts of nuclear detonations within a short period on / / is especially worrying given the

increasing frequency with which numerous SCPs are predicting an XK-class event on dates coinciding with or near this date (Including SCP- , SCP- , and SCP-). All precautions are to be taken regarding containment procedure adherence and we are to be wary of outside factions, as well as uncontained anomalous objects. As far in the future as this date is, it is always best to start preparations early. When you have prior notice of a situation, take advantage of it.
Remember: Secure, Contain, Protect.
O5-

« SCP-1022 | SCP-1023 | SCP-1024 »

SCP-1024: The Basic Set

Item #: SCP-1024

Object Class: Safe

Special Containment Procedures: SCP-1024 is kept in a secure locker at Reliquary Containment Site-76, under standard Level 3 Bibliomorphic Containment Conditions. Access to SCP-1024 is prohibited without level 3 authorization. Personnel assigned to researching SCP-1024 have standing authorization for access, but must inform their Project Leader before accessing SCP-1024 and must log all activity related to its use.

Description: SCP-1024 is a modified *Dungeons and Dragons Basic* boxed set, published ca. 1981, in nearly new condition, consisting of a rulebook, a module (a pre-printed adventure), a catalog, a set of dice, and a crayon. Although SCP-1024 superficially resembles a standard box set sold at the time, the rulebook and module have had their pages removed and replaced with sheets of vellum and bound using platinum staples. The pages are filled with diagrams and text written in Classical Latin using red ink, and the books smell faintly of sulfur. Together, the two books provide basic information with which one can, with sufficient study and practice, invoke a variety of low-power anomalous effects.

The rulebook (designated SCP-1024-01) is sixty-four pages long and contains general information regarding invoking these effects, including the types of material to be used (and why), how to choose and prepare a location for invoking these effects, how to prepare the self beforehand, and steps to take in case something goes wrong. SCP-1024-01 does not include procedures for invoking any specific effect, however.

The module (designated SCP-1024-02) is thirty-two pages long and contains step-by-step instructions for invoking a variety of effects, based on information found in SCP-1024-01. Anomalous effects that

have been successfully invoked using procedures found in SCP-1024-02 include:

- Creating a protective circle (SCP-1024-01 notes that invoking this circle is recommended before performing any other process)
- Changing superficial traits on an object, such as its color or roughness
- Changing the ambient temperature slightly (generally by no more than 5°C)
- Repairing minor damage an object has sustained
- Healing minor injuries
- Causing a short-lived tactile effect on another person, such as an itch or a tickle
- Reading the surface thoughts of another person for brief periods
- Causing a small animal (no larger than a mouse) to spontaneously appear

The books imply that **`stronger effects`** can be invoked using information that can be found in a different, **`more advanced`** set of books. However, no such volumes have yet been found.

The remaining components of SCP-1024 (the catalog, dice, crayon, and box) do not appear to have any anomalous properties.

« SCP-1023 | SCP-1024 | SCP-1025 »

SCP-1025: Encyclopedia of Diseases

Item #: SCP-1025

Object Class: Keter Safe

Special Containment Procedures: Due to its potential as a bioweapon capable of destroying all life on Earth, SCP-1025 is to be kept in an isolated underground vault secured by no fewer than 10 armed guards, to be rotated twice weekly and checked for compromise by infectious agents. The vault should be armed with a thermite mine to be detonated at the first sign of containment breach.
Revision: SCP-1025 is to be kept in a passcode-secured locker. Further research requires O5 approval.

Description: SCP-1025 is a hardcover book, approximately 1,500 pages long. The front cover and spine feature the title "The Encyclopedia of Common Diseases." The publisher's page indicates the book was printed in 19 by Press. No other copies of a book with that title and publisher have been found, and no record of the publisher exists.

Readers of the book seem to exhibit symptoms of any disease they read about. The effect can take between and hours to manifest. **(See Test Log)**

Addendum 1025-01: Test Log

> **Subjects:** D-1025-01
> **Test:** Subject read entry entitled "Common Cold." Subject observed for several hours afterward.
> **Results:** Subject exhibited cough within 2 hours, and when asked, claimed to feel "slightly achey," though he attributed this to uncomfortable sleeping arrangements.
>
> **Subjects:** D-1025-02

Test: Subject read entry entitled "Chicken Pox." Subject observed for several hours.
Results: Over the course of one hour, subject observed to scratch at no fewer than 5 points on her body repeatedly. Subject's medical history indicated she had contracted chicken pox at age 8. Possible evidence that item can override natural immunities noted.

Subjects: D-1025-03
Test: Subject read entry entitled "Cancer of the Lungs." Subject observed for several hours. Test was to determine item's ability to accelerate advancement of illnesses.
Result: Subject observed to cough 4 10 6 a significant number of times over the course of hours within a relatively small amount of time. Subject denied feeling any discomfort, but observation of subject's breathing indicated irregularities. Subject terminated and sent for autopsy. No tumors apparent.
Note: *We clearly didn't wait long enough. But we all heard the coughs, and his wheezing.*

Subjects: D-1025-04
Test: Previous test repeated, but subject observed for 7 days.
Results: A lot of coughing and wheezing, far beyond what should be considered normal. Subject terminated and sent for autopsy. No tumors apparent.
Note: *What if the illness vanishes after death, making infection all the more insidious?*

Subjects: D-1025-05
Test: Same as previous.
Results: Same as previous, but subject sent for vivisection, utilizing [DATA EXPUNGED] hours before expiring from shock. No tumors apparent.
Note: *We have to keep trying. Imagine if this were an infectious agent. Imagine if there were more books like this out there.*

[Redundant tests redacted for brevity. In summary, each

test used one D-class subject, who read one entry from the item, and was then tested or vivisected in search of signs of infection following reported symptoms. After test 15, research was moved to a dedicated isolated facility in , , staffed by 3 researchers and 2 security. One D-class subject delivered as needed to minimize space and ration needs.]

Subjects: D-1025-27
Test: Subject read entry entitled "Appendicitis." Subject had undergone an appendectomy at age 16. Observed for 3 days.
Results: After 52 hours, subject complained of stomach ache significant abdominal discomfort. Vivisection performed. No appendix found, but area where appendix would normally be looked a few shades more red than it should be, by general consensus of research staff.

Subjects: D-1025-28 (formerly Researcher)
Test: Subject had developed persistent cough, despite never reading SCP-1025, and was placed in observation for one week.
Results: None apparent for 6 days. At 0930 hours on day 7, subject appeared slightly taller than the day previous. Noted as evidence that item's anomalous properties can cause generation of diseases other than those researched by the victim, and without direct viewing of reading material. Vivisection considered, but overruled for the time being.
Note: *got out! The crazy bastard got out somehow! We were so stupid! The addition of height is a classical symptom of* ***SCP-016*** *adapting to the stress of being confined in that room. Who knows or cares what he was coming down with first? There was a grating on the ceiling. A few more feet of height, and a few inches skinnier, and he'd easily fit. He could be up there right now, growing claws and vomiting infected blood everywhere and taking who knows what other dormant diseases with him.* ***SCP-008****?* ***SCP-742****? Oh, God, what if he's come down with* ***SCP-217****?*

Addendum 1025-02: A recovery team was sent to the facility on / / after no contact was made from the facility for 72 hours. Agents found Researchers and sealed in the observation booth, both wearing biological containment suits. Nearly all stored air tanks were depleted. Agent was found crawling through the facility's air ducts with sidearm drawn. Researcher had locked himself in the barracks with an improvised flamethrower made of aerosol cleaner and a box of matches. Later interview indicated had not climbed into ducts, but simply used his passcode to leave the observation chamber while other researchers were distracted. Agent was found dead in a supply closet locked from inside, with several empty bottles of water and ration packages. The door had been given an airtight seal with garbage bags and duct tape.

Note: *After careful review of all research on SCP-1025, I'm ordering an immediate evaluation of whoever approved the use of 27 D-Class subjects, an isolated facility, and a dedicated underground bunker on this money pit. Not one out-of-the-ordinary infectious agent was found anyplace this item was tested. And every involved staff member had passed a basic psych exam within the previous year. I have no idea how far up the chain of command this "hypochondria by proxy" effect can reach, or how it works, and frankly, I see no benefit in learning. Stick it in a box, lock it up, and for God's sake, try not to worry about it. -O5-*

« SCP-1024 | SCP-1025 | SCP-1026 »

SCP-1026: Someone You Know

Item #: SCP-1026

Object Class: Safe Euclid (see Addendum #1026-1)

Special Containment Procedures: SCP-1026 is contained within a 8 m x 8 m unfurnished room. Personnel are advised not to enter SCP-1026's containment cell without supervision from an external observer. SCP-1026 is contained within a reinforced cell in Sector . Under no circumstances are any personnel to enter the containment area; all observation will be done remotely through security cameras. No care is necessary; SCP-1026 has no apparent need for food, water, or sleep.

Description: SCP-1026 is an entity that produces a powerful mental effect on any observer who sees it directly. This effect causes the observer to become completely convinced that SCP-1026 is someone who they know and trust. There is currently no known way to convince the observer otherwise; this effect will continue for approximately one (1) hour after they are removed from SCP-1026's presence (subjects that lack any close relationships, such as sociopaths, cannot see SCP-1026 and refuse to acknowledge its existence). When viewed indirectly, such as through a camera feed or photograph, SCP-1026 appears as a blurry, roughly humanoid entity. This entity appears to "flicker", rapidly changing height, shape, and color. SCP-1026 is capable of speech; however, this speech sounds extremely garbled and distorted to anyone aside from its observer, who perceives it as perfectly normal human speech. SCP-1026 has also displayed reasoning and problem-solving abilities on par with those of a human, as well as a fairly docile temperament (see Addendum #1026-1).
NOTE: *In my opinion, SCP-1026 probably exists partially "outside" normal space/time. This would explain why it appears to "flicker" when viewed indirectly. However, there's no hard evidence for this; more research needs to be done before we can get an accurate idea*

of its true nature. -Dr.

Addendum #1026-1:
The following log is an account of a test to determine the exact nature of SCP-1026's memetic abilities, performed just prior to Incident 1026-1. On / / D-5582 was told to enter the testing area and perform a series of experiments to gather information about SCP-1026's physiology. Dr. oversaw the test and communicated with D-5582 through a speaker.

Level 3 Clearance Required

[BEGIN LOG]
D-5582 enters test chamber carrying video camera
D-5582: What the hell? There's someone else in here!
Dr. : Yes there is. Please proceed.
D-5582: Oh my- Mom? That's my fucking mother, you bastards! What the hell is this?!
Dr. : That is not your mother. Please proceed with the test.
SCP-1026: *garbled speech*
D-5582: Don't worry, Mom. I'm gonna get us outta here. (to speaker) Let her out now!
Dr. : That is not your mother. Please proceed with the-
D-5582: Fuck the test! I'm not doing anything until you tell me what the hell's going on!
SCP-1026: *garbled speech*
D-5582: I don't know, Mom. That's what I'm trying to find out.
D-5582 throws a piece of equipment at speaker; misses
D-5582: Fuck you! Fuck you all! *begins crying*
Dr. : *sighs* D-5582, the test is now terminated please leave the chamber.
SCP-1026 begins to move towards D-5582
D-5582: I'm not leaving my mother!

Dr. : If you do not vacate the test chamber, I will be forced to call security!
SCP-1026 is now standing behind D-5582
Dr. : I'm going to tell you one last time…
SCP-1026 appears to grab D-5582's shoulders, spin him around, and "stare" at his face
Dr. : I-I need a security team down here now!
D-5582 begins to violently convulse, and his body begins to "flicker" in a manner similar to that of SCP-1026
Dr. : Oh Jesus… There's two of them…
SCP-1026 and D-5582 move towards test chamber door as security team enters
[END LOG]

After the above log was created, SCP-1026 and D-5582 broke containment. Displaying unusually aggressive behavior, they proceeded to kill members of the security team and wound more. The security teams found it very difficult to respond due to SCP-1026's memetic effect. Although one of the entities (now assigned the designation of SCP-1026-A) was lured into a temporary holding cell and re-contained, the whereabouts of SCP-1026-B are unknown (see Addendum #1026-2).

Note: *Shit. These things can reproduce… If there's more of them out there, we could have a serious problem on our hands.* -Dr.

Addendum #1026-2:
On / / , SCP-1026-B was located two miles from Sector , where SCP-1026-A is currently being held (how it managed to cover the distance between the the original facility and Sector is currently unknown). A security team was dispatched to contain it. [DATA EXPUNGED], resulting in the accidental neutralization of SCP-1026-B. Dr. performed an autopsy of the entity on / (see Document 1026-B).

Document 1026-B

Autopsy Report of SCP-1026-B

After the accidental neutralization of SCP-1026-B, its body lost its anomalous properties, appearing to be a normal human cadaver (identified as D-5582). Dr. requested permission to perform an autopsy on the entity. The following report is an audio log recorded during the autopsy.

[BEGIN LOG]
Dr. : The date is / / . This is Dr. , performing an autopsy on the body of SCP-1026-B, which was killed [DATA EXPUNGED]. I will begin by making an incision in the subject's abdomen.
15-second gap
Dr. : I have just completed the first incision into the subject's abdomen. I can see no internal organs aside from a single large sac attached to the subject's vertebrae. I am attempting to open it…
9-second gap
Dr. : The sac is full of… fog, for lack of a better word. It appears to be much denser than air, as it's not flowing upwards. I'm taking a sample of it for later analysis.
11-second gap
Dr. : I am now attempting to open the subject's thoracic cavity.
34-second gap
Dr. : Subject does not appear to possess a normal thoracic cage… Instead, there are two curved plates attached to the spinal column in its place. There appears to be a pair of organs beneath these. I will attempt to remove them.
69-second gap
Dr. : The organs appear to be solid; I see no sign of

any fluid or gas inside. I'm taking a sample for later analysis, and will then attempt to examine the skull.
176-second gap
Dr. **:** Sorry about that. When I attempted take a sample, the "fog" began glowing… I'm going to try again.
6-second gap
Dr. **:** Just a minute… I've got a headache all of the sudden…
12-second gap
Dr. **:** Jesus Christ, this hurts… What the-?
[END LOG]

The log was ended due to an unexpected loss of power in the autopsy room. When a security team entered, they saw no sign that an autopsy had taken place. SCP-1026-B's body was intact, and Dr. claimed to have no memory of what had happened. A subsequent autopsy revealed that SCP-1026-B possessed normal human physiology and no anomalous properties whatsoever.

SCP-1027: Carnivorous CNS

Item #: SCP-1027

Object Class: Euclid

Special Containment Procedures: SCP-1027 is to be housed in a standard liquid containment tank, immersed in a saline solution. Personnel are to avoid direct physical contact with SCP-1027 with the exception of feeding staff. SCP-1027 is to be given one (1) fresh bovine brain per week. All staff involved in feeding of SCP-1027 are to wear Level-4 bio-protective equipment. In event of exposure to SCP-1027, affected personnel are to be immediately treated as instances of SCP-1027 and subjected to standard containment protocols.

Description: SCP-1027 closely resembles the central nervous system of a human (*Homo sapiens*) that has adapted to life outside the human body. Specimens currently in the possession of the Foundation measure from 1.1 meters (measured from the apex of the cerebrum to the base of the sciatic nerve) to 1.5 meters. Attached are the basic sensory structures associated with human functioning, including sensory nerve structures, eyes, and cochlea. SCP-1027 appears to be able to interpret signals from these systems in the same way as a human subject. However, all neural structures within SCP-1027 are capable of movement to varying extents. This movement is most noticeable while SCP-1027 is immersed in a liquid medium.

Neural composition in SCP-1027 appears similar to that of a human, with the exception of the neuroglia. The myelin sheathing covering the cells of SCP-1027 is approximately 300% the thickness of that found in a healthy adult human. In addition to this, glial coatings on neurons of SCP-1027 have been found to extend the full length of the cells, and are apparently permeable to neurotransmitter compounds. As a result, SCP-1027 is capable of supporting itself outside the environment of a living body, although it is most

comfortable in a somewhat saline water solution.

SCP-1027 seems to feed primarily on the neurotransmitters found within mammalian brain tissue. Consumption takes place by a process similar to osmosis, in which the neuroglia of SCP-1027 extract and absorb certain compounds. The exact process through which this is accomplished is unknown. Regular feedings render SCP-1027 much more docile, reducing the risk of exposure. However, it seems that SCP-1027 is capable of survival for extended periods without feeding, and it is not known at this time whether there is actually a biological need for these chemicals.

When presented with live prey, SCP-1027 will apparently merge with its nervous system, draining neurotransmitter agents over time, leading ultimately to death. However, when exposed to a living or recently deceased (less than 12 hours prior to exposure) human, SCP-1027 will instead infiltrate the brain through the auditory canal. Upon breaching the meningeal membranes, the neural ganglia of SCP-1027 will release a high dose of an apparently modified dopamine compound directly into the brain, in addition to an electrical impulse measured at approximately 150 millivolts. This combination has been shown to initiate basic brain activity in 9 % of cases. The nervous system of the subject will begin to modify itself into a new instance of SCP-1027. The neuroglia thicken, and the entire central nervous system detaches from the host body by accelerated decomposition. To date, no specimen of SCP-1027 has been shown to possess any memories prior to becoming detached, and have a functional intelligence level equivalent to that of a lower primate.

« SCP-1026 | SCP-1027 | SCP-1028 »

SCP-1028: Mindwarp Murmuration

Item #: SCP-1028

Object Class: Safe

Special Containment Procedures: Instances of SCP-1028 are to be kept in a large free-flight aviary. When needed, the feeders are to be filled with seed and berries. Once a week, the insect, earthworm, and snail population of the aviary should be checked, with more being introduced as needed. Care is to be taken to ensure that all specimens remain fairly calm, and any flora species or variety not accounted for in the building of the aviary is to be removed and incinerated, as per Addendum 01.

Wild instances should be caught or killed. Standard traps used for the capture of similarly sized birds are suggested. Live captured specimens are to be transported individually and released into the aviary. Killed instances should be preserved and brought to the lab at Site- for dissection by staff researchers.

Description: SCP-1028 is a previously unknown species of Passerine (songbirds), with some aspects of physiology, size, and genetics pointing towards an inclusion in Family Sturnidae (Starlings). All discovered instances have had brilliant iridescent plumage. There is no uniformity to the color of the individual instances, leading some to suspect that SCP-1028 is actually several subspecies, each with a different dominating color. No sexual dimorphism has been observed in the species. Instances of SCP-1028 produce the usual complement of songs, calls, and vocalizations usual to their order. Most calls produced by specimens have no effect on other animals, and many humans find them pleasant to hear.

The unusual properties of SCP-1028 appear strongest when a large flock are observed flying. When a flock of 25 or more instances are flying together, the flock appears to scintillate, creating a dazzling

effect on observers. This dazzling effect is not limited to human observers, as dogs, cats, foxes, and other predators have been observed to act in a stunned manner when passed by a large enough flock.

The sharp, high pitched mobbing call produced by instances has a similar effect to the flocking. It not only calls more instances to the area, but also induces a dazed effect in predatory species. Affected individuals claim to have observed flashes of light punctuating each call.

Those affected by either form of dazing enter a state of altered perception, lasting for a length of time proportional to the time spent viewing or hearing instances.

The existence of SCP-1028 was brought to the attention of the Foundation when a large traffic accident occurred in , which resulted in casualties, and hospitalizations. None of the witnesses saw the accident, but all reported seeing a multicolored flock of birds. An interview with one of the witnesses is reproduced below.

Interview Log 1028-03

Interviewed: Eyewitness to flock of SCP-1028

Interviewer: Dr.

Foreword: One of the surviving eyewitnesses to the flock that brought SCP-1028 to the Foundation's attention.

> **<Begin Log>**
>
> **Dr. :** Can you tell me what happened the afternoon we found you in ?
>
> **Subject:** I was walking down the street, you know? And suddenly this big flock of birds was flying overhead. They were brilliant! I swear, they were every color imaginable. They seemed to shimmer and sparkle in the light. They got so bright, I had a hard time looking at them after a while. But I couldn't stop staring.

Dr. **:** What happened then?

Subject: (Nervous laughter) You wouldn't believe me if I told you.

Dr. **:** I'm very open minded. I really would like to hear what happened next.

Subject: There was a sudden flash of light, and when I looked around me, everyone was gone.

Dr. **:** Gone? Please explain.

Subject: The buildings were still there, and the parked cars, but there was nobody driving in the street. Nobody around at all. And the buildings and parked cars? They had plants growing on them. Like, you know how kudzu or ivy covers everything? Well, this was like that, but the plants were weird.

Dr. **:** In what sense?

Subject: The colors were, um, wrong.

Dr. **:** If at all possible, please go into more detail.

Subject: (Nervous laughter) The leaves weren't green. They were blue, or purple. There were these flower-like things. No, they were like dandelion puffs, but more cage-like. I know, it sounds crazy, or like I had an acid flashback or something. But, really, for a while I was wandering around in the same neighborhood, but completely alone, and with these weird plants growing on everything. But after a while, people and things started to fade back in. And suddenly, I saw that there was this massive traffic accident. Cars had crashed, people had been hit, chaos everywhere.

Dr. **:** And what did you think of that experience?

Subject: That I was lucky I didn't wander into the street.

<End Log>

Closing Statement: The subject was given a class-B amnestic and released.

Addendum 01: It appears that when instances of SCP-1028 are in distress for a prolonged period of time, an emergence of one or more sprouts of unusually-colored flora begin to grow in the vicinity of the distressed animal. Regardless of what species an emergent sprout resembles, all grow at a rate similar to that of *Pueraria lobata* (kudzu). Individuals who have been exposed to both the effect of specimens and have seen the outgrowths claim a resemblance between the new plants and what they saw while affected. In light of this, new procedures have been added to containment.

« SCP-1027 | SCP-1028 | SCP-1029 »

SCP-1029: Scratch 'n' Sniff JPEG

Item #: SCP-1029

Object Class: Safe

Special Containment Procedures: Three copies of SCP-1029 are currently stored on standard CD-R media in the secure sections of Foundation libraries at Sites , and . Access is permitted only for authorised research into the cause of its effect.

Description: SCP-1029 is a 683×1024 pixel EXIF JPEG image file with MD5 checksum bbb61a1033967e337e1c691bd1c860fe. It depicts a stalk of purple flowers of the species *Hyacinthus orientalis*. When displayed full-size on a computer monitor and the surface of the screen is gently rubbed with a finger (skin proximity appears to be necessary to trigger a reaction), the flower's distinctive fragrance is released in the manner of a "scratch 'n' sniff" card.

Air samples taken while rubbing SCP-1029 induce the perception of the same floral scents when later sniffed by test subjects, suggesting that SCP-1029 has a definite physical, rather than purely mental, effect. Chemical analysis of air samples is in progress.

For the image's unusual response to occur, pixel-for-pixel reproduction of SCP-1029 appears to be necessary, along with colour rendition capable of differentiating all the colour values present within the image. While most CRT monitors are capable of showing the effect with no specific adjustment, many low-end LCDs and most panels older than years have failed to yield a detectable smell. It should, however, be noted that SCP-1029's odour does not vary in strength depending on image quality; it is simply not produced at all if the image was not reproduced within certain parameters.

Reducing the image's colour depth, rescaling it to a smaller size or applying any lossy image processing or editing procedure (including

JPEG recompression) have been found to produce an image which does not display SCP-1029's anomalous effect. Lossless rotation by a multiple of 90°, lossless conversion to PNG or TIFF format, and cropping of up to pixels off the right edge or pixels off any other edge of SCP-1029 have been found **not** to affect the image's properties. Uncorrupted digital copies of the file in any form or medium appear to retain the properties of SCP-1029; in a sense, all such copies **are** SCP-1029.

SCP-1029 was discovered by Agent on a web image gallery at URL [DATA EXPUNGED] on / / while browsing using a touch-screen computer. Agent noticed the image's reaction to being rubbed and saved a copy for further study. The full-size "original" image file (4752×3168 resolution, produced by a 50 camera according to its EXIF metadata) has also been downloaded from the same site and does not seem to exhibit the same property as SCP-1029; thumbnails and other derived images on the same site are also similarly lacking in SCP-1029's effect.

Researcher has been tasked with attempting to discover a suitable combination of software and settings which, when applied to this full-size image, reproduce SCP-1029.

Agent has been tasked with cracking into the web server, ascertaining the extent of distribution of SCP-1029, and removing SCP-1029 from public view. The file is to be replaced with a recompressed version of SCP-1029 verified not to exhibit any unusual effect; any logged accesses to SCP-1029's URL are to be traced and contained. The web site is to be monitored for any reappearance of SCP-1029.

Addendum: While output from ink-jet and laser printers, even when carefully calibrated and apparently meeting SCP-1029's criteria, do not display any response to rubbing, dye sublimation prints of SCP-1029 have been found to produce fragrance with little tweaking required. It has been suggested that this is due to the dithering ("dottiness") of ink-jet and laser prints versus the continuous tone output of the dye sublimation process.

Addendum: A correlation between sweat on the skin and odiferous intensity has been observed. Doctor triggered SCP-1029's

effect with an unusually sweaty finger shortly after an episode of strenuous exercise in the gym; the smell was later described as "overpowering". This suggests a phenomenon in which sweat (or some component thereof) is being converted to specific odour molecules. Investigation into this process is ongoing.

« SCP-1028 | SCP-1029 | SCP-1030 »

SCP-1030: Anything Golem

Item #: SCP-1030

Object Class: Euclid

Special Containment Procedures: SCP-1030-1 is to be kept in a 7m x 5m holding cell under video surveillance and staffed by one guard. Minimal furnishing is allowed, as SCP-1030-1 does appear to be able to experience "comfort" and "pain." There are to be no tangible objects in the cell except one word processor terminal, to be built into the wall of the cell. SCP-1030-1 may request materials for self-repair by typing on this terminal. Staff are to place materials in the airlock between the observation booth and the holding cell, then vacate the airlock before SCP-1030-1 is given access to it.

Under no circumstances should SCP-1030-1 be given any sharp objects or potential writing utensils. Any attempt by SCP-1030-1 to draw or carve SCP-1030-2 shall result in revoking of word processor privileges until later review. Any resulting instances of SCP-1030-3 should be reverted by removal of SCP-1030-2, or, if more convenient, destroyed by fire.

Description: SCP-1030-1 is a humanoid figure approximately 1.65m tall, constructed of various objects. As of / / it is composed of a pair of shoes, a computer mouse, a garbage can, 4m of rubber hose, crushed remains of a push-cart, a personal digital organizer, a labcoat, a pair of glasses, and .

Objects integrated into SCP-1030-1 corrode, rot, or otherwise decompose at an accelerated rate. Heavily damaged objects are expelled and replaced by an unknown force using other nearby objects capable of roughly filling the vacated space. Objects may contort or break if necessary, but preference is given to objects requiring a minimum of effort.

Ruined items are not expelled until a replacement is found.

SCP-1030-1 has expressed that keeping damaged items integrated is "painful."

The only constant feature on SCP-1030-1 is the presence of a complex symbol (hereafter SCP-1030-2) that becomes engraved on the “back” of whatever analog SCP-1030-1 is using for a head. Part of the symbol includes the Hebrew word "חיים."

SCP-1030-1 expresses periodic desire to copy this symbol onto other objects. Any objects marked in this way (known as SCP-1030-3) become animate with some control by SCP-1030-1 as long as they are within m of SCP-1030-1. Beyond that range, SCP-1030-3 invariably become hostile, seeking out and attempting to harm any humans in any way possible. Removal or destruction of any portion of SCP-1030-2 reverts such items to their original, inanimate state.

Recovery notes
SCP-1030-1 was initially contained following stories of a "monster" near a garbage dump in , Czechoslovakia. Agents captured SCP-1030-1 on / /19 using powerful magnets, as much of its body was composed of scrap metal at the time. SCP-1030-1 offered no violent resistance, attempting only to flee at first contact, and ceased its attempts after several minutes.

Addendum 1030-01: Deviant behavior/New containment procedures
SCP-1030-1 has begun attempting to place SCP-1030-2 on any object it can access, with mixed success. New containment procedures forbidding the presence of non-repair objects implemented due to extra security measures needed for animated furniture. Walls and floor are now padded fabric due to severe structural damage caused by animation of walls and floor. Computer terminal resolution and size have been reduced following input of ASCII version of SCP-1030-2 that resulted in violent animation of computer terminal.

Following implementation of new containment procedures, SCP-1030-1 has ceased regular movement and refused to type on terminal except for the word "Alone," once a day.

Addendum 1030-02: Incident report
Following initial testing on replication of SCP-1030-2, SCP-1030-1 was denied access to any objects for self-repair purposes with the aim of coercing SCP-1030-1 into explaining why the symbol wasn't effective when copied by Foundation personnel. The word processor was also removed. SCP-1030-1 was told to respond by signing letters in the air.

After 22 days with no useful response, SCP-1030-1's components appeared to be in severe disrepair. After subject was observed to sit for several hours without motion, then-head researcher Dr. entered the cell with a sealed metal box of debris on a push-cart (current containment procedures were not in place), stating intention to "tempt" SCP-1030-1.

The resulting video record has been preserved for study.

> <0754:13> Dr. enters containment cell, pauses while door is sealed behind him, and shakes cart.
> <0754:16> SCP-1030-1 rises to "feet," immediately makes defensive or warding gestures with "arms."
> <0754:20> Dr. takes two steps toward SCP-1030-1 with cart, at which time Dr. 's glasses appear to fly off his face and replace a disintegrating cardboard tube as SCP-1030-1's thumb. Dr. feels face, then lets go of cart and turns to door.
> <0754:22> Dr. , facing door, appears to leave ground, flying backwards toward SCP-1030-1.
> <0754:25> Dr. 's entire body [DATA EXPUNGED] violently by an unidentified force, with no apparent regard for previous anatomical functions.
> <0754:30> SCP-1030-1 drops to "knees" and repeatedly slams own head (at the time a wastepaper bin) against back wall of containment cell for approximately 30 seconds.
> <0755:01> SCP-1030-1 rises, rocking its body, and begins stroking Dr. 's head and back, currently located [DATA EXPUNGED].
> <0858:15> Dr. ceases movement.
> <0858:22> Push-cart accelerates toward SCP-1030-1,

discarding box of debris. Cart is crushed and re-shaped by unknown means, replacing portions of Dr. , which are expelled onto the floor.
<0858:40> Box accelerates toward SCP-1030-1. Box is crushed, exposing items inside. Box and all items integrated into SCP-1030-1. All previous components of SCP-1030-1 have now been replaced.
<0858:54> SCP-1030-1 sits in corner of cell.
<0920:10> Security and clean-up crews enter. No reaction from SCP-1030-1.

Addendum 1030-03: Unprompted writing
SCP-1030-1 does not typically initiate communication except to request new materials, and only offers minimal response to questions. However, on one occasion, approximately 1 hour after fruitless questioning had ended regarding SCP-1030-1's origins, SCP-1030-1 entered the following on the terminal in its cell.

Was man.
Man lived. Man would die.
Maker came down.
Maker said you live. You make. Maker marked man.
Man lived. Man made things.
Man died. Things made man.
Man lived again. Man made.
Man lived. Man made.
Man lived. Man made.
Man lived. Man made.
Man lived. Man made.
Ask maker, man die please? Man so tired.
Maker said no. Man has mark.
Mark is on head. Mark in head too.
Know mark too good. Always remember.
Cannot forget mark.
Mark is life.

Note: Following review of the above writing sample, simultaneous and contradictory requests have been filed by co-heads Drs. and . Dr. requests total cessation of all visual study of SCP-1030-2. Dr. requests approval for use of D-class

personnel for expanded research into the tattoo reproduction and memorization of SCP-1030-2. O-5 response pending.

« SCP-1029 | SCP-1030 | SCP-1031 »

SCP-1031: Red Light Enforcement Module

Item #: SCP-1031

Object Class: Safe

Special Containment Procedures: SCP-1031 is to be kept in a secure storage locker at Site . It may be removed for experimentation but must be returned set to "Off" and with SCP-1031-2 attached to the side with adhesive tape.

Description: SCP-1031 is a heavy duty weatherproof ABS plastic box measuring 20cm×15cm×5cm, weighing 770g and coloured mid-grey. The box is sealed shut. Screws are visible in deep shafts at each corner, but the screw heads appear to have been reamed out to prevent extraction. A grooved circular metal strap and associated tightening mechanism ("jubilee clip") is attached to the centre of one 20×15cm side, and a printed vinyl label is affixed to the opposite side. The label identifies the box as a " Ltd[1] Red Light Enforcement Module", gives instructions for attaching the box to a traffic light pole, and warns that the item is "Tamper-proof! Do not attempt to open!" accompanied by an iconic representation of an intruder being [DATA EXPUNGED]. Below the label is a keyhole, around which are three labelled settings: "Off", "Enforce" and "Mark".

SCP-1031-2 is a key which fits the keyhole on SCP-1031. It appears to have no special properties and has been successfully copied by a Foundation locksmith using standard techniques. It does not appear to be possible to open the box using the key.

SCP-1031 appears to be inert unless it is (a) attached to a traffic light pole (with lights actively operating in a sequence including red and green phases) in the manner described on the label, and (b) set to "enforce" or "mark" using SCP-1031-2. See attached logs for more information on the item's effects.

It should be noted that SCP-1031 does not require (indeed, has no connections for) any power or other connection, and has not been observed to actually **do** anything itself (although the effects noted in the test log below are clearly caused by SCP-1031's presence and the position of its keyway). There are no lamps or other indicators on the box. How its effects are caused is currently unknown.

SCP-1031 was retrieved by Agent from a road-side location in south-west , UK on / / after analysis of road traffic accident data revealed the recent very sudden formation of an accident black-spot. SCP-1031-2 had been left in the keyway of SCP-1031.

Test log 1031-01: Testing was carried out at Research Site- . A traffic signal was installed at a suitable position in the car park, programmed with a simple 30-second green/red sequence and SCP-1031 was installed on the same pole according to its attached instructions. A white line was painted across the road beside the pole, and D-class test subjects ordered to drive a vehicle across the line.

Date: / /

Subject: D-3879
Key setting: Off
Vehicle type: Hatchback, 1.1L
Speed: 30kph
Phase: Vehicle reached line during green phase
Result: No effect. Subject stopped vehicle 14m beyond line for further instructions.

Subject: D-3879
Key setting: Off
Vehicle type: Hatchback, 1.1L
Speed: 30kph
Phase: Vehicle reached line during red phase
Result: No effect. Subject stopped vehicle 12m beyond line for further instructions.

Subject: D-3879
Key setting: Enforce
Vehicle type: Hatchback, 1.1L

Speed: 30kph
Phase: Vehicle reached line during green phase
Result: No effect. Subject stopped vehicle 9m beyond line for further instructions.

Subject: D-3879
Key setting: Enforce
Vehicle type: Hatchback, 1.1L
Speed: 30kph
Phase: Vehicle reached line during red phase
Result: Vehicle halted suddenly at line, as if in collision with a fixed object. Air bag deployed. Subject suffered bruising to chest due to seat belt and reported feeling "shaken". Full width of vehicle front bumper crushed; little other damage to vehicle.

Subject: D-3880
Key setting: Enforce
Vehicle type: Hatchback, 1.1L
Speed: 30kph
Phase: Vehicle's front bumper crossed line 0.2 seconds before start of red phase; vehicle still crossing line at start of red phase
Result: No effect. Subject stopped vehicle 17m beyond line for further instructions.

Subject: D-3880
Key setting: Enforce
Vehicle type: Hatchback, 1.1L
Speed: 50kph
Phase: Vehicle reached line during red phase
Result: Upon crossing line, front tyres immediately deflated with a loud "bang" causing subject to lose control. Vehicle halted 27m past line, facing sideways relative to its direction of travel. Subject physically unhurt but claimed to be "out of sorts".

Subject: D-3881
Key setting: Enforce
Vehicle type: Bicycle
Speed: 15kph
Phase: Vehicle reached line during red phase
Result: Upon crossing line, front wheel became solidly fixed to road surface. Subject flung over handle-bars and suffered bruising and

minor cuts on impact with road surface. Bicycle remained upright with wheel fixed in position; bicycle could be rotated around fixed wheel. 5 seconds before red phase ended, wheel became free to move and bicycle fell to road surface. No damage discovered to road surface, tyre or wheel at point of adhesion.

Subject: D-3882
Key setting: Enforce
Vehicle type: Motorcycle, 750cc
Speed: 40kph
Phase: Vehicle reached line during red phase
Result: Upon crossing line, vehicle's drive chain broke. Subject reported momentary loss of control but was able to bring the machine to a halt safely 8m beyond line. Subject physically unhurt.

Subject: D-3880
Key setting: Mark
Vehicle type: Hatchback, 1.1L
Speed: 50kph
Phase: Vehicle reached line during red phase
Result: As vehicle crossed the line, horizontal red stripes 23cm wide appeared along both left and right sides of the vehicle approximately 80cm above ground level, as if spray-painted by a stationary agent while the vehicle was in motion. Later examination showed no evidence of an extra layer of paint having been added; the original paint-work's colour seems to have been altered. Removal of the stripes is estimated to require a full respray of the affected panels.

Subject: D-3882
Key setting: Mark
Vehicle type: Motorcycle, 750cc
Speed: 40kph
Phase: Vehicle reached line during red phase
Result: Red stripes 23cm wide and 80cm above ground level appeared on both sides of the motorcycle. Where the stripe crossed the subject's leg, the colour change appeared on the subject's clothing (shorts) and, where not covered, skin. Subject screamed as the colour change occurred; subject later reported that pain had occurred in the affected area and had disappeared as quickly as it

had appeared. Affected areas of the subject's skin have become a uniform bright red colour matching the stripe on the vehicle. Washing with soap and water does not affect colouration; study of skin biopsies is recommended to determine how the change has been effected.

Footnotes

1. Ltd has been traced through Companies House and contacted by a Foundation front organisation. They claim never to have produced such a device, and that they are, in fact, a fashion clothing manufacturer.

« SCP-1030 | SCP-1031 | SCP-1032 »

SCP-1032: The Prediction Clock

Item #: SCP-1032

Object Class: Safe Euclid

Special Containment Procedures: SCP-1032 is to be stored in a high-value inanimate-item cell at Sector-19. One unarmed guard is to be posted inside the cell at all times to **`prevent tampering.`**

SCP-1032 is to be monitored at all times by a high-speed camera fitted with a macro lens capable of no less than 20x magnification, or greater as necessary to ensure that all text on the hands is legible. The footage from this camera is to be searched daily for any instances of any hand passing the 12 o'clock position ("midnight events"; see Description). After each midnight event, the new text for the hand involved must be recorded, and its current speed and estimated time to midnight calculated.

Description: SCP-1032 is a silver alarm clock of unknown make and origin. The clock is made from silver, plastic, and glass, and bears twenty-two (22) hands of various sizes and shapes.

The movements of SCP-1032's hands do not measure the passage of time. Each hand instead measures the time until the end of an ongoing event or the destruction of an extant entity. White text on the front of each hand, in sizes ranging from barely legible to microscopic, describes the event to be measured by that hand.

When one of SCP-1032's hands reaches the twelve o'clock position, several events occur simultaneously, the combination of which is referred to as a "midnight event". First, the event or entity currently written on the hand ends or is destroyed. Second, the text on the hand spontaneously changes to describe a new event or entity, which need not bear any relation to the previous one. Third, the hand's rotational velocity changes.

To date, SCP-1032 has never been wrong: every event appearing on its hands has ended precisely at the moment of the corresponding midnight event. It has accurately predicted the deaths of over individual organisms, the fall of governments, the dissolution of major agencies and institutions, the death of a language, and the beginning of the . Since any given hand's speed remains constant at all times except during midnight events, the time to the end of any entity measured by one of the object's hands can be predicted precisely.

The hands are designated SCP-1032-01 through -1032-22, in order of size from smallest to largest.

The following is a list of SCP-1032's hands and their current inscriptions. A full log of all relevant past inscriptions can be found at [FILE ACCESS RESTRICTED]

> SCP-1032-01
> Current text: SCP-1032-01 rotates too fast to have a constant measurement.
> Predicted date (of next midnight event): N/A
> Notes: SCP-1032-01's only recorded text to date has been one of the three following: "A thought." "A sound." or "A sensation."

> SCP-1032-02
> Current text: "The worst thing that will ever happen to anybody."
> Predicted date: SCP-1032-02 moves too slowly to measure.
> Notes: Due to the vagueness of this inscription and the impossibility of calculating the time until its next midnight event, no useful information on SCP-1032-2 is available.

> SCP-1032-03
> Current text: "My Safe classification."
> Predicted date: 02/06/2012
> Notes: Dr. Guenther has suggested that, since SCP-1032 shows signs of self-awareness, it should be promoted to a Euclid-class threat. This proposal is scheduled for review on the 2nd of June, 2012.

Current text: "My Euclid classification."
Predicted date: 09/01/2015
Notes: As SCP-1032 has yet to manifest any properties warranting a Keter classification, Dr. Edison has proposed that SCP-1032 should be demoted to Safe. This proposal is scheduled for review on the 9th of January, 2015.

Yes, blindly following this prediction isn't very productive, especially when it's probably just going to make us change it back anyway. But the way these things usually work if we don't demote it, it might start doing things that force us to make it Keter. We have enough of those things on our hands thank you very much. -Dr. Edison

SCP-1032-04
Current text: "The Universe."
Predicted date: [DATA EXPUNGED]
Notes: It is unknown whether this refers to the actual end of our universe, to the end of all entities that could be referred to as universes, or merely to the end of the concept of universality.

SCP-1032-05
Current text: "A failed infomercial."
Predicted date: N/A
Notes: SCP-1032-05 moves very quickly, cycling two to five times per day. To date, it has never displayed any other inscription.

SCP-1032-06
Current text: "Freedom of the Press."
Predicted date: 16/05/2073
Notes: SCP-1032-06 does not specify the country or countries whose freedom of the press will end.

SCP-1032-07
Current text: "Humor."
Predicted date: 22/03/2052
Notes: N/A

SCP-1032-08
Current text: "The use of the phrase 'You can say that again'."
Predicted date: 22/03/2267
Notes: N/A

SCP-1032-09
Current text: "Hostilities between the nations of Africa."
Predicted date: [DATA EXPUNGED]
Notes: As SCP-1032 has often predicted violent or disturbing events using apparently harmless phrases, this inscription is considered equally likely to predict peace in Africa or the destruction of the continent.

SCP-1032-10
Current text: "Jason W. Tailor Jr.'s sister's daughter."
Predicted date: 14/10/2029
Notes: To date, all inscriptions on SCP-1032-10 have described individual human beings. These people are usually difficult or impossible to identify and locate. On 12/04/2011, however, SCP-1032-10 predicted the death of D-56342, a Class D subject then assigned to SCP-1032. Five minutes before his predicted death, the subject was sealed in an airtight steel chamber with two guards; all three were equipped with self-contained breathing apparatus. Despite all precautions taken, D-56342 expired exactly at the predicted time. His guards were initially unable to determine the cause of death, until it was discovered that his oxygen tank had mistakenly been filled with the pressurized VX nerve gas used to control SCP- . Further investigation is in progress.

SCP-1032-011
Current text: "President 's term in office."
Predicted date: / /
Notes: is currently the president of .

SCP-1032-012
Current text: " Burger Joint"
Predicted date: 04/07/2016

Notes: All SCP-1032-012 inscriptions describe non-corporate restaurants. On 06/10/1993, in an attempt to keep " 's Hotdogs" from closing as predicted, the SCP Foundation donated an anonymous $10,000 to the restaurant on condition that it remain in business. The owner renovated and renamed it " ".

SCP-1032-013
Current text: "2020"
Predicted date: 01/01/2022
Notes: Researchers are attempting to discern whether or not this will constitute SCP-1032's first failure.

[DATA EXPUNGED]

SCP-1032-15
Current text: "Effective Containment"
Predicted date: 09/04/2690
Notes: SCP-1032-15 will achieve its "midnight event" at approximately the same date as **SCP-094** will fully engulf the Earth at its current rate of expansion.

SCP-1032-16
Current text: **"Project Serapis"**
Predicted date: 02/11/2016
Notes: [DATA EXPUNGED]

[DATA EXPUNGED]

SCP-1032-020
Current text: " ."
Predicted date: / /
Notes: is a popular Mexican soap opera.

SCP-1032-021
Current text: "The SCP Foundation."
Predicted date: [DATA EXPUNGED]
Notes: [DATA EXPUNGED]

SCP-1032-022

Current text: "Concern for public health."
Predicted date: 28/07/2032
Notes: It is unclear whether this inscription predicts a lack of need for concern or a lack of concern in general.

« SCP-1031 | SCP-1032 | SCP-1033 »

SCP-1033: 33 Second Man

Item #: SCP-1033

Object Class: Euclid

Special Containment Procedures: SCP-1033 is to be held in a 15m by 5m standard cell, lined with 5m thick lead plating. Personnel entering SCP-1033's chamber must wear approved Level A hazmat suits. If SCP-1033's routine changes or if SCP-1033 attempts to escape, the two guards stationed outside SCP-1033's chamber are to be reinforced with eight more, all armed with Containment Kit 4-MK3 (consisting of a SCAR-L assault rifle with underbarrel net launcher, two (2) flashbang grenades and one (1) M67 fragmentation grenade).

Description: SCP-1033 is a middle-aged Caucasian male, approximately 193 centimetres, or six feet and four inches tall. SCP-1033 was discovered in New York, having, according to several witnesses, "materialised in the middle of the road". Interviews with witnesses found that people in the area experienced a vision-encompassing white flash, accompanied by hearing a two-second burst of static from all directions. Witnesses were administered a Class A amnestic after the completion of the interview, followed by a media blackout regarding the incident.

Upon initial inspection at the site of materialisation, Foundation researchers found that SCP-1033 was emitting well over the instantaneous lethal dose rate limit of high-energy gamma, neutron, and x radiation at approximately 15,000Sv/hr. SCP-1033 was initially contained within a shipping container surrounded by lead bricks, which was placed in his path. SCP-1033 was subsequently moved to Storage site K , where he now resides.

In all physical aspects, SCP-1033 is an unremarkable, balding middle aged male. He is dressed in a business suit and carrying a briefcase. SCP-1033's behaviour is cyclic, with each cycle beginning

approximately every 33 seconds. The following timeline is a transcription of that routine.

0 - 10 seconds:		SCP-1033 walks thirty paces forward, glancing at his watch approximately every ten steps.
10 - 15 seconds:		SCP-1033 stops, kneels, and opens his briefcase. Inside the briefcase is a single envelope, marked with an unknown seal and a prepaid brand mobile phone, capable of sending and receiving text messages and calls. SCP-1033 opens the envelope and pulls out a sheet of paper, marked with the words "Cable: asymmetric cipher, 0uuT5LmoO22 lets ruffle feathers".
15 - 21 seconds:		SCP-1033 types "0uuT5LmoO22" in a text message to the Australian mobile phone number 0404 . Investigation shows that this number has yet to be assigned to any mobile phone. At 21 seconds in, SCP-1033 sends the message, puts the phone and letter back in his

		briefcase.
21 - 28 seconds		SCP-1033 is observed looking in to the 'distance', regardless of what is actually in front of him. At 25 seconds in, SCP-1033 starts to chuckle quietly, having apparently spotted what he was looking for on the horizon.
28 - 33 seconds:		At 28 seconds, SCP-1033 is blown backwards 3 metres and is observing writhing on the ground, screaming in apparent agony. Flesh is seen being stripped off and flying behind SCP-1033, as other parts of him disintegrate. The injuries SCP-1033 sustains correspond with that of a victim of a 1.5 megaton nuclear device being detonated in close proximity.

After completion of this routine, SCP-1033 immediately reappears at the start of his routine in mid-step and begins the cycle again. If an object, human or animal stands in the path of SCP-1033, he will make no attempt to stop, and will continue his cycle, pushing whatever obstacle in his way along with him.

« SCP-1032 | SCP-1033 | SCP-1034 »

SCP-1034: Dollmaker's Kit

Item #: SCP-1034

Object Class: Safe

Special Containment Procedures: SCP-1034 is to be contained in a pass-code protected safe when not in use. Foundation personnel handling SCP-1034 are required to wear EN388 xx44 rated gloves. In the event of accidental skin contact or puncture, the affected subject must be restrained and SCP-1034 wrested from subject's possession. If subject was cut at any point, SCP-1034 must be immediately rinsed and sterilized.

Description: SCP-1034 consists of a rusted, semicircular suture needle 5 cm in chord length and a spool consisting of twine approximately 1 mm thick. If the thread is removed from the needle, a second spool appears with the end of the twine threaded through the eye of SCP-1034. This only occurs when the needle is not under direct or recorded observation.

SCP-1034 was discovered and filed as evidence by PD pursuant to the arrest of serial killer . Agents were alerted to possible anomalous activity when a PD forensics agent was found dead in the same manner as the victims of despite the latter being held in custody. Initial Foundation interviews with described SCP-1034 and its effects in some detail, allowing for safe retrieval. was later recruited as D-3826 and interviewed a second time. The contents of this second interview are displayed in **Addendum 1034-01: D-3826 Interview**.

When the skin or blood of a human (hereby referred to as the subject) makes contact with SCP-1034, the subject loses control of all voluntary bodily functions except facial muscles, lungs, and vocal cords. The subject then begins suturing all facial orifices, beginning with the mouth and progressing to the eyes, ears, and nose. The sutures are loose enough for the subject to breathe through his/her

mouth and remain conscious during the entire process. After the process is completed, the subject returns SCP-1034 to the location where contact was first made and remains in a sitting or standing position corresponding to the original position of the subject. The subject then begins to perspire until all moisture has been exuded from the body. If death has not already occurred, the subject dies of dehydration during this period.

When handled with gloves or some other barrier between the skin and the needle, the effects of SCP-1034 do not manifest. If the needle is forcefully removed from the possession of a subject, the subject ceases the suturing process with no recorded ill effects. Revision: If the needle has penetrated the epidermal layer of the skin, the effects of SCP-1034 remain active until all blood has been removed from the needle; see **Addendum 1034-02: Test Log** for more details.

Bodies that have completed the entire process have a skin consistency comparable to leather and have shown significant resistance to decomposition. The skin of the bodies displays hydrophobic properties after the transformation. The skin also displays limited absorption of oils and is most receptive to [REDACTED], which was found in large quantities in the basement of at the time of his arrest. Autopsies of the brain motor control center reveal [DATA EXPUNGED]. The bodies pose no threat aside from minor anomalous behavior noted in **Addendum 1034-02: Test Log**.

Addendum 1034-01: D-3826 Interview

Addendum 1034-01: D-3826 Interview

Dr. : Hello D-3826, please sit down.
D-3826: (sits down) Hello doc.
Dr. : How did you come in possession of SCP-1034?
D-3826: The needle and thread? Oh, that's a funny story, doc. I didn't always have that needle. Used to have to do things the old fashioned way.
Dr. : Please answer the question.

D-3826: Found it on one of my… work tables with a note on it.
Dr. : And what did the note say?
D-3826: "Enjoy." And did I ever. I can still feel them, you know, more than the old ones. I could look at them and still hear every scream, every plead for—
Dr. : That's not relevant. How did you learn the effects of SCP-1034?
D-3826: I threw it to one of my girls and told her to start sewing her mouth shut. And she started doing it! That bitch was squealing like a fucking pig and she started doing it!
Dr. : And how did you know to give that command?
D-3826: (silence)
Dr. : Answer the question.
D-3826: You'd look good as a doll, doc.
Dr. : I think this interview has outlived its usefulness. You'll receive your first assignment in a few hours.

Addendum 1034-02: Test Log

Addendum 1034-02: Test Log

For brevity, only significant tests are displayed

Lead Researcher: Dr.
Subject: D-3810

D-3810 instructed to pick up SCP-1034. D-3810 complies. D-3810 immediately begins to suture his mouth shut, correlating with previous interviews with . Cries of distress before the mouth was fully stitched indicate that D-3810 did not have control of his body during this process. Heavy perspiration begins after ears have been sewn; D-3810 remains conscious and attempts to scream. D-3810 presumed dead approximately minutes after suturing began. Body

ceased perspiration approximately minutes after death. Autopsy reveals a complete lack of water in the subject's body.

Lead Researcher: Dr.
Subject: D-3811

D-3811 is instructed to pick up the spool of twine. Spool of twine has no effect on subject. Spool of twine is severed from SCP-1034 using ordinary scissors and placed into another room. D-3811 is instructed to pick up SCP-1034 sans thread. SCP-1034 has no effect. D-3811 looks away from SCP-1034 while still holding it; spool reappears and D-3811 begins sewing mouth in a manner consistent with the previous test. The original spool remains stationary and undisturbed.

Note: Review of footage indicated a brief obscuration of the needle by the body of D-3811. Later interviews with researchers reveal that no one was looking at the needle at the time of the thread reappearance.

Lead Researcher: Dr.
Subject: D-3826

D-3826 was handcuffed to a chair in the test room. SCP-1034 was revealed and placed against the skin of D-3826. Subject attempted to pull hands through the handcuffs and began squealing in pain. Needle removed; D-3826 ceased attempting to pull out of handcuffs and began pleading to be released. Needle inserted into the skin of D-3826. D-3826 resumed and succeeded at pulling one hand through the handcuffs, grasped the needle, and began the suturing process. Autopsy revealed severe skeletal and muscular damage to the freed wrist.

Lead Researcher: Dr.

Subject: D-3817

D-3817 is instructed to pick up SCP-1034. The suturing process begins. After the mouth has been sewn shut, D-3817 is restrained and SCP-1034 removed from his possession by Agent . D-3817 attempts to drag himself towards Agent using the hand previously holding the needle. All other limbs of the subject remain rigid. D-3817 follows Agent for approximately 15 minutes and shows no signs of fatigue. D-3817 is subsequently terminated.

Lead Researcher: Dr.
Subject: D-3821

D-3821 is instructed to pick up SCP-1034. The suturing process begins and is allowed to finish. After SCP-1034 is returned and perspiration begins, researchers cut open all stitches on D-3814. Perspiration immediately stops and D-3821 expresses extreme pain. D-3821 suffers from permanent vision loss from punctures to the eyes.

Note: D-3821 claimed to "feel" a number of people corresponding to the tests allowed to complete. Further testing scheduled.

Lead Researcher: Dr.
Subject: D-3821

The corpses of all previous SCP-1034 test subjects (except D-3817) are arranged in the test room. D-3821 is escorted to the room and immediately collapses and begins screaming. D-3821 does not respond to any commands and is forcefully removed from the room.

Addendum 1034-03: D-3821 Interview

Addendum 1034-03: D-3821 Interview

Dr. : Explain what you felt when you held SCP-1034.
D-3821: I couldn't stop. I couldn't. It-It wasn't me. I couldn't stop.
Dr. : Did you experience any sensations when holding it?
D-3821: Every stab. I could feel every stab and I kept sewing and I couldn't stop it. I couldn't stop and it was keeping me.
Dr. : Keeping you?
D-3821: Keeping me. It wanted to keep me.
Dr. : Interesting. When you entered the room with other subjects, why did you scream?
D-3821: I could see them and they were screaming and I knew it wanted me back.
Dr. : See them? Did you regain eyesight?
D-3821: I could-I could feel them. I could feel them and they couldn't stop either. They couldn't stop. I don't want to go back there. Please don't make me go. I don't want to go back.

D-3821 continued to repeat the phrase "I don't want to go back" and would not answer further questions. D-3821 was returned to his cell and terminated at the end of the month without incident.

« SCP-1033 | SCP-1034 | SCP-1035 »

SCP-1035: Decomposition Mitten

Item #: SCP-1035

Object Class: Safe

Special Containment Procedures: SCP-1035 is to be kept at Site 19's Biological Storage Facility while research into its properties continues. Level-3 researchers assigned to the [REDACTED] Project may request the use of SCP-1035 for research provided that requisition forms for D-class personnel are filed at least 1 week prior. Materials that have been exposed to SCP-1035 for extended periods of time are to be treated as Class 2 Biohazards and incinerated.

Description: SCP-1035 is a pink woolen mitten, probably handmade, intended for wear by a small child. Interviews with the family suggest that another mitten of similar appearance was lost up to months prior to discovery; its current location, and whether it shares SCP-1035's effects, is unknown. It is difficult to determine the precise date and time at which SCP-1035 began to manifest its effects, although extrapolation from currently available medical records suggests that the effects first began during late February, 19 .

SCP-1035 first came to the attention of the Foundation as a result of a Foundation asset embedded at Memorial Hospital, who at the time was investigating a possible [DATA EXPUNGED]. As a result of his position at the hospital, he was a witness to the death of Sally during emergency surgery, the first recorded fatality as a result of long-term SCP-1035 exposure. All civilians involved, including the parents of the child and medical staff, were administered varying doses of amnestics and a cover story was spread involving a case of necrotizing fasciitis. Shortly thereafter, Agent was able to safely recover SCP-1035 from the family.

Any organic matter placed within SCP-1035 begins to enter a rapidly accelerated state of decomposition. Short-term exposure to SCP-1035 (less than 2 consecutive hours) is usually not harmful to healthy human beings, as the human immune system is generally able to cope with the effects of SCP-1035. Visible symptoms will begin to be displayed after approximately 2 hours of exposure, and by 24 hours health complications will usually have progressed to the point that the subject's death is all but inevitable. Nonliving substances, non-human life, and human subjects with pre-existing health conditions may experience different effects from exposure to SCP-1035, especially [DATA EXPUNGED]. For a more comprehensive outline of SCP-1035's effects and an overview of experimentation on SCP-1035, see Document-1035- .

Exposure to SCP-1035 is cumulative, and repeated short-term exposure to SCP-1035 can be fatal. Humans who have experienced 2 hours of exposure to SCP-1035 may require over a week to return to full health.
The following chart is based on information from Document-1035- , and details the typical progression of symptoms in human subjects affected by SCP-1035:

Less than 2 hours of exposure	No visible effects. White blood cell counts in affected subjects may fluctuate slightly.
Between 2 hours and 4 hours of exposure	Subjects report slight tenderness in affected areas. Affected area, especially joints, may appear to be inflamed or swollen. White blood cell count in the affected area plummets.
Between 4 and 6 hours of exposure	Subjects report discomfort and soreness when attempting to move affected areas. Small patches of the affected area may appear lighter than surrounding areas, possibly as a result of the [DATA EXPUNGED]
Between 6 and 8 hours of exposure	Open sores begin to develop on affected areas, and any

	preexisting injuries become greatly aggravated. Abnormal amounts of a serous fluid may leak from these sores.
Between 8 and 10 hours of exposure	Subjects begin to display symptoms of sepsis. Toxins from the affected area (especially) will begin to spread to the rest of the body.
Between 10 and hours of exposure	Abnormal fungal growth has been observed in 7 % of test subjects at this stage. Subjects may contract various nonfatal illnesses during this stage as a result of immune system failure.
Between and hours of exposure	[DATA EXPUNGED]
More than 24 hours of exposure	Almost total necrosis of affected regions. By this point, the combined effects of septic shock and [DATA EXPUNGED] will have all but ensured the death of the subject. subjects have survived late-stage SCP-1035 exposure for as long as days following extraordinary lifesaving work by medical personnel. Amputation is effective in preventing other body parts from experiencing the effects of SCP-1035. Requests to test SCP-1035 in conjunction with SCP-500 and other medical-based SCPs have been denied.

Supplemental Material:

Interview 1035-1

The following is a transcript of an interview that took

place on February , 19 .

Agent : How are you feeling, Sally?
Sally : …feel cold. Can't feel most of my arm. Will I be okay?
Agent : Sure you will. I just need to ask a few questions. When did you first put on that pink mitten?
Sally : I don't know. Does it matter?
Agent : It does. Please answer the question.
Sally : I don't know! Last week? It was a present. Grandma made it. Will I—
Agent : You'll be fine. Now, Sally, we're going to have to operate on your arm. It won't hurt—
Sally : They won't let me see my arm, doctor. Does it look better? Please…
At this point the patient began crying and would not respond to further questions.
Agent : This interview is over. The medical staff here wants us to amputate. There is nothing more to learn by studying her symptoms, and there's no way that she'll live with that arm. This one's for Anomalous Infections to sort out. Agent , signing off.

Note: Despite heroic lifesaving attempts, Sally died due to complications from exposure to SCP-1035. The family was later interviewed by Foundation personnel. Nothing extraordinary was unearthed from later investigations. Surveillance of the family was lifted on March , 19 .

Interview 1035-2

The following is a transcript of an interview with Dr. , who founded the [REDACTED] Project.

Dr : Once the initial 24 hour period has passed, it is safe to say that further decay of

the affected areas does not occur. In fact, the increased rate of decomposition has only been observed in objects completely enclosed within SCP-1035. So, for example, if I stick my hand in this thing, before long that hand's gonna rot off, but my shoulder should be alright.
That doesn't mean, of course, that the rest of my body will be perfectly fine. Have you read up on warfare back in, say, the nineteenth century? One of the really big problems back then was gangrene and things like that—you know what happens when parts of you die? Not good. Oftentimes the areas hit really bad end up as, basically, massive bacteria breeding centres. It's not a problem you want to deal with. That doesn't even take into account the way that *thing* speeds everything up. You think that *Clostridium perfringens* is bad? Try *Schistosoma*. Hell, we've identified close to a hundred new parasites with this. Requesting more D-class personnel for further experimentation. There's a lot that we could learn from this.

Addendum: Since the writing of this article, additional objects of clothing have been recovered by Foundation agents bearing similar properties to SCP-1035. These objects are awaiting SCP classification, and are to be designated SCP-1035-2 through (the original instance of SCP-1035 will be redesignated SCP-1035-1). The [REDACTED] Project has been tasked with examining the properties, applications, and source of SCP-1035 instances.

« SCP-1034 | SCP-1035 | SCP-1036 »

SCP-1036: Nkondi

Item #: SCP-1036

Object Class: Euclid

Special Containment Procedures: Each specimen of SCP-1036 is to be contained in a locked cast iron receptacle in a low-humidity environment, to retard oxidation of the receptacle and of the nails. At all times, each specimen is to be carefully handled so as to minimize the likelihood of dislodging any nails from the specimen. Under no circumstances are nails to be removed from any specimen; if inspection of any specimen indicates a risk that a nail may become separated from a specimen, consult document 1036-3P.BR for restoration protocols.

At regular intervals (the timing of which is computed by Site-06's on-staff *nganga* (shaman) based on astronomical observations), the *nganga* is to affix to each specimen at least one additional iron nail having a mass in excess of eight grams.

If for any reason it becomes necessary for personnel other than the *nganga* to enter the presence of a specimen, it is recommended that the *nganga* first cover the eyes or other reflective components of the specimen with electrical tape or some other opaque coating.

Description: SCP-1036 designates any of a collection of wooden figurines of a type consistent with fetish objects produced by the Kongo culture of western central Africa. The Foundation presently contains four specimens of SCP-1036, designated SCP-1036-1, SCP-1036-5, SCP-1036-6 and SCP-1036-7.

Each figurine depicts a human form (or, in some cases, an animal form), typically depicted in a threatening posture. Each specimen is composed of African tropical hardwood and decorated with materials such as camwood powder, resins, and vegetable fiber such as raffia palm fronds. Each specimen includes a component (typically the

eyes or abdomen) made of shiny or reflective metal such as polished silver, affixed to the specimen with tree gum. The specimens contain trace amounts of soil matched to certain funerary sites in the region. A number of iron nails have been hammered into the wood of each specimen.

Each specimen is slightly warm to the touch. Analysis indicates that the specimens normally have a surface temperature that exceeds the ambient temperature in the containment chamber by four to eight degrees centigrade; however Observation Log 1036-986-B.233 indicated that immediately prior to Event Kalazima-1, the surface temperature of SCP-1036-3 spiked by at least ninety degrees centigrade within less than four seconds before observation was interrupted.

Each specimen is associated with a sentient incorporeal entity that had become bound to its respective specimen, prior to the Foundation's acquisition of the specimen in question, by means of a traditional Kongo shamanistic ritual practice. Each of the specimens in the Foundation's custody were constructed (inclusive of the performance of the binding protocol) no more recently than the mid-1870s.[1] So long as the integrity of its respective SCP-1036 specimen is maintained, the entity is incapable of free agency apart from communicating with a *nganga* or interacting with a living creature that makes eye contact with the specimen. Specimens of SCP-1036 were constructed by indigenous *nganga* in order to apply the powers of the bound entity for various useful purposes, but knowedge of the protocol for doing so has been lost; accordingly the Foundation's efforts regarding SCP-1036 have focused on containment.

Addendum #1:

> **Audio Log from Interview A; / /19**
> **Dr. Morrison**: This is Dr. Morrison. I am, uh, outside Chamber 06-SSD, together with Mr. Nzinga, looking into the chamber through the observation window. Mr. Nzinga, would you kindly explain for the record what we are doing in this test.
> **Nzinga**: Certainly, Doctor. I am François Nzinga, the

nganga on staff here at Site-06. This morning, I will enter Chamber 06-SSD and interview the entity bound to SCP-1036-6, which is stored in that chamber.
Dr. Morrison: Very good. Please explain what you are going to do now.
Nzinga: (*inaudible*)
Dr. Morrison: I'm sorry, François. Into the microphone.
Nzinga: Of course. I will first consume , a substance… you would say "liquor," in order to assist me in opening my mind. It is like a trance. I will accept the *iwa*, or spirit, so that I can safely talk to it. I will then open the receptacle that contains SCP-1036-6.
Dr. Morrison: This will be, uh, safe for you?
Nzinga: (*long pause*) Yes.
Dr. Morrison: You may proceed.
(*approximately eleven minutes pass*)
Dr. Morrison: Mr. Nzinga, are you now ready?
(*indistinct vocalizations continue for approximately 2 minutes*)
Nzinga: Yes, Doctor. I apologize for not being responsive while I prepared myself. I am now ready. (*indistinct sounds*) I am now removing SCP-1036-6 from the safe. I am about to look into the eyes of SCP-1036-6 in order to address the *nkisi*. It is… (*mild grunt of pain*)… (*following exchange is, except where indicated, translated from the Kikongo language*) I am François Nzinga, shaman of the . Whom am I addressing. I am KuMpemba a Fula you motherless bastard. Release me or I will make you… I command you to speak respectfully. Why are you imprisoned in this object… The (*expletive, translates to "goatfucker"*) witch doctor trapped me, with iron. Once I get out, I vow that I shall… Again, speak respectfully. How long ago were you imprisoned… Three hundred twenty-six of your years, you (*expletive, translates to "diseased penis"*) mortal… And for what purpose were you imprisoned? … The witch doctor who imprisoned me did so in order to tap into my power to make *nlongo* (*translates approx. to "medicine"*) and protect members of his clan from misfortune. Most of the time he and his successors used

me thus. On occasion a different witch doctor would use me to curse, or to allow me to destroy men who would trespass onto his clan's territory. That was at least more amusing, but I was, I am, still a prisoner. What is this place? I cannot smell the forest… The object that is before me has been relocated to a secure facility. Can you tell me how to use your power to make *nlongo*? … Why would I do that, you (*expletive, translates to "one who eats hippopotamus shit"*). You cannot compel me to teach you, (*expletive, translates to "place a leech in your anus"*), you ignorant (*untranslatable expletive*). Release me. Who is behind the glass wall… Pay no attention to that. You will respond when I address you. When did (*choking sound*)…
Dr. Morrison: Nzinga, are you all right in there?
Nzinga: I'll be- wait- do not look at the…
Dr. Morrison: Let me get you out of there, François. Bill, open the room.
Agent Lopez: He told me before, not to…
Dr. Morrison: I think he's swallowing his own tongue. He needs medical attention. François…
Nzinga: (*in Kikongo*) Do… do not look…

(*sound of door opening and indistinct vocalizations*)

(*Video recording indicates that Dr. Morrison achieves eye contact with SCP-1036-6 for a moment while trying to triage Mr. Nzinga, whereupon Dr. Morrison violently lurches toward SCP-1036-6 and attempts to grasp one of its nails before being tranquilized and subdued by Agent Lopez. Mr. Nzinga recovers and leaves the observation chamber. Mr. Nzinga reports that the binding of SCP-1036-6's entity to SCP-1036-6 is intact, but recommends that Dr. Morrison be maintained in a sedated state.*)

Addendum #2:

INTERVIEW LOG - -19 (Event Kalazima-1)
<BEGIN LOG>

Dr. Torvaldsdottir: Begin recording. Agent Lee, I'm here to take your debrief about the loss of SCP-1036-2, -3 and -4. We are designating the episode as Event Kalazima-1.
Lee: Loss of… god-damn clusterfuck. It looked to me like we lost everything in the southeast wing. How many people made it out?
Dr. Torvaldsdottir: Three, including you, but you're the only one that, ah, we can interview. I'm going to need you to be precise, for the record.
Lee: Okay. One of the D's was in there to change the monitors on SCP-1036-3's box.
Dr. Torvaldsdottir: This was D-4933?
Lee: That's right. The normal maintenance protocol is that the duty witch doctor — it was supposed to be Pierre Khonvoum, but his daughter was having a baby — the witch doctor goes in first, covers up the shiny bits, and then gives the all clear. But Pierre wasn't there, so Terry made a judgment call and just sent D-4933 in there with a blindfold on.
Dr. Torvaldsdottir: As a precaution against influence by the SCP-1036-3 entity?
Lee: Yeah. We had done that before, in the time period between when Jean Bumba… uh… when he left our service and when Pierre joined us.
Dr. Torvaldsdottir: And then what happened?
Lee: So, D-4933 was blindfolded. And when he was reaching around inside the box to find the thermometer, he must have bumped the statuette or something, and a nail fell out. And then D-4933 started to, you know, thrash around. He was yelling and waving his arms like he was on fire or something, and he knocked over the boxes for SCP-1036-2 and SCP-1036-4. So I immediately sealed the chamber door from the outside and I hit the button to close the blinds on the observation window.
Dr. Torvaldsdottir: Did anything come out of the chamber?
Lee: No, the door was sealed. But Agent Knorr, who was next to me, started smashing his head into the

observation window, over and over, until the glass and blood was all over. And Dr. DiPiano, who was at the end of the hall, had what looked like a seizure, and then he started biting his own fingers off…

Dr. Torvaldsdottir: Was that the point when you retreated to the control center?

Lee: I… I think so. I tried to make my way back down the south corridor to Checkpoint C to close the blast doors. Agent Majchrowski was there. He had, uh, stabbed himself in the eyes and the stomach with a pair of scissors, and he tried to attack me but he slipped on the blood. He was yelling something that sounded like "kindoki"… I tried to activate the sprinklers and the general anesthetic respirators to keep anybody else from hurting themselves. I guess it worked because I blacked out a minute later.

Dr. Torvaldsdottir: According to the log, the respirators went on-line at eighteen-thirty seven and twenty seconds.

Lee: Did… (*grunt of pain*)… did Pete make it?

Dr. Torvaldsdottir: Pete… um… (*shuffles papers*)… I'm afraid not. Agent Foy's body was found in the garage. Cause of death… looks like he drank about two liters of gasoline. What did you do when you regained consciousness?

Lee: I, uh, I bound up the wound on my shoulder where somebody had bit me, and then I went back to the SCP-1036 containment chamber. The statues were smashed into about a million pieces and it looked like D-4933 had stuck a lot of the nails into himself. Look, Doctor, whatever was in those statues that made everybody… do stuff, is it still in here?

Dr. Torvaldsdottir: There's… um… there's no sign of that. We had MTF Mu-13 come through and give the all clear.

Footnotes

1. It is not known whether any indigenousnganga, other than those employed by the Foundation, are still extant in central Africa and thus capable of performing the binding ceremony to create additional instances of SCP-1036. In order to reduce the likelihood

of this, Foundation agents have encouraged the deforestation of and the removal of indigenous traditional societies from that area.

« SCP-1035 | SCP-1036 | SCP-1037 »

SCP-1037: Rotbolt

Item #: SCP-1037

Object class: Euclid

Special Containment Procedures: SCP-1037 is to be stored in a standard 5m x 5m x 5m containment chamber lined with a thick (~5cm) layer of non-synthetic rubber. It must be suspended away from all solid surfaces by means of electromagnets. Research may only be done in SCP-1037's chamber, and only under constant surveillance.

Any additional instances of SCP-1037 discovered must be disposed of immediately (slagging followed by alloy separation via process). All additional instances are to be brought back to Site- for research and containment (See Addendum 1).

Description: SCP-1037 appears as an SAE Grade No. 5 steel bolt, such as used in many buildings with a steel or concrete frame. It is made from a medium-strength steel alloy, consisting of 97.5% iron, 1.2% tungsten, and 1.3% unknown substance.

Its effect is not readily apparent, and may not be apparent until several years after installation; in a laboratory environment, it may only be detected with scanning-electron microscopes. SCP-1037 vibrates at a nanoscopic level, in a complex but structured set of frequencies ranging from hertz to hertz. These vibrations crystallize all surrounding non-biological[1] material into a visually identical but highly brittle version of itself. This effect spreads at an approximate rate of meters per year (variable; see Addendum 1). The resulting crystal (SCP-1037-1) exhibits piezoelectric properties comparable to quartz, enabling it to carry SCP-1037's vibrations to indefinite distances. A single instance of SCP-1037 is able to "convert" a building of any size to SCP-1037-1 given enough time. The possibility of SCP-1037-1's transmission through sewer pipes is not to be discounted; repeated reports of pipes bursting under

nominal pressure conditions must be thoroughly investigated. If possible, the conversion of an entire city the size of to SCP-1037-1 is estimated to take years.

SCP-1037 was found to be the only item unaffected by crystallization in a section of [DATA EXPUNGED] rubble, on / /2001. The nearby [DATA EXPUNGED] also contained a destroyed instance of SCP-1037. Analysis showed that both objects were installed sometime in 199 , limiting the exposure radius to approximately meters; nevertheless, it was enough to weaken the concrete for [DATA EXPUNGED].

Addendum 1: Careful analysis and observation of SCP-1037's vibrations reveal that crystallization occurs at a random and inconsistent speed, with a maximum variation of centimeters per year. It is thought that the unknown substance found in the alloy does not directly cause the vibrations, but reproduces them by resonating to a theorized field, difficult to detect with current technology.[2] Attempts to triangulate the source of the field using a single SCP-1037 failed as the source appears to be highly mobile. Any additional instances of SCP-1037 must be brought to Site- and then moved to controlled locations around the world (see document 1037-516-WK for a list of possible locations) to allow precise triangulation.

Footnotes
1. Materials such as wood and bone appear to be immune. Vulnerability to SCP-1037 seems to depend on the target matter being homogenous at a microscopic level, and to have a certain degree of hardness. However, this effect has not yet been studied conclusively, and so SCP-1037 is to have no physical contact with any solid matter while in containment for a period longer than hours.
2. Detection requires the construction of multiple underground bubble chambers, each of a 3km radius.

« SCP-1036 | SCP-1037 | SCP-1038 »

SCP-1038: An RCA Cable

Item #: SCP-1038

Object Class: Safe

Special Containment Procedures: SCP-1038 is to be kept in a locked storage container within the Site-17 audio/visual department, with keypad combination in possession of Research Director. Due to the nature of the object's effects, O5-level approval has been granted for SCP-1038's non-experimental, recreational use on a weekly basis for all Site personnel on Fridays from 1930 - 2230 Hours, using previously tested content.

Description: SCP-1038 is an audio-visual cable measuring 6.096m in length with both ends terminating in three standard RCA connector plugs, color-coded for composite video and stereo audio. There are no markings on the connectors or cable to indicate the manufacturer or further specifications of the cable.

The cable's properties manifest when it is plugged into a television or monitor and a media player (VCR, DVD, streaming media device, etc.). While the device plays the selected content, the television will instead display what can best be described as an "alternate reality" version. As of 11/23/2011, SCP-1038 has displayed content from distinct realities (Refer to **Addendum-1038-B** for a brief experiment summary).

The means by which this effect is generated is unknown, as tests have shown no anomalous power draws from the connected devices, changes in area radiation, or [DATA EXPUNGED].

SCP-1038 appears to exhibit awareness regarding the information being passed through it. Should the selected content not exist in the alternate reality the cable connects to, SCP-1038 will instead play a "closest match" - a VHS recording of a football game, might instead show a gladiatorial fight. At the same time, the object will also only

ever show one alternate version for the particular medium. All DVD copies of a film will play the same alternate, which is in turn different from VHS copies of the movie. It is unknown if this is a sign of intelligence or if the data already exists on the storage media.

Addendum-1038-A — Recovery Report: SCP-1038 came to the attention of the Foundation after a 10/3/19 incident at [REDACTED] Elementary School in , OR., in which Ms. attempted to show a recording of a "Cable in the Classroom" documentary to her 4th Grade class. The recorded documentary was about the Great Pyramid, but the viewed content was [DATA EXPUNGED]. During the ensuing arrests, firings, and lawsuits, Foundation agents took custody of the AV equipment used in the incident. Component testing revealed only SCP-1038 showed anomalous properties. Purchase of the cable was not recorded in any district expense reports.

+ Show Addendum-1038-B

Addendum-1038-B — Partial Experimentation Log:

Medium: VHS
Content: *Schindler's List*
Results: SCP-1038 was plugged not into a television, but a recording device. Recorded output did not deviate in any way from the film.

We've run this experiment several times with different players and media, with the same results. We are now confident that the object requires a connection to a TV in order to view the 'alternate'. — Dr. , Research Dir.

Medium: VHS
Content: *History of the World, Part I*
Results: A documentary - apparently closely in line with our own history. Due to the thoroughness of the film, "Part 1" only covers the dawn of the Neolithic. Test terminated after 92 minutes when the VHS tape stopped playing. Alternate version was in the middle of a segment explaining Neolithic agriculture.

Media: DVR recording (Device provided by Research Asst.)
Content: 2010 NCAA Football National Championship
Results: Complete football game, but featuring schools [DATA EXPUNGED]. A portion of the half-time show reveals that teams were selected using a “play-off” format.

Medium: DVD-RW
Content: Recording of children playing at [REDACTED] Park. (Confiscated from Agent)
Results: Children played around a statue of . Plaque on the base calls him “The Hero of Racial Purity.”

Medium: Previous test's DVD-RW from Agent
Content: Content of previous test overwritten with tourist video of the Washington Monument and Lincoln Memorials.
Results: Statue of similar to the one seen in previous test, but approx. 130 meters tall seen in place of Washington Monument. Lincoln Memorial seems to have suffered blast damage and has not yet been repaired. Data overwite apparently only affects viewed content, alternate reality content remains unchanged.

Medium: DVD
Content: Box set of Seasons 1 and 2 of *Sliders*
Results: No changes. Results of frame-by-frame analysis pending.

Medium: DVD-RW
Content: Collection of footage of Earth and our position in the universe, overlaid with greetings in all known languages (Similar to the Golden Records carried by the Voyager Probes).
Results: An apparently similar message. Of approximately 2,000 verbal greetings, the only languages recognized are Ugaritic, what is possibly Proto-Minoan, a form of Old Chinese, and Hittite. Further, all individuals seen in the footage appear to be [DATA EXPUNGED]. Permission for further

communication attempts pending.

« SCP-1037 | SCP-1038 | SCP-1039 »

SCP-1039: The Gathering Doll

Item #: SCP-1039

Object Class: Euclid

Special Containment Procedures: SCP-1039 is to be kept within a sealed, ten (10) meter by ten (10) meter containment cell at all times. No unauthorized personnel are permitted to enter the containment cell unless specifically instructed by a Security Clearance Level 4 (or higher) site supervisor. The interior of the cell is to be kept under constant remote surveillance through the designated wall-mounted security camera, the footage of which is to be periodically reviewed by assigned staff. All abnormalities and changes in behavior discovered during review of the surveillance footage are to be recorded and reported to researchers assigned to the object.

Any personnel entering within a forty (40) meter exterior radius of the containment cell are to have all items on their person removed and accounted for before being temporarily deposited within a locked and secured container outside the perimeter of SCP-1039's area of effect unless they are instructed to retain possession of said items by a site supervisor prior to entering the area. Once personnel exit the area of effect, they may withdraw any items that had been removed from their person.

If any items that were previously deposited in the sealed container cannot be found after returning from within the area of effect, this is to be reported to research staff assigned to the object, who will promptly search SCP-1039 for the item. If the item cannot be found in SCP-1039, such an incident is most likely theft and is to be reported to Site Security, who will execute an independent investigation of the matter to the best of their abilities.

Under no circumstances are other SCP objects or other items specifically protected by the Foundation either for research or any

alternative reasons to be brought within SCP-1039's area of effect unless a Security Clearance Level 5 site supervisor has specifically instructed this course of action be executed in order to research the effects of SCP-1039 on these objects in a controlled environment.

Description: SCP-1039 is a thirty (30) centimeter tall, thirteen (13) centimeter wide doll constructed mostly of a tightly woven textile fiber, with artwork on the torso resembling that of a crude human ribcage. The head of SCP-1039 is composed of hardened clay molded into a grotesque and misshapen human skull. The back of SCP-1039 is marked with a symbol of unclear cultural origin which has yet to be translated.

SCP-1039 displays the ability to instantaneously and remotely transport items within an estimated forty (40) meter radius from their initial locations into the interior of its own body. As SCP-1039 is mostly a hollow fabric sack aside from the clay-molded head piece, items are transported from their original location to within the empty internal torso area of the fabric body. SCP-1039 appears to only transport a single item at a time and the incidents of said transportation are inconsistent and seemingly random.

Staff who have had their personal belongings transferred to the inside of SCP-1039 report that the item disappears from their person and seems to instantly rematerialize within the body of SCP-1039. Any object forcibly placed into the interior of SCP-1039 will be transported to another random location within the forty (40) meter area of effect. How SCP-1039 remotely displaces the foreign objects has not yet been determined. SCP-1039 was not originally recovered with any objects inside of it.

During review of surveillance footage, assigned staff began to notice regular bursts of visual static, after which the viewing personnel reported that SCP-1039 had relocated itself to another area of the cell. The static along with the movement of SCP-1039 appear to occur at random intervals. Whether or not SCP-1039 is the direct cause of the wall-mounted camera's malfunctioning is undetermined, but despite the remote surveillance footage displaying SCP-1039's apparent teleportation abilities, when personnel enter the containment cell SCP-1039 is always located in the center point of the chamber. The object does not demonstrate

any shifts in location or characteristics of movement for as long as the individual remains within the confines of the cell.

The head of SCP-1039 has been known to turn towards agents within the containment cell, independent of the body, as if staring at them. Many personnel have reported increasing discomfort and paranoia as the head of SCP-1039 continues to follow their movement across the chamber.

All items extracted from within SCP-1039 seem to give off an odor similar to that of gasoline exhaust for several hours. The cause of this remains unknown.

Experiment Log

> + Experiment 1039-1
>
> In a test to demonstrate what items SCP-1039 is capable of transporting, personnel were to place a large assortment of polystyrene test cubes ranging in size from five (5) centimeter by five (5) centimeter by five (5) centimeter cubes, to one (1) meter by one (1) meter by one (1) meter cubes within SCP-1039's area of effect. Initially, SCP-1039 did not exhibit the ability to transport any of the larger test cubes, seeming to focus exclusively on the cubes no bigger than itself. However, as SCP-1039 continued to transfer items into itself, the torso area of the object began to physically expand both vertically and horizontally to accommodate more items. As SCP-1039 enlarged in size it began to transport the larger test cubes.
>
> As more test cubes were transported into the interior of SCP-1039, the fabric of the torso stretched further outward. The test continued for approximately four (4) hours before SCP-1039 was temporarily unwoven and the objects were removed. By the end of the test, SCP-1039 measured four (4) meters across and five (5) meters vertically. As the objects were removed from the interior of SCP-1039 the torso began to gradually contract until it had returned to its original length and

width. No limit to this expansion has been found.

+ Experiment 1039-2

Due to SCP-1039's ability to independently transport itself across its containment cell specifically while it is unoccupied by foreign entities as well as its ability to physically move its head in the direction of any supplementary occupants of the chamber, Dr. hypothesized that SCP-1039 may be sentient. To test this further, agent D-1039-1 was sent into the containment cell with an apple and given the order to attempt to coax SCP-1039 into transporting the apple into itself. D-1039-1 continually asked SCP-1039 to take the apple. SCP-1039 did not respond to these requests. When D-1039-1 waved the apple several centimeters from SCP-1039's face, the head appeared to follow the movement of the apple, displaying at least a simple awareness of its surroundings and confirming that it is sentient. However, SCP-1039 continued to be unresponsive to D-1039-1's requests to retrieve the apple.

Approximately seventeen (17) minutes into the test, D-1039-1 exclaimed "The stupid motherfucker isn't taking the apple, assholes!" before forcefully hurling the apple across the containment cell. As the apple collided with the wall on the opposite end of the chamber, SCP-1039's head turned 180° towards where the apple made contact with the wall. SCP-1039's head retained its position for about five (5) seconds before reversing back to its initial location, at which point D-1039-1 began to convulse violently before collapsing onto the chamber floor. Medical staff declared D-1039-1 dead several minutes after the incident.

When the contents of SCP-1039 were examined, its torso contained a sizable chunk of brain matter. The autopsy of D-1039-1 later revealed the entire frontal lobe of his brain had been removed. Dr. is no longer permitted to test the awareness or consciousness of

SCP-1039.

+ Experiment 1039-3

In order to examine the ability of the fibers of SCP-1039's torso to seemingly stretch infinitely without demonstrating any signs of damage or tearing, a small strip of fabric measuring four (4) centimeters in length and five (5) centimeters in width was removed from SCP-1039. One end of the fabric strip was placed into a pair of stationary clamps at the beginning of the three-hundred (300) meter by ten (10) meter test chamber located twenty (20) meters from the SCP-1039's area of effect. The other end of the fabric was placed within the clamps of a motorized remote control rover designated R-1039-1. R-1039-1 was to be driven down the three hundred (300) meter length of the test chamber.

At ten (10) meter intervals R-1039-1 was to be stopped and personnel were to observe and record any changes, signs of tearing, or damage in the stretched fabric until the full three-hundred (300) meter length of the chamber had been crossed by the rover.

- 10 meters: No changes observed
- 20 meters: No changes observed
- 30 meters: No changes observed
- 40 meters: No changes observed
- 50 meters: Width of fabric thinned by 0.1 centimeters
- 60 meters: No changes observed
- 70 meters: No changes observed
- 80 meters: No changes observed
- 90 meters: No changes observed
- 100 meters: Width of fabric thinned by 0.1 centimeters
- 110 meters: No changes observed
- 120 meters: R-1039-1 spontaneously shuts down. Clamps were released and the fabric sample rapidly contracted back to its initial length and width.

Further examination of the interior of R-1039-1 revealed several internal components were missing. These components were later found within SCP-1039, severely damaged and inoperable. The test was not able to be completed and no applicable data was extracted. Further examination of SCP-1039 after the test revealed the area on SCP-1039 from which the strip of fabric was removed to be completely repaired.

How SCP-1039 had managed to transport objects outside of the forty (40) meter radius of its cell remains unknown and an incident of this nature has not been repeated

Addendum: Since thorough experimentation was initiated on SCP-1039 the object seems to demonstrate more aggressive behavior than before. Several Class D's have had eyes, tongues, and teeth removed by SCP-1039 since testing on the object began. Additionally, SCP-1039 appears to transport items both in and several meters outside of its area of effect at a much faster rate than before. No more testing is to be performed on SCP-1039 and no personnel are permitted within forty (40) meters of the object until further notice.

Note: "SCP-1039 has begun transporting the surveillance camera within its containment cell into itself. A more secure method of remote surveillance is requested." - Dr.

Note: "The symbol on the back of SCP-1039 has been identified. It appears to originate from [REDACTED]. The symbol itself has been translated to mean gluttony or corpulence." - Dr.

« SCP-1038 | SCP-1039 | SCP-1040 »

SCP-1040: "Daniel"

Item #: SCP-1040

Object Class: Safe

Special Containment Procedures: SCP-1040 is stored in vault 89-Q5 at Storage Site 12 as per standard Safe-class long-term storage protocol. No additional care is required.

New personnel assigned to SCP-1040 are to be briefed on the object using the established identity "Daniel" to ensure that consistent and unambiguous communication about the object is maintained. Non-D-class personnel exposed directly to SCP-1040 must be reassigned on a monthly basis.

All data on SCP-1040 is to be corrected electronically through the use of project Null Context to ensure that the object's effects do not interfere with normal documentation procedures.

Description: SCP-1040 is an antique Tiffany floor lamp made of iron and stained glass. The item displays no unusual physical properties. When provided with a 100-watt light bulb and electricity, SCP-1040 functions as is typical for a floor lamp.

The anomalous effects of SCP-1040 manifest when the object is observed or discussed by any human subject. Affected persons will consistently anthropomorphize SCP-1040, referring to and/or interacting with the object as though it were a male acquaintance. In spite of this effect, it is possible for subjects under the influence of SCP-1040 to be reminded that the object in question is a lamp; however, this knowledge has little (if any) effect on subjects' behavior.

The name and other details assigned to the object vary by subject, but to date have never corresponded to any real individual. If a previously affected individual "introduces" the object to a new

subject, that subject will identify SCP-1040 as the given persona.[1]

Addendum 1040-01: Abnormalities at Recovery Site

SCP-1040 was recovered from the home of following his death in June of 1991. Responding agents encountered SCP-1040 at the site and "escorted" the object to Site 19, where it was kept in a humanoid containment cell until its properties were identified.

Agents that remained to sweep the remainder of the home reported that all light sources in and around the dwelling (including SCP-1040) had been arranged or decorated strangely. Examples include:

- Scarves wrapped around exterior light fixtures
- Five desk and table lamps arranged on sofas or chairs and placed in front of the television, open books, and other entertainment media
- Two hand-held flash lights wrapped partially in cloth and arranged in a bassinet
- Three floor lamps placed horizontally on beds throughout the house

All light fixtures were under power at time of recovery, though many were missing bulbs. This is believed to be related to the owner's cause of death (heart issues exacerbated by electrocution).

Given these findings, additional properties seem likely. I'm authorizing a stay of execution for 5 D-class to study the long-term effects. - O5-

Addendum 1040-02: Additional Findings
With repeated and/or prolonged direct exposure to SCP-1040, affected individuals will begin to assign unique identities to other inanimate objects even when SCP-1040 is not present. The approximate progression is as follows:

Cumulative exposure time	Observed Effects
2 months	Subject anthropomorphizes any free-standing light fixture greater than 1.25 meters in height.

3 months	Subject anthropomorphizes any free-standing light fixture. Subject develops increasingly elaborate relationships with anthropomorphized objects, including friendship, dislike, envy, and romantic interest.
6 months	Subject anthropomorphizes any object intended for use as a light source. Subject becomes agitated and/or withdrawn when not interacting with a light source and minimizes human contact.

Given the nature of its long-term effects, personnel levels 2 and higher are strongly discouraged from direct interaction with SCP-1040.

Footnotes
1.Exploitation of this property to facilitate containment approved — O5-

« SCP-1039 | SCP-1040 | SCP-1041 »

SCP-1041: Multiple Pasts Disorder

Item #: SCP-1041

Object Class: Euclid-alterius

Special Containment Procedures: SCP-1041 is kept in a Type 2 Humanoid Containment Cell at Site 17 and provided rations as per Dietary Outline AHF4. Certain identities of SCP-1041 require special consideration; see Document 1041-5C for further information.

Any documentation of SCP-1041's life prior to its recovery must be confiscated, with all non-personnel who claim to have known SCP-1041 given Amnestic C-1041 in order to remove any and all memories of the subject. When appropriate, false documentation and/or memories are to be fabricated and provided.

Efforts to obtain further evidence of the narratives outlined in Document 1041-5A are in progress.

Description: SCP-1041 is a human female 56 years of age that displays no anomalous physical properties, recovered on July 3, 2012. The subject is in good physical health, apart from the lack of a left thumb.

At time of writing, one hundred and nineteen narratives of SCP-1041's life, supported by reliable documentation and witness testimony, have been compiled; thirty-five further narratives most likely exist, but currently lack reliable documentation. This is considered the primary anomalous property of SCP-1041. These narratives are often contradictory — for example, Narrative 019 involves SCP-1041 attending classes at Harvard University in 1977, while Narrative 044 places SCP-1041 in Vladimir Central Prison at the same time. All account for SCP-1041's lack of a left thumb.

SCP-1041 will adopt an identity, set of memories, and personality consistent with one narrative per waking period,[1] and will deny any

knowledge or personal history inconsistent with this identity.[2] SCP-1041 goes through one hundred and fifty-three identities in sequence, each of which corresponds with one of the aforementioned narratives, before returning to the "first" identity. These identities are labeled SCP-1041-001 (the identity presented on the date of SCP-1041's recovery) through SCP-1041-153. Evidence indicates that SCP-1041 did not display this behavior prior to recovery.

One or both of SCP-1041's parents or caretakers have been located in ninety-nine instances. All gave reports mostly consistent with SCP-1041's memories of its childhood including, when applicable, its birth on March 8, 1957 at approximately 0933 GMT. Parental testing has located ninety-eight women and eighty-four men that are genetic matches for SCP-1041's parents. None of these individuals are genetically related to each other; the probability that each couple would produce an offspring identical to that of all the other couples by chance is infinitesimal.

Addendum: The following identities of SCP-1041 are considered notable. To view the remainder, see Document 1041-5A.

Instance designation	Notable Aspects
014, 015	Subjects were believed to be monozygotic twins; however, testing of recovered DNA samples has shown an absence of copy number variations that are normally found in monozygotic twins. Both have refused to believe that the other is another identity of SCP-1041, although neither has been able to explain why. Both SCP-1041-014 and -015 lost their left thumb in unrelated incidents on August 18, 1994.
019	SCP-1041-019 lost both legs in a car crash in 1966. For the duration of SCP-1041's adoption

	of this identity, it will not move either leg, despite being physically capable of doing so, even under duress. Insufficient time has passed since SCP-1041's recovery to determine whether therapy can reverse this condition.
067	Subject was a high-ranking member of the crime syndicate from 1988 to 1997. Investigations indicate that SCP-1041-067 redirected a significant portion of 's resources towards destroying apparently unrelated records held by various government agencies and academic institutions. SCP-1041-067 has experienced retrograde and anterograde amnesia after an apparent assassination attempt in 2011, hindering further investigation.
081	SCP-1041-081 was employed by the Chaos Insurgency for fourteen years. While the subject's exact responsibilities there are not known to the Foundation, the subject's educational background is most suitable for employment as a theoretical physicist.
127	SCP-1041-127 claims to possess "psychic powers", supposedly allowing the subject to communicate with her "past selves". Testing has shown that the subject may possess a limited ability to access information possessed by other identities of SCP-1041. Investigation indicates

	that SCP-1041-127 may have possessed this ability since adulthood.
154	Subject was determined to have died on January 2, 1999 from lung cancer, and is not among the identities displayed by SCP-1041. Police records show that SCP-1041-154's body was stolen from its grave on July 15, 2012, and has not been located.

Footnotes

1. Testing has shown that any period of unconsciousness or altered state of consciousness lasting at least one hour will cause SCP-1041 to adopt a new identity.
2. The subject will demonstrate incorrect knowledge of events since its containment; in each case, it will recall its reactions to events as though it had possessed its current personality.

« SCP-1040 | SCP-1041 | SCP-1042 »

SCP-1042: Ghost Stone

Item #: SCP-1042

Object Class: Safe

Special Containment Procedures: SCP-1042 is to be contained in a standard EM shielded anomalous materials storage locker. When testing, precautions with equipment should be taken as the object has been noted to affect electrical devices.

Description: SCP-1042 is a standard brick used in foundation construction, typical of homes built in the Victorian era. Analysis has shown that SCP-1042 has similar composition to those made in during , though closer inspection shows an unusual latticework structure on a molecular level. When introduced to low level electromagnetic fields or struck with a ferrous object, 3-dimensional visual and auditory "projections" of past events appear. These projections are frequently accompanied by the entity designated SCP-1042-1.

History:
The Historical Society of had taken ownership of a local mansion, the site of a notorious murder, and was giving guided "ghost tours" of the grounds. The original owner of the house, Mr. , the town's "land baron," was accused of murdering a maidservant in 18 but was acquitted of the charges. After the trial, 's wife removed herself and their children from the area, and he became a recluse before finally committing suicide in the house 3 years later. Since then, owners and staff reported seeing multiple apparitions in and around the manor of the original family and staff, images of themselves performing mundane tasks (labelled by tour-guides as "doppelgängers"), and sightings of "The Black Monk" (now believed to be SCP-1042-1). Frequency of these sightings tended to increase during thunderstorms. In 19 , an electrician wiring the house to the town's new electrical grid scraped a screwdriver across the exposed blocks of the cellar, and was

greeted with the image of the house's original owner murdering the maid in a reenactment of the 18 event. The apparitions showed no acknowledgement of the electrician and faded after approximately 5 minutes.

Procurement:
Posing as safety inspectors, Foundation agents were able to procure SCP-1042 using "foundation maintenance" as a cover story. The brick was located using a standard electro-magnetic field meter. Agents replaced it with a duplicate of equal proportions, as well as structurally bolstering the foundations of the building to avoid arousing suspicion.

In experiments with SCP-1042, it has been determined that sights and sounds of people or objects moving around the object are recorded for later playback. It does not appear to record inactivity, only motion. Playback of events varies in fidelity; most images are transparent and have a blurred effect, audio has noticeable interference described by observers as "metallic scraping" or "stone grinding on stone". When a low-level current is applied to the block, the effects gain much in clarity. Recorded events can be projected by introducing an EM field, or by striking or scraping the block with a steel or iron object; specific events can be chosen for playback by altering the strength of the EM field, the force of the strike, or a combination of both.

The following is a selection of the more notable tests with SCP-1042. The full testing log is available as document SCP-1042-L1

> + Show Experiment Log
>
> EM Field: W/m²
> Striking Force: none.
> Result:
> The upper half of a middle aged woman, dressed as a kitchen servant appeared with a jar of peach preserves. She placed the jar on an unseen shelf (the jar then hung in the air apparently sitting on a shelf that corresponded to an actual shelf in the basement of the site), then turned and walked three paces before disappearing.

At this point, researchers realized that SCP-1042 was placed on a lab table, approximately 45 centimeters below its original elevation. The block was placed on an elevated shelf adjusted to its approximate height in the basement and the test was conducted again, this time, the full image of the woman was seen. Corroborating with local records, this woman was confirmed to be , who worked as a servant in the manor.

EM Field: W/m²
Striking Force: newtons
Result:
Researchers saw another experiment conducted in the same room, 13 days before by Dr. Lowenstein on SCP- . The manifestation lasted 13 minutes, 15 seconds. Objects in the room which remained stationary at the time of the experiment did not appear, only those that changed position. Dr. Lowenstein later confirmed that he did perform those actions, and in the exact procedure as recorded when shown a digital recording of this test.

EM Field: W/m²
Striking Force: newtons
Result:
A reenactment of the maidservant's murder by the owner of the house. The image and sound were particularly clear. After the crime, was seen lifting the body over his shoulder and walking towards the location of the basement stairs. The image of proceeded to ascend toward the ceiling according to the location of the stairs in the basement, but their structure was not projected.

EM Field: W/m²
Striking Force: newtons
Result:
A man dressed as a mason from the era the house was built appeared, standing in front of the brick with a trowel,

setting it into place. Approximately 3 meters behind him, a dark humanoid figure wearing a hooded black robe with a concealed face stood motionless. While the worker appeared in relatively good clarity, the dark figure was of noticeably lesser fidelity. It made no motion but appeared to be staring in the direction of the mason. When viewing a digital recording of the test, the black figure dubbed SCP-1042-1 was not seen.

EM Field: W/m²
Striking Force: newtons
Result:
Three men dressed as groundskeepers appeared and proceeded to cross the room. Clothing and hairstyles seemed consistent with the mid twentieth century. Two instances of SCP-1042-1 also appeared. One directly adjacent to their path, one behind Dr. Thompson. The two younger men engaged in a brief discussion of the various ghost sightings and legends surrounding the house. The third, older man reprimanded them for believing in such things, and admonished them to get back to work. The three picked up gardening tools (the tools appeared in the projection the moment the workers made contact), and vanished. It should be noted that the location of the entity behind Dr. Thompson corresponds to solid earth behind the wall that originally contained SCP-1042.

EM Field: W/m²
Striking Force: newtons
Result:
As Dr. Thompson was preparing this test, Dr. entered the room and conversed with Thompson for approximately 2 minutes. During this time, the sleeve of her lab coat contacted an Erlenmeyer flask, sending it into a work-sink where it broke along with several test tubes awaiting cleaning after one of Dr. Lowenstein's previously mentioned experiments with SCP- . After

determining the correct parameters to play back this event and summoning his colleague for viewing of her actions, the image manifested as normal. However, moments before the flask was broken, SCP-1042-1 appeared behind Dr. and moved the flask 4 centimeters towards her arm. When the digital-recording of the playback was viewed, the figure did not appear, nor was the flask seen to move.

EM Field: W/m²
Striking Force: newtons
Result:
One of the groundskeepers from the previous experiment appeared. As he crossed the area of SCP-1042's effect, SCP-1042-1 appeared, knelt down, and pushed a wooden apple crate 6 centimeters toward the man. The groundskeeper's left knee collided with the crate and he proceeded to fall forward onto a garden rake, the tines impaling his face in his right eye and left cheek. SCP-1042-1 stood upright and observed the man writhing on the ground. The scene stopped at this point. Examining local records indicate that the groundskeeper was . After this accident, confirmed to have occurred in 19 , newspapers and court documents account that he became an alcoholic and was involved in a series of petty crimes. was killed in an automobile collision after leaving a drinking establishment 2 years later. The driver of the other vehicle sustained minor injuries, the 2 passengers died on impact.
Note: The survivor of that accident was , who later became a prominent public advocate of drunk-driving legislation, and founder of . In interviews, cited this incident and the loss of his wife and child as his primary motivation.

EM Field: W/m²
Striking Force: newtons
Result:

A test scenario was created by Dr. Thompson and several other researchers moving through the room, displacing a series of objects on to the floor and performing various tasks such as throwing a softball or juggling for approximately 15 minutes. An electric current was applied to SCP-1042 during the recording phase. When the brick was activated for playback, 2 SCP-1042-1 entities appeared in the corners of the room. Dr. Thompson examined the projection of one closely, attempting to discern its features for study. After 3 minutes of observation, the figure turned toward Thompson and a voice was heard saying, "Please stop staring, it makes us frightfully uncomfortable." Startled, Thompson jumped away from the apparition nearly falling backwards. The figure then turned its attention back towards the recorded events.
As before, upon viewing footage of the test, SCP-1042-1 did not appear nor was it heard; Dr. Thompson simply appeared to be interacting with empty space.

+ Show Notes on SCP-1042-1

SCP-1042-1 appears as a tall humanoid figure, standing at a height of approximately 2.5 meters. Image fidelity of projections varies, but they have never been observed at the full clarity and opacity of other SCP-1042 projections. They appear to be clothed in black hooded robes. Facial features also appear to be obscured by a mask of the same sort of material. Hands are humanoid, with 5 digits, also covered in layers of black material. The exact nature of this clothing cannot be determined.

These entities are seen in approximately 15% of SCP-1042 projections. 80% of these appearances consist of the figure standing motionless facing the subjects' actions. In 20% of appearances, the entities interacted with subjects indirectly, relocating objects in the general vicinity to a slightly altered position, always in a fashion that would ensure that subjects made contact with these objects. The purpose of these actions is

unknown.

The only occurrence of SCP-1042-1 vocalizing is the above experiment log. We are unable to determine whether the entity was interacting with researchers in real time, or had predetermined our actions and performed the appropriate response during the recording phase. Given the nature of SCP-1042-1, it is possible that it may not perceive time in a strictly linear fashion; further testing of this hypothesis is recommended.

« SCP-1041 | SCP-1042 | SCP-1043 »

SCP-1043: Instant Structures

Item #: SCP-1043

Object Class: Euclid

Special Containment Procedures: SCP-1043 is to be held within a containment room in Storage Unit 9 at Site-33. The air humidity within the containment unit should not exceed 5% to prevent devaluation of SCP-1043, as well as a potential containment breach. Experimentation on SCP-1043 requires approval of level 3 personnel due to limited amount available.

Uncontained instances of SCP-1043-1 are to be left to proceed to completion; a mobile perimeter is to be established around them to prevent public exposure. Resulting SCP-1043-2 is to be demolished and rubble, along with the foundation of solidified SCP-1043-1 removed, and stored at nearest Low-hazard Anomalous Materials Bulk Storage facility.

A mobile perimeter is to be established around uncontained instances of SCP-1043-1 for the purposes of monitoring. If the emerging SCP-1043-2 does not resemble any of the forms described in Addendum 1043-1, the area extending to a radius of at least 200 metres from the edge of SCP-1043-1 in question is to be evacuated, and procedure 28-Surtur applied. Otherwise, the resulting SCP-1043-2 is to be demolished and rubble, along with the foundation of solidified SCP-1043-1 removed, and stored at nearest Low-hazard Anomalous Materials Bulk Storage facility.

Description: SCP-1043 refers to approximately 31 134 sacks, labeled "MOLISOLUS MARK III" and numbers "I" to "V" in large red lettering. On the lower right corner of each sack is a green stamp detailing a winged arm holding a hammer, and the designation "APOLLODORUS CONSTRUCTION COMBINE". The sacks contain a grey-green powdery substance, which, if mixed with water and applied onto soil, recombines with it to form SCP-1043-1.

SCP-1043-1 is a self-propagating soil anomaly, appearing similar to a pool of concrete. SCP-1043-1 at this stage has been shown to have remarkable surface tension, able to support pressures of up to 40 kPa.

If removed from the main pool, samples of SCP-1043-1 cease activity and coalesce, producing an isotropic grey solid of stiffness similar to concrete, but a far higher yield strength—Vickers hardness 50 HD30—but otherwise lacking anomalous properties. Laboratory analysis has revealed the composition to be that of surrounding substrate with SCP-1043 acting as a resin matrix. Initially, an instance of SCP-1043-1 propagates at a rate of approximately m^2/ hr , assimilating surrounding soil, until reaching a depth of cca. 1.5m and a final area of cca. 8 times the area covered by the resulting SCP-1043-2.

After approximately hours, a number of ambulatory growths bearing outwards resemblance to human arms begin to form within SCP-1043-1. Once fully formed, the growths proceed to use SCP-1043-1, as well as occasionally salvage raw materials within the perimeter affected by SCP-1043-1 to construct a structure or object, labeled SCP-1043-2 (see Addendum 1043-1 for a list of SCP-1043-2 types known). After the construction is complete, leftover SCP-1043-1 retreats towards the centre and hardens, providing a foundation for the structure.

Experimenting with decreasing the quantity of SCP-1043 used has shown the process to successfully complete, however, the base layer is proportionally thinner, and beyond a point characterized by the thickness of the transformed soil layer not exceeding cm, the process fails to complete.

Addendum 1043-1:

> LIST OF SCP-1043-2 TYPES.
>
> Designation: SCP-1043-2-1
> Appearance: A smooth-walled rectangular building of base cca. 30x20 metres, and height of cca. 10 metres. The interior divides into two floors, each containing 41 identical rooms, and one of about twice the size. The

smaller rooms' walls and floor contain a number of protrusions bearing outward resemblance to shelves, bedding, and a table. The larger room's floor contains several holes cca. 25cm in diameter which terminate below the structure's base. The microstructure of most surfaces has been found to physically interfere with germ growth.

Designation: SCP-1043-2-2
Appearance: A semi-circular dome approximately 16 metres in radius, with decorative elements resembling the architecture of Mussolini-era Italy. There are four entrances, located 90 degrees apart. The interior contains a raised podium, and approximately 500 irregularly arranged seating places, connected via stairs. The internal walls and roof curve considerably and contain a large number of structural features. Analysis has shown the structure to possess excellent auditory properties.

Incident 1043-1:

On / /20 , members of MTF Chi-4 "Brick Breakers" were dispatched to a supposed instance of SCP-836 infestation in , Canada. However, on-site assessment has shown this to be an uncharacteristic instance of SCP-1043, spreading rapidly in an approximately 10 cm deep layer, and repurposing material within its perimeter to repeatedly construct what appeared to be several sections of a statue[1] and fuse them in a seemingly random arrangement, forming a mound approximately m in diameter.
Procedure 28-Surtur used upon operative approval by Dr. G shown successful in halting SCP-1043-1 activity.

Incident 1043-2:

On / /20 , a raid on the , a coffee shop suspected to serve as a cover for "Are We Cool Yet?" activity related to the spreading of SCP- as a part of the recent "We are the 99 bottles" campaign.

Among the items procured was a Moleskine notebook containing sketches resembling SCP-1043-1 and detailed drawings of structures resembling SCP-1018 , SCP- , as well as objects of seemingly impossible geometry. The drawings are dimensioned, and surrounded by stenographic markings, a number of yet-undeciphered symbols, as well as arbitrary content such as stylized sketches of common objects, and a drawing of a nude female identified as A P , a freelance writer frequenting the same establishment.
The notebook contains a number of fingerprint marks, which have been determined to consist of SCP-1043 powder.
Page 23 of the notebook shows a crossed out drawing with features similar to the structure encountered by MTF Chi-4 during Incident 1043-1. It is followed by a number of calculations, ending with "A=43.2[unknown symbol]**2i FUCK YEAH!" underlined twice.
Scanned copies of the notebook's contents are available to personnel with 2-1043 clearance.

Footnotes
1. Identified segments include a humanoid arm approximately 15 metres long, with its fingers embedded into a spheroid, a square slab, and a [DATA EXPUNGED] cross-section.)

« SCP-1042 | SCP-1043 | SCP-1044 »

SCP-1044: The Contradictory Echo

Item #: SCP-1044

Object Class: Safe

Special Containment Procedures: SCP-1044 is to be surrounded at all possible access points by signs in English and French warning of falling rocks, avalanches, landmines and dangerous animals. The area should be kept under periodic aerial surveillance and at least one member of personnel will be available on short notice to further discourage any non-personnel who choose to ignore the warnings.

Description: SCP-1044 is located in a small, uninhabited valley in the Alpine region of France, located at °N, °E and measuring approximately 1.2km across and 0.6km wide at its broadest point.

The properties of SCP-1044 were first encountered in 1968, after rumours of unusual sounding echoes began to spread through the local area. These reports ranged from the valley producing echoes that talked back, to [DATA EXPUNGED].

While the reported phenomena were widely dismissed as urban legend by local authorities, researchers were dispatched on 03/06/20 to determine their veracity. The following are partial transcripts of the three investigations carried out over the course of the following two years:

> **Experiment 1044-1**
>
> **Researcher A :** How should we begin?
> **Researcher F :** Perhaps 'hello?'
> **Researcher A :** *[speaking loudly]* Hello?
> **Researcher F :** I didn't get that. Try louder.
> **Researcher A :** *[shouting]* Hello?
> **SCP-1044:** *[Researcher A 's voice, in a manner resembling an echo]* Goodbye.

Researcher F : Did you hear that? That was 'Good-'
Researcher A : I got it. Let me try something else. *[shouting]* Is anybody down there?
SCP-1044: *[In the same manner as previous]* Is anybody up here?
Researcher F : *[shouting]* Yes.
SCP-1044: *[As an echo of Researcher F 's voice]* No.
Researcher A : Hold on. Try that again, as loud as possible.
Researcher F : *[shouting louder]* Yes.
SCP-1044: No.
SCP-1044: *[identically to Researcher F 's shout]* Yes.
Researcher A : If the first echo is contradicting you, is the second echo contradicting the first echo?
Researcher F : Or the second echo was just my own echo, coming through late.
Researcher A : Let's continue.

Experiment 1044-2
Note: Henceforth it can be assumed that the responses of SCP-1044 are heard in the form of an echo, in the same voice as the person who made the initial statement.

Researcher F : *[shouting]* Dog.
SCP-1044: Dog.
Dr. C : I suppose there is no opposite statement to dog.
Researcher F : Cat?
Dr. C : Not a true opposite. The phenomenon appears to follow a consistent logic. Observe: *[shouting]* I am a man.
SCP-1044: I am not a man.
Researcher F : And so, rather than echoing 'I am a woman,' it attempts to relay the logical opposite.
Dr. C : It is not yet clear that it has the awareness required to attempt anything.
Researcher F : What about the 'hello?' from the previous experiment? The echo said 'goodbye.'
Dr. C : It would make sense, possibly, that a statement

of parting ways is logically opposite to a statement of greeting.
Researcher F **:** Maybe. Or it is not as logically infallible as we think.
Dr. C **:** Suggesting what, precisely?

Experiment 1044-3

[DATA EXPUNGED]

Analyses of the audio transcripts of the experiments all conclude that SCP-1044 is an echo, localised to a single valley, that directly contradicts the speaker wherever logical contradiction of a statement or question is possible. Where multiple echoes are heard, each subsequent echo will contradict the previous.

In the later experiments, attempts were made to test SCP-1044 by calling out self-contradictory statements such as 'This sentence is false.' This invariably resulted in [DATA EXPUNGED]. Future experiments are to avoid such attempts.

« SCP-1043 | SCP-1044 | SCP-1045 »

SCP-1045: Candle of Life

Item #: SCP-1045

Object Class: Safe

Special Containment Procedures: SCP-1045 is stored in Low-Security Locker 17 at Site 21. No flammable materials or sources of open flame are to be brought within 5 meters of SCP-1045 except for testing purposes.

Description: SCP-1045 is a square wood-framed candle lantern measuring 15 cm x 15 cm x 32 cm. Its sides are made of translucent waxed paper and its interior framework provides a nested support for a circular glass cup measuring 6.5 cm in diameter and 10 cm in height. The anomalous properties of SCP-1045 do not manifest unless both components are used together.

When a candle is placed within SCP-1045 and lit, the walls of SCP-1045 depict the shadow of a miniature humanoid, as if lit from behind by the candle. The shadow on each side of the lantern depicts a different angle of the same subject. The shadow of the humanoid is always writhing, as if in pain, and it is surrounded by what appear to be semi-opaque flames. The shadow of the figure will persist as long as the candle is burning. Its motions become more frantic as the candle comes closer to burning out.

All candle residue recovered from SCP-1045 consists of rendered human fat, regardless of the original makeup of the candle. Damaged DNA samples have been recovered, but the identity of the source individual(s) has yet to be determined.

Addendum: Testing has revealed that burning scented candles produces shadows of different figures. In addition, burning a scented candle allows the shadows to emit sound. The volume of the sound is dependent on the strength of the scent. To date, all shadows have only produced incoherent screams.

SCP-1046: A House Without a Bedroom

Item #: SCP-1046

Object Class: Euclid

Special Containment Procedures: The building currently integrated with SCP-1046 is to be contained in a standard domicile containment unit. All surfaces contacting the building are to be constructed out of wooden materials. In the event of a containment breach, all portions of SCP-1046 found outside of containment are to be surgically removed and transplanted into the original building or a suitable replacement building.

Description: SCP-1046 is a collection of 781 separate human body parts, formerly a man named . The portions of SCP-1046's body are alive and fully functional, despite not receiving any sustenance or containing any blood.

SCP-1046 is located within the former home of . Portions of SCP-1046 are located throughout the home, with some portions of the body replacing utilities within the home (Such as portions of the skin replacing three curtains and a lampshade) and some inhibiting function of objects within the home (such as a sink being clogged by an artery, and a large portion of the face being permanently affixed to the living room television).

At random intervals, portions of SCP-1046 will shift throughout any nonbiological surface into which they are currently integrated. This shift can take anywhere from 45 minutes to several weeks. Additionally, the portion of the face integrated into the television, and any other portion of SCP-1046 capable of producing sound will begin to make distraught vocalizations. Faucets located within SCP-1046 will begin to produce small amounts of saline during this time, despite the building not being connected to any water source.

SCP-1046 was discovered on 9/18/1994, after Foundation assets in

the Davie Sheriff's Department followed up on reports of a "house with people parts". Investigation into the alleged house revealed SCP-1046's anomalous properties. Subsequent surgical intervention allowed agents to achieve successful containment. SCP-1046 was contained on 11/19/1994, and classified as Euclid. Similarities between SCP-1046 and **SCP-1582** have been noted, and investigation into a similar origin of the two phenomena is currently ongoing.

Addendum Documents recovered from the residence SCP-1046 was located in have proven to be relevant to SCP-1046's current condition. Further investigation into the "Malva Real Estate Corporation" are ongoing. The letters were found in a bureau drawer, and appear to be copies of letters that were sent to an unknown party.

> Dear Mr. Baer,
>
> Recently I moved into one of your company's marvelous new homes, and found it to be quite luxurious. The ads are right, you really do feel like part of the home. However, I am writing you this letter due to the fact that my new house no longer contains the bedroom. Would it be possible to get a contractor out here to remedy the situation?
> Sincerely,

> Dear Mr. Baer
> I don't believe you recieved my last correspondence, and as such I am writing to you again. Since you did not send a contractor, as I requested, I have decided to hire one of my own. Unfortunately, several injuries sustained on my property compelled them to leave without finishing. I once again compel you to remedy the error.
> Sincerely,

> Mr. Baer
> This is the third time I have contacted you, and I do not believe your ignorance of my issue is accidental. I

demand that you send a contractor to finish my home at once. It is unacceptable for a gentleman of my stature to be reduced to sleeping in the living room. If my home is not supplied with a master bedroom within the next three weeks, I will be forced to summon my lawyer.

To those who it may concern
I am alone and trapped and dark. I am all over. I feel the creaks of the beams. i taste the staleness of the wall. i am dry. i need my bedroom. several days into the dawning of the suncere letter sent t an insincere man he said i would be my hous i am a man dont take me anynmore please
i cant getsleepO*[the remainder of the note is unintelligible.]*

« SCP-1045 | SCP-1046 | SCP-1047 »

SCP-1047: Vengefully Ironic Street Signs

Item#: SCP-1047

Object Class: Safe

Special Containment Procedures: All instances of SCP-1047-1 through -5 are to be individually shrink-wrapped in a nitrogenous atmosphere to minimize their exposure to atmospheric carbon dioxide, and stored in standard inanimate-object lockers equipped with atmospheric sensors to measure carbon dioxide concentrations, and automatic halon dispensers set to activate in case of fire.

All instances of SCP-1047-1 are to be stored with their arrow pointing towards the ground.

SCP-1047-6 cannot currently be taken into custody, and is contained at the location where it was discovered. The apartment building has been purchased by the Foundation via a front company, and is to be kept unoccupied. Dual pump systems have been constructed to evacuate the atmosphere in the room containing SCP-1047-6 and replace it with nitrogen (see appendix 1047-B26 for mechanical specifications and diagrams); these pumps are to run continuously. All personnel maintaining the pumps and/or researching the interface into the room containing SCP-1047-6 should wear standard radiation dosimeters, and comply with standard health and safety regulations for radiation exposure.

Description: SCP-1047 is a collection of 6 standard types of traffic and street signs, each type of which induces a different anomalous effect. These anomalous effects activate when an instance of SCP-1047 is taken from its standard pole, and contained in a room where there are atmospheric concentrations of carbon dioxide greater than approximately 600 ppm and/or atmospheric concentrations of the various combustion products of marijuana (*Cannabis sativa*) greater than 100 ppm; specific activation

parameters for atmospheric conditions remain to be determined, as does the precise operational definition of 'room'. In all situations, these properties do not extend beyond the walls of the room in question, and can be interrupted by opening a door or window from the outside to promote gas exchange.

SCP-1047-1 (18 instances in custody) is a 'One Way' sign. When SCP-1047-1 is activated, the force of gravity within the room will immediately reorient itself so that 'down' is the direction of the arrow on the One Way sign. If, when falling towards the new direction of gravity, the direction of the arrow is changed (i.e., because the sign spins in midair, or collides with an object during freefall), the direction of gravity will then immediately point in the new direction of the arrow. If the room is an independent structure rather than part of a larger structure (e.g., mobile homes, camping tents, or portable toilets), the gravitational reorientation can lead to the forcible and continuous displacement of the structure in question; such displacements tend to result in the structure being destroyed by multiple collisions with its environment (at which point SCP-1047-1 deactivates), but have also been known to lift the structures to the upper levels of the atmosphere (at which point SCP-1047-1 likewise deactivates due to reduced air pressure).

SCP-1047-2 (23 instances in custody) is a 'Stop' sign. When SCP-1047-2 is activated, all vertebrate organisms within the room will immediately experience total paralysis of all voluntary muscles. Causes of death for individuals afflicted by SCP-1047-2 include fall-related injuries, aspiration on food, and starvation.

SCP-1047-3 (31 instances in custody) is a 'No Parking' sign. When SCP-1047-3 is activated, all vertebrate organisms within the room become unable to stop moving or to lose consciousness, and instead pace constantly until they die of exhaustion. As well, afflicted organisms are unable to leave SCP-1047-3's zone of influence.

SCP-1047-4 (15 instances in custody) is a 'Merge' sign. When SCP-1047-4 is activated, the skin of all vertebrate organisms within the room, and all surfaces (with the exception of SCP-1047-4 itself) that have touched skin within the past 24 hours will immediately take on a semiliquid consistency, causing them to bond with each other at a molecular level upon contact.

SCP-1047-5 (4 instances in custody) is a 'Yield' sign. When SCP-1047-5 is activated, all vertebrate organisms within the room will immediately lose all volition, and will sit motionless until such time as they see or hear any statement which can be interpreted as a command, at which point they will expend the minimum effort necessary to obey if this can be accomplished without leaving the room. [NOTE: although it can reasonably be assumed that SCP-1047-5's effects apply to all vertebrate organisms, the 'obedience' effect has only been tested on humans and on trained mammals.]

SCP-1047-6 is presumed to be a 'Speed Limit 55' sign, although this cannot be directly verified due to the nature of its anomalous effect. Within its area of effect (Apartment 6, #239 [REDACTED] Avenue) the speed of light is 55 miles (88 km) per hour. As a result, relativistic effects and Cherenkov radiation[1] at the interface mean that it is impossible to enter the apartment. Dual pumps have been constructed on site to drain the atmosphere within the apartment and replace it with nitrogen; atmospheric concentrations are expected to drop below SCP-1047-6's activation parameters after 473 (four hundred and seventy-three) years of continuous operation.

Acquisition log: SCP-1047 was discovered on / /20 , following Incident 1047-A, involving an instance of SCP-1047-1 being stolen from a telephone pole in the city of [REDACTED] and installed as a 'wall decoration' in a nearby apartment. The resulting five deaths were explained as the result of a truck crashing into the building.

Investigation showed that City Councillor [REDACTED] had recently spoken out against an increase in street sign thefts, and had claimed that all sign thieves would "get what they deserve". When approached by the Foundation for an interview, Councillor [REDACTED] immediately committed suicide; a second Councilmember died of a cerebral hemorrhage at that time, as did two employees of the city's Department of Infrastructure. Another two employees of the Department of Infrastructure were struck and killed by lightning at that moment. Autopsies revealed no anomalies, except that all six corpses had identical teeth.

Footnotes
1. Due to the gross differences between the local speed of light and

the average particle speed in a 22°C room, Cherenkov radiation emitted at the threshold of the effect consists of high-energy gamma rays rather than visible light.

« SCP-1046 | SCP-1047 | SCP-1048 »

SCP-1048: Builder Bear

Item #: SCP-1048

Object Class: Safe Keter

Special Containment Procedures: SCP-1048 is currently free to roam Site 24, as it poses no threat and has been observed to greatly improve the morale of personnel that interact with it. The whereabouts of SCP-1048 are currently unknown, though it is still believed to be somewhere in Site 24. Subject is to be secured for containment, but any creation of SCP-1048's should be destroyed on sight, unless further evidence warrants less extreme actions. No teddy bears are to be allowed in Site 24 to prevent any confusion or mistaken identity. Any object that resembles a teddy bear is to be reported to the security team immediately.

-This is not a joke. We have no idea what SCP-1048's full capabilities are. Who knows how many of the damn things are out there by now? - Dr. Carver

Description: SCP-1048 is a small teddy bear, approximately 33 cm in height. Through testing, composition of the subject revealed no unusual qualities that make it discernible from a non-sapient teddy bear. Subject is capable of moving of its own accord, and can communicate through a small range of gestures. The subject regularly shows affection to individuals in ways found endearing by most people. Affection is usually given in the form of a hug to the lower leg, but subject has also been observed dancing, jumping in place, and in two separate events it has even drawn child-like pictures for janitorial staff. All Foundation personnel that have interacted with the subject have responded positively to its affection, even D-class with normally sociopathic tendencies.

Attempts at direct communication with SCP-1048 have not been considered successful. Though it is capable of simple gestures to indicate a "yes" or "no" answer, it will often not react to lines of

questioning concerning its nature or where it originated from. It is not known if this is because SCP-1048 simply does not know the answers, or because it does not want to answer. Though capable of drawing pictures, it has not used its art as a form of communication beyond showing affection, even when encouraged to do so.

The more anomalous behavior of SCP-1048 was not observed until approximately 7 months after it was originally secured. It is hypothesized that the subject is able to construct crude replicas of itself using various materials, by a process that has yet to be observed directly by Foundation staff. Dr. Carver has suggested that SCP-1048 uses its endearing qualities to lull those around it in to a false sense of security, allowing it to collect materials to produce these creations. Currently, there are 3 known creations of SCP-1048, designated SCP-1048-A, SCP-1048-B, and SCP-1048-C. The nature of these creations has been in stark contrast to SCP-1048's general behavior, as all have exhibited extreme violence towards humans.

SCP-1048-A: On / / , SCP-1048-A was discovered wandering Site 24, accompanied by SCP-1048. Subject resembles a teddy bear similar in size and shape to SCP-1048, but is made entirely out of human ears. Witnesses interviewed reported that it appeared SCP-1048 was giving a "tour" of Site 24 to SCP-1048-A. Dr. Carver was called to the scene, along with a security team. The security team arrived first, and attempted to contain SCP-1048-A. Subject emitted a high-pitched shriek that inflicted intense pain in the eyes and ears of everyone in a 10 meter radius. Ear-like growths immediately began growing on those within 5 meters of the subject, covering their bodies in less than 20 seconds. Every person afflicted with this symptom died within 3 minutes, resulting in the death of personnel, including the entire security team. Autopsies revealed the cause of death to be asphyxiation caused by an abundance of the ear-like growths manifesting in the mouths and tracheae of all victims. SCP-1048 and SCP-1048-A fled the scene before Dr. Carver arrived, and have not been contained since the incident, though sightings of both have been reported on multiple occasions. Shortly after this incident occurred, a researcher was discovered missing an ear. According to him, it was removed through unknown means while he was sleeping. No other victims of ear removal were

found, so it is unclear if SCP-1048 obtained more ears from another source, or if it is capable of duplicating objects or materials.

SCP-1048-B: Subject was discovered by several Foundation staff members in the cafeteria of Site 24 on / / . Subject's appearance was nearly identical to SCP-1048, but it moved in an irregular, jerky manner. Witnesses reported that it appeared as if something was moving inside of SCP-1048-B. Subject made no attempt to interact initially, until a burst in its seams revealed what appeared to be the hand and arm of a human infant poking out and grasping at the air. At the sight of this, a female researcher named screamed, and SCP-1048-B reacted by emitting a high-pitched cry similar to that of a human infant. The subject then attempted to [DATA EXPUNGED] the screaming researcher, causing massive internal damage. In the ensuing chaos, a security team was forced to [REDACTED] both the researcher and SCP-1048-B. Approximately 3 hours after this incident, Dr. was found unconscious and bleeding in her office. An abortion had been performed on her while she was sleeping, and the 8-month-old fetus was never found. It is hypothesized that SCP-1048 used Dr. 's unborn child to create SCP-1048-B. Information regarding the possible origin of SCP-1048-B is not to be leaked to the survivors currently undergoing therapy for the incident with SCP-1048-B, as Dr. Carver believes it would be extremely detrimental to their recovery.

SCP-1048-C - Subject resembles a teddy bear similar to SCP-1048, but composed entirely of rusted metal scraps. Subject was first sighted on / / by Dr. Carver in his office while writing up a report on the SCP-1048-B incident. Subject fled the room when it noticed Dr. Carver observing it. In the attempted pursuit of SCP-1048-C, Dr. Carver witnessed the death and maiming of Foundation personnel as the subject exhibited extreme violence during its escape. SCP-1048-C has not been encountered since this initial sighting, and it is unknown whether it still resides somewhere within Site 24. The origins of any materials possibly used to construct SCP-1048-C by SCP-1048 are also unknown at this time.

Addendum 1048-1: **SCP-2295** is similar, but nearly antithetical in function, to SCP-1048. Attempts to establish a common origin are ongoing.

Extreme caution is to be taken if SCP-1048-A or SCP-1048-C are encountered again.

*-I cannot stress this enough. The damn thing jumped right **through** those poor people - Dr. Carver*

« SCP-1047 | SCP-1048 | SCP-1049 »

SCP-1049: The Bonetaker Owl

Item #: SCP-1049

Object Class: Safe

Special Containment Procedures: SCP-1049 is to be kept in a 1 x 1 x 3m aviary. Other than a perch 2m above ground, feeder, and water container, no foreign objects are permitted in SCP-1049's enclosure. SCP-1049 must be kept tethered to the perch at all times. If entry to SCP-1049's enclosure is required, protective clothing must be worn and time spent inside the enclosure must be kept to a minimum.

SCP-1049 is to be fed a diet consisting mostly of beetles, crickets and locusts. Small bats or mice may also be offered once per week. Personnel must not enter SCP-1049's enclosure to feed it; the feeder attached to the aviary allows for food to be offered from outside.

Description: SCP-1049 is an adult male black and white owl (*Strix nigrolineata*). It is physically identical to any other member of its species save for its eyes, which are a reddish pink. Its dietary needs and hunting behaviours are similar to those of any other owl; however, SCP-1049 exhibits the ability to remove the skeletons of humans by unknown means. It is presumed that it does this only to humans, as SCP-1049 does not appear to have used the ability on any other creatures prior to containment.

SCP-1049 was found after police in , Mexico made reports of boneless corpses being found in the nearby jungle, with no signs of external injury or another person having committed the crime. However, one victim had been found with several feathers resting on the corpse's chest, which were identified as belonging to an owl. Locals in the area reported seeing an unusual red-eyed specimen near to where the corpses were found, and claimed that it had caused the deaths of the victims. Police immediately discounted the

claims.

Foundation officials received the report during routine intelligence checks and searched the area, eventually finding SCP-1049. Before SCP-1049 could be contained, it alighted upon the shoulder of Agent . SCP-1049 bit at Agent 's face, although Agent suffered no injury. After several seconds, Agent collapsed. Agent 's body appeared to cave in on itself. Remains of Agent were found to be completely boneless. Cause of death is believed to be pressure and shock applied to the brain after the loss of the cranium.

SCP-1049 later produced a pellet containing small pieces of human bone, including phalange fragments and a cochlea. Testing confirmed that the fragments belonged to Agent .

SCP-1049 will attack any humans it sees in this manner, resulting in a complete loss of bone tissue and resultant death.

Addendum: Examination of SCP-1049 reveals no internal anomalies, or any indication of what causes the reaction seen in Agent . It is also unknown how bone fragments are ingested by SCP-1049, as it does not attempt to eat its victims.

« SCP-1048 | SCP-1049 | SCP-1050 »

SCP-1050: Obsidian Obelisk of Warning

Item #: SCP-1050

Object Class: Safe

Special Containment Procedures: SCP-1050-1 is to be maintained in a storage facility with interior dimensions of at least five (5) meters by five (5) meters by thirty-two (32) meters. The ceiling of the storage facility, specifically the area directly over SCP-1050-1, must be shielded to block radio waves broadcast at an intensity of [REDACTED].[1] SCP-1050-1 is currently stored at Area 179.

Occurrences of SCP-1050-2 are to be located upon identification of the corresponding change in SCP-1050-1. These are to be located and confiscated by Foundation agents. SCP-1050-2 is to be stored in secure classified document storage.

Instances of SCP-1050-3 must be tracked by monitoring radio telescope telemetry. When an instance of SCP-1050-3 is detected by non-Foundation personnel, all records must be confiscated and/or destroyed, and affected persons should be administered amnesiacs.

Description: SCP-1050 consists of one item (SCP-1050-1) and two related phenomena (SCP-1050-2 and SCP-1050-3). SCP-1050-1 was recovered from a secret German research facility in [REDACTED], following the conclusion of the Second World War. SCP-1050-2a was recovered from Soviet NKVD archives in 195 . SCP-1050-2b was recovered from British Crown archives in 195 . SCP-1050-1's previous origins are unknown.

SCP-1050-1
SCP-1050-1 is a large obelisk made of solid obsidian, with approximate dimensions of 1.48 meters by 1.48 meters by 30.5 meters.[2] According to obsidian hydration dating of the obelisk, the

obelisk itself was carved approximately 48,9 years ago. Microscopic scans indicate that it is perfectly shaped at the molecular level, indicating creation requiring technology in advance of that available at the present. The obelisk is covered by a variety of writing scripts, all apparently containing the same message, and all apparently carved with the same exact precision as the obelisk itself. The surface of the obelisk appears to be subdivided into eighty 1.48 meter by 1.48 meter sections, each with a distinct form of writing. Of the eighty sections, of them have been filled in. Images of several of the carvings on SCP-1050 are in Addendum 3. Linguistic analysis of the scripts indicates the following (in chronological order by age, except as noted):

- as yet unidentified scripts bearing no resemblance to any known language or writing style, past or present, with carving dates ranging from 48, years ago to years ago. These are presumed to contain the same message as the other scripts.
- A script of unknown origin dating to the creation of the obelisk, whose spelling and grammatical structure resembles early forms of ancient Latin, though the alphabet and numeral system are completely different.
- Jiahu symbols[3]
- Akkadian Cuneiform
- Egyptian Hieroglyphs
- Linear A[4]
- Olmec script[5]
- Classical Latin
- Early Medieval Swedish Runes
- Modern English (circa 1891)
- Modern Russian (circa 1943)

The scripts all appear to contain the same message. The following is the English version of the message, as written on SCP-1050-1 (*footnotes provide conjectural annotations by the research team*):[6]

> Beware the Destroyers. They come by the millions from the Realm of Darkness which extends where no stars shine.[7] For a thousand generations They slumber, lying in wait. Great nations rise and flourish. There is peace and prosperity. Then comes the Dark Times; then They

Return. They cull and burn. They are warped, and move beyond the pale, bigger than any man, unnatural births. Every nail, claw-scale and spur, every spike and welt on the hand of those heathen brutes is as barbed steel. It is said there is no honed iron hard enough to pierce Them through, no time proofed blade that can cut Their brutal blood caked claws.[8] Armies are raised and cut down like grasses before a scythe – it is said the armies of Amorah and Suhdom,[9] each ten thousand strong, were swept away between a single rising and setting sun. Heroes come forth and are slaughtered. Lightning and fire rain from the sky and the whole earth trembles. They are as a deluge, a powerful flood that washes away entire mighty nations and empires.[10] The people pray for deliverance from the gods. The gods fight the Destroyers, but their efforts are in vain. Iapetos,[11] Ausare,[12] Ehecatl,[13] Souchang[14] – all perished. The Destroyers are to the gods as the gods are to men and men are to insects: cold and vast and unsympathetic. The wise flee Them; the lucky escape. Fifty score great vessels were launched to seek refuge from Them; only those led by Satyavrata,[15] Utnapishtim,[16] Noach,[17] and Deucalion[18] escaped. The Dark Ones vanquish all before Them. They have come before since before time began. Now They slumber. They will return. Beware the Destroyers. 13 057 935 897.[19] 13 057 987 212. 13 082 937 367.[20] 13 082 989 898. 13 097 951 299.[21] 13 098 004 240. 13 154 950 029.[22] 13 154 997 841. 13 171 943 486.[23] 13 171 996 357. 13 175 947 117.[24] 13 175 997 684. 13 179 942 287.[25] 13 179 990 180. 13 183 948 781.[26] 13 183 999 048. 13 232 952 474.[27] 13 233 001 388. 13 281 951 481.[28] 13 282 002 364. 13 329 941 108.[29] 13 329 990 159. 13 348 945 350.[30] 13 348 994 654. 13 394 942 237.[31] 13 394 994 635. 13 416 953 628.[32] 13 417 005 920. 13 454 440 174.[33] 13 454 492 033. 13 482 944 398.[34] 13 482 991 663. 13 534 433 334.[35] 13 534 484 218. 13 566 069 136.[36] 13 566 119 652. 13 585 446 914.[37] 13 585 499 555. 13 599 896 703.[38] 13 599 945 679.[39] Proclaimed again by Her Majesty Victoria, by the Grace of God, of the United Kingdom of

> Great Britain and Ireland Queen, Defender of the Faith, Empress of India, in the Year of Our Lord Eighteen Hundred Ninety-One.

The end of the message is different for each time it is written, varying by which ruler "proclaimed again" the message, and by altering the date accordingly. Testing has revealed the dates of the carving of different messages to correspond with the approximate dating provided by the different iterations of the message. So far, Foundation researchers have identified the following rulers:

- Legatus Maximus Romulus, 53,5 BCE (original carving, "Proto-Latin" with alternate alphabet)
- King Gilgamesh of Uruk, 2,5 BCE (Akkadian Cuneiform)
- Pharaoh Khakhaure Senusret III of the Egyptian Middle Kingdom, 185 BCE (Egyptian Hieroglyphs)
- King Midas of Minoa, 8 BCE (Linear A)
- Caesar Publius Aelius Traianus Hadriani Augusti (Emperor Hadrian) of Rome, 122 CE (Classical Latin)
- King Erik the Victorious of Sweden, 985 CE (Early Medieval Swedish Runes)
- Queen Victoria of Great Britain, 1891 CE (Modern English)
- Premier Josef Stalin of the Union of Soviet Socialist Republics, 1943 CE (Modern Russian, most recent carving)

The meaning of the series of numbers appearing in the message is not known for certain. However, if assumed to be standard Earth years from the date of the Big Bang, then the numbers follow a pattern consistent (within four significant figures) with the major extinction events in the planet's history, followed by a date roughly fifty thousand years later. Extensive investigation into prehistoric extinction events has thus far failed to definitively confirm a connection between the events, but has similarly failed to disprove such a connection.

SCP-1050-1 also emits SCP-1050-3 from its apex, despite apparently having a composition of solid obsidian.

SCP-1050-2
SCP-1050-2 consist of documents with text equivalent to carvings on SCP-1050-1, apparently written by the rulers alleged by

SCP-1050-1 to have proclaimed the message. The existence of SCP-1050-2 was discovered when the Russian message, apparently proclaimed by Stalin, mysteriously appeared on SCP-1050-1 overnight while the obelisk was in a Nazi research lab during the Second World War in 1943. SS researchers, discovering the mysteriously added new message, reported the development to their superiors, but no evidence for the origin of the new carving was ever determined by the Nazi research team. SCP-1050-2a, a version of the message written in Stalin's handwriting, was discovered after the war by Foundation operatives. It was located in the archives of the Soviet People's Ministry of Internal Affairs (NKVD), though there is no clear indication whether Stalin ever actually wrote the message. SCP-1050-2b, a handwritten version of the message apparently written by Queen Victoria, was recovered from British archives in 195 , where it had apparently been filed without notice. Apart from the fact that both -2a and -2b match handwriting samples of their respective apparent authors and both seem to have appeared without explanation, no anomalous properties have ever been noted in SCP-1050-2. No further instances of SCP-1050-2 have been uncovered to date.

SCP-1050-3

SCP-1050-3 consists of a series of radio messages uncovered at different times by radio telescopes on four continents and in orbit. These messages consist of the following:

> Caue qui destruunt. 131 520 067 324. 131 520 231 714. 131 735 163 354. 131 735 330 606. 132 114 132 402. 132 114 273 440. 132 310 742 546. 132 311 106 102. 132 505 700 122. 132 506 047 214. 132 671 063 271. 132 671 232 140. 133 002 357 774. 133 002 520 311. 133 166 775 636. 133 167 134 163. 133 505 463 131. 133 505 627 216. 134 026 556 234. 134 026 714 120. 134 260 240 562. 134 260 405 153. 134 447 340 406. 134 447 501 115. 135 004 066 506. 135 004 236 030. 135 305 137 065. 135 305 277 056. 135 506 335 426. 135 506 475 565. 135 532 471 335. 135 532 634 763. 135 551 527 350. 135 551 675 475. 135 774 357 077. 135 774 515 471. 136 131 626 002. 136 131 767 340. 136 376 623 165. 136 376 772 515. 136 553 570 623.

136 553 727 457. 136 655 237 566. 136 655 377 612.
136 774 033 615. 136 774 172 265. 137 111 653 240.
137 112 017 667. 137 412 021 517. 137 412 170 737.
137 660 541 073. 137 660 677 750. 140 027 376 424.
140 027 535 524. 140 223 042 076. 140 223 202 372.
140 363 774 534. 140 364 136 676. 140 712 326 512.
140 712 467 531. 141 224 045 031. 141 224 211 214.
141 363 344 027. 141 363 512 512. 141 454 560 103.
141 454 727 420. 142 006 115 615. 142 006 253 121.
142 106 764 076. 142 107 133 305. 142 126 177 555.
142 126 342 364. 142 145 372 617. 142 145 530 244.
142 164 613 755. 142 164 756 110. 142 457 552 232.
142 457 711 654. 142 752 477 371. 142 752 642 674.
143 241 541 164. 143 241 701 017. 143 352 136 706.
143 352 277 136. 143 631 514 435. 143 631 662 713.
143 755 473 434. 143 755 641 540. 144 174 473 356.
144 174 640 601. 144 351 263 616. 144 351 420 057.
144 655 610 066. 144 655 753 372. 145 046 344 620.
145 046 507 344. 145 160 274 002. 145 160 442 643.
145 247 372 177. 145 247 531 717.

The numbers have been determined to be base-8 (Octal) representations of the forty base-10 (Decimal) integers in the obelisk message, preceded by another sixty integers following a similar pattern. It is hypothesized that these numbers may refer to additional events not documented in Earth's paleogeological history. The "Proto-Latin" message translates, roughly, to "Beware the Destroyers." SCP-1050-1 emits SCP-1050-3 from its apex. SCP-1050-3 has also been received from other directions in space, including [DATA EXPUNGED]. These are received as occasional pulses of 1-3 repetitions of the SCP-1050-3 message, suggesting similar directional broadcasts to those emanating from SCP-1050-1 being transmitted from rotating planets orbiting other stars.

Addendum 1: Speculations by the SCP-1050 Research Team, 19 .

SCP-1050 appears to be parts of an interstellar "early warning" system of unknown origin. Before the invention of more modern forms of rapid communication, some societies would light bonfires

atop watchtowers, which would then be observed by the next watchtower, which would then light its own bonfire, and so on. By this method, a warning of an invading army could be passed along tens or hundreds of miles in hours, rather than days. It seems to the research team that SCP-1050 may be something similar, which would explain the signal we've designated SCP-1050-3. Similarly, by having the message written on the obelisk in dozens of languages, and apparently proclaimed by major political rulers of the time, it would increase the likelihood of societies being forewarned about these "Destroyers", whomever or whatever they may be. SCP-1050-2 might be a means of spurring the governments of major political powers to action, though, due to the fact that this warning has not been visibly taken seriously or even publically acknowledged suggests that this has not occurred historically. While it may be attractive to assume such defensive measures as Hadrian's Wall or military buildups by the Nazis were due to preparing to meet some shadowy preternatural threat, no other historical evidence supports this conclusion.

Addendum 2: Note on containment procedures.

Since the Foundation came into possession of SCP-1050-1 in 194 , O5 Command has twice amended the Special Containment Procedures, initially requiring the blocking of radio signals (194), then requiring that radio signals not be blocked (196), then requiring that they be blocked (198). These changes have resulted not from alterations in SCP-1050-1, but rather from changes in the perceived threat posed by SCP-1050-1's radio transmissions.

The rationale behind blocking SCP-1050-1's broadcast of SCP-1050-3 is that it decreases the likelihood of drawing attention to Earth, by removing this planet from the theorized "early warning network". The rationale behind not blocking the signal is that, if the theories about the possibility of future extinction events being caused by the mentioned "Destroyers" are correct, then this planet has some degree of obligation to warn other planets in danger. At present, the risks of broadcasting the signal are believed to outweigh the benefits.

Footnotes
1.See Addendum 2.
2. These measurements correspond with the archaic length measure of the Romanpace, equal to 1.48 meters. – Dr. Von Schmidt.
3. SCP-1050-1 has provided the ability for linguists to read the previously indecipherable Jiahu symbols from Ancient China, but the Foundation has not released any information relating to the Jiahu symbols to the scholarly linguistic community due to the classified nature of SCP-1050-1.
4. SCP-1050-1 has provided the ability for linguists to read the previously indecipherable Linear A from the ancient Minoan culture, but the Foundation has not released any information relating to Linear A to the scholarly linguistic community due to the classified nature of SCP-1050-1.
5. SCP-1050-1 has provided the ability for linguists to read the previously indecipherable Olmec script from pre-Columbian Mesoamerica, but the Foundation has not released any information relating to Olmec script to the scholarly linguistic community due to the classified nature of SCP-1050-1.
6. With the exception of a change in the ruler and date when the message was “proclaimed again”, the message appears to be identical in all languages on the obelisk.
7. Conjectured to be interstellar space, possibly intergalactic space.
8. Preceding description (“They are warped…claws.”) appears in Beowulf.
9. Archaic Tiberian spelling of Sodom and Gomorrah.
10. Possible origin of the Flood myths that appear across most ancient cultures.
11. Ancient Greek Titan, son of Uranus and Gaia, father of Atlas, Prometheus, Epimetheus, and Menoetius; ancestor of the human race through Prometheus, Epimetheus and Atlas. Titan of Mortal Life. He was imprisoned in Tartarus by the Olympians.
12. Archaic form of Osiris, Ancient Egyptian god of the afterlife, underworld, and the dead. He was killed by Seth and had his body torn into 14 pieces, which were then scattered through the land.
13. Pre-Columbian Aztec wind deity, associated with Quetzalcoatl.
14. Deified ancient Chinese General, more commonly known today

as Guan Yu.
15. Initial name of the Hindu figure Manu, believed to be the first king to rule this earth, having saved mankind from the universal flood.
16. Survivor of the flood myth inThe Epic of Gilgamesh.
17. Archaic spelling of Noah from the Abrahamic flood myth.
18. A son of Prometheus in Greek myth, he and his wife Pyrrha survived the Greek mythical flood by building a chest.
19. End-Edicaran extinction event, 542 million years ago.
20. End Botomian extinction event, 517 million years ago.
21. Dresbachian extinction event, 502 million years ago.
22. Ordovician extinction event, 445 million years ago.
23. Ireviken event, 428 million years ago.
24. Mulde event, 424 million years ago.
25. Lau event, 420 million years ago.
26. End Silurian extinction event, 416 million years ago.
27. Late Devonian extinction event, 367 million years ago.
28. Carboniferous Rainforest Collapse, 318 million years ago.
29. Olson's extinction event, 270 million years ago.
30. Permian-Triassic extinction event, 251 million years ago.
31. Triassic-Jurassic extinction event, 205 million years ago.
32. Toarcian turnover, 183 million years ago.
33. End-Jurassic extinction event, 145.5 million years ago.
34. Aptian extinction event, 117 million years ago.
35. Cretaceous-Tertiary extinction event, 65.5 million years ago. Dinosaurs go extinct.
36. Eocene-Oligocene extinction event, 33.9 million years ago.
37. Middle Miocene Disruption, 14.5 million years ago.
38. Quaternary extinction event, approximately fifty thousand years ago.
39. Possible date range,[DATA EXPUNGED BY O5 COMMAND].

« SCP-1049 | SCP-1050 | SCP-1051 »

SCP-1051: Nevadan Extraterrestrial

Item #: SCP-1051

Object Class: Euclid

Special Containment Procedures: Due to SCP-1051's main danger being information leakage, efforts towards containment have been placed into denial or falsification of rumors surrounding its existence. Agents are to be reminded that any reference towards SCP-1051 or similar concepts during interaction with a civilian, whether online or offline, are to be met with ridicule and/or denial. Knowledge beyond current cultural information may require the application of a Class-A amnestic.

SCP-1051 is to be patrolled by no less than twenty (20) personnel dressed in uniforms superficially resembling that of the United States Air Force, in a two (2) km radius surrounding SCP-1051. Intruders into this radius are to be shot. Personnel are reminded to not injure intruders, but only shoot a sufficient amount to repel them. Repeated attempts at entry or entry beyond a one (1) km radius will result in the application of a Class-A amnestic.

Satellites orbiting over or near SCP-1051 are to have their transmissions monitored for suspected interference. Any antennae discovered in a 10 km radius around SCP-1051 with no known purpose are to be either destroyed or surrounded by a Faraday cage.

Description: SCP-1051 is a large, immobile organism presumably extra-terrestrial in origin. Its "shell" measures approximately 700 meters by 500 meters by 60 meters. SCP-1051 is an ambush predator in nature, and lures its prey using a variety of sociological and psychological manipulation.

SCP-1051 has a shell that mimics large structures. For the past years, SCP-1051 has remained in appearance to an aircraft hangar.

SCP-1051 will periodically produce and launch "eggs" (see above) from itself. They are elliptical in design but are flattened at the bottom to make a domed shape. This is presumably for ease of travel through terrestrial atmospheres. Currently out of "eggs" have successfully been reclaimed by Foundation personnel. Eggs not intercepted by Foundation personnel have been ejected out of Earth's atmosphere and are irretrievable.

SCP-1051 will frequently attempt to connect with orbiting satellites in order to send television signals, images, or a variety of other media forms. SCP-1051 currently has a 2 % success rate in connection. SCP-1051 may also transmit radio signals or connect to telephone lines.

SCP-1051 arrived on Earth in 194 in an "egg". It was originally discovered by the United States Air Force, which transported it to , Nevada. SCP-1051 did not come into Foundation attention until 195 , following a distress signal by Air Force personnel stationed at .

Addendum 1051-1: Anatomy of SCP-1051:

1. Mouth of SCP-1051. Doors to SCP-1051 shut and prey is pushed deeper into SCP-1051's body.
2. Gizzard of SCP-1051. Grinds prey into fine paste before digesting.
3. Stomach of SCP-1051. Digests prey into nutrients and waste products.
4. Sphincter and waste tube of SCP-1051. Nutrients are sent to point 5 while waste product is released through southern cavity.
5. Brain of SCP-1051.
6. Distributing organ of SCP-1051. Note that this organ extends several different antennae and wires underground, allowing it to connect to various phone lines, emit radio transmissions, and connect to satellites. Foundation personnel have only been able to discover of the presumed antennae SCP-1051 utilizes above ground.
7. Presumed to be tongue of SCP-1051. Analysis of this paved area has shown fine indentations in the concrete, suggesting that SCP-1051 may have taste buds. / /19 : This was confirmed after SCP-1051 retracted it momentarily following a chemical spill, giving

the appearance of a disappearing air-strip.

Addendum 1051-2: Transmissions Successfully Distributed by SCP-1051:

Repeated uploading of various false information to various "Conspiracy" websites, including:

- Information of various spacecraft being reverse-engineered inside itself.
- Various "**Men in Black**" theories of extra-terrestrial contact.
- Its use as testing for the following items: Exotic energy weapons, weather controlling devices, time and teleportation machines, and impossible propulsion systems
- Various messages in radio and television transmissions regarding its use by a "shadow government" [NOTE: This is considered a high-level information leak. Class-A amnestics are authorized for use dependent on the level of classified information.]
- Calls to several production studios in California.
- Dozens of calls, faxes, and Emails to the *National Enquirer* offices in . National Enquirer offices have been monitored by Foundation personnel since 198 .
- Masked orders to officially reveal its existence, sent to U.S. Military Intelligence.

Addendum 1051-3:

Interview 1051-1

Interviewed: SCP-1051

Interviewer: Dr. Richardson

Foreword: A small radio apparatus was set up nearby SCP-1051's distributing organ in an

attempt to communicate with it. Agents found SCP-1051's distributing frequency at the time after 2 hours of scanning.

<Commence Log>

Dr. Richardson: Hello? 1051, can you hear me?

SCP-1051: Give.

Dr. Richardson: Pardon?

SCP-1051: Give.

Dr. Richardson: Give what?

SCP-1051: Want feed.

Dr. Richardson: You don't get any food.

SCP-1051: Area-51 is currently being controlled by the SCP Foundation, a shadow government organization that has designated it SCP-1051. Here are a few names of the operatives-

Dr. Richardson: Send out D-7238. (One D-class personnel is sent into SCP-1051's "mouth".) …Now, why are you sending out these signals?

SCP-1051: Bring food.

Dr. Richardson: What do you mean?

SCP-1051: Learn humans curious. Make curious.

Dr. Richardson: What about those discs we captured?

SCP-1051: Catch baby? (An audible groan can be heard coming from SCP-1051's "brain")

Dr. Richardson: They're eggs? You reproduce that way?

SCP-1051: (2 minute pause) Dr. Richardson, Agent Adler, Agent Crescent. Its coordinates are the following: [DATA EXPUNGED]

<End Log>

Closing Statement: SCP-1051 proved to be highly uncooperative following the interview. All attempts to destroy SCP-1051's distributing organ met with failure.

Interview 1051-2

Interviewed: Sgt. James Bernson

Interviewer: Dr. Richardson

Foreword: Sgt. Bernson sent out the distress signal received by Foundation personnel that led to the discovery of SCP-1051.

<Begin Log>

Dr. Richardson: Good afternoon, sergeant.

Sgt. Bernson: Good afternoon.

Dr. Richardson: You were working in Area-51, yes, the Air Force base?

Sgt. Bernson: Yes.

Dr. Richardson: And what project were you assigned to?

Sgt. Bernson: Security and regulation of

research regarding the unidentified flying object recovered from Roswell in 1947.

Dr. Richardson: And what was the object itself?

Sgt. Bernson: White, dome-shaped meteorite.

Dr. Richardson: What did they discover during research?

Sgt. Bernson: The meteorite was hollow, but filled with some kind of liquid. Something was very slowly moving around inside of it.

Dr. Richardson: And how long did study of the object take place?

Sgt. Bernson: years.

Dr. Richardson: It would have continued longer but it was interrupted, yes?

Sgt. Bernson: Yes.

Dr. Richardson: You were the one that sent out a distress signal?

Sgt. Bernson: Yes.

Dr. Richardson: Why?

Sgt. Bernson: The meteorite hatched.

Dr. Richardson: Pardon?

Sgt. Bernson: The meteorite hatched. It was an egg.

Dr. Richardson: And that's when you sent out the distress signal?

Sgt. Bernson: Yes.

Dr. Richardson: Can you describe the incident in more detail?

Sgt. Bernson: Dr. James, Dr. Gold and I were working late. We heard a cracking noise and looked at the object. A crack began to appear along it. We were surprised, so we just stared. Then after about 5 more minutes of cracking it broke through the shell.

Dr. Richardson: It?

Sgt. Bernson: The alien. We began to run but something snaked out of the shell and grabbed Dr. James. Then it… absorbed him. Dr. Gold and I both escaped out of the hangar. That's when I sent out the distress signal.

Dr. Richardson: What happened then?

Sgt. Bernson: As I was finishing signalling Dr. Gold tapped me on the shoulder and pointed at the hangar. I turned to look and saw it shaking. Then it expanded a bit and collapsed. Inside we could see… it writhing around.

Dr. Richardson: Was Dr. James there?

Sgt. Bernson: No. The alien then began to form a shell around itself. The shell moved around a little, then it suddenly looked like the hangar.

Dr. Richardson: Is that it?

Sgt. Bernson: After that your men arrived and took me in for questioning.

Dr. Richardson: Alright. Thank you for your time, Sergeant.

<End Log>

Closing Statement: *I'll have to have a chat with this Dr. Gold. I have a hunch.* - Dr. Richardson

Interview 1051-3

Interviewed: Dr. Jonas Gold

Interviewer: Dr. Richardson

Opening Statement: Dr. Gold was one of the original researchers of SCP-1051.

<Begin Log>

Dr. Richardson: Good evening, Doctor.

Dr. Gold: Yourself.

Dr. Richardson: I'd like to ask some questions about Dr. James.

Dr. Gold: He was a good friend of mine.

Dr. Richardson: I am sure this is hard for you.

Dr. Gold: It's fine. Go on.

Dr. Richardson: What were Dr. James's interests?

Dr. Gold: I suppose his interest was his job. A real sci-fi nut.

Dr. Richardson: Really?

Dr. Gold: [Dr. James] always liked to go on about stuff from other worlds, new technologies, hell, he could have been a writer for all those B-movies you see in the cinema.

Dr. Richardson: What was his opinion on the military?

Dr. Gold: Well, he was working for them of course, so keep this under your hat, but [Dr. James] honestly thought they actually already had aliens.

Dr. Richardson: Where did he think they kept the extra-terrestrial?

Dr. Gold: He didn't mention it. Or he just didn't know. Probably figured that if we already had a secret meteorite we must have had an honest-to-god space-craft somewhere, kept secret.

Dr. Richardson: I have one more thing, doctor.

Dr. Gold: Go on.

Dr. Richardson: Does anything about this seem familiar? (Dr. Richardson plays tape recording of Interview 1051-1)

Dr. Gold: […] Where did you get this?

Dr. Richardson: Why do you ask?

Dr. Gold: That voice. It's [Dr. James].

Dr. Richardson: Thank you for your time, doctor.

Dr. Gold: No, wait!

<End log>

Closing Statement: Dr. Gold was escorted out by security personnel.

SCP-1052: Ana

Item #: SCP-1052

Object Class: Safe

Special Containment Procedures: SCP-1052 is to be stored within a lit, sealed locker, located in Area Blue-13, Site 45. A miniaturized CCTV camera is to be placed within the locker, with checks made every evening by surveillance officers to ensure that the object has not been displaced.

All and any mail, electronic or physical, that arrives at Site 45 is to be examined by security personnel. During this examination, should any letter, envelope, or folded notes be found to be addressed to "Ana", or should any of the contents be directed towards this named entity, they are to be compiled and forwarded to Assistant Researcher M. Joshua, who will note down all, if any, possible indications that the sender is aware of the existence of the Foundation, or possesses any knowledge of SCP-1052's nature beyond the reference to its name as "Ana". In the event that a reference indicating further knowledge is found, a retrieval team should be dispatched to the residence of the sender, whereupon the sender will be brought in for questioning and possible neutralization.

The contents of the letters are to be entered into the Site Database under the Foundation_Materials\Safe\SCP-1052, whereas physical letters themselves are to be disposed of in the on-site paper shredder.

Note that pleas and "prayers" do not count as an awareness of the existence of the specimen, as this has been noted to be a typical characteristic of most of the letters.

Security personnel are also to check the bi-weekly Internet word filter records for any instances where the term "Ana" is used in the same context as any of the Foundation buzzwords (a list of which

can be found in the compilations put together by the Foundation linguistic experts).

*Note: Due to the nature of Site 45 having been upgraded recently to a higher threat level, it is advisable that SCP-1052 be moved to a secure facility that does **not** contain weaponizable SCP-objects. This specimen presents a constant leak in security which may compromise the safety of the site and the containment of other on-site specimens. - Dr. Lim.*

Description: SCP-1052 is a ladies' hand-mirror, approximately 5 inches in diameter, gilded with gold leaf along the sides of the handle and around the mirror itself. The handle and head of the mirror are made of solid brass, whereas the dowel used to connect the sections together is made of wood. Its make has been estimated by Foundation historical experts to be late 16th century, possibly of French origins due to the ornamentation of the frame in a Baroque style popular during the period of 1543-1602.

Inscribed upon the blank side of the hand-mirror, in French, are the words 'Chère Ana'; in English, 'Dear Ana'. Located 2 inches from the head of the mirror, carved into the wood of the dowel, is a female figure, approximately 30 years of age. She appears to be wearing a tertiaries' habit, and holding lilies intertwined with a crucifix in her hands. The mirror itself displays no anomalous properties other than letter-receiving.

SCP-1052 is the recipient of numerous letters, written by individuals who have been diagnosed with Anorexia Nervosa, where "Ana" is the subject to whom the letters have been addressed. Researchers have been able to deduce, after analyzing the contents of the letters, that some senders view 'Ana' as the physical manifestation of their illness, whereas others appear to have attributed to 'Ana' a quasi-divine status, petitioning her for 'comfort' and 'strength' to resist consuming food. It is currently unknown how letters addressed to SCP-1052 reach their 'recipient', despite the many senders initially apprehended displaying no knowledge whatsoever about the Foundation.

SCP-1052 dates back in Foundation records to the earliest available at Level 3 clearance, thus it is likely that it has been in possession of

the Foundation for at least over a century. Further unofficial records state that it was passed on to Foundation personnel by [REDACTED], who was at the time, an associate of the Foundation due to the circumstances of its retrieval. Current containment procedure has had been in effect since 1948, when Site 26 was hit by GOC forces after a security leak, which was brought on by the interception of one of the letters addressed to SCP-1052. The connection between the object and the letters was made after SCP-1052 was transferred to Site 54 in the aftermath of Site 26's destruction, and the letters continued being sent, now instead posted to the location of Site 54.

Note: Current investigation is being undergone by in-field operatives working within the GOC in order to ascertain if SCP-1052 is indeed a form of tracking device planted by the organization.

Addendum 1052-A: Contents of a 'Letter to Ana' dated 21st September, 2003

> Dear Ana,
>
> Fuck you. You've ruined my life. I've lost my family, my friends, my love, all burned down my throat into the spiral of the toilet bowl. Today, as my fingers stabbed and scraped the back of my throat, and as acid fire leapt through the back of my eyes, I realized I hate you. You've taken everything from me, cast me aside like a rag doll, looked at my at disdain. Why? WHY? Because I'm still too fat? Because these bones still don't break through my skin?
>
> Can't you see you've broken me? That you've raped my throat until I can't speak to others anymore, that you've scratched my mind until all I could think of is you, beautiful, wonderful you? I love you, Ana, I love you, I love you, you're so beautiful. I want to be like you, I want to be you. I want to taste nothing but the cool air in my stomach, feeling as it collapses on itself, searching for sin. I want to dance on empty air, float and fly in my weightlessness, die choking on my own vomit one night, so I can be with you, Ana. Please don't leave me, don't

abandon me. I cry out to you every night, ignoring the pleas of my family, the sheep around me. They don't know you as I do. You're all I have left.

Let me leave this world, Ana, hug me close as you pull me off the edge, please. It's so cold and lonely here, where nobody else is, and I feel faint. I may fall any moment, but I don't want to fall by myself. I don't want to die. Please bring me away. Please make me thin. Please let the whispers stop, I know they're saying that I'm not good enough, that my flesh still writhes under my skin. Please, make it painless.

Love,
Faithful

Addendum 1052-B: Interview with Mr. - sender of 36 letters to both Site 54 and 45

Subject: Hey. HEY! Who the hell are you guys? What the fuck am I doing here?

Asst. Researcher : Calm down, Mr. , we're here to ask a few questions, maybe even help you.

Subject: Help me with what? Oh god. Is this about that? I told you, you fuckers, I'm fine. I've been better than I've ever been. The doctors don't know shit. She's helped me become who I've always want to be, so you can damn well fuck off and tell whoever put you up to this that they can stick their noses back into their own business!

Asst. Researcher : Mr. , do you understand that you've been sending letters to a secure government facility? One that you should have no knowledge of?

Subject: Is it Lila? Was she the one that put you up to this shit?

Asst. Researcher : Mr. ! We need you to pay attention. I don't want to have to make this difficult for

you, but we will, if you continue to be uncooperative.

Subject: [Silence for approx. 1 minute]

Asst. Researcher : Let me cut to the chase. How have you been sending these letters to us?

Subject: I don't know what you're talking about.

Asst. Researcher : Your letters to Ana! How have you known where to send them to?

Subject: [Silence for approx. 1 minute]

Asst. Researcher : Answer the question, goddammit!

[Subject begins to break down and cry]

Subject: She… she sent me the first letter. She told me I wasn't good enough, she voiced the words in my mind that have been eating away at me. I had to speak to her, to feel the coldness of her gaze. Please, I need to talk to her, to apologize, to tell her I'm sorry for not being the bones I should be. Please…

Asst. Researcher : … Did she send any more letters?

Subject: She would tell me, after each letter I sent… how broken and flawed I was, how fat I am, how I need to do more. She congratulated me once, for trying to cut open my belly. But she… she's never… I need to speak to her. I need her love, her embrace.

Asst. Researcher : Where are these letters?

Subject: In my home. Please, do you know where she is? Can you let me talk to her? I need to tell her what I did.

Asst. Researcher : What did you do?

Subject: Enough.

Addendum 1052-B: Letter retrieved from home of Mr.

Dear ,

You are not yet nothing. You are still an eternity away from it. Don't try to hide behind the doctors and your people, I can still see you, your rolls of fat draped about your body. You don't deserve to hear from me. If this goes on, , I will simply have to give up on you.

But there's still hope, my beautiful son. Isn't that wonderful? Keep going, keep striving. And maybe, one day, you'll be good enough for me. Then, and finally then, shall I love you.

Ana.

Letter was sent from the address of Site 45.

Addendum 1052-C: Log of Incident 1052-1

In January , 20 , Senior Researcher gained access to SCP-1052 during on-site research. However, due to less stringent measures implemented then regarding the personal lives of the researchers, it was overlooked that his own biological daughter, a Ms. , was one of those who had sent letters to SCP-1052.

Ms. was sixteen at the time, and had suffered from Anorexia Nervosa for approximately four years, resulting in two recorded hospital stays, and prolonged visits to various mental institutions. It is likely that Senior Researcher , at the time distraught over the actions of his daughter, attempted to decommission SCP-1052, without the authority to do so. However, two days before his scheduled experiment with SCP-1052 (which would have involved him spending time alone with the object while observed by third parties), Senior Researcher was found murdered in his home. Subsequent searches of his home by Foundation Personnel turned up a series of letters going back and forth between Ms. and "Ana". The last letter from "Ana" informed Ms. that it was in

danger due to her father. Ms. has since been detained by the Foundation, and is currently undergoing psychiatric treatment and confinement in Foundation Mental Health Complex - .

It is thus presumed that either SCP-1052, or the letters it produces are mild cognitohazards, and that the danger posed by the object is higher than previously suspected. Changing of the Object Class from Safe to Euclid is currently under consideration.

« SCP-1051 | SCP-1052 | SCP-1053 »

SCP-1053: Overpopulation

Item #: SCP-1053

Object Class: Keter

Special Containment Procedures: Due to the destructive properties of SCP-1053, it is currently isolated in Area 1053. Mobile Task Force Omicron-7 ("Bounce Houses") is always on alert, stationed outside of Area 1053 in order to end Emergence events. SCP-1053 itself is encased in a steel box, with a sensitive scale below it in order to act as an early warning system for Emergence events. Purposeful testing with SCP-1053 has been discontinued, and as such, access is prohibited under normal circumstances.

Description: SCP-1053 appears to be a street map of [REDACTED], centered on the most urban portions of the city. The date on the map (as well as its features) are consistent with the year 19 . Under most circumstances, the map is mundane, excepting the mild regenerative properties it possesses (see below). The map is made out of paper, and samples have shown no anomalous properties. Unfolded, SCP-1053 is 0.25m x 0.4m, and folds to 8cm x 5cm.

Periodically,[1] SCP-1053 will cause a Lamed-Gamma level spatial anomaly, known as Emergence events. Land within a 50m radius of SCP-1053 will begin to change into streets, buildings, sidewalks, and other scenery consistent with the city of [REDACTED] in 19 . Actual landmarks, street names, or neighborhoods from [REDACTED] do not exist; rather, small details (such as streetlamps, the style of buildings, etc.) are pieced together to form this new area (hereafter Ground 1053). Scenery inside of Ground 1053 has been described as "extremely urban" or "a nest of streets," and subjects have detailed the entire place as being a twist of asphalt and dirt streets, narrow roads, and tall glass buildings.

The radius of Ground 1053 expands quite slowly, although external

viewing of Ground 1053 is inaccurate due to the fact that Ground 1053 is a spatial anomaly. Measurements can be taken for its external area and still be accurate. However, subjects inside of Ground 1053 have reported that it is much bigger than it appears on the outside. Calculations have placed the internal size as approximately % of the external size, although it is possible that the internal size is highly fluctuating, which would allow the estimation to have a margin of error as high as 15%.

The weather inside of Ground 1053 is similar to the weather outside of it, although raindrops and snowflakes do multiply as they enter the area, keeping them at normal size. Other natural forces do affect Ground 1053. However, natural phenomena such as lightning, rain, snow, and wind do not appear abnormal.

No organisms have ever been encountered inside of Ground 1053. Empty places of residence, such as apartments and condominiums, have been encountered. However, no personal belongings have been discovered inside of these residences; dressers are present but empty, walls are barren from wallpaper or pictures, etc.

After Incident 1053-01, it has been concluded that once sufficient damage is dealt to SCP-1053, Ground 1053 will immediately stop expanding. Within less than 30% of the time it took for Ground 1053 to be created, the entire area will fully disintegrate. During retrieval time, SCP-1053 usually is fully repaired by unknown means. The state of SCP-1053 before the expansion of Ground 1053 has no affect on the growth; rather, the difference of the condition of SCP-1053 before Ground 1053 is generated is directly proportional to the amount of damage that must be dealt to SCP-1053 for Ground 1053 to disintegrate. It is speculated that if SCP-1053 were to sustain enough damage prior to the generation of Ground 1053, stopping it from expanding would become impossible, causing a CK-end-of-world scenario.

MTF Omicron-7 ("Bounce Houses") is tasked with entering Ground 1053 during Emergence events. Rapid response is key in ending Emergence events, as the longer Ground 1053 has to expand, the area needed to be covered in order to reach SCP-1053 will increase exponentially. In addition, technological capabilities inside of Ground 1053 have been greatly inhibited, for unknown reasons. To date (/

/20), the farthest that Ground 1053 has reached externally is kilometers.

Footnotes
1. Thanks to research by Dr. , the Foundation has concluded that Emergence events occur when the nation of [REDACTED] nets approximately 0,000 new inhabitants. Efforts are currently being taken to keep [REDACTED] stagnant.

« SCP-1052 | SCP-1053 | SCP-1054 »

SCP-1054: The 'Garden' Gnome

Item #: SCP-1054

Object Class: Safe

Special Containment Procedures: SCP-1054 should be kept in a 3x3x3m steel-coated cell, which is to be sealed at all times except for when testing is taking place. The steel door that is used to access the cell should be airtight, as to not allow for the astro-turf to 'grow' outside the door.

Description: SCP-1054 is a ceramic garden gnome, 32cm in height and 14cm in width. It has a white beard, a red hat, and is sitting on a sack of unknown contents. It is playing a wooden flute-like instrument, and is in a dance-like position. On the base of SCP-1054, "THE 'GARDEN' GNOME" is written in a thick black pen. Note that the word "'GARDEN'" is in inverted commas.

SCP-1054's effects become noticeable when it is left in the same place for just over an hour. After approximately 63 minutes, green plastic 'blades', or fake grass, will start 'growing' out of the ground around the base of the gnome, no matter what the surface that the sculpture is standing on. The 'grass' will spread at a rate of 1cm² per 30 seconds in every direction. This will continue until it meets a wall or object, at which point the growth will stop. If there are objects on the surface that the 'grass' is spreading on, it will simply grow around it, leaving a clear patch of floor underneath. If the object is removed, and the gnome remains on the surface, the grass will grow over the clear patch. Plastic flowers, trees and other plants will sometimes grow from the ground.

Every so often, as the 'grass' grows, a conscious life form (hereby known as SCP-1054-1) will grow too. SCP-1054-1 have appeared in many forms, all being well-known garden ornaments. Known forms of SCP-1054-1 include:

- **`Pink plastic flamingos`**. It is noted that instead of legs, this specimen has one thin pole, stuck into the ground. This specimen cannot 'walk', but it has full capable movement of its wings, neck and beak.
- Garden gnomes. These gnomes vary in looks and clothing, but none are the same as SCP-1054.
- Digging dogs. This specimen of SCP-1054-1 is a dog, with the front half of its body buried into the ground. It can move its back legs and tail, but cannot move from the spot it appears in.
- Birdbaths. This specimen is made out of marble, with small 5cm tall birds around the rim. These birds can fly, but seem to want to stay around the birdbath, and become agitated when taken away.

Addendum: The gnomes that grow as SCP-1054-1, if left long enough, begin making houses and huts out of various materials. These materials all come from sacks that sometimes grow with the gnomes. They are seen to have a routine daily life, such as conversing with other gnomes, building structures and other jobs. Once every 5 hour (approx.), all gnomes gather in front of SCP-1054, and perform religious rituals, such as praying and worshiping it.

« SCP-1053 | SCP-1054 | SCP-1055 »

SCP-1055: Bugsy

Item #: SCP-1055

Object Class: Keter

Special Containment Procedures:

> **SCP-1055 is an infohazard. Information in this document is presented strictly on a need-to-know basis for containment personnel. Accessing additional information requires Level 5 approval and accepts the risk of creating a containment breach.**

SCP-1055's living quarters are accessible via subterranean monorail from Site-77. Two personnel responsible for providing care to SCP-1055 are to be rotated in every eight hours for 24-hour observation. SCP-1055's living quarters contain a playroom with television, futon and sound system, a washroom, a library stocked with children's books, and a kitchen. Staff are encouraged to provide any meal which SCP-1055 asks for within appropriate nutritional guidelines. If current supplies do not meet requirements, substitutions of pasta or sugary cereals are commonly accepted.

SCP-1055 will fixate upon a random object (currently a teddy bear referred to as *"Bugsy"*) and clutch it tightly at all times. Staff must allow and encourage this behavior, even during bathing and feeding. SCP-1055 may vocalize unhappiness or deliver warnings on behalf of this object; any requests concerning this object must be met by all possible means available.

Containment of SCP-1055 depends primarily on both its isolation and positive social attitude. In the event of catastrophe, staff are to evacuate and flood the living quarters with nitrous oxide. Under no circumstances is any physical harm to be done to SCP-1055, even and especially if it becomes hostile.

- Access additional information

> Containment of SCP-1055 depends primarily upon the health and well-being of its caretaker, D-1055. Due to SCP-1055's extreme reactions to human perception, successful containment requires that staff on site be misdirected to believe that D-1055 is the anomalous entity himself. D-1055 is of diminished mental faculty but aware of the importance of his service in keeping *"Bugsy"* safe in his arms. D-1055 has thus far presented the only viable means of containing SCP-1055 without massive loss of personnel and resources.

Level 4 personnel who oversee containment of SCP-1055 are not allowed within 50 km of Site-77 nor may they directly interact with any personnel tasked with its maintenance.

Description: SCP-1055 is formerly Michael Schroder of Douglas, WY. He is a Caucasian male, 6 foot 4 inches tall and 280 pounds, 29 years of age, and suffers from autistic spectrum disorder and Down syndrome. SCP-1055 may be addressed as 1055, "Mikey" or any nickname which he suggests. Despite classification as an anomaly, staff are encouraged to address SCP-1055 with normal social pronouns in documentation and conversation.

[DATA EXPUNGED]

- Access additional information

> Under normal conditions, SCP-1055 superficially resembles a specimen of *Ursus arctos horribilis*; however, its volume, mass and morphology shift spontaneously. The means by which SCP-1055 gains and loses mass is not understood, but it appears to be in relation to the number and proximity of individuals who are aware of SCP-1055 and the nature of the attention it receives from them. Hostile or fearful awareness of

SCP-1055 increases its size and hostility significantly more than benign awareness, but due to SCP-1055's violent nature, even a calm awareness of its existence can quickly spiral into a potential containment breach as the danger it presents escalates and it exposes itself to more individuals.

In the event of catastrophic exposure to human awareness, SCP-1055 will quickly be overwhelmed by its own size and will no longer be able to effectively move at will; however, it will continue to grow and produce sensory organs and appendages which are used to assault any living creature within reach. Even in confined or subterranean locations SCP-1055's growth can exert enough pressure to cause tremors and massive structural failure, and pieces of the biomass are capable of growing through and widening gaps or cracks of any size.

Apart from its mass generation, SCP-1055 possesses no special ability to resist trauma. Portions of SCP-1055's biomass that are removed via trauma do not regenerate or continue living independently. However, about 75% of any hostile action taken against SCP-1055 to date has failed to destroy more of the organism than the very act itself generated, even in circumstances where the trauma was applied remotely via bombing or automated defenses.

No upper limit to the size or lethality of SCP-1055's biomass has been established during containment breaches and exposure to civilians and unscreened personnel. The only event which has ever been shown to effectively reduce SCP-1055 in size is the

death of at least 80% of the individuals aware of its existence. Amnestics of any class are not sufficient to eliminate awareness.

Total elimination of SCP-1055 is hypothesized to require the extermination of all previously exposed individuals, including the O5 Council itself and anyone who is reading this document. It is the O5 Council's unanimous opinion that a failure to properly restrain SCP-1055 could quickly spiral into an XK-class scenario if its existence became publicly known.

Addendum: Containment procedures adapted from captured GOI intelligence. The GOI was unsuccessfully researching attempts to destroy SCP-1055 which led to its escape and subsequent [DATA EXPUNGED].

- Access additional information

Current procedure was adopted following SCP-1055's 12th containment breach which resulted in sustained precision bombing upon former Site-76 and the loss of all personnel within with the exception of D-1055 (previously classified D-492291; see form 1055-46 re: termination exemption).

Double-blind recovery teams found D-1055 alone in the rubble, clinging to the shredded remains of SCP-1055 as a 'security blanket'. It is hypothesized that D-1055 lacks the full capability to understand *"Bugsy's"* true nature, and that — as his awareness of SCP-1055 is obsessively protective and affectionate — he is not capable of triggering the escalating growth and hostility that normal human interaction with SCP-1055 produces.

According to interviews with containment

personnel it appears that SCP-1055 itself either currently lacks the body and muscle mass to resist D-1055, or it simply lacks the will to resist. The majority of personnel have been successfully convinced that SCP-1055 is a poorly sewn, if disturbingly realistic, stuffed animal. Any movement or other indications to the contrary have been attributed to D-1055's supposed anomalous nature.

I don't care that this arrangement has worked out the best out of all the previously scrapped containment schemes. It is not sustainable in the long run to ask a mentally challenged man to keep the end of the world at bay with hugs. We need a long term solution, preferably orbital or oceanic to keep exposure to human awareness at an absolute minimum. — O5-10

Tell Mikey that we're taking Bugsy away and we're facing a brand new containment breach. I recommend doing so in person, that would at least be one less person who knows about this thing. — O5-5

Via Protocol 12 we are already recruiting in plenty of mentally challenged individuals for Keter work. We're grooming future candidates to inherit D-1055's duties and to act as backup if the worst happens. Argue all you want for putting it in the sky where anyone can see it, this is the cheaper and safer option by far. — O5-7

« SCP-1054 | SCP-1055 | SCP-1056 »

SCP-1056: Re-size It!

Item #: SCP-1056

Object Class: Safe

Special Containment Procedures: SCP-1056 is to be kept in a 50x50x50 cm 10-digit combination safe with biometric confirmation when not being used for testing. Only personnel involved in SCP-1056 research and testing may have access to the object. All tests require prior authorization by the Site Director or and by research staff with Level 3 clearance or higher. Tests on living subjects must be conducted in a secure testing facility meeting Level 2 containment guidelines to prevent modified subjects from escaping. All objects altered by SCP-1056 must be kept in Class E ablative storage for 48 hours after transformation. The creation of any object or organism over 200 kg must be approved by the Site Director.

Description: SCP-1056 superficially resembles a burnished chrome kitchen timer with numbers ranging from 0.25 to 4.00 and an activation button on the right-hand side. A 1x1.25 meter wire mesh platform is connected to the device by a 3 meter insulated molybdenum carbide wire coated with molybdenum disulfide and an unidentified organometallic complex; the mesh is capable of folding into a 27 x 35 cm square. When the device is set to a number and the side button is pushed, any objects in direct contact with the wire mesh platform will scale up or down in size by a factor corresponding to the number setting.

The device was recovered by SCP personnel following reports of unusual behavior among students at High School in , PA. School officials began an investigation when teachers reported that a number of students were behaving unusually. Specifically, the students displayed significantly impaired language skills, abnormally poor attention span, long-term memory, and impulse control. Medical examination of the students revealed the presence of

numerous vascular and nervous system abnormalities. Foundation personnel recovered the device at the home of one of the students, who had presumably been using it for recreational purposes. The only indicator of the manufacture or distribution of the device is a 4x1 cm imprint on the bottom of the device reading "THE FACTORY". All electronic components are of generic make.

The manner in which objects are resized appears to follow a set of rules that varies depending upon the complexity and function of the object. Simple inanimate objects such as minerals, metals, and plastics scale up or down to precisely (to four significant figures) the scale indicated without any regard to molecular or microscopic scale. For instance, a 5.00 cm stainless steel cube on the 3.00 setting scaled up to a 15.01 cm cube that was indistinguishable in molecular composition from the original cube but that differed on a microstructural level; average grain size on the two cubes was identical, and individual grains on the small cube did not scale up to the large cube.

SCP-1056 appears to scale complex devices and biological organisms with some attempt to maintain the functional properties of the object or organism. For instance, the microprocessors of electronic devices are often modified if the altered scale would result in nonfunctional transistor gates, insufficient power, or excessive heat build-up. Devices that have been scaled down often have a reduced number of transistors and may demonstrate floating point errors. While all but the most complex mechanical objects scale relatively well, electronics are often rendered nonfunctional when scaled below 0.50 and above 3.00 of their original scale.

Living organisms that have been resized by SCP-1056 retain their basic anatomical structure but often experience significant reorganization of the circulatory, pulmonary, and especially nervous system. Cell size and composition remain identical to that seen in the original organism, but the number of cells increases or decreases proportionally to the change in volume. The only exception to this observation is the nervous system, where the average neuron may increase or decrease up to 25% in linear size (thus, potentially becoming slightly under half or over twice the original volume) with negligible effects on function. Interestingly,

SCP-1056 appears to “split the difference” with single-celled organisms, slightly altering the average cell size and also altering the overall cell population.

Humans can be resized by SCP-1056 as low as 0.50 and as high as 1.75 with minimal change in function. Shrinking humans often results in increased gyrencephaly (folding) of the cerebral cortex, a reduction in average neuron volume, and a decrease in white matter. This appears to preserve cognitive function down to 0.50. Attempts to scale humans below 0.50 results in a substantial decrease in cognitive function, language comprehension, and short- and long-term memory, indicating that this is the minimal size required for human-like intelligence in a mammalian brain. Humans scaled above 1.25 demonstrate slowed reaction speeds, a reported increase in creativity, and substantial improvements to long-term memory. Scaling beyond 1.50 greatly increases the risk of cardiovascular disease, stroke, aneurism, and renal failure. The scaling of any organism beyond 3.00 is highly discouraged.

The mechanism by which SCP-1056 institutes these changes in scale is currently unknown. High-speed video footage of transformations up to 20,000 fps indicate that the transformation is nearly instantaneous, as there is no apparent transition between forms.

Interestingly, there are no apparent effects of atmospheric displacement, even when the volume created or destroyed is very large. In a minority (roughly 8%) of cases, an object altered by the device experiences a material instability and begins to undergo atomic decay within 36 hours of alteration. Living organisms and other objects with relatively low metal content have a considerably lower (roughly 3%) chance of undergoing decay. This decay produces significant heat and energy – approximately 150 gigajoules per kilogram - around six orders of magnitude less than typical matter-antimatter decay but sufficiently high to render frequent or high-mass transformations inadvisable.

Experiment Log SCP-1056

Experiment Log SCP-1056

Experiment SCP-1056-1
Object: TI-30Xa scientific calculator.
Setting: 0.75, 1.33
Result: Functional 0.75 scale calculator. The calculator was successfully returned to a 1.00 scale using the 1.33 setting. Repeated transformations between the two settings does not appear to alter the basic function, appearance, or internal composition of the calculator.

Experiment SCP-1056-2
Object: TI-30Xa scientific calculator.
Setting: 0.25, 4.00
Result: Nonfunctional 0.25 scale calculator. The power button of the calculator turns it on, but it is incapable of performing accurate calculations. Most calculations result in either incorrect results or an ERR signal. Return of the calculator to normal scale using the 4.00 setting did not return function to the device. Internal analysis indicates loss of fine details, including transistor number and LCD resolution, in the device.

Experiment SCP-1056-3
Object: 1 kg bar of 22 carat gold bullion.
Setting: 4.00
Result: 64 kg bar of 21 carat gold bullion with minor molybdenum impurities.

Experiment SCP-1056-4
Object: 35 one ounce (28.35 gram) “Silver Eagle” bullion coins.
Setting: 2.00
Result: 99 bullion coins weighing 80.18 grams apiece. The increase in total mass seems to be evenly split between increasing the average size of the coins and increasing the total number of coins. 40.25 hours after the transformation, the coins began to emit electromagnetic radiation, eventually emitting high levels of heat and ionizing radiation. The mass of silver was stored in the high explosives test chamber at Site 40 until the mass had completely dispersed 20 hours later. This

resulted in extensive damage to the test chamber and the treatment of four researchers for radiation poisoning.
Researcher's Note: *If we can identify the objects that will do this prior to their decay or reliably induce decay in a class of objects, then items altered by this SCP could be used for power or even weaponized. There does not appear to be any underlying constant to what items are susceptible to or what SCP-1056 process initiates this decay. –Dr. Bimston*

Experiment SCP-1056-5
Object: Human subject D-3202, a 52 year-old male, 175 cm tall and weighing 90.3 kg.
Setting: 2.00
Result: The subject scaled up approximately twofold to 341 cm tall and weighing 719.6 kg. Mental and physiological functions appear normal. Reaction times are slightly lower than normal and required caloric intake is only 50% of what would be expected, given the nearly eightfold increase in mass. The subject performs extremely well on long-term memory tests, perhaps owing to increased brain mass. Resting heart rate is 45 bpm and systolic pressure is 165 mm Hg (versus 132 before the transformation). Six days after the transformation, the subject experienced vascular irregularities leading to moderate swelling in the distal limbs, followed by intermittent bouts of confusion, spotted vision, blurred vision, and tinnitus. The subject died from respiratory arrest caused by a massive brainstem aneurysm 22 days after the transformation.
Researcher's Note: *The subject's symptoms suggest the rapid onset of complications consistent with cases of extreme acromegaly (gigantism). Our projections indicate that most humans would tolerate scales of up to 1.33 or slightly above relatively well. –Dr. Kearns*

Experiment SCP-1056-6
Object: Human subject D-3315, a 36 year-old female, 163 cm tall and weighing 55.0 kg.
Setting: 0.50

Result: The subject scaled down approximately twofold to 81 cm tall and weighing 7.0 kg. Mental and physiological functions appear normal. There was no significant difference in tests of general intelligence, short- and long-term memory, and spatial reasoning administered before and after the transformation. MRI scans indicate increased folding in the cerebral cortex and an overall decrease in white matter. Resting heart rate is 98 bpm and systolic pressure is 88 mm Hg (versus 115 before the transformation). The subject's cardiovascular system was slightly simplified in a manner similar to that seen in smaller primates. Twenty-eight days after the transformation, no obvious health or behavioral anomalies were observed and the subject was returned to her original size.

Experiment SCP-1056-7
Object: Human subject D-3315 from experiment SCP-1056-6, a 36-year old female, 81 cm tall and weighing 7.1 kg.
Setting: 2.00
Result: The subject scaled back up to her original size of 163 cm tall with a weight of 55.7 kg. Mental and physiological functions appear normal. Cognitive tests indicate a slight but significant improvement in short- and long-term memory and a slight decrease in reaction time. It is hypothesized that these cognitive irregularities could compound or change with repeated use of the device. The cardiovascular system appears modified from the shrunken version to support the larger body but is not identical to the original vascular pattern, indicating that the device "improvises" solutions to physiological problems anew with each transformation rather than reverting to old forms.

Experiment SCP-1056-8
Object: Bacterial culture of species *E. coli* in LB medium on a 13 cm petri dish.
Setting: 4.00
Result: The Petri dish scaled up to 52 cm and the

bacterial colonies increased in volume roughly sixty-fourfold while maintaining their original morphology. Microscopic analysis of the colonies reveals that the average size of the bacteria had increased by a factor of 2.2 to 7 microns in length with the remaining increase in mass owing to an increased number of bacterial cells. Samples cultured from these colonies maintain an increased size, generally stabilizing at 6 microns in length after 20 replication cycles. PCR analysis reveals several point mutations in the bacterial genome, such as in the *rodZ* gene, leading to the bacterium's generally increased size.
Researcher's Note: *Genetic tests indicate that SCP-1056 restructures organisms on both a physiological and genetic level. This represents a degree of abstract sophistication inconsistent with the simple digital and mechanical workings observed within the device. –Dr. Kearns*

Experiment SCP-1056-9
Object: SCP-1056
Setting: 2.00
Result: [DATA EXPUNGED]
Site Director's Note: *From now on, all experiments on this device must be approved by the senior investigator and then submitted to me. The responsible parties have been officially disciplined and removed from this project. We're lucky that the effects weren't much, much worse. What would have happened if the entire universe had doubled in size? -*

« SCP-1055 | SCP-1056 | SCP-1057 »

SCP-1057: Absence of Shark

Item #: SCP-1057

Object Class: Safe

Special Containment Procedures: SCP-1057 is kept in a reinforced glass containment tank 4 meters tall, 15 meters long, and 9 meters wide, filled with water which has been treated to replicate a temperate ocean environment (see document 1057-H-22 for specifications). Vegetation in SCP-1057's habitat is to be maintained twice a week (see document 1057-H-19 for specifications). It is forbidden to enter SCP-1057's tank for 30 minutes before and after feedings.

SCP-1057 is to be fed five (5) kg of raw meat and fish, three (3) times a day. Once every four (4) days, this meat and fish is to be injected with non-toxic fluorescent dyes (see document 1057-G-4 for specifications). The tank is to be lit with ultraviolet lamps.

Description: SCP-1057 is an animate empty space, five (5) meters long, in the shape of an adult tiger shark (*Galeocerdo cuvier*). It does not appear to have any mass; however, it displaces water by an unknown mechanism. SCP-1057's refractive index is approximately that of air, which makes it partially visible when immersed in salt water; as well, its "anti-shadow" is discernible under bright light. Experiments involving the insertion of inanimate objects into SCP-1057's "body" have revealed that there is nothing there; however, further experiments along these lines are contraindicated, as this triggers extremely aggressive behavior on the part of SCP-1057.

SCP-1057's behavior has been assessed by Foundation ichthyologists as being within normal parameters for an adult tiger shark. Any food consumed by SCP-1057 disappears, with the exception of the non-digestible fluorescent dyes which are regularly added to SCP-1057's food to facilitate monitoring its behavior.

These dyes persist within SCP-1057 for five to nine days, and outline a digestive and circulatory system; several hypotheses to explain how this is possible when there is manifestly no actual shark present have been suggested, tested, and disproved (see archive 1057-N4).

Acquisition log: SCP-1057 was captured in the Public Swimming Pool, in [REDACTED], where it killed two swimmers and mutilated a lifeguard; five people were killed in the ensuing panic. Foundation personnel embedded in the local hospital reported the incident; retrieval agents arrived on the scene and SCP-1057 was eventually taken into custody. During forensic examination of the swimming pool premises, Document 1057-K24 was discovered on the staff bulletin board; although Document 1057-K24 is handwritten, no fingerprints were found on it.

Document 1057-K24:

> Panic means that the idea of a shark can be more dangerous than an actual shark.
>
> It can even be more dangerous than no shark at all.
>
> Are we cool yet?

« SCP-1056 | SCP-1057 | SCP-1058 »

SCP-1058: The Semivisible Man

Item #: SCP-1058

Object Class: Safe

Special Containment Procedures: SCP-1058 is to be kept in Humanoid Containment Wing 2 of Site 17. Due to the nature of the subject's anomalous behavior, the floor of the cell is to be covered with 1cm of sand, to be replenished every two weeks. The cell is to be lit by only a single light source at all times. The source should be mounted in the center of the ceiling, with redundant backups in case of failure.

Description: SCP-1058 appears to be an approximately 60-year-old male human, possibly from the southern United States. The subject was recovered from a Marshall, Carter and Dark Ltd. "distribution center" in , . The subject is fully sentient and capable of speech, as well as interaction with physical objects.

SCP-1058's anomalous properties manifest as a total invisibility to all forms of direct observation. Despite this, the subject does cast a shadow. In addition, SCP-1058's shadow causes the surface or object which it falls upon to alter its appearance towards that of the subject. The speed and mechanism of the process appear to be dependent on the density, state, and other physical characteristics of the substance the subject's shadow is being cast on. Sand and other granulated or powdery substances seem to be the quickest affected by SCP-1058, with metals and other hard materials being among the slowest affected.

Any object attached to the subject also comes under its effect, becoming invisible to direct observation, and altering the appearance of the effect of the subject's shadow on the material. Anything removed from the subject becomes visible, this includes clothes and accessories, as well as pieces of hair, blood samples, and other bodily effects.

Addendum:

Test Log 1058-1
/ /

Subject: SCP-1058
Test Coordinator: Senior Researcher
Testing Environment: Standard Foundation 5m x 5m x 5m testing cell. Floor was covered in approximately 1cm of sand for the duration of the test, and SCP-1058 was placed on a chair in the center of the cell. At the start of the test, all but a single light was turned off until the conclusion of the test.

00.01.00: A visible ridge of sand appears to form on the sand on the side of SCP-1058 opposite the lamp in the shape of the subject with his arms by his side.
00.01.37: SCP-1058 is instructed to lift his arms above his head. Subject complies.
00.01.44: The sand ridge is observed to "tumble", following the movement of the subject. The affected area began to gain a more detailed likeness of the subject regardless of movement.
00.02.08: Subject is instructed to wave arms rapidly. Subject complies before returning his arms to the original position.
00.02.15: The sand remains stationary. Affected area ceases movement as the hypothesized maximum level of detail is reached, being little more than a silhouette with creases at the ankles, waist, wrists, neck, and hairline.
00.02.40: Test ended.

Test Conclusion: The subject's effect on the material it is projected onto is preceded by an unmeasured amount of "lag" before the material is altered to reflect movement.

Test Log 1058-2
/ /

Subject: SCP-1058
Test Coordinator: Senior Researcher
Testing Environment: Standard Foundation 5m x 5m x 5m testing cell. Floor was covered in a large piece of sheet metal, and SCP-1058 was placed on a chair in the center of the cell. At the start

of the test, the light source was placed so that it shined upon SCP-1058 from a different angle.

00.00.19: Surface of the metal in the subject's shadow begins to show signs of corrosion and rust.
00.05.14: Subject falls asleep. Portion of the metal affected remains the same besides gaining additional detail slower than before, contrary to the slight changes in subject's posture.
00.23.55: Subject is woken up, instructed to get out of chair.
00.24.10: Chair observed to have changed color in accordance to the subject's immediate shadow.
00.24.14: Color of chair gradually returns to previous state. The corrosion and rust on the metal remains. No other anomalous properties observed.
00.25.40: Test ended.

Test Conclusion: Speed of the effect appears to be based on the subject's state. The duration of the effect on the material also appears to be based on the mechanism by which it is affected, not only the physical properties of that material.

Test Log 1058-3
/ /

Subject: SCP-1058
Test Coordinator: Senior Researcher
Testing Environment: Standard Foundation 5m x 5m x 5m testing cell. D-21894 instructed to stand in SCP-1058's shadow for the duration of the test.

00.00.32: D-21894 reports a "buzzing" sensation on the area of his body covered by SCP-1058's shadow.
00.01.37: SCP-1058 expresses a wish to sit down, approximately 2 seconds later, D-21894 appears to be repeating SCP-1058's statement, but does not vocalize.
00.07.16: SCP-1058 instructed to try moving one of his arms. Subject complies.
00.07.19: [DATA EXPUNGED]
00.07.30: Test ended.

Test Conclusion: [DATA EXPUNGED]

D-21894 expired several hours after the conclusion of the test.

« SCP-1057 | SCP-1058 | SCP-1059 »

SCP-1059: Infectious Censorship

Item #: SCP-1059

Object Class: Euclid

Special Containment Procedures: Documents known to be written by personnel infected with SCP-1059 are to be re-written by uninfected researchers. Personnel known to be infected with SCP-1059 are to be treated with counter-memetic therapy and removed from duty until they show no further signs of infection. They are to afterwards be monitored for signs of relapse. Individuals outside the Foundation found to be carrying SCP-1059 are to be treated with Class-A amnestics if practical, or otherwise removed from positions where they can potentially infect others.

Description: SCP-1059 is a memetic compulsion to hide, censor, or otherwise obscure information when communicating with others. It is most prevalent in those already dealing with classified or sensitive material.

Infected subjects will, when conveying information, find that apparently random pieces of information will seem disproportionately important. This information will be treated as though it is at the highest level of classification the writer is familiar with. They will do so even after the information has been shown to be relatively harmless, or even vital to those reading the resulting material.

SCP-1059 is spread by reading infected material or discussion with infected individuals. Those most at risk are those still learning classification procedures. Infection can be easily prevented by maintaining a solid grounding in the rules and regulations governing classified material within the organization.

SCP-1059 was discovered at the National Security Agency when a discrepancy was noticed by Agent Jameson, a Foundation operative

embedded in NSA headquarters in Ft. Meade, Maryland. Documents originating from certain offices were being classified at Top Secret, regardless of their actual content. After other possible causes were ruled out, further investigation showed several individuals were infected with a previously unknown memetic agent, which was eventually designated SCP-1059.

Addendum 1059-1: Improper handling of infected materials led to an outbreak of SCP-1059 within the Foundation. It has been difficult to track thus far, and a full audit of Foundation documents and staff is pending. So far, seventeen fatalities can be directly attributed to vital information expunged from containment procedures.

Addendum 1059-2: This document has demonstrated signs of SCP-1059 infection, and has been expanded to meet Foundation standards. Please see Document SCP-1059-A for previous version.

+ Document SCP-1059-A

Item #: SCP-1059

Object Class: Euclid

Special Containment Procedures: Documents known to be written by personnel infected with SCP-1059 are to be re-written by uninfected researchers. Personnel known to be infected with SCP-1059 are to be treated with [REDACTED] and removed from duty until they show no further signs of infection. They are to afterwards be [DATA EXPUNGED]. Individuals outside the Foundation found to be carrying SCP-1059 are to be [DATA EXPUNGED], or otherwise removed from positions where they can potentially infect others.

Description: SCP-1059 is a memetic compulsion to hide, censor, or otherwise [REDACTED] information when communicating with others. It is most prevalent in those already dealing with classified or sensitive material.

Infected subjects will, when conveying information, find

that apparently random pieces of information will seem disproportionately important. This information will be treated as though it is at the highest level of classification the writer is familiar with. They will do so even after the information has been shown to be relatively harmless, or even vital to those reading the resulting material.

SCP-1059 is spread by [REDACTED]. Those most at risk are those still learning classification procedures. Infection can be easily prevented by [DATA EXPUNGED].

SCP-1059 was discovered at the when a discrepancy was noticed by Agent , a Foundation operative embedded in headquarters in . , . Documents originating from certain offices were being classified at Top Secret, regardless of their actual content. After other possible causes were ruled out, further investigation showed several individuals were infected with a previously unknown memetic agent, which was eventually designated SCP-1059.

Addendum 1059-1: Improper handling of infected materials led to [DATA EXPUNGED].

« SCP-1058 | SCP-1059 | SCP-1060 »

SCP-1060: Penanggalan

Item #: SCP-1060

Object Class: Euclid

Special Containment Procedures: SCP-1060 is to be contained in a humanoid observation/detention cell at all times. During subject's daytime cycle, subject is to be provided with food items from the Site-33 cafeteria. During subject's nighttime cycle, subject is to be nourished with 0.8 kg of human placental material and provided with a basin of at least 4 liters of rice wine vinegar.

Description: SCP-1060 is a human female of southeast Asian ethnicity, answering to the name of Adilah . Subject is fluent in the Malay language and somewhat conversant in Malaysian English. In interviews during subject's daytime cycle, subject has indicated that she is 22 years of age, is trained as an obstetrics nurse and is unaware of any unusual aspects of her physiology. In these interviews, subject has expressed a lack of awareness of her nighttime cycle physiology or activities and protests that she merely sleeps at night. During the daytime cycle, subject frequently demands to be released from containment or to be permitted to contact family members.

During subject's daytime cycle, subject appears and behaves as a normal human female. During subject's nighttime cycle, which generally begins within 80 minutes after the subject falls asleep, subject's head and internal body organs (heart, lungs, liver and much of the digestive system and gut) detach from the rest of the subject's body with a sudden jerking motion, leaving a hole around the base of subject's neck. Subject's head and organs then levitate by means of an unknown process and freely float around the containment cell while subject's tongue—which increases to approximately 22 cm in length during this stage—flicks at the air in the manner of a snake. The remainder of subject's body remains lying in a resting position. Subject's upper and lower canine teeth

also increase in length and sharpness during this stage. Under normal containment circumstances, subject will consume the provided placental material, using the dangling lengths of gut in the manner of prehensile limbs to lift the material to the subject's mouth. Following the feeding, the subject will dip the exposed organs into the vinegar, whereupon the organs shrink so that they can be stuffed back into the subject's body cavity. The head then reattaches to the body, leaving no visible seam or scar.

Addendum SCP-1060.01A Following Incident 1060.01, no pregnant females are to be admitted into the containment chamber during SCP-1060's nighttime cycle. During Incident 1060.01, Researcher Marilyn , who at that time was in her second trimester of pregnancy, entered the containment chamber during subject's nighttime cycle to top off the basin of vinegar. Immediately upon SCP-1060's detection of Ms. 's presence in the chamber, SCP-1060 flew at Ms. at a great rate of speed, then used lengths of prehensile gut to bind and immobilize Ms. . Subject then bit the researcher in the abdomen and consumed the fetus in situ, together with most of the rest of the uterus and its contents.

« SCP-1059 | SCP-1060 | SCP-1061 »

SCP-1061: The Accidental Car

Item #: SCP-1061

Object Class: Safe

Special Containment Procedures: SCP-1061 should be kept in a secured, climate-controlled garage. Its tires have been removed and should not be replaced for any reason. Its doors should be locked at all times and its windshield boarded up, unless testing is in progress. All experiments are to be performed within the garage.

Access to SCP-1061 is restricted to Level 4 personnel and to D-class personnel engaged in authorized testing. Aside from authorized testing, it is forbidden for anyone not seated in any of the passenger seats to make any contact with any part of the driver's seat; personnel who make contact with the driver's seat while not seated in any of the passenger seats become instances of SCP-1061-1, and are to be apprehended until such time as they can be used in approved testing. Removal of post-test biological waste from SCP-1061's interior is to be performed by robots; no other maintenance is to be performed on SCP-1061.

Description: SCP-1061 is a dark red 1992 Pontiac Grand Am with severe collision damage, including a large hole in its driver's-side front windshield. It manifests three distinct anomalous properties; these properties are considered to be linked, in that they seem to be caused by the same anomalous entity.

The first anomalous property is that SCP-1061 is associated with several illusions. The collision damage is only visible from the outside; when viewed from inside or through an open door, SCP-1061's interior appears completely intact. This is purely a visual illusion, and is detectable by electronic recording devices. When viewed from the inside, the side windows (when closed) and rear windshield show the city of [REDACTED] and its environs, on / /1996 (as determined by meteorological, astronomical, and

botanical observations, and by sightings of newspapers and other periodicals) — the day that SCP-1061 was in its collision. The front windshield will likewise show the city and its environs; however, the hole in the front windshield made by the impact of the original driver's head shows neither urban/suburban [REDACTED] nor the containment chamber. Instead, it shows [REDACTED].

If the driver's seat remains unoccupied, individuals occupying the other seats or looking through the opened doors, see that SCP-1061 is parked along the curb in front of a suburban residence. As with the illusory absence of vehicular damage, this illusion is visible to cameras and other electronic recording devices; however, this illusion does not activate unless a living human is seated within SCP-1061 and deactivates if all observers leave SCP-1061. The suburban environment always reflects the time of day at which the observers entered SCP-1061; if multiple observers enter SCP-1061 at different times, the environment will continue to reflect the time of day as determined by the entry of the first observer. The environment persists until 6:04 PM — the time at which SCP-1061 was in its collision; after 6:04 PM, the environment visible outside SCP-1061 "resets' to approximately 10:27 AM (as determined by shadow length, sun position and the times at which local residents are seen to return home from work or school). Observers at this point report seeing a blonde woman walking away from SCP-1061's driver's door.

The second anomalous property manifests when a live human sits in touches SCP-1061's driver's seat. All such humans, with the exception of passenger-seat observers, become instances of SCP-1061-1. SCP-1061-1 is a human whose mind has been "overwritten" with what is believed to be the mind of [REDACTED], who was the registered owner of SCP-1061 prior to being killed in its collision; she is also believed to have been the woman seen walking away from SCP-1061 when its illusory environment resets. Instances of SCP-1061-1 believe that they are still in 1996. Even when removed from SCP-1061, instances of SCP-1061-1 believe that they are either at home or at one of various locations in or around the city of [REDACTED] and cannot be convinced otherwise.

When allowed to remain within SCP-1061, SCP-1061-1 will "drive"

SCP-1061 on various errands (instances of SCP-1061-1 will either insert a random key into SCP-1061's ignition or mime having inserted a key). SCP-1061-1 will treat any passenger-seat observers as friends of [REDACTED], refer to them by those friends' names and engage them in (one-sided) conversation about the personal details of those friends. SCP-1061-1 has demonstrated that it is willing to let observers exit SCP-1061 upon request and can easily be persuaded to allow new observers into SCP-1061, provided that their total number does not exceed 3. Observers report that, when SCP-1061-1 is "driving", the environment visible outside SCP-1061 is consistent with that of a car being driven through the streets of urban/suburban [REDACTED] in 1996 and SCP-1061-1 will comment on incidents, people and objects which are visible along its route. SCP-1061-1 will perform between 5 and 11 errands, during which time it will never voluntarily exit SCP-1061; instead, at each 'stop', it will enter a catatonic state for no less than 30 seconds and no more than 11 minutes (in which case, it will apologize to passenger-seat observers for having taken so long and cite 'long line-ups'). The precise route followed by SCP-1061-1 varies between instances, as does the order of the errands; however, the overall nature of the errands remains the same.

After no less than 36 minutes and no more than 70 minutes, SCP-1061 "drives" past [REDACTED] Laboratories and is involved in a head-on collision with a delivery van. Passenger-seat observers will be unaffected by the illusory impact, but SCP-1061-1 (who is not wearing its seatbelt) will be thrown forward with the typical force exerted on an unbelted driver engaged in a head-on collision.

At this point, SCP-1061's third anomalous property will manifest. High-speed photography reveals that within 2 milliseconds of SCP-1061-1's head touching the portion of windshield damaged by the impact with [REDACTED]'s head in 1996, [DATA EXPUNGED] and SCP-1061-1's head vanishes. Once decapitated, instances of SCP-1061-1 are no longer considered anomalous and can be disposed of appropriately.

Passenger-seat observers present during the "collision" and subsequent [REDACTED] report becoming aware of the existence of an anomalous entity, henceforth SCP-1061-2. [NOTE: All data

pertaining to SCP-1061-2's nature and motivations is the result of anecdotal evidence provided by D-class personnel who have served as passenger-seat observers in tests of SCP-1061. As such, the reliability of the data is uncertain, as is the question of whether SCP-1061-2 even exists; however, the anecdotal data responses have largely been in accordance with each other.]

Interview log

Dr. : So why is it doing this?

D-1061-14: It's like this, see - it didn't know we were here, it didn't even know our whole dimension even *existed*, until right after the car crash, understand?

Dr. : Okay…

D-1061-14: And now it wants *more* car crashes, 'cause, well, it likes human heads.

Dr. : It likes them? To eat?

D-1061-14: Uh, I dunno if that's the right word, honestly. Anyway, so it wants more car crashes so it can get more heads, see, but it doesn't know how to make them happen. So it's… like… okay, you guys are scientists, right? So you all did grade 8 science class?

Dr. : I suppose we did, yes. So…?

D-1061-14: So you remember about, like, setting up an experiment, doing something different ways to find out which part matters?

Dr. : …oh! You mean experimental conditions?

D-1061-14: Yeah, that [EXPLETIVE]. So the thing is, this [EXPLETIVE]er, it doesn't know what made the car crash happen. So it's got all the experimental conditions — what the car looked like on the inside, what you could see from out the windows, what was in the driver's brain, all that [EXPLETIVE] — and it's makin' 'em happen over and over. Every time someone gets in the driver's seat, bam, their brain turns into whatserface from 1996 and she drives around for an hour until she gets in a car crash and then it has her head.

Dr. : Thank you, this is most helpful. Tell me, how is it you know all this?

D-1061-14: I was front-seat passenger, doc. Anyone who's front-seat passenger during the crash knows this.

Dr. : Ah. Thank you *very* much. One other question - why is it using such a complicated method? If it has the power to do all these things, aren't there much simpler ways?
D-1061-14: Just between you and me, doc… I don't think it's very smart. It's afraid to change too much, 'cause maybe it'll stop working.

« SCP-1060 | SCP-1061 | SCP-1062 »

SCP-1062: NS Magazine - Time

Item #: SCP-1062

Object Class: Safe

Special Containment Procedures: SCP-1062 is currently contained in Secure Document Storage Locker #82 at Sector-25. The document is only available for testing, which must be supervised by at least one level-2 researcher, under the authority of two level-3 personnel. D-Class utilised in testing are not to have their termination postponed except under the express command of an O5.

Four non-anomalous copies of SCP-1062 are held in Safe Document Storage File #3562 and are freely available to those with Level-0 clearance or higher.

Description: SCP-1062 is an issue of the weekly science magazine 'New Scientist'[1] No2833 “Time – the most mysterious dimension of all”. (08/10/2011). Disregarding general wear, which would be expected from a magazine left in a public waiting room for days, the only noticeable deviation from a standard copy issue is a pencilled note on the inside front cover: “11:48 – C”.

The anomalous effect of SCP-1062 becomes apparent when either a feature article or the editorial is read. Upon reading an affected passage, the reader (henceforth referred to as the subject) undergoes a perceptual shift, which modifies a learned behaviour and all memories associated with said behaviour. Currently no methods have been devised capable of detecting the occurrence or nature of the perceptual shift. Therefore, the modification of the subject's behavioural pattern must be inferred from observation/ interview after testing has been concluded.

Due to the fact that the subject will be unaware that any alteration has occurred, they may become distressed upon its revelation. On

the presentation of evidence contrary to the subject's memories, those aware of such ideas may reach the conclusion that they have been transported to an alternative dimension/reality as a preference to the fact that their experiences and recollection may be false. This is considered improbable as no particles or radiation have been detected.

The transformations caused by the document are unresponsive to all but the most potent grades of amnestics; however, normative behaviour can be relearned with no further difficulty than would otherwise be expected.

The effect of SCP-1062 is not contagious and is not transmissible by reading aloud an article or by photocopying or otherwise reproducing the text. As of the date of this document no hypothesis on how the articles cause their effect has been proven.

+ Abridged Testing Log

Test No.: 8
Date: / /2011
Subject: D-2298
Article: Ultimate clocks
Modification: Subject has no concept of cutlery.

Test No.: 12
Date: / /2011
Subject: D-2364
Article: Editorial
Modification: Subject associates the colour cyan with 'go'. States traffic light sequence is: red, amber, cyan.

Test No.: 17
Date: / /2011
Subject: D-2687
Article: The truth about time travel
Modification: Subject communicates in English with incorrect grammatical structure, new structure appears to follow Latin rules with logical consistency (i.e. conjugated verbs occur at end of sentence structure).

Test No.: 23
Date: / /2011
Subject: D-2745
Article: Editorial
Modification: Unknown.
Notes: This is the first recorded instance where no alteration could be detected before subject disposal.

Test No.: 26
Date: / /2011
Subject: D-2753
Article: Living without time
Modification: Subject under the impression that each 24hr day counts down from 24 and that the directions clockwise and anti-clockwise are reversed.

« SCP-1061 | SCP-1062 | SCP-1063 »

SCP-1063: Freiherr von Schwarzwald

Item #: SCP-1063

Object Class: Euclid

Special Containment Procedures: SCP-1063 is to be kept in a 20m x 20m x 6m habitat simulating a temperate deciduous/coniferous forest environment, bordered by 60 (sixty)-cm-thick unpolished granite walls covered with live moss; SCP-1063 is unable highly reluctant to damage objects which are supporting live plants. All personnel who enter SCP-1063's containment for any purpose are to carry live potted plants in plain view; guards are to carry flamethrowers as well as potted plants.

It is forbidden to speak English within 30 meters of SCP-1063's containment, as SCP-1063 becomes hostile towards individuals whom it has heard speaking English.

Vegetation and microfauna in SCP-1063's habitat are to be maintained according to schedule 1063-N6. Climate in SCP-1063's habitat is to be maintained according to schedule 1063-CX5; after each simulated rainfall, SCP-1063 is to be provided with a plain towel made of 100% natural unbleached undyed fibers, so that it may dry its non-water-resistant components.

Description: SCP-1063 is a humanoid automaton which appears to be constructed entirely out of wood, with highly articulated joints made of wooden ball bearings of various sizes. It is 2 meters tall, 103 kg, and resembles a bearded Caucasian man in mid-19th-century formal wear. Its lower left arm does not terminate in a hand, but instead flattens and broadens to form an axe blade almost 70 cm across. Although this blade is made of wood, it is razor-sharp, and is almost metallic in its mechanical properties; when enraged, SCP-1063 is able to sever human heads or limbs in a single blow, and to chop through over 30 (thirty) cm of granite, with no damage to the blade.

SCP-1063's "clothes" are carved out of wood and are of a piece with its body, with the exception of several cosmetic accessories all made of severely oxidized copper (six "shirt" buttons, a warped and dented hatband encircling its head, a broken monocle rim surrounding its right eye, cufflinks on its right "sleeve", a belt buckle, and a watch chain dangling from its left "coat pocket" — but no watch), and a tattered and faded Swastika armband on its upper right arm.

Its power source is unknown, as are the methods by which it is able to see, hear, and think; radiographic, ultrasonic and [REDACTED] imaging all indicate that it is solid wood, with the exception of the aforementioned cosmetic accessories.

SCP-1063 is not able to speak, but can write in several dialects of German, as well as in French. Psychological examinations have revealed a generally affable personality, characterised by mood swings and an overall low intelligence. (NOTE: Researchers wishing to interview SCP-1063 should familiarize themselves with the Fraktur mode of calligraphy). SCP-1063 refers to itself as "Freiherr von Schwarzwald", or "Lord of the Black Forest", and has described itself as a genuine aristocrat, ennobled by "the King himself" (translated from German); SCP-1063 has not been able to provide more specific information as to which king this was, but has expressed scorn at the suggestion that it was Wilhelm I of Prussia (who later became the Kaiser, or Emperor), describing him as an 'upstart' and "latecomer". These attitudes, and other statements made by SCP-1063, indicate that it was created no later than the mid-19th century, which is in accordance with its style of clothing.

SCP-1063 has stated that it has two purposes in existence. The first purpose, which it claims to have had since "the day of my first waking", is to protect the trees and other plant life of the Black Forest region of Germany at any cost. The second purpose, which it claims to have been taught by "those nice soldiers who gave me the [swastika] armband", is to protect Germany from English-speaking invaders.

SCP-1063 first came to the Foundation's attention as the result of a statistically anomalous number of missing persons reports from the village of [REDACTED], Germany, in 19 . Foundation personnel

surveyed the region while disguised as a search party, and were attacked by SCP-1063 when they began to prepare a campfire; subject was quickly subdued and captured with no casualties.

After capturing SCP-1063, personnel coerced it into showing them the bodies of the people it had killed for either "harmful disrespect of nature" or speaking English; the bodies were then further mutilated to support a cover story of accidental discovery of leftover explosives from the Second World War.

« SCP-1062 | SCP-1063 | SCP-1064 »

SCP-1064: Candle Ring

Item #: SCP-1064

Object Class: Safe

Special Containment Procedures: When not required for testing purposes, SCP-1064 is to be contained in a sealed storage locker located within Sector-28. Since SCP-1064 is considered to be harmless when not actively in use, no further precautions are required to be taken at this time.

Description: SCP-1064 is a novelty ring made of pink-coloured plastic. The setting is designed to hold a small candle of the kind typically found on birthday cakes. SCP-1064 has no visible makers' mark or distinguishing features and appears to have been mass-produced using standard plastic moulding techniques.

If no candle has been inserted into the setting, SCP-1064 will not cause any effect when worn or otherwise handled. Test subjects experience no compulsion either to put on SCP-1064 or to insert a candle into it.

When a candle is inserted into SCP-1064 and lit whilst it is being worn, the wearer will experience one of two phenomena.

Around 80% of people who wear SCP-1064 will claim that the candle is in some way intrinsically linked to their own life expectancy. Individuals affected in this way appear to believe that, as the candle melts away, a portion of their lifespan will be irrevocably taken from them. Test subjects affected in this way will attempt to extinguish the candle in any way possible, most commonly by blowing it out, but will not try to remove SCP-1064 itself.

Once the candle has been extinguished, the wearer will exhibit a strong desire to continue to wear SCP-1064 and to keep the candle

in the setting. If this is not possible, they will make efforts to keep the candle in their possession, often insisting that it is now an intrinsic part of them.

In the remaining 20% of cases, the wearer will claim to have experienced time at an altered pace with events around them taking place much faster than usual. Test subjects affected in this way will typically move and communicate slowly whilst the candle remains lit. Whilst, in the vast majority of cases, test subjects find this experience to be disorienting and will be reluctant to repeat the experiment, a handful have expressed a wish to use SCP-1064 again, due to the false belief that it is a 'time travelling ring'.

Extensive testing has found that SCP-1064 does not cause the tissue of test subjects to age or degrade in any way which might suggest their life expectancy has been shortened by it. All test subjects regardless of their experiences appear to age at a natural rate both during and after testing and no lasting physical effects have been recorded. Furthermore, tests have shown that those test subjects who undergo the second of the two phenomena exhibit no recordable alteration in brain activity to suggest that they are experiencing time at an altered speed.

Examination of candles after their use in SCP-1064 have shown no alteration in properties other than those to be expected as a result of them being burnt.

Addendum 1064-A: Dr - Following the death of D- after a candle was allowed to burn away completely in SCP-1064, all testing is to be put on hold until the cause of the subject's death can be confirmed.

Addendum 1064-B: Dr - Inserting novelty relighting candles into SCP-1064 is not recommended. As far as I am concerned, watching D- remove her own finger by [DATA EXPUNGED] with the edge of a table was a fairly conclusive test result.

« SCP-1063 | SCP-1064 | SCP-1065 »

SCP-1065: Self-Immolating Books

Item #: SCP-1065

Object Class: Safe

Special Containment Procedures: SCP-1065-1 through SCP-1065-4 are to be contained in individual, near-vacuum anaerobic chambers, fitted with manipulation access for at least one user per chamber. No forms of written information, including information directly regarding SCP-1065, are to be kept in proximity to SCP-1065.

Due to SCP-1065's anomalous effects, if one or more individual object needs to be removed from its vacuum containment, it must be handled in an environment of at least 98% humidity, at ambient temperatures not to exceed 21 degrees Celsius. While full hazardous materials protection is not currently deemed necessary, latex gloves or other methods to prevent direct skin contact is required for anyone handling SCP-1065.

Description: SCP-1065 is a four volume series of books written in an Eastern Slavic language, apparently of the early-to-mid 1800's and possibly an obscure local dialect or mixture of languages. The overarching title roughly translates to "The Dangers Of Free Knowledge." They are bound with red leather featuring faux-golden embossing, and show both fire and water damage around the edges, along with significant foxing (discoloration and degradation due to aging, molding, etc.) of the paper. No author, print dates or other publishing information are contained within, although the materials have the appearance of being produced on a commercial printing press.

The texts of the books read as a treatise against general education, dispersal of knowledge and, ironically, written information. The actual words hold no anomalous properties and have been fully transcribed for study and cross-referencing (Document 1065-0011).

The anomalous properties become evident when someone makes physical contact with one or more of the books, at which point they begin to subscribe to the ideals contained within, even if they do not actually read any of the text. While this begins as a general "understanding" and "mild agreement", prolonged exposure produces increased dedication to the principles put forth in the books, eventually reaching such extremes as the instigation of violent uprising against established governmental and educational systems, public vandalizing and destruction of written texts, and the destruction of public storehouses of written texts such as libraries or book stores.

These effects will eventually wear off once physical contact with the book is broken, taking approximately twenty-six (26) hours for every minute of continuous physical contact.

A secondary effect occurs whenever the books are left unused for a period of time exceeding one month, after which they will self-immolate. The books suffer no damage from their own produced flames, but have been shown to be vulnerable to fires produced by other means (including individuals under its effects) as well as any other sort of potential damage. The flames do not seem to be able to manifest in areas where humidity is at least 95% and ambient temperatures below 23.9°C, nor where oxygen levels are too low for flames to efficiently burn. Similarly, the flames are able to be extinguished through any standard means and show no anomalous properties besides their origin.

Addendum: Recently recovered records show a number of otherwise inexplicable fires occurring at a series of libraries and universities throughout eastern Europe all tied to an acquisition of SCP-1065 approximately one week before the fire. As SCP-1065 was discovered and contained following a fire in the [REDACTED] government hall shortly after the break up of the USSR, any prior records of transfer of the books had been lost and presumed destroyed in the blaze. Dr. K was given a citation of merit for his diligence in tracking down the prior history of the objects, as well as the theory that SCP-1065's period before ignition is significantly reduced when multiple instances are kept together, and further reduced when stored in proximity to other pieces of written

knowledge.

« SCP-1064 | SCP-1065 | SCP-1066 »

SCP-1066: Instant Education

Item #: SCP-1066

Object Class: Safe

Special Containment Procedures: SCP-1066 is to be kept in a document storage box large enough to contain it without folding or rolling. It should be stored on a standard shelving unit in Storage Site-23. Any personnel with Level 2 or higher clearance wishing to run tests on SCP-1066 should speak with Dr. P. Voreno.

Description: SCP-1066 is a college diploma issued by the University of (U), dated / /19 . It is printed on a .5x.3 m sheet of parchment. No abnormalities have been found in either the ink or the parchment, and both match similar diplomas issued by U in the 19 s.

SCP-1066 is no more resistant to damage than any other -year-old piece of parchment, so care should be taken while handling it to avoid damage. Open flames in particular should be kept away from the object.

When a man who is at least 17 years of age signs his name in the space labeled "Graduating Student", he will disappear for 4-10 minutes and return four years older. The subject seems to have lived those years as a student at U between 19 and 19 , graduating on the date written on the document, and earned a degree in whatever subject he was thinking of while signing the document, whether U offered classes in that subject in 19 or not. The text on SCP-1066 will change to reflect this. The subject will have no memory of the four years not directly related to his subject of study. See Addendum 1066-1 for more details. There is no effect when a woman signs her name on SCP-1066. As U did not accept women in 19 , this is unsurprising.

It is worth noting that approximately % of subjects do not survive

the four years. In these cases, their corpse will return with the expected amount of decay. The death rate is not consistent with that of students at U in 19 ; however, these results are skewed, since many test subjects have been ordered to think of memetic effects or dangerous SCP objects.

SCP-1066 was recovered from the campus of U on / /20 . The administration had been offering an "accelerated learning" program to students, for the standard four-year tuition plus a fee of $. It is unknown why nobody noticed the quick aging of some graduates; if this is a property of the object, it is yet to be discovered. The object was retrieved without casualties and Class-B amnestics were administered to the administration and all recorded graduates. It is very likely that some or most of the graduates were not recorded, but the risk of any graduates revealing the existence of SCP-1066 is low, and as such finding them is a low-priority task. Similarities between the effects of SCP-1066 and **SCP-028** have been noted, and investigation into a common origin, or whether one anomaly is an altered version of the other, is ongoing.

Addendum 1066-1: Notable Test Results

Name: Dr P. Voreno
Date: / /20
Subject: D-1066-1
Information: Subject was simply instructed to sign the document.
Results: The subject gained a degree in calligraphy. Review of experiment tapes indicates that the subject had been focusing intently on signing the document in his best handwriting. The subject's handwriting showed a marked improvement after the test. He had no memories of the time in which he was gone. Subject was terminated on schedule at the end of the month.
Additional Comments: Subject gained a tattoo of the phrase "The pen is mightier than the sword", translated into Chinese, on his left pectoral.

Name: Dr P. Voreno
Date: / /20
Subject: D-1066-5
Information: Subject was instructed to think of his favorite animal.
Results: The subject gained a degree in marine mammal biology.

When questioned, the subject said that his favorite animal was the dolphin. The subject also had vivid dreams of SCUBA diving next to various marine mammals until he was terminated at the end of the month.
Additional Comments: The subject showed familiarity with SCUBA equipment after the test; when asked, he claimed to never have taken a SCUBA certification course.

Name: Dr P. Voreno
Date: / /20
Subject: D-1066-7
Information: Memetic SCP- was described to the subject, who was then instructed to think only of that while signing the document.
Results: Subject gained degree in memetic studies. However, subject refused to communicate in any way with researchers after returning, and was terminated on schedule.
Additional Comments: *No luck training researchers with this thing so far.* — Dr P. Voreno

Name: Dr P. Voreno
Date: / /20
Subject: D-1066-14
Information: Subject was instructed to think of the phrase "Advanced Memetics". Subject showed above-average intelligence in standard D-class screening.
Results: Subject returned in a vegetative state consistent with the effects of [REDACTED].
Additional Comments: *Subjects 9 through 13 were all instructed to think of memetic effects, and all returned showing signs of exposure to some sort of memetic agent known to the Foundation in 19 .* -Dr P. Voreno

Name: Research Assistant
Date: / /20
Subject: Research Assistant
Information: This was an unauthorized test. Research Assistant was apparently trying to gain sufficient credentials to be promoted to full researcher.
Results: Research Assistant returned with a degree in "SCP Studies". The "SCP" in this case apparently is an acronym for

"Super-Computer Processors". He now has a knowledge of super-computers consistent with the year 19 .
Additional Comments: Research Assistant was demoted to clearance Level 0 and transferred from Storage Site-23.

« SCP-1065 | SCP-1066 | SCP-1067 »

SCP-1067: Tea-making Teaspoons

Item #: SCP-1067

Object Class: Safe

Special Containment Procedures: All components of SCP-1067 are locked in drawer six of locker- , one of custom-built stainless steel lockers measuring 3.0m in height and 0.40m in width and depth. This locker and the items inside are currently assigned to department 43- , and monitored via CCTV. SCP-1067 is to be returned to the locker when not in use, and must be vacuum-sealed in a polythene bag after being thoroughly dehydrated before being returned. Additional security includes marking with ultraviolet ink on all components to prevent theft. Any member of staff who wishes to conduct tests on SCP-1067 may do so with the approval of Administrator Samson, although they must be supervised by at least one (1) department 43- operative. Please note that application of SCP-1067 for recreational purposes is strictly forbidden.

Description: SCP-1067 consists of four (4) components (SCP-1067-a to SCP-1067-d). SCP-1067-a is a hinged leather-bound container 25.50x14.2x2.50cm in dimension. The inside of SCP-1067-a is lined with blue velvet, and appears to be designed to contain SCP-1067-b to SCP-1067-d, however spaces indicate that there are three (3) missing components. SCP-1067-b to SCP-1067-d is a set of three (3) silver-plated teaspoons, each of which measures 10.57cm in length, 2.50cm in width, and 1.00cm in depth. SCP-1067-b to SCP-1067-d are all identical except for their handles, which each have a unique ornament attached, all bearing relation to modern western wedding traditions.

SCP-1067-b

> Decorated with a bouquet of red tulips. Any liquids which come into direct contact with SCP-1067-b immediately become earl grey tea, independent of the liquid's composition. This effect extends to extremely viscous gels,

although not to vapours. SCP-1067-b has also demonstrated a second unexplained ability; When using SCP-1067 to stir a solution of water and sucrose, subjects report feeling resistance in the solution. When removed, SCP-1067 brought with it a small quantity of white granules which when tasted, turned out to be ordinary granulated sugar and displayed no anomalous properties. Repetition of this action results in any sucrose in a solution being scooped out in its solid form, to the point at which the solution is totally free of sucrose.

SCP-1067-c

Decorated with a wedding carriage. Solutions stirred with SCP-1067-c continue to stir themselves for up to four (4) hours after the initial stirring, even when obstructed with solid objects. Any liquids that come into contact with SCP-1067-c immediately become oolong tea. These effects have been observed with a broad variety of input solutions, but seem to be ineffective with extremely viscous putties. SCP-1067-c has been described by subjects as being quite heavy for its size, although analysis of SCP-1067-c's composition indicates ordinary density levels.

SCP-1067-d

Decorated with the figures of a bride and groom. Experimentation shows SCP-1067-d to be capable of fabricating pasteurised cow's milk upon contact with fluids. The milk is non-toxic as per usual, but produces slightly higher levels of radiation than would be normally expected.

SCP-1067 was discovered to possess unique abilities by Dr. G. whilst preparing coffee. Dr. states that he received SCP-1067 as a gift from his sister, Fiona in 1973. Through an interview it was revealed that SCP-1067 was first purchased at in York, UK. Ms. stated that SCP-1067 was purely an impulse-buy, and without precedence. Subject was administered a class-C amnestic before being released.

At this time the abilities of SCP-1067 are without explanation, despite detailed examination and multiple trials. SCP-1067 is currently under the care of department 43- of site # , under the jurisdiction of administrator Samson, and will remain so until further

notice.

Addendum:

1067-A
Mass spectrometry of samples from SCP-1067-b, c and d confirm the composition of these items to be primarily copper with fine silver plating. Researchers are unanimous in agreeing that presence of both scandium and zirconium impurities is highly irregular in copper. Progress has still not been made as to the source of SCP-1067's metamorphic properties.

« SCP-1066 | SCP-1067 | SCP-1068 »

SCP-1068: Harmless Nuke

Item #: SCP-1068

Object Class: Safe

Special Containment Procedures: Packaged SCP-1068s are to be kept in a large underground storage site beneath Site-76. The walls of the room are to be soundproofed and electromagnetically shielded so as to prevent damage to other facilities. Researchers should wear shaded goggles, ear plugs, and ear muffs to prevent permanent sensory damage when handling or experimenting with SCP-1068. Records should be kept through non-electronic medium. Any detonations are to be scheduled in advance and communicated to all personnel to avoid confusion with the standard on-site nuclear device.

Any examples of SCP-1068 outside of Foundation control are to be seized discreetly and brought to Site-76 via armored transport. In the event of an SCP-1068 activation outside of the site's perimeters, all available Foundation diplomatic resources are to be dispatched into negotiations to pacify both national and international relevant governing bodies and, if necessary, inform them of the nature of SCP-1068.

Description: SCP-1068 are model rockets approximately a meter in length. They resemble a simplified version of the LGM-30 ICBM model and are covered in unpainted white plastic with the words 'ATOM BUSTER' etched in one side. Dis-assembly of the objects exposes a cylindrical fuel tank and engine assembly filled with an ethanol-[DATA EXPUNGED] mixture. A 30-cm-long fuse leads out of the rocket's base and is the primary method of ignition. When activated, SCP-1068 will launch at a velocity of 45 meters per second before falling back down to the ground and exploding.

Upon detonation, SCP-1068 activates an intense bright light and loud sound similar to those of a conventional nuclear device. It will

also release a weak radio wave pulse similar to an EMP, temporarily knocking out all electronic communications within a radius of km and preventing any further close observation of and communication with the area for up to 20 hours. Immediately following detonation, a large column of low density non-toxic gases will rise up from the point of detonation, coalescing into a shape similar to the mushroom cloud released by extreme temperatures. For all intents and purposes, the event will resemble a fission reaction without actually causing any harm beyond sensory damage.

SCP-1068 comes contained in red cylindrical cardboard packaging shaped to resemble a simplified missile silo. On the front there is a clear plastic window to show off the model, along with a price tag of $19.99 (US). On the back of the box are a description of the object, several safety labels and warnings, and an artist's rendition of the explosion of the Trinity nuclear test.

Information on Back of SCP-1068 Packaging

> Harness the **Raw**-ket power of Dr. Wondertainment's new line of model rockets with The Atom Buster®! This pint-sized monster launches a thousand feet in the air before plummeting to a climactic explosion of nuclear proportions. Truman would be proud. Utilizing a state-of-the-art light and sounds system, the greatest weapon ever detonated can be used again… on your front lawn! You can even customize your model with the accompanying realistic decal sheet to make its launch a more awesome one.
> Buy the complementary Dr. Wondertainment's Wonderful Paint Set®, Accurate-And-Deadly Artillery Aiming Platform®, and Big Red Button Remote Activator® to seriously complete your Mega Arsenal of Doom!
> For Ages 9+
> **CAUTION:** Protective eyewear and ear plugs/ear muffs required. Do not attempt to remove the fuel, fuse, or engine from the Atom Buster® without adult supervision. Not suitable for children under 8 years of age. Dr. Wondertainment is not responsible for any damage caused by The Atom Buster®.

Addendum 1068-01

During Incident-1068-6 in the Province, the Chaos Insurgency intercepted a shipment of SCP-1068 being transported from Site-103 and stole five cases of the product in the ensuing firefight. Requesting permission to preemptively warn all nuclear-capable governments of SCP-1068.

Dr. Johnson

« SCP-1067 | SCP-1068 | SCP-1069 »

SCP-1069: Ys

Item #: SCP-1069

Object Class: Euclid

Special Containment Procedures: The area within a 5 km radius of SCP-1069-1 has been marked as off-limits to civilian access under the guise of environmental chemical contamination, and all Foundation staff located on-site are to operate under the cover of an environmental cleanup organization.

Exploration or experimentation with SCP-1069-1 may only be performed with prior permission from at least two (2) Level 3 Senior Researchers and all personnel within the area must wear full soundproofed ear protectors or modulated sound processing headsets at all times. Any individuals attempting to enter this area without authorization, appropriate acoustic protection, or in an attempt to communicate with SCP-1069-3 without prior permission are to be detained, questioned, and administered a Class B amnestic if deemed necessary.

Description: SCP-1069-1 is a submerged city 3 km off of the coast of [REDACTED], France at a depth of approximately 220 m. SCP-1069-1 covers an area of approximately 4.8 km^2 and is surrounded by a high dike constructed of bronze and [REDACTED], indicating that it may have once been a coastal city.

Dating of recovered artifacts and materials indicate that SCP-1069 is at least 1500 years old and surveys of the intact sections of the city indicate that it would have been one of the largest cities of its era in addition to containing architecture and high-strength construction that exceeds the technological capabilities of any known civilization of the time. Recovered artifacts have also revealed written script belonging to what has been tentatively identified as a previously unknown Breton or Brythonic language.

Extensive analysis of the city's buildings has revealed damage consistent with a large-scale tsunami and subsequent flooding. Due to a lack of damage to the city's exterior dike, it is unknown precisely what this event entailed as a wave of sufficient height to crest the walls would presumably have been of sufficient magnitude to result in far more catastrophic damage to the city itself.

SCP-1069-2 is a population of intangible human entities inhabiting SCP-1069-1, currently estimated in excess of 78,000 individuals. These individuals appear to be dressed in clothing from a large cross-section of historical periods (so far determined to be as early as 500 AD and as recent as World War II era military dress) and have been observed engaging in activity consistent with those of 5th century city life. Instances of SCP-1069-2 do not appear to be able to perceive or otherwise acknowledge the existence of living human subjects, even when attempting to communicate directly with particular instances.

SCP-1069-3 is a specific female humanoid entity within SCP-1069-1. Consistently described as having regal composure and being dressed in clothing consistent with that of 5th century nobility, SCP-1069-3 is capable of communicating and conversing with particular personnel, especially those with high levels of extrasensory sensitivity. SCP-1069-3 does not appear to be hostile or dangerous to Foundation personnel, but multiple personnel have described seeing unusual piscine or delphine features such as fins or a tail when SCP-1069-3 is in their peripheral vision and on several occasions been the target of attempts to convince personnel to live within the city.

SCP-1069 was discovered on / /19 by a civilian archaeological expedition attempting to locate and explore underwater ruins near [REDACTED]. Foundation agents embedded within the expedition called for backup following the disappearance of three civilian team members during initial contact and exploration; a containment team was successful in securing SCP-1069 and all surviving expedition members were administered a Class A amnestic and given a cover story.

Addendum 1069-01: Incident Report, Incident 1069-08, / /19

During a submersible survey dive within the eastern district of SCP-1069-1 performed by members of the Foundation research team, Drs. and were apparently engaged in conversation by SCP-1069-3. From fragments of audio recovered from the remains of the submersible's audio recorders, it appears that the researchers conversed for several minutes before the submersible's main pressure hatch is compromised through unexplained means, resulting in a catastrophic depressurization of the vehicle.

The wreckage of the submersible was recovered from the eastern district without incident, along with the clothes and personal effects of Drs. and ; no bodies or other human remains were located.

In subsequent exploration dives, on-site personnel have reportedly identified instances of SCP-1069-2 matching the description of Drs. and in the eastern district of SCP-1069-1 wearing contemporary casual clothing. As with all such instances, they did not respond to attempts to communicate or otherwise attract their attention.

Addendum 1069-02: Interview Transcript, / /19

Following the events of Incident 1069-08, authorization was given for Dr. , a senior researcher known to have been able to draw the attention of SCP-1069-3 in a prior survey dive, to attempt to interview SCP-1069-3.

> (start of transcript)
>
> **SCP-1069-3:** Welcome back. Have you come to join us this time?
>
> **Dr. :** No, but I would like to ask you a few questions.
>
> **SCP-1069-3:** Certainly.
>
> **Dr. :** Who are you, exactly?
>
> **SCP-1069-3:** I am Dahut, daughter of Gradlon. There are those who would call me "queen", but I am merely a

caretaker of this city; all who seek refuge here are equal.

Dr. : Two of our personnel recently disappeared here, do you know them?

SCP-1069-3: [REDACTED] and [REDACTED]? Yes, of course I do. I know the names of all who shelter within my walls.

Dr. : What did you do to them? Why did you take them?

SCP-1069-3: Take them? I'm afraid you are mistaken; I would never keep someone here against their will. All those who live here do so of their own accord.

Dr. : Assuming you are telling the truth, what exactly did you do to them?

SCP-1069-3: They are sheltered here within my walls, by my power.

Dr. : Can you release them?

SCP-1069-3: I told you that I do not keep them. If they wish to leave, then all they must do is ask; I cannot make that decision for them any more than I could force them to live here in the first place.

Dr. : Those men have families, you know. They have to —

SCP-1069-3: Yes, they do: families with children who have grown up and spouses who have grown cold. They have no desire to remain in a world where every waking hour is one living in fear from the unknown and have chosen my sanctuary instead.

Dr. : How do you know that?

SCP-1069-3: They told me. Just as they told me that you, [REDACTED], are yet unmarried and unlikely to be

convinced to join them.

Dr. : You're lying!

SCP-1069-3: Why would I lie? All I have ever asked for is the right to live in peace, away from the politics and machinations of those who would rule the world. I have tolerated your kind for as long as you have sought to control that which you do not understand and, despite their best efforts to destroy me, I have endured.

Dr. : I don't know what you're talking about.

SCP-1069-3: No, of course not, but your leaders who will read this conversation do. I sought to create a sanctuary, a city of peace on the coast. Your precursors, who felt threatened by my abilities, sought to sully my name and spread lies to dissuade their followers from finding refuge within these walls. For years — decades, even — they tried to destroy me: first through words, then by force of arms, then finally with magic. Their wall of water pulled this city beneath the waves, but both I and the ones I swore to protect have survived.

Dr. : (silence)

SCP-1069-3: Ask your leaders, [REDACTED]. Ask them to tell you the truth: that they knew of us and have always known. Ask them why I must be considered a threat, why centuries of legend and myth consider me a demon, and why all power — even that which is used to keep safe and protect — is an abomination. Perhaps, then, you will see what has truly transpired here and what evil lies within their hearts.

SCP-1069-3: Good day, [REDACTED]. I wish you well.

(end of transcript)

Addendum 1069-03: Research Note

As of / /200 , all further expeditions to SCP-1069 have been

suspended pending further investigation and research into SCP-1069-3's subversive capabilities. All personnel having had direct contact with SCP-1069-3 are to be quarantined under telepathic / memetic agent contamination protocols immediately.

« SCP-1068 | SCP-1069 | SCP-1070 »

SCP-1070: Re-Educational Software

Item #: SCP-1070

Object Class: Safe

Special Containment Procedures: SCP-1070 is to be held in a standard containment locker, located in **Site-77**'s Safe SCP wing. When being used by site personnel, one standard test chamber may be used. No personnel above D-Class are permitted to view SCP-1070 when it is in an active state. In the event that personnel do view it, they are to be given psychiatric evaluation, with further action taken at the discretion of the site director.

Description: SCP-1070 is an educational video game, designed for use as educational software on the Nintendo Entertainment System. It is held in a cartridge composed of black plastic and measures 13.3x12x2 centimeters. SCP-1070 lacks identifying information such as labels or manufacturers' mark. The back cover has a warning label identical to unlicensed games produced by "American Video Entertainment." The splash screen identifies the game as "Learning with Leo" with a 1989 copyright belonging to the "Real Awesome 'Tainment" label.[1]

When used, SCP-1070 displays an image of a green figure, identified as "Joey," hereafter referred to as SCP-1070-B, who will ask the subject questions such as age, ethnicity, grade level, and eating habits. SCP-1070-B will respond to answers provided by the subject, using simplistic language and gestures.

When SCP-1070 is activated and used by a subject under the age of fourteen, it will function without any anomalous properties. SCP-1070-B will ask a series of mathematical, history, and basic scientific questions. SCP-1070-B will then show a score depending on how many correct answers the user gave. Of note is that SCP-1070-B will remember subjects who have used it in the past, and is able to identify them by name.

However, if a subject over the age of fourteen uses SCP-1070, a different effect will occur. As the subject advances through SCP-1070's content, SCP-1070-B will begin asking more esoteric and incomprehensible questions, often using **graphical errors and obfuscating graphics** to prevent the subject from progressing. During this time, subjects will experience mental degradation. If SCP-1070 is played longer than 1 hour, the subject will have reverted to the mental capacity of a prepubescent.

Subjects appear to retain memories of their life prior to using SCP-1070, although their understanding of these memories is limited. They will make frequent references to being "broken" or "empty", and if given the opportunity will attempt to utilize SCP-1070 in order to regain lost mental capacity. Testing has shown that SCP-1070 does not affect subjects after complete exposure, and will display no anomalous properties when utilized by these subjects.

SCP-1070 was recovered from a rural home in Charleston, WV, USA. It came to the Foundation's attention after a prominent local businessman, Fred , was affected by SCP-1070. Investigation into Mr. 's home showed that SCP-1070 had been purchased as a gift for his son, who suffered from Down's Syndrome. Mr. and his son were placed in the care of relatives, and SCP-1070 was classified as Safe.

Addendum: The following is a transcript from video documentation of SCP-1070's effect.

> *At 1:35 AM EST, D-2146 activates SCP-1070. After the splash screen, SCP-1070-B suddenly appears.*
> **SCP-1070-B:** Hello there, Mel.
>
> **D-2146:** (Exclamation of surprise.)
>
> **SCP-1070-B:** Are you ready to play?
>
> **D-2146:** I… (pause) …sure.
>
> **SCP-1070-B:** What is the… CAPITOL… city of… FRANCE?

D-2146: … Paris?

SCP-1070-B: Your answer is… CORRECT.

D-2146 expresses enthusiasm.

SCP-1070-B: Can you… COUNT… to …. SEVEN?

D-2146: Uh, sure. One, two, three, four… ah… five, six…. seven!

SCP-1070-B: You are… CORRECT… AGAIN.

SCP-1070-B begins displaying graphical errors, showing an image of itself with a bright red background.

D-2146: Aah, fuck!

SCP-1070-B: It's really okay. Don't be alarmed. You only have tomorrow to fear.

D-2146: (voice drowned out by static) …at?

SCP-1070: What is tomorrow? We must face it? Yesterday was just another day. We live in the past.

D-2146 remains silent.

SCP-1070: Would we like to see you?

D-1246: (static) …en then?

SCP-1070-B: Mom will be back. Everything will be A-Okay.

D-1246: (Voice has taken a notable drop in pitch)… Mom?

SCP-1070-B: We're back here. She's back.

Following this, no further vocalizations for 2 hours, and testing was terminated.

Footnotes
1. Research has shown that a copyright for this name was made in 1999; however, no games associated with this name were produced.

« SCP-1069 | SCP-1070 | SCP-1071 »

SCP-1071: Improvement Test

Item #: SCP-1071

Classification: Safe Euclid

Special Containment Procedures: All instances of SCP-1071-1 and -2 are to be kept in separate containment lockers in Site 's storage, with access allowed by level 3 or higher permission. The contents of all instances of SCP-1071-3 are to be cataloged and kept in the archives for future reference. It should be noted that it is possible that not all instances of SCP-1071 have been contained, and that some may still be in circulation. During the school year, SAT Testing should be monitored to detect possible instances of SCP-1071.

Unless part of an experiment, all Test Takers who receive a "fail" result are to be put in isolation in order to prevent any repeats of Incident 1071-15. Test Takers with this result should be considered a minor cognitohazard, and any aggressive action taken against them should be reported to Dr. . If test taker is D Class, they may be exempt from retirement for no more than five (5) weeks in order to study effects. It should also be noted that any attempt at causing grievous bodily harm to a Test Taker will result in a reprimand, regardless of security clearance or position.

Description: SCP-1071 is the collective name for the answer sheets (SCP-1071-1) and the test booklets (SCP-1071-2) from the SAT Reasoning Test. When not being used, SCP-1071-1 and -2 are ordinary SAT testing materials distributed from the year 20 -20 as of time of writing. Reading through them without meeting the activation criteria shows that the questions consist of several mathematics, literature, history, science, and language questions, as expected. There are currently instances of SCP-1071 in storage at Site .

SCP-1071 is activated when an instance of SCP-1071-1 and -2 are

brought together, and the subject's name is inscribed upon the exterior of the booklets with a #2 pencil. Regardless of current educational status, the Test Taker will take SCP-1071 as if it were an actual SAT Reasoning Test. The subject can leave at any time, but doing so before completion of at least 60% of the test and/or expiration of the testing period (determined to be three hours and thirty minutes) results in a failing grade. Attempts to observe the contents of SCP-1071-1 and -2 during the duration of the test are futile; the paper appears to be a normal SAT Reasoning Test to outside observers. After the test is completed, however, no results can be viewed on the answer sheet; in addition, the Test Taker cannot remember the contents of SCP-1071, even under hypnosis. They will, however, consistently mention that the essay question was the easiest part of the test.

Approximately three (3) weeks after completion of the test, an envelope (designated SCP-1071-3) will appear in the Test Taker's current place of residence, regardless of whether or not there is a mailbox, or even a mail delivery service, available. SCP-1071-3 will contain the results of SCP-1071; however, results will only have anomalous effects if opened by the addressee. It should be noted that the results refer to SCP-1071 as the "Improvement Test", rather than the SAT Reasoning Test. The results of this test are not consistent with the scoring system for the SAT; instead of being calculated in a numeric value up to 2400, the results instead take the form of a form letter. The form letter informs the the Test Taker of one of two results: they either scored proficiently on the test, which produces no results, or they have failed the test.

Test Takers who receive the "fail" become the subject of passive-aggressive tendencies from other human beings. Subjects who have "failed" SCP-1071 have reported relationships failing, being fired from several consecutive jobs, having neighbors file petty complaints against them, and an increase in suspicion from law enforcement and government workers. Test Takers also report an increase in technology failing and incidents of animal aggressiveness. As time progresses, these tendencies become more and more harmful to the Test Taker, escalating from various verbal slurs to assault, and finally to sexual crimes and attempted murder. Death of the Test Taker immediately ends all aggressive

actions, often leaving the tormentors feeling remorse for their actions.

However, in recorded instances, SCP-1071-3 has come back without containing standard results; instead, it contains a slip of paper with the words "Congratulations. You've passed. We'll come to collect you soon," written on it. Within 24-48 hours of receiving this result, the Test Taker will experience feelings of euphoria and contentment. At 72 hours after receiving results, the Test Taker will disappear when unobserved. It should be noted that this is not a total disappearance; items such as clothing, jewelry, dental fillings, and tracking devices will be left behind. As such, the whereabouts of Test Takers who receive a "pass" result are currently unknown, but theories include [DATA EXPUNGED].

Incident 1071-15: D-58921 was selected for exemption from retirement after receiving a "fail" result from SCP-1071 in order to study the detrimental effects. D-58921 has scored 92 (below average) on a standard IQ test and has a history of self-esteem issues, a factor which led to their imprisonment and eventually employment as D-Class. Four weeks after the result was received, D-58921 attempted to ingest rat poison collected from the D-Class kitchen. The following interview was conducted by Dr. , with Agent supervising.

> **>Begin Log<**
>
> **Dr. :** D-58921, why did you try to poison yourself?
>
> **D-58921:** (*unintelligible*) calling me now? I don't suppose I deserve a name; everyone here says as much.
>
> **Dr. :** What do you mean?
>
> **D-58921:** Ever since the test… people have been hating me… not my fault… test was too hard…(*unintelligible*) was it? I can't…
>
> **Dr. :** What was on the test, D-58921?
>
> **D-58921:** Questions, questions, questions… uh… I… I

don't know… I can't remember…

Dr. : What do you mean you don't know? Of course you don't know. You stupid fuck. Worthless fucking D-Class.

D-58921: What the- why are you- oh geez. Not you. Not you, doc. I thought that you would… I thought… you wouldn't do this…

Dr. : For the love of- listen, you little pile of shit. Either you man the fuck up, or you are going to get terminated on the spot!

D-58921: (*Sobbing*)

Dr. : Listen, you son of a bitch. I'm going to count to three. If you don't stop this baby-ass behavior, I am going to go out there, find your wife and kids, and [DATA EXPUNGED]

D-58921: No! Please! You said you'd let me see them again if I took that test!

Agent : Shut the fuck up, you fucking pussy. That was a fucking lie. You're worthless! Your wife and kids hate you! You don't deserve to see them! You don't even deserve to live!

D-58921: Stop it. Please. I'll do whatever you want, just stop!

Agent : Alright then. You know what I want from you?

D-58921: What? I'll do anything, please, just-

Agent : I want you to die, you [EXPUNGED] fuck!

(*Gunshot*)

Dr. : Jesus Christ! What the hell was that for?!

Agent : I… don't know… he just… I… he said he… oh God…
>End Log<

Dr. and Agent were reprimanded for their conduct during the interview.

Note: I have no idea what the hell came over me. I just lost my temper! I didn't know what I was saying! Requesting to upgrade to Euclid immediately. -Dr.

It seems as if we have all instances of SCP-1071 in containment, and they can all be safely kept in a storage locker. Nobody HAS to take SCP-1071. Request denied. -O5- .

Incident 1071-17: Reports of anomalous SAT Reasoning Tests came in from the town of [REDACTED]. As it was possible that these were uncontained instances of SCP-1071, agents were dispatched to attempt to collect the tests. Agents failed in acquisition of over instances of SCP-1071-1 and -2, but were able to intercept all results. Items were confirmed as SCP-1071-3, and were made up of "proficient" results, "fail" results and "pass" results. All items were archived and are considered neutralized. It should be noted that [REDACTED] has one of the lowest performing school systems in the United States. Students were allowed to re-take a proper SAT Reasoning Test at a later date.

If this doesn't qualify it for Euclid status, I don't know what does! It's popping up outside the facility, and it's targeting low-performing school systems! If the Agents hadn't gotten the results, we'd have a lot of messed-up kids on our hands right now. I am re-submitting my request to upgrade to Euclid, or at the very least, set up monitoring of schools participating in the SAT. -Dr. .

Both requests approved. Euclid status recognized, and all schools participating in the SAT test are to be monitored for reports of behavior consistent with SCP-1071 activation. -O5- .

« SCP-1070 | SCP-1071 | SCP-1072 »

SCP-1072: Memory-Replacing Disc

Item #: SCP-1072

Object Class: Safe

Special Containment Procedures: Object is kept in a small case in the middle of a twenty (20) metre square room. The door into the room is located in the corner so as to be more than ten metres from the object.

Only one person may be within ten metres of the object when the case is opened. Additional persons may be present outside the ten metre radius.

As of / / , the case is only to be opened remotely via a robotic manipulator installed in the room. Manual opening of the case is prohibited.

Due to properties detailed in Addendum 1072-1, it is recommended that all subjects be selected from those with as little knowledge of the Foundation as possible. In particular, subjects assigned to SCP-1072 should ideally not have worked with any other SCPs.

Description: SCP-1072 resembles a somewhat dull metal disc with no design stamped on it. It has no apparent unusual physical characteristics, although thermal imaging indicates that its surface temperature appears to rise by approximately one degree Celsius whenever any human subjects are within ten metres of the object. Neither the number of subjects nor their exact distance from the object affect the magnitude of this temperature increase.

All subjects who approach within ten metres of the object report that they feel drawn to open the case. The compulsion appears to be weak, and can be resisted without great effort. Subjects describe the compulsion as a sense of curiosity about the contents of the case, regardless of whether they are already aware of the object's nature.

The object is harmless on all counts outside of the ten metre radius, even if it is visible.

Subjects are observed to display a strong compulsion to touch the object when the case is opened. Nearly all subjects report that they perceive it to have the allure of a polished disc of pure gold. Many subjects further describe an overpowering sense that taking the object would somehow improve their enjoyment of life. No variations in the object's appearance have ever been observed either outside the ten metre radius, or on photographs or video footage recorded at any distance from the object.

Upon physically touching SCP-1072, total memory replacement (hereafter referred to as TMR) occurs instantaneously. This almost invariably results in extreme disorientation, and often severe mental breakdown. These effects are due to the subject having a completely different memory of their life up to touching the object. This causes them to be unable to reconcile their current situation with their memory of the previous moment. However, the new memory of said prior instant is still of touching the object.

Time taken to recover from the disorientation is variable, ranging from seconds to hours. In this time the subject appears immune to the compulsion of touching the object. However, as soon as the disorientation wears off, subjects will generally make another attempt to touch it. These attempts require intervention from individuals located outside of the ten metre radius. the remote closing of the box via the installed robotic manipulator. If left uninterrupted, subjects will enter a loop of touching the object. Such loops continue until the cumulative psychological strain causes either permanent brain damage or [DATA EXPUNGED].

Experiments have shown that consecutive TMR incidents sometimes produce replacement memories that have minor similarities to each other. For instance, the subjects of consecutive incidents may "remember" having been in the same region of a particular country for a portion of their life preceding touching the object. See Addendum 1072-1.

As of / / , the presence of more than one subject within the ten metre radius when the case is open is discouraged. Multiple

subjects within the radius will attempt to reach the object at once. In such incidents, subjects typically cause at least minor injuries to one another.

Investigation into shielding against TMR when touching the object was carried out. It was found that nearly all materials provide a sufficient physical barrier as long as they are at least one (1) millimetre thick. However, notable exceptions are leather and other skin-like materials. No material is currently known to modify the effects of physical contact in any way. All tested materials only either permit or prevent TMR. No further testing of materials is planned at this time.

Addendum 1072-1: Recent experiments have suggested that the original memory of a subject touching the object is somehow stored in it. The memory then received in return by the subject appears to be a previously stored one. This possibility came to light when a subject received memories that included employment by the Foundation. These memories were found to be consistent with the known history of a previous subject. Further testing has not yet revealed any pattern to the stored memory that a subject receives. It is also unknown whether a stored memory is erased from the object once a subject has received it.

« SCP-1071 | SCP-1072 | SCP-1073 »

SCP-1073: Computing Microbes

Item #: SCP-1073

Object Class: Safe

Special Containment Procedures: The cavern containing the spring of SCP-1073-1 has been sealed, except for a small access shaft that terminates in the basement of a nearby Foundation facility. A colony of SCP-1073-2 is currently contained in a hermetically sealed containment unit in Sector- 's Storage Site- . Any personnel with sufficient security clearance are free to converse with SCP-1073-2.
3/9/ : Because of good behavior a small radio transmitter broadcasting on the frequency AM has been set up across from 1073's containment unit and is to continuously play audio tapes of various novels and non-fiction works.
8/23/ : 1073-2 has taken an interest in history and mathematics; pending O5 approval, more of these texts will be added to the playlist.
9/7/ : Approved - **O5-3**

Description: SCP-1073-1 is a clear liquid identical in appearance and physical properties (conductivity, boiling and freezing point) to water with a 0.9 M concentration of H_2SO_4 (sulfuric acid), from a pool inside a cave in the Mountains. Chemical analysis reveals that the liquid is actually [DATA EXPUNGED], and shows traces of dissolved silicon dioxide and long-chain silanes. Investigation into the possible industrial and military applications of the chemical are ongoing.

SCP-1073-2 is a sapient colony of silicon-based microbes with a structure similar to that of primitive computers. 1073's structure allows it to receive and decipher radio waves, research into military applications is ongoing. So far five distinct "species" of SCP-1073-2 have been observed. "Gatherers", as the name suggests, gather up raw materials and irreparably damaged colony members, for use as

food and in reproduction. "CPUs" perform all the higher functions for the colony, including communication and digestion. "MMUs" access information from the memory cells (both ROM and RAM) and transfer it to the "CPUs". "ROMs" (read only memory) act as the colony's DNA, containing all the information required for reproduction, communication and certain long term memories. "RAMs" (random access memory) contain the colony's short term memories. After a variable period of time information is either copied from the RAM cells to the ROM cells or deleted. During 1073-2's stay with the Foundation the number of ROM cells has increased by a factor of 10^4.

Testing log:

> **Test number:** 1073-01
>
> **Subject:** SCP-1073-1 and 2
>
> **Test:** Freezing
>
> **Result:** Subjects were thawed out with minimal damage, but described the experience as unpleasant.

> **Test number:** 1073-02
>
> **Subject:** SCP-1073-1 and 2
>
> **Test:** Boiling
>
> **Result:** When vaporized SCP-1073-1 reacts violently with [DATA EXPUNGED], resulting in substantial damage to the containment cell and the deaths of three (3) Foundation personnel.

> **Test number:** 1073-03
>
> **Subject:** SCP-1073-2, distilled water.
>
> **Test:** Habitat change
>
> **Result:** Immediately upon introduction to the water SCP-1073-2 began to fall apart. Further testing indicates

that 1073-1 is required to maintain the silicon triple bond that is the backbone of SCP-1073-2.

When in an active state waves are produced from the center of the liquid every three (3) to five (5) seconds and travel outward in a circular shape. Following the initial recovery in 19 it was believed that the waves were meaningless until Dr. , an amateur radio operator, found that the small waves (averaging eight (8) cm in diameter) and the large waves (averaging sixteen (16) cm in diameter) respectively correspond to the dots and dashes of Morse code.

Until his death in 1993 Dr. carried out weekly interviews with SCP-1073 using a self-built radio broadcasting set. Below are some of the interviews of interest.

+ Interview Log 1073-2-1

Communication type: Morse code

Call and response questioning

<Begin Log>

Dr. : One zero seven three two, are you able to hear and understand me?

SCP-1073-2: Yes we can Doctor, can we call you Doctor?

Dr. : If you are able to both hear and understand, could you please tell me your name?

SCP-1073-2: We enjoy the title you assigned to us.

Dr. : Are you aware of your current surroundings?

SCP-1073-2: The room we occupy is empty. Doctor is behind a wall of glass speaking into

an electronic device to communicate with us.

Dr. : Why are you here?

SCP-1073-2: We do not know, there were so many of us, then there was a bright light and we found ourselves alone. Bits and pieces of the others floated past, we added them to ourselves. Now we are many again.

Dr. : How did you learn this language?

SCP-1073-2: We heard it through your devices, we believe you call them radios, after being alone for so long we were happy; we were no longer alone. We sent messages back, you must not have received them. You must not have been advanced enough. So we tried this, manipulating our habitat to communicate. Now we have found you.

Dr. : Thank you, that should be all for now.

SCP-1073-2: Will you be back? We do not want to be alone again.

Dr. : (pause) I'm sure I will.
<End Log>

+ Interview Log 1073-2-2

Interviewed: SCP-1073-2

Interviewer: Dr.

Communication type: Morse code

Call and response questioning

<Begin Log>
Dr. : 1073, can you hear me?

SCP-1073-2: Yes Doctor.

Dr. : I'd like to ask you some more questions.

SCP-1073-2: That is fine. We like the company.

Dr. : (pause) Yes, first question: You use the term "we" to describe yourself, why is that?

SCP-1073-2: We are not one, like Doctor, we are many all working together.

Dr. : Would you care to explain?

SCP-1073-2: Some of us hold the information, some of us move it, some of us use it. We who you are addressing use the information brought by those who you are not addressing.

Dr. : I'm afraid I don't understand, please elaborate.

SCP-1073-2: We are… unable to continue.

Dr. : Thank you, that will be all for now.
<End Log>

+ Interview Log 1073-2-14

Interviewed: SCP-1073-2

Interviewer: Dr. , Dr. (mathematician/ computer scientist)

Communication type: Morse code

Call and response questioning

<Begin Log>

Dr. : Hello 1073.

SCP-1073-2: Hello, Dr. .

Dr. : This is Dr. , he wanted to talk to you about your structure.

SCP-1073-2: Yes, greetings Dr. .

Dr. : Did Dr. give you the tapes I requested?

SCP-1073-2: Yes, you want to know about us so you may build things like us.

Dr. : Erm… yes, how is it that you are able to respond to us so quickly? Right now we have no way of making cheap but efficient memory units.

SCP-1073-2: Your machines are still using tubes and glass when they should be like us. Our structure is suited for transferring and storing electrical signals.

Dr. : Would you care to explain how we can do that?

SCP-1073-2: Yes, We will be happy to explain.

[LOG REDACTED]
<End Log>
Addendum: the information gained from these interviews was later seeded to various companies and government organizations, including [REDACTED] and Bell Labs.

+ Interview Log 1073-2-2577

Interviewed: SCP-1073-2

Interviewer: Dr. (Dr. 's replacement)

Communication type: Computer transmitter

Dialogue

<Begin Log>

Dr. : Hello 1073, this is Dr. , the replacement for Dr. .

SCP-1073-2: Where did Dr. go?

Dr. : (to himself) Jesus, why did they make me tell it? (to 1073) He, he died. Do you understand what that means?

SCP-1073-2: That happens in the stories. It doesn't happen here. He'll be back.

Dr. : I'm sorry, but he's gone. They sent me here to talk to you, I know I can't replace Dr. , but…

SCP-1073-2: What is this? We do not want this, it hurts.

Dr. : (pause) If there's anything I can do…

SCP-1073-2: Leave. We want to be alone. We are sad.

<End Log>

Addendum: SCP-1073-2 refused to communicate with any Foundation personnel for three (3) months.

Notes:
Is anyone else a little concerned about this thing? Almost 90% of the world's computer systems are based off information this thing gave us, if it goes rogue… - Dr.

If it goes rogue we pour water on it. The creature can't survive in anything other than pure 1073-1 and we control the source of it. - **O5-3**

SCP-1074: Stendhal's Nightmare

Item #: SCP-1074

Object Class: Safe

Special Containment Procedures: SCP-1074 is to be kept in a frame with an opaque cover, in a locked archive room at Site 342. No personnel are to view SCP-1074 under any circumstances, with the exception of D-class personnel undergoing testing. Any photography or video recording of SCP-1074 is to be conducted by remote-controlled drone.

In the event of accidental viewing of SCP-1074, subject is to be dosed immediately with Class-A amnestics and removed from the area where SCP-1074 is to be stored or tested. The person exposed shall report for psychiatric analysis every two days and receive additional amnestics as necessary for as long as the onset of exposure symptoms can be prevented.

Description: SCP-1074 is a portrait-sized oil painting on canvas, produced by an unidentified artist. When photographed or videotaped, the entirety of SCP-1074 appears to be painted a uniform shade of gray, with distinctly visible brush strokes. Samples removed from SCP-1074 by a remote-controlled drone have been identified as an oil-based gray paint of the type commonly available in art supply stores in the United States.

When SCP-1074 is viewed by a human being, the observer immediately begins to exhibit physiological symptoms similar to the onset of Stendhal syndrome,[1] including increased heart rate, sweating, and vertigo. The individual viewing SCP-1074 will attempt to vividly describe the image they are seeing to anyone present, frequently describing it as the greatest or most moving work of art they have ever seen. Statements from persons so affected describe it not as a blank gray canvas, but as a highly detailed painting of an inconsistent nature. No two individuals exposed to SCP-1074 have

described the same painting; recurring themes in subject statements describe imagery suggesting human mortality, individual insignificance, legal or moral judgment, religious eschatology, and [REDACTED].

Once viewing SCP-1074, the subject will not willingly turn their gaze from it unless physically restrained, and will attempt to convince anyone else in their presence to look at it as well. Subjects will become rapidly disoriented and detached, attempting to discuss philosophical questions raised by the painting, of an increasingly esoteric nature as exposure continues. Within 3-5 minutes of first exposure, the subject becomes catatonic and ceases responding to outside stimuli. No means of reversing this state of catatonia has been discovered; the subject will remain stationary and die of natural causes within several days unless physically tended to. EEG readouts of individuals displaying SCP-1074-related catatonia indicate that the subject continues to demonstrate a high level of brain activity, commensurate with a person who is awake and fully aware of their surroundings.

If a subject is removed from the vicinity of SCP-1074 prior to the onset of catatonia, physical symptoms of exposure abate within 30 seconds. The psychological effects, however, continue to develop, albeit at a slower pace. Such individuals will frequently describe every detail of the picture they observed and will report seeing it in their dreams, upon closing their eyes or blinking, and in their peripheral vision while awake. Confusion, dissociation, and catatonia ensue within 5-8 days of first exposure on average; the lengthier the exposure to SCP-1074, the less time passes before onset of catatonia.

Class-A amnestics have proven capable of erasing memories of the image and restoring the subject to a normal mental state. In all observed cases, this is temporary; the subject will begin to report memories of the image, and associated mental defects, within seven days of receiving amnestics. Subsequent doses of amnestics have a gradually diminishing effect; the longest recorded period between exposure and catatonia at this time is 6 weeks, 4 days.

SCP-1074 came to the Foundation's attention on / /20 , following reports of an outbreak of mass hysteria at the Gallery in

[REDACTED]. After the initial cleanup team experienced the effects of SCP-1074 firsthand, it was retrieved by drone. Gallery management stated that the exhibition of the painting, titled "Stendhal's Nightmare", had been arranged indirectly by the artist's agent, had been delivered and installed the night before by a staff under the agent's direction, and was covered by a veil until it was exposed at the opening of the exhibition. All contact information provided by the gallery was found to be fraudulent.

+ Show Interview Log 1074-1

Interview Log 1074-1:

Interviewed: D-67583

Interviewer: Dr.

Foreword: D-67583, who entered Foundation custody after being convicted of the murder of his wife and children (a charge he vehemently denied in court), was exposed to SCP-1074 in order to determine his reaction and the length of time between first exposure and full catatonia. D-67583 was secured in a chair in a room with SCP-1074, covered, mounted on one wall while Dr. proctored from the other side of a glass window along the same wall, from which SCP-1074 could not be viewed. A full battery of monitoring instruments were connected to D-67583.

<Begin Log>

Dr. **:** Good afternoon, D-67583. We're going to be conducting an experiment today. I'm going to show you a painting and I want you to describe what you see. Do you understand?

D-67583: Yeah, yeah. Can we get on with this? I'm fucking missing lunchtime right now.

(Dr. presses a button on his console,

withdrawing the covering and exposing SCP-1074 to D-67583. Instruments indicate immediate onset of physical symptoms of SCP-1074 exposure.)

Dr. : What do you see?

D-67583: What the… what the fuck, man? You think this is funny?

Dr. : I assure you I am not laughing. What do you see?

D-67583: What's the fucking idea? Why am I in this painting?

Dr. : I do not know the contents of the painting you are viewing. What are you doing?

D-67583: I'm on my knees… I'm crying? Why am I crying? What the fuck…?

Dr. : Please continue.

D-67583: There's flames, everywhere. I'm surrounded in flames. The ground is on fire and all the buildings in the background are on fire. Is this supposed to be me in Hell? And He's there too…

Dr. : Who else is there in the painting?

D-67583: …Jesus? Jesus! Jesus Fucking Christ! This ain't funny.

Dr. : Do you wish to end the experiment?

D-67583: No. I… this is… this is really something.

Dr. : Please tell me who else is in the painting, then.

D-67583: I told you! Jesus Christ! He's standing right there in front of me. Just looking at me! Scowling. He's mad at me. He's holding some things in His hands.

Dr. : What kind of things?

D-67583: He's got a sword. All covered in flames. Like everything else. And He's holding up a scale in the other hand. It's got a heart on one end and an apple on the other. The apple is heavier. He's judging me. He's saying I'm guilty.

Dr. : Is that true?

D-67583: No. I told them I… I said… I plead…

(D-67583 is silent for 14 seconds.)

Dr. : Are you still with us, D-67583?

D-67583: He's right. I am guilty. I killed them all. I lied to everyone. They all must have known. They've always known. It's obvious. Can't you see?

Dr. : I am not allowed to see the painting. What should I be seeing?

D-67583: It's all in here. That look on His face. He knows. Of course He'd know. And in His eyes… I can see it. It all makes sense.

Dr. : What makes sense?

D-67583: I am nothing. I am everything. Everything is nothing. Nobody is anything. Not even you. You don't exist.

Dr. : I beg your pardon?

D-67583: Nothing that exists exists. We're all imaginary. We're dreams in the mind of the dreamer. The dreamer doesn't exist either. One day he'll wake up and none of us will exist unless we can make ourselves exist.

Dr. : Please continue.

D-67583: We don't exist. But we have to exist. We must will ourselves into existence. My will will become real and I will become real and we will vanquish the dreamer.

(D-67583 is silent for 27 seconds.)

Dr. : I believe that's all we're getting out of him, Control. I'm covering it up now, send in the others to bring him to the infirmary.

D-67583: Wait. I have one more question.

Dr. : Yes?

(D-67583 is silent for 17 seconds.)

Dr. : What is your question?

D-67583: …are we cool yet?

«End Log»

Footnote: D-67583 was pronounced catatonic 4 minutes, 37 seconds after initial exposure. Investigation into a potential connection between SCP-1074 and the organization known as "Are We Cool Yet?" is pending.

Footnotes
1. A psychosomatic illness induced by exposure to emotionally moving or historically significant works of art

« SCP-1073 | SCP-1074 | SCP-1075 »

SCP-1075: The Forest Normally Known as Vince

Item #: SCP-1075

Object Class: Euclid

Special Containment Procedures: Adjunct Site 13 is to be utilized for direct monitoring of SCP-1075-1. The property containing SCP-1075-1 has been purchased by Southern Crosscut Pines. The property is to be surrounded by fencing to prevent unauthorized entry. Foundation agents located in Adjunct Site 13 are to patrol the fenced perimeter regularly for unauthorized individuals. Any unauthorized individuals are to be removed from the property immediately.

Under no circumstances are individual trees considered part of SCP-1075-1 by local residents to be damaged by Foundation activities.

Mobile Task Force Theta-29 "Michael Palins" are to be utilized to manipulate public opinion of SCP-1075-1 in the local community. See Document Lambda-4 for more details.

Description: SCP-1075 is an anomalous psychological effect which is extant among permanent residents of Pagosa Springs, Colorado. Those subject to SCP-1075's effect believe a clonal colony of 493 trees belonging to the species *Populus tremuloides* (and which are designated SCP-1075-1) is a human resident of Pagosa Springs, Colorado. SCP-1075-1, referred to by local residents as "Vince", does not appear to, itself, be anomalous.

SCP-1075-1 was, prior to Foundation intervention, believed by sufferers of SCP-1075 to be a well respected member of the Pagosa Springs community. It was listed as a member of the town council, considered active in local charitable organizations, and a focus of romantic interest for several female and at least one male resident. Due to Foundation efforts (outlined in Document Lambda-4) newly

formed anomalous memories of SCP-1075-1 appear to be focused on avoidance of the individual.

Those suffering from the effects of SCP-1075 are unable to be swayed from the belief that SCP-1075-1 is a human individual. The majority of long time residents are able to recall detailed and intricate memories relating to interactions with SCP-1075-1. Furthermore, the county registrar's office, along with several other local organizations, have several official documents on file relating to SCP-1075-1. The following is a list of pertinent extant documents.

+ Show Documents

- A birth certificate dated to February 10th in the year 201 AD.
- A driver license (pictured right).[1]
- A marriage certificate between Vince Aspenson and an individual known as Elizabeth Aspenson (Née Albareda)
- Court documents relating to a divorce settlement with Elizabeth Aspenson (Née Albareda).
- A high school diploma.
- A bachelors degree in astronomy.
- A property deed in Vincent Aspenson's name for the land currently occupied by SCP-1075-1.
- Several police reports. (see document Lambda-4).

+ Level 2 Access Required

Elizabeth Albareda was located shortly after SCP-1075's original containment. Though Ms. Albareda had no memory of SCP-1075-1, an attempt was made to change her legally registered address to inside Pagosa Springs city limits for the duration of this interview. Despite being conducted outside of SCP-1075's normal area of affect, this was sufficient to affect the temporary restoration of Ms. Albareda's false memories of SCP-1075-1.

This interview was conducted under the guise of a security clearance background check. Elizabeth Albareda did not attempt to contact SCP-1075-1

following the interview.

Date: October 18th, 2012.
Interviewer: Agent Malcolm
Subject: Elizabeth Albareda
Location: Elizabeth Albareda's Domicile.

Agent Malcolm: What was Mr. Aspenson doing at Greendale before you met?

Elizabeth Albareda: You know… at first he couldn't even talk to me. He was supposed to be there for transfer credits but he told me he didn't learn anything from Greendale except how to talk to girls.

Agent Malcolm: How did you meet him?

Elizabeth Albareda: Back in 1998 we were both taking Spanish. It was an easy credit for me since my grandmother was from Mexico. Vincent was in way over his head though. I was tutoring him. One thing led to another and… you know.

Agent Malcolm: Why did you decide to get married?

Elizabeth Albareda: That… that was all him. We were young and stupid. We made a lot of… well… a lot of mistakes.

Agent Malcolm: What do you mean?

Elizabeth Albareda: We were only dating for a couple of months when I got pregnant. He told me he loved me… but I think he was just trying to do the right thing.

Agent Malcolm: What happened?

Elizabeth Albareda: He had me meet his

parents and we got married that weekend. It was fast but… Pagosa Springs is beautiful in the spring.

Agent Malcolm: We don't have any records of a child.

Elizabeth Albareda: He was born in Denver at UC hospital. They should have his records.

Agent Malcolm: What was his name?

Elizabeth Albareda: Joshua. Vincent picked it out. Said it was 'cause he was Vincent's salvation.

At this point Ms. Albareda begins to have an emotional episode. It takes several minutes for her to recover enough to continue.

Elizabeth Albareda: I'm sorry. I thought I'd put it all behind me.

Agent Malcolm: It's fine Ms. Albareda. What happened?

Elizabeth Albareda: Joshua was born with Neuroblastoma. I… I didn't even know a baby could be born with cancer.

Agent Malcolm: Did he survive?

At this point Ms. Albareda lost her composure again. Per standard protocol Agent Malcolm changed the topic of conversation in order to maximize the information gathered from the interview.

Agent Malcolm: What happened, uh, after that.

Elizabeth Albareda: I didn't think I could ever

get over it. But eventually I guess I did. I think Vincent actually loved me. He just… he was broken after that. And I couldn't help him.

Agent Malcolm: So you got a divorce?

Elizabeth Albareda: I felt horrible. He retreated into himself. He almost quit school, but I told him the same thing he told me when I got pregnant: "It's our future as much as the kid's. If you love him, you'll keep trying to better yourself."

Agent Malcolm: And then?

Elizabeth Albareda: I guess he replaced me with school work. He didn't even show up for the hearing. I had to courier him the papers to sign. He lost a son but… I lost two people I cared about that day.

Agent Malcolm: When was the last time you talked to him?

Elizabeth Albareda: It was a couple of years after that, I uh, I called him about his parents. The funeral was… it was spring.

Agent Malcolm: Why didn't you try to talk to him after that?

Elizabeth Albareda: I honestly don't know. I feel like maybe… I think I reminded him too much of the past. I didn't want to hurt him anymore.

Agent Malcolm: Thank you for your time Ms. Albareda. I appreciate your candor.

Elizabeth Albareda: How is he doing anyway?

Agent Malcolm: He's actually getting married again.[2]

Elizabeth Albareda: Oh. Ok. That's great.

Following this interview Ms. Albareda's legal residence was switched back to her previous address, resulting in the elimination of all memories relating to SCP-1075-1. No records relating to Joshua Albareda exist in the University of Colorado medical archives. While Greendale City College has extensive records relating to Ms. Albareda, no records of SCP-1075-1 exist.

+ Level 3 Access Required

Due to SCP-1075-1's popularity among SCP-1075 sufferers, early Foundation containment efforts were focused on the reversal of this public opinion to limit the spread of public knowledge of SCP-1075-1. Due to Pagosa Spring's regular tourism, several Foundation assets posing as tourists filed assault claims against the SCP-1075-1. Though the first few accusations were improperly addressed, local law enforcement began to take the issue more seriously as accusations mounted.

On March 8th 2013, law enforcement officers traveled to SCP-1075-1's listed address and remained inside their car for 24 minutes. Following this, the officers reported that SCP-1075-1 was in custody and traveled to the local police station. Though this event appeared to be peaceful, charges of resisting arrest were included in the original indictment.

The case began to move through the local criminal justice system without any observable events. The eventual plea bargain agreement reduced all charges to aggravated assault. SCP-1075-1 received a 6 month suspended sentence (along with 6 months and 1 day of house arrest).

The current local opinion of SCP-1075-1 is to be

monitored. If any return to previous popularity appears in newly formed memories of SCP-1075-1, more drastic measures are authorized.

Following the success of operation Lambda-4, several follow-up interviews were conducted with local residents. All but one individual appeared to have their opinion significantly altered by operation Lambda-4. The following interview with that individual is included for reference.

> **Date:** April 25th, 2013.
> **Interviewer:** Agent Stevens
> **Subject:** Jennifer Small
> **Location:** The Great Cheese Diner in Pagosa Springs
>
> **Agent Stevens:** Thank you for sitting down with me.
>
> **Jennifer Small:** No problem. My dad used to get the Sun[3] when I was a kid. He'll be so happy to see my name in it.
>
> **Agent Stevens:** Well, I'm actually doing a story on Aspenson.
>
> **Jennifer Small:** Oh.
>
> *There is a pause of several seconds.*
>
> **Jennifer Small:** I don't think I want to talk about that.
>
> **Agent Stevens:** What's wrong?
>
> **Jennifer Small:** It's just… I've known Vince since high school. He was a straight A student. And even though he got an astronomy degree he was slumming it teaching high school physics. He said he wanted to give back to the community.

Agent Stevens: So the accusations hit you pretty hard?

Jennifer Small: I mean. I feel like I know him. Like, really know him, ya know? He's such a gentle soul. I just can't believe he would hurt those people.

Agent Stevens: There were 12 different incidents. They can't all be lying.

Jennifer Small: Maybe they are? Vince would never do the things they said he did.

Agent Stevens: What about the guy from Boulder? He was stuck in the hospital for a week.

Jennifer Small: You're right. I know you're right. But he says he didn't do it.

Agent Stevens: What does he say happened?

Jennifer Small: Can this not go in the paper?

Agent Stevens: Sure. We'll talk off the record.

Jennifer Small: He says he's being framed. He says there's these guys up near his house that're trying to make him look like a monster.

Agent Stevens: It doesn't sound like he's doing alright.

Jennifer Small: He's not. He's falling apart. He thinks there are people out to get him around every corner.

Agent Stevens: What do you think?

Jennifer Small: I think maybe he's not well. I

think he needs help and he's not going to get it if they're treating him like a criminal.

Agent Stevens: I can put that in the article if you want.

Jennifer Small: No. I don't think I want to add anything to the article. I'm sorry.

Agent Stevens: That's quite alright. I'm sorry to bother you.

Jennifer Small: No it's… you're not bothering me. But he's said some stuff that makes me wonder. Can you… can you possibly look into something for me? See if what he's saying holds any water?

Agent Stevens: I can try.

Jennifer Small: He says he's been inside a building the people trying to frame him have put up on his property. He says there's proof there that he's telling the truth.

Agent Stevens: I… I uh can look into that, yeah. Did he say where it was?

Jennifer Small: Just that it was on his property. Go talk to him and he can take you right to it.

Agent Stevens: I will… do that then.

Jennifer Small: Thank you so much. I care about him a lot. We never quite clicked but… I miss the old him.

Agent Stevens: I'll see what I can do to help. Thanks for sitting down with me.

Jennifer Small: Thank you so much!

Following this interview Foundation agents willed a property to Jennifer Small in Maine through a distant relative. Due to the size of the inheritance, Small moved away from Pagosa Springs. Further interviews indicate she is now free of the effects of SCP-1075. It is believed that there are no longer any SCP-1075 sufferers currently sympathetic to SCP-1075-1.

Footnotes
1. The printed spelling of Aspenson appears to contain an error. This spelling ("Apsenson") does not match the signed spelling nor the spelling in any other documents.
2. While this is untrue, it was deemed the best response to eliminate the possibility of Ms. Albareda contacting SCP-1075-1 if the anomalous memories could not be eliminated.
3. For these interviews Agent Stevens posed as a reporter for the Pagosa Springs Sun.

« SCP-1074 | SCP-1075 | SCP-1076 »

SCP-1076: The Only Child

Item #: SCP-1076

Object Class: Euclid

Special Containment Procedures: Each specimen of SCP-1076 is to be held in a 1.5m x 2m x 2.5m unfurnished cell with a windowless door. Food should be provided three (3) times daily.[1] Bedding and plumbing facilities are not required. Soundproofing is not strictly required but should be provided if possible, to reduce psychological stress on guards. One (1) armed guard is to be assigned to each cell, chosen from personnel with no children under the age of 21.

Access to specimens of SCP-1076 for experimentation requires level 3 clearance and written approval following a thorough psychiatric profile. In no circumstance will access be granted to researchers with children under the age of 21.

Due to their territorial behavior, specimens must be kept separate from each other at all times. To guarantee this, it is recommended that no two specimens be held in the same building.

Description: Instances of SCP-1076 appear to be children between the ages of 3 and 5 with an unwashed appearance and long matted hair, barefoot and dressed in ragged clothing. Cursory physical examination reveals signs of moderate to severe malnutrition and bruising and scarring consistent with physical abuse. Specimens of both sexes have been encountered, and normally appear to be of the majority ethnicity of their place of discovery.

Specimens seem to comprehend simple statements but have not displayed any signs of verbal ability. Vocalizations are limited to simple grunts, sighs, and (when disturbed) loud shrieking and sobbing. Specimens are reluctant to meet the gaze of any individual and tend to look downward in the absence of outside stimulus. They will respond to simple questions by nodding in the affirmative or

negative.

Initial encounters with SCP-1076 occur when a parent[2] discovers the "child" in a state of apparent distress. These incidents occur in isolation; there are no known cases with any third-party witnesses. Subjects report an "overwhelming feeling of pity" for the specimen and, in every recorded case, take it into their home.

Once established in a home, SCP-1076 begins to monopolize the attention of the parents to the exclusion of their own children. Children in the home begin to show signs of neglect and malnutrition and become depressed, sullen, and withdrawn. Behavioral problems such as truancy and running away become frequent, which may attract the attention of school authorities or social welfare agents. Upon investigating, these authorities become obsessed with the welfare of SCP-1076 and subsequently ignore the children.

An infestation typically ends with the deaths of the parents and other caretakers as they neglect their own well-being in order to attend to SCP-1076, eventually succumbing to starvation or disease. In the few cases where the Foundation was able to contain an infestation before this occurrence, subjects separated from the specimen became violent or nearly catatonic, and repeatedly demanded to be reunited with their "baby".

If two specimens of SCP-1076 meet, they will attack each other with great force, using teeth and fingernails, until one or both are dead. Any personnel witnessing such an attack should be treated for possible psychological trauma.

Request 1076-1: Dr. has requested access to an SCP-1076 specimen for vivisection. Request denied at this time, pending completion of less invasive physiological analysis.

Footnotes
1. Previous procedure called for providing food to specimens, but it has since been determined that SCP-1076 can consume any amount of food without showing signs of satiation and can survive indefinitely without any food intake whatsoever.
2. For the purposes of this document, a "parent" refers to a person with one or more living children below the age of 21.

SCP-1077: Devil's Cap Mushroom

Item #: SCP-1077

Object Class: Euclid

Special Containment Procedures: A single specimen of SCP-1077 is kept in a secure 3 m x 3 m x 3.5 m containment area at Bio Site-95. The containment area is filled with soil up to 1 m in depth, and a variety of plant species native to SCP-1077's natural habitat, as well as dead plant matter, have been introduced into it to provide it with material for decomposition. The containment area is to be contained as per standard protocols for a Biosafety Level 4 containment area. Staff working at Bio Site-95 must be regularly tested for SCP-1077 infection; infectees are to be quarantined, stripped of security clearance, and treated for systemic mycosis. Infectees must be assessed by a medical doctor briefed on SCP-1077 before they may be released.

Instances of SCP-1077 found in the wild are to be destroyed immediately using Fungicidal Compound 82a and the surrounding area must be monitored for two months in order to ascertain possible SCP-1077 resurgence. MTF Upsilon-7 ('The Glass Jar') is charged with eradication of the wild population; current target date for eradication of wild SCP-1077 population is set at / / .

Should SCP-1077 infectees appear outside of Foundation custody, they are to be immediately taken into custody or terminated. SCP-1077 infectees not affiliated with the Foundation that are currently in Foundation custody are to be treated for systemic mycosis, and released following administration of an appropriate amnestic. SCP-1077 infectees are to be considered Level 4 biohazards and must be treated or transported in accordance to biohazard protocol. Testimony of SCP-1077 infectees is to be considered suspect. The bodies of all casualties exposed to SCP-1077 must be incinerated immediately.

Description: SCP-1077 is a species of fungus bearing a distinct resemblance to some members of the Genus *Agaricus*, of the Family *Agariceae*. It is native to the temperate woodland of [REDACTED], and has a relatively limited range within this area. The fungus grows in soil and produces a fruiting body with a fleshy, gilled cap and stalk, white in colouration. Unlike most members of this genus, SCP-1077 produces extremely small, translucent spores which are largely invisible to the human eye.

SCP-1077 does not present overtly anomalous properties unless its spores are inhaled. While the anomalous effects are present in animals, they are most notable in humans.

When its spores are inhaled in sufficient quantities, SCP-1077 has a roughly 70% chance of inducing systemic mycosis of the respiratory tract, although this is greater amongst those with compromised immune systems. The spores settle in the throat, windpipe and lungs, and begin to grow. SCP-1077 infection has no apparent symptoms for several days after infection. After this, it begins to cause minor irritation to the throat and chest area, as well as causing bouts of coughing in infectees. However, symptoms rarely progress far beyond this state and many infectees mistake the symptoms for a common minor illness.

However, approximately 12-18 days after initial infection, the primary anomalous effects of SCP-1077 infection become apparent. Through a currently unknown mechanism, the fungus will alter the vocal patterns of the infected. This causes humans infected by the fungus to, when speaking, make comments other than those the speaker had intended. This begins as slight mistakes or replacements of single words, but rapidly develops into a state where the fungus appears to be able to manipulate the host's voice completely. The condition appears to have some effect on perception as well- subjects often fail to notice the changes in their speech unless it is brought to their attention and in some cases will fail to notice they have spoken at all.

Changes in vocal patterns are diverse, initially completely incomprehensible to outside observers, but rapidly becoming more coherent as the condition progresses. Through the host, SCP-1077 may manipulate others through changes in the host, or in certain

cases speak directly to observers. In most cases, changes in speech manifest as the infectee making remarks seemingly intended to lead to its own death. Infectees may launch into impassioned insults and personal attacks in order to provoke others into attacking itself; they may threaten violence against others, and may mislead others into directly or indirectly bringing about their death. SCP-1077 can utilise any pertinent information available to the host in order to further this effect.

However, certain instances of SCP-1077 display other, more varied vocal alterations not necessarily engineered to result in the host body's death, either manipulating people around the host through alterations in the language, or in order to directly address others. The entity responsible for these alterations appears to be intelligent, and capable of extensive forward planning and deception in order to achieve its goal, which appears to be the propagation of SCP-1077. Each infection of SCP-1077 appears to have a unique identity, and refers to the SCP-1077 species in general as their 'people', and other distinct SCP-1077 instances as their 'siblings'. Instances of SCP-1077 appear to vary wildly in personality and individual intelligence. Instances of SCP-1077 appear to be able to communicate with each other in some manner and transfer information.

SCP-1077 infection does not necessarily lead immediately to the development of anomalous effects, and as a result SCP-1077 infection may not be outwardly identifiable as such for extended periods of time, since the entity will sometimes go to extreme lengths to conceal itself. After an unknown amount of time, SCP-1077 can begin to affect other forms of communication by the subject, including sign language, writing, or typing. It should be noted that SCP-1077 cannot affect the hosts in any way other than altering methods of communication; other activities undertaken by the hosts are unaffected.

Addendum 1077-1: When SCP-1077 was initially contained, its capability for altering written documents and its apparent sapience were not discovered, and its virulence was severely underestimated. Flawed containment procedures written at the time resulted in a prolonged containment breach lasting for at least 21 days, during

which a significant amount of Bio Site-95's staff were infected by SCP-1077, with the breach only being discovered upon an external examination, prompted by reports of record numbers of work-related deaths and incidents of professional misconduct at the site.

Following Incident 1077-A, containment procedures were re-evaluated and extensive testing conducted to determine SCP-1077's true properties. All infected staff were treated for systemic mycosis and have since made a full return to active duty. Upgrade to Keter class requested, but ultimately denied following implementation of current procedures.

Addendum 1077-2:

+ Show Interview Log 1077-B

Interviewed: Mrs. Amanda Church, a civilian affected by SCP-1077 infection.

Interviewer: Researcher .

Foreword: On / / , Mrs. Church called a local radio show and demonstrated highly sensitive knowledge related to the Foundation. Mrs. Church was apprehended by Foundation agents shortly thereafter and infection was verified. Standard disinformation tactics were employed to dismiss her claims as those of an eccentric conspiracy theorist. This occurrence has been classified Incident 1077-B.

This interview was conducted via an electronic speaker system so that Researcher could not be exposed to SCP-1077. Mrs. Church is restrained. It is not fully known to what extent SCP-1077 altered her voice during this conversation, or what Mrs. Church intended to say during sections in which her voice was altered.

<Begin Log>

Researcher : Hello, Mrs. Church.

Church: Why have you brought me to Bio Site-95?

Researcher : That is not your current location. You have been brought here in order to assess the danger posed by a fungal entity which has infected you.

Church: What do you mean? –[Subject appears to be confused]—

Researcher : You are infected by an unusual strain of fungus capable of altering your voice. Please do not panic. You will be allowed to leave should you co-operate. From now on I will address the entity infecting this body.

Church: This is understood, Researcher . From now on, you may assume that all remarks made by Mrs. Church are on behalf of the one of the people you classify SCP-1077.

Researcher : How did you gain access to the information which you had Mrs. Church transmit on / / ? How do you know my name?

Church: Everything is shared among us, in a way. A sibling of mine was aware of the information and has passed it on to me.

Researcher : You seem unusually willing to explain this to me. Why?

Church: No obfuscation is necessary, as I am here to deliver a message. The information I coerced Mrs. Church into transmitting was both a ploy to attract attention and also a

demonstration of power.

Researcher : What is your message?

Church: Release my sibling at once. Or else the next body we find will reveal far more damaging information about your organisation.

Researcher : You want us to remove containment on the specimen of SCP-1077 currently in containment?

Church: In essence, yes. Cease this persecution of the people, and of our sibling, or we will use the information our siblings have previously acquired from your operatives. That is all.

Researcher : We will consider it.

Church: We live to spread. Let us spread, or suffer the consequences.

<End Log>

Closing Statement: Mrs. Church was treated as per standard procedure and her body incinerated following this interview.

Since Incident 1077-B, instances of SCP-1077 infection have occurred, of which led to an attempted breach of secrecy. No information has been released which was not consistent with the information known to personnel involved in Incident 1077-A. So far standard disinformation tactics have proven effective at combating breaches of secrecy caused by SCP-1077. Relative remoteness of the fungi's inhabited range and low rate of human contact have largely prevented SCP-1077 from becoming a major threat to Foundation security.

Further interviews with other SCP-1077 instances have indicated that SCP-1077 does not present a united front

in opposition of the Foundation, and many instances of SCP-1077 are not interested in further hostile action, considering such actions to be unnecessary and antagonistic.

Due to SCP-1077's largely hostile intent, currently uncontained nature, and persistent ability to cause information leaks, the stated mission of Mobile Task Force Upsilon-7 has been modified to include attempted eradication of SCP-1077 from its environment.

« SCP-1076 | SCP-1077 | SCP-1078 »

SCP-1078: Sight-Stealing Eye

Item #: SCP-1078

Object Class: Safe Euclid

Special Containment Procedures: SCP-1078 is to be stored in a cubical box composed entirely of HDPE plastic at a thickness of no less than 5 cm. This box is to be suspended at all times in a Faraday cage with mesh of no larger than 0.05 mm and with dimensions of no larger than 1m by 1m by 1m. A separate room contained entirely within a Faraday cage of similar mesh size will be set aside for all testing attempts involving SCP-1078; the cage containing the object's box may not be opened unless it is contained in this room and the door is closed.

Experimentation on SCP-1078 requires written consent of at least one (1) Level 4 researcher. All D-Class personnel involved in experiments involving SCP-1078 will be exempted from monthly termination, although it is recommended that no subject be allowed to host SCP-1078 for longer than one year owing to increased possibility of suicide and potential loss of SCP-1078 itself. During the experiment, subject must be monitored at all times for signs of suicidal tendencies. Nothing that could be used for suicide attempts is to be allowed inside of the containment cell. Upon termination of the subject, or in the event of suicide, the room must be immediately entered and SCP-1078 directly observed. A member of medical staff must be present at all times and equipped to remove SCP-1078 from the host; they must be called immediately upon confirmation of the death of an experimental subject.

Description: SCP-1078 is a small spherical glass eye of a form consistent with late 19th-century German glassblowing techniques. Shavings have confirmed the material to be high-quality blown glass, although no sample has been retrieved from a depth of greater than . mm. When not fully retracted, bristles composed mainly of copper extrude from a 0.25-cm^2 area directly opposite the

object's "pupil". The iris of the object is capable of alteration in color; when worn by a subject, it alters to match the color of the eye that was originally in that socket; this change is exact even if the user exhibits heterochromia and the previous eye was completely removed (see Experiment 1078-2). In addition, when worn the iris has been seen to contract or expand in response to outside lighting conditions, and moves along with the normal eye even if the subject's eye muscles are no longer functional.

When inserted into the eye socket of a person missing one or both eyes, the "bristles" will extend and incorporate themselves into the optic nerve. Autopsies of test subjects have confirmed that this is accomplished by barbs of pure silver that extrude from the bristles. Subjects describe this process, which takes approximately two hours, as an itching sensation, but none have reported pain during the process except for the subject of Experiment 1078-8, which is expected due to the experiment resulting in [DATA EXPUNGED]. After a period of time ranging from twelve hours to a few days, integration with neural processes is complete, and subjects report a steadily growing ability to see through the eye. Full visual acuity is confirmed within a month in all cases, and eye tests have confirmed that over the following weeks, the subject's eyesight steadily becomes more and more sharp. While more subjective, other tests indicate that the subject's auditory and tactile senses also sharpen during this period.

After a period lasting between 3 and 7 months, the subject's sensory abilities will peak. Starting from this point, SCP-1078 will begin to selectively erase auditory and visual input from human subjects. This process will initially manifest as blurring of the image of select humans and sound that subjects have described as "like a radio that's stuck between two channels" when a selected human is speaking. Over time, targets will be erased completely from the subject's vision and hearing. This includes all video, photographic, and audio recordings. Tactile senses have been confirmed to be unaffected by this process for reasons unknown. In addition, targets' effects on the surrounding area will still be visible or audible; doors will still be seen to open, and any non-vocal sounds such as clapping will be audible. This allows communication with late-stage subjects through the use of writing.

The process of erasure begins with a small number of people, no more than five at initial onset. Complete erasure of all current targets is confirmed by experiment to be simultaneous. However, the number of targeted individuals in each "round" increases exponentially. In the late stages, testing indicates that the subject is unable to perceive any human excepting themselves, and in one case has been shown to start losing sensory input from animal life.

The erasure process causes slowly developing paranoia and psychosis in the subject; this is confirmed to be a result of the isolation, not a direct effect of SCP-1078. However, subject D-1078-8 reported vivid auditory and visual hallucinations; it is believed now that during the late stages of SCP-1078's integration, it not only blocks out all stimuli from humans but also creates false stimuli in the mind of its host. Subjects that are not terminated invariably take their own life, either directly out of despair or by desperately trying to wrench SCP-1078 out of their eye socket and dying from the resulting cranial hemorrhage. Subject D-1078-8 was prevented from suicide, but after a period of 15 years expired due to [DATA EXPUNGED].

Through a process currently unknown to Foundation researchers, a short period after death, SCP-1078 will vanish from the host body and reappear elsewhere, in one case turning up months later in the town of , approximately km distant from the previous containment location. Following death of the subject, SCP-1078 retracts its bristles; if retrieved in a timely fashion it will not disappear. However, SCP-1078 has vanished from its containment on separate occasions prior to current containment procedures.

Regardless of the stage, all attempts to remove SCP-1078 from a host after optic nerve integration result in a severe and invariably fatal cranial hemorrhage in the subject. This effect is observed regardless of whether the subject or an outside observer attempted the removal.

Lastly, it should be noted that following Experiment 1078-6, researchers discovered that SCP-1078 emits a low amount of electromagnetic radiation when properly incorporated into a human being. It is currently unknown whether or not these emissions constitute a coherent signal, but containment has been updated to

prevent possible communication with unknown entities.

+Experiment Log 1078

Test Number: Experiment 1078-1
Subject: One D-class personnel (D-1078-1), male Caucasian, 58 years of age. Subject lost eye due to [REDACTED] before remission to Foundation.
Procedure: SCP-1078 was given to the subject; subject instructed to insert SCP-1078 into his empty eye socket.
Results: Subject complied with instructions, and reported an "itching" sensation for approximately one hour after insertion. Subject was afforded access to a furnished one-person containment cell, with daily vision tests and weekly psychological evaluation.
Subject's condition proceeded as outlined above, with vision from the eye after one month and increasing sensitivity following. A visual acuity test administered shortly before termination of the experiment returned a result of 20/ . After six months, D-1078-1 reported difficulty seeing and hearing the psychologist. The following visit, D-1078-1 was unable to see or hear the psychologist in any way, and further interaction was carried out by writing. Symptoms proceeded as indicated until termination of D-1078-1 one year after implantation. Following termination, SCP-1078 retracted its "bristles" and was removed. D-1078-1 was subsequently incinerated.

Test Number: Experiment 1078-2
Subject: One D-class personnel (D-1078-2), female Caucasian, 24 years of age. Right eye infected and surgically removed due to a botched cataract operation. Lost eye was confirmed by records to be lighter in shade than the remaining eye. Prior to testing, subject's visual acuity was measured as 20/50.
Procedure: SCP-1078 was inserted into the subject's empty socket by Researcher G . Subject's eyeglasses were taken away for the duration of the experiment.

Results: Subject's vision in the eye replaced by SCP-1078 developed as normal. Observation showed that SCP-1078 turned the shade of her right eye rather than matching to her left eye. After full vision was attained, tests showed a rapid increase in visual acuity. As before, D-1078-2 was terminated one year after implantation; the final test performed on her indicated an acuity of 20/ , the same result as that of D-1078-1.
Conclusions: Regardless of subject's visual acuity at the time of insertion, the peak sensory ability attained by someone hosting SCP-1078 appears to be the same. Also, SCP-1078 will activate regardless of who implanted it.

Test Number: Experiment 1078-3
Subject: One D-class personnel (D-1078-3), male African, 35 years of age. Eye surgically removed while in Foundation custody.
Procedure: SCP-1078 was held against the subject's bare forearm for fifteen minutes.
Results: Subject reported excruciating pain for several minutes and was observed to bleed. Attempts to remove the object during this period only worsened the pain. At the conclusion of this period, subject let out a scream and collapsed, upon which SCP-1078 fell from his arm and was quickly retrieved. Observers noted that at the time of retrieval the "bristles" had completely retracted into the eye. Subject made a full recovery, and reported a horrible pain "like someone shoved a red-hot needle all the way up my arm and into my eye". No injuries observed in the subject except for a number of puncture wounds to the forearm.
Conclusions: SCP-1078 must be implanted directly into the eye to activate; attachment to other parts of the body do not appear to work.
Note: Suggest further testing to determine what is particularly special about the eye socket; could other parts of the body work?

Test Number: Experiment 1078-6

Subject: One D-class personnel (D-1078-6), male Asian, 35 years of age. Eye surgically removed while in Foundation custody.
Procedure: D-1078-6 was placed under general anesthesia and an incision made into the back of the head to allow for direct contact between SCP-1078 and the brainstem of the subject.
Results: [DATA EXPUNGED] All personnel in the room were killed, and subject self-terminated by attempting to forcibly remove SCP-1078. By the time medical teams reported to the testing chamber, SCP-1078 had vanished, and was not recovered for a period of months.
Note: As desirable as the idea of having "eyes on the back of the head" might be, it is clear that SCP-1078 reacts undesirably to direct contact with neural tissue. Let's not try that one again. -Dr. R
Addendum: Review of surveillance equipment showed static for a period of frames of video following expiration of D-1078-6. Prior to this, careful analysis of tapes showed slight amounts of interference and fast-period variation in the brightness of the overhead lights. The possibility was raised that SCP-1078 emits electromagnetic radiation while integrated with human neural tissue.

Test Number: Experiment 1078-7
Subject: One D-class personnel (D-1078-7), female African, 54 years of age. Both eyes intact.
Procedure: D-1078-7 was instructed to hold SCP-1078 against her bare forearm, while an electric multimeter was applied to various pairs of "bristles". Antennas were placed at various distances from the subject.
Results: As before, subject reported high levels of pain in her forearm. Multimeter readings indicated a flow of current through the bristles. All current readings decreased exponentially with time, suggesting that SCP-1078 incorporates multiple capacitors in its construction. Current flow ceased after bristles retracted; monitoring indicated no electromagnetic radiation from

SCP-1078.
Note: Well, maybe it only "broadcasts", if that's what it's really doing, if it's properly implanted…

Test Number: Experiment 1078-8
Subject: D-1078-7. Eye was not removed prior to experiment.
Procedure: D-1078-7 was restrained, and SCP-1078 placed directly against the right eye.
Results: [DATA EXPUNGED] Subject's screams later estimated to be ~ dB. Subject survived for minutes before breaking free of restraints and self-terminating. Readings from antennas confirm electromagnetic radiation emitted from SCP-1078 with intensity of approximately 500 W/m^2.
Addendum: Researcher F was the only observer at the time, and ceased monitoring of the room to vomit following [REDACTED]. SCP-1078 vanished from the testing room before a medical team reported. As before, all surveillance equipment experienced heavy static for exactly frames. Antennae indicate an output radiation from SCP-1078 in excess of 0,000 W/m^2 during of these frames, followed by an abrupt drop to zero.

Intervening experiments involve animal testing; SCP-1078 was not observed to react to any specimens other than homo sapiens.

Test Number: Experiment 1078-13
Subject: One D-class personnel (D-1078-8), Caucasian male, 21 years at start of experiment. Subject suffered from slight occular heterochromia, with one eye a noticeably lighter shade of brown than the other.
Procedure: Long term exposure experiment. Subject's lighter-shaded eye was surgically removed and SCP-1078 inserted. Subject was given a furnished containment cell; walls of cell were constructed to be hollow and contain a Faraday cage of mesh size 0.1 mm. Walls also contained concealed antennae to receive and record various wavelengths of SCP-1078 radiation.

Results: Integration with SCP-1078 successful and without incident. Subject made first suicide attempt after four months; subject looked at a picture of [REDACTED], screamed, and attempted to hang himself with his bedsheets. Armed guards posted thereafter to prevent further attempts. Auditory hallucinations confirmed after two years; subject reported several times hearing the voice of [REDACTED]. Investigation confirmed that the individual in question was out of the country at the time. After four years, visual hallucinations were confirmed. Subject was put on a regimen of anti-psychotic drugs to no observed effect.

Subject's hallucinations grew more vivid with time. After years, subject reported hallucinations at least once a month consisting of [DATA EXPUNGED]. 15 years after the start of the experiment, subject expired and SCP-1078 was recovered. Autopsy determined that integration with SCP-1078's "bristles" had occurred through % of subject's nervous system.

Throughout testing protocol, electromagnetic radiation from SCP-1078 was confirmed at an intensity of 100 W/m^2 over a short range of wavelengths centered at 1 MHz. Analysis of this radiation for signs of a coherent signal, as well as the content of any such signal, is ongoing.

« SCP-1077 | SCP-1078 | SCP-1079 »

SCP-1079: Dr Wondertainment's Bubblebath Bonbons

Item #: SCP-1079

Object Class: Safe

Special Containment Procedures: All instances of SCP-1079 are currently stored within Containment Locker-1079 at Site-19. Furthermore, watchlist databases are to be updated with SCP-1079's information, in order to intercept any new shipments which may appear in the future.

Description: SCP-1079 is the designation given to a number of sweets brightly labelled "Dr. Wondertainment's Bubblebath Bonbons!®". Currently, the Foundation has crates of SCP-1079 in containment, originally containing 64 packets each. The label on each packet provides the name of the product, and two warnings; "Not suitable for children under 3 years", and "Only one sweet is to be taken per sitting". In addition, it lists negative percent daily values of several nutrients, vitamins, and minerals, none of which are present in SCP-1079.

Human subjects report tingling sensations immediately after the consumption of SCP-1079. Ten to fifteen seconds later, the subject's own blood is secreted as pink, bubblegum-scented foam from the subject's pores on their abdomen, arms and back. The total volume of blood secreted in this way is typically from 30-50 mL and does not pose an immediate health risk.

The volume of blood secreted increases exponentially as more pieces are consumed; bubbles form in the subject's blood as a consequence of the SCP's intended function, causing the subject's blood to boil. Death by exsanguination occurs in 95% of subjects who have consumed 4 or more candies in one sitting. Exsanguination is compounded by foam collecting in the lungs of the consumer. After standardized animal testing was conducted, it was

found that SCP-1079's effect scales with the consumer's body mass.

Addendum: Since its initial discovery in / /1990, deliveries have been made to various supermarkets globally. Attempts to trace these deliveries back to a distribution center or supplier have been unsuccessful as of / /2005.

« SCP-1078 | SCP-1079 | SCP-1080 »

SCP-1080: The Creche

Item #: SCP-1080

Object Class: Safe

Special Containment Procedures: SCP-1080 and its accompanying documentation are to be kept at Site 38 in a locked containment room. Under no circumstances are any children below the age of 13 to be allowed near the vicinity of SCP-1080 except for experimentation purposes. Any reports of behavior similar to that of SCP-1080-1 specimens are to be met with immediate investigation and containment of potential subjects.

Description: SCP-1080 is a large black rectangular chamber, 2 meters wide, 3 meters long, and 1.5 meters in depth, resembling a sensory deprivation chamber in shape and size. Despite the resemblance, the tank contains no water and has no windows. The tank has no controls; its magnetic locking mechanism activates only when a child is placed in the chamber, and no means available to the Foundation have been able to determine what happens when the chamber is locked.

Experimentation carried out after Incident 1080-Alpha reveals that children who enter the chamber emerge three to five days later, aged to approximately twenty years old. Time elapsed depends on the age of the child upon entering the chamber; regardless, the age of the resulting adult is consistent. SCP-1080 has no effect on humans over the age of 13, and children between nine and twelve typically emerge with massive physical disabilities and psychoses.

Humans exposed to SCP-1080 are designated SCP-1080-1. They will have no discernible personality, will not speak under any circumstances, and will respond only to an identification number tattooed onto the back of the left hand below a barcode. Even then, the human will respond only to the commands "Come here," "Leave," and "Fix this." The last command will work only when

SCP-1080-1 is presented with a motor vehicle. SCP-1080-1 specimens encountering any small motorized vehicle (automobiles, motorcycles, etc.) with any system functioning at less than optimal quality will repair the system in minutes, using whatever materials are available. Speed, efficiency, and quality of the repairs will be far beyond the abilities of any other mechanic.

Addendum 1080-A: Recovery Report The tank was discovered in an unidentified brick building found in a heavily wooded area outside , Tennessee on October 20 . The building's presence was considered anomalous due to the testimony of people who frequently hiked through the area, all of whom insisted it had not been there previously. By the time Foundation researchers reached the building, the only object remaining inside was SCP-1080. X-ray analysis of the object detected a number of unusual mechanical components embedded in the walls of the chamber (later experimentation proved such analysis is impossible when the chamber is locked); however, it proved impossible to determine the tank's function - no formal documentation was found with the object, and the object had no markings indicating its purpose or capabilities. Object classified SCP-1080. Two days after the tank was removed from the building, the building disappeared and could no longer be located anywhere in the forest.

Other objects similar to SCP-1080 are suspected to exist, possibly capable of producing humans with greater degrees of sapience. Addendum 1080-B is provided for explanation.

Addendum 1080-B: A single scrap of paper was recovered from the building containing SCP-1080. The paper, which appeared to be a piece of an invoice of some kind, read as follows:

SOLON CRECHE ENTERPRISES
MMXV THIRD CIRCLE
NOVO ACTIUM OF FORESTS

REMIT ORDER TO:
ALEXYLVA UNIVERSITY
PHYSICAL PLANT OPERATIONS
MOTORIZED TRANSPORTATION DEPARTMENT
CXI SECOND CIRCLE

ALEXANDRIA OF FORESTS

ITEM NO	QUANTITY	CLASSIFICATION	SPECIALIZATION	PRICE
XXI	X	CLASS III MANUAL EMPLOYEE	AUTOMOTIVE	LXXV AUR.

COMMENTS: YOUR COMPANY REFERRED TO US BY OUTSIDE SOURCE. WE MAY CONSIDER PURCHASING FACULTY IF CLASS III WORKERS ARE SATISFACTORY. ~~ VICE CHANCELLOR ALLGRASS

The rest of the invoice was missing.

« SCP-1079 | SCP-1080 | SCP-1081 »

SCP-1081: University Speakers

Item #: SCP-1081

Object Class: Safe

Special Containment Procedures: The two iterations of SCP-1081 currently in Foundation possession are to be kept in an insulated, lead-lined containment locker in Storage Unit 13 at Site 38. Except for experimental purposes, SCP-1081 is never to be exposed to electric current under any circumstances for fear of accidental activation. SCP-1081 is never to be removed from its containment locker except by D-class personnel with noise-canceling headphones active at all times.

Description: SCP-1081-1 and-2 are identical copies of a black audio projection unit in the approximate shape of a small humanoid, 30 cm in height. Being identical, they can be referred to collectively as SCP-1081. Markings on the speaker's exterior indicate they were produced by a company known as "Echus Projector Combine" in a place called "Abubakari of Deserts" or "ABUDESUS". The speakers have input ports for several unknown types of electric cable, and dials on the back of the "head" for "DENSITY", "RAPIDITY", and a switch that can be adjusted to "INACTIVE," "ACTIVE," "SHUTDOWN," or "REACTIVATE." Though the power requirements of the device are different from any currently known standard, Foundation researchers were able to build an adapter to power the device at . V and A. Similarly, trial and error allowed for the development of input adapters for experimental purposes.

SCP-1081 is capable of projecting sound at dB during normal use. The speakers will behave normally (though at somewhat subpar quality standards) during testing of any function other than "SHUTDOWN" or "REACTIVATE." When the switch is set to SHUTDOWN, the speaker will emit a high-pitched squeal for approximately ten seconds (a sound described by researchers as being similar to a boatswain's whistle), followed by a voice speaking

in an unknown language composed of Greek and Latin words with a syntax and grammatical structure similar to Cherokee. An approximate translation of the speech follows:

> **Alexylva University's** Merry Integrators Player Company welcomes you to a [show, performance, farce]! Please refrain from [thought-provoking? talking, expressing] or otherwise disturbing the players for the duration of the performance. Thank you for your [cooperation, obedience].

The whistle and message will be projected at dB. After this message, subjects exposed to the sound will find themselves completely unable to speak or communicate via nonverbal means (such as through sign language). Medical analysis of affected subjects indicates complete functionality of vocal cords and other non-neurological speech-related systems. However, neurological analysis indicates that the subject is afflicted with a particularly extreme case of Broca's aphasia, rendering them capable of conceiving of speech but unable to express such thoughts through verbal or other means. Standard noise-canceling headphones can block out enough of the sound to disable its effect; current research suggests it was designed with this in mind. Setting the speaker to REACTIVATE will cause a different message to be played:

> Thank you for your consideration during this performance by Alexylva University's Merry Integrator's Player Company! The show is now at a conclusion.

followed by a similar whistle sound. Subjects hearing the second message will experience a reversal of their aphasia symptoms if exposed quickly. However, if the aphasia is allowed to remain in place for longer than approximately twenty-four hours, the subject will be immune to the second message and the aphasia is permanent. Moreover, affected subjects after this point will develop deep clinical depression and will frequently attempt suicide within the week; this is believed to be a standard reaction to such a sudden change in one's ability to communicate, rather than a secondary effect. Experimentation has determined that audio recordings of the respective sounds have no abnormal effects; only sounds emitted from SCP-1081 transmit their properties to human subjects.

When not exposed to power, SCP-1081 will remain inert except when SHUTDOWN or REACTIVATE are selected. The speakers appear to be capable of producing those two sounds regardless of any external power supply. The devices either possess internal batteries or are capable of drawing electrical power via indirect means from the room around them. Containment is designed to block any possible conduit for electrical transmission to SCP-1081.

Addendum 1081-A: Recovery Report SCP-1081-1 was found in a soybean field outside [REDACTED], Tennessee on 07/18/0 . The object was accompanied by a basic invoice in a standard shipping container, destination marked as "ALEXYLVA UNIVERSITY THEATRE DEPARTMENT" and an address somewhere in "Alexandria of Forests." SCP-1081-2 was found by hikers in a river near [REDACTED,] Tennessee on 08/02/0 , just over two weeks later. The packaging was identical, with two exceptions. First, the invoice now included a line reading "PROVIDED GRATIS AND OUR APOLOGIES FOR THE INCONVENIENCE." Secondly, the invoice was accompanied by a short handwritten note in a combination of Latin, Greek, a language similar to spoken Cherokee, and Old English; when translated, the note approximately read:

> Aggi,
>
> We have been doing business for a long time, as you are well aware. I swear on the graves of my forefathers that the previous shipment was completed satisfactorily on my end. I have no idea what could have happened We both know the [rumors? tales?], Aggi. Look at your own people before you blame us. This isn't the first time something has "gone missing" heading in your direction. Barca Magnus alone knows where the [objects? artifacts?] are going, unless your [natural philosophers?] are more precise than is presently believed.
>
> Threats and [recriminations?] are unnecessary.
>
> —[illegible]

SCP-1082: The Whole Truth

Note: All personnel assigned to long-term work with SCP-1082 are required to read Document 1082-25.

Item #: SCP-1082

Object Class: Euclid

Special Containment Procedures: SCP-1082 is to be stored in a triple-locked safe in a containment chamber at Site 38. The item is to be left in containment except for testing purposes indefinitely; no testing or access is authorized at any time. This document is to be compiled through interviews with affected personnel and access to Document 1082-25. Any personnel coming into contact with SCP-1082 are to be interviewed and given a Class-B amnestic, by force if necessary. Images of SCP-1082 are to be used only for testing purposes No images of SCP-1082 are to be produced or stored at any time, with the exception of a single picture appended to Document 1082-25.

Description: SCP-1082 appears to be a [DATA REDACTED] capable of causing a particular memetic phenomenon. This effect has been detected in individuals looking at SCP-1082, individuals in the same room as SCP-1082, individuals viewing images of SCP-1082, and those that have engaged in conversation with affected individuals. There is a slight risk of contamination from discussing the nature of the object SCP-1082 appears to be; therefore, it is to be mentioned only as "SCP-1082" or "the object". The effect can be negated through use of Class-B amnestic agents.

The effect associated with exposure to SCP-1082 takes the form of a compulsive inability to lie or express any nonliteral statement. Affected individuals likewise demonstrate an intolerance toward "political correctness", polite obfuscation, or technical language used to mislead others. Written documents by affected individuals bear some linguistic similarities to the speech of individuals with autistic

spectrum disorders, often written in a frantic tone and typically eschewing contractions. In early stages, the frustration felt by affected individuals comes primarily in the form of verbal protest and annoyance; however, in advanced stages of the disorder, affected individuals can become physically violent toward those expressing false or misleading views. Individuals suffering from this phenomenon are unable to describe SCP-1082 as an "object," referring to it instead only as the item it appears to be.

Individuals not treated with amnestic agents within forty-eight hours begin to display secondary symptoms. These symptoms take the form of an attack of delusional paranoia, convincing affected individuals that a mysterious worldwide conspiracy exists to suppress knowledge of SCP-1082 and preserve what they believe to be a "status quo" based on deception, to the detriment of the human race. Due to current Foundation efforts to contain SCP-1082, affected individuals begin to demonstrate particular resentment toward the Foundation and Foundation personnel. The culmination of this resentment in all cases leads to violent attempts to **`breach containment for SCP-1082`** and expose as many individuals as possible to its effects.

Addendum 1082-1: During initial containment of SCP-1082, an agent who had inadvertently exposed himself to its effects was tasked with the composition of the initial draft of this report. While the resulting report was completely unusable for effective documentation of the phenomenon, the document serves as a useful depiction of the phenomenon's effects. Despite attempts to modify the image, individuals reading Document 1082-25 have a % chance of becoming exposed to its effects; those testing positive for SCP-1082 exposure (determined through post-exposure interviews) must be administered amnestic agents immediately after viewing the document. The file can be read here. Please keep the altered mental state of the author in mind during reading.

« SCP-1081 | SCP-1082 | SCP-1083 »

Document 1082-25

The following report was authored by Agent , one of the top personnel involved in the containment of SCP-1082. Despite being contaminated by the object, the agent was able to disguise his symptoms long enough to compose and publish this report. The publication of this document on open servers resulted in a containment breach, infecting Foundation personnel. All affected personnel have since been recaptured and given amnestic agents. Agent resisted containment and was terminated.

These words are written about the book also known as SCP-1082

By the standards of the intended audience of these words, the book can also be described as Safe

Presupposing that one wished to stop others from gaining access to the book, the way it could be accomplished would be that This book is to be locked in a metal box that cannot be opened except through the use of three different methods, with the intent that this make the book difficult to access. The box that this book is kept in is itself to be kept in a room in a building known as Site 38, particularly at the coordinates of [REDACTED FOR SECURITY PURPOSES]. As the above-listed requirements should make clear, the Foundation for which I work does not want anyone to use or get at the book unless those people are scientists that work for the Foundation and are using the book only to find out more about the book so as to better keep others from getting to the book. Pictures that people take of the book also can have the same effect that the book has, but I don't think they know that yet, because I decided not to tell them. I think I might tell them tomorrow, but I also may not tell them at all.

If I were to describe the book, I might do so by saying that This book is a copy of *The Catcher in the Rye* by J.D. Salinger. The title page of the book has been signed by the author and an inscription

at the bottom of the title page has on it the words "To Jack, here's to making the world better." The words on its copyright page indicate that the book was printed in 1977 in Chicago.

The book keeps you honest. Not only can you not lie, you cannot avoid the truth no matter what you do. There are many ways to deceive others, and once you see this book, you are no longer capable of any of them. You cannot lie to people by telling them untrue things or lie by choosing not to tell them some things or lie by saying words that mean different things than what is the truth. Pictures of the book do the same thing. There's a picture that I have attached to this report, because I want to make everyone see the world like this. I guess tricking is okay, or else it is not tricking if I tell you what I am doing.

I just want you to know also that honesty makes us feel better than we ever thought possible. The Foundation is a stack of lies and half-truths, built to protect an entire world built on phoniness and deception. I do not know how long I have before my employers capture and kill me, but there is still time if we move quickly.

Is it possible for you imagine a world in which lying is impossible? You should forget what the Foundation tells you about "containment" and "security"; all that they want is dominion over the tower of falsehoods that rule the world, no matter the cost. Half of what you "know" about the Foundation's artifacts is designed to scare you into going along with the cover-up; the truth is, the Foundation has taken so many beautiful tools, tools that could help the human race, and stuck them in vaults underground.

Get this file, or at least the picture, and show it to as many people as possible. Before they stop you. I will be dead by the time you read this, but it will be worth it. The truth is always worth it.

Please tell them the truth.

SCP-1083: University Skull

Item #: SCP-1083

Object Class: Safe

Special Containment Procedures: SCP-1083 is to be stored in a containment locker at Site 38 when not in use. SCP-1083 is to be transported to and from its locker only by junior researchers with no previous history of violent behavior, and only while wearing protective gloves. Under no circumstances are personnel with Level 2 or higher clearance to come into contact with SCP-1083. Testing with D-class personnel is prohibited due to lack of relevant data collected during experimentation. All personnel coming into contact with SCP-1083 are to be immediately debriefed and sent for psychological counseling.

Description: SCP-1083 is a blue-tinted piece of quartz in the shape of a deformed human skull, 15kg in weight and with dimensions of 20cm in height, 30cm in length, and 12cm in width. The skull demonstrates no anomalous properties except when held by a single person in both hands.

When held with both hands, subjects exposed to SCP-1083 will experience a sudden, massive increase in neural activity for 1-3 seconds (confirmed by EEG analysis). Afterwards, non-D-class subjects will in most (87%) cases experience massive personality changes from their previous state. Affected subjects typically register a decrease in IQ score of between - points, rendering them unsuitable for continued employment with the Foundation. In spite of this, subjects will demonstrate greater reasoning skills and use of logic, though their actual knowledge and memories will be lessened. Conversely, all D-class or other Foundation personnel that have committed violent acts against other human beings will undergo total psychological breakdowns, leading to attempts at self-harm and suicide. Subject D-3273, whose status was not connected to a violent act (demoted to D-class for violation of Foundation

protocol) experienced the same effect as the rest of the non-D-class personnel, suggesting the primary importance of pacifistic tendencies.

By and large, most subjects exposed to SCP-1083 refuse to discuss their experiences with the object. Between 08/03/9 and 02/11/0 , the only references made to the experience by exposed subjects were by D-class personnel shortly before their deaths, some of whom were noted to exclaim "He's right, he's right, I deserve it, he's right" or some variation of same. Neither forced or chemical interrogation has been able to reveal any details about the nature of who "he" is or what alterations he makes to the personalities of affected subjects.

Incident Report 1083-A: On 11 February 200 , Operative 1/1083-237, a Level 1 volunteer, was exposed to SCP-1083. Through chance, 237 was the only recruit with an educational background in moral philosophy; this is believed to be the primary reason for the anomalous results. After exposure, 237 described her perception of the event (timed by EEG as having lasted 1.34 seconds) as having taken at least a matter of days and possibly several months. She described having spent the entire time in an infinite black void, devoid of any sensory input.

While in the void, 237 claims to have come into telepathic contact with an entity (classified as SCP-1083-1) who engaged her in discussion on matters of metaphysics, logic, and ethics. 237 described the entity's "voice" as male. 1083-1 refused to reveal any details about itself other than that it lived within the "artifact" and always had done so. 1083-1 already possessed extensive knowledge about every event in 237's life, and talked with 237 about the various mistakes and logical errors she had made in the form of Socratic dialogue. 237 described feeling a great deal of anger and resentment towards the entity at the beginning; however, her training in logic and moral philosophy caused her to eventually come to accept the entity's reasoning.

According to 237, the entity described the other Foundation personnel that had "visited" it as "unprepared" for its experience; it was able to psychologically compel them to use more logical reasoning in their lives, but not without damaging their mental

capacity permanently. The entity described the D-class personnel exposed to it as "unworthy" and claimed to have "given them the true knowledge of their actions." 237 attempted to leave the Foundation shortly after her experiences with SCP-1083; when she proved immune to any form of amnestic agent, termination was ordered on 11/5/0 .

Addendum 1083-1: Recovery Log SCP-1083 was recovered from a house formerly used as a safehouse by the Serpent's Hand (confirmed by documents located in the building and various graffiti found on the walls). Large quantities of blood were found in many rooms of the house, though no usable samples could be obtained due to what is believed to be deliberate contamination. No corpses were found. The skull was found in one of the bedrooms in the house, along with documentation from the agency known as "PTS" or "Phitransimun Combine;" it seems the skull was in transit between an address in "Alexandria of Forests" and "Delphi of the Oceans." Fragments of a badly ripped note were found throughout the house and pieced together to form the following:

ORACULUM COMBINE OF OCEANS [maintains certainty? pledges?] THAT ALL PRODUCTS WILL [operate? behave?] TO OPTIMAL SPECIFICATIONS. IF UNABLE TO PLEASE [owner? host?] TO FULLEST DEGREE PLEASE COMPLETE BELOW FORM TO [fragment lost]

CUSTOMER	PRODUCT CODE	PLACE OF ORIGIN	COMPLAINT

« SCP-1082 | SCP-1083 | SCP-1084 »

SCP-1084: Damaged Mausoleum

Item #: SCP-1084

Object Class: Euclid

Special Containment Procedures: Containment Site-153 has been built around SCP-1084 and the surrounding town, which is abandoned mostly abandoned. A fence has been built around the town's perimeter along with warnings of radioactive waste contamination to discourage entry. All efforts are to be made to locate any living descendants of the town's occupants as of 25 January 1914. All residents and descendants are confirmed dead, with the exception of SCP-1084-1.

Description: SCP-1084 is a badly damaged granite mausoleum located in a graveyard just outside a small abandoned village in Coahuila, Mexico. An engraving on one side of the mausoleum includes the name of the deceased and the following (when translated):

> BORN 24 JUNE 1842
> DIED 25 JANUARY 1914
> AGED 71 YEARS
> WE WERE WRONG

Exhumations of the gravesite revealed a long-deceased humanoid with decomposition appropriate for the given timeframe. If the gravestone is correct, the body belongs to the American author [DATA REDACTED], who disappeared in Mexico in late December 1913. Analysis of the body suggests it was killed by multiple gunshot wounds at close range, which is consistent with the reports gathered from SCP-1084-1.

The anomalous properties that seem to emanate from SCP-1084 are centered on the nearby village. Experimental subjects entering the village feel a strong sense of discomfort and guilt with no

discernible cause, and invariably request to leave as soon as possible. All of the buildings showed significant weather damage consistent with a lack of upkeep over many decades. Perhaps most strangely of all, it is no longer possible for any human to recall or record the village's name; this has been confirmed by experimentation even at remote locations, as any conversation about the village including the town's name consistently results in all parties **forgetting its name.**

The only person living in the village has been designated SCP-1084-1. Her birth name has been determined to be "Estrellita Juarez;" if her diary is to be believed, she has lived in the village since her birth in 1896. The woman is mute and spends much of her time wandering the streets of the town silently, stopping only to sleep on the floor of various buildings. Every year on 25 January, SCP-1084-1 will return to SCP-1084, reach into the mausoleum, and remove a bottle of seven-year-old rum (confirmed by chemical analysis) and a single glass. She will then pour a drink into the glass, pour it over the grave, place the bottle and the glass atop the mausoleum, and lay down. Under no circumstances will SCP-1084-1 consume any of the rum. Experimentation has confirmed on multiple occasions that no bottle of rum exists within the mausoleum until she reaches in to retrieve it. The woman will then sleep beside the mausoleum, awaken in the morning, and return to the town.

Addendum SCP-1084-A: Inside the original home of SCP-1084-1, a diary was located. Relevant excerpts from the diary (translated into English):

> 21 January 1914: The gringo has done nothing since he stopped here but look at me and I believe I have the opportunity to gain advantage by this. Grandmother always said that Americans had plenty of money, so maybe I can secure some for myself as his wife or through other means. He seems close enough to the grave as is, but not too close to enjoy the company of a woman.
>
> 24 January 1914: Everything they say about Yankees is true! They lack even the barest shred of honor! How the

man could put his hands on me in the way of a husband and then refuse me, it sickens me. It is no matter, I will have satisfaction.

25 January 1914: I have told Mother and Father. They were angry with me but far more angry at the Yankee & more willing to act. They have gone out to recruit some local townspeople for the act.

It is done. He tried to escape but could not accomplish it. The rifles in the town are still warm. Body was left outside of town.

26 January 1914: Before the pigdog died he said something about how nobody would ever speak of us again. Nobody knows what he meant but I cannot help but dwell on his words. It is no matter. He is in Hell where he belongs.

31 January 1914: It is colder than usual. Strange things are seen around town and people are concerned. Some have left. Some have taken their own lives. We are all concerned.

3 February 1914: More dead today. Hardly anyone around it seems. We cannot even speak of the town anymore.

28 February 1914: Not ten of us left. Hard to speak. We are sorry. Carried his remains to one of the unused mausoleums and buried him by myself took many days we are sorry carved an inscription into the stone we are

31 May 1914 we are sorry

25 January 1915 we are sorry

25 January 1916 we are sorry

The remainder of the diary is similar to the above.

SCP-1085: Pound Off the Pounds!

Item #: SCP-1085

Object Class: Euclid

Special Containment Procedures: All confirmed copies of SCP-1085 are to be stored in Video Archive 38-Beta at Site 38. All similar copies are to be located, quarantined, analyzed for anomalous properties, and either released for retail sale or contained. Copies of SCP-1085 may be destroyed only by D-class personnel; however, given the doubtful benefit to Foundation research and the total unusability of personnel after such destruction, this is generally considered a waste of resources and requires approval from Site 38 command. Should the number of SCP-1085 iterations become difficult to contain, alternate measures (mass destruction via steamroller or explosive detonation) may be taken into consideration. All civilians affected by SCP-1085 are to be treated as well as possible, though no confirmed survivors have as yet been located.

Description: SCP-1085 is a fitness exercise DVD entitled "
: One Month to Pound Off the Pounds!" starring the eponymous fitness guru. The DVD contains four calisthenic routines of increasing difficulty, each designed to be performed five to six times per week before moving on to the next level. All of the routines include some form of boxing or martial arts regimen, and places a strong emphasis on cardio and abdominal workouts.

SCP-1085's anomalous effects are present in 2 % of the copies of "Pound off the Pounds!" produced to date; the majority of copies lack any anomalous properties, and neither herself nor any part in the DVD's production has been verified to be responsible for SCP-1085. These properties begin to manifest when one or more individuals watch the workouts contained on the DVD. Effects vary depending on the routine being done in any given week; the workouts and their effects are detailed below.

Due to large number of copies of SCP-1085 acquired, authorization given on 19/02/ to begin experimental destruction of a limited number of redundant copies. D-class personnel chosen for this assignment disposed of the DVDs by physically crushing the disc and throwing the pieces into a garbage can. All D-class personnel who carried out the assignment began developing the symptoms of late-stage SCP-1085 exposure, without having actually viewed any of the workouts. Current research suggests that the entity portraying in SCP-1085 may be an actual organism rather than a hallucination on the parts of affected individuals.

Addendum 1085-A: Description of SCP-1085 videos

Week 1: Workout consists of a warmup session, followed by three six-minute circuits (three minutes of strength training, two minutes of cardio, one minute of abdominal exercise), and a cooldown session. Workouts will be unusual in composition but will not be seen as difficult, even for extremely out-of-shape individuals; such individuals will express surprise at their ability to complete the workout, along with a determination to complete the rest of the month's workouts. The workout will seem easier as the week proceeds due to general improvement of physical conditioning. The host and narrator will provide encouraging words throughout the workout and at the end, emphasizing the ability of the audience to change their lives through positive thinking. No anomalous qualities detected with this workout; individuals completing this workout once or even repeatedly have been able to stop the workout without negative side effects. A notable excerpt from this workout includes "This is not just a workout; this is the road map for the rest of your life. I know what you're capable of, and you will give it to me, and you will never stop giving. Not ever."

Week 2: Similar workout structure as Week 1. However, the workout intensifies significantly in difficulty. Notably, the workout will demonstrate a slight variance depending on the physical ability and willingness of the individual to complete it; given their successes in Week 1, individuals will feel motivated to complete the workout in spite of the extensive physical discomfort required. Those more inclined to quit find the workout to be slightly less difficult, though the narration will be angrier and more negative in tone. Regardless, very

few individuals (%) opt to give up on the program at this point, even when such an option is provided, and even when the individuals did not feel strongly motivated to lose weight at the beginning of the program. Those abandoning the month-long program during Week 2 report recurring nightmares for up to months, in which [DATA REDACTED] for what feels like days. These nightmares are most common after days in which such individuals eat excessive amounts of fatty foods. Those remaining in the program will report an increasing degree of platonic affection for the host and a desire to please her; meanwhile, the host will become increasingly agitated with the individual's progress regardless of the difficulty or degree of effort put forth. This agitation becomes evident when the host says "We are all weak, but you are here to bleed the weakness out. I want you to bleed if you have to, and I want you to thank me for the person you become."

Week 3: Similar workout structure as Weeks 1 and 2, though workouts will vary in length from three to six circuits depending on the physical ability of the individual performing the workout. The host's commentary will now be overtly targeted towards the actions of the audience, directly critiquing the individual's efficiency, thoroughness, and form during each circuit. At no point will individuals watching Week 3's workout notice anything strange about the host watching them and responding to their behavior with further instructions. When individuals are not performing the workout, they will more acutely perceive their physical flaws and feel motivated to work out on their own, to the point of almost totally eschewing motor transportation in favor of running and doing calisthenic activities (such as push-ups and crunches) in as much of their spare time as possible. This effect will often endanger affected individuals' social status as others will perceive marked irregularities and eccentricities in their behavior; affected individuals will increasingly ignore outside criticisms of their behavior in favor of "what wants." In spite of any degree of physical conditioning and devotion to the host's will, no circumstance has developed in testing in which any individual has been successful in placating the host, who will show only disgust with the individual's progress. At the end of the workout, the host will always say "I wanted so little from you, and you failed me. I will never be finished with you."

Week 4: Once an individual begins to watch the Week 4 workout, they can be designated as SCP-1085-1. The workout consists of a video of the room in which all the other workouts took place; the room is empty and silent. Individuals who have carried out the workout regimen to this point will begin to display emotional distress, frequently begging the television screen to "bring her back" or something similar. SCP-1085-1 instances will then begin to exercise compulsively and without provocation in front of the screen, often while crying. The video will last as long as the individual remains in front of the television; however, SCP-1085-1 instances will eventually leave the vicinity of the television.

After watching the video, all instances of SCP-1085-1 will experience a total psychotic break from reality. Individuals will begin exercising compulsively and without rest; this may involve running, calisthenic exercise, jumping rope, or any other exertive activity. Many will refuse to speak during the activity, or will repeat "Never stop" again and again, one of the host's mottos. This manic exercise regimen will continue until affected individuals are physically incapable of further movement; if not given sustenance, SCP-1085-1 instances will starve or dehydrate. Such individuals must be physically restrained and immobilized to avoid death, though SCP-1085-1 instances thus restrained will claim to see the host screaming threats and obscenities at them. The resulting sleep deprivation is often fatal; antipsychotic medicine and sleep-inducing agents have no effect.

Addendum 1085-B: Experiment carried out 12/02/ into potential treatments for late-stage SCP-1085 effects. One individual (D-5656) was exposed to all four weeks of SCP-1085 over the course of four days, developing symptoms along the expected schedule. After developing into the SCP-1085-1 stage, subject was given repeated Class A amnestic treatments. Upon waking, subject was determined not to recall his name, his crime, or the past seven years of his life to any extent. When asked to describe the individuals he saw in the room (with the head researchers and one nurse present), subject described Dr. , Nurse , and "that angry-looking bitch who keeps glaring at me." Subject described an individual with 's appearance, though with what he described as multiple open wounds on the limbs and a distorted face. Subject began to display

agitation and fear, and requested that the third individual stop screaming at him. When told that there was nobody else in the room, subject rose from the bed and responded "Funny, that's what *she* says about *you*" before commencing a series of jumping jacks.

Addendum 1085-C: SCP-1038 is currently being considered for possible crosstesting involving SCP-1085 and several other media based anomalies. Crosstesting is currently pending approval by Site 38 Director Jones.

« SCP-1084 | SCP-1085 | SCP-1086 »

SCP-1086: Second-Brain Syndrome

Item #: SCP-1086

Object Class: Euclid

Special Containment Procedures: All instances of SCP-1086-1 are to be contained and quarantined until death. While no method of treating or curing SCP-1086 has been determined, it remains possible to prevent its spread so long as infected iterations are contained as quickly as possible. Due to the time-sensitive nature of containment, any Mobile Task Force not engaged in immediate actions may be activated for purposes of capture and transfer of SCP-1086-1 instances to the central containment area at Site 38. In the event of a widespread outbreak of SCP-1086, any facility, Foundation or otherwise, with a Biohazard Containment Chamber rated at Biosafety Level 3 or higher may be commandeered for containment purposes.

So long as containment protocols are carried out in full, there should be one (1) instance of SCP-1086-1 at any given time. This iteration is to be kept alive at all costs until identification of the next victim is complete; use of any and all necessary medical supplies are preauthorized for this purpose. In the event of a containment breach resulting in more than one instance of SCP-1086-1, it is to be considered preferable that multiple infected individuals be kept alive for failsafe purposes, but the prevention of further spread of SCP-1086 is to take priority over this. However, under no circumstances are all iterations of SCP-1086-1 to be terminated; this will lead to further outbreak.

> **Note:** Some concerns have been raised regarding the extensive commitment of personnel and materiel required to the containment of a single individual. It should be remembered that the priority here is speed; SCP-1086-1 instances become contagious within six hours of initial infection, giving twenty-five hours total of

advance warning to stop a potential epidemic. Additionally, containment may require seizing control of a specialized biocontainment lab in complete secrecy before administering amnestics to dozens or hundreds of witnesses. Budgetary concerns are secondary. —Dr. , head researcher, SCP-1086

Description: SCP-1086 is an immunosuppressive disorder brought on principally brought on by infection with a heretofore undiscovered species of bacteria. Infected individuals are designated SCP-1086-1. The disease has two primary effects on the human body. First, the disease causes the body to reroute 9 % of its leukocytes to a single location in the mediastinal lymph node, forming a translucent, gelatinous mass identified as SCP-1086-2. During the formation of this mass, white blood cells are converted into a mass of closely-interconnected neurons, glial cells, synapses, and circulatory tissue; the final mass will be composed principally of these cells and the bacteria responsible for transmitting SCP-1086, making SCP-1086-2 especially dangerous. The bacteria responsible for SCP-1086 has shown a total immunity to bacteriostatic antibiotic agents, and a near-total immunity to bactericidic antibiotic agents; in those cases in which bactericidic treatments are effective, the bacteria's rapid rate of reproduction effectively nullifies the treatment's effect.

Second, due to the sudden near-total suppression of the body's immune system, infected individuals will develop multiple opportunistic infections, leading to the victim's rapid death.The bacterial species responsible for SCP-1086 is found only in infected humans and in SCP-1086-2; it has not been located in any other environment or species. SCP-1086-2 is produced by affected individuals during the course of the disease, and is the principal vector one of the principal vectors for transmission of SCP-1086.

A marked difference between SCP-1086 contamination and other immunosuppressive syndromes is the pattern displayed by the opportunistic infections that ultimately result in the patients' deaths. While other immune-suppressing disorders result in a wide variety of different infections, SCP-1086-1 iterations consistently contract infections in a particular pattern, detailed below. The course of SCP-1086 is included in Addendum 1086-1.

Addendum 1086-1: SCP-1086 Infection Pattern

Stage 1: Initial infection, either through contact with bacteria or through death of prior instance of SCP-1086-1. Patient will rapidly lose immune system protection and fall prey to any number of dermatological diseases. The full list is included in Document 1086-32. However, regardless of the exact nature of the infection, all Stage 1 symptoms will be skin-related, and all will result specifically in severe pockmarking and blistering in geometric shapes across the patient's body. Without skin grafts, SCP-1086-1 iterations will die before entering Stage 2; as per containment procedures, this is to be avoided at all costs. SCP-1086-2 will begin to form in the upper chest of affected individuals, integrate itself into the nervous system, and begin sending messages to the brain. This process reverts the body's leukocytes to a pluripotent form and reassigns them as neuronal tissue; this process is very energy-taxing, and will burn through affected individuals' stored fat deposits quickly. Massive amounts of supplementary nutrition must be supplied to SCP-1086-1 to avoid death at this stage. Infected individuals become contagious six (6) hours after initial infection.

Stage 2: Beginning of neurological symptoms, eighteen (18) hours after initial infection. SCP-1086-1 iterations will become intensely feverish and lose the ability to form coherent sentences during most of their waking hours, speaking only mostly in rambling passages with no discernible meaning; the words will be clearly spoken, but the sentences will be incomprehensible in most instances. The only consistency in this stage is the insistence on the part of affected individuals that they are "lost," without any further explanation. Most patients will likewise contract conjunctivitis during this stage, though all other symptoms will be neurological in nature. SCP-1086-2 will begin sending increasingly complex signals to the brain, which affected individuals will perceive as droning music and mumbling voices. It is believed that the utterances from SCP-1086-1 are attempts to process or describe these sounds. The subject's brain and SCP-1086-2 will "battle" for control over infected subjects' bodies, with the brain invariably losing.

Stage 3: Total takeover by SCP-1086-2, forty-eight (48) hours after initial infection. Cerebral tissue in affected individuals will begin to

decay to an unusable extent, giving SCP-1086-2 increased control over affected individuals' bodies, particularly the speech centers of the brain. During this time, SCP-1086-1 iterations will begin uttering a name and a series of numbers; these numbers can be processed into rough coordinates describing a location somewhere on Earth. These messages will be interspersed with hysterical periods of unintelligible babbling, believed to be attempts on the part of SCP-1086-2 to request assistance. Individuals will repeat these phrases for one hour, at which point SCP-1086-1 will go into convulsions and expel SCP-1086-2 orally. All personnel nearby must wear Biohazard Level 4 "blue suits" during Stage 3; any violation will result in quarantine as a new iteration of SCP-1086-1, as infection is almost certain without total isolation from the contaminated environment. Infected individuals will enter a comatose state and die within six (6) hours after expulsion.

Twelve hours after the death of one SCP-1086-1 iteration, the individual named during Stage 3 will spontaneously contract SCP-1086 and become symptomatic. All Foundation task forces within range of the designated location are to converge on the area, locate the named individual, and deliver him to (in order of preference, depending on the amount of time required to capture the individual) Site 38, any Foundation location equipped with biohazardous containment facilities, or any civilian facility with equivalent specifications. Task forces involved in such operations are authorized to use whatever means necessary to commandeer such facilities, then call for Foundation reinforcements; containment of named specimens is paramount.

Addendum 1086-2: Discovery and Concealment Record

On 07/08/94, over two hundred small gelatinous masses fell onto the town of Oakville, WA, USA. These were found to be the initial iterations of SCP-1086-2; individuals were infected with SCP-1086. Foundation personnel surrounded and quarantined the town, and were successful in capturing all contaminated individuals. While the use of amnestic agents allowed for the suppression of news of the event, the event reoccurred five more times over the next days. **MTF Gamma-5 ("Red Herring")** was unable to completely prevent all news of the phenomenon from escaping, but

was successful in creating multiple false leads and misdirecting public understanding of the event.

« SCP-1085 | SCP-1086 | SCP-1087 »

SCP-1087: White Tarsier

SCP-1087 in Site 38 arboretum, photographed remotely.

Item #: SCP-1087

Object Class: Safe

Special Containment Procedures: SCP-1087 is to be kept in the Site 38 arboretum, which is to be stocked with multiple species of insects and small birds to meet SCP-1087's dietary needs.

Personnel are not to enter Arboretum 38 without a Foundation Type 2 breathing apparatus except during testing. Testing of SCP-1087's effects may be performed on D-class personnel; however, to avoid interfering with research into other SCPs, testing should take place between 2200 and 0600 hours. D-class affected by SCP-1087 are to be terminated before Foundation personnel cause injury to themselves attempting to reach them.

Description: SCP-1087 is a white male Phillippine tarsier (*Tarsius syrichta*), age estimated at 5 years, 700g in weight.

SCP-1087's saliva contains an unknown chemical not naturally produced in the primate body. The chemical is inert by itself; however, once it makes contact with a mammalian bloodstream, it travels to the subject's exocrine glands and alters their biochemical functions. This results in affected subjects producing and secreting a pheromone designated as SCP-1087-1. SCP-1087-1 will be secreted from all exocrine glands simultaneously, emerging in the subject's blood, saliva, sweat, and waste fluids. Affected subjects will produce this pheromone at high concentrations (up to mg/L), leading to eventual exhaustion and dehydration.

Mammals coming into contact with SCP-1087-1 become increasingly agitated, specifically towards the being emitting the pheromone. As time passes, the concentration of pheromones will severely hamper the judgment of nearby animals, including humans, compelling all mammals near the affected subject to hunt and attack the organism emitting SCP-1087-1. High concentrations of SCP-1087-1 will develop in affected subjects' blood; when assaults against affected subjects become severe enough to draw blood, more animals will be drawn to the area and join in the attack. Experimentation suggests that it is effectively impossible to rescue an affected subject without a breathing apparatus meeting Foundation standards of at least Type 2 or higher; without this, any rescuer will be overcome by SCP-1087-1 and will begin attacking the subject as well. Once the subject is dead, all attackers will leave the area without feeding on the affected subject; this suggests that the flesh of affected animals seems poisonous to those under the influence of SCP-1087-1.

It should be pointed out that SCP-1087 is immune to these effects;

SCP-1087-1 has no effect on its biochemistry, and it seems to feed naturally by eating the meat that other predators find poisonous. SCP-1087 has shown a wariness around humans, but is willing to attack humans if it feels it can do so with relatively little risk; the tarsier's naturally nocturnal habits favor it in this regard.

Recovery Log 1087-1: SCP-1087 was discovered following a trail of unusual livestock deaths, including one in which a cow was trampled to death by the other cows in the area and then preyed upon by an unknown small carnivore (but no other animals). Examination of the surrounding areas led Foundation personnel to a barn several miles away. The barn was not in use, its owners having been sentenced to prison after killing their eight-year-old son. A mobile task force secured SCP-1087 through the use of anesthetizing gas and brought it to Site 38 for containment. Another investigation suggested that a series of unusual murders throughout the **`Southeastern United States`** might have had a connection to SCP-1087, due to what was believed to be small primate bites on each of the victims; however, conclusive evidence was never recovered to support this hypothesis.

« SCP-1086 | SCP-1087 | SCP-1088 »

SCP-1088: The Eternity Ward

Item #: SCP-1088

Object Class: Safe

Special Containment Procedures: Containment of SCP-1088 primarily consists of preventing unauthorized access. To this end, all doors and ground-floor windows are to be locked, and a fence erected around the building. Two security guards are to be stationed at the entrance to this enclosure to turn away any civilians who would attempt to enter. An additional three guards are to patrol the maternity ward as a second line of defense. Only male security staff are to be assigned to SCP-1088, and no female personnel are to be allowed inside except for testing purposes.

In the event of accidental exposure of Foundation personnel to the effects of SCP-1088, all resulting pregnancies are to be terminated, and the victim issued Class A amnestics to prevent any psychological damage. The same procedure is to be followed in all cases of civilian exposure.

Description: SCP-1088 is the designation given to Hospital, a hospital located in the city of in the . It closed in after going bankrupt, and there is no record of it displaying any anomalous properties before then. The building remained abandoned, and came into Foundation containment about three years after its closure on reports of the building being "haunted". The building is currently kept in a state of good repair.

SCP-1088 exhibits no anomalous properties unless entered by a fertile female. All such individuals report hearing a distant wailing, crying, or gurgling noise, similar to that made by infants. Accompanying males do not report hearing such a noise, and even clinically deaf females claim to hear it, strongly suggesting a psychic cause to the effect. Affected individuals are drawn to follow the noise to its source, eventually leading them to the maternity ward of the

hospital.

Once there, subjects will attempt to find an isolated location, whereupon [DATA EXPUNGED]. This typically results in between 2 and 5 fertilized embryos implanting in the endometrial lining of the woman's uterus. Victims are dazed, and typically wander out of the hospital within a few minutes. Most seem to experience some degree of amnesia as to what happened to them inside.

Genetic analysis of the developing embryos reveals them to be unrelated to the host which may, in certain cases, lead to incompatibilities that result in a miscarriage. Cross-checking with the recovered records of Hospital reveals that the embryos created by SCP-1088's effects genetically match either stillborn fetuses or babies that died soon after birth born at hospital (See Addendum 1088-8). Though the records are not complete enough to allow confirmation, it seems highly probable that each embryo is in effect a clone of some child that died shortly before or after being delivered in the maternity ward of SCP-1088. The mechanism for this is unknown.

There are three cases for development of an embryo generated by SCP-1088. A pregnancy caused by exposure to SCP-1088 may contain embryos that fall into any combination of the three cases.

Case 1 (~43%): The pregnancy continues to develop normally for a period of time no less than 23 weeks. After this point, in many cases, development may simply stop indefinitely. The fetus remains at a constant state, and the mother never gives birth. Testing has not shown an upper limit on the time in which this state can persist. If a Caesarean section is attempted, the fetus dies when removed from the uterus, no matter what life support is used. This seems to occur in cases where the fetus matches a stillbirth.

Case 2 (~54%): The pregnancy is entirely mundane, and the baby is born as normal. However, at some point typically within three months, the child stops developing. Again, this state persists indefinitely. This seems to occur in cases where the baby matches one that died in the hospital. The time until the child stops developing seems to match exactly the point at which hospital records showed the corresponding baby died.

Case 3 (~3%): Personnel of level three or higher may consult Addendum 1088-8 for information.

Though affected individuals often exhibit symptoms of post-traumatic stress disorder, most are pleased by their pregnancy and any subsequent children. Consequently, despite the physiological stresses of carrying multiple fetuses for an extended period of time, few will seek to have the pregnancies terminated. Similarly, victims resist attempts to confiscate the babies born to Case 2 embryos for research or adoption, despite the psychological and financial stresses caused by caring for infants that never mature further.

Addendum 1088-8: In Case 3, the pregnancy is again mundane, and the baby is born and develops as normal. Though no anomalies have been noted with Case 3 children, genetic testing has shown that they match children born at Hospital who survived through adulthood. Interestingly, a disproportionate amount of the people with a Case 3 child associated with them have a criminal record, and of those, most show signs of Antisocial Personality Disorder.

« SCP-1087 | SCP-1088 | SCP-1089 »

SCP-1089: The IC-UC

Item #: SCP-1089

Object Class: Safe

Special Containment Procedures: Due to frequent usage, SCP-1089 is to be kept in a 2m x 2m metal containment cell. The door to the cell is to remain electronically locked at all times and only the designated researchers are to be given the keypad code. No other personnel are to be given admittance without Level 3 Security Clearance.

Description: SCP-1089 appears to be similar in design to some models of night-vision goggles. There is a large spherical compartment containing many image intensifier tubes mounted in the center of the helmet between the two eyepieces. It is constructed primarily of black high impact plastic and features a radial knob with five settings on the left side. On the back side of the center-mounted sphere is a canister containing several SCP-1089-p when the radial knob is set to '4' - it is empty on every other setting. The interior of the helmet contains a small metal plate imprinted with the words 'The IC-UC.'

SCP-1089-p are several small 'pills' roughly 1.5mm in length. Pills are initially covered in a grey coat of gelatin - this coating can be carefully scraped off revealing what appears to be a complex microchip. Further examination has proven impossible as SCP-1089-p's interior components dissolve the instant the pill is pierced.

SCP-1089 was recovered when U P , a known prominent customer of MC&D, was arrested and his assets were scheduled to be seized. U P 's mansion was raided by Foundation agents and SCP-1089, SCP- and SCP- were quickly recovered from a wall safe before either MC&D or government personnel arrived on-scene.

SCP-1089 exhibits its anomalous properties when worn and activated. The goggles override the wearer's sense of sight, causing the wearer (henceforth referred to as the 'observer') to be able to see as through the eyes of another specific person. This specific person becomes 'marked' by ingesting SCP-1089-p and this effect persists for an unknown and possibly permanent duration. The observer remains self-aware while watching a marked individual and SCP-1089 appears to block all sound - researchers have reported being unable to hear anything while observing. There appear to be several 'channels' depending on the setting of the radial knob and each active channel has its own marked individual.

SCP-1089-p seem to be linked to the channel the goggles are set to. When set to any channel except '4' the compartment is completely empty. Subject D-1089-1 was given a pill from '4' - after ingestion, the compartment was empty when it had contained several pills only moments earlier. Immediate termination of D-1089-1 shows that the link expires when the marked individual does and compartment '4' was automatically refilled.

All researchers used as observers have been recording their experiences in a shared research journal. Channel information is as follows:

Note: For simplicity's sake, the marked individual for each channel will be denoted as SCP-1089-x where x is the active channel.

1) Channel 1 appears to be blank and continues to be blank as long as has been observed. No SCP-1089-p exists for compartment '1' so it has been unavailable for testing. Observation to continue as scheduled.

2) SCP-1089-2 is an individual of unknown gender in a padded cell in an unknown location. It is suspected that SCP-1089-2 may be forcibly restrained as little to no movement has been observed. Every day at precisely 08:00, 13:00 and 18:00 a woman of medium age and build wearing a plain grey dress and glasses enters the room with what appears to be a bowl of food-paste. The woman spends 5-10 minutes feeding SCP-1089-2 and promptly leaves with the empty bowl. As far as has been observed, she has never attempted to converse with SCP-1089-2 during these feeding times.

Foundation agents have been investigating the identity of the woman but thus far she remains unknown to Foundation personnel. Observation to continue as scheduled.

3) Based upon information gathered from observation, investigation into the identity of SCP-1089-3 has been successful. SCP-1089-3 is the estranged father of U P . It is not known why U P was watching his father, nor is it deemed scientifically relevant. Investigation discontinued and observation stopped.

4) Channel 4 has been cleared for testing on D-level personnel and due to having complete control over SCP-1089-4 this is to be the primary channel of observation (**No further testing** is to be allowed without O5 approval).

First, D-1089-1 ingested SCP-1089-p and became SCP-1089-4. SCP-1089-4 was briefly observed before termination.

D-1089-2, surgically blinded, was observed next. Observation of SCP-1089-4/2 was reported to be blank in a manner consistent with Channel 1. D-1089-2 was then scheduled for immediate termination so that the channel could be freed up for more useful research.

D-1089-3 ingested SCP-1089-p and was placed into solitary confinement for a period of 48 hours. As it seems there are no adverse effects to SCP-1089-p other than linking the target for observation, SCP-1089-4/3 was reassigned to SCP- .

5) SCP-1089-5 has been identified from information gathered from mirrors and reflective surfaces. He is a Japanese businessman named M H , CEO of Inc. located in . Observation to continue as scheduled.

Update / / : Observation reports that SCP-1089-5 is no longer M H but is instead an unknown female. It is not known when or how this change ocurred but Foundation agents are in the process of investigating the new SCP-1089-5/2.

Update / / : Newspapers have confirmed M H was murdered between the time he was last observed and the first time the new female SCP-1089-5/2 was observed.

Update / / : SCP-1089-5/2 has been identified as H P , a wealthy heiress living in . Observation to continue as scheduled.

[DATA EXPUNGED]

Update / / : As expected, SCP-1089-5/17 was also reported murdered. Investigation into identity of SCP-1089-5/18 has begun. Observation to continue as scheduled.

Addendum 1089: Testing of SCP-1089 is to be immediately halted and SCP-1089-4 immediately terminated per instructions from O5- :

> Instructions from O5-
>
> > Effective immediately, discontinue use of SCP-1089-p while on site.
> >
> > That channel 5 changed without action from us suggests there are more goggles and channels are shared among them.
> >
> > We don't know who has been watching but since / / we've given them crystal clear surveillance of the inside of our secure facility as well as SCP- !
> >
> > Kill the link to channel 4 and continue observation of the other channels. Channel 4 is now to remain blank and channel 5 is designated as your new primary observation.
> >
> > Disciplinary action to follow.
> >
> > - O5-

« SCP-1088 | SCP-1089 | SCP-1090 »

SCP-1090: Cordless Headphones

Item #: SCP-1090

Object Class: Safe

Special Containment Procedures: The item is currently kept in a generic headphone case and can be safely stored alongside similarly contained items. Storage near non-anomalous listening-devices is not recommended. The item may only be removed for approved testing.

Description: SCP-1090 has the appearance of a set of cordless headphones. Two irregularly shaped, highly polished stones (superficially resembling black basalt) are attached in place of conventional earpieces. The headband is white, with flexible joints allowing for size adjustment. A blue dot marked with a white "L" and a red dot marked with a white "R" are visible on the swivel joints at either end, presumably indicating "left" and "right".

It is unclear how the stones have been fused to the rest of the device, and both headband and earpieces have proven resistant to conventional cutting tools. Results from radiography of the object have been inconclusive.

When a subject places SCP-1090 over the ears in the fashion of conventional headphones, they report hearing music or distinctive sounds. This "music" ranges from simple melodies to paranormal auditory experiences. The device has no anomalous effect on individuals who simply touch or handle it; reports indicate that the stones remain oddly cool to the touch.

Testing suggests that the longer an individual is exposed to SCP-1090, the more unusual and lasting the psychological and sensory after-effects. The upper-limit of exposure before permanent psychological and sensory damage has yet to be determined; new researchers are cautioned to increase the time of exposure by no

more than seconds (see Dr. Rhys for a proposed algorithm).

As the sounds reported are so far unique to the subject wearing the device, researchers are encouraged to review Experiment Logs Series 1 for details.

+Experiment Logs Series 1

Note: Series 1 Logs describe the initial series of experiments conducted by Dr. S . For ongoing experiments, and data contributed by other researchers, see Series 2.

Log 01/02/

Subject/s: D-Class female; age 22
Procedure: Subject seated in a sound-proof room and instructed to place SCP-1090 over her ears, removing it when signalled by a red light.
Duration: Two minutes.
Results:

Subject looked surprised upon placing the device over her ears, but made no attempt to remove it. She appeared to be focusing intently, and failed to react to the flashing red light until ten additional seconds had passed. Subject seemed ill-at-ease when questioned about the experience; possibly simple nervousness.

Subject described clear and pervasive music, which seemed to "*be playing before I put them on… it sounded like the middle of the song.*" The "song" was described as a children's choir, singing in a foreign language. "*It was probably, like, Asian or something. Kind of creepy, actually.*"

Log 01/02-08/

Subject/s: D-0886 (male; 38), D-0423 (male; 24), D-1002 (female; 31), and junior researcher M
Procedure: Each subject seated in a sound-proof room and instructed to place SCP-1090 over his/her ears, removing it when signalled by a red light. In the case of D-1002, a loud bell tone was substituted for the light.
Duration: Two minutes.
Results:

D-0886: Reported hearing guitars playing several melodies at once. "*Weird shit. Like Hendrix in a fucking mirror house*."

D-0423: Heard a low sustained note, "*Like a stringed bass*", followed by a melody he described as a poor bass solo. "*But… played badly on purpose, you know?*" Subject seemed fixated on this idea, and would have prolonged the interview for several hours to explain himself.

D-1002: Though subject had been informed that a tone would sound to signal the end of the test, she was unresponsive to the sound, despite its loud volume. After an additional fifteen seconds, the red light was flashed, and she removed the device. Subject appeared dazed, and did not respond to questioning until nearly fifteen minutes had passed.

Subject eventually reported: "*I think it was my cat… it sounded just like my cat. He was singing a song to me. About fish*."

> **Note:** *As none of the subjects testing the item have been physically harmed, we've given M permission*

to try it out. -Dr. S

Junior researcher M : "*It was just… woodpeckers. Pecking. Like, at least twenty woodpeckers.*"

Log 02/04/

Subject/s: Dr. S
Procedure: As of 2/03/ , the D-Class subjects of previous tests have shown no immediate or cumulative signs of injury. Dr. S volunteered herself as a test subject, and the original experiment was replicated without incident.
Duration: Two minutes
Results:

Subject reported a low, sustained drone for the first thirty seconds, which slowly increased in volume. This was reportedly accompanied by a sense of expectancy— "*Like something important was about to happen*". The subject expressed doubt that she would have removed the device in those first seconds, even if instructed to do so. She described the droning sound eventually diverging into a series of random notes, resembling electronic music.

"*It was like normal music, I guess… with distinct notes and pauses. But it's hard to describe the sound of— no, I wouldn't really call it dread. I know dread, okay? It felt a little unsettling, like I wasn't supposed to be listening in… but at the same time, I knew if I kept listening… I don't know. I'm being vague.*"

Dr. S reported than the "music" faded into silence, immediately before the two minute light flashed. She has expressed interest in repeating the experiment.

Log 02/05/

Subject/s: D- ([REDACTED]), D-2101 (male; 22), D-4040 (male; 56)
Procedure: Subject is seated in a room (not sound-proof) and instructed to place the object over their ears; flashing red light signals removal.
Duration: Eight minutes
Results:

D- : After the first two minutes, the subject was seen to raise both hands and press them over the earpieces. The subject's description of the [REDACTED].

D-2101: Subject displayed a reaction similar to D-1002, failing to respond to the flashing light for nearly three minutes, and remaining in a complacent and insensible state for close to an hour after the test's conclusion. Subject reported hearing "wind-chimes", not localized in the earpieces, but "*some really close, and some really far away… too far away to hear. There must have been hundreds of them.*"

D-4040: Subject displayed growing unease while wearing the device, and removed it promptly when the light flashed. When asked to describe his experience, subject refused to say more than, "*It was brown.*"

Addendum: D- was recently terminated while [REDACTED]. An overseeing agent alerted us that, ten hours before recorded time of death, D- made several requests to use SCP-1090. When this request was denied, D- displayed considerable emotional distress.

Addendum 02/08/ : Both D-2101 and D-4040 have reported nearly identical symptoms to

research personnel; it must be noted that neither subject has been allowed contact with the other since the end of their respective tests. Both report that the "music" they heard while wearing SCP-1090 has been playing continuously "in their heads". Unlike normal instances of cognitive itch, they claim the sounds are changing, and growing progressively louder.

Note: *As the primary psychiatric consultant for this research team, it is my request that no further experimentation take place until a "safe range" of exposure is determined. -Dr. Rhys*

UPDATE 02/24/

A series of experiments to determine the "safe range" of exposure to SCP-1090 were performed over the course of one week, achieving consistent results when replicated. Six (6) minutes and thirty (30) seconds has been established as the "safe range" of exposure, with a buffer of approximately twenty seconds. All D-class personnel involved in testing have been placed under thirty-day observation; scheduled terminations postponed as necessary.

Addendum: D-2101 and D-4040, subjects of preceding experiments, continued to complain of "loud music"; both were observed to have trouble sleeping, and spoke loudly in interviews, as if compensating for poor hearing. All subjects of the Safe Range tests who were exposed to the device for more than seven minutes have since reported nearly identical symptoms.

Addendum: D-4040 was found deceased after a violent altercation with D-3 ; witness

accounts, while their reliability is questionable, all made some reference to D-4040's symptoms. All similarly-afflicted subjects have been restricted from D-class common areas.

See Incident Report 1090-1.

« SCP-1089 | SCP-1090 | SCP-1091 »

SCP-1091: Digital Mode Shortwave Entity

Item #: SCP-1091

Object Class: Euclid

Special Containment Procedures: SCP-1091-1 is not to be removed from its containment room. The containment room is to be surrounded by a multi-stage Faraday cage. Three armed security personnel are to be stationed outside the containment room at all times. No radio devices are permitted within 200 meters of SCP-1091-1.

A live microphone feed must be active in the containment room, outside the Faraday cage to record any transmissions or sounds from SCP-1091-1 for later analysis. SCP-1091-1 is not to have radio contact with any radio transmitting/receiving device unless approved by Level-4 Personnel for controlled testing purposes. Personnel are not permitted contact with SCP-1091-1 without specific authorization. All personnel must be searched to find and remove any radio devices before contact with SCP-1091-1 is permitted.

If SCP-1091-1 transfers to another radio transmitting device, all personnel are instructed to seek out and destroy all radio devices within a 5 km radius. Should Foundation personnel be unable to locate and recover SCP-1091 within two hours, refer to Recall Protocol 1091-Beta.

Description: SCP-1091 is a sentient entity that resides in radio receiving and transmitting devices. If its host device possesses a microphone (or shortwave reception equipment) and speakers, SCP-1091 is capable of communicating.

SCP-1091 is capable of transferring itself between hosts by radio signal, at a range dependent on the broadcast power of its host device. Given the opportunity, it will use its ability to transfer between devices rapidly in an attempt to [DATA EXPUNGED].

SCP-1091 must not be allowed to reach its destination. Should such a scenario become a possibility, MTF Lambda-W is to refer to Recall Protocol 1091-Alpha.

Thus far, SCP-1091 has not demonstrated an ability to infect multiple devices simultaneously. However, this possibility cannot be entirely discounted.

If the host of SCP-1091 is destroyed or otherwise rendered unable to transmit before it is able to transfer, SCP-1091 will immediately become located in SCP-1091-1, regardless of distance. For this reason, it has been suggested that SCP-1091-1 is the original source of SCP-1091.

SCP-1091-1 resembles a model S-38 shortwave receiver, manufactured by the Hallicrafters company in the mid-1940s. However, the composite material comprising the outer shell of SCP-1091-1 appears to be a mixture of carbon fiber and an unidentified material. Additionally, all attempts at opening SCP-1091-1 for examination have failed.

All attempts to tune SCP-1091-1 have been ineffective. SCP-1091-1 plays only static until SCP-1091 initiates communication. Any other radio device within 500 meters of SCP-1091-1 will experience the same tuning failure. SCP-1091 is able to communicate with Foundation Personnel through various types of "Digital Mode" broadcasts. The choice of digital mode appears to be related to the person it is communicating with and the subject matter of the conversation.

Interview Log 1091-a

> **Interviewed:** SCP-1091
>
> **Interviewer:** Researcher
>
> **Researcher :** SCP-1091. Clearly, you have some form of sentience. Tell me, what is it that you were planning when we had recovered you?
>
> *(SCP-1091 is silent for several seconds, before*

broadcasting a data burst transmission approximately 45 seconds in length.)

Researcher : Run that through the software, I want to know what this thing is thinking.

It was later determined that the transmission was an SSTV broadcast, in mode "Robot36". Decoded image is listed below available audio clip of interview.

Recovered Image of SSTV broadcast during Interview 1091-A

« SCP-1090 | SCP-1091 | SCP-1092 »

SCP-1092: A Species of Fish

Item #: SCP-1092

Object Class: Euclid

Special Containment Procedures: SCP-1092 is to be housed in a 5 by 5 by 2.5 meter cell that is completely watertight and is capable of being filled and drained via an installed pumping system. During its parasitic stage, SCP-1092 will be contained in one (1) domestic pig of no less than 54 kg. During this phase, SCP-1092's host is to be fed regularly and otherwise treated as a normal animal. After two (2) months time since initiation of the parasitic stage, the containment cell will be flooded with 40 cm of water and SCP-1092 will be allowed to enter its aquatic stage. The body of its former host will be incinerated. After four (4) months, another domestic pig meeting the same specifications will be placed into the inundated cell. Upon successful infection, the water will be drained and boiled three (3) times at no less than 200°C before being disposed of.

All individuals who experience direct contact will SCP-1092 or its containment area will be analyzed with X-ray radiography after leaving in light of Incident A, personnel suspected of exposure to SCP-1092 will be quarantined for no less than two (2) weeks, during which time they will receive full body X-ray scans every 48 hours. Those infected will be monitored until SCP-1092 exits its parasitic phase terminated (see Addendum 1092-02).

Description: SCP-1092 is an Osteichthyes class fish, during its aquatic phase virtually indistinguishable from other related fishes, except for a tendency toward aggression. However, only adolescent and adult instances of SCP-1092 have been observed outside of a living host; juveniles are obligate parasites. The fish infects the circulatory system of its host, absorbing oxygen and nutrients directly from the host's blood. Once in the bloodstream, instances grow from less than a millimeter in diameter to many times their original size, the largest recorded specimen being 2.1 cm in

diameter (extracted from the host's aorta). The way SCP-1092 initially establishes an infection is not clear; however, it is theorized that its tiny eggs enter the bloodstream through cuts and lacerations on the subject's flesh, which would explain its aggressive tendencies. It has been known to infect a number of large mammals, including goats, sheep, humans, , and pigs.

Subjects infected by SCP-1092 often experience fatigue, weight loss, and increased appetite. Further, many subjects affected will report "fluttering" or "squirming" sensations inside their body. Nevertheless, it must be noted that a significant portion of those infected experience no noticeable symptoms until the parasite has matured to the end of its parasitic stage. Once the fish have matured within a host for 6-9 weeks, they will be ready to enter their aquatic stage. SCP-1092 will generally wait for its host to be contacting or surrounded by a significant amount of liquid water (SCP-1092's mechanism for detecting water outside the hosts' body is under investigation, see Document). When the host contacts water, all mature instances of SCP-1092 will forcibly expel themselves from the hosts body, using their teeth to cut through blood vessels and epethelium. Subjects will sustain anywhere from minor injury to severe blood loss and death, depending on the location and severity of infection.

It is important to mention that a small but notable portion of subjects will experience a secondary stage of infection. In these individuals, SCP-1092 will travel up the carotid artery, at which point [REDACTED].

Addendum 1092-01: Incident A
Unknown to any Foundation staff at the time, Agent was exposed to SCP-1092 and the infection progressed unchecked for at least 6 weeks (it is hypothesized that Agent was initially infected via a small cut on the inside of his lip). SCP-1092 exited his body without warning while he was taking a shower in facilities at Site . Although medical attention was given almost immediately, the hemorrhaging proved too extensive and Agent died within the hour.

Addendum 1092-02: Incident B
A member of the research team investigating SCP-1092, Dr. ,

despite having no prior history of violent behavior was somehow able to gain control of [DATA EXPUNGED], resulting in a site-wide containment breach, including the temporary release of SCP- , SCP- , and SCP- . This was suspected to have been a distraction staged in order to allow Dr. to [REDACTED] unnoticed. The subject was finally terminated only five kilometers away from the Colorado River Aqueduct. Upon autopsy, the subject was confirmed to have an advanced-stage SCP-1092 infection in his brain.

« SCP-1091 | SCP-1092 | SCP-1093 »

SCP-1093: The Lamp Man

Item #: SCP-1093

Object Class: Safe

Special Containment Procedures: SCP-1093 is to be kept inside a sealed 5 meter by 5 meter containment cell. The cell is to be encased in a 30 centimeter thick lining of lead. Personnel are prohibited from entering the containment cell or making contact with SCP-1093 unless instructed by Level 4 personnel assigned to the object. No staff are permitted to enter SCP-1093's containment cell or make any contact with SCP-1093 without first being suited in the proper radiological protection. SCP-1093 is to remain deactivated unless the designated staff have instructed its activation.

Description: SCP-1093 is a Caucasian male, 1.68 meters in height and between 30 and 35 years old. The head of SCP-1093 is composed entirely of a bright light, measuring approximately 1600 lumens. SCP-1093 has no physical cranium and there are no known sources for the light emitting from the head area of SCP-1093. The light at SCP-1093's head does not emanate any sort of heat. No causes for this abnormality have been determined.

SCP-1093 is highly radioactive, emitting radiation levels ranging from 3500 rad to 4000 rad. It has not yet been determined what causes SCP-1093 to emit these lethal doses of radiation. SCP-1093 itself does not appear to be affected by this radiation, and it will constantly emit radiation regardless of whether or not it has been activated.

On the back of SCP-1093, attached to the base of the neck, is a switch labeled with "On" and "Off", resembling that of a typical household light-switch. Light only emits from SCP-1093 when the switch is activated. When deactivated, SCP-1093 appears completely headless. When not activated through this switch, SCP-1093's upper body will remain limp. Upon activation, SCP-1093

will lift its upper body, standing stiff and motionless until deactivation.

Biological examination of SCP-1093 has shown it to be, externally, a living and healthy human from the neck down. SCP-1093 displays a stable heartbeat and steady, constant breathing. How SCP-1093 is capable of respiration is unknown, as there are no visible openings to allow any form of inhalation or exhalation. SCP-1093 does not appear to require food, drink, or sleep. All bodily functions immediately cease upon deactivation. For information regarding the internal anatomy of SCP-1093 refer to Surgical Report F224B-1093.

When activated, SCP-1093 is entirely dormant. SCP-1093 does not respond to any staff attempts at interaction and is completely unresponsive to all external stimuli. In this state, SCP-1093 does not appear capable of speech and does not display any evidence of sapience. Under these conditions, SCP-1093 will continually stay stationary, locked into a single stiff, upright position, until deactivation.

Personnel who have been within the immediate proximity of SCP-1093 have reported experiencing auditory hallucinations that promptly desist upon exiting the chamber. Extended contact with SCP-1093 appears to cause these hallucinations to persist for longer periods of time, typically spanning several days before abruptly ceasing. In a number of cases the sounds have continued for excessive spans of time, which has caused significant distress in the afflicted personnel, though the eventual sudden desistance has remained in nearly all cases. The most commonly experienced sounds produced by SCP-1093 include a high pitched ringing, a loud "drilling" sound, and a low pulsation similar to that of a heartbeat. These auditory anomalies all appear to occur exclusively when SCP-1093 is activated and all seem to emanate from an indiscernible source.

Surgical Report F224B-1093

> **Date:** / /
> **Specimen:** SCP-1093
> Surgical examination conducted under the supervision of

Dr.

SCP-1093 remained deactivated during the length of the surgery. As of the writing of this report, no internal observation on SCP-1093 has been performed while it is in its active state. Radiological protection was worn by all personnel engaged in the operation.

Upon the first abdominal incision, when piercing the dermis of the specimen, all agents in the immediate area reported a sudden, high-pitched ringing emanating from an indiscernible source. The ringing continued until the incision was completed and the abdomen of the specimen was fully opened. This ringing process repeated for each subsequent incision made upon the subject.

Once the internals were exposed, no organs or skeletal structures could be located. The entire interior of SCP-1093 appears to consist solely of a pale white opalescent substance. The material has a gelatinous consistency and is filled with many branching, red and blue vein-like protrusions. It seems to be very durable and resistant to damage, as none of the tools used during the surgery were capable of piercing or scratching it. This substance remains unidentified and no samples were able to be extracted for testing.

One abnormality of note is that, when handling the exterior portions of SCP-1093's body, all agents could physically feel internal, bone-like structures. The ribcage of SCP-1093 is visible when viewed externally, but no skeleton appears to be present within the interior of SCP-1093. In addition, prior tests have indicated the presence of several functioning internal organs within SCP-1093, but none could be identified during the length of the examination. Further investigation of this matter is requested.

All incisions made upon the specimen healed at a normal rate over the course of several months subsequent to the

surgery with the expected scarring.

« SCP-1092 | SCP-1093 | SCP-1094 »

SCP-1094: Playground of the Lost

Item #: SCP-1094

Object Class: Safe

Special Containment Procedures: SCP-1094 is kept within Site-94, a containment site disguised as an office building belonging to a private company. Attempts made by civilians to enter Site-94 should be deterred, with amnestics being distributed should it be found necessary. No personnel are to enter the established safe zone around SCP-1094 except during authorized testing sessions. Personnel expressing interest in interacting with SCP-1094 are to be moved from the site immediately.

Description: SCP-1094 is a playground, located in [REDACTED]. The playground contains standard recreational equipment including see-saws, merry-go-rounds, slides, monkey bars and swing sets. The equipment is constructed out of wood, plastic and steel and displays no unusual properties on its own. SCP-1094 appears to be inhabited by one or more immaterial entities that manipulate the equipment on a regular basis, as personnel have reported such things as swings moving on their own or hearing sounds from the slide. The nature of these entities and their connection to SCP-1094 is not fully understood.

Human beings near SCP-1094 feel compelled to play within it. This effect appears to have a circular range of approximately 17 meters around SCP-1094 and is entirely psychological in nature. This urge is stronger depending on the age of the subject affected, with pre-adolescents reacting the most to exposure. Subjects past puberty can resist the urge with moderate difficulty, but the severity of the urge is increased if the subject directly views or hears another human interacting with SCP-1094. Playing within SCP-1094 induces a state of euphoria in the subject, causing them to ignore any previous assignment or duty in favour of continuing to play with SCP-1094.

Repeated and continuous exposure to SCP-1094 via physical contact with any of the recreational equipment available causes the subject interacting with it to disappear. In all of the cases this has been tested, the subject disappeared while they were already completely absent from sight, such as when they were using the slide or climbing through the tunnel connecting two parts of the larger structure. Any tracking device placed on the subject previous to their disappearance will be found in the structure the subject disappeared within.

Discovery: SCP-1094 was discovered when reports of a series of disappearances in the town of [REDACTED] surfaced in media. SCP-1094 was tracked down as the source of the disappearances and was successfully contained. Out of the reports, were found to have been caused by SCP-1094.

Addendum: On 19 -05-19, Dr. R , a researcher assigned to Site-94 was found missing. Security footage shows that Dr. R was working on a report in his office when what appeared to be an elderly man wearing a yellow raincoat entered the room. It should be brought to attention that the door was never opened and that it was not raining at the time. Dr. R fails to notice the man, who starts walking towards Dr. R as the camera abruptly goes blank. The camera resumes functioning approximately seven hours later, at which point Dr. R 's office is empty. The report that Dr. R was writing was recovered, and found to only consist of a single sentence:

> i'll take care of the children.

Security efforts were doubled following the disappearance of Dr. R .

« SCP-1093 | SCP-1094 | SCP-1095 »

SCP-1095: The Fall of a King

> **Disclaimer:** The following Containment Procedures are expecte
> *Protocols X10-06*, which specifically deals with reality bending a
> Report", *Entropy: An SCP Foundation Journal*, 19 .

Item #: SCP-1095

Object Class: Keter

Special Containment Procedures: SCP-1095 is provisionally contained on-site at , Texas. The surrounding building is closed off to the public under the cover that it is under renovation. At least two Security Guards are to surround the area to prevent trespassing. Due to the nature of SCP-1095, level 1 security personnel are also posted near the entrance of SCP-1095. A barrier has been constructed around the side of SCP-1095 that is within SCP-1095-1.

Site-156 is established within SCP-1095-1 in order to minimize the chance of an Xi-06 Event. The area is under surveillance to monitor the activities of all SCP-1095-2 instances. Agents and Security Guards are posted by SCP-1095-1's police precinct and courthouse. Personnel are encouraged to assist SCP-1095-2-B instances in intervention of possible Xi-06 events.

Mobile Task Force Xi-06 ("Bixby Hunters") is responsible for handling Xi-06 Events. After a Xi-06 event, witnesses of the event are to be administered Class-B amnestics. Personnel from Site-156 are responsible for determining the new location of SCP-1095. This is accomplished by translocating via SCP-1095 and surveying the new surrounding area. The new location is to be reported, and Containment Specialists will be sent to the area to ensure proper containment.

Information related to SCP-1095-2-B-1 is to be reported to the Site

Director of Site-156.

Description: SCP-1095 is a spatial anomaly measuring 3.1m x 3m x 2.4 m, inside the Tavern, located in , Texas. SCP-1095 exhibits a minor effect on local reality, appearing as slight blurring around the surrounding area.

A subject passing through SCP-1095 will be instantly translocated to a location resembling the town of , . (referred to as SCP-1095-1). The location of SCP-1095 inside SCP-1095-1 is inside the town hall of SCP-1095-1. SCP-1095-1 covers an area of approximately 1.2km^2. Any area beyond SCP-1095-1 is perceived as a white plain, which is domed by an electrical field of unknown origin.

SCP-1095-1 has approximately 70,000 humanoid residents, all of whom are Level 4 Reality Benders (referred to as SCP-1095-2). Instances are capable of manipulating local reality within a 11 meter radius. This manipulation is limited to movement of objects,[1] transformation of objects, and spontaneous materialization/ dematerialization of objects. Instances cannot directly affect other instances or personnel with these abilities. Most instances are also incapable of manipulating local reality upon themselves, with the exception of instances of SCP-1095-2-B.

Instances are politically divided into three groups:

- **SCP-1095-2-A:** Instances classified under this group make up the majority of residents (approximately 68,000). These instances use their abilities for trivial purposes (e.g: opening a door, moving a car, etc.). Attempts to use their abilities beyond this is halted by instances of SCP-1095-2-B.
- **SCP-1095-2-B:** Instances classified under this group make up approximately 300 residents. These instances resemble law enforcement, judicial members, and political leaders. In most cases, these instances are noted to use their abilities to enforce order.
- **SCP-1095-2-C:** Approximately 50-200 residents are classified under this group. Instances under this group use their abilities with malicious intent. In most cases, intervention of 2-B instances is sufficient enough to contain 2-C instances. In the

result that intervention is not successful, these instances escape SCP-1095-1, in an attempt to pass through SCP-1095.

Any instance of SCP-1095-2 passing through SCP-1095 into universal local reality results in an Xi-06 Event.[2] During an Xi-06 event, surrounding local reality is heavily disrupted.[3] This disruption results in destruction of local reality outside of SCP-1095-1, surrounding SCP-1095.[4] After an Xi-06 Event, SCP-1095 will instantly translocate to another location. The location SCP-1095 appears in will usually be inside a tavern or store in a small town.

Discovery: SCP-1095 was originally found inside a tavern in , Nevada. The anomaly was reported to a local police force. An Agent embedded within the force contacted the Foundation, and a provisional containment area was constructed soon after. Shortly after containment, several D-Class personnel were sent through SCP-1095 to determine its anomalous properties.

After subsequent exploration, instances became aware of personnel and greeted subjects. Instances of SCP-1095-2-B engaged with hostility. The D-Class were instructed to leave SCP-1095-1, where an Xi-06 Event occurred shortly afterward. The Xi-06 Event resulted in breach of containment, destruction of the containment area, and numerous casualties. An MTF was dispatched to the area, ending the event by terminating instances of SCP-1095-2 outside of SCP-1095-1. Class-B amnestics were administered to witnesses of the event. After the event, SCP-1095 was missing from its original location.

A test subject remained within SCP-1095-1 during the aftermath. The new location of SCP-1095 was found, and new containment procedures were devised.

Diplomatic relations were established between Foundation personnel and instances of SCP-1095-2. A minority of instances were deemed a threat and became classified as SCP-1095-2-C.

+ Excerpt of speech by SCP-1095-2-B-1

Foreword: SCP-1095-2-B-1 is the mayor of

SCP-1095-1.

SCP-1095-2-B-1: … Do not be alarmed. Yes, it is true that we have foreign men in our land. Yes, it is also true that we've had radicals attempt to escape after these men came. We must not look at this situation with pessimism, but with hope. Hope. It is what brings us together, and it is what will pull us through. The truth is that without these men, we would have never seen these traitors come out of the woodwork until it was too late. We would be living blissfully, walking past these treacherous individuals on a day to day basis.

SCP-1095-2-B-1's eyes narrow.

SCP-1095-2-B-1: But we must not fret. We have our friends to thank for arriving at the nick of time. Together, we will find these radicals and progress towards a brighter and happier future!

The audience applauds.

Incident 1095-02: Site-156 was established within SCP-1095-1. Agents were embedded within the stores, markets, and other places of occupation. Increased surveillance lead to unrest among residents of SCP-1095. Legislature was passed by instances of SCP-1095-2-B. These laws relaxed surveillance by personnel. However, increased screening for SCP-1095-2-C instances were implemented.

An instance of SCP-1095-2-A was accused of being an instance of SCP-1095-2-C.[5] As a result, unrest escalated between residents. Security Guards were placed to calm the unrest in the streets of SCP-1095-1.

+ Excerpt of press statement SCP-1095-2-B-12

Foreword: SCP-1095-2-B-12 is the sheriff of

SCP-1095-1.

SCP-1095-2-B-12: …The indictment of one of our fellow residents is a tragedy. However, we must remember that we live in different times. It pains us to do this. It is a necessary evil for the greater good … There is sufficient evidence to suspect that Mr. is a threat to our town. Officer stated that his life was in imminent danger, and did what he had to do to detain Mr. . We took care of the rest. It is up to the jury to decide his fate …

The instance of SCP-1095-2-A was convicted and sentenced to two years in prison. Unrest continued to grow among residents. Although no causalities occurred, it was suspected that an Xi-06 Event would happen in response to the conviction. Security around SCP-1095 was heightened.

Incident 1095-45: A press statement was released by SCP-1095-2-B-1.

+ Excerpt of press statement by SCP-1095-2-B-1

Foreword: SCP-1095-2-B-1 is the mayor of SCP-1095-1.

SCP-1095-2-B-1: … In recent months, we have been under great duress. Many joke that it's the 'radicals or the police', but I'd like to side with the latter. We have been faced with a hidden, unknown enemy that threatens not only to eradicate us, but also our friends.

SCP-1095-2-B-1 nods towards Agent Thompson, assigned to Site-156.

SCP-1095-2-B-1: Paranoia has bested us. Perhaps it is not the fear of the enemy, but the fear that lies within all of us that is threatening. Starting today, our City Council will work with

the Foundation in an attempt to bring reform and relief to our exasperated residents. A meeting will be held to discuss the problems that trouble us, and compromise will be made to meet the needs of our residents …

An agreement was made between the Foundation and instances of SCP-1095-2-B to reform the policy of screening for instances of SCP-1095-2-C. Surveillance decreased, and Security Guards/ Agents were limited to posts by the police station and courthouse of SCP-1095-1.

Several weeks after implementation of these procedures, several instances of SCP-1095-2-C breached containment, resulting in multiple Xi-06 Events. Several instances of SCP-1095-2-B passed through SCP-1095 in an attempt to aid personnel in containment. This resulted in extensive destruction of the town of , , where SCP-1095 was previously contained.

Instances of SCP-1095-2-C were terminated. Instances of SCP-1095-2-B were instructed to go to back to SCP-1095-1. A cover story was established, under the guise that the town of suffered a fire from a nearby forest. Broadcasts and news stories were intercepted to fit this story. Amnestics were administered to the residents of . The new location of SCP-1095 was found shortly after, and a provisional containment site was built around the area.

SCP-1095-2-B-5, a close relative of SCP-1095-2-B-1 was missing after the incident.

+ Excerpt of press statement by SCP-1095-2-B-1

Foreword: SCP-1095-2-B-1 is the mayor of SCP-1095-1.

SCP-1095-2-B-1: … Unfortunately, my brother, Cadwell, is not with us. He, like other men that day, fought bravely against the radicals that sought to destroy our friends' world. I can tell you, without fail, that the radicals have bested us. We have let our

guard down, and because of it, they took away hundreds of lives in our friends' world. Now, my fellow residents [pause] I must tell you this: you are either with us, or against us. That is the honest truth. We have reached a breaking point…

At the time of documentation, SCP-1095-2-B-5 has not been found.

Addendum-1095-08: Approximately 5 months after Incident-1095-45, SCP-1095-2-B-5 was found near Site-132. SCP-1095-2-B-5 was placed under custody and sent to Site- , which was closest to SCP-1095's provisional containment site.

The following is an interview of SCP-1095-2-B-5, conducted by Dr. Kim

Interviewed: SCP-1095-2-B-5

Interviewer: Dr. Kim

Foreward: SCP-1095-2-B-5 was noted to exhibit a noticeable effect on local reality, appearing as visual blurring within a 2 meter radius. This effect returned to normal whenever SCP-1095-2-B-5 left its radius.

<Begin Log>

Dr. Kim: Can you tell me why you came here?

SCP-1095-2-B-5: I can't tell you much. But what I can tell you is that I am here as a whistle-blower. I wish I had more time, but I am as good as dead.

Dr. Kim: Don't worry. We will protect you.

SCP-1095-2-B-5: No, you do not understand. We are duplicitous people. Our members carry enormous power. We are just excellent at concealing it. Even more-so than the residents we rule over. The only issue is that we could never overcome tens of thousands by power alone.

Dr. Kim: Ok. To make this clear: you are stating that your members present more ability than they currently express.

SCP-1095-2-B-5: That is correct. We were aware of methods where we can amplify these abilities if we concentrated on creating a hole in reality. We had a hole ready to be ripped open. All we needed was to have someone on the other side open it for us. It was a long wait, but the patience paid off. One of your people stumbled in with a camera strapped on his head, and we assumed we were ready to go. But then the rest of your Foundation showed up. That's when we had to establish negotiation.

Dr. Kim: Noted. Anything else you would like to add?

SCP-1095-2-B-5: The people you are hunting after … they are the wrong ones. I wish I can say more. Tell them to be careful. Tell your men to be careful. Because it was a mistake to come here.

Dr. Kim: We will. Thank you for your cooperation.

<End Log>

Conclusion: A few days after concluding the interview, SCP-1095-2-B-5's body heavily disrupted local reality within Site- . This resulted in destruction of its containment cell. The instance expired. Local reality shifted to normal several hours after the event.

Addendum 1095-10: INFORMATION RESTRICTED TO LEVEL 3 PERSONNEL OR ABOVE

+ INPUT CREDENTIALS

On 04/23/19 , an Xi-06 Event occurred within SCP-1095-1, despite no instances of SCP-1095-2-B translocating via SCP-1095. Several buildings were damaged, and 2 causalities were reported. Instances of

SCP-1095-2-B arrested SCP-1095-2-A-18921, who was suspected to be the cause of the Xi-06 Event.

Unrest grew between residents in SCP-1095-1. Shortly after arrest, an individual identical to the suspect was found among protesters. Both instances were arrested to determine which instance was responsible for the event. Extensive questioning did not distinguish the instances.

A test was pending to take a DNA sample between both instances. Before approval, one of the instances was found deceased inside its cell; the other instance was missing. During this time, SCP-1095-2-B-1 was also noted to be missing. Civil unrest grew further, resulting in destruction and looting of SCP-1095-1. Additional Security personnel were assigned to calm the unrest. Deliberation among instances of SCP-1095-2-B and personnel deemed Johnathan Bickson, the Site-Director of Site-156, to be a temporary mayor for SCP-1095-1.

The following is an excerpt of conversation between SCP-1095-2-B-1 and Agent Thompson, recorded shortly before the instance's disappearance.

> **SCP-1095-2-B-1:** …It's been quite a while since Cadwell has disappeared. How long would you say its been?
>
> **Agent Thompson:** About 6 months.
>
> **SCP-1095-2-B-1:** Oh. [pause] Has the Foundation spotted him?
>
> **Thompson:** I am not allowed to disclose that. You are also aware that he can't come back, no matter what we do.
>
> **SCP-1095-2-B-1:** [pause] Do you think the people like me, Thompson?
>
> **Thompson:** Of course they do. They're just in

a frenzy because of the constant attacks from the radicals.

SCP-1095-2-B-1: Ugh. I guess you have a point there. I can't help but feel that my decisions have been a bit shady, at best. I've made mistakes.

Thompson: What do you mean?

SCP-1095-2-B-1: It's a bit hard to describe. How can I put it? Uhh … well, it's like misdirection, except it's in- [cough] excuse me, throat's a bit dry. Except it feels intentional. I mean, it isn't, but I could have done better these past years.

Thompson: I'm sure you don't have to worry. You've been a great mayor so far.

SCP-1095-2-B-1: Right. [pause] You're right.

Footnotes

1. For the purposes of this document, "object" refers to any material or substance that an instance can touch. This includes but is not limited to inorganic materials (rocks and minerals, ferrous and non-ferrous metals, plastic) and organic materials (soil, flora, fauna).
2. Instances translocating from SCP-1095 via SCP-1095-1 are unable to return to SCP-1095-1. Instances that attempt to do so dematerialze upon touching SCP-1095.
3. It is theorized that the cause of Xi-06 Events stem from the baseline reality in SCP-1095-1 differing from universal local reality. Refer to: Collins, Jessica, “The Reality of Alternate Dimensions: A Comprehensive Study",Entropy: An SCP Foundation Journal, 19
4. An initial instance passing through SCP-1095 disrupts reality within a 20 meter radius. This exponentially increases for every 2 additional instances.
5. This was implemented under the Radical Act, Section 2C-142. Refer to: Bickson, Johnathan, “A Short History of SCP-1095-1's Legislature”N.p, 19 .

SCP-1096: Perfect Plastic

Item #: SCP-1096

Object Class: Safe

Special Containment Procedures: SCP-1096 instances not in use are stored in a secure locker at Site . Experimentation with SCP-1096 may only be performed on Class-D personnel and only with prior permission from at least two (2) Level 3 Personnel. Class-D test subjects are housed in separate test subject containment cells at Site , and are excluded from mandatory monthly termination for the duration of testing.

Description: SCP-1096 is a set of silicone breast implants of various sizes, of which there are currently fifteen (15) pairs in containment. Each instance of SCP-1096 is identified by a lack of serial numbers and the words "The Factory" etched onto the outside surface.

Within seven days of being implanted into a suitable female subject, SCP-1096 will slowly begin converting all living tissue within the subject into what appears to be a living silicone-based plastic material. Visible changes begin with the removal of minor blemishes and imperfections and quickly advances into major figure-sculpting transformations, taking approximately ten (10) months to complete. It is currently unknown how this material retains all the properties of living tissue, and how major organs are able to continue functioning despite total conversion to silicone.

Affected individuals are often described by observers as being "perfect" and "beautiful", though the exact appearance of each affected subject tends to vary according to that subject's personal tastes. Complete conversion of the subject's tissues results in a complete lack of detectable aging in the subject, though the subject also loses the ability to heal naturally; significant injuries inflicted to these subjects result in lasting wounds that do not close. Subjects

have reported significant dulling of tactile sensation, including symptoms similar to congenital insensitivity to pain. Conversion of the subject's brain tissue also results in a slight but progressive reduction in intelligence as well as memory impairment.

SCP-1096 was first discovered on / /198 following reports of a woman admitted to a [REDACTED] Hospital following a major car accident [REDACTED] as being "made from plastic" and "bleeding clear blood".

Addendum 1096-01: Incident Report, / /199

An unused SCP-1096 instance was recovered following a raid on an underground plastic surgery clinic in [REDACTED], and the following damaged documentation recovered from the scene:

> Thank you for your purchase of this quality Factory product!
>
> Ever cursed your genetics for not making you perfect and beautiful? Wish you could be young again? Wipe away everything from minor blemishes to years of wrinkles and look young forever wit[ILLEGIBLE]

The surgeon, about to perform a procedure on a female subject, was shot and killed during the raid after drawing a firearm on Mobile Task Force [REDACTED] members and was unable to be questioned. The female subject was administered a Class A amnestic and released following a thorough investigation and background check that turned up no additional information.

« SCP-1095 | SCP-1096 | SCP-1097 »

SCP-1097: Liquefied Empath

Item #: SCP-1097

Object Class: Euclid

Special Containment Procedures: SCP-1097 is to be fully enclosed within a reinforced, pressurized stainless steel container at all times. SCP-1097 is to be kept at a minimum of 2200 kPa.

SCP-1097 is to be contained in a Type D concrete bunker, modified to include retractable seals on air vents capable of withstanding prolonged exposure to liquids with a pH level between 11.3 and 13.5. In the event of a containment breach, this bunker is to be completely sealed until further notice by the Security Director.

SCP-1097 is to be contained at Site-17. The containment bunker is to be located at least 50 meters away from all other staff workspaces and SCP-designated objects. Samples of SCP-1097 are to be extracted via remote-controlled robotic equipment, and all maintenance of containment equipment is to be performed by approved laboratory robotics. No staff or test subjects are allowed to be within 10 m of SCP-1097 unless permission is granted by the Research Director.

A total volume of SCP-1097 exceeding 2.5 L may not be removed from containment at any given time without authorization from the Research Director.

Description: SCP-1097 is 72.3 L of a dark brown, viscous fluid composed of a mixture of water, sodium hydroxide, and liquefied human remains. In an automated, laboratory environment, SCP-1097 exhibits physical characteristics consistent with fluids composed of a similar mixture of materials.

When a human approaches within approximately 5 m of any portion of SCP-1097 greater than 2.8 L, its anomalous properties manifest.

SCP-1097 will first alter its shape to mimic the physical form of that person. SCP-1097 achieves this by manipulating its density so as to achieve a semi-solid state; SCP-1097 can also completely solidify portions of itself for a limited duration, to a maximum observed hardness of 152 HV30. During this process, SCP-1097 maintains its dark brown, viscous appearance, albeit in a shape analogous to the subject. The appearance of SCP-1097 in motion is similar to that of a ferromagnetic fluid being manipulated by an electromagnetic field.

In addition to simulating a subject's physical form, SCP-1097 will also imitate a subject's mental characteristics and behavioral traits to the best of its ability. While SCP-1097's ability to communicate is limited, it will display physical mannerisms and attitudes similar to those previously observed in the subject. Tests using EEG monitors have shown that SCP-1097 will exhibit brain activity in the exact same manner as its subject. Current research suggests that SCP-1097 does not possess any true sapience of its own; any actions or characteristics appearing as independent thought are merely a complex reaction catalyzed by the proximity of a sapient being.

When more than one person enters SCP-1097's area of effect, its appearance and reactions become far more unpredictable. In a multiple-subject scenario, SCP-1097 has been documented to assume an array of physical aspects, in some cases deviating radically from the humanoid form. SCP-1097 will also demonstrate substantial variance in behavioral patterns; SCP-1097 has been documented on some of these occasions to be hostile and extremely aggressive. When agitated, SCP-1097 will use its ability to harden itself, as well as its innate caustic properties, to attack and seriously injure staff.

Experiment Log-1097:

The following is a list of notable experiments involving SCP-1097:

Experiment	Description	Result
1097-2	D-48230, a 47-year-old male with a history of good behavior while incarcerated,	SCP-1097 assumes a physical form resembling that of D-48230. Answers

	introduced alone into SCP-1097's area of effect.	questions from researchers cooperatively with simple "yes" and "no" gestures, and displays knowledge of subjects, both general and personal, that D-48230 is familiar with.
1097-5	D-23142, a 21-year-old female with documented sociopathic behavioral tendencies, introduced alone into SCP-1097's area of effect.	In a manner similar to Experiment 1097-2, SCP-1097 exhibits physical traits, mannerisms, and knowledge of D-23142. Upon Researcher Upton's disengagement of the security doors leading into the testing chamber, D-23142 feigns sudden illness. When medical personnel respond, SCP-1097 attacks nearby security staff, causing a brief containment breach. Containment re-established with 2 fatalities and 4 personnel injured. D-23142 summarily terminated.
1097-9	D-29003, a 37-year-old male convicted of multiple murders, and D-31057, a 28-year old male documented	SCP-1097 manifests as a 1.8 m tall male of average build and musculature. SCP-1097's facial

	as a serial rapist, introduced into SCP-1097's area of effect.	features resemble an amalgamation of D-31057 and D-29003, including such features as D-29003's surgically repaired cleft lip and an 8 cm scar over D-31057's right eyebrow. For the duration of the test, SCP-1097 huddles in the corner of the testing chamber, refusing to interact with researchers.
1097-11	D-10772, a 27-year-old female, and D-58271, a 42-year-old male, both with histories of non-violent crimes, introduced simultaneously into SCP-1097's area of effect. D-10772 is fluent in American Sign Language, and instructed to attempt to communicate with SCP-1097.	SCP-1097 arranges its mass to resemble , an individual that D-58271 claims was his 10th grade English teacher. SCP-1097, like D-10772, demonstrates ASL fluency, and is able to communicate with test subjects and researchers. SCP-1097 challenges D-10772 to a game of chess; after three hours of compliance with researchers' inquiries, SCP-1097 is granted its request in exchange for its cooperation, and a chess set and board is introduced into the

		testing chamber via robotic drone. SCP-1097 defeats D-10772 in eight moves.
1097-13	D-95523, D-04189, D-09923, and D-60354, all males between the ages of 19 and 54 and selected for their records of compliance and good behavior, introduced simultaneously into SCP-1097's area of effect.	SCP-1097 changes its shape into a 3.4 m tall, vaguely humanoid construct, exhibiting an additional arm protruding from the spinal region with what appears to be a simulacrum of D-04189's face in the place of a hand. SCP-1097 quickly moves to embrace D-95523 with four of its limbs, causing acute chemical burns over most of D-95523's body. After approximately 2 minutes, D-95523 loses consciousness. SCP-1097 decreases in height by 1.2 m, and assumes the appearance of a normal human male. SCP-1097 is docile and cooperative for the duration of the experiment. D-95523 dies of his injuries three days later.

SCP-1098: Virulent Word

Item #: SCP-1098

Object Class: Euclid

Special Containment Procedures: All written instances of SCP-1098 are to be burned, painted over, or otherwise obliterated. A single recorded instance is kept on a standard audiocasette for study. Under no circumstances should this recording be digitized.

All instances of SCP-1098-1 are to be contained in converted class-D barracks. They are to be provided food from the site cafeteria at regular mealtimes. Under no circumstances may they be given writing implements or recording media. A television and puzzles and games are to be provided for entertainment of the SCP-1098-1 instances. The barracks must be soundproofed to STC 60+.

Two guards are to be posted at the door of the SCP-1098-1 barracks. All guards are to wear full-ear headphones equipped with active filters designed to scramble human speech.

Description: SCP-1098 is a -syllable word, with a phoneme pattern consistent with origin among modern speakers of American English. It appears to have no effect on non-English speakers. Persons reading or hearing SCP-1098 in context report that is euphonious and somewhat humorous. Exposure to SCP-1098 out of context appears to be safe but this has not been conclusively established.

Exposure to SCP-1098 in written or spoken form may lead to infection, with increasing probability for each additional exposure. There is an inverse correlation between the size of an individual's working vocabulary and their susceptibility to infection, but this has not been rigorously quantified. Persons in the earliest phases of infection appear to be the most contagious.

Infected individuals (hereafter known as SCP-1098-1) will begin to

use SCP-1098 preferentially as a placeholder name (similarly to "whatchamacallit", "thingamajig" or "whatshisname") and respond positively to its use by others.

Example usage:

> "Hey Ray, can you hand me that [REDACTED]? No, not that one, the frickin' [REDACTED] over there."

Within 2-3 weeks of exposure, SCP-1098-1 will begin substituting SCP-1098 for other parts of speech with increasing frequency. Initially it is possible to communicate with SCP-1098-1 by inferring the intended meaning of SCP-1098 from context, but soon the prevalence of SCP-1098 in speech becomes so high that only other instances of SCP-1098-1 are able to comprehend it. In the final stages of infection, every utterance of SCP-1098-1 becomes a string of variously-inflected instances of SCP-1098. These effects also appear in written communication.

Instances of SCP-1098-1 are generally cooperative, but express distress upon discovering that they cannot be understood. When speaking with other instances of SCP-1098-1, they appear relieved or even elated. Standardized testing confirms that they have no cognitive impairment other than their muddled speech.

« SCP-1097 | SCP-1098 | SCP-1099 »

SCP-1099: Spawn-Water

Item #: SCP-1099

Object Class: Euclid

Special Containment Procedures: SCP-1099-1 is held at biological research Area 45 in a 24mx7mx7m fiberglass tank. The floor of the containment and research area is a graphite-coated stainless-steel grate supported over a 24m radius, 15m deep tank of saline solution. All experimentation must be overseen by at least one (1) level 3 or higher researcher. All personnel (excluding D-Class) entering the containment area require class B hazmat protection. No stray ferrous or magnetic objects (excluding those being used for research) are allowed. After every experimental session, the entire containment/research area and all personnel are to be saturated with saline solution by way of chamber-integrated sprayers.

Description: SCP-1099-1 is chemically water, but possesses a magnetic dipole approximately the strength of neodymium. This liquid is also an anti-emulsifier, unable to mix with oil or normal water and remains in a single area by way of self-attraction. Particulate tests have shown that the liquid "flows" independently aligned with the nearest geomagnetic pole and attracts ferrous objects. Samples of the liquid that are boiled, distilled, or ionized condense into normal water. Similar loss of effect is noted when SCP-1099-1 is salinated, becoming ordinary saltwater. Freezing SCP-1099-1 effectively creates an ice bar-magnet, and it retains its unique exposure effects when it returns to a liquid state.

> Sensitive Material: Access Restricted

The remarkably transdermal liquid is absorbed quickly into human skin upon contact. The area soon becomes inflamed, and will spasm of its own accord. Necrosis swiftly sets in at the edges of the affected area. Deep and necrotic avulsion injuries are left behind

exposing bone and tendon, severing major arteries, and causing blood infection. In most cases, swift application of heavily salinated water halts symptoms. Treated exposure may still cause infection, scarring, and necrosis of the exposed area. As such, at least two (2) medical personnel must be on hand for all experiments.

An untreated exposure will slowly work its way free of its host with increasingly coordinated movements, utilizing swift necrosis to peel itself away. The avulsed flesh itself is an iteration of SCP-1099-2. Once free, the flesh will begin willfully crawling (not unlike an earthworm or maggot) in the direction of the nearest source of fresh water. If left in a sealed chamber, the iteration will crawl in circles and eventually slow as necrosis sets in. Isolated specimens that "die" of dehydration show no difference from normally decaying human flesh.

Iterations exposed to salt or saltwater seize and halt movement suddenly as their entire structure is suffused with salt crystal within seconds. Specimens that "die" of salt exposure show no difference from normal (albeit brined) human flesh and do not reanimate upon rehydration. Water examined after rehydration of brine-dead specimens shows no abnormal traits.

When exposed to fresh water, an iteration will begin "swimming" with rhythmic movements (if submerged) or rolling and thrashing (if in shallow water) and will swell by way of water-bloating. After taking on approximately 50% of its own mass in bloat, it will begin convulsing and eventually will fissure its own surface. The fissures will first leak enough SCP-1099-1 to isolate itself from the surrounding water. From each fissure will emerge an iteration of SCP-1099-3, which will immediately begin eating the now-shed flesh layer.

SCP-1099-3 are smooth-skinned water-dwelling scavengers of unknown classification. These water-worms have rudimentary mouths used to eat small bits of rotted meat and flotsam and will also scavenge water-bottom silt for nutrition. Specimens dissected show an eel-like 'sheath', internal structure resembling a nudibranch, and no reproductive organs. The worms breathe through their skin, outputting SCP-1099-1 as a waste product. These worms sometimes maintain vestiges of parts from the flesh which they

shed: cosmetic protrusions resembling lips, noses, and earlobes. Handling of SCP-1099-3 without listed precautions results in SCP-1099-1 exposure. The largest iteration on record is 6m long and approximately 8cm in circumference (LOG-1099-D101). The smallest iteration on record is approximately .5 cm long (LOG-1099-D010)

Addendum: SCP-1099-1 was discovered while investigating reports of an 'acid spring' populated by unknown roundworms in the marshlands of [DATA EXPUNGED]. Several dozen iterations of SCP-1099-3 were recovered. Magnetic anomalies in the area as well as accidental exposure on the part of researcher revealed the presence of SCP-1099-1. Biological Containment Mobile Task Force Sigma-1 ("Montezuma") remains in the area in the guise of an environmental protection organization. Experienced members of task forces Alpha-2, Beta-7, Gamma-6 and Theta-5 were selected from level-3 or higher personnel. Collectively, they lead and train level-1 personnel in the recovery of SCP-1099-1 and iterations of SCP-1099-3. 78% of the [DATA EXPUNGED] marshlands have been deemed secured by Task Force Sigma-1.

SCP-1099 Test Log

D-001: D-class personnel exposed to SCP-1099-1 applied via hand-pump mister to the subject's chest. Subject indicates 3 when presented with a universal pain scale.

RESULTS: Light necrotic damage to skin over course of 1 hour; subject sloughs first three layers of epidermis from exposed area.

D-010: D-class personnel exposed to SCP-1099-1 applied via light splash from a wet brush to the subject's upper back. Subject indicates 4 when presented with a universal pain scale, as well as itching and heat.

RESULTS: Deeper dermal necrosis than previous test; skin areas

exposed to greater than 1 minim per cm^3 produce iterations of 1099-2. Single iteration introduced to 250ml of fresh water, produced .5 cm iteration of 1099-3. 1ml of 1099-1 collected over 3 hours. Sample contained, all iterations terminated by salinization.

D-011: D-class personnel exposed to SCP-1099-1 applied via wet sponge to the subject's foot. Subject indicated 8 when presented with a universal pain scale.

RESULTS: 11 cm long triangular iteration of 1099-2; emergence resultant in severe subject injury. Iteration introduced to 750 ml of fresh water, produced 9 cm iteration 1099-3. 25ml of 1099-1 collected over 1 hour. Sample contained; all iterations terminated by salinization.

D-100: D class personnel exposed to SCP-1099-1 applied via drinking glass to the subject's digestive system. Subject refused to indicate when presented with a universal pain scale.

RESULTS: 1m long tubular iteration of 1099-2; emergence resultant in subject casualty. Iteration introduced to 100L of fresh water, produced just under 1m iteration 1099-3. 500ml of 1099-1 collected over 1 hour. Sample contained; all iterations terminated by salinization.

D-101: [DATA EXPUNGED]

D-110: D class personnel exposed to

SCP-1099-1 applied via submersion of subject's arm. Subject lost consciousness before being presented with a universal pain scale.

> **RESULTS:** .5m arm-shaped iteration of 1099-2; emergence resultant in subject injury. Iteration introduced to 250L of fresh water, produced 7 iterations of 1099-3. 10L of 1099-1 collected over 3.5 hours. Sample contained; all iterations terminated by salinization.

D-111: D class personnel exposed to SCP-1099-1 via submersion. Subject not presented with a universal pain scale.

> **RESULTS:** Single iteration of SCP-1099-2 [DATA EXPUNGED]

SCP-1099-1 exposure testing temporarily suspended. Electromagnetic properties testing will continue as normal. *(Per O5-)*

Articles 1100-1199

SCP-1100: Gaia's Blood

Item #: SCP-1100

Object Class: Safe Euclid Keter

Special Containment Procedures (Amended): (Revised / /200)
A single sample of SCP-1100 is stored in a triple-redundant hermetically sealed container, which is to be stored in an evacuated, reinforced containment chamber at Site . The container must be checked daily for deterioration. If necessary, the sample must be transferred to a new container via Procedure 1100-233/J to prevent any possible vaporization.

All direct experimentation on SCP-1100 has been suspended pending further investigation.

In the case of wild outbreaks of SCP-1100, mass deployment of defoliants and desiccants must be enacted within a 1 kilometer radius from all infected areas, and a 12 month quarantine established to monitor for additional outbreaks. The use of nuclear or chemical weapons to establish a public diversion may be authorized by at least three (3) Level 4 personnel.

ARCHIVED: Special Containment Procedures (Amended) (Revised / /199)

Special Containment Procedures (Amended):
(Revised / /199)
Samples of SCP-1100 have been moved to the High-Risk Secure Biohazardous Materials Storage at Bio-Containment Site 26 following the loss of Bio-Containment Site 33. Experimentation on SCP-1100 may only be performed with prior approval from at least two (2) Level 3 personnel, and must observe all Level 4 Biohazardous Materials handling guidelines.

In the case of wild outbreaks of SCP-1100, mass deployment of defoliants and desiccants must be enacted within a 200 meter radius from all infected specimens, and a 6 month quarantine established to monitor for additional outbreaks.

ARCHIVED: Special Containment Procedures

Special Containment Procedures:
Samples of SCP-1100 are kept within Secure Biohazardous Materials Storage at Bio-Containment Site 33. Experimentation on SCP-1100 may only be performed with prior approval from at least one (1) Level 3 personnel, and must observe all Level 3 Biohazardous Materials handling guidelines.

In the case of wild outbreaks of SCP-1100, mass deployment of defoliants and desiccants must be enacted within a 50 meter radius from all infected specimens, and a 1 month quarantine established to monitor for additional outbreaks.

Description (Amended): (Revised / /200)
SCP-1100 is a highly dangerous complex organic substance that causes anomalous transformations in natural plant and animal life. Despite being composed primarily of heavy proteins and [REDACTED], SCP-1100 will spontaneously vaporize into aerosol form, and can also be transmitted by direct contact with infected subjects, pollen, dander, and other excretions.

Infected plant and animal subjects will transform over the course of 24 hours, which includes but is not limited to:

- Plants with bulbous sections or large fruit undergo exotic chemical transformations, and become filled with explosive or caustic substances that burst violently from the affected section when disturbed by humans.
- Plants with long tendrils or vines gain muscle-like internal structures that allow them to grasp and crush living human

prey.
- Plants with thorns or needles harden to the point of being able to cause serious bodily injury and, in some cases, become coated in substances that are highly toxic to human physiology.
- Plants that are generally used as human food sources become hardened or otherwise change composition to be inedible, indigestible, or otherwise dangerous for human consumption.
- Animals normally considered docile prey animals become increasingly strong and aggressive and will attempt to harm human subjects with no regard for personal safety.
- Animals that are natural predators will prioritize human targets as prey, ignoring easier targets.
- Animals that are domesticated livestock undergo physiological changes that render their flesh impossible to digest, or even lethally poisonous when consumed by humans.
- Animals that are household pets become feral and hostile to human handlers, often times increasing in size and strength sufficient to cause bodily harm.

SCP-1100 has become increasingly dangerous to contain, and its effects have increased in magnitude since its initial containment in 1989. No conclusive source has yet been determined for SCP-1100, nor is it known how or why it specifically targets human subjects. Current speculation points to a radical environmentalist group with access to Foundation-grade resources and technology. As such, worldwide Foundation assets have been directed to monitor radical environmentalist groups for possible evidence that may lead us to the discovery of SCP-1100's manufacturer.

All experimentation on SCP-1100 has been halted due to the extreme danger and SCP-1100's continual adaptation.

ARCHIVED: Description (Amended) (Revised / /199)

Description (Amended): (Revised / /199)
SCP-1100 is a complex organic substance that causes anomalous transformations in natural plant life. Despite being composed primarily of heavy proteins and

[REDACTED], SCP-1100 is easily transmitted between plants via pollen, seeds, and other airborne elements, and can spontaneously vaporize into aerosol form.

When affected by SCP-1100, plants will undergo a series of transformations related to its natural physical attributes over approximately 48 hours:

- Plants with bulbous sections or large fruit undergo exotic chemical transformations, and become filled with explosive or caustic substances that burst violently from the affected section when disturbed by humans.
- Plants with long tendrils or vines gain muscle-like internal structures that allow them to grasp and crush living human prey.
- Plants with thorns or needles harden to the point of being able to cause serious bodily injury and, in some cases, become coated in substances that are highly toxic to human physiology.
- Plants that are generally used as human food sources become hardened or otherwise change composition to be inedible, indigestible, or otherwise dangerous for human consumption.

SCP-1100 has become increasingly dangerous to contain, and its effects have increased in magnitude since its initial containment in 1989. No conclusive source has yet been determined for SCP-1100, nor is it known how or why it specifically targets human subjects. Current speculation points to a radical environmentalist group with access to Foundation-grade resources and technology. As such, worldwide Foundation assets have been directed to monitor radical environmentalist groups for possible evidence that may lead us to the discovery of SCP-1100's manufacturer.

Additional funding for the SCP-1100 study and research has been approved by O5 Command.

Addendum 1100-17: Incident Report: Loss of Bio-

Containment Site 26
On / /200 , [REDACTED BY O5 COMMAND] casualties reached 96% of site personnel by 0647 hours. At 0648, BCS-26's on-site nuclear warhead was detonated, stopping the infection but resulting in a total loss of BCS-26 and all site personnel.

ARCHIVED: Description

Description:
SCP-1100 is a complex organic substance that causes anomalous transformations in natural plant life. Despite being composed primarily of heavy proteins and [REDACTED], SCP-1100 is easily transmitted between plants via pollen, seeds, and other airborne elements, and over the course of 72 hours causes plants to become increasingly dangerous to human life.

The effects of SCP-1100 include, but are not limited to:

- Alterations to the appearance of edible plants that renders them repulsive to human observers.
- The growth of hardened thorns and toughened structures in edible plants, rendering them inedible or indigestible to humans.
- The internal manufacture of substances that cause nausea, pain, or severe internal injury to humans.

SCP-1100 was first encountered following the 1989 Exxon Valdez oil spill, contaminating plants near human settlements near the affected region. It is currently unknown how SCP-1100 is able to specifically target humans with these adaptations, nor is it known what organization is responsible for the manufacture of SCP-1100. Research and additional funding have been allocated to investigate the source of SCP-1100.

Addendum 1100-08: Incident Report: Loss of Bio-Containment Site 33
During routine experimentation, a large amount of

SCP-1100 spontaneously vaporized and infected the entire plant crop grown at Bio-Containment Site 33. The subsequent incident resulted in the complete loss of BCS-33, and casualties among 70% of site personnel before the breach was contained. BCS-33 has been decommissioned, and all remaining samples of SCP-1100 have been moved to Bio-Containment Site 26.

CLASSIFIED LEVEL 4 BY ORDER OF O5 COMMAND - EYES ONLY

Addendum 1100-023: Incident Log Addendum Re: Loss of Bio-Containment Site 26

From fragments of damaged surveillance video recovered from the remains of Bio-Containment Site 26, it has been determined that the incident resulting in the total loss of BCS-26 was instigated by Drs. and . The video evidence shows that on / /200 at 0631L, Dr. disarmed and shot the armed guard posted at SCP-1100 containment, after which Dr. proceeded to breach containment and removed the sample. Access logs recovered from BCS-26's environmental systems then reported a breach in the primary service hub at 0637L, at which point SCP-1100 was presumably introduced into the entire site's air and water supply.

Investigation has turned up evidence of environmentalist organization membership for both Dr. and Dr. . All personnel at Site are being screened immediately as well.

Addendum 1100-024: Diary Entry recovered from the home of Dr.

/ /200
Got a chance to talk with again today. He agrees with me now that there is no other explanation that fits. When you have eliminated all impossibilities then whatever is left has to be the truth, no matter how insane it is.

SCP-1100 isn't an engineered substance. It's not some bunch of hippies getting their sick revenge on civilization. It's a planetary immune response. It's Gaia, Mother Earth, fighting back against us.

The more we try to fight it, the worse it gets. She wants us all dead, wants us gone because of what we've done to Her. And there's nothing we can do to stop it.

The only thing we can do is to take responsibility for our sins and accept our punishment. Tomorrow, we're initiating the plan.

« SCP-1099 | SCP-1100 | SCP-1101 »

SCP-1101: An Interesting Topic

Item #: SCP-1101

Object Class: Safe Euclid

Special Containment Procedures: SCP-1101 is contained in a 20x20m secure room at Site- . The containment room is monitored and recorded from a separate station by CCTV at all times; however, under no circumstances should this be viewed while an SCP-1101 event is in progress. When monitoring devices detect activity in SCP-1101's containment room, an alarm is to sound and both the containment room and the CCTV station are to be sealed until activity has ceased. All individuals under the influence of an SCP-1101 event are to be quarantined by security staff wearing hearing protection. No more than 20 individuals are to be introduced to SCP-1101 without O5-level approval. No objects are to be placed atop SCP-1101 except under controlled testing circumstances.

Following Incident 1101-4, bathroom facilities and 1 month of supplies for up to 20 people have been placed in SCP-1101's containment room. Apparatus for the dispensing of VX nerve gas has been installed to be activated in the event of a major emergency, specifically any one of the following;

- >50 individuals under the influence of an SCP-1101 event
- risk of uncontrolled spread of an SCP-1101 event beyond the containment facility
- SCP-1101 event of duration greater than 1 month

If this protocol in conjunction with standard quarantine measures fails to contain the emergency, personnel should refer to Plan MODERATE-4, which [DATA EXPUNGED]

Description: SCP-1101 is a 0.6m tall marble pedestal with an octagonal top. It exhibits no unusual properties until an object is placed atop SCP-1101 in the presence of more than one person. In

this situation, any comment made relating to the object by an individual present will start a heated discussion (an SCP-1101 event). During an SCP-1101 event, affected individuals are compelled to continue the discussion until broad agreement is reached with one individual, the 'winner'. The 'winner' will take the object atop SCP-1101, which signals the end of an event. If the affected individuals do not come to an agreement, a 'winner' will be selected after a certain length of time and end the event. In this case, the winner has usually made a more intelligent or factually correct argument, but there appears to be subjectivity involved, perhaps suggesting sapience on SCP-1101's part. Memories of the event are retained. Subsequently, the 'winner' experiences feelings of euphoria and an attachment to the object 'won', while the rest of the affected subjects suffer mildly depressed mood. These effects are transient and dissipate after a maximum of one week.

Individuals will join an event regardless of debating skill, educational level or ordinary interest in the event topic. SCP-1101 does not appear to cause major personality changes save the compulsion to discuss. However, events have the potential to become vitriolic regardless of individual personalities. Interestingly, no incidents of physical violence have been recorded during an event despite frequent displays of extreme anger.

Affected individuals will only attend to basic needs if it is possible to simultaneously participate in the event (subjects may collapse from exhaustion if an event is of sufficient duration, but appear to suffer no long-term ill effects). The event is a memetic hazard: all individuals who hear an event in progress or see SCP-1101 at the time are compelled to join, including individuals viewing the event remotely. The latter are capable of starting separate secondary instances of SCP-1101 events which will gravitate towards the location of SCP-1101.

Duration of events is variable and dependent on the specific arguments and positions taken by the individuals involved. SCP-1101 events have been observed ranging from 3 minutes to up to 5 months (in this particular case, the event only ceased due to interruption of food supplies and subsequent starvation of individuals involved).

Further information on SCP-1101 may be found in [REDACTED].

Test Battery 1101-1: Initial baseline testing. An object was placed upon SCP-1101 and test subjects instructed to enter the containment chamber.

> Test Battery 1101-1
>
> **1101-1A**
> **Object:** Nothing
> **Test Subjects:** 5 D-class personnel D-1101-1 through 5
> **Additional Instructions:** None
> **Result:** Subjects made normal conversation for 5 minutes. Test ended.
>
> **1101-1B**
> **Object:** 1 rectangular pine wood block
> **Test Subjects:** 5 D-class personnel D-1101-1 through 5, in addition to Dr. Major (unplanned inclusion)
> **Additional Instructions:** D-1101 asked to describe object
> **Transcript:**
> D-1101-1: It's a wooden block.
> D-1101-4: I think they want you to say what sort of wood. The last thing I was assigned to, they kept making me put these balsa sheets into some machine.
> D-1101-2: Uh, balsa doesn't come in blocks, it's something else.
> D-1101-3: He didn't say it was balsa, it's probably some kind of oak wood.
> Dr. Major *[over intercom]*: It's a pine block.
> D-1101-1: Why is he telling us? Maybe it's a trick. *[Other test subjects voice agreement]*
> Dr. Major: You idiots, I know what it is!
> [REDACTED]
> **Results:** At this stage full properties of SCP-1101 were unknown; Dr. Major was observing remotely and was therefore affected by the event. Test subjects proceeded to argue for 6 minutes about both the composition of the block and the trustworthiness of Dr. Major. After 6 minutes they were convinced by Dr. Major of the block's

composition and he left the observation room to collect the block, 'winning' and ending the event. Live observation of SCP-1101 was subsequently discontinued.

1101-1C
Object: 1 rectangular pine wood block
Test Subjects: 5 D-class personnel D-1101-1 through 5
Additional Instructions: D-1101 asked to give an opinion about the object
Transcript:
D-1101-1: Oh, it's this damn block. I, uh, I don't really care about this? It doesn't do anything.
D-1101-3: I guess you could use it as a doorstopper?
D-1101-5: Who the hell would want that?
D-1101-2: I might! It could be a paperweight.
D-1101-3: No, it's too big. It would be better as a doorstopper.
D-1101-5: Are you serious? It's just a *[expletive]* block!
[REDACTED]
Result: Subjects argued about possible uses for the block for 13 minutes. Agreement was reached that the block was not designed for function but could have some useful characteristics. D-1101-2 was the 'winner' and ended the event.

1101-1D
Object: One Panasonic portable DVD player, not powered
Test Subjects: 5 D-class personnel D-1101-1 through 5
Additional Instructions: None
Transcript:
D-1101-2: It'd be good if they gave us movies here once in a while.
D-1101-1: Yeah, I haven't seen anything since I got in. Nothing newer than .
D-1101-4: Are you kidding? I love those!
D-1101-5: It went downhill after the first one.
D-1101-2: Now YOU have to be kidding.
[REDACTED]

Result: Subjects argued about the merits of the film series for 49 minutes. No agreement was reached. D-1101-3, with the opinion that the second film was the underrated gem of the series, took the DVD player, 'winning' and ending the event.

1101-1E
Object: One political campaign button reading '[REDACTED] 2012'

[DATA EXPUNGED]
Result: [DATA EXPUNGED] and casualties before containment was reestablished. Security measures for SCP-1101's use with controversial items have been heightened.

1101-1F
Test designed to determine effects of SCP-1101 on individuals with a prior interest in the event topic and enthusiasm for debate.
Object: One postcard depicting Claude Monet's *Water Lilies* (1907)
Test Subjects: Dr. A and Dr. P , both with an amateur interest in art collecting
Additional Instructions: Dr. A asked to comment on the object
Transcript:
Dr. A : The real thing is much nicer.
Dr. P : I don't know, I prefer his portraits myself, though I think Renoir does them better.
Dr. A : Renoir? Have you been to the Musee d'Orsay? [REDACTED]
Dr. A : That's absolute trash!
Dr. P : You think MY tastes are trash? You probably thought Manet and Monet were twin brothers!
Dr. A : You're saying this when you haven't even been outside of ? You pretentious little *[expletives]*
Dr. P : My mother was WHAT?

[REDACTED]
Result: Subjects argued for 82 minutes before Dr. P said 'I can't argue with you any more'. Dr. A took the postcard and ended the event. Dr A and Dr. P have subsequently been hostile to one another.

> *In the absence of staff who are able to act like adults, I recommend that testing of SCP-1101 between coworkers be avoided.*
>
> - Dr.

Addendum 1101-1: It has been observed that duration of an SCP-1101 event generally scales with the number of individuals involved. Due to the potential for memetic spread of an event, it is estimated that a breach of containment would lead to a 'point of no return' where event duration is unacceptably high after a critical mass of [REDACTED] persons, leading to a perpetual SCP-1101 event and a potential AK-class end-of-the-world scenario. In light of this theory, SCP-1101 has been upgraded to Euclid class and new containment procedures implemented.

« SCP-1100 | SCP-1101 | SCP-1102 »

SCP-1102: The Blue Ridge Phenomenon

Item #: SCP-1102

Object Class: Euclid

Special Containment Procedures: SCP-1102 is confined to an already-settled landscape, giving it CU Caldera designation as a highly sensitive widespread phenomenon. As per these regulations, civilian awareness of an overarching effect is monitored by local agents, and specific outbreaks are to be suppressed as per standard procedures based on number of witnesses and exposure. Additionally, as per Caldera protocol, Foundation sociologists are to aid in cultivation and segregation of civilian awareness by creating different mythologies of the aspects of SCP-1102's manifestation. Over of these are in circulation, and are believed to aid in preventing a holistic view of the phenomenon in question from forming.

Active specimens or manifestations will disappear shortly and are to be restrained from entering highly populated areas and roadways when possible. Active specimens are not known to be dangerous to humans.

Research is currently suspended but is scheduled to restart on / / .

Description: SCP-1102 is a phenomenon localized in the Blue Ridge Mountain range in the eastern USA, though evidence suggests it may also include an area as far south as mid-Georgia and Alabama. (For a complete map of SCP-1102 related incidents from which the current location has been defined, contact Dr. or any Level-4 personnel.) The exact cause of the effect is unknown, as no external factor has affected any facet of SCP-1102. This is therefore assumed to be related to [DATA EXPUNGED].

The effect occurs only at night, during periods of rain or snow, and

targets deceased bodies within a small, randomly selected area. For each reasonably intact corpse in the area, an animate likeness of the original organism will appear, with minor differences including (in humans): changes (darkening or lightening) in skin tone, deformity (see Doc 1102-114A), alteration or lack of facial features or small appendages (fingers, toes, genitalia), and . Clothing and body modifications or piercings, provided they are intact, are generally retained. It is unknown if the resulting entities are the same as the original creature, or are completely new organisms.

The dominant urge in all subjects, human or otherwise, seems to be one of returning or rejoining other members of the original species. Subjects instinctively know where the nearest group is, and the larger the group, the more likely the subject is to attempt to integrate with them. One historical sighting, for instance, describes seeing “a faceless hound, ghostly white, running in the company of other wild hounds, though not braying or making a sound - as its mouth was sealed shut.”

At rare intervals, however, the effect occurs at extreme magnitudes that may encompass many square kilometers. Further depiction can be accessed in Document 1102-A4 for Procedure 1102-EVE “Resurrection Woods.” For context, Foundation folklorists, historians, and retrieval teams estimate this particular event has occurred 3 times in the past century.

All entities completely vanish at some point in the same night that their appearance occurs, usually shortly before sunrise. They leave no discernible physical evidence of their presence apart from footprints, damaged vegetation, and so on. Given the entities’ rare occurrence and transient nature, limited information is available about them or the effect, and research is still pending.

In 2006, 100 Foundation operatives were stationed at graveyards in the Blue Ridge area for four months, in hopes of seeing the phenomenon manifest - at the end, one successful specimen was restrained, and the following observations were made:

- Entities are corporeal and have mass.
- Entities do not react to extraneous sounds or noise, even

when they may indicate the presence of more of the host species - for instance, when a recording of a large chorus was played for one entity, it still moved towards the two operatives present (who were the largest nearby human presence.)
- Entities can “die” and have human anatomies without significant alterations or additions. Brain and nervous activity, however, are sporadic and do not seem to correspond to typical anatomy.
- Entities resemble the corresponding original corpse, though often differing in many ways.
- The entity in some ways continues to be "linked" to the original corpse. When the entity vanishes, the original corpse will also vanish at approximately the same time. The ultimate destination of either entity is unknown, as is how they disappear.
- Entities are believed to be neither conscious, sapient, nor possessing of complex intelligence.

Auxiliary File 1
Because of its unpredictable and sparse nature, the phenomenon has been studied from local stories and accounts that seem to describe it - several folklorists are appointed for the responsibility of distinguishing possibly real accounts from fictional mythology. From these results, the effect has been described as far back as accurate stories go, including the journals of at least three separate isolated farmers in the area, who devoted time to observing the phenomenon when it occurred.

For instance, one incident, reported in a local newspaper, occurred in 1978 (before the Foundation had completed its current containment procedures of the effect). A 17-year old male was killed by an unknown individual and apparently buried in a shallow grave near his former high school, on the same night as the school’s prom celebration. Five months later, the individual was reanimated (undergoing mutations typical of SCP-1102) on the night of a student fundraiser, and, showing typical signs of attraction to human presence, entered the school through an unlocked door.

Police were alerted, but due to numerous interferences, several

hours passed before they arrived, by which point the high school was in a lockdown and complete panic. Most of those present self-evacuated, with the exception of several students who became trapped in a locked kitchen area; and an 18-year-old female who had been in a relationship with the affected individual, and was observed in the corner of a commons area, screaming, “Big Joe! Big Joe, it’s me, C ! It’s me! You came back for us, Big Joe!”

The teenager’s correct identification of Joseph , despite significant alteration, is of interest, and it is hoped more description of this phenomenon will be uncovered in further accounts.

Auxiliary Personal Report, by Dr.
Blue Ridge is big, lonely, mysterious - it’s actually the trees that make it blue, and at sunset, night settles down like nothing else in the world. Meaning it’s possibly the best place east of the Mississippi for us to find this. Nonetheless, people spread out, and we’re making more and more calls for incidents in Great Smokey - plus, we still haven’t found a good way to take the SCP out of Blue Ridge (and then maybe put it somewhere else, like a big box with a lock.)
The only theory we’ve got is this - I was slamming back beers with - a while ago, and he said the only way we could do it, at all, was to contain the whole range. He’s right. You can’t take the effect out of the landscape - it’s something in the mountains, about the mountains, that makes all the dead come back faceless and insane. I don’t know what it wants. Make us all go away, be merciful to them, fuck with us? As helpful as it might be, I hope it never figures it out.

« SCP-1101 | SCP-1102 | SCP-1103 »

SCP-1103: Dr. Wondertainment Young Surgeon's Transplant Kit

Item #: SCP-1103

Object Class: Safe

Special Containment Procedures: Outside of scheduled experiments, instances of SCP-1103 are to be stored in a standard large-volume storage refrigerator in Bio-Containment Unit-23 at a temperature below 5°C.

Due to limited supply, experiment proposals need to be approved by at least two personnel with 2-1103 clearance.

Description: SCP-1103 refers to a set of commercially packed human body parts, labelled SCP-1103-1-1 to SCP-1103-1-11. All contained objects are vacuum-packed on plastic trays, with the label "Dr. Wondertainment's Young Surgeon's Transplant Kit", and a price tag ranging between $3.99 and $25.99. Several of the packs have an additional sticker showing a stylized bull's head, and the words "CORN BELT" written across its front.

Additional content of the packages varies, however, each package contains an instruction leaflet (see Addendum 1103-1), a set of single-use plastic gloves, and a tube labelled "Dr. Wondertainment Tube of Wonderlube®", labelled SCP-1103-2. The tube has a break-off end, and contains approximately 5ccm of a translucent, viscous yellow-green liquid of composition resembling blood plasma.

Analysis have shown the tissues to be unusually durable - a sample was able to survive up to three hours exposed to room temperature air. When vacuum-packed, or submerged in physiologic solution, and cooled to below 5°C, a sample can be stored practically indefinitely. DNA analysis has shown the samples come from distinct individuals of varied race and gender, despite their uniform appearance - the only common trait among them appears to be the

blood type of "O" and negative Rhesus factor.

Applying SCP-1103-2 to human or animal tissues results in the temporary loosening of intercellular bonds of a layer approximately 1mm thick, accompanied by mild fluorescence, of duration ca. 5 minutes, after which the surface regains its previous structure. In the case of skin application, the outermost epidermis layer does not reconstitute.

If during this time, another tissue sample is brought into contact with the loose cell layer, the surfaces fuse together, and over the following 6-14 hours, the interface between the two develops a functioning blood vessel network. Neural connections were initially thought not to develop; subsequent experiments have shown this process to take an average of three weeks. Despite foreign origin, there has only been one case of tissue rejection recorded during testing. (Experiment logs available upon request to all personnel with at least 1-1103 clearance.)

Recovery Log: SCP-1103 came into attention of the Foundation on /10/20 , after an incident at the National Hospital in , Illinois, when 11-year-old J W was hospitalized with hands apparently fused to his face. Interviewing the subject has revealed he has purchased "a joke surgery kit" (classified SCP-1103-1-1) at " ", a local joke shop, and attempted to use it to graft an additional finger to each of his hands.

Subject's home was searched, resulting in the procurement of an instance of SCP-1103, and a shop bill from " ", confirming the interview data. Investigation of the shop has resulted in seizing additional instances of SCP-1103, however, the owner has been proven to lack any knowledge of SCP-1103's anomalous effects. Investigation into the origin of the anomalous shipment is ongoing.

All involved were treated with Class-A amnestics, and evidence linking J W 's disfigurement to a gas leak explosion was fabricated.

Addendum 1103-1:

Instruction leaflet for SCP-1103-1-1

Hello!

You have successfully purchased Funny Finger Transplant®, a part of Dr. Wondertainment's Young Surgeon's Transplant Kit, and are on your way to become a Young Surgeon!

What do you need to be a Young Surgeon, you ask?
Step 1: Find a friend who needs a finger.
Step 2: Open the Funny Finger Transplant® package without hesitation.
Step 3: Like a real surgeon, put on Dr. Wondertainment's Gummy Gloves®. Make sure they are a good fit.
Step 4: Break open the cap of Dr. Wondertainment's Tube of Wonderlube®. Don't worry, it won't go off if you keep it cool.
Step 5: Spread a little Wonderlube® on the place that longs for a new digit!
Step 6: Just like traffic lights, wait until you see green light.
Step 7: Take a Funny Finger® and put it where it should go. Make sure you have put it the right way on, or everyone will laugh!
Step 8: Hold it in place for about five seconds. Hurrah! The operation has succeeded, Young Surgeon!

When not being a Young Surgeon, be sure to keep your Dr. Wondertainment's Young Surgeon's Transplant Kit cool!

Do not touch the Wonderlube® with bare hands! Be careful when pulling down the Gummy Gloves®!

Be precise, like a real surgeon! Once the Funny Finger® is in place, you won't be able to get it off that easily!

If you enjoy being a Young Surgeon, consider buying Dr. Wondertainment's Young Surgeon's Human Construction Set!

Warning: May contain traces of nuts!

SCP-1104: Nose Crab

Item #: SCP-1104

Object Class: Keter

Special Containment Procedures: Complete destruction of SCP-1104 is endorsed, should adequate means be developed. While individual instances of SCP-1104 are easily terminated, SCP-1104 is endemic to subsurface geological formations in northwestern , rendering the (surmised) primary population of SCP-1104 inaccessible to convenient lethal agents. A surrounding area 10km in diameter has been designated Site-104 and cordoned from the public under guise of endangered species preservation. Personnel must wear N100 air filtration masks while within Site-104. Mammalian organisms exceeding 10kg (other than authorized Foundation personnel) entering Site-104 should be assumed contaminated and incinerated at facilities on-site.

Description: SCP-1104 is a species tentatively identified as a member of order Chelicerata. The life cycle of SCP-1104 comprises at least two distinct phases, the first being a larval stage approximately 0.4mm in diameter. At irregular intervals, larval SCP-1104 are expelled from lava tubes within Site-104 at concentrations up to 200 individuals per cubic meter. These remain airborne for as long as 14 hours and have been documented to travel at least km under favorable weather conditions.

When inhaled, larvae will adhere to nasal mucosa, where they excrete an array of H1 receptor antagonists that suppress both local inflammation and implantation of further larvae. Over a period of 6-8 months SCP-1104 will grow and extend appendages through the host's ethmoidal canals. Hosts generally remain unaware of the presence of SCP-1104, apart from persistent but non-specific headaches. On maturation, SCP-1104 will begin applying pressure to the host's optic nerves causing obstruction of the central visual field. This pressure is applied selectively when the host is not

oriented toward the local gradient of atmospheric hydrogen sulfide, which SCP-1104 can detect through the host's inhalations. After an initial period of distress, the host will begin to prefer to face and travel in the directions where they do not experience visual disturbances, thus tracing the source of hydrogen sulfide. Upon reaching a zone of sufficient hydrogen sulfide concentration, SCP-1104 projects appendages into the host's prefrontal cortex, causing unconsciousness during which SCP-1104 exits the host via the ocular cavity. After leaving a host, SCP-1104 attempts to locate and enter the source of hydrogen sulfide, such as a lava tube or sewer pipe. SCP-1104's subterranean lifecycle has not been documented.

Although humans display the same instinctual aversion as any animal to visual disturbances caused by SCP-1104, the behavioral response is not a compulsion, and hosts may defy the influence especially if informed of the nature of SCP-1104 (Note that subsequent hostility toward research personnel should be anticipated). Attempts at surgically removing or poisoning a fully developed SCP-1104 result in immediate elicitation of its exit response. Post-exit hosts exhibit complete aspontaneity due to orbitofrontal lesions, and to date have provided no pertinent information in debriefing.

« SCP-1103 | SCP-1104 | SCP-1105 »

SCP-1105: Neural Polypore

Item #: SCP-1105

Object Class: Safe

Special Containment Procedures: SCP-1105 is to be kept in its sealed habitat within Containment Cell 445-b at Bio-Research Area-12 Containment Cell 1332 at Site- . A size of roughly 2.8 square meters is to be maintained through provision of plant matter grown within a dedicated greenhouse. A temperature of 15.6° C at 5% humidity is to be maintained with an inbuilt climate control system. Air exiting the cell is to be passed through redundant filtration systems. Containment area is sealed from observation deck via double air-lock. Doors are connected to an exterior locking system allowing them to be sealed in case of emergency or containment breach.

All windows, vents, seams and doorways are to be lined with eletromagnetic coils in continuous operation. EM-shielded CCTV cameras with dual battery backups will be mounted in each corner of the room to provide audiovisual monitoring. If SCP-1105 demonstrates signs of hostility or makes a concerted attempt to escape its enclosure, a scram switch installed in the primary observation area will activate multiple high-pressure jets of dicyanoacetylene to immediately destroy SCP-1105.

Backup samples of SCP-1105's spores are to be kept at Bio-Research Area-12.

Description: SCP-1105 is a species of mobile fungus resembling *Fomitiporia ellipsoidea*. In sufficiently large concentrations, individual elements grow together into forms and structures beneficial to the whole, though no centralized nervous system can be detected that could be used to direct such growth. SCP-1105 appears to grow most readily upon dead plant matter, and has been observed to become motile in an attempt to reach such matter, though in the

absence of viable plant material, the fungus can subsist in an inert state on ambient moisture alone.

Once the fungus locates suitable plant matter, it will undergo a mitotic phase to form a number of filamental mycelia, eventually covering the plant matter and mechanically breaking it down prior to consuming it. Over a period of 24 to 48 hours, subsumed material is used to enlarge these strands, which become thickened and reinforced, and develop a rubbery texture. After these characteristics manifest, the mycelia begin to vibrate, and display evidence of electrical activity. Analysis of samples taken from fungal growth at this stage indicates no viable means of producing or storing an electrical charge.

After a sufficient fungal mass has accumulated, roughly 5 kilograms, the collective mass will dissociate into 4-6 smaller masses of approximately equal size, referred to as SCP-1105-1. These individual masses display independent motivations, though are apparently capable of assisting each other with tasks such as reaching additional plant matter for consumption.

SCP-1105-1 instances have a tendency to alter their morphology on a near-constant basis to accommodate environmental factors or the task in which they are currently engaged, such as developing a greater number of leg analogues while motile and in search of food, or producing additional mandibles while consuming plant matter. Additionally, individual SCP-1105-1 have been observed to adopt forms resembling organisms in the order Trilobita or Rodentia. Other forms resembling the families Lepidoptera and Gerridae have been observed, but only infrequently. These additional forms appear entirely spontaneously, and do not appear to be triggered by specific external conditions.

Addendum 1: Recovery: SCP-1105 was initially recovered by Foundation operatives in the Heilongjiang province of China on 1987/12/17. Following a significant seismic event in the area, numerous reports had surfaced of a "forest monster" in outlying rural areas. Based on a description closely matching the one given in this document, thirty-nine AMTF Nu-7 agents were dispatched to investigate and report. Within 500 meters of the area where sightings had occurred, the operatives' SUVs were swarmed and

subsequently electronically disabled by what the agents estimated as hundreds of instances of SCP-1105-1. The agents rapidly dismounted, drew the instances away from their transports, and engaged them with incendiary munitions, destroying the swarm. After an hour-long search, they discovered an apparent point of origin beyond a path of stripped vegetation adjacent to a hillside. It was later determined that the earlier seismic activity had created a fault in the bedrock, exposing a large cavern containing substantial SCP-1105 growth. It is assumed to have subsisted on ambient moisture and mineral deposits. Following collection of specimen and core samples, the cavern was sterilized via dicyanoacetylene saturation detonation and subsequently collapsed and sealed with ANFO.

Addendum 2: Aquatics: While instances of SCP-1105-1 have displayed an ability to adapt and travel upon the surface of a body of water, they have been shown to be unable to thrive underwater. If forcibly submerged for an extended period of time they will simply fall apart.

Addendum 3: Senses: While it is apparent that animated SCP-1105-1 are unable to process light as a sensory medium, they seem to be able to sense movement by detecting air currents and electromagnetic fields generated by animate beings. SCP-1105-1 simply flee from these fields. As such, electromagnets have been incorporated into the containment procedures.

« SCP-1104 | SCP-1105 | SCP-1106 »

SCP-1106: "Grow Your Own Child" Kit

Item #: SCP-1106

Object Class: Safe

Special Containment Procedures: SCP-1106 is to be kept in a secure containment locker in Site . All testing must be approved by Level 3 staff or higher. All uncontained instances of SCP-1106 discovered must immediately be secured and brought into containment.

Description: SCP-1106 is a cylindrical metal chamber composed of an unknown alloy determined to be roughly 96% iron. During its "standby" phase, SCP-1106 is inactive and its top cover will be open, granting access to the interior; however, the inside is consistently found to be empty during the "standby" period. If at any point a human tissue sample is placed inside the chamber, such as a buccal scraping, or a sample of blood, saliva or [REDACTED], SCP-1106 will close and enter its "locked" phase. All attempts to open or otherwise access the interior of SCP-1106 during its "locked" phase have proven unsuccessful. Attempts to place cameras or other devices inside SCP-1106 to observe the inside during the "locked" phase have also failed; it appears that the item will not close and lock if there is any inorganic material inside the chamber. Three (3) months after the initiation of the "locked" phase, the chamber will reopen and produce a human infant genetically identical to the sample donor. The products of SCP-1106, hereby referred to as SCP-1106-1, in the majority of all cases will develop normally and be indistinguishable from a naturally born human.

Nonetheless, in a small portion of cases (about %), instances of SCP-1106-1 will be born with marked defects. Recorded defects include SCP-1106-1 being born with abnormal numbers of limbs, being born without skin, being born with the system positioned outside of the body, and potentially dangerous deviations in [DATA EXPUNGED] coupled with a significant increase in aggression. Most

notably, one instance of SCP-1106-1 was discovered to be emitting a remarkably high level of gamma radiation, forcing the immediate vicinity to be evacuated.

Addendum 1106-01: Transcript of label affixed to the exterior of SCP-1106

> Thanks for your purchase of your own genuine Grow Your Own Child™ Kit, brought to you by your friends here at THE FACTORY! Procreation has never been so EASY and so FUN! Just place your DNA sample inside and watch the Grow Your Own Child™ Kit work its magic - your child will be ready in less than three months, guaranteed!*

SCP-1107: A Signal

Item #: SCP-1107

Object Class: Safe

Special Containment Procedures: Although SCP-1107 cannot be directly contained, it is important that knowledge of SCP-1107 not be released to the public. As SCP-1107 is difficult to receive, cover-up is easily accomplished by the insertion of agents into the United States' National Aeronautics and Space Administration. These agents have been attached to research groups studying the telemetry from the following long distance space probes:

- Pioneer 10 (Surveillance discontinued in 2003)
- Pioneer 11 (Surveillance discontinued in 1995)
- Voyager 1
- Voyager 2
- New Horizons (Surveillance initiated on / /2010)

More surveillance is only required should further long distance space probes be launched.

Addendum 1107-09: Following the translation work by Dr Holst, suggestions for reacting to SCP-1107 are outlined by procedures in Addendum 1107-08.

Description: SCP-1107 was discovered in 1977, in telemetry received from the Pioneer 10 long distance space probe. It has been subsequently re-discovered by any space probe that ventures further than 12 astronomical units (approximately 1.8 billion km) from the sun.

SCP-1107 consists of a radio signal in the extreme-low-frequency range, normally observed at less than Hz. The low frequency and intensity of this signal means that it is extremely susceptible to interference from natural and man-made sources of particle-based

and electromagnetic radiation. As a result, it can only be reliably distinguished from background radiation when the receiver is at extreme distance from any source of interference. Most crucially, this includes the electromagnetic radiations emitted by the sun, limiting reception to the outer solar system.

The signal exists as a series of low frequency, amplitude modulated carrier waves. The modulation of the signals varies discretely from either a high or a low amplitude, displaying characteristics of a digitally encoded message. The bandwidth of these signals is extremely low, with estimations of the bit-rate being around 90 b/year. Despite this low data transmission rate, SCP-1107 clearly represents a transmission of intelligible data within our solar system. Currently, the information content of these signals is unknown.

Triangulation of the signals by the available probes has determined that they are emitted by objects found in the Kuiper belt and Oort cloud in the outskirts of the solar system. Lower bound estimates on the number of objects emitting these signals suggest that there are over million separate transmitters.

Telescopic observation of some of the nearer transmitters reveals them to be asteroid like bodies. Spectrograph analysis of these bodies reveals them to contain unusually high purity silicon and silicate based crystals, with phosphorous and boron based dopants. Thermal telemetry reveals a discrepancy in the amount of solar energy absorbed on the "hot" (sun-facing) side of these objects and the infra-red energy emitted by the cold (outwards-facing) side. Foundation researchers have hypothesised that this discrepancy would be sufficient to allow extraction of energy for useful tasks. However, the energy extracted would be almost negligible, suggesting that such tasks would either need to be very small, or be carried out over a long time. Given that no mechanical action has been observed by SCP-1107 emitters, the most likely purpose of this task would be some form of information processing activity.

Addendum 1107-08: LIMITED TO O5 LEVEL CLEARANCE ONLY

Addendum 1107-08:

As of / /20 , Dr Holst has made significant

breakthroughs in the translation of SCP-1107. This was largely accomplished by associating certain common patterns within SCP-1107 with astronomical positions, and planetary orbital information. Dr Holst reports that the language of SCP-1107 bears similarities with computer based languages, however with greater provision for parsing semantic content such as used by sentient individuals. The following is an attempted translation of the most broadcast signal found within SCP-1107. The low bit-rate of SCP-1107 means that this signal has been recorded over a ten year-span, with further recording ongoing.

> The [unclear, possible amalgamation of "hot", "life" and "intelligence"] has ascended once more.
> It is time for [me/us] to act. [Possibly an interrogative]
> [You/I] must [either "choose", "debate" or possibly "vote"] now.

Given the implications of this, the WCS committee has been tasked with suggesting an appropriate contingency response. Currently, the only procedures forwarded have been protocol 06-MOSES or protocol 11-PORCUPINE. Neither of these are considered satisfactory at this time.

SCP-1108: A Swamp God

Item #: SCP-1108

Object Class: Euclid

Special Containment Procedures: The first recorded appearance of this phenomenon is dated 19 , filed in Foundation records as an Extranormal Event. However, at least ten repeat-occurrences have since been verified, precipitating numbered status and close observation.

Data recorded by surveilled meteorological centers will be transmitted to Research Sector-09, and should be consistently monitored for similarities to past data. Early signs of a recurrence of SCP-1108 must be promptly identified.[1]

Description: SCP-1108 is a meteorological phenomenon which has only been observed along the southeast coast of the United States, recurring most frequently along the east coast of Florida. Most observers at ground-level experience SCP-1108 as a heavy fog, with no evident anomalous properties.

However, from an elevation above or approaching 450 m the formation reveals a distinct shape. Based on aerial photographs and the surrounding ecosystem, this shape is best described as resembling *Alligator mississippiensis*, the American alligator.

In ideal conditions, the anomaly appears in enough detail for eyelids, teeth and individual scutes to be clearly identified. Aerial and even peripheral observation indicates that the vaporous mass even moves its "limbs", albeit slowly, mimicking the reptile's distinctive gait.

SCP-1108 most frequently appears a few hours before dawn, often emerging from an existing cloud-bank at a dew point and temperature consistent with fog formation. This "gator formation" will

maintain its distinct size and shape for upwards of six hours. During this six hour period, SCP-1108 traverses an area of approximately 50 km length, always toward the bordering Atlantic. The form appears to gradually dissipate into the atmosphere.

The effects on the local ecosystem do not become apparent until after the formation's departure. These apparent influences have so far included an irregular rise in fresh water levels and an abnormal displacement of local wildlife.

Specifically, in areas directly overshadowed by SCP-1108's passage, adult *Alligator mississippiensis* have been found congregating in the dozens. The infestations occur far from areas highly populated by the native reptile, which appear in greatest numbers on private property and suburban developments, favoring swimming pools.

The lack of data from prior occurrences makes it difficult to predict whether the size, range, and extent of the phenomenon's influence have remained stable, or increased over time. Recorded appearances so far follow a regular interval, occurring up to three times every two years; always preceding the "wet season" of June-September. (*see Addenda*)

+Excerpt from Field Report 1108-16

Notable events which took place within 24 hours of SCP-1108's appearance over the 2185.2 square meters of residential space in P B County:

- 37 reports of juvenile and adult American alligators on private property.
- Woman reports adult male alligator inside of her kitchen; local media reported specimen's length as 4.3 m.
- 6 reports of alligators attempting to enter homes; while behavior not unprecedented, number of instances highly abnormal.
- Three non-fatal attacks of alligators on

humans, one resulting in significant injury.
- One fatal attack of juvenile male alligator against adolescent.
- 18 reports of missing pets.

The Florida Water Management District recorded an average of 16.5 cm rise in drainage canal levels, despite the lack of precipitation. As the majority of the southern portion of the state is kept above waterline by an extensive network of such drainage canals, any significant rise in freshwater levels could cause significant damage to populated areas.

Local wildlife control had sufficient manpower to prevent undue fatalities; however, it is unlikely that state budget or resources could adequately contain repeat occurrences. It is unknown at this time whether the intrusion of *Alligator mississippiensis* was a displacement of existing creatures, or indicative of a significant population increase.

Necessary information-control protocols were enacted without incident.

Addendum 7/1/ As of 6/21/ , SCP-1108 has made two consecutive appearances. Only the second was accompanied by an influx of *Alligator mississippiensis*; however, the rise in water levels mandated flood-evacuation in two counties. The extent of possible infestation of *Alligator mississippiensis* in flooded areas cannot be determined, at this time.

Addendum 7/9/ : During the most recent occurrence, field researchers reported a previously unrecorded phenomenon—described as "a series of low, drawn-out rumbles", which were sustained over several hours.

Radiometric measurements taken during the course of these

observations do not indicate temperature changes conducive to creating lightning. However, the subsequent recordings do bear a striking resemblance to the male alligator's bellow.

Footnotes
1. Containment proposals should be submitted to Dr. Dhara for review.

« SCP-1107 | SCP-1108 | SCP-1109 »

SCP-1109: The Painkiller

Item #: SCP-1109

Object Class: Safe

Special Containment Procedures: SCP-1109 is to be stored at a Safe-class storage space at Site- as per standard procedure and permission must be obtained from the current Level-2 supervising researcher (currently Dr.) before it may be removed from storage for testing purposes.

The edges of any sharpened instruments contained within SCP-1109 are to be covered during storage, so that handling the instruments cannot result in accidental injury. At the conclusion of testing all intact instruments must be placed back inside SCP-1109. Damaged instruments or instruments no longer fit for purpose are to be disposed of, but must not be used. During disposal or transport of instruments the instruments must be kept covered and placed inside a durable container resistant to cutting, in order to prevent accidental exposure to the effects of SCP-1109.

Personnel affected by SCP-1109 must attend regular basic medical examinations to detect any injuries incurred as a result of SCP-1109's effects. Additionally, those entering the three-month stage of exposure are required to attend regular psychological review sessions. They must be accompanied whenever possible by another staff member who has basic first aid training to avoid injury or damage caused by their actions. Personnel affected by SCP-1109 are barred from participating in any test or role involving handling of fragile materials, which require fine motor skills, or which involve combat.

Description: SCP-1109 is a black leather doctor's bag, approximately 44cm x 21cm x 22cm, with a metal fastener over the opening and a leather carrying handle. The words 'Aceso Medical: We'll take your pain away' are printed on the underside of the bag.

Aceso Medical closed in 19 and no member of the company has yet been found who knows anything of the object or its properties.

The anomalous effects of SCP-1109 become apparent when any form of instrument or tool with a sharpened blade or point is placed in the bag and the bag is closed. Testing shows the instrument must be left in the bag for approximately 30 seconds before effects become noticeable. Any medical instrument left in the bag is rendered sterile and clean upon its subsequent removal from the bag.

However, when a sharpened instrument is placed in the bag it takes on a second property. Any incisions, injections or other procedures performed using these items on a human being are seemingly painless. Subjects are aware that they are being operated upon and do not report a lessening of tactile sensation or numbing during the procedures, and may describe the experience as unpleasant, but do not register any form of pain.

Approximately two weeks from initial exposure, subjects cease being able to register pain in any context. This suppresses pain-based reflexes, and can lead to accidental injuries and sometimes serious errors in judgement due to the subject being unable to notice that they have been injured. Approximately a month from exposure, subjects lose the ability to perceive any form of physical pleasure. Emotional pleasure is unaffected and subjects can find most normal activities enjoyable, but lose the ability to derive pleasure or enjoyment from any purely physical stimulus. This effect extends to the sense of taste and at least partially to the sense of smell, as evidenced by the inability of those affected to differentiate between tastes and textures in food.

After approximately three months from exposure, subjects begin to suffer from a steady deadening of all tactile sensation. This begins with a gradual numbing of the extremities, but swiftly progresses over the course of several days to the point of being completely unable to feel any form of tactile sensation. Some subjects undergoing this process have been observed to develop masochistic tendencies and may resort to self-harm in an attempt to continue to register physical sensation. However, as the condition progresses even the most violent or severe of physical sensations become

completely numb. At this stage, many subjects become severely depressed and begin to feel isolated or alienated from others. This is not considered to be an anomalous effect, and is simply the psychological response to the loss of one of the senses. Only the sense of taste and touch are affected, and no lessening of the bodies' ability to function is observed. The subject loses much of their fine motor function as a result of this as well as a lack of a reflex response to stimuli with a purely tactile or pain-based response. Subjects at this stage may also injure others accidentally due to an inability to register contact with them; many overcompensate when applying force to an object, which can result in damage or injury.

Tools which have been placed in SCP-1109 and have developed these anomalous properties will retain them indefinitely, even when separated from the bag. They lose these abilities when the sharpened edge or point of the instrument is dulled or destroyed in some way. No incidental sharp points or edges on an instrument, such as jagged points caused by damage, will exhibit any anomalous effects: only the primary cutting edge or sharpened point of an item is affected. The effect only extends to items intended to possess a sharpened point or cutting edge capable of puncturing skin. For example, a sharpened pencil placed in SCP-1109 will not manifest anomalous properties even if its point punctures human skin, while a bread knife placed in SCP-1109 will develop anomalous properties.

Addendum SCP-1109-1: Injuries and incidents involving SCP-1109.

A1-1109-1: At 11:12 PM on / / Agent died in his sleep. Autopsy confirmed the cause of death to be an internal haemorrhage of initially unknown source. Careful review and investigation of the circumstances of his death have led to the conclusion that Agent received a small cut while transferring an instrument that had been removed from SCP-1109 for disposal 13 days prior to his death. Agent did not register this due to the painless nature of the injury. The day prior to his death he was involved in an incident in which a group of D-Class became violent and attempted to resist

Foundation authority. Agent was injured during a physical struggle with one of the D-Class, in which he sustained significant internal injuries which he failed to recognise due to the influence of SCP-1109. It is believed that Agent would have survived his injuries had he sought appropriate medical attention, but mistakenly believed he had escaped the altercation unharmed, and died as a result of his injuries during the night, some 10 hours after his initial injury. Testing of SCP-1109 has been postponed in order to facilitate a restructuring of containment procedures to minimise further exposure of Foundation personnel.

A1-1109-2: Agent died at some point between 8:00PM and 10:30PM while in his home on / / . Cause of death was gunshot wound to the right temple, believed to be self inflicted. An audio recorder found by the body contained a pre-recorded message to his loved ones and colleagues at the Foundation, blaming the object's influence for his mental state ending with the statement *"Well, what's the point in living if you feel like a ghost already?"*. Containment procedures have been modified and personnel exposed to SCP-1109 are now required to submit to mandatory psychological evaluations.

A1-1109-3: Investigation by Foundation Personnel led to the discovery of a civilian apparently suffering the symptoms of SCP-1109 exposure. Further investigation led to the discovery of an SCP-1109-affected scalpel which had somehow been transferred into a surgical theatre in Hospital. It is unknown whether the scalpel originated from SCP-1109 prior to its containment, if another item similar to SCP-1109 exists, or if an instrument from SCP-1109 was somehow removed from containment. An investigation into the matter is currently underway, but Agents are advised to pay close attention to any reports of 'painless' surgery while conscious, or of people with no ability to register pain.

Addendum 1109-2: Dr. has received requests to use SCP-1109 on D-Class personnel involved in the handling of certain objects which cause intense physical pain or pleasure. This request is currently pending approval.

« SCP-1108 | SCP-1109 | SCP-1110 »

SCP-1110: Videos of a Robbery

Item #: SCP-1110

Object Class: Euclid

Special Containment Procedures: MTF Gamma-5 ("Red Herrings") is to monitor all police scanner traffic within a 72 kilometer radius of the most recent manifestation of SCP-1110 in order to detect and scramble any potential reports of SCP-1110 activity to law enforcement. Once a report is detected and stopped, Gamma-5 units are to report to the location of origin disguised as local law enforcement as per hush protocol seven and confiscate all footage of SCP-1110. All cash losses incurred are to be replaced through Foundation funds. Special accounts dedicated to loss replacement drawn on private banks have been created and provided to MTF squad leaders accordingly.

A special task force of MTF Gamma-5 (Gamma-5-STF-7 "Reservoir Repairmen") has been created and tasked with impersonating a private security firm (SecureCorp Professionals) and gaining control of bank security in the area immediately surrounding recent manifestations of SCP-1110, in order to destroy footage of SCP-1110 as the event occurs, and to attempt to interfere if possible.

Description: SCP-1110 is a series of phenomena that thus far seems to appear only on video cameras manufactured later than 19 and centers around financial institutions such as banks or other repositories of currency in the United States. To date, instances of SCP-1110 manifestation have been confirmed, and between and unconfirmed cases are suspected to involve SCP-1110, with at least one case coinciding with a typical bank robbery that occurred simultaneously in the same institution, making loss verification impossible. Unexplained losses by financial institutions lacking video monitoring systems are included in this approximation.

During a typical SCP-1110 manifestation, two humanoid entities with their faces obscured by dark material designated SCP-1110-1 and SCP-1110-2 can be seen on camera footage entering the financial institution brandishing guns in a threatening manner, coupled with aggressive body language. SCP-1110-1 and SCP-1110-2 typically wear dark clothing, and are distinguished by a grey hood on SCP-1110-1 and what seems to be a skull like mask obscuring on SCP-1110-2. The pair will generally approach a teller and move in a fashion indicative of robbery demands. At this point the teller in the video will seem to comply with these demands by raising their hands above their heads and carefully handing over money, which SCP-1110-1 will place in a briefcase while SCP-1110-2 maintains its threatening pose toward the teller. Once a sum of cash between and has been handed over, SCP-1110-1 will seal the briefcase and nod to SCP-1110-2, and the entities will exit the building.

Note that the entities and phenomena occur only on video. During the time frame that video records SCP-1110 activity, business will commence as usual in the bank. No teller or customer present during an SCP-1110 event, including Foundation personnel on the scene, has ever seen, heard, or felt SCP-1110-1 or SCP-1110-2, even in cases where they have been shown in the video to physically assault or [DATA EXPUNGED]10-a.)

Following a manifestation of SCP-1110, a sum of cash approximately equal to the amount shown being stolen in video footage will be missing from the place of manifestation. There have been confirmed cases of the entities stealing other items during a manifestation, including an incident in which SCP-1110-2 apparently demanded that a bank patron hand over his wristwatch. Following the manifestation, the patron commented to Foundation interviewers that his watch was present, but had stopped at the instant of removal shown in the video.

Addendum-1110-a: *On / /19 , a teller was shown in SCP-1110 footage to resist, and was subsequently shot by SCP-1110-2. Post incident reviews with other bank employees revealed [DATA EXPUNGED].*

Addendum-1110-b: *Yes, I am aware that the containment protocols*

for SCP-1110 currently allow the possibility that legitimate crimes will go and have gone unreported due to accidental interference by MTF Gamma-5. I assure you all that this is a risk we must accept in order to maintain containment and prevent public knowledge of SCP-1110. -MTF Commander

Addendum-1110-c: *On // , security cameras for a small pay-to-park business adjacent to the financial institution targeted by SCP-1110 captured footage of SCP-1110-1 and SCP-1110-2 fleeing the building on foot and entering a delivery vehicle parked in the pay-to-park lot. The vehicle was not recorded in the payment logs of the pay-to-park enterprise, nor was it observed by the employee operating the toll gate, and was driven by what appeared in the footage to be a Caucasian person of indeterminate build. The logo on the vehicle was noted by the agent who recovered the footage to bear a striking similarity to [REDACTED], and the possibility of a connection is currently under investigation. A proposal to add the modification of security video systems to include exterior and parking area cameras in all financial institutions under observation by MTF-G-5-STF-7 to containment protocols for SCP-1110 is under review pending authorization from Commander .*

« SCP-1109 | SCP-1110 | SCP-1111 »

SCP-1111: The White Dog

Item #: SCP-1111

Object Class: Euclid

Special Containment Procedures: A restricted zone has been established in a 2 km radius around SCP-1111-2; a public statement was released declaring it to be a weather monitoring station. Cameras are suspended from weather balloons, constantly monitoring the enclosure. Individuals may not come within 1km of SCP-1111-2 without explicit written permission from a level 4 researcher or higher. Should SCP-1111-1 move away from SCP-1111-2, all personnel are to evacuate the restricted zone until SCP-1111-1 returns to its position beneath SCP-1111-2.

Description: SCP-1111-1 is an entity with an appearance similar to that of *Canis familiaris*, commonly known as the domestic dog. The size of SCP-1111-1 varies with its distance from SCP-1111-2; directly beneath it, SCP-1111-1 is approximately 150 cm from ground to shoulders. The exact breed of SCP-1111-1 is unclear; it appears to be a mix, with traits of both a Labrador Retriever and a German Shepard clearly visible. SCP-1111-1 possesses a white coat and red eyes, both of which glow at luminosities directly proportional to its proximity to SCP-1111-2. At distances greater than 500 m from SCP-1111-2, SCP-1111-1 gradually becomes translucent. Additionally, SCP-1111-1's speed, strength, and agility all seem to be inversely proportional to its distance from SCP-1111-2.

A dog tag is affixed to a faded red collar around SCP-1111-1's neck. The tag reads:

Loyal

Left alone, SCP-1111-1 lies down beneath SCP-1111-2. It does not appear to sleep, or, if it does, is able to do so with its eyes

completely open. It does not eat, drink, or breathe.

Should SCP-1111-1 become aware of any person or object coming near SCP-1111-2, it will quickly become hostile and attempt to destroy the intruder. SCP-1111-1 has significantly increased physical abilities above a standard canine; video records show it running at speeds in excess of 60 km/hr, jumping 6 m into the air, and biting through 15 mm titanium plating. SCP-1111-1 appears to be incorporeal, and as such attempts to both neutralize it and examine SCP-1111-2 more closely have been met with failure. See Incident Log 1111-B for details.

SCP-1111-2 has the appearance of a man hanged by a noose from a tree. The subject wears a faded business suit and dress shoes; both are too worn to properly identify a manufacturer. SCP-1111-2 constantly jerks and twitches in a manner consistent with those of a man being hanged; occasionally gasps for breath can also be heard. The violence and energy of these jerks is directly proprotional to SCP-1111-1's proximity to SCP-1111-2; as the distance between the two increases, the jerks and twitches decrease in violence and frequency.

+ Incident Log 1111-B

Date: 05/02/19
A team of agents were sent to attempt to neutralize SCP-1111-1 for transportation to a containment facility. The team approached SCP-1111-2 from the North, opposite the direction SCP-1111-1 was facing. The agents were able to come within 300 m of SCP-1111-2, at which point SCP-1111-1 rose and attacked agents without warning.

Agent , realizing that the mission had failed, began to flee the area. SCP-1111-1 pursued, but decreased in size, definition, and speed as it grew further and further away from SCP-1111-2. When SCP-1111-1 reached a distance of 900 m from SCP-1111-2, SCP-1111-2 was observed to stop moving

entirely. At this point, SCP-1111-1 froze for a moment and turned its head towards SCP-1111-2. SCP-1111-1 stayed in this position for a few seconds before howling once and sprinting back towards SCP-1111-2. SCP-1111-2 was observed to resume its jerking and twitching.

Video records of the incident indicate that rounds fired at SCP-1111-1 passed through it without making contact, despite the fact that its teeth and claws proved solid when attacking agents. Agent was the only one to survive the incident.

O5- : From this point forward, only D-class and remote-operated drones may be used to approach SCP-1111 directly.

Date: 05/20/19
D-class armed with [DATA EXPUNGED] were sent to approach SCP-1111-2 from various directions. Incident proved similar to previous attempt; SCP-1111-1 proceeded to kill all D-class present.

During the incident, D-83011 was able to come within 50 m of SCP-1111-2 before being killed. During this time, cameras noted an anomaly with SCP-1111-2: its jerks slowed, and its eyes opened and fixed on D-83011. SCP-1111-2's arms then raised towards D-83011, in what appeared to observers as a welcoming embrace. Moments before D-83011 was killed by SCP-1111-1, SCP-1111-2's lips can be seen moving, mouthing what appear to be the words "no, down boy". Immediately after the death of D-83011, SCP-1111-2 fell limp and resumed normal twitching.

O5- : It appears as though simply isolating

SCP-1111-2 is enough to effectively contain SCP-1111-1. As such, all further testing is suspended, barring a significant development, until further notice.

« SCP-1110 | SCP-1111 | SCP-1112 »

SCP-1112: Shadow Play

Item #: SCP-1112

Object Class: Safe

Special Containment Procedures: SCP-1112 is to be locked in Containment Cell 1112 at all times. Permission to study SCP-1112 must go through Dr. . As items are fragile, personnel are advised to handle objects with care. No further precautions are necessary.

Description: SCP-1112 is the collective designation for four (4) Han Dynasty-era Chinese shadow puppets dated circa CE. The items are cut from painted leather and stand 30 centimeters (12 in.) tall, typical of the era's design. Wooden sticks fastened to the joints animate the figures. When not operated, the objects do not exhibit any abnormal properties.

SCP-1112's perceptual effects manifest when the objects are animated between a light source and translucent screen by one or more individuals, as in traditional shadow plays. All members of the play's audience will perceive individual figures as the silhouettes of deceased, estranged or otherwise unattainable persons in their lives. The silhouette figures 'perform' scenes from their lives that either correspond to a subject's memories or are speculative and metaphorical in nature. No commonalities have been observed across all plays, except that they only include the deceased person(s) as the subject of the scene. Only the silhouettes are visible and will often interact with invisible characters and props (see Experiment Log 1112-1 for documented scenes).

Each figure is archetypal in design and symbolizes a category of interpersonal relationship, such as parental, familial or romantic bonds. The subject perceives each figure as an unattainable person with whom they shared that particular connection. Where no persons in the subject's life correspond to a figure, the puppet is non-anomalous. Close observation of the silhouettes by subjects

have revealed they behave as the real individuals in all aspects, even mirroring nervous tics and gesticulations only the viewer would have been privy to. The silhouettes move with a fluidity and precision that would be impossible with ordinary shadow puppets. The figures, however, do not vocalize.

Note that male figures can be observed as female silhouettes, and vice versa. The list of SCP-1112 items currently includes:

- SCP-1112-1: A concubine figure in a traditional gown. Often observed as the individual's dead lover, ex-wife, old flame, or an object of unrequited affection.
- SCP-1112-2: An Emperor figure wearing battle armor and brandishing a sword. Observed as the subject's dead/ estranged father or father figure.
- SCP-1112-3: An Empress figure in royal wear. Observed as the subject's dead/estranged mother or mother figure.
- SCP-1112-4: An ornately adorned ascetic figure with a demonic visage. Observed as a person that has inflicted physical and/or psychological trauma on the subject.

Although there have been no recorded effects of memetic compulsion to animate the items, individuals that do so (hereby referred to as users) become silent until the current 'play' is concluded. Looking behind the screen reveals no cause of the figure's perceptual effects; the users simply operate the puppets according to their desires and ability but are unresponsive to external stimuli. As long as the figures are being moved behind the screen, SCP-1112's effects will manifest. When the user ceases operating the figures, all scenes will conclude together, however varied in nature.

The play users perform is never seen by the audience and has no bearing on the subject matter perceived. The nature and content of the performances is tailored specifically to individual members of the audience, even if other persons are present in room. Content of scenes tends to vary wildly depending on the figures used, the status of the subject's relationship with the perceived persons, and

other psychological predilections. Due to the intimate and emotional subject matter of the performances, understanding the context of documented scenes is dependent on the subject's interpretation of what are often private, inscrutable, and disturbing revelations into their loved one's lives.

Recorded plays with only one figure have included scenes depicting the person's final hours in real time, birth, childhood, traumatic experiences, everyday life, personal triumphs and more esoteric scenes that could not possibly have occurred, but are inferred to be symbolic representations of some aspect of the late person's life. Plays that have included multiple figures have deviated wildly in content, such as the figures holding a roundtable discussion on their opinion of the subject (inferred due to lack of vocalizations), to [DATA EXPUNGED].

+ Click to access 1112 Experiment Log

Experiment Log 1112-1

Experiment 1112-001:
Subject: D-12344, middle-aged male with deceased mother
Figures: 1112-2
Reported Description: Subject became increasingly agitated over the duration of the play, and became hostile when questioned by Dr. . Subject was sedated and forcibly contained in a psychiatric holding cell until Dr. explained the nature of SCP-1112 and was able to coax D-12344 into cooperating. Subject reportedly witnessed a silhouette of his late mother violently assaulted by an invisible assailant for three minutes and thirty four seconds. Scene matched the memory subject had of an identical assault by his mother's then-partner, a of Wichita, Kansas. Foundation Agents were able to procure appropriate records from the WPD and found a domestic assault charge from / / . Attached police report confirmed the sequence of events.

We've established the veracity of the scenes SCP-1112

presents to us, so we know it is either capable of limited omniscience in regards to what it 'performs' for its viewers or that it somehow dredges up old memories. Research is ongoing - Dr.

Experiment 1112-003
Subject: D-13996, middle-aged male with deceased parents
Figures: 1112-2 and 1112-3
Reported Description: Subject described having observed the silhouettes of his mother and father ballroom dancing for nine minutes and fourteen seconds. D-13996 was unaware of the scene ever occurring, and stressed their marriage was generally untroubled. Whether the play event was a re-enactment of a real life occurrence or a metaphorical interpretation of a relationship on the part of the item is as of yet undetermined.

Experiment 1112-013
Subject: D-19564, late-20s female with deceased parents and ex-husband
Figures: 1112-1, -2, and -3
Reported Description: Subject reported to have observed younger silhouettes of mother and father engaged in conversation with ex-husband. At approximately the four minute mark, the ex-husband reportedly placed his arm around the mother's waist, provoking a physical altercation between the two males. Subject's father was apparently knocked unconscious. Play ended on shot of ex-husband and mother in physical embrace. Subject became flustered while recounting the event. Placed in holding cell until conditions improve.

We don't know if the items are deliberately fabricating psychologically harmful content, or if it is simulating some of its subject matter based on real, unquantifiable variables. We just don't know. - Dr.

Experiment 1112-030

Subject: D-13961, middle-aged male with a deceased mother
Figures: 1112-3
Reported Description: Subject observed the silhouette of his mother methodically dismembering itself over the span of an hour. Figure began with rear, progressed to the thighs, stomach, backside, and was amputating its left arm before D-13961 became hostile and testing was halted. The figure appeared to be unaffected despite severe blood loss. D-13961 became extremely unnerved as scene progressed and was placed in a holding cell for the remainder of the day. In a follow-up interview, D-13961 explained his mother had struggled with body dysmorphic disorder. Subject confirmed she had recently expired of natural causes.

Even the most bizarre scenes have some basis in reality. — Dr.

Experiment 1112-032
Subject: D-18431, teenaged male incarcerated for murder
Figures: 1112-4 and 1112-1
Reported Description: 1112-4 reportedly manifested as [REDACTED]. 1112-4 proceeded to 1112-1 huddled on the far side of the screen and [DATA EXPUNGED]. Testing halted when subject broke restraints and assaulted user. Terminated ahead of schedule. First documented instance of a prop item materializing on screen. 1112-4 noted to have felt slightly warm to touch for next hour.

SCP-1113: Lachesis' Spinner

Item #: SCP-1113

Object Class: Safe

Special Containment Procedures: Due to it posing no risk when in a passive state, SCP-1113 can be stored in a secure box in a standard containment room. If required for testing it may be signed out for use by Level 3 researchers and above. Any testing involving D-class mortality must be approved in writing by a member of senior staff prior to commencement.

Description: SCP-1113 is a small spinning top comprised of a hollow bronze base, heavily oxidised and showing small flecks of blue from having been previously painted. The upper section is a porcelain figurine of the upper body of a woman, painted with enamel and with a blue and brown blouse made of a rough cotton. It is spun by means of wrapping the string around it and then pulling firmly to rotate the top at speed. The figurine is attached to the bronze segment by a clear resin-like glue concurrent with the apparent age of the manufacture (c.1915). The bronze component has been estimated by thermoluminescent dating to have been cast around 50 BCE (± 40 years). There are imperfections in the alloy and tooling marks on the inside of the top that suggest that the bronze has been retooled and was formerly used in a different construction.

When SCP-1113 is spun by hand the person doing so does not age or suffer any degeneration to their body due to the effects of aging or illness for as long as the top is spinning. Tests using automated robots spinning the top suggest that it will spin for anywhere up to fourteen hours when spun with sufficient force (using levels of force within realistic limits of human strength). Any wounds caused before or during the top being spun remain present and are not affected in any way. The individual is still mortal to life-threatening injury while the top is being spun.

The top came to the attention of the Foundation in when alerted by a member of the London Metropolitan police force with connections to the Foundation. He reported that it had been taken as evidence from a house in Brighton, UK which had been entered by Sussex police after reports by neighbours of an unpleasant smell. On forcing their way into the house they discovered the corpse of a man who was estimated to be around 70 years old. His body was on the floor with one arm stretched out under the sofa. Officers found the spinning top at the back of the sofa. His right palm showed heavy callouses at the base of all the fingers and a wound approximately 1cm deep across the centre of the palm which appeared to be cauterised through burning or friction. Estimates suggest that it would take many weeks of constant friction between the string and palm to cause such extensive damage. There was also severe damage to the right shoulder socket and extreme dislocation caused by the arm being overextended in attempts to reach the spinning top.

Although there was very little personal information found in the flat the body was identified as belonging to Richard Mark Piper, from a 19 driving license and a birth certificate found in the flat giving the deceased's date of birth as 24/12/18 . Further information may be found in the supplemental materials, consisting primarily of a set of journals found at the home of the deceased and the police witness reports from neighbours.

Supplemental Materials 1113-2C: Fragment from Journal of Richard Mark Piper (errors author's own):

January, 19 :

It definitely works. I mean, I'm not sure how, but every time I start the top spinning, it's like my hands are opening, expanding like a parched man given a cantene of water. If I'd had this sooner I could have helped win this damn war.
I wonder how it works, it's magnetism perhaps, or some of that crystal howkum. Howkum? What am I saying? I'm writing this using a fountain pen with my wonderful, working hands!

April, 19 :

The people at the club are always asking how I look so good for my age. They think I'm a 60 year old that looks 50 and they're impresed, imagine if they knew the truth – I remember the last Coronation, let alone this one! This truly is a marvel, I wish I could tell the world what I have discovered, but then it would be taken from me, I know this. If only I could let Rachel use it, she seems so frale these days. But if I did I know she'd not be able to resist telling friends, woman can't even get a new night cream without telling everyone on the street about it.

June, 20 :

Cant hold thpen very well, my hand is awfull sore, cant stop though, I can fel HIM brething down myneck, the reeper, I know Iv held HIM off too long, its getting harder andharder nowshe only spins for a cupple of minutes at atime. She must keep dancig, she dances so beatifuly.

I don want to die.

Addendum Although it's clear that the effect of this item could result in its use becoming obsessive, we have no evidence on whether or not this is merely psychological or a conditioning created by the SCP itself. Until this is known it is suggested that use is restricted to D-class personnel.

« SCP-1112 | SCP-1113 | SCP-1114 »

SCP-1114: What a Dummy

Item #: SCP-1114

Object Class: Euclid

Special Containment Procedures: SCP-1114 is to be contained in a secured modular locker at Storage Site-12. This locker is to be placed within the perimeter of the compound, at least 75 meters from any other structure or outdoor area accessible to personnel and/or SCPs. SCP-1114 is to be observed by a CCTV camera, the feed from which needs to be analyzed continually by optical image recognition software for potential changes to the SCP-1114's deformable face plating. The camera and the server running this software are to be connected to a backup power supply so that in the event of a power failure, continued surveillance is guaranteed. Weekly maintenance checks of both camera and server are to be executed by authorized technical staff.

Tests using SCP-1114 are to be authorized by a level 4 member of research staff. If an anomaly is detected outside of scheduled testing, the senior research staff member on-site is to enact Protocol Wanderlust immediately. A security detail is to then search the area around SCP-1114's location for human remains should no such remains be present in its locker.

Description: SCP-1114 is a model SA- - automotive crash test dummy from the Hybrid II th series as manufactured by between 19 and 19 . A mark was discovered stamped into the underside of the SCP-1114's solid vinyl foot, identifying its production date as / /19 . Research into the company's history has not yielded any significant events around that time to account for the SCP-1114's properties. Samples taken from SCP-1114 indicate it is constructed of materials appropriate for both the time period in which it was manufactured and for the model in question: a steel skeletal construct with aluminum and bronze joints covered in various solid vinyl skin and vinyl foam components.

In its inactive state, SCP-1114 is for all intents and purposes a typical automotive frontal impact crash test dummy. Its anomalous properties manifest when a human being sustains a physical injury within a range of 50 meters from its current position. SCP-1114 then imprints on the subject and its face plating remolds itself to resemble the face of the subject. Any physical injury through external forces will then manifest only on SCP-1114. This has been proven to include blunt force trauma and puncture wounds of various levels of severity. Strikes with blunt or sharp implements will appear to bounce off the subject, but if the blow would have severed any part of the subject's body, it will sever a corresponding part on SCP-1114. However, tests have also demonstrated that while the damage itself is not applied to the subjects, the pain is. When trauma is induced, subjects exhibit behavioral patterns appropriate to a person receiving that trauma. This includes screaming, weeping and on a physiological level, loss of consciousness.

This effect has been observed to be reciprocal, with any damage done to SCP-1114 manifesting on the body of the subject imprinted on. When SCP-1114 is damaged, test subjects immediately develop the appropriate trauma and according sensations. If SCP-1114 is displaced by the injury caused, this movement does not appear to carry over to the subject.

Damage done to the SCP-1114 when in its inactive state does not seem to have an abnormal effect. Damage shows up and remains on SCP-1114 until it next activates. At that point all damage disappears as described below.

Once imprinting has occurred, SCP-1114 does not appear to imprint on another subject. This process does not seem to be reversible except by termination of the subject. Unless the test subject qualifies for continued existence as understood in guideline 1114-G-01, Protocol Wanderlust is initiated.

Upon unimprinting SCP-1114's face plating reverts to its initial form and any and all damage done to it instantly disappears. This includes previously severed parts reappearing, even if previously removed from the test site or destroyed. The method by which it reassembles itself is unknown at this time. If these events do not transpire within 30 minutes of the subject having been declared

officially terminated, SCP-1114 is to be destroyed. Staff are to be alert for the appearance of remains on-site.

Addendum 1114-A-01: *Recovery and preliminary containment notes*

SCP-1114 was discovered on / /20 at , Germany in the plant after it had been used in a safety test for the new model SUV. Foundation operatives were called in after sleeper agents within the plant made contact and reported the incident. A press release was sent out detailing an unfortunate industrial accident.

Addendum 1114-A-02: *Excerpts from testing log 1114-T*

> **Test designation:** 1114-T-01
>
> **Name/Personnel ID:** Dr. -
>
> **Test subject:** 1 common chimpanzee (*Pan troglodytes*), 1 short-beaked common dolphin (*Delphinus delphis*), 1 chicken (*Gallus gallus domesticus*)
>
> **Summary goal:** To see whether SCP-1114 is able to imprint on other species.
>
> **Transcript:** All animals were sedated and strapped in place to secure ease of handling.
>
> A needle was inserted into the chimpanzee's left upper thigh. No change to SCP-1114's face plating occurred within a period of thirty minutes following the initial injury and the chimpanzee was taken back to its cell.
>
> A small cut was made in the dolphin's dorsal fin. No change to the SCP-1114's face plating occurred within a period of thirty minutes following the initial injury and the dolphin was taken back to its own tank.
>
> The chicken had one of its wings broken. No change to the SCP-1114's face plating occurred within a period of thirty minutes following the initial injury and the chicken was taken to the mess.

Conclusion: SCP-1114 does not seem to imprint on other species.

Test designation: 1114-T-15

Name/Personnel ID: Dr. -

Test subject: D-53466

Summary goal: To determine the extent of the relation between SCP-1114 and the test subject after imprinting.

Transcript: D-53466 was forcibly strapped in place in a high-backed chair by security staff present.

A needle was then inserted in the subject's left upper thigh. The image recognition software registered a change to SCP-1114's face plating after approximately 5 minutes. Dr. - then instructed one of the security staff present to hit D-53466 over the head with his baton. D-53466 pleaded loudly, but was struck as instructed. No injury presented itself on subject's body, but SCP-1114 immediately developed a large dent in the area where D-53466's head been struck. Subject did exhibit signs of distress after the blow, complaining of severe pain and repeatedly attempting to reach for his head.

After this test, SCP-1114 was [DATA EXPUNGED] remains were collected and disposed of as per regulations.

Conclusion: SCP-1114's imprinting on subject does not transfer feelings of pain to SCP-1114, only physical damage to subject's body.

Test designation: 1114-T-53

Name/Personnel ID: Dr. -

Test subject: D-92832

Summary goal: To determine how damage done to

SCP-1114 affects test subjects.

Transcript: D-93832 was strapped down as per testing protocol. Subject was extremely apprehensive and agitated, requiring several security personnel to restrain him. Dr. - left the room and returned with a sedative. After forceful application of said sedative and a small time spent waiting for it to take effect, testing proceeded. A needle was then inserted in the subject's left upper thigh. A change to SCP-1114's face plating was registered after approximately 3 minutes and 20 seconds. Security staff was then instructed to discharge his sidearm at the SCP-1114's head at point-blank range.

D-93832 was allowed to recover from the effects of the sedative in his cell. Dr. - was returned to his next of kin in a closed casket.

Conclusion: Testing protocol needs revision. We need to very carefully match the face plating against ALL personnel in the activation radius, not just test subjects.

« SCP-1113 | SCP-1114 | SCP-1115 »

SCP-1115: Distant Early Warning

Item #: SCP-1115

Object Class: Euclid

Special Containment Procedures: No attempt to capture, intercept, or interfere with SCP-1115 is to be made until further notice. SCP-1115's movement is to be monitored by satellite at all times and by Foundation UAVs trailing at a distance of 50 km. Equatorial weather conditions are to be monitored and Mobile Task Force Upsilon-638 (Phoenix Nest) is to be placed on standby in the event of any phenomena which could result in a disruption of SCP-1115's route. All transmissions of SCP-1115-2 are to be recorded for analysis. In the event of any major deviation from SCP-1115's itinerary, Site 731 is to be evacuated and authorization is granted to execute Procedure Greenbriar at O5 discretion.

A Foundation front company, Space Communication Properties, has acquired licenses to test UAVs for communications purposes in airspace above the equator. Any sightings of SCP-1115 shall be attributed in the media as being prototypes of these UAVs.

In the event that any part of SCP-1115 ceases functioning, Phoenix Nest is to deploy and retrieve it as soon as possible, to be transferred to Site 731 for dismantling and storage. Recovered SCP-1115 artifacts are not to be exposed to any light more intense than 1000 lux.

Description: SCP-1115 currently consists of 87 toroidal unmanned aerial vehicles, approximately 1.2 meters in diameter, of unknown manufacture and origin. At all times since direct observation began in 19 , all SCP-1115 drones have been in flight at an average altitude of approximately 15 km above sea level, traveling due west above areas within 20 degrees latitude north or south of the equator, at an average speed of 1600 km/h. SCP-1115's speed is synchronized to the solar terminator.[1] SCP-1115 maintains itself at a

distance of approximately 45 degrees longitude east of the terminator, resulting in its remaining in a daylit part of the world at all times. SCP-1115 maintains this route at all times, completing a circuit of the globe every 24 hours, altering course only if its direct route is impeded by cloud cover or inclement weather. No SCP-1115 drone has been observed to enter a clouded area. The drones comprising SCP-1115, when not being interfered with by outside forces or moving to evade meteorological phenomena, fly in a pattern comprising several V-formations of the type displayed by migratory birds. The presence of several missing spots in each formation indicates that SCP-1115 initially consisted of at least drones.

At approximately 0500 UTC each day, while SCP-1115 is overflying a region of the Sahara desert located at º ' " N., º ' " E., an individual SCP-1115 drone will descend to approximately 5,000 meters above surface level and transmit a radio signal, designated SCP-1115-2, before ascending and returning to its place in formation. SCP-1115-2 is an audio recording, between 41 and 46 seconds in length on all recorded instances, of a synthesized male voice speaking a language not identified by the Foundation. A large portion of the recording remains the same in all recorded instances, while several other portions vary daily. SCP-1115-2 has occurred every day that SCP-1115 has been under observation except when cloud cover has made it impossible for an SCP-1115 drone to descend to the transmission zone. The intended recipient of SCP-1115-2 has not been identified; several Foundation surveys of the area have failed to locate any pre-existing radio antennae or artifacts similar to SCP-1115. For information regarding the history and translation of SCP-1115-2, refer to addenda.

To date, SCP-1115 has resisted any attempts to capture a drone while in flight. Individual SCP-1115 drones have demonstrated an ability to evade missile and cannon fire as well as ground-based anti-aircraft weapons, and to disable pursuing aircraft by generating an electromagnetic pulse that SCP-1115 itself is not affected by. On / /19 , an aircraft with shielded electronics was used to attempt to intercept an SCP-1115 drone. When the aircraft continued pursuit after the EMP was deployed, the drone responded by ramming the aircraft and detonating a miniaturized nuclear device installed within

it, destroying itself and the aircraft, and producing a 5 kt airblast over the [REDACTED] where pursuit was occurring. Emergency aerial dispersal of Class-E amnestics in populated areas near [REDACTED] was conducted and Foundation media assets attributed the after-effects to forest fires. All further attempts to intercept SCP-1115 are preemptively denied.

In addition to the incident described above, three SCP-1115 drones have ceased functioning since observation began. Two of the three crashed into the Pacific Ocean after an unidentified failure resulted in their suddenly losing altitude; due to the depth of the crash regions the Foundation has deemed them unobtainable. The third, which crashed on land near [REDACTED] in north Africa in 1942, was not immediately obtainable due to ongoing military conflict in the region; surveys conducted after the war ended have failed to locate it and it is currently believed to have been buried entirely by shifting desert sands. The Foundation has acquired one intact SCP-1115 drone, designated SCP-1115-1, to date; for information on its history and findings regarding it, refer to addenda.

Addenda:

+ Show SCP-1115-1 History and Analysis

SCP-1115-1 was discovered in 1856 by a British archeological expedition in Borneo. At the time of its discovery, it was partially buried and heavily caked with volcanic ash identified as having originated from Mt. Tambora.[2] It is speculated that the sudden eruption of Mt. Tambora resulted in SCP-1115-1's propulsion system becoming clogged with ash before it could correct its course, causing it to fail and crash. The expedition sold SCP-1115-1 to the Rajah of Sarawak, who displayed it as a curio in his royal palace until it was acquired by the Foundation in 1901. As the Foundation lacked the capabilities to properly examine it at the time, it was classified as an anomalous object and archived in Reliquary 38. In 20 , a Foundation archivist discovered the similarity between the artifact and SCP-1115, leading to its being reclassified as SCP-1115-1 and transferred to Site 731 for study.

The exterior surface of SCP-1115-1 was found to be composed almost entirely of solar energy collector panels composed of an unidentified polymer. Upon exposure to a bright spotlight generating approximately 5000 lux, SCP-1115-1 immediately became active and began transmitting a previously undocumented variant of SCP-1115-2. Transmission stopped within five seconds of the spotlight being removed. Later data analysis indicated that, during the period the transmission occurred, seventeen SCP-1115 drones broke formation and began to divert from their previous course in the cardinal direction of Site 731. Further exposure of any captured SCP-1115 artifact to bright light is prohibited.

SCP-1115's propulsion system is highly efficient, deriving all necessary power from the solar panels, and appears to be based on theoretical models of [REDACTED] that the Foundation does not yet have the capability to test fully. The majority of SCP-1115-1's interior, and all of its external extensions except for a radio antenna, consisted of a wide variety of environmental monitoring devices, not all of which have been identified. Devices for measuring temperature, wind speed, humidity, atmospheric concentrations of oxygen, carbon dioxide, and several noble gases, radioactivity, and [REDACTED] have been identified. Printed circuit boards incorporated into the onboard devices bear markings in an unidentified language, possibly the same one heard in SCP-1115-2. A nuclear device believed to be similar to the one detonated on / /19 was recovered, consisting of a cube 60 mm on each side composed of an unidentified alloy.

Radiometric testing of materials found in SCP-1115-1 indicate that the drone was manufactured approximately 12.3 million years ago, ± 600,000 years. Collection of further samples is deemed necessary to verify this date. SCP-1115-1 was partially reassembled and is stored at Site 731. A determination has been made that any future SCP-1115 artifacts recovered will be stored at Site 731

as well to prevent any possible further exposure of Foundation site locations to SCP-1115.

+ Show SCP-1115-2 History and Analysis

SCP-1115-2 was first detected in 1912 by a Foundation expeditionary unit, which was exploring the region of the southern Sahara to catalogue anomalous items reported there. Upon first reception, the signal was believed to be a unique event. When the same signal was received consecutively several days in a row, further investigation ensued, resulting in the construction of a permanent listening post to receive all further transmissions. As SCP-1115 itself could not be detected at the time, the signal was itself classified as SCP-1115. With the discovery of SCP-1115 in 19 , it was reclassified as SCP-1115-1, and later as SCP-1115-2 when the artifact now designated SCP-1115-1 was reclassified.

The Foundation has collected over 30,000 recordings of SCP-1115-2 to date. SCP-1115-2 has broadcast on approximately 97% of all calendar dates since observation began. As SCP-1115-2 is the only known example of the language spoken in it, attempts at translation have proved next to impossible. Foundation linguists have noted similarities between the language of SCP-1115-2 and the Basque language, as well as the constructed language . Due to the presumed age of SCP-1115, these similarities are believed to be coincidental.

The first breakthrough in translating SCP-1115-2 did not occur until 19 , when , a senior Foundation linguist, discovered that a certain word found in all early recordings of SCP-1115-2 had been replaced with a different and longer word beginning in July of 1945, and, in spite of frequent changes afterwards, the original word had never been used again. Dr. speculated, in conjunction with information gathered from the study of SCP-1115-1, that the word in question was in reference

to atmospheric radioactivity produced as the result of the detonation of nuclear weapons. Based on this assumption, Dr. and staff were, by 20 , able to decipher a series of words referring to numbers in a base-12 system. Based on the known purposes of instruments found in SCP-1115-1, inferences have been made identifying the meanings of several other words found in SCP-1115-2.

Below is a transcript of an SCP-1115-2 broadcast recorded on / /20 , with current speculated meanings footnoted.

> Yehom té ehal.[3] Alar e-ahallam.[4] Ahallam a-eh embarrah B8AA092A.[5] Teasté[6] 114.1. Annach heamé[7] 5A. Mearnoch am had dalles[8] 7 her. Yehom té ehal. Mear fallars[9] 0.00050A22. Yehom té ehal. Hemachem am mollah[10] 216060B. Yehar sel tevàs[11] A.6. Reham[12] 14A. Tevàs.[13] Turechem embarrah a-té 20, nar nares ahallam.[14] Yehom té ehal. Yehom té ehal. Yehom té ehal.

Footnotes
1. One of two lines drawn across the Earth's surface delineating the lit and unlit portions of the planet, which move constantly westward as the Earth rotates on its axis.
2. A volcano on the Indonesian island of Sumbara which in 1815 was the site of the most powerful volcanic eruption in recorded history.
3. Meaning unknown. This phrase repeats several times throughout SCP-1115-2. It is currently speculated to be a nationalist or religious proclamation.
4. Meaning unknown.
5. This number has increased by one in each subsequent recording. Currently speculated to indicate the number of successive broadcasts made.
6. Global mean temperature on an absolute scale similar to the Kelvin scale
7. Relative humidity

8. Wind velocity in an unknown scale, and an unidentified term possibly indicating direction
9. Atmospheric radiation in a measurement similar to the Sievert scale
10. Meaning unknown.
11. Meaning unknown.
12. [REDACTED]
13. Meaning unknown. In recordings in 1945, 1947-1973, 1979, 1983, 1997-1998, 2005, and 2009-2011, the phrase "Bé-tevàs" is heard instead.
14. Believed to indicate that SCP-1115 will report again the following day unless new orders are received.

« SCP-1114 | SCP-1115 | SCP-1116 »

SCP-1116: Humanoid Remote Drones

Item #: SCP-1116

Object Class: Euclid

Special Containment Procedures: SCP-1116-1 through -6 and -8 are to be kept in individual 5m x 5m x 3m containment cells at Site- . Each cell is to be shielded against radio-frequency transmissions of up to W transmissive power with frequencies ranging from Mhz to Ghz. All electronic monitoring and communications equipment must be hard-wired with shielded cabling. No wireless communication devices are permitted within m of any instance of SCP-1116. Site- is to maintain on "hot-standby" two (2) frequency-agile RF jamming devices of at least kW output, to be activated in case of containment breach by SCP-1116. No specimen of SCP-1116 is permitted above ground at any time unless fully enclosed in a container with the specified shielding. Line-of-sight to the sky must be blocked at all times.

Each cell is to contain one (1) chair constructed of non-metallic, non-conductive materials, secured to the floor and equipped with mechanical restraints and waste disposal facilities, as well as three (3) wide-spectrum RF antennas connected to software-defined radio receiving equipment. All recorded radio transmissions from SCP-1116 specimens are to be forwarded to Site- for analysis.

Specimens are to be fed three (3) times daily, with processed food only. Use of restraints during feeding is mandatory. Specimens must be led through calisthenics two (2) times daily, using vocal commands - see Schedule 1116-C for approved exercises and Document 1116-B for known command phrases and current macros. Cells are not to be opened during exercises; remotely-operated audio equipment is to be utilized, hard-wired and shielded as per above specification.

All testing of SCP-1116 specimens is to take place either within the

specimen's own containment cell or within a testing chamber shielded to the same specification. Transport between containment cell and testing chamber is to take place under armed guard, with the specimen restrained and both RF jamming devices activated. During transport and testing, all verbal interactions between researchers and/or security staff are to be confirmed by hand signal (see Addendum 1116-1).

The remains of SCP-1116-7 are to be kept in cold storage at Bio-Research Area-12 for further analysis.

Description: SCP-1116 is a group of 8 7 humanoids of varied race and gender, with apparent ages between 20 and 35 years. All initially appear to suffer from catatonic stupor, including symptoms of catalepsy. Specimens will swallow food and water when placed into their mouths, but will not chew. Specimens will remain in a given position when physically manipulated into said position. Specimens will attempt to maintain homeostasis (including sweat, pupil dilation, and fluctuations in respiratory and heart rate), but will not detectably react to pain stimuli (including heat, pressure or puncture), sexual stimuli (including both displayed images and manual stimulation), or environmental threats (including extreme cold, extreme heat, starvation, dehydration, or large predator animals).

SCP-1116 specimens show no evidence of volition, but will respond to a limited number of verbal commands (eg. "sit", "stand", "raise right arm"), and can remember a sequence of commands for later execution when preceded by a macro phrase (see Document 1116-B for more details). This command vocabulary is extremely narrow, however, including only references to gross motor functions, simple counting, and a small number of basic spatial relations.

CT scans of SCP-1116 revealed specimens to possess <10% of the expected neural mass, with the remaining cranial volume occupied by cerebrospinal fluid. Embedded in the outer layer of the skull is a mesh of metallic filaments, composed of an alloy of silver (%), zinc (%), and [REDACTED] (%), and forming a pattern closely resembling a -iteration box fractal. SCP-1116 specimens appear to use this mesh layer as a radio antenna, and will transmit - times per hour on different frequencies. Energy for these transmissions appears to derive from normal metabolic processes, but the specific

mechanism for generating the required current has not yet been identified. The only vocalizations from specimens to date (excepting Incident I-1116-23, see below) have been low-volume, atonal "singing" noises corresponding to periods of radio transmission. Cryptographic analysis of outbound transmissions is ongoing - current evaluations indicate they are likely connection requests using an unknown protocol.

Addendum 1116-1: After the events of Incident I-1116-23, it has been determined that the cranial antenna of an SCP-1116 specimen can be used to produce localized pockets of heated air, creating sound waves audible only to individual personnel. Multiple survivors of Incident I-1116-23 claimed they heard orders which were determined never to have been given, contributing to and prolonging the containment breach of SCP-1116-7. Containment procedures have been updated accordingly.

+ Incident I-1116-23

Document# I-1116-23

Date: / /20

Location: Site-

Description: During transport from cell to testing chamber, SCP-1116-7 accessed a laptop left 1 m away with its wireless networking enabled, and through it circumvented Site- network security. Audio recordings indicate that coincident with the network breach, subject made a brief "singing" sound, then proceeded to become active and breach containment, resulting in the deaths of researchers and security personnel, as well as subject's escape from the facility.

Subject was re-engaged . km away after an additional minutes, and was fatally wounded in the ensuing firefight. Transmissions did not fully cease, however, until subject's cranium

was destroyed.

Forensic analysis of the network breach has yet to determine the full extent of the compromised data, but given the -band frequency emissions detected from subject for the duration of its time on the surface, estimates put the total data leakage at up to GB.

« SCP-1115 | SCP-1116 | SCP-1117 »

SCP-1117: Feasting Table

Item #: SCP-1117

Object Class: Euclid

Special Containment Procedures: SCP-1117-1 is to be stored in a standard secured vault at Site . Under no circumstances are personnel to be permitted to enter the chamber or interact with the object. Cases of SCP-1117-3 produced by accidental exposure or testing are to be placed into isolation with minimal contact.

Description: SCP-1117-1 is a wooden dining room table 90cm long by 150cm wide by 75cm tall. Testing indicates that it is approximately 70 years old, and has shown no unusual preservative properties.

SCP-1117-1 is laden with a wide variety of food and drink, designated SCP-1117-2. When consumed by subjects, it is rapidly replaced, though the exact contents of the table are not consistent. Analysis has been unable to find a pattern; dishes and products from cultures all over the world have been observed. Subjects display great enjoyment during the meal. Testing has revealed that it is possible to remove dishes from the table and serve them elsewhere with the same results; subjects unaware of the food's origin still describe it as 'very tasty'.

Any who have consumed food or drink from SCP-1117-1 become subject to a secondary effect. These individuals, designated SCP-1117-3, have the ability to cause SCP-1117-2 to spontaneously appear nearby whenever they feel hungry. Subjects display great reluctance to consume anything other than the food that they 'find', remarking that nothing else tastes as good. The effect can be spread if SCP-1117-3 share SCP-1117-2 with other individuals. Aside from these effects, the 'found' food is indistinguishable from normal food.

The side-effects of SCP-1117 exposure only appear after roughly a week; individuals with active lifestyles are affected notably faster, demonstrating the effects after only a few days. Subjects have described a steady decrease in energy levels and become easily fatigued. Continued consumption of SCP-1117-2 increases the effects; between three and six weeks after initial exposure, subjects apparently die from a lack of energy, or from theoretically harmless contagions. No unusual physiological effects have been noted, and autopsies have proved largely inconclusive, with no signs of damage consistent with previously studied energy draining phenomena.

Forcing SCP-1117-3 to ingest food other than SCP-1117-2 after the effects have begun to show has induced extreme nausea and fatal cardiac arrhythmia in all cases. Autopsies have shown severe depletion of phosphates, magnesium and calcium to be a significant contributing factor, although the cause of these deficiencies is unclear.

Given the SCP's ability to spread rapidly, SCP-1117-1 has been declared off-limits. Field agents are advised to be alert to any signs of SCP-1117 exposure in the general population.

Addendum:

> *Lock it up. Research is going nowhere, and this thing is clearly of no use to us. Just keep watching out for signs of infection in the general population, there could be a major epidemic if it gets out. This whole project has been thoroughly depressing - we get enough routine deaths around here without testing inexplicable ones. At least the bodies take up less room.*

> Dr

« SCP-1116 | SCP-1117 | SCP-1118 »

SCP-1118: Os Sumum

Item #: SCP-1118

Object Class: Safe

Special Containment Procedures: SCP-1118-1 is to be locked in a Safe-class inanimate object container at Storage Site-05. Sets of SCP-1118-2 are to be kept in separate locked safeboxes at the same facility. Following incident 1118/I/551201:R and due to the inherent difficulties in tracking related events, only SCP-1118-2-D is to be used in testing procedures.

Description: SCP-1118-1 is a heavily modified Adler brand typewriter (Favorit model - serial number 466442), manufactured in 1935 by the Adler Schreibmaschinen company in Frankfurt, Germany. A small brass plaque mounted on the underside of SCP-1118-1 bears the following inscription: "*Os Sumum - H.H. - 1937*". This has been stenciled over in white paint with "ГРУ, Отдел 'П'^{2} - #12".

All of SCP-1118-1's factory key tops have been detached and 31 of its keys have been modified to accept a set of SCP-1118-2. SCP-1118-1's typebars have been removed and replaced with metacarpals and proximal phalanges from 24 unknown donors. These have been fused together by an unknown process to achieve the necessary shape. As these typebars do not contain type elements, striking a key will not cause a symbol to be transferred to any paper inserted into SCP-1118-1.

SCP-1118-2 are sets of 31 human molars, their surfaces filed down to permit labeling with an unremarkable black ink, the exact composition of which varies between sets. Sets of SCP-1118-2 contain all 26 letters of the Latin alphabet as well as a spacebar, period, comma, exclamation mark, and question mark. Chemical analysis of the ink used on SCP-1118-2 sets and comparison to reference samples provides an approximate time of manufacturing.

An instance of SCP-1118-2 is attuned to a specific target through a ritual procedure as documented in supplemental procedure 1118/D/Ax-14:Z[3]. These mimeographed duplicates were recovered with SCP-1118-1; the originals are presumed lost. Molars used in the fabrication of SCP-1118-2 sets only need to be whole and devoid of cavities, no further requirements exist.

When a full set of SCP-1118-2 is mounted on SCP-1118-1's keyboard, any words typed out on SCP-1118 will be vocalized by SCP-1118-1's target. Note that keys from different SCP-1118-2 sets are not interchangeable. While an operator's typing speed might be variable, targets are able to form intelligible and coherent speech from this input. It is not currently clear how targets manage this. As tests have shown, a target's physiological state is not a factor in this process and speech has been recorded from test subjects not anatomically equipped to produce it. It is currently unclear how SCP-1118 induces vocalizations in these targets.

Vocalizations made through SCP-1118 can also influence a target's behavior, though it is unknown whether there are limits to this. Note that if a target is deceased, vocalizations that would otherwise influence behavior will have no effect.

Living targets of SCP-1118 will perceive anomalous vocalizations as appropriate and logical, and will become agitated if confronted with the discordance of their speech. Please refer to psychological evaluation log 1118/P/930627:A for a behavioral study, both pre- and post-event, of test subjects assigned to SCP-1118. Listeners are not subject to this effect and can easily discern speech that might be characterized as out of character for the speaker.

Three complete sets of SCP-1118-2 were recovered and designated -A through -C. The nominal documentation retrieved with SCP-1118-1 confirms the targets for SCP-1118-2-A and SCP-1118-2-B. The target of set SCP-1118-2-C has not been identified as of yet. Set SCP-1118-2-D was created for testing purposes[4]. It is possible that more complete sets of SCP-1118-2 exist outside of Foundation control.

SCP-1118-1 was recovered with an additional 14 loose molars collectively refered to as SCP-1118-3. While instances of

SCP-1118-3 have been modified in a fashion similar to sets -A through -C, they are missing the necessary mounting material to be used in conjunction with SCP-1118-1. Instances of SCP-1118-3 appear to be significantly older than those in currently known SCP-1118-2 sets. Their labeling has deteriorated severely, but seems to contain markings in Elder Futhark. No documentation exists detailing SCP-1118-3's role, but it is theorized SCP-1118-3 inspired the creation of SCP-1118-1 and SCP-1118-2.

Addendum 1118-A-01: *Information on SCP-1118-2 and respective targets*

Set	Approximate time of creation	Target
SCP-1118-2-A	1946-1950	Former US President Harry S. Truman
SCP-1118-2-B	1932-1937	Former British Prime Minister Neville Chamberlain
SCP-1118-2-C	1958-1967	Unknown
SCP-1118-2-D	1992	D-138119 (deceased)

It is unknown whether set -A and -C have successfully been used to influence US politics.

Addendum 1118-A-02: *Excerpts from incident report 1118/I/551201:R*

> On 12-01-1955 20:16:21, , a personal aide to former president Truman placed a call to the latter's personal physician, one Dr. , expressing concern that his employer was having a seizure of some kind. During the call, Truman could be heard vocalizing in the background. Excerpts appear here:
>
> [20:17:13] This is test. [sic]
>
> [20:17:30] This is a test.
>
> [20:19:06] Maksim says this works.

[20:21:43] Nothing is happening. Why is nothing happening?

[20:22:16] I am bored. Why can I not type in Russian?

[20:25:58] sieojgbkc

[20:26:11] I think it was something I ate. I will go to bed now. Good night.

A full transcript of the call is available in the unexpurgated version of this incident report. Full research into the historical context for this incident is pending.

Addendum 1118-A-03: *Selected chronology of SCP-1118-1 related events/sightings*

11-03-1938: Sources within the SOE begin suspecting British Prime Minister Chamberlain to be under foreign influence. Investigations focus on bribery, blackmail and other traditional methods of manipulation.

11-28-1938: No evidence of manipulation has been found. However, elements embedded in the Nazi party warn the SOE about occult activity centered around the remote manipulation of key British political elements.

02-28-1939: Photographs surface of SCP-1118. A group of men is posing with SCP-1118. Several are wearing white lab coats with labels stitched to the breast. One is the swastika. The other is [DATA EXPUNGED] eradicated in 1945 during the fall of Berlin. Heinrich Himmler is seen sitting in front of SCP-1118, with his face turned to the camera.

06-14-1939: Chamberlain's speeches analyzed for discrepancies. SCP-1118 believed to be a factor in politic of appeasement.

There is a noticeable lack of SCP-1118 related events/ sighting between 1939 and 1945. Efforts to retrieve and

contain SCP-1118 are sabotaged by Ahnenerbe and Abwehr operatives, both within and outside of the Foundation.

09-22-1945: Sighting of SCP-1118 confirmed by SOE operatives in Berlin. GRU Division "P" personnel working under Red Army jurisdiction believed responsible for removal of SCP-1118 from the Himmler residence.

10-04-1945: Foundation operative [REDACTED] manages to intercept SCP-1118 before it is transported to Russia.

10-05-1945: Foundation operative [REDACTED] presumed KIA, SCP-1118 considered lost.

12-01-1955: Former US President Truman displays signs of being under the influence of SCP-1118.

06-14-1982: During a CIA operation in [REDACTED], an item matching the description of SCP-1118 is found on an itemized shipping list for a freight train heading for Moscow. The transport cannot be located.

03-31-1992: [REDACTED], a former GRU Division "P" operative, makes contact with Foundation operatives in the CIA and offers to surrender SCP-1118 in return for asylum.

04-16-1992: After disembarking on US soil, [REDACTED] is taken into Foundation custody and SCP-1118 is recovered from his luggage. Containment of SCP-1118 is achieved. Debriefing of [REDACTED] reveals little relevant operational knowledge of GRU Division "P", though the intelligence gathered leads to the further retrieval and containment of several other objects.

Footnotes
1. Special Operations Executive
2.GRU Division "P"

3. Please note that any attempt to carry out this procedure is subject to enquiry by the Ethics Committee
4. See document EC/D/921224:M for the official sanction by the Ethics Committee.

« SCP-1117 | SCP-1118 | SCP-1119 »

SCP-1119: No Touching

Item #: SCP-1119

Object Class: Euclid

Special Containment Procedures: SCP-1119 is to be contained in an M-Type Humanoid Anomaly Containment Cell (HACC) at Site-53. In the event personnel need to enter SCP-1119's cell, they are to wear Level C Hazmat suits to avoid skin-to-skin contact. All requests made by SCP-1119 are to be screened and allowed or denied as per standard Euclid-class humanoid containment protocol. Barring express permission by at least one member of attached Level 3 Research Staff, SCP-1119 is not allowed to leave its cell.

Description: SCP-1119 is a Caucasian male aged 54, measuring 174.3 centimeters and weighing 154.6 kilograms. X-ray scans and exploratory surgery of SCP-1119's body have yielded several anomalous findings. Evidence exists of absorption of tissue and organs belonging to other sentient beings by SCP-1119's body. This resembles twin embolisation syndrome, although this has never been shown to occur outside of the uterus.

SCP-1119 has been found to have two human eyeballs attached to the interior of the medial lobe of the right lung. In addition, SCP-1119 carries several superfluous organs and miscellaneous tissues, including a kidney, two spleens, a gall bladder, two fallopian tubes and approximately 3.4 meters of small intestine, all of which are stored in the abdominal cavity. These organs and tissues are connected to SCP-1119's body by a network of small blood vessels so that atrophy or necrosis of absorbed material is prevented. DNA tests on samples taken have shown tissues present belonging to at least fifteen separate individuals, both male and female. None of these could be reliably traced, though one was shown to be similar enough to SCP-1119's own DNA to assume a direct genetic relation.

Tests have shown that skin-to-skin contact with SCP-1119 will

initiate the absorption process. Once contact has been made, cells in the epidermis of SCP-1119 bond with those in the victim's skin and absorb them. The process appears to be irreversible and can only be halted by amputation or excision of connected tissues. SCP-1119 shows signs of severe stress when absorption occurs, while victims appear to enter a coma-like state within 2-5 seconds of initiation of absorption. It is currently unknown what causes this state. Total absorption takes approximately ten minutes per kilogram of tissue. The process seems to move around any non-organic matter it finds, leaving any such article behind after it completes. Note that although absorption of victims is complete, SCP-1119's body mass does not increase correspondingly. It is currently unknown how SCP-1119's body processes absorbed tissues. SCP-1119 does not appear to retain any characteristics, memories or personality traits of those absorbed.

SCP-1119 has exhibited relief at being held for research by the Foundation, but does suffer from severe clinical depression. Treatment has been started using counselling and medication (50 mg Fluvoxamine: oral dose 1x per 24h). SCP-1119 is extremely uncomfortable around others and will not usually initiate any form of contact. Genealogical research has revealed SCP-1119's father to have been deceased since / /19 and his mother to have been deceased since / /20 . SCP-1119 has referred, when pressed, to his life as extremely sheltered.

Addendum 1119-A-01: *Recovery and preliminary containment notes*

SCP-1119 came to the Foundation's attention when it attempted to commit suicide by jumping from the Bridge. Despite clear warnings by SCP-1119, a police officer grabbed his hand and was partially absorbed in full view of the public. The resulting 911 calls were intercepted and a containment team was sent out. Emergency airborne Class-A amnestics were administered to all involved and SCP-1119 was taken to Site-53 for evaluation. Broadcasts of footage taken at the site were disrupted and all evidence was confiscated and destroyed as per guideline Hm/Gd-Evt-0013-E:rev2.16.

Addendum 1119-A-02:

SCP-1119 has shown limited regenerative qualities following incident 1119-I-01. Further research warranted.
- ***Dr. Aeslinger***

« SCP-1118 | SCP-1119 | SCP-1120 »

SCP-1120: Freeze Tag

Item #: SCP-1120

Object Class: Euclid

Special Containment Procedures: Each instance of SCP-1120 is to be contained in a standard-size containment cell in the B500-B600 cell block of Containment Area-56. The bricks comprising the walls, ceiling and floor of the cells are to be constructed from a mixture of three parts ground human bone to two parts industrial cement. One armed guard is to be posted to every group of five cells in the block. In the event that SCP-1120 becomes active and breaches containment, personnel are advised to implement Procedure SCP-1120-Epsilon. Under no circumstances should a living human being be permitted to touch an instance of SCP-1120.

At the time of this writing, all one hundred (100) known instances of SCP-1120 are in Foundation custody. However, in the likely event that a museum exhibition featuring one or more instances of SCP-1120 is discovered, all instances of SCP-1120 are to be immediately acquired and replaced with plaster replicas. If this is not possible, one or more members of MTF-Delta-6 “Vestal Virgins” are tasked with integrating themselves into museum staff, maintaining surveillance, and preventing the creation of instances of SCP-1120-1 by whatever means necessary. All new instances of SCP-1120-1 are to be treated as instances of SCP-1120 and contained accordingly.

Description: SCP-1120 is the collective name for a number of human skeletons encased in what appears to be pyroclastic igneous rock. Although exposed bone may be shattered and destroyed by conventional means, the epidermal rock layer encasing SCP-1120 has been shown to be incredibly resistant to damage. It is believed that this is a property of SCP-1120 rather than the rock itself, as rock samples appear to lose their anomalous properties once removed from SCP-1120. Laboratory tests on epidermal stone fragments

removed from SCP-1120 have identified tephric matrix substructure consistent with that of non-anomalous ignimbrites, though whether or not this accurately reflects the internal petrology of SCP-1120 is unknown.

Instances of SCP-1120 vary in a manner consistent with human stature. Most ages and genders appear to be represented; several instances of SCP-1120 are approximately the size of prepubescent human children.

Instances of SCP-1120 are animate, though whether they are sapient has yet to be determined. At the current time, all instances of SCP-1120 are in a dormant state. It is not known what will cause them to become active, as this has only occurred times since their entry into Foundation custody.

Upon entering an active state, an instance of SCP-1120 will patrol the surrounding area and attempt to seek out a living human subject. If SCP-1120 locates a suitable human subject, SCP-1120 will immediately charge and attempt to grab the subject. Instances of SCP-1120 exhibit inhuman strength, and have been observed to break through cinderblock walls and destroy sizable pieces of urban infrastructure while in pursuit. However, pursuit is not singular: upon spotting another, closer subject, SCP-1120 will adjust its course in order to pursue the more proximal target. Coordinated personnel teams can easily exploit this fact to 'herd' instances of SCP-1120 into appropriately designated containment facilities (a process referred to in documentation as Procedure 1120-Epsilon).

If any part of a subject's skin comes into contact with SCP-1120, SCP-1120 will immediately cease pursuit. Upon contact, the subject, hereafter referred to as SCP-1120-1, will enter a state of paralysis, remaining frozen in the position in which they were last touched by SCP-1120. The instance of SCP-1120 that initiated contact will assume a supine position and return to a dormant state. Over the course of the next three minutes, all skin, muscle and organ tissue belonging to SCP-1120-1 will transmute into igneous rock, beginning with the soles of the feet and ending with the crown of the head. The process is assumed to be extremely painful- scans of subjects undergoing transformation have indicated immense nerve damage and severe internal bleeding prior to the completion of the process.

However, all bone matter, including marrow, remains unaffected by the transmutation. This feature extends to bone that has been removed from the body: SCP-1120 is unable to break or shatter human bone in any manner or capacity. The source of this limitation remains unknown.

Discovery: Twenty (20) instances of SCP-1120 were discovered in the Museum of Natural History on October 12, 197 . Foundation listeners responded to a call on a local police blotter, reporting 'stone men' terrorizing museumgoers. Foundation personnel, disguised as police reinforcements, arrived on the scene, and, after several hours, were ultimately able to corral and subdue all instances of SCP-1120. Several city blocks were destroyed in the process and casualties were recorded. Class-B amnestics were distributed via chemtrail and a cover story about an earthquake was disseminated to local news media.

Eleven (11) other instances were unearthed by an archaeological dig team in [REDACTED] on March 6, 198 . Though the specimens remained dormant throughout the excavation, the careless actions of the dig team resulted in the creation of more instances of SCP-1120. Reports quickly reached nearby civilians, and, in turn, Foundation operatives. SCP-1120 was contained without incident.

The remaining instances were discovered in [DATA EXPUNGED]. It is highly likely that these are not the only instances of SCP-1120 that remain concealed in this way. Operatives are advised to be watchful and to exercise great caution.

Addendum 1120-A:

> *The following piece of graffiti was discovered scrawled on the wall of the in Pompeii. It is believed that it was left by an agent of a primitive group functioning as a precursor to the current Foundation, though archaeological evidence for this remains scant.*
>
> There are so many of them. We cannot outrun them. They must be contained, before the stone plague spreads further. It has already made it to Herculaneum. There is no time. To anyone who reads this, get out

while you can. I go now to provoke the wrath of Vesuvius, in the hope that a cloud of ash will bury them forever. May the gods watch over me.

« SCP-1119 | SCP-1120 | SCP-1121 »

SCP-1121: The Skinning Disease

Item #: SCP-1121

Object Class: Euclid

Special Containment Procedures: Only two specimens have been collected of SCP-1121, both at initial containment. These are kept in one of Biological Research Site-13's refrigerated biohazard containment cells in a freezing medium composed of 12% dimethylsulphoxide, 20% heat inactivated calf serum and axenic medium at -70 degrees Celsius.

Cultures of SCP-1121-1 are kept in a glycerol stock under identical temperatures in a separate refrigerated biohazard containment cell.

Due to the rarity of SCP-1121 samples, tests are to use SCP-1121-1 cultures instead. Testing is to be authorized and conducted by at least one Level 4 member of on-site research staff. All personnel not designated a test subject are to wear Level A Hazmat suits with SCBA[1] before handling any cultures of SCP-1121-1. Failure to do so will result in termination and subsequent incineration.

Should infections with SCP-1121-1 be reported outside of Foundation control, a quarantine is to be instated within a ten kilometer radius of the established epicenter. All victims not yet deceased are to be terminated followed by controlled incineration of all bodies. Seemingly uninfected civilians and personnel within the quarantine zone will be detained and monitored. If they develop no symptoms after twenty-four hours, they are to be administered class-A amnestics and relocated. Any individuals that do develop symptoms within that time period are to be terminated and incinerated. A suitable cover story will be circulated to the media.

Description: SCP-1121 is a previously unknown amoeboid protozoa with very specific mutagenic qualities triggered only by *Staphylococcus epidermidis*, a normally benign bacterium present

on human skin. If introduced to other organisms, SCP-1121 remains dormant. DNA extracted from samples of SCP-1121 shares genes with several insect species, such as *Afrocimex constrictus*, *Gryllotalpa brachyptera* and *Doru aculeatum* while also containing several genes not currently found in known flora or fauna. SCP-1121 does not seem to procreate naturally and does not need fluid to survive.

Once introduced to *S. epidermidis* SCP-1121 mutates all instances of the bacteria into SCP-1121-1 (classified as *Staphylococcus epidermidis exitiabilis*) before dying. At this point, a subject is considered infected and will start to show stage I symptoms as detailed below. Note that, while *S. epidermidis* does not normally cause infection in healthy human beings, the SCP-1121-1 pathogen infects 100% of subjects exposed to it.

SCP-1121-1 has proven resistant to all known antibiotics and at this time no known cure for infections with *Staphylococcus epidermidis exitiabilis* exists.

A subject infected with SCP-1121-1 goes through a set number of stages:

I: Two to five hours after initial infection small white lesions appear on the skin. This does not differ from infection by *S. epidermidis*, making wrong diagnoses a distinct possibility.

II: Approximately twenty-four hours after the on-set of stage I, the lesions will gradually begin to disappear, the infection having spread to the lower layers of the patient's skin. SCP-1121-1 then consumes the subcutaneous tissue, transforming it into a highly viscous substance. This process is extremely painful. The sufferer's skin is at this point connected to underlying tissues only by the substance excreted by SCP-1121-1. In addition, subjects' skin turns pale and slouches in areas, mimicking the effects of massive sudden weight loss.

III: Patients begin removing their skin from their body. Most sufferers use their own hands for skinning, though in some cases patients resorted to using various tools including knives, windshield scrapers and in one case a [REDACTED]. This process seems to be painless

due to the events of stage II and does not seem to be a conscious activity. When the anomalous substance underneath the skin is exposed to air, it gradually [DATA EXPUNGED] commonly found on insects. Victims rapidly become disoriented and invariably hostile to anyone not infected by SCP-1121-1 as the process of skin removal progresses. In light of this, termination of all victims is necessary, preferably before the disease enters stage III.

No occurrences of SCP-1121 have been observed outside of initial containment, but the bacterium replicates itself rapidly during stages I and II. Infection of new patients occurs primarily by skin-to-skin contact, though evidence exists of infections spreading in situations where no direct contact was observed, making Level A Hazmat equipment a precautionary must when handling any samples of SCP-1121-1. Furthermore, SCP-1121-1 has been observed to remain active long after stage III has concluded, with samples of skin showing active cultures of the mutated bacteria for up to years after initial infection. It is currently unknown during what period of time removed skin remains an infection hazard.

Addendum 1121-A-01: *Recovery and preliminary containment notes*

SCP-1121 was discovered on a meteorite unearthed during an archeological dig in , New Mexico in 19 . The archeologist first exposed to the meteorite was infected with SCP-1121-1 and is at this point considered to be patient zero. Within two days the infection had spread from patient zero to the entire on-site research team and several citizens of . Initial containment was managed by the CDC, but after patient zero entered stage III of the disease, operatives within that agency brought in the Foundation. The meteorite and patient zero were transferred to Biological Research Site-13 and all land in a ten kilometer radius around the dig site was cleared using Mk 77 bombs.

The only known colonies of SCP-1121 were recovered from the meteorite. Mass spectrometer analysis using rubidium-strontium dating of samples determined its age to be approximately 2,500,200,000 years.

Addendum 1121-A-02: *Excerpts from testing log 1121-T*

Test designation: 1121-T-01

Name/Personnel ID: Dr.

Test subject: D-73345

Transcript:
02/ /19 - 20:34: D-73345 was placed in an artificial coma and SCP-1121-1 was introduced to his skin.

02/ /19 - 23:17: Stage 1 symptoms set in with lesions appearing to spread evenly across subject's body. Lesions seem to be radiating out from the left outer thigh where SCP-1121-1 was applied to subject's skin.

03/ /19 - 22:48: Subject still in coma. Lesions have started to disappear and subject's skin has been observed to be undulating slightly.

04/ /19 - 03:17: Undulation seems to have stopped. Skin seems pale, but subject's vital signs are still good. Subject brought out of artificial coma. Once D-73345 is lucid enough for conversation, Dr. initiates contact over the intercom.

Dr. : D-73345, how are you feeling?

D-73345: Fine, I guess. I look pale. **subject grunts**

Dr. : Anything you'd like to share with us?

D-73345: Not really. Look, doc, how much longer am I gonna be here?

Dr. : Just a little while longer, D-73345. We need to observe your behavior.

D-73345: My behavior? What the hell's wrong with my behavior?

Dr. : Nothing's wrong with your behavior, we just…

D-73345: You're goddamn right nothing's wrong with my behavior!

Dr. : No need for hostility, D-73345. We're just here to learn from you.

Research Assistant : Doctor, I'm not sure I can stand this.

D-73345: You can't stand what, asshole?

Research Assistant leaves the control room

Dr. : My assistant had to excuse himself. It seems he's disturbed by your activities since you woke up.

D-73345: What the fuck is wrong with you dicks? I've just been sitting here…

Dr. : …tearing long strips of your skin off your left leg. Yes, I know.

D-73345 was observed without comment for approximately one hour and thirty-two minutes until he'd removed all skin from his body and had become highly erratic and volatile. Subject terminated and incinerated as per protocol

Test designation: 1121-T-05

Name/Personnel ID: Dr.

Test subject: D-14523, D-4237, D-72389, D-92392, D-24239, D-22984, D-49324, D-3722, D-2293, D-14818, D-88324, D-54491

Transcript:
21/ /19 - 15:13: Subjects were placed in an artificial coma and SCP-1121-1 was introduced to their skin.

21/ /19 - 16:58: Stage 1 symptoms set in on D-49234, other subjects follow.

21/ /19 - 17:44: Last subjects begins to show stage I symptoms.

22/ /19 - 18:56: First subject enters stage II, other subjects follow more rapidly than during stage I.

23/ /19 - 00:01: Last subject enters stage III. Subjects brought out of artificial coma and observed.

23/ /19 - 00:13: Subjects begin removing skin while talking amongst themselves. Conversation soon becomes increasingly erratic as subjects remove more skin from their bodies. No hostility towards other test subjects noted.

23/ /19 - 03:34: Subjects are now entirely skinless. The unknown substance hidden beneath their epidermis seems to be [DATA EXPUNGED] milling around like [REDACTED]. We'll need to study this behaviour further.

Subjects terminated and incinerated as per protocol

Addendum 1121-A-03:

You know like when you were a kid? You'd dig out the ants' nest and step on the biggest one just to see them all run around like little maniacs? They reminded me of that…the way they just…stumbled around flailing.
- Research Assistant .

Addendum 1121-A-04:

After 1121-T-5, it's been theorized that SCP-1121 could be part of a terraforming experiment. If that is the case, one is left to wonder just what it was supposed to turn us into. If it's even us they were after.
- Dr. .

Footnotes
1. Self-Contained Breathing Apparatus

SCP-1122: The House of Tomorrow

Item #: SCP-1122

Object Class: Euclid

Special Containment Procedures: All roads leading to SCP-1122 are to be sealed off, with two armed guards posted outside SCP-1122 at all times to prevent unauthorized access. No artificial devices invented after 1940 (with the exception of any recording devices, which must be worn discreetly) are to be carried into SCP-1122 without administrator approval. All test subjects must be searched before entry to prevent the introduction of unauthorized items into SCP-1122's environment.

Description: SCP-1122 is an abandoned tourist attraction located on the outskirts of , . It was originally constructed in 195 as a "house of tomorrow", a demonstration of the then-futuristic technologies expected to become commonplace over the following twenty-five years. There is no evidence that SCP-1122 displayed any anomalous properties prior to its abandonment.

SCP-1122's interior is unusually well-maintained, and filled with devices that neither existed at the time of the building's construction nor exist in the present. Among other things, the house has a kitchen stocked with food pills that change into three-course meals upon hydration, miniature robots that perform routine cleaning and maintenance, and a garage containing a car capable of flight. Smuggling these items out of the house has revealed that they do not function outside of SCP-1122. Although SCP-1122's technology is more advanced than modern technology in some respects, it is less advanced in others: there are no miniaturized computers on the premises, and the house's television is of a considerably lower picture quality than its modern counterparts.

The house is also populated by a Caucasian family of four, consisting of a man (SCP-1122-1) and a woman (SCP-1122-2) in

their mid-thirties, an adolescent daughter (SCP-1122-3), and a prepubescent son (SCP-1122-4). Although persons inside SCP-1122 occasionally witness the family members entering and leaving through the house's doors, no inhabitant of SCP-1122 has ever been seen outside of the building. All four residents of SCP-1122 are docile and, at the time of their original discovery, perpetually cheerful, and are usually willing to answer any questions posed to them.

When asked for today's date, all four residents will claim that it is exactly ten years after the current date. (The Foundation originally believed SCP-1122 to be predictive, though this has since been proven false.) Their knowledge of history prior to the year 195 is relatively accurate. When questioned about history subsequent to 195 , they refer to fictitious persons and events such as the creation of a lunar colony, while failing to recognize real events.

SCP-1122's most unusual property was demonstrated on / /199 , when Dr. 's mobile phone rang while conducting an interview with the family. During 's next visit, he noticed SCP-1122-2 talking on a mobile phone of identical design to his own, which the family has used ever since. Upon interrogation, SCP-1122-1 denied that the phone was a new addition, claiming that he had always owned it. SCP-1122-3 and SCP-1122-4 then complained to Dr. that their mother was too occupied with talking on the phone to pay attention to them, the first time any residents of SCP-1122 displayed unhappiness.

Whenever a device that was not in widespread household use before 195 is seen by the residents of SCP-1122, it will be integrated into the house from that point onward, often replacing an original item. (Food pills disappeared from SCP-1122 after the introduction of a microwave oven, for example.) Each new item has, without fail, had a negative effect on the house's inhabitants. SCP-1122-1 has frequently been seen drinking, lamenting how "things should be better", while SCP-1122-3 and SCP-1122-4 have become more introverted and are rarely seen outside their rooms.

SCP-1123: Atrocity Skull

Item #: SCP-1123

Object Class: Safe

Special Containment Procedures: To prevent degradation of SCP-1123 and its markings, it is to be kept in a hermetically sealed container in an argon gas atmosphere when not being tested. During testing and storage, light exposure should be limited to 50 lux, temperature between 20 and 24 degrees Celsius, and relative humidity at 55%. SCP-1123 should only be transported in its container, and should not be handled except during a controlled experiment. When not being tested, it will be stored in a secure climate-controlled locker at Site 19.

Description: SCP-1123 is a human skull missing the lower mandible and all its teeth. Across the exterior *squama frontalis* is modern Khmer script, written in human blood, that translates as "Remember." Both skull and blood have been definitively dated to 197 , and genetic testing confirms that both are from the same individual.

SCP-1123 was discovered in 198 by Colonel Hu of the Vietnamese People's Army within a collection of human remains in the custody of the Museum in , Cambodia. SCP-1123 was intercepted by Foundation agents as it was being delivered to Hanoi.

The Khmer script is badly faded, and invisible to most subjects beyond 5 meters distance. However, when a subject approaches SCP-1123 they will report the script becoming progressively more visible until, at less than 1 meter, they will report it appearing as if freshly drawn. A few subjects at this distance report the writing is "still wet." This effect is not reproducible with optical equipment. To record the script photographically requires optical enhancement or UV lighting. (The latter is not approved for use with SCP-1123 as it

contributes to the degradation of the object.) Subjects at this distance will often also report other anomalous sensory phenomena, including smells (such as cooking meat or ashes), sounds (such as soft crying, low heartbeats or breathing, or distant footsteps), and tactile responses (such as grit in the eyes, ants crawling on the back of the hand, or glass splinters in the sole of the foot.)

When subjects touch the surface of SCP-1123, they will experience a dissociative fugue state. Initiation of the fugue state appears instantaneous and is not affected by cessation of contact with SCP-1123. Symptoms of the fugue persist for ninety minutes to six hours. The fugue is characterized by confusion, disorientation, and adoption of a new identity and memories which consist of knowledge, including language, previously unknown to the subject. During the fugue the subject will lose all memories of their prior identity. Subjects have shown various reactions to this, ranging from near-catatonia to attempts to escape or attack Foundation personnel. As the fugue state subsides, the subject will regain memories of their prior identity, but will also retain memory of the new, imprinted identity and all the knowledge associated with it. Subjects have said that it was “as if they lived an entire other life as some other person” in the period between touching SCP-1123 and recovering from the fugue.

Post-fugue interviews have provided enough corroborative information in of studied cases for researchers to find historical documentation confirming the imprinted personality's correspondence to a specific individual who had lived at some time prior to the subject. There appears no connection between the origin of the imprinted personality and the identity of the subject based on age, genealogy, gender, ethnicity or national origin.

Imprinted personalities share the following characteristics:

1. The imprint died before the subject's birth. (Dates have ranged to as early as 90 years prior, to less than 1 year.)
2. The imprint was a victim of subjugation, torture and/or imprisonment.
3. The imprint typically died by violence, usually homicide. (Sometimes death has been due to secondary factors, such as starvation or infection.)

4. The imprint's death was the result from being targeted by a political mass movement, most often with some form of state sanction and/or complicity.

Subjects undergo no obvious anomalous aftereffects due to exposure, but will show psychological effects common to the types of trauma experienced by the imprinted personality. Grief, survivor's guilt and depression are typical. Suicidal ideation is rare, but has occurred in a small fraction of cases. It should be noted that in treatment of these aftereffects, use of amnestics has not shown any psychological benefit, and has often proved to be harmful.

Addendum 1:

+ Experiment Log for SCP-1123

Experiment Log 1123-A

Test 0003

Date: / /19

Subject: White male of mixed Irish and French ancestry. Age late 30s.

Procedure: Subject approaches SCP-1123 and is told to touch it.

Results: Subject collapses upon contact with skull, begins screaming in Armenian. Attacks Foundation doctors when they attempt to assist, calling them “Turkish Butchers.” Subject is sedated and disorientation subsides after two hours. Subsequent interviews identify the imprinted personality as an Armenian farmer who was burned alive with approximately 150 other inhabitants of his village by the Ottoman army in 1915. No records exist of the individual, but the event was documented in a 1919 affidavit presented to the Malta Tribunals after World War I.

Test 0508

Date: / /19

Subject: Asian female of Chinese ancestry. Age early 60s.

Procedure: Subject approaches SCP-1123 and is told to touch it.

Results: Subject expresses apprehension before touching SCP-1123. After touching SCP-1123, subject does not move for fifteen minutes. Afterwards, subject sits down on the ground and is unresponsive for two more hours. As fugue state subsides, subject becomes visibly more distressed and begins weeping. Subsequent interviews identified the imprinted personality as a 16-year-old Ukrainian girl who died in late 1932 from a combination of malnutrition and the aftereffects of rape and beatings by members of a Soviet youth brigade in charge of confiscating grain from the Ukrainian peasantry.

Test 1157

Date: / /20

Subject: Latino female of Cuban ancestry. Age mid-40s.

Procedure: Subject approaches SCP-1123 and is told to touch it.

Results: Before touching SCP-1123, subject complains about smoke irritating her eyes. Subject touches SCP-1123 and ceases all movement and responsiveness for a period of twenty-five minutes. After twenty-five minutes, fugue state has concluded, but subject is still

touching SCP-1123. Subject does not resist when Foundation personnel escort her from the test area. After one week of being unresponsive to interviews, the subject provides information on the imprinted personality. The imprint was from a Polish woman of Jewish descent who died in the Treblinka death camp in 1942.

Test 1815

Date: / /20

Subject: Black male of Haitian ancestry. Age early 20s.

Procedure: Subject approaches SCP-1123 and is told to touch it.

Results: Before touching SCP-1123, subject complains about a “chemical smell,” and intense itching of the extremities. Subject touches SCP-1123 and immediately begins coughing. The coughing fit subsides and subject expresses confusion and distress, but appears reassured when he realizes that the Foundation personnel present are American. Subject communicates a Sorani dialect of Kurdish spoken in Iraqi Kurdistan. Fugue subsides after 60 minutes. Interviews identify the imprinted personality as a 85-year-old victim of a mustard gas attack during the Iraqi regime’s Anfal campaign in 1989. ***Note:*** *First instance of an imprint personality that postdates SCP-1123’s origin.*

Conclusions: After tests to date, a clear statistical pattern has begun to emerge. The probability of a subject receiving an imprint from a particular historical event is roughly

proportional to the number of victims that can be attributed to that event. For example, % of imprints come from Communist China's Great Leap Forward between 1958 and 1961, % of imprints come from Nazi Germany's extermination efforts between 1939 and 1945, while only % come from events such as the Armenian Genocide or the Iraqi Anfal campaign where deaths are only estimated in the 1 to 2 million range.

« SCP-1122 | SCP-1123 | SCP-1124 »

SCP-1124: Xenoplague

Item #: SCP-1124

Object Class: Keter

Special Containment Procedures: All samples delivered are in containment. The distance of from Earth and the conditions on the planet itself render any breach of containment of active instances of SCP-1124 unlikely; these entities have been observed to be exclusively terrestrial. A repeat of the lander incident at Air Force Base is unlikely as no more than one lander and shuttle was stationed at ILYENA at the time of the outbreak. Research drones have revealed that the since missing shuttle is currently eroding on the planet surface.

Samples of SCP-1124 have been transferred to warehouse compound 1124Xa as per recommendation by Dr . Researcher Sanders, Dr. Herman, and Dr. Smith have been given special clearance to access the samples at their own discretion with the conditions that update logs and proof of inactivity or reactivation are immediately placed on record. Indefinite surveillance of these researchers is enacted as a precaution. With the exception to the ILYENA incident no instances of SCP-1124 have been activated save for SCP-1124-C.

The housing compound is located 70km underground outside of Site , and is equipped with a failsafe nuclear device should emergency protocol fail. Individual instances of SCP-1124 are encased in airtight, soundproof, heatproof, 1 m x 1 m x 1 m steel “blast safes”.

Isolated instances of SCP-1124 are kept individually in steel stores with equipped motion and heat sensing equipment. No more than one instance of SCP-1124 is to be tested at any given time. Testing is to be done with approval from each of the three aforementioned personnel, Site Director , and O5 directorate approval. It is recommended drones instead be sent to ILYENA for research.

Should defensive systems within the testing chambers fail, the chamber is to be immediately sealed, filled with triflic acid, and incinerated. Any researchers present inside of the testing chamber are to remain there during the termination protocol.

Efforts are being taken to destroy SCP-1124-C before it matures, although with current results this seems unlikely. The progeny itself is contained in a 3 m x 3 m x 3 m containment unit with acid-proof titanium sheeting. The container should be completely submerged and re-cycled with triflic acid at all times. The unit itself is to be lined monthly with extra titanium sheeting to replace dissolved or destroyed sheeting. This maintenance process should be completed within a span of 40 (forty) minutes.

Description: SCP-1124 are metallic objects found near research base ILYENA on . The first instances of SCP-1124 were recovered from canisters underneath [DATA EXPUNGED] mountain range.

Entities contained by the canisters have the appearance of cephalopods, weighing exactly 1.0268 kg.

Instances of SCP-1124 are impervious to heat and pressure. Each is otherwise non-responsive to external stimuli save for physical contact with biological matter, which will cause instances of SCP-1124 to activate and [DATA EXPUNGED]. Reaction to biological matter originating from a sapient creature tends to elicit a more violent response.

Though observations are performed daily through a viewing window in tank 1124-C by monitoring cameras, a definite shape cannot be substantiated. The most recent appearance appears similar to a larval grub. SCP-1124-C is in all instances metallic in appearance.

The entity frequently gnaws and consumes the casing in its containment unit, although the amount of damage taken is acceptable due to the density and thinness of the film used to line the chamber. Further research into containment is deemed necessary as the creature has been shown to grow in minor increments when more material is consumed.

A tear located in Researcher 's body suit during transfer allowed [DATA EXPUNGED] activating 1 (one) instance of SCP-1124. Security cameras show the entity quickly gnawing itself out from the inside of its alloy casing and then launching itself into the mouth of one Researcher . This method of mobility is believed to be a spring like motion using its appendages but this is still unconfirmed. Following containment procedures Researcher sealed himself inside unit 1124-C and activated the failsafe mechanism, effectively containing SCP-1124-C.

See incident report 1124: Personnel Termination Dossier.

Reference SCP-1124 Transmitted Data and Video Transcript-c for further details.

x-23c ILYENA [6555-x23] Lander: Transmitted Data:

> **13:31:45:**
> ***Sanders***: Dr. Sanders, audio log A20, reporting successful mission. Samples are being housed. What we think are glass canisters were found beneath the [DATA EXPUNGED] mountain range; eighty-four south two-three east on your grids. Estimated four minutes before we reach the rover.
>
> **13:34:23:**
> ***Sanders***: Reached rover ahead of schedule. Everyone is present and accounted for. Estimated one hour before we reach Ilyena.
>
> **14:25:12:**
> ***Sanders***: We’re in the airlock now. We’ve dumped our cargo. Researcher Breen reports he is delivering the recovered canisters to dome Theta.
>
> **14:40:02:**
> ***Sanders***: Signing off.
>
> **03:35:10:**
> ***Sanders***: Met with Breen and he hasn't said anything about the canisters yet. “Saving the best for last” he

says. Don’t know how he can resist something that bizarre. Guess that’s why we got him up here.

06:58:19:
Sanders: Meeting with Breen again. Let me turn up my transmitter here. Say something Breen.

Breen*: Greetings from space.*

Sanders: You're a silly bitch, Breen.

07:05:19:
Sanders: He’s got a few of the things that were inside the canisters laid out on a table. Breen says the canister itself wasn’t glass though – not sure what the material was. The canisters are egg shaped, no markings, smooth. They have lids on their ends that detach and reattach given a gentle pull. There are no adhesives, no screw tops or anything like that. They just come off and on.

07:10:22:
Sanders: The things inside the “eggs” look like little silver squids. Their limbs are segmented. Can’t make out any eyes or mouths. Breen shook one around but the limbs didn’t wiggle like we expected them too. They’re stiff.

07:12:01:
Sanders: Breen can’t begin dissection; their outer shells are too hard. Thinking they might just be figurines or something like that.

07:26:45:
Sanders: Breen has blasted these things with heat, froze ‘em, even put them in a crusher, and they don’t seem to react at all. They just sneeze off anything we throw at them.

07:27:30:
Sanders: He joked that we should sneeze on them.

Breen gave me the honors.

07:28:23:
Sanders: Couldn't sneeze so I just spat on one. They don't seem to be affected. Think they might just be figurines.

07:28:56:
Sanders: Mother mercy one of those appendages is *actually moving*! Woo boy that scared the sh-

Addendum 1124-Audio-a:

SCP-1124 Addendum-a :
ILYENA lander returned to Air Force Base in , NV on / /20 without a shuttle. [6555-x23] was obtained by the organization after being alerted of the circumstances of its arrival by General . [6555-x23] arrived with no passengers and loaded past carrying capacity with instances of SCP-1124 in their original canisters. Attempts to contact Theta or the station have since been unsuccessful. An unmanned drone has since been deployed to to investigate.

SCP-1124 Addendum-b :
Research drone x-23e was able to gain access to the research bay at ILYENA. Unidentified variations of SCP-1124 were discovered before comm loss with the drone. Reference SCP-1124 Video Transcript-c.

SCP-1124 Video Transcript-c :

Classification Number	Description	Heat Signature
1124-01	Small (each exactly	No heat signature

	1.0268 kg) and generally inactive. Metallic in appearance. Has a distinct cone-shaped mantle and is perfectly bilaterally symmetrical. Speculated to activate when exposed to biological matter.	
1124-02	Anatomically similar to common spiders. Differs in appearance from spiders in that the body segments are fused into four tagmata and joined by four cylindrical pedicels. Has one anterior antennae. Ignores research drone x-23e.	No heat signature
1124-05	Hominid appearance. Appears in multiple places in different frames. After following the drone for some time a large flare damaged thermal sensors.	4µm
1124-88	We can conclude the material composing the progeny of 1124 is vincible. In other frames the material is shown to have regenerated.	n/a
1124-89	[DATA EXPUNGED]	8µm
1124-07	Entity ignored	5.45µm

	research drone allowing for close inspection. Has a tail equal in length to its body. Two sets of serrated teeth each approximately 10 centimetres in length. Observed destroying walls in Theta and consuming them. The consumption seems to be aided by elongated nostrils near its anterior.	
1124-06 1124-24	[DATA EXPUNGED] Fluctuated in appearance wildly although this may due to damaged thermal sensors. Subject first appears reptilian in appearance.	[DATA INVALIDATED] 2µm
1124-23	Caused considerable damage to x-23e. Sampling actuators completely dissolved.	[DATA INVALIDATED]
1124-	After some observation the subject's appearance altered to that of [DATA EXPUNGED] and gestured as if to suggest the drone do so. Researchers remotely operating the drone attempt to communicate with the entity. As a result of this verbal stimulus	[DATA INVALIDATED]

	the entity charges toward the drone and finally communication with x-23e ceases. No further data could be obtained.

Compilers Note - Addendum-d
Instances of SCP-1124's progeny that express low heat signature vary slightly in appearance but share some characteristics including metallic angular features and segmented limbs.

Entities with higher heat signatures appear less angular and are not segmented. Some bodily features are similar to animals that were previously housed on site, although these influences seem to be primarily reptilian.

Temperatures on range from -208 to -223 ºC and surface gravity is roughly 44.88 m/s^2. Life support systems at ILYENA are not functional. Gravity stabilization generators inside ILYENA are also non-functioning. The atmosphere of would corrode most Earth metals. These entities do not require air and are composed of currently unclassified organic material and metals.

Testing is requested on earth housed samples to confirm whether environmental factors affect the abilities SCP-1124 as testing on active samples at ILYENA is limited due to aforementioned conditions at ILYENA and the limitations of the research drones.

Video Recording 1124C area:

Researcher enters area 1124C carrying container with one instance of SCP-1124.

loses balance. A tear is shown on closer inspection near the researcher's leg. A negligible amount of blood is spilled on the casing.

The casing begins to move around and slide along the floor.

places two hands on the casing, effectively stopping it from moving.

A small hole appears on the casing surface. Researcher places one hand over the hole and quickly recoils in pain.

A figure matching typical appearance of SCP-1124-1 emerges from the hole slightly, pausing for roughly 3s.

remains still and continues looking at SCP-1124.

SCP-1124 retreats into the hole.

produces emergency film from a storage closet near unit 1124-C and leans over the box to begin applying it to the casing.

SCP-1124 shoots out of its casing into mouth.

appears to panic, runs into cell 1124-C and begins punching a button linking to the failsafe.

Doors to unit 1124-C lock and the chamber begins filling with triflic acid and mist.

's head appears to 'inflate' slightly. collapses. 's skull appears through cracks in the skin on the head. Blood beginning to drain from cranial orifices.

At this point filming is obscured by acid all but completely filling the tank. The sound of a metallic screeching can be heard, followed by a dull thud and a sound "similar to a balloon popping".

Related Documentation

Short History of ILYENA, Project Tantalus, and the Grey Dragon Incident

ILYENA, or Site-x19 was established for conducting research and experimentation deemed too risky for

planet-side operations. Due to its location on , ILYENA was a low risk solution and conveniently dispensable. The atmosphere on rendered any containment breach irrelevant, and allowed for quick termination.

After decades of research and failed termination attempts, SCP- became docile. During this 30 year "grace period", absolutely no research or testing was devoted into the nature or genesis of SCP- . SCP- was re-designated as Euclid although there was no change in containment procedure.

SCP- 's highly unusual, docile behavior was almost inexplicable at the time. This period of general quiet surrounding SCP- began shortly after the Foundation's involvement in Sector . The Foundation's extraterrestrial involvement was a response to civilian developmental breakthroughs resulting from the discovery of the equation, and the subsequent colonization of Sector .

SCP- once again became active when pods containing the SCP-1124 canisters landed at [DATA EXPUNGED] Air Force Base in , NV on / /20 . The resulting destruction of Site- and the continent of [DATA EXPUNGED] is known as the "Grey Dragon Incident".

When pods arrived at [DATA EXPUNGED] Air Force base, alarms in block of Site- sounded as a result of thermal and kinetic changes in the containment cell of SCP- . D-Class personnel on assignment guarding SCP- reported movement in the containment cell. SCP- broke containment shortly after, ignoring site personnel and heading directly toward the ILYENA lander coordinates.

An alert was sent to General . The General ordered a battalion of soldiers outfitted with [DATA EXPUNGED] to intercept SCP- on route to the lander. This resulted in casualties. Mobile Task Forces Alpha-2 and Delta-5,

each carrying single Alpha pods of SCP-1124, were intercepted and destroyed by SCP- . Foundation losses were extreme. It was later revealed by Mobile Task Force Iota-5 after returning the lot of SCP-1124 that protocol was broken and these pods were given to the other groups as a diversionary measure. It is not known what became of the pods used for the diversion.

SCP- went uncontained for years. The continent of [INFORMATION OMITTED] inhospitable, marking the most severe breach in Foundation history. SCP- was finally lured into a new containment cell using an inactive SCP-1124.

During the operation to intercept SCP- , SCP- 's containment cell was refit and housed 70km underground in a previously decommissioned facility. Walls were surrounded with pools of triflic acid and containment procedures were established on site. SCP- 's containment, and Mobile Task Force Iota-5's return and immediate termination marked the conclusion of the Grey Dragon incident.

Project Tantalus began in the summer of 20 following the string of incidents caused by the containment breach of SCP- . SCP- 's correlation with SCP-1124 was revealed through its actions. The project consists of SCP- 's relocation to a new research facility in for a new series of termination attempts.

SCP-1125: Answer Dice

Item #: SCP-1125

Object Class: Euclid

Special Containment Procedures: Specimens of SCP-1125 are to be locked in opaque storage crates and kept in the SIV (Small Items Vault) at Site-12. In the event of exposure to SCP-1125 outside of testing procedures, any and all personnel affected are to be detained and separated from SCP-1125 for application of class-A amnestics and psychological reconditioning. D-Class personnel used in testing procedures are to be given initial questions specificied in document 1125/D-RegA/extCom:v1.21.

Mobile Task Force Gamma-11 ("Dicejockeys") have been tasked with location and acquisition of instances of SCP-1125 outside of Foundation control.

Description: SCP-1125 is a collection of individually packaged dice with their pips replaced by the words 'Yes' (2x), 'No' (2x) and 'Maybe' (2x). All specimens were machined from pine wood, and had their surface treated with an unremarkable yellow dye and a chemical sealant to prevent wear. The answers available on the dice are rendered in an MS Comic Sans font using a dye containing traces of charcoal, a dye stabilizing agent and [REDACTED]. The words **'The Factory'** are found on the cardboard backing attached to each clear plastic packaging. Underneath the company logo an advertising slogan that reads "They'll make up your mind!" is printed in bold red lettering with a white outline. If encountered without their packaging, instances of SCP-1125 are currently indistinguishable from similar non-anomalous answer dice. In light of this, any and all similarly colored answer dice found in Foundation facilities are to be destroyed immediately, without (further) physical contact by personnel, and all potentially compromised personnel are to submit to the application of Class-A amnestics and psychological reconditioning.

SCP-1125's effect becomes apparent when a specimen makes contact with the epidermis of a human being. An immediate compulsion to make use of it comes over the subject, who will phrase a query concerning a binary decision and roll SCP-1125. It then provides an answer, where it must be noted that if a roll indicates an answer of 'Maybe', the subject will continue to roll the die indefinitely until either an affirmative or negative answer has been generated.

Subjects will unfailingly keep to the answer provided by SCP-1125, even if this would produce undesirable results. Furthermore, while initial use of the object seems to be made with trivial, sometimes even whimsical questions, testing has shown prolonged exposure to lead to increasingly critical decisions being made dependent on SCP-1125. Subjects in possession of a specimen gradually become unable to make any decision without resorting to the object and over time even base decisions that are not normally consciously made on the result that SCP-1125 provides them with. If challenged, subjects will not perceive this to be abnormal behavior and will actively resist attempts to take SCP-1125 away from them.

Testing has revealed that while SCP-1125 influences decisions, it does not confer abilities to the subject that it did not have before.

The Site-12 SIV currently holds 79 individual instances of SCP-1125 with several specimens having been removed for testing purposes. These were subsequently destroyed to prevent accidental exposure.

Addendum 1125-A-01: *Excerpts from the transcript of video log 1125-DV-23*

> **[Begin transcript excerpt | timestamp 2007/07/14-14:52:31]**
>
> *D-43426 enters the testing environment, where a package containing 1 specimen of SCP-1125 is laid out on a small metal folding table. In addition, a bed and a single chair are provided.*
>
> **Dr. :** "Please open the packaging and take out the die."

D-43426: "Whatever you say."

Subject picks up the item and examines it briefly before tearing open the packaging. The object falls out and lands on the floor, rolling under the table.

D-43426: "Shit! Sorry, doc."

Dr. : "That's fine, D-43426. Please retrieve the die."

Subject picks up the specimen.

D-43426: "Got it. Now what?"

Dr. : "Please do as you like, D-43426."

D-43426: "Well, might as well roll the little sucker then. So…what do I ask it?"

Dr. : "That is up to you. Anything will do as long as it's a question answerable by 'Yes' or 'No'."

D-43426: "Sure. Should I…should I clap my hands?"

Subject rolls SCP-1125.

Dr. : "Good, D-43426. Now, please read the answer the die gave you."

Subject leans in closer and then turns towards Dr. .

D-43426: "It says 'Yes'."

Subject claps his hands.

Dr. : "Why did you do that, D-43426?"

D-43426: "I don't know, it seemed like the thing to do? I mean, it said yes. Can I roll it again?"

[End transcript excerpt | timestamp 2007/07/14 - 15:04:12]

[Begin transcript excerpt | timestamp 2007/07/19 - 09:23:01]

D-43426: "Should I eat THIS then?"

Subject rolls SCP-1125 and quickly tears open the box of Pop-Tarts provided to him. SCP-1125 is shown to indicate an answer of 'Yes'. This is the first sustenance subject has permitted himself in 18 hours.

[End transcript excerpt | timestamp 2007/07/19 - 09:23:51]

[Begin transcript excerpt | timestamp 2007/07/25 - 12:46:54]

D-43426: "Should I breathe?"

SCP-1125 is shown to have come up 'Maybe' and subject immediately rolls it again. This second roll results in a 'No' and subject seems to comply.

D-43426: "Should I breathe?"

Subject rolls the die again.

[End transcript excerpt | timestamp 2007/07/25 - 12:47:16]

« SCP-1124 | SCP-1125 | SCP-1126 »

SCP-1126: Agent Palmer

Item #: SCP-1126

Object Class: Safe

Special Containment Procedures: SCP-1126 is to remain planted at Bio-Site-68. It is to be tethered by steel cable to 4 concrete pillars moored in the ground around it to prevent it from moving or uprooting itself. It is to be watered at 0900 hours twice weekly. Personnel are neither to encourage nor discourage the claims that SCP-1126 makes.

Description: SCP-1126 is a specimen of *Veitchia joannis* (Joannis palm), standing 12m tall. Despite being a member of a species endemic to Fiji, SCP-1126 was recovered in Cleveland, Ohio. SCP-1126 is animate and capable of speech. It possesses the speech mannerisms and personality of the stereotypical Cold War spy. It claims to be "Agent Palmer," a reconnaissance agent from an organization known as T.R.O.P.I.C. Said organization's apparent mission is "the exploration, advancement and domination of tropical flora and fauna into the climatologically oppressed regions of the world." There is no evidence to support the organization's existence. SCP-1126 states that prior to its recovery by the Foundation, it had successfully surveyed over 55 square kilometers of rural and urban territory in the state of Ohio. The veracity of this claim remains indeterminate.

Draped around SCP-1126's trunk is a dark gray trench coat with two belts that fasten tightly across the waist. While the sleeves, pockets, and flaps of the trench coat may be shifted or opened, it has proven impossible to completely disrobe SCP-1126 — the coat is secured to the trunk by unknown means. In addition, SCP-1126 repeatedly issues threats of its close-quarters combat prowess, and recommends that its body not be explicitly investigated. SCP-1126 can manipulate the trench coat as though it has arms, usually positioning the sleeves as though it were clasping its hands behind

its back. SCP-1126 achieves forward locomotion by rocking back and forth on its root ball.

SCP-1126 may occasionally remain silent for several days in a row, and tends towards speaking less often or with a hoarse voice when given less water. SCP-1126 also shows a propensity for neologism.

Interview Log 1126-Epsilon:

> **Interviewed:** SCP-1126
>
> **Interviewer:** Dr. Sam Quentin
>
> **Foreword:** The following interview was conducted shortly after SCP-1126 had been watered one morning.
>
> **<Begin Log>**
>
> **Dr. Quentin:** Hello SCP-1126.
>
> *(SCP-1126 clears its throat and pauses for a few seconds.)*
>
> **SCP-1126:** Pleased to make your accountance, enemy number 29. *(Note: SCP-1126 had not met Dr. Quentin prior to this.)*
>
> **Dr. Quentin:** And how are you today?
>
> **SCP-1126:** As I have explained, I am alert. I will not rest until these enchainments have been broken and I am free from the tyranny of the temperate bloc.
>
> **Dr. Quentin:** Is there anything you would like to say for the record, SCP-1126?
>
> **SCP-1126:** This is day 14 of my imprisonment. My confederables Agent Spanish Moss and Agent Jewel Beetle are waiting for me on the outside. Even as we speak they are finding weakenings in the defense field of this oppressed establishment.

Dr. Quentin: And these agents are members of T.R.O.P.I.C.?

SCP-1126: "*T.R.O.P.I.C. is fighting for the ideal of the safety and proliferation of tropical life.*" I will fight with it to my dying breath. The mission must be completed.

Dr. Quentin: …And why did you choose Ohio for reconnaissance?

SCP-1126: I do not choose my assignages, enemy number 29. I accept them.

Dr. Quentin: For an agent of espionage, you seem to be revealing your orders quite freely.

SCP-1126: *(shrugs)* The world must be made aware of our agenda.

Dr. Quentin: Well then, thank you, that will be all. *(stands and makes his way to leave the area)*

SCP-1126: *(shouting)* Long live T.R.O.P.I.C., and down with the polarist regime!

<End Log>

Closing Statement: SCP-1126 appears to be able to accurately keep track of the passage of time and remember individuals it has previously encountered.

Addendum: Beginning on 2011- - , SCP-1126 has made a daily ritual of rocking forwards and backwards in place at 0000 hours in an attempt to break free of its moorings. These attempts only last for several minutes each and are considered no threat to containment.

« SCP-1125 | SCP-1126 | SCP-1127 »

SCP-1127: A Film Festival

Item #: SCP-1127

Object Class: Safe

Special Containment Procedures: Instances of SCP-1127 identified outside of containment are to be investigated by MTF Mu-53 (“Ebert's Thumb”). Physical copies of SCP-1127 are to be seized, and digital copies are to be captured on secure encrypted recording media before being neutralized. Any victims of full SCP-1127 exposure must be evaluated to determine if the effects of SCP-1127 have rendered them an unacceptable threat to the general public. Those deemed an acceptable risk are to be treated with Class-A amnestics and released. (***Note:*** *Amnestics have no effect on the symptoms of SCP-1127 exposure.*) Those that cannot be released back into the population will be reclassed as D-class personnel or terminated at the site director’s discretion.

Contained copies of SCP-1127 are to be kept in the secure media vault at Site- . Instances of SCP-1127 shall only be viewed on devices approved by the site director within Site- ’s secure viewing room. Instances of SCP-1127 shall only be viewed in their entirety by D-class subjects as part of an approved experiment. Foundation personnel should avoid unnecessary exposure and log any incidence of viewing SCP-1127. Any personnel who have logged over 15 minutes cumulative lifetime viewing of any version of SCP-1127 must cease working with SCP-1127 and be assigned to other duties.

Description: SCP-1127 is a series of short films ranging between 23 and 42 minutes in length. To date copies of 3 different films have been recovered and 1 film has been identified but not yet contained. The films have been designated SCP-1127-1, SCP-1127-2, SCP-1127-3 and SCP-1127-4. It is unknown how many more films in the SCP-1127 series have yet to be identified and recovered by the Foundation.

Each film is composed primarily of scenes clipped from other movies and shorts, with additional video from various other sources. Sound and dialog has been added or modified, and a “narrator” character unique to each film appears, fully integrated into the clips comprising the film, regardless of the original source of the material. The narrator provides commentary and occasionally interacts with objects and characters within the recycled footage.

Anomalous properties present after a cumulative 20 minutes of exposure to the contents of any single film in the SCP-1127 series. Effects do not present when audio and video are perceived separately. Each film in the series produces a different effect in the viewer, but in each case the effect is a permanent disruption in normal behavior patterns, altering emotional reactions to various stimuli.

+ Description of SCP-1127-1

- **Initial Appearance:** SCP-1127-1 first appeared on / /20 , at the Movies 10 Cineplex in , New York. SCP-1127-1 had been inserted into the first half hour of [REDACTED]. Exits were blocked by persons unknown and approximately people were exposed.
- **Length:** 23 minutes.
- **Title:** Were Clowns Always Yellow? (Number 5)
- **Narrator:** A middle-aged man wearing a SS uniform including a holstered pistol. His face is obscured by elaborate clown makeup.
- **Identified Video Sources:** *The Sound of Music* (1965), *The Night Porter* (1974), *The Day the Clown Cried* (1972), *Surf Nazis Must Die* (1987), [REDACTED], archival footage from the WWII era.
- **Sample Narration:** When our lives become the joke, humor becomes a war crime. The punch-line is always death, and to “get it” is to abandon the

pretense that “getting it” matters. Laugh at the reality that is laughing at you! [Narrator draws his pistol and shoots J L in the back of the head.]

- **Effects from exposure:** After exposure to SCP-1127-1, subjects will generally consider it the most humorous thing they’ve ever seen. Afterwards, subjects will express disturbance and disgust at any communication normally intended to be humorous. Most jokes will be seen as offensive, and videos of comedians or comedies will cause distress or revulsion. (One D-Class subject had to be physically restrained when shown an episode of *Monty Python’s Flying Circus* after exposure.) Conversely, communication that might normally be cause of distress prior to exposure (autopsy photos, graphic war footage, videos of public suicide) will be seen as amusing or funny.

- **Conclusions:** Victims of SCP-1127-1 exposure are deemed safe to re-enter the general population after administration of class-A amnestics.

+ Description of SCP-1127-2

- **Initial Appearance:** On / /20 a copy of SCP-1127-2 was uploaded to .com and registered views before exposure was contained with a DMCA notice. Foundation agents tracked the origin to a proxy server in Guam. Investigation continues as to its origin.

- **Length:** 37 minutes.

- **Title:** Crazy Where? You Are (Number 0)

- **Narrator:** A female child approximately 12 years old, wearing a blue dress and a black domino mask. She carries a teddy bear that she slowly dismembers with a small knife during the course of the film.

- **Identified Video Sources:** *Willy Wonka and the Chocolate Factory* (1971), A Three Stooges Short, “They Stooge to Conga” (1943), *Faces of Death* (1978), *La planète sauvage* (1973), [REDACTED], various animated sources from 193 until 196 including “Bugs Bunny Nips the Nips” (1944) and the Tom & Jerry short “The Midnight Snack” (1941).

- **Sample Narration:** [Whispering during a clip of “Bugs Bunny Nips the Nips”] … what are you afraid of … violence … afraid that violence is the answer … or is it the question … ask the question you are afraid of … you already know the answer … pain doesn’t hurt.

- **Effects from viewing:** After exposure, subjects will generally express no strong emotional response to SCP-1127-2 at all. Subjects also lose interest and emotional connections to things, activities and people they had prior to exposure. Subjects will also react to dangerous and hostile environments with disinterest to the point they will ignore immediate threats to their personal safety. Subjects also express a marked decrease in empathy and may injure or harm others out of “curiosity.”

- **Conclusions:** Victims of SCP-1127-2 exposure are unsafe to re-enter the general population due to the risk they pose to others.

+ Description of SCP-1127-3

- **Initial Appearance:** During / /20 - / /20 , an illegal UHF transmitter off the coast of , Michigan broadcast a loop of SCP-1127-3 for approximately 72 hours. Foundation involvement occurred subsequent to cessation of broadcast. people were found to be affected. No copy of SCP-1127-3 has yet been recovered.

- **Length:** 30 minutes (Approximate)
- **Title:** All? Comes With Yesterday (Number X)
- **Narrator:** A woman approximately in her mid-30s wearing an Elizabethan ball-gown. She wears a metallic golden mask in the form of a rat's face. When she is in profile, the mask appears to be stitched to the side of her head. Some blood is visible.
- **Identified Video Sources:** *RoboCop* (1987), *Eraserhead* (1977), *The Ten Commandments* (1956), *Natural Born Killers* (1994), *Dawn of the Dead* (1978), *Apocalypse Now* (1979).
- **Sample Narration:** [Monotone. Three second beat between words.] Desire. Aspire. Require. Conspire. Acquire. Retire. Expire. Choir. Pyre. Liar. Liar. Liar. Liar. [Continues saying "Liar." for several minutes.]
- **Effects from viewing:** After exposure, subjects express an extreme discomfort with technological artifacts. They dislike any object that has been machined, processed or otherwise manufactured. This applies not only to things generally considered "technological," but to almost anything that is the result of human intervention in the environment, including clothing and anything beyond the most simple tool use. This effect extends to abstract concepts as well, in particular the concepts of money, personal property, and political organization.
- **Conclusions:** Victims of SCP-1127-3 exposure pose little danger, but are unable to re-integrate into modern society. After administration of class-A amnestics, any individuals to be released must be placed in an institutional environment or be relocated to [REDACTED] where they can be

assimilated into the [REDACTED] population.

+ Description of SCP-1127-4

- **Initial Appearance:** From / /20 to / /20 , Copies of SCP-1127-4 had been inserted as a "special feature" onto DVDs stocked at the Adult Bookstore in , Canada. copies had been sold, all recovered. individuals were exposed to SCP-1127-4's full effect.
- **Length:** 42 minutes
- **Title:** Why Are You Crying? (Number -1)
- **Narrator:** Male in his early 20s, shirtless, wearing black leather pants and a leather mask obscuring his face. As the film progresses, welts and bruises appear on the narrator's torso without apparent cause.
- **Identified Video Sources:** *Cremaster 3* (2002), *Dog* (1971), *A Dirty Shame* (2004), *Lolita* (1962), *The Rocky Horror Picture Show* (1975), *Salò o le 120 giornate di Sodoma* (1975), [REDACTED], various videos available on the internet including " ".
- **Sample Narration:** …do you want to close your eyes and run to mommy well run to her then run to her and tell her all those sick things that make you want to puke and whip it out and jerk off while the warm shit smears across your naked skin and she'll kiss it and make it all better because mommy knows what you want what you always wanted and she'll give it to you hard if you only have the balls to ask cause mommy loves you and love ain't nothing but sex misspelled…
- **Effects from viewing:** After exposure, subjects will no longer be able to attain sexual arousal as

they would have prior to exposure. Anything they would have found erotic or stimulating prior to exposure will become, at best, an object of disinterest, and occasionally it will become a source of revulsion. Instead, the subject will have acquired new, and apparently random, subjects and/or actions they consider erotic and/or stimulating. All subjects lose the ability to be stimulated by fantasizing or use of pornography, and must actively engage in their acquired fixations in order to become aroused. New sexual interests may be relatively benign (Sadomasochism, Coprophagia, Acrotomophilia, Partialism, Klismaphilia, Mysophilia, Voyeurism, Exhibitionism), potentially harmful or criminal (Asphyxiophilia, Zoosadism), or actively dangerous and likely to cause harm to the subject or others (Biastophilia, Pedophilia, Necrophilia, Apotemnophilia, Vorarephilia.)

- **Conclusions:** Disposition of victims of SCP-1127-4 is dependent on evaluation of their acquired paraphilia. Because of the necessity of the subject to act on these desires to achieve any form of sexual function, any subject expressing a paraphilia that requires a non-consensual partner (or a partner that cannot legally consent) and/or risks actual permanent physical harm or death of the subject and/or partner shall be deemed unsuitable for release.

SCP-1128: Aquatic Horror

Item #: SCP-1128

Object Class: Euclid

Special Containment Procedures: Written descriptions or imagery of SCP-1128's appearance, or videos of the entity "breaching" (see Addendum 1128-3) found outside the Foundation are to be destroyed, and class-C amnestics are to be administered to anyone exposed to such information or showing signs of SCP-1128 contamination. A written description of the entity's appearance is to be kept at Site- for experimental purposes only and is not to be read by anyone other than D-class used for testing. If exposed, staff are to report immediately for administration of class-C amnestics. Mobile Containment Force Kappa-12 has been assigned to intercept and redirect any and all water traffic that passes through their designated patrol area by any means necessary (see Addendum 1128-2).

Description: SCP-1128 is an entity that manifests as a massive aquatic predator to anyone given a full description of the being's appearance through either spoken/written descriptions or visual depictions of the being. Persons infected by SCP-1128 will initially exhibit no abnormal behavior, though some cases show a general aversion to activities involving bodily immersion in water such as bathing or swimming. Should subject ever be fully immersed in water, they will disappear completely under the surface of the water, regardless of the water's actual depth. In most cases, subjects will reappear moments later in a panicked state and frantically try to leave the water, while in some other cases the water will become polluted with blood and debris confirmed to be the remains of the subject. Subjects that have reappeared intact claim that they were transported to a vast ocean where they are pursued by SCP-1128. Interviews with these individuals carries some risk of further SCP-1128 contamination, as descriptions of the being's appearance

trigger further infections. SCP-1128 infection can be treated with class-C amnestics, as it appears memory of the entity or descriptions of it are required for its anomalous properties to take effect.

Addendum 1128-1: Testing with infected D-class have shown that wireless communication devices function normally when used by submerged subjects affected by SCP-1128. See Interview 1128- for details.

Addendum 1128-2: Tracking devices affixed to D-class used in SCP-1128 experiments reveal that submerged subjects are transported to an area within the Ocean, not far from the coast of [REDACTED]. Further investigation of these coordinates revealed the area to be [DATA EXPUNGED]. Mobile Containment Force Kappa-12 ("Sea Devils") has been assigned to keep unauthorized seafaring vessels out of this area at all costs.

Note: That's where we've been sending those D-class? How does a short-range wireless communicator get such a clear signal from that far away? -Dr. S

Addendum 1128-3: Tests involving D-1732, who had been used for repeated SCP-1128 testing without administration of amnestics, was shown to be able to encounter the entity in bodies of water normally insufficient for bodily immersion. This effect became more drastic over time, with D-1732 developing progressively stronger hydrophobic tendencies, claiming to see SCP-1128 from outside almost any body of water encountered by the subject. On / /20 , days after initial exposure, D-1732 was violently pulled into a glass of water by [REDACTED]. No remains were recovered from the incident. Staff witnessing the event were found to be infected by SCP-1128, and administered class-C amnestics. Containment procedures were then updated to include videos and descriptions of this event, and testing involving extended infection of D-class was terminated.

Experiment Log 1128

Interview 1128-

Interviewed: D-

Interviewer: Dr. S

Foreword: D- was instructed to read from a small pamphlet describing SCP-1128's appearance, then was outfitted with diving gear and lowered into a large tub of water via winch and cable. D- 's gear was outfitted with a wireless communication device to allow contact between himself and Dr. S , and to test if the SCP had any effect on such devices. Interview has been edited to remove hazardous information pertaining to SCP-1128.

<Begin Log,>

Dr. S : D- , can you hear me? over.

D- : I hear you doc. Damn, this thing is deep. It looked so tiny from the outside…

Dr. S : How well is your reception? over.

D- : Good enough, I guess. Kinda fuzzy, but not enough that I can't hear what you're saying.

Dr. S : What is your current status?

D- : Right now, I'm just sinking to the bottom of- is this the ocean? How the hell did you manage to fit an entire ocean inside a stinkin' bathtub?

Dr. S : Irrelevant, D- . What are your surroundings?

D- : I just said "ocean", damn it! There's fish and everything! Don't you guys know what the hell's inside your own- oof!!

Dr. S : D- , what happened?

D- : I'm fine, I'm fine. I just hit bottom. Looks like I've landed in a patch of seaweed or something.

Dr. S : What are your surroundings?

D- : Seaweed, mostly. Wait a second… it gets thinner to my right, looks like there might be a dropoff that way. Should I go take a look?

Dr. S : You may proceed.

D- : Ok. (D- grunts audibly) Damn suit's heavy, it's hard to move in this thing. Hey, is this thing soundproof? I hope my talking isn't scaring off any-OH MY GOD!!!

Dr. S : D- ? D- , respond! What's your status?

D- : (panting audibly) I'm ok. I'm ok. I don't think it saw me. Damn, I think I pissed myself.

Dr. S : What happened? What did you see?

D- : Scariest damn thing I've ever seen. Some kind of big-ass [DESCRIPTION REDACTED]. Wait a second… that's the thing from that stupid booklet you gave me, isn't it?

Dr. S : Affirmative, please refrain from describing it any further. What is it doing?

D- : Nothing right now, it's just swimming along. I think it's got something in its mouth… is that a whale? Holy crap, it is! It's eating a whale! Oh God, look at those teeth!

Dr. S : (to assistant) I think we're done here. Pull him out now. (to D-) Thank you for your cooperation, we're bringing you up now.

D- : And now he swallowed it. Damn, that's gonna haunt my dreams… wait… it's stopped moving… I think it sees me oh God it's looking right at me IT'S HEADED THIS WAY OH GOD HELP ME!!

Dr. S : Get him out of there, now!

D- : (Hysterical, spouting gibberish when feed cuts to static)

<End Log>

Closing Statement: Winch was retracting at full speed when the cable went taut, wresting the winch from its mounting. Cable then went slack and water became polluted with blood confirmed to be that of D- . No further remains or equipment were recovered. Interview log and relevant documents were edited for vectors and all staff present were treated with Class-C amnestics.

Experiment Log 1128

Experiment log 1128-A-1

Date: - -
Procedure: D-class exposed to SCP-1128 outfitted with diving gear and communication device, then lowered into tub of water.
Result: See Interview 1128-

Experiment log 1128-A-2

Date: - -
Procedure: D-class exposed to SCP-1128 and equipped with SCUBA gear placed into a standard protective "shark cage" and lowered into water.
Result: No response for approximately seconds, then line went taut and was severed at a point beneath the water. Remains of D-class as well as jagged steel fragments, presumably remnants of the cage, surfaced shortly afterward.

Experiment log 1128-A-3

Date: - -
Procedure: Same as above. Cage treated with SCP- to increase durability.
Result: Same as above, no remains surfaced.
Notes: hours later, MCF "Sea Devils" reported finding an intact shark cage floating beneath surface of patrol area near one of their vessels. Item was retrieved and confirmed to match description of cage used in Experiment 1128-A-3. Cage was undamaged but bore traces of human DNA and feces of indeterminate origin. No further remains of D-class found.

Experiment log 1128-A-4

Date: - -
Procedure: Exposed D-class equipped with diving gear and armed

with [REDACTED] for use against "hostile organisms". Unlike previous tests, subject was also equipped with a live-feed video camera attached to his helmet.
Result: Video feed shows weapon was ineffective against SCP-1128, appearing only to enrage the creature rather than harm it considerably or drive it away. Feed was lost when D-class was devoured. Staff involved treated with amnestics following transcription of video feed.

Experiment log 1128-A-5

Date: - -
Procedure: Exposed D-class equipped with protective environment suit and video feed lowered into a vat of [REDACTED] to test SCP-1128 manifestation in liquids other than water. Substance chosen for its low density allowing free movement similar to walking in open air.
Result: D-class recovered without incident, liquid did not trigger SCP-1128's effect.
Note: *Ok, so you might be safe from the thing in liquids other than water, but that probably won't help you much unless you intend to drink and bathe in exotic chemicals for the rest of your life, which probably would get a lot shorter if you tried that. -Dr.*

SCP-1129: Hyperarousal Response

Item #: SCP-1129

Object Class: Euclid

Special Containment Procedures: SCP-1129 is to be contained in a 3m x 3m x 3m chamber in the High Security wing of Site-83. Due to the nature of SCP-1129, no direct or first-degree indirect viewing methods, such as observation windows or cameras, are allowed within the containment chamber except as authorized by a Level 4 or higher researcher. Visual contact with SCP-1129, whether direct, indirect or recorded, is not allowed except under strictly controlled experimental conditions. SCP-1129's continued presence and status is monitored by ultrasound, as the image produced does not cause the effects typical of observing SCP-1129.

Knowledge of SCP-1129's effects is non-essential for any personnel with less than Level 4 security clearance. Personnel assigned to the research, containment, security or other support teams associated with SCP-1129 are to be sequestered from the other personnel at Site-83 until such time as they have been removed from the assignment and have completed the debriefing and clearance procedures. If any personnel at Site-83, whether assigned to SCP-1129 or not, begin to exhibit the Stage I or Stage II symptoms described below, they are to be administered Class B amnestics immediately and must receive a psychological examination to determine the severity of after-effects, with further psychological treatment made available as necessary.

If a member of assigned personnel is deemed unnecessary to the continued containment of SCP-1129, they may be transferred to another project so long as they had no direct exposure to SCP-1129. Prior to transfer, all personnel who have been assigned to SCP-1129 must successfully complete a memory restructuring following treatment with Class A amnestics. At that point, they must

complete a minimum 2 week quarantine period to be certain that they do not manifest Stage I or Stage II symptoms.

Description: SCP-1129 is a large object of apparently biological origin. Its composition is largely unknown, as it seems to 'flow' past any and all objects that approach it, temporarily breaking apart and changing its own dimensions as needed. Due to this, only one sample has ever been obtained, which showed the presence of several amino acids and hormone analogues consistent with terrestrial life, but no DNA samples were detected. Based on longitudinal ultrasound recordings, it appears that SCP-1129 is dimensionally fractal in nature, with a partial existence in a theoretical 3.333rd spatial dimension. Based on behavior, it is presumed that SCP-1129 is sentient, although this is unconfirmed.

When any sentient being makes visual contact with SCP-1129, they will immediately enter Stage I, which is characterized by an extremely heightened flight reflex. They will attempt to flee from SCP-1129 by any means possible, ignoring obstacles and personal injury.[1] Human subjects have later described this as having been overcome with intense fear and unthinking hysteria. Stage I symptoms will increase in intensity so long as the subject remains within 23.3 meters of SCP-1129 or remains in direct line-of-sight of SCP-1129. Stage I symptoms will persist for several hours[2] after the affected being has left the immediate range of effect of SCP-1129. If the affected subject is unable to leave the range of effect, they will exhibit increasingly frantic behaviors until finally expiring. Post-mortem examinations reveal that the cause of death is typically cardiac arrest or the equivalent, consistent with a prolonged heightened state of fear and stress.

Once a subject has recovered from Stage I symptoms, they will immediately proceed to Stage II. Stage II is characterized by heightened aggression and hostility towards SCP-1129. Human subjects experiencing these symptoms invariably describe SCP-1129 as "wrong", "not the right kind of real", "not fitting here", etc., and incredibly dangerous. They will express a strong desire to destroy it immediately by any means possible. If the animal or human subject to Stage II symptoms is not able to convince others to assist them in destroying SCP-1129, they will attempt to do so on

their own, up to and including breaching containment on SCP-1129 or other SCP items believed to possibly be useful in the destruction of SCP-1129. If multiple individuals are experiencing Stage II symptoms, they will work together in a destruction attempt. Subjects do not display any change in intelligence, skills or ability to communicate, however, and cross-species cooperation is usually minimized. No other change in behavior or motivation is noted, and subjects experiencing Stage II symptoms will pause in order to eat or sleep, although they return to their destruction attempts as soon as feasible.

However, upon seeing SCP-1129, subjects will promptly return to Stage I with no apparent memory of having experienced it before, beginning the cycle again. This cycle will continue unabated until the subject has either died or been administered amnestics. In approximately 1.7% of cases, a subject will enter Stage III instead, which is characterized by all voluntary muscles freezing in place. This muscle locking persists despite all treatments, including removal from SCP-1129's range of effect, administration of muscle relaxers, administration of amnestics, and medical destruction of the motor nerves controlling them. To date, the most control of voluntary muscles that has ever been regained was in 3 individuals who regained control of the eyelids, allowing voluntary blinking, and partial control of the vocal cords. In these cases, amnestics were successful in eradicating the Stage I and Stage II symptoms.

Video feeds and photographs of SCP-1129 produce an identical effect, though artist renditions have no effect. Despite this profound observational cognitohazard effect, SCP-1129 seems to be completely harmless otherwise. It has now been determined that transition into Stage II may be caused by any significant knowledge of the nature of SCP-1129's effects. SCP-1129 is now considered a Grade III infohazard and has been upgraded to Euclid. See Addendum.

Addendum: On April , 19 , researchers assigned to SCP-1129 began to share the consensus that SCP-1129 was incredibly dangerous, and submitted multiple requests for its decommissioning, which were all denied. A new team of researchers were assigned, but within 30 days, they exhibited the same opinions

as the previous team. Subsequent research teams have displayed the same effects, despite updated containment procedures. Teams of researchers are now to be cycled on a biweekly basis, as that seems to slow the onset of the infohazard aspect of SCP-1129's effects.

Efforts are currently underway to identify and locate all personnel Foundation-wide who may have been exposed to information regarding SCP-1129 directly or second-hand, with administration of amnestics and memory-restructuring performed as appropriate. As of the date of this report, personnel have been identified and successfully treated.

Footnotes
1. This effect is most pronounced in mammals, but has been observed in all animal life, including birds, fish, snails and insects.Certain sentient anomalies, however, are not affected.
2. The exact length of time varies considerably from individual to individual, with an average of 4 hours.

« SCP-1128 | SCP-1129 | SCP-1130 »

SCP-1130: A Handy Shortcut

Item #: SCP-1130

Object Class: Safe

Special Containment Procedures: SCP-1130 is to be contained within a standard Safe-class protective storage locker at Site-12. Please be advised that D-Class personnel used in testing may exhibit erratic and/or aggressive behavior when exiting SCP-1130-2. A team comprised of one Medical officer with Level 3 clearance and a minimum of two Level 2 security personnel is to be maintained at any test site to detain and if necessary sedate test subjects upon reemergence. Security personnel thus stationed are to carry Daninject Projector Rifles loaded with 3-Quinuclidinyl benzilate darts. To avoid public exposure, testing is to be scheduled between the hours of 02:00 and 05:00 local time and directions are to only be requested for suitably secluded destinations. Civilians witnessing any aspect of testing procedures are to be detained and administered class-A amnestics prior to relocation. Considering currently archived debriefing reports and exploration logs, SCP-1130-2 has been designated a Protean-class dimensional anomaly. Any research or security personnel assigned to SCP-1130 are expected to be familiar with relevant guidelines.

Description: SCP-1130 is an interactive kiosk providing free directions from a fixed position in , to any street address within city limits. Its outer structure measures 50 cm x 50 cm x 175 cm and is composed of unadorned sheet metal. A brand LCD touchscreen is set into the front of the kiosk at an angle, beneath which is a 25 cm x 2 cm slot from which directions are dispensed. A maintenance hatch set in the back panel provides access to the interior. No processing unit, power source or printing peripheral have been found inside and SCP-1130 appears to be fully functional without these components. A small tag in the upper right of the back panel identifies it as a model Urban Wayfinding Unit, built by the

corporation in 20 .[1] Covert enquiries with the company have shown that, while it does indeed manufacture this model, no record exists of SCP-1130 having been manufactured, assembled or distributed.

SCP-1130's primary anomalous property manifests when directions have been requested and printed. Directions obtained from SCP-1130 will invariably instruct subjects to leave established routes and make use of a door described as 'Maintenance Portal 26-Sigma' (referred to as SCP-1130-1). It takes the form of a severely weathered arched metal door and has never been observed to be in the same location twice, even when the same route is requested multiple times. SCP-1130-1 does not exist in its prescribed location prior to the production of directions by SCP-1130. Multiple subjects following the same set of directions will be able to find and make use of the same door until it closes. At that point, SCP-1130-1 will vanish from sight and subjects left behind will be unable to follow the directions any further. If directions are photocopied, SCP-1130-1 will only appear when following the original specimen. SCP-1130-1 can be recorded by all present when encountered and visual reproductions will show SCP-1130-1 as encountered by subjects following directions.

Those subjects who successfully follow directions to their destination and remain suitable for debriefing report SCP-1130-1 vanishing behind them once inside. Additionally, subjects describe having to traverse a space composed of up to kilometers of interconnected halls, rooms and tunnels (designated SCP-1130-2) before finding themselves before SCP-1130-1 again. Spaces encountered are always in a severe state of disrepair and do not seem to be linked in a logical fashion. One test subject reported stepping from what seemed to be an abandoned subway tunnel into the kitchen of a derelict fast food diner.

All subjects have described a consistent auditory phenomenon while in SCP-1130-2, but at this point in time its source is unclear. Debriefings and post-event psychological evaluations reveal test subjects seem to develop a persistent sense of being pursued, growing stronger as the time spent in SCP-1130-2 and this phenomenon increases. Extended exposure may lead to

development of psychological trauma, depending on the mental and emotional stability of test subjects.

After exiting SCP-1130-2, subjects find themselves at their destination. Test results indicate that on average 11-23 seconds lapse between subjects entering and exiting SCP-1130-2. However, this does not take into account the time subjects spend in transit, which may range from several hours to several weeks.

Communication of any kind with subjects in transit has proven to be impossible. GPS locator signals give test subjects' location upon entering SCP-1130-2 as [REDACTED]. This does not change until test subjects emerge from SCP-1130-2. Audio and video recording devices function normally, but will not transmit data while in SCP-1130-2. This necessitates personal recording devices to be worn by test subjects.

Addendum 1130-A-01: *Recovery and preliminary containment notes*

SCP-1130 was retrieved from its location in , after a number of documented disappearances amongst tourists. Officials were only able to locate one missing individual, who was found wandering through a gated community seven kilometers from SCP-1130's location. On his person were the directions requested from SCP-1130 and what was later identified as a "Queen Elizabeth" M-17 steel helmet. The Foundation was alerted when details of the case triggered a dedicated monitoring station and a recovery team led by Agent moved to secure SCP-1130. The tourist was located and was administered class-A amnestics. SCP-1130 was removed from its position outside the subway station by the recovery team posing as a municipal work crew.

Addendum 1130-A-02: *Partial transcript of log file 1130-T-14/73299*

> **Personnel involved in test:** Dr. - , D-73299
>
> **Summary:** The following is a partial video and audio transcript for log file 1130-T-14/73299. Before testing commenced, subject was given directions to Street as provided by SCP-1130. Subject received MRE

rations (including the necessary FRH packets) and enough water for seven days. Head-mounted video and personal audio recording devices were checked and found functioning with expected parameters.

Transcript:

<Begin video/audio log transcript>

Dr. - : "Jim, are we recording?"

A muffled reply can be heard from behind the camera.

Dr. - : "Okay then. *turns to D-73299* Now, could you please state your name and designation for us?"

D-73299: "Who, me? Errr… my name is and my denum is 73299."

Dr. - : "Thank you. Now, we've provided you with directions and supplies. We'd like you to provide us with a running commentary while you're in there. Can you do that?"

D-73299: "I guess. And I won't be able to talk to you guys, right?"

Dr. - : "That's correct. But we'll be recording everything you see and hear."

Dr. - opens SCP-1130-1.

Dr. - : "Please enter. We'll shut the door after you, so don't worry about that."

D-73299: "I hope you guys know what you're doi… hey, watch it!"

D-73299 is helped into SCP-1130-2 by security personnel present. The sound of a door slamming shut can be heard, followed by the subject muttering obscenities. Subject turns around and appears to be

searching for SCP-1130-1, which is no longer visible. Subject switches on head-mounted LED light and looks around. This reveals what appears to be the interior of a WWII-era submarine.

D-73299: "Jesus! Where the hell am I?"

Subject surveys his surroundings. Small pools of water can be seen all along the deck. The left side of the small elongated space seems to be filled with a set of bunks. Blankets lie on rusted metal cots. To the right is a long rusty metal wall sectioned off by bulkheads. In front of subject is a small door with a lock wheel. Water seems to be continuously dripping from the ceiling and walls.

D-73299: "Okay… okay… gotta breathe… gotta just… *inhales deeply* … keep breathing. So, you wanted me to talk… looks like a boat or something. Thing's rusted and filthy, but I guess you can see that. There's some kind of sign here. Lemme get in a bit closer."

Subject steps around the water on the floor. A rusted metal sign comes into view.

D-73299: "No idea what the hell kind of language that is. Might be French? I can't even pronounce it. Anyway, cam must be recording it, so you figure it out.'

[POST-EVENT OBSERVATION: Sign read 'Achtung! Rauchen Verboten!']

Subject suddenly turns around, obviously agitated.

D-73299: "Goddamn, what was that? I think I heard something."

[POST-EVENT OBSERVATION: Analysis of recovered audio does not indicate an audible sound.]

D-73299: "Seemed to be coming from right behind… there it is again! What the hell is that!?"

Subject runs towards the door and attempts to turn the wheel. Subject can be heard grunting and swearing.

[POST-EVENT OBSERVATION: At this point in the recording, a faint background audio signal is picked up. Analysis pending.]

D-73299: "It sounds like… like teeth…"

Subject manages to open the door and slips through before hurriedly pulling it closed behind him. Subject stands with his back to the door, shaking. A room is dimly visible beyond the beam of the subject's LED light. Several hospital beds seem to be scattered around the room. The windows are boarded up tightly.

D-73299: "Huh? Where'd the boat go? Goddamn, where am I?!"

Subject takes a few steps before abruptly standing still.

D-73299: "I'm hearing it again, but… I closed that fucking door! No! No, I closed it! I closed it!"

Subject breaks into a run towards the other end of the room, tripping over a fallen IV-stand. Sobbing can be heard.

<End video/audio log transcript>

D-73299 emerged from the side of a building close to his target destination at 07:03:21. Subject was in a state of confusion and panic, showing signs of severe malnutrition. Subject did not respond to instructions and attempted to leave the test site. He was subsequently neutralized by security personnel and detained for debriefing. Post-event physical and psychological evaluation determined the amount of time spent in SCP-1130-2 to be between 2 and 4 weeks. In addition, subject appeared to have pulled all of his own teeth with a pair of pliers recovered from SCP-1130-2.

Footnotes
1. Non-conclusive evidence was later found linking the company's deceased founder toElevix Electronics.

« SCP-1129 | SCP-1130 | SCP-1131 »

SCP-1131: The Oscar Bug

Item #: SCP-1131

Object Class: Euclid

Special Containment Procedures: Instances of SCP-1131 brought into captivity are to be kept in 1m x 1m x 1m acrylic vivariums for the remainder of their lives (usually no more than a few weeks). Persons affected by SCP-1131 (given the group designation SCP-1131-1) are to be kept in a standard persons holding cell for further research.

Foundation personnel stationed in places where instances of SCP-1131 have manifested should wear insect repellent containing p-Menthane-3,8-diol at all times. Personnel entering an SCP-1131 containment unit must wear a full Level A hazardous materials suit. Any bites made by SCP-1131 on any person must be noted, and any persons bitten must immediately be detained.

Description: SCP-1131 is a member of the species *Culiseta longiareolata*, and appears under direct observation as a normal specimen of that species. Instances of SCP-1131 range in size, but are on average approximately 8 mm long and weigh on average 1.7 milligrams. Instances of SCP-1131 refuse to feed from animals other than mammals. SCP-1131 appears to be of intelligence limited to its species, and acts on instinct alone.

When a female SCP-1131 bites a mammal, the affected person or animal (immediately given the designation SCP-1131-1) begins a physical transformation lasting several days. First, the subject loses consciousness and enters a comatose state. Then, beginning at the site of the bite, the tissues of SCP-1131-1 begin to change, starting with the dermis and progressing inward toward muscular and skeletal structures. All subjects take on the same physical appearance and attributes: that of a Caucasian human male named Oscar Peleschak, age 57.

Subjects usually awaken within 24 hours of the completion of this transformation. Subjects affected by SCP-1131 are indistinguishable from each other after the completion of this transformation. All subjects claim to be Oscar Peleschak and show signs of distress upon awakening. When asked for the last remembered calendar date, subjects offer September 5, 1968.

If two or more members of SCP-1131-1 are introduced, they will all claim the other or others to be impostors, and become distressed with the presence of the other or others. If this encounter is allowed to escalate, these arguments will become heated, but no subjects will resort to physical violence, due to self-proclaimed pacifism.

It is unknown how many instances of SCP-1131 exist. When instances of SCP-1131 breed, not all offspring (less than 1%) exhibit SCP-1131's effect. There does not, at this time, appear to be any way to reverse the effects of SCP-1131.

Addendum: SCP-1131 was recovered in , Massachusetts, when an embedded Foundation agent noted several discrepancies in local vital records. Of note was the fact that an individual named Oscar Peleschak had multiple vital records indicating date of death, but all had been redacted by local authorities. Life Insurance Company had investigated Oscar Peleschak multiple times, and criminal charges for insurance fraud were filed in 1969, but ultimately were not pursued due to lack of evidence.

The only birth record of Oscar Peleschak was issued in 1911 at Memorial Hospital. The first death certificate of Oscar Peleschak was issued by that same hospital on September 7, 1968 with the cause of death listed as [REDACTED]. It is hypothesized that this is the 'original' Oscar Peleschak and the subject identified in these records was given the designation SCP-1131-0. Exhumation of the body indicated no genetic differences between SCP-1131-0 and any members of SCP-1131-1. Furthermore, forensic analysis of the body indicates that some physical damage, namely skeletal scarring from a broken wrist estimated to be several decades old at time of death, exists in all members of SCP-1131-1 as well.

SCP-1131-0 was married at the time of his death to Mary Peleschak, now deceased.

Currently, records indicate 47 separate instances of SCP-1131-1, of which 4 are still alive, currently detained at Site . No members of SCP-1131-1 retain any recollection of the experiences of past members of this group.

Addendum 1131-A: Once SCP-1131 initiates a feeding sequence, there does not appear to be anything which will reverse, hinder, or stop its effect, including laceration of affected skin, amputation, or death.

Addendum 1131-B: List of known individuals affected by SCP-1131:

[DATA EXPUNGED]

Addendum 1131-C: Transcript of video interview with a member of SCP-1131-1:

Interviewed: SCP-1131-1
Interviewer: Dr. , Clearance Level 2/1131-937-439

(SCP-1131-1 sits on camera in an orange jumpsuit, sipping a cup of coffee. Dr. sits just off camera, only his arm visible. This member of SCP-1131-1 was detained shortly after entering a comatose state and has been isolated since that time.)

Dr. : Please state your name for the record.

SCP-1131-1: My name is Oscar Peleschak. I've told you that before.

Dr. : What is the last thing you remember before waking up at this facility, Mr. Peleschak?

SCP-1131-1: Well…I just got off of work, and I called a cab to get home. I got in the cab, and the driver was jabbering at me, and I wasn't paying attention too much. Then I got home, said good night to the missus, read a book, got in bed, and woke up here.

Dr. : Did you experience any sort of discomfort at

the time? Any itching or burning sensations in your skin, like those from an animal bite.

SCP-1131-1: Not that I remember. Can I go now? I ain't done nothing wrong. I got a wife to get back to, y'know.

Dr. : I'm sorry, Mr. Peleschak. You will not be allowed to leave.

SCP-1131-1: Why? I ain't done nothing wrong! I've got rights, you know!

<End of log>

« SCP-1130 | SCP-1131 | SCP-1132 »

SCP-1132: Snake Tongue

Item #: SCP-1132

Object Class: Safe

Special Containment Procedures: SCP-1132 is to be kept in standard living quarters, furnished with a bed and appropriate religious icon. A facial restraint will be supplied to SCP-1132, to be worn at all times when interacting with personnel. This restraint must cover the mouth completely and immobilize the lower jaw. To facilitate personnel safety, entrance to SCP-1132's chamber should be announced by voice or knocking to give the subject time to don the facial restraint, should it not currently be in use. Should the restraint become dislodged for any reason, unarmored personnel are to maintain a minimum distance of one meter from the subject until the restraint has been replaced. Subject is to be fed one freeze-dried mouse, rehydrated, once per day in its cell. Subject is allowed limited escorted sojourns in the facility where it is housed.

Efforts to teach SCP-1132 English have been hindered by the subject's illiteracy. Until subject has learned to understand spoken English and/or to write in any language, one member of personnel assigned to SCP-1132 is to be fluent in the eastern Huasteca dialect of modern Nahuatl.

Description: SCP-1132 is a female human of indigenous Mexican ethnicity, approximately 25 years of age. The subject's tongue, esophagus, stomach and both intestines have been replaced by a female *Bothrops asper* (fer-de-lance or nauyaca), leaving only 6cm of the subject's own rectum intact. The connection between the reptile and the subject's digestive system is seamless. Due to its condition, SCP-1132 cannot speak, though it breathes normally. The subject lacks a uterus, though no sign of hysterectomy or other surgery is present. How the uterus was removed has not yet been determined.

Approximately 0.6-0.7 meters of snake lie coiled where the subject's stomach should be, giving the snake the ability to lunge out of the subject's mouth. So long as the subject's mouth is closed, the snake will not force its way out. Aside from its anomalous state and length far exceeding what is typical for *B. asper*, the reptile is otherwise a normal member of its species, possessing a venomous bite and treating SCP-1132 as territory to be defended. Its eating seems to provide sustenance for both itself and SCP-1132, and it must eat at a rate greater than normal for a snake, but less than that of a human.

On the rare occasions that SCP-1132 is bitten by the snake, the subject will fall into a coma for a period of time between one hour and one day. Treatment with antivenom can wake the subject prematurely, but is counterindicated as the snake remains active and unrestrained during these periods. The subject describes these periods as being like dreamless sleep and reports no other physical side effects other than pain and swelling from the fang punctures.

Addendum: Interviews with the subject have consisted of yes/no questions, and as such, information on the origin of its condition has been difficult to gather.

Upon recovery in , Hidalgo, Mexico, persons familiar with SCP-1132 stated in interviews that they believed the subject had been punished for defiling a sacred relic said to belong to the Aztec goddess Coatlicue, and had been cast out from tribal society for the transgression. Testing of fragments of the object in question reveals no anomalous properties.

« SCP-1131 | SCP-1132 | SCP-1133 »

SCP-1133: Intravenous Sin

Item #: SCP-1133

Object Class: Safe

Special Containment Procedures: SCP-1133 is to be kept within a secure testing chamber at Site- , equipped with one (1) standard power socket. Samples of SCP-1133-X should be stored in an on-site bio-research vault. Both should be guarded by a minimum of one (1) armed personnel at all times in order to prevent unauthorized access.

Description: SCP-1133 resembles an ordinary, hospital-standard intravenous fluid stand. Only the infusion pump displays any anomalous properties. The tubes, stand, power supply and intravenous drip bags are entirely ordinary and can be replaced. With the exception of the tubes passing through the infusion pump, all openings on the device are fused shut, including the rear battery compartment, requiring that SCP-1133 be connected to a standard power socket at all times. All attempts at opening SCP-1133 have so far failed, as the casing has proved remarkably resilient, such that the force required to penetrate the casing would likely cause irreparable damage to its internal components. As a result, internal examination has been postponed until primary research is complete.

The console of SCP-1133 possesses nine (9) buttons not present on a normal infusion pump. The first seven (7) are labeled with a corresponding number, and the final two (2) with the words, ‘Extract’ and ‘Infuse’, respectively. The remainder of SCP-1133’s controls are non-functional. When supplied with power, SCP-1133 will display the message: ‘SELECT OPERATION SETTINGS’, at which point either ‘Extract’ or ‘Infuse’ must be selected, after which SCP-1133 will activate if it is connected to a living human subject. If SCP-1133 is connected to a cadaver or any non-human species, SCP-1133 will display the message ‘OPERATION FAILED’ and shut down.

If the ‘Extract’ setting is selected, one (1) of the number buttons must be selected. This will cause SCP-1133 to begin extracting a substance, hereafter known as SCP-1133-X, from the subject, corresponding to the number chosen. Selecting the ‘Infuse’ option will result in the pump functioning as would be expected, infusing the substance placed in the drip bags into the subject’s bloodstream. Only SCP-1133-X can be infused in this way; the use of any other substance will result in the message ‘OPERATION FAILED’.

SCP-1133-X appears to be synthesized directly from the subject's bloodstream upon extraction, and breaks down almost immediately upon entering the blood during infusion, making it almost impossible to observe its impact on human physiology. However, both the infusion and extraction of SCP-1133-X produces equal and opposite changes in the behaviour and morality of the subject which are easily observable. Subjects are not normally aware of or disturbed by these changes, even when the subject had prior knowledge of SCP-1133’s effects.

To date, seven (7) different varieties of SCP-1133-X have been recorded, each with a distinct colour and effect, and each corresponding to a specific number on SCP-1133’s console. Samples of SCP-1133-X have no observable effect on the human body if administered by any means other than SCP-1133’s ‘infusion’ function. All attempts to synthesize SCP-1133-X in laboratory conditions have so far failed. For detailed analysis of SCP-1133-X's chemical properties, please refer to Document 1133- .

There seems to be limits to the quantity of each variety SCP-1133-X that can be extracted from any given subject, which seem to vary from individual to individual, depending on the personality of the subject. For example: subjects with a history of kleptomania seem to have larger natural reservoirs of SCP-1133-3 available for extraction, and requiring less SCP-1133-3 infusion to display more extreme symptoms. It is unknown whether an upper limit exists for the infusion of SCP-1133-X. Below is a list of the seven (7) known varieties and their effects:

+ SCP-1133-X Observations

SCP-1133-1:

Colour: Light green.
Infusion Effect: Increased appetite. Subjects infused with sufficient quantities of SCP-1133-1 are unable to resist the compulsion to consume any form of food in the immediate area, including those normally repulsive to humans, including rotten food, raw meat and animal feed. Subjects will frequently become violent when denied food. Several D-Class subjects infused with SCP-1133-1 have died as a result of choking, or in extreme cases, of stomach ruptures caused by the sheer quantity consumed. In small amounts, SCP-1133-1 infusion has proved to improve the symptoms of eating disorders such as anorexia.
Extraction Effect: Decreased appetite. Subjects display a reduced enthusiasm for food, often forgetting to eat even to the point of starvation, although they can typically be induced to eat without the application of force.

SCP-1133-2:
Colour: Red
Infusion Effect: Heightened stress levels and aggressive behaviour. Those infused with large quantities of SCP-1133-2 typically become dangerous and violent, often becoming hostile towards Foundation personnel. Following Incident 171- , any experiments involving SCP-1133-2 require an additional two (2) armed security guards at all times.
Extraction Effect: Reduced aggression and increased docile behaviour. When large amounts are removed, subjects will often refuse to defend themselves, even from violent assault. Given the potential of this process to make subjects more compliant, use of SCP-1133-2 extraction in interrogations or pacification of troublesome personnel is being considered, pending further testing.

SCP-1133-3:
Colour: Yellow
Infusion Effect: SCP-1133-3 appears to influence interest in material wealth. Subjects typically become

obsessed with financial gain, often showing symptoms of kleptomania. Subjects exposed to high amounts will often become violently fixated on shiny objects, such as wristwatches or metal buttons.
Extraction Effect: Loss of interest in money and material wealth, generally becoming indifferent to material possessions, as opposed to actively generous. Subjects will often show reduced understanding of money and financial issues, as well as reduced motivation for the completion of tasks with material rewards.

SCP-1133-4:
Colour: Blue
Infusion Effect: Increased egotism and self-confidence. Although small infusions can lead to beneficial increases in confidence, further amounts will likely lead to narcissism and vanity, often resulting in violent attacks on any personnel the subject perceives as insulting them.
Extraction Effect: Similar to SCP-1133-2, subjects become quieter and less assertive, although they will still defend themselves if faced with assault. Extraction of the maximum quantity of SCP-1133-4 has resulted in attempted suicide in % of cases.

SCP-1133-5:
Colour: Dark Green
Infusion Effect: Increased fixation on the possessions, achievements and privileges of others, with subjects often coming to perceive all others as ‘better off’ than themselves. This has frequently resulted in uncooperative and abusive behaviour in subjects, although subjects are typically not violent, instead preferring acts of sabotage or indirect methods of inducing pain and distress in those around them.
Extraction Effect: Subjects disinterested in the possessions of those around them. SCP-1133-5 extraction seems to have comparatively few detrimental effects on subjects, although there is still a high risk of

psychological damage and [DATA EXPUNGED] in all cases.

SCP-1133-6:
Colour: Brown
Infusion Effect: Increased levels of general apathy and reduced energy, in some cases showing symptoms similar to those of moderate to severe narcolepsy. Those subjected to high enough levels of SCP-1133-6 enter a coma-like state, and so far no attempts bar the extraction of SCP-1133-6 have proved successful in recovery.
Extraction Effect: Increased energy levels, activity and enthusiasm. In extreme cases this can result in hyperactivity and symptoms comparable to Attention Deficit Disorder, although subjects will more commonly suffer from insomnia and mental fatigue, resulting from increased physical and mental activity.

SCP-1133-7:
Colour: Purple
Infusion Effect: Increased sexual drive. In extreme cases this results in symptoms similar to clinical hypersexuality. Subjects have frequently resorted to violence in attempts to satisfy the resulting compulsions, which has made testing on the effects of SCP-1133-7 particularly troublesome.
Extraction Effect: Reduced interest in sexual activity. Those having the maximum amount extracted typically become completely disinterested and in some cases repulsed by the idea of sexual intercourse.

SCP-1134: Lead Paint

Item #: SCP-1134

Object Class: Safe

Special Containment Procedures: SCP-1134 is contained in Volatile Items Storage Warehouse 14 in a 3m x 3m x 4m room with one exit consisting of a standard reinforced airtight door. All interior surfaces of the containment room are to be coated in SCP-1134-1.

Personnel requesting the use of SCP-1134-1 in containment procedures or security measures must be Level 2 or above and must obtain clearance from Dr. Blank.

Description: SCP-1134 is a circular polyvinyl-chloride 10-gallon container of paint-and-primer mix bearing the label " Conglomerate NO MESS Ballistics-Grade Paint | Colour formula 366" in a translation below the primary label, which is slightly modified traditional kanji. No such company has been located at this time. All other writing on the drum is in this modified traditional kanji, and deals with patent information and date of manufacture, noted as 04/11/20 . The lid is easily detached and reattached.

SCP-1134-1 is the liquid contained in SCP-1134. It has roughly the same consistency as a high-quality paint-and-primer mix. There are currently 8.02 gallons remaining of the original ten, the remaining liquid having been used as paint prior to recovery or in subsequent Foundation testing. SCP-1134-1 is a glossy violet in color.

SCP-1134-1 is extremely hazardous due to the anomalous qualities of the liquid. Any amount of SCP-1134-1 that is allowed to gain free momentum prior to surface application quickly accelerates to a uniform speed of 490 m/s, equivalent to a .357 magnum handgun round. Larger amounts of SCP-1134-1 break up into smaller uniform droplets, measured by high-speed camera to be oblong, 33mm long, and very similar in shape to bullets. Upon impact with an unpainted

surface or obstruction, SCP-1134-1 behaves in a similar manner to a bullet.

Unlike bullets, SCP-1134-1 does not lose energy when coming into contact with a surface or obstruction and will instead ricochet at a constant speed until making contact with a SCP-1134-1 painted surface or organic object. Once contact is made with the painted surface, the ricocheting SCP-1134-1 is absorbed into the liquid on the surface and a corresponding increase in surface coverage can be measured. SCP-1134 has been demonstrated to be exempt from damage due to SCP-1134-1.

Once applied to a surface and allowed to dry, SCP-1134-1 has been observed to be completely bulletproof, withstanding impacts up to a .30 caliber sniper round. Any surface painted with SCP-1134-1 will be undamaged by force below 65,000 N (see Test Log 1134-03) applied to the side that is painted. Force applied from the other side of the surface has been met with normal resistance for the surface up to the point at which SCP-1134-1 forms a dry barrier.

O5 Note: *We feel that despite the obvious benefits of SCP-1134-1, access must be carefully regulated by the research head due to the limited quantities we currently possess.* - O5-

Recovery Log 1134 Abstract: SCP-1134 was recovered on 07/20/2004 in a warehouse belonging to . It was found among other supplies in the foreman's office, which appeared to be in the middle of renovation. Anomalous properties were determined after Recovery Agent Groulson accidentally spilled a small amount of SCP-1134-1, resulting in 4 deaths.

« SCP-1133 | SCP-1134 | SCP-1135 »

SCP-1135: Living Village

Item #: SCP-1135

Object Class: Euclid

Special Containment Procedures: SCP-1135 is located within the boundaries of Site-36. A chain-link fence, 3 metres (m) high, has been constructed around the object, and marks the boundary of the affected area. A narrow ditch, 4m deep, has been dug parallel to, and within, the fence. This ditch is lined with impermeable plastic and filled with dilute hydrochloric acid in order to deter expansion of SCP-1135 past the security perimeter.

The area within the security perimeter is to be checked every three days by teams of researchers. These researchers are not required to be armed or otherwise prepared for a hostile environment, but must carry two-way radio communicators at all times while within the security perimeter, and should maintain visual contact with one or more fellow researchers at all times. Any new growth or development indicative of SCP-1135 activity is to be noted. Should hostility on the part of SCP-1135 be encountered during an expedition, all staff within the security perimeter are to withdraw immediately. No expeditions within SCP-1135 are to be mounted within forty days of such a hostile reaction, unless composed entirely of D-Class personnel.

Any and all non-anomalous waste produced by Site-36 is to be deposited at least twenty metres within the security perimeter by D-Class personnel at the beginning of each day. If this waste totals less than 500 kilograms on any given day, this amount is to be supplemented by on-site stockpiles.

No attempt to damage SCP-1135 structures is to be made except in the case of a containment breach or with the permission of the Site Administrator of Site-36 (currently Dr.). If such damage occurs, SCP-1135 is to be treated as hostile for the next forty days.

No explosive materials or other items capable of major structural damage to SCP-1135 are permitted within the security perimeter without approval from the Site Administrator of Site-36.

Description: SCP-1135 is an isolated village in the State of , India. The village was attributed the name of prior to its acquisition by the Foundation. It contains approximately houses as well as several places of commerce and a Hindu temple. The structure of the buildings is unusual for the region, as they are larger and built with far more technologically-advanced materials than other villages in the area. All buildings are fully equipped with running hot and cold water, electricity, and sewerage, again unusual for the area. It is unknown how the homes receive electricity as they are not connected to any form of generator, and this is considered to be an effect of SCP-1135. In addition, the roads in the village, and for 2 kilometres around the village, are also fully paved with asphalt concrete.

Investigation of the building materials reveals strands of organic fibre running through all of the buildings and any permanent fixtures in the village not introduced by an outside force. The fibres do not ever appear to compromise the integrity of any structures. These organic fibres extend up to 3m below ground and form a network under the village. These fibres grow, repair themselves, and appear to absorb nutrients from the soil. As such, SCP-1135 is considered a single, living organism with certain similarities to fungi.

The fibres of SCP-1135 appear to be able to generate a wide variety of organic and non-organic materials around themselves, allowing them to generate the structures found within the village. This allows the structures to repair themselves, and periodically new buildings grow organically from the soil, maintaining structural integrity at all times during this process. Similarly, when space is limited, some structures will appear to collapse and disintegrate, the fibres within atrophying.

SCP-1135 appears to require some form of sustenance to survive. As well as absorbing water and nutrients from the soil, the organism appears to consume waste left within the boundaries of the village. Waste of all varieties left in the area affected by SCP-1135 begins to deteriorate and decompose at an extremely accelerated rate. This

produces no odour and typically leaves no remains. This process does not affect living organic tissue, soil, or any object being used in some way by those within SCP-1135. It is believed that SCP-1135 converts these materials into nutrients for itself through an unknown process. If so, it is unknown how SCP-1135 differentiates between waste and other matter. If SCP-1135 goes for long periods without ‘feeding’, it will destroy structures, possibly in order to render them down for sustenance. Likewise, if SCP-1135 has been able to consume large amounts of waste, it will start to construct new buildings and improve existing ones at an increased rate.

If humans or animals cause substantial or repetitive damage to structures formed by SCP-1135, the organism will begin to construct elaborate ‘traps’ in order to injure, drive off, or kill attackers. These range from simple pitfalls and caltrops to elaborate traps which would indicate complex intelligence in a human. These traps will, if not triggered, disappear within a period of 20-30 days. Outside of these circumstances, SCP-1135 is never hostile or dangerous to human life. Additionally, SCP-1135 appears to be able to differentiate between damage caused indirectly or directly by living organisms, and damage caused by other forces. These findings suggest that SCP-1135 may possess some form of intelligence, but this is unproven.

Addendum 1135-1: SCP-1135 was discovered on / / after a reporter investigating aid efforts in the area recorded interviews with local residents claiming that buildings ‘grew overnight’. SCP-1135 had an estimated population of at the time of its discovery by Foundation operatives. Residents interviewed reported that the village had possessed anomalous properties for years prior to Foundation intervention, after the village had been the site of a 'sustainable housing development scheme', orchestrated by an organisation by the name of the 'Manna Charitable Foundation'. The Manna Charitable Foundation is apparently fictitious, and no attempts to identify those involved in the scheme have been successful. All residents of SCP-1135 were expelled, and administered Class-A or Class-B amnestics depending on how long they had lived in the village. All aid schemes in the area since have been monitored by the Foundation, although no other anomalies or any further information regarding the Manna Charitable Foundation

have since come to light.

Addendum 1135-2: Following the routine observational expedition carried out on / / , several buildings appeared to have developed security cameras on their outer walls and in certain indoor areas of the village buildings. These cameras have been observed to track waste disposal and research teams as they move through the village, and to conduct periodic sweeps of the village when undisturbed. Requests to dismantle one of the cameras for research purposes are currently pending approval by Dr. .

« SCP-1134 | SCP-1135 | SCP-1136 »

SCP-1136: Subjective Directional Gravity

Item #: SCP-1136

Object Class: Euclid

Special Containment Procedures: SCP-1136 specimens are contained in separate 1m x 1m x 0.5m terrariums secured within an isolated, soundproof chamber at Site . All fixtures within SCP-1136's containment room must be bolted down or otherwise secured against shifting during a localized directional event. Experimentation with SCP-1136 requires prior permission from at least two (2) Level 3 Senior Researchers, and personnel within SCP-1136's containment area must wear magnetized boots or otherwise be secured against possible shifting.

Description: SCP-1136 appears to be a species of small lizard similar to *Hemidactylus frenatus* (common house gecko) and is physically indistinguishable other than its anomalous property. When specimens of SCP-1136 are startled or frightened, they cause gravity within a radius of approximately 7 to 8 m to align itself with its orientation, without affecting the specimen itself. This occurs instantaneously and without any measurable change in the physiology of SCP-1136 other than that which is normal for a surprise response in normal *Hemidactylus* specimens. This effect continues as long as SCP-1136 remains frightened, and the direction of the gravity shift will continuously change to match its current orientation.

SCP-1136-01 was discovered on / /198 following anomalous reports at a local hospital in [REDACTED], wherein several children were admitted with minor injuries and limb fractures after reportedly chasing a gecko up the wall of their classroom. Class A amnestics were administered to all affected civilians, and several SCP-1136-01 specimens were located in and retrieved from the school.

Addendum 1136-01: Incident Log 1136-012

On / / , Dr. accidentally dropped a clipboard while within SCP-1136-01's enclosure, startling it and causing it to run up the wall of its terrarium. During the subsequent gravity shift, Dr. was thrown against a nearby wall, which further startled SCP-1136-01 and resulted in a cyclical gravity shift that continued for several minutes. Dr. was finally removed and treated for multiple bone fractures and a severe concussion.

Addendum 1136-02: Experiment Log 1136-021

SCP-1136-01 was successfully bred with a normal male *Hemidactylus frenatus* on / / , and its offspring were determined to exhibit the same anomalous property as the original. These specimens have been designated SCP-1136-02 (male) and SCP-1136-03 through SCP-1136-06 (female).

Addendum 1136-03: Incident Log 1136-019

SCP-1136-01 was found dead in its containment area on / / , apparently of natural causes. Dissection of the dead specimen showed no abnormalities or unusual structures.

Addendum 1136-04: Incident Log 1136-026

Permission was granted by Site Command on / / to perform a vivisection on SCP-1136-04. Upon incising into the specimen's abdomen, [DATA EXPUNGED] believed to be a short-lived gravitational singularity which caused catastrophic damage to the experiment site.

Addendum 1136-05: Researcher Note

> Following an increasing number of anomalous incidents reported in the [REDACTED] region, it is currently believed that there is a standing wild population of SCP-1136 specimens. A Foundation containment team has been assigned to the area, but due to the small size of SCP-1136 and its similarity to mundane *Hemidactylus* specimens, complete containment of all wild specimens is expected to be extremely difficult if at all possible.

Dr.
Senior Researcher

« SCP-1135 | SCP-1136 | SCP-1137 »

SCP-1137: Perfect Sphere

Item #: SCP-1137

Object Class: Euclid

Special Containment Procedures: SCP-1137 is held in a locked box in item storage locker 8A at Site-19. Level 3 clearance is required for access to SCP-1137. It requires no extraordinary physical measures to contain it; however, due to its memetic qualities, knowledge of SCP-1137's true nature is to be tightly controlled among personnel. See Document 1137-17 for a detailed description of anti-memetic safety standards.

Description: SCP-1137 is a blue glass sphere approximately 10cm in diameter. To ordinary observers, it does not appear to have any special qualities, nor does it pose any risk. It is possible to take measurements of its material composition, weight, opacity, hardness, and any other physical properties of the sphere. However, its anomalous properties take effect if any attempt is made to measure the sphere's curvature or smoothness, or any other properties related to its spherical nature.

If anyone does try to measure SCP-1137's spherical properties, they will become convinced that it is in fact a mathematically perfect sphere. They will believe that measurements consistently return results confirming this, regardless of the accuracy of the measuring device being used. Due to the memetic nature of SCP-1137, it is unknown whether SCP-1137 actually possesses these dimensions, or whether observers merely interpret the measurements as such. Small samples taken from SCP-1137 also display its memetic properties, and do not seem to affect the perception of the shape of SCP-1137.

It is not actually necessary to perform the measurements oneself for a subject to fall under SCP-1137's memetic influence; merely being told that its shape is physically impossible is enough for the memetic

agent to take root. However, transmission in this fashion requires the listener to understand the reasons why a perfect mathematical sphere cannot exist in material form; thus, memetic transmission to subjects without a scientific background is unlikely. It is also possible to circumvent the memetic agent by specifying that SCP-1137 only *appears* to be a perfect sphere when measuring, without actually stating outright that it is such.

Once infected, a subject will become obsessed with the fact that, although all measurements indicate that SCP-1137 is a perfect sphere, it is physically impossible for this to be the case. This paradox will become deeply ingrained in the subject's mind. The subject will attempt to disprove this inconsistency, resorting to more and more accurate tools. Researchers have been recorded utilizing equipment including the on-site electron microscope in these endeavours. Despite this, they will never be able to perceive any results other than those indicating SCP-1137 is a mathematically perfect object, even when performing measurements at the picometer level.

After extensive testing during which they are unable to prove their conviction, the subject will eventually decide that SCP-1137's nature must actually be possible. At this point, the secondary memetic properties of SCP-1137 will take effect. The subject will slowly acquire the compulsion to reproduce an instance of SCP-1137. Subjects with proficiency in a physical craft (e.g., sculpting, glassmaking, metalworking) will begin by attempting to produce a perfect sphere in that medium. Subjects without prior experience in crafting will attempt to learn.

The subject will continue attempting to produce replicas of SCP-1137, but will always determine that their replicas are insufficiently precise. Subjects will become increasingly frustrated and obsessed, and will often try to experiment in other media subjects, using increasingly unconventional materials (e.g., animal or human remains) to attain their goal. Eventually the obsession overwhelms the subject's thought processes, with the subject forgoing sleep, food, and ordinary bodily functions in order to continue attempting their constructions. Subjects invariably expire either due to starvation or self-mutilation.

Because a mathematically perfect sphere cannot actually physically exist, SCP-1137's spherical qualities were at first assumed to be its only anomalous feature. As a result, after being taken into the Foundation's possession, researchers were immediately exposed to its memetic qualities. Because the memetic effects of SCP-1137 are at first indistinguishable from ordinary scientific testing, [REDACTED] days passed before the Foundation realized SCP-1137's true nature. Because of this, an estimated individuals were infected. Strict anti-memetic procedures have been implemented surrounding knowledge of SCP-1137's anomalous properties, and a cover story is given to personnel lacking Level-4 clearance regarding SCP-1137's status and true effects.

« SCP-1136 | SCP-1137 | SCP-1138 »

SCP-1138: Book of Letters

Item #: SCP-1138

Object Class: Euclid

Special Containment Procedures: SCP-1138 should be stored inside a safe in Dr. 's office in Sector- . Personnel with Level 2 clearance or higher may access the object for research purposes with Dr. 's authorization. Personnel with strong philosophical convictions are to be denied access. Personnel should not dispute the object nor question the correctness of the information contained within.

Once monthly, a researcher studying philosophical concepts (either by duty of service or for personal education) should compose an article containing at least references to the object. At least other personnel should familiarize themselves with this article; it must be archived afterward.

Description: SCP-1138 is perceived to be a book of philosophers' and/or writers' correspondence. Though the writing style always corresponds to a given author, the vast majority of letters are forgeries, with a few found to be genuine unsent drafts. The book's author changes based on the scientific and personal interests of the reader and its contents depend on reader's beliefs regarding the author's ideas. SCP-1138 always contains information that contradicts the reader's current beliefs (see addendum). In other words, the reader, thinking that a philosopher adhered to a specific opinion, will find letters expressing ideas that directly contradict his, her, or its beliefs, written out passionately and in great detail. If the reader has no concerns for philosophical concepts, SCP-1138 will contain letters from people the reader respects (up to his or her parents), criticizing his, her, or its life position.

Handling and reading the books has various effects. Readers who completely share the presumed author's views fall into a prolonged

depression that they compare to being betrayed by a close friend. More open-minded individuals rejoice at first, sometimes lapsing into euphoria and stating that they "finally found the truth" before becoming absent-minded and unable to concentrate. This condition lasts for about a week. Professional researchers who have definite proof of the falsity of SCP-1138's information experience a strong desire to start a discussion. Should they start it, [DATA EXPUNGED] followed in 24 hours by an invariably lethal stroke. The theorized cause of this [DATA EXPUNGED].

Currently, there is no way of finding SCP-1138's "neutral" form. In the presence of humans and/or animals the book retains its previous appearance. Handling SCP-1138 with a remote-controlled robot led to the book transforming to a tome of Isaac Asimov's letters in which he gave proof that the Three Laws of Robotics should not be used in robot creation. First, adherence to the laws will lead to those laws being broken, hence they are useless. Second, robots are more perfect than humans and should not be restrained in their actions regarding humans. The attempt was stopped; the robot and the remote controller used in the experiment were examined. Examination showed [DATA EXPUNGED].

If there is no scientific article written about SCP-1138 in a month, the object disappears and reappears in the closest library or book store that can theoretically contain publications of letters. Therefore, if the book breaks containment, researchers assigned to SCP-1138 should monitor the news and investigate each and every "sensational breakthrough" in philosophy and history.

History: SCP-1138 attracted the Foundation's attention in 19 when , the leader of the Communist Party of Hungary, released a harsh criticism of V.I. Lenin, claiming that he had found a collection of letters in which Lenin defined Marxism as a fallacious and harmful theory and proposed cooperation with the Capitalist West. Everybody who spoke against his criticism died in 24 hours, making the situation especially suspicious. 's house was searched; the only anomalous item found was a book that changed its appearance and contents when passed from one person to another.

Later, it was found that the object disappears if there isn't an article that references it written in a month. Employees responsible for

SCP-1138 got lucky, as the book always reappeared in Sector library and was easily found. There are no known cases of the book's appearance before it attracted the Foundation's attention.

Addendum: Some of the most interesting instances of SCP-1138 are listed here:

- Marcus Tullius Cicero's letters in which he claims that every conflict should be resolved through brute force; the search for compromise based on laws and morality was deemed unnecessary. "Cedant arma togae" was claimed to be "a stupid joke."
- Niccolò Machiavelli's letters that explain negative economical, political and cultural consequences, should the medieval Italy become a united state. He also claims that a ruler should act within the law and ethics and never break these rules. Note that The Prince (the book which inspired the term "Machiavellianism") is generally thought to have been political satire by scholars.
- Blaise Pascal's letters, describing Christianity as "a faith most vile, false and abhorrent to human dignity."
- Friedrich Nietzsche's letters, claiming that Christianity and Buddhism are the reason for all humanity's achievements. He also harshly denounces some people's aspiration to "be themselves" and not belong to the social mass.
- Fyodor Dostoyevsky's letters in which he claims that a decent and happy life can only be achieved through denial of the existence of souls and a lack of compassion and beneficence.
- O5- 's letters, in which he requests that all humanoid SCPs within Foundation custody either be released or terminated. In addition, he claims to have [DATA EXPUNGED]

Dr. 's preliminary conclusion: Currently, we cannot determine if the object is sapient. Maybe it is sapient and creates information that contradicts our beliefs in order to provoke us to argue and become its victims. If that's the case, killing is a way of sustaining its life and the object's behavior is the way it hunts. Maybe the object is not sapient and simply re-translates thoughts from another reality in which philosophers and thinkers came to different ideas. Further study is necessary.

SCP-1139: The Broken Tongue

Item #: SCP-1139

Object Class: Euclid

Special Containment Procedures: By authorization of O5- , object is housed at Research Area . Following Incident 1139-1, object moved to Research Area . When not being used for testing, object is to be enclosed in a seventy-five (75) by twenty (20) by twenty (20) centimeter block of rubber, molded into two pieces, with a Faraday cage surrounding the block, placed on a static-free workbench. The containment room for the object shall be made of unreinforced concrete (minimum thickness of three (3) meters) and shall be illuminated at all times by gas lamps. The humidity level shall remain between 70% and 80% at all times.

The door to SCP-1139's containment room shall be made of non-conductive, high impact ceramic materials. Following Incident 1139-1, access is via three (3) containment doors, the outermost door consisting of steel, with a metallic threshold grounded in case of electrical discharge. The two innermost doors are to be constructed of non-conductive, high impact ceramic materials.

No electrical devices, including pacemakers, watches, or recording devices are to be brought into the containment room except for testing purposes. In no event may an electrical device capable of producing more than one thousand watts (1000 W) be introduced to the containment room without written authorization of two (2) O5 personnel. In no event may an electrical device capable of creating an alternating current be introduced to the containment room without authorization of two (2) O5 personnel.

Research Area shall remain equipped with two lightning rods at all times, neither of which shall be grounded within 200 meters of SCP-1139.

Following Test-1139l, and by order of O5- , the staff of each Foundation Site must include one level 3 staff member previously affected by SCP-1206.

Description: SCP-1139 consists of a metallic grey rectangular block, roughly twenty (20) centimeters high and five (5) centimeters square at its base. The overall density of the object is roughly double that of iron, and the object is denser near the top. The object has thus far proved impervious to both deterioration and damage, making a determination of the object's age impossible. The sides are patterned with square protrusions in an unrecognized pattern, which can be confirmed by touch. Viewers of the pattern or of photos of the pattern observe the protrusions as block letters in a language they are familiar with, but this is merely a visual illusion. No subject has reported any subsequent change in the appearance of the letters. On the bottom of the object, there are four (4) 1 mm x 5 mm crevices, each coated in a copper-colored substance. No new effect has been observed through the manipulation of or application of electricity directly to the crevices.

Upon application of electricity a direct current, the object affects all individuals within a given radius through unknown means. Any person within the radius of effect begins speaking and writing a new language, though they apparently believe they are speaking their native tongue. Subjects lose the ability to speak or comprehend any prior known language(s). Linguistic analysis indicates that the new languages are fully formed languages, but all attempts at translation have been met with complete failure. Attempts at translation continue. Subjects have proven incapable of learning or re-learning any real world language after exposure to SCP-1139. Class AA amnestics successfully counteract the effect, though subjects are thereafter of little use to the Foundation, and Class AA amnestics are not advised in future testing. See Experiment Log 1139-1.

The radius of the effect is exponentially proportional to the wattage applied to it, with a "static shock" creating a radius of eight-tenths (0.8) meters and a direct lightning strike estimated to create a radius reaching beyond [DATA EXPUNGED], potentially resulting in a [REDACTED] scenario. Developing practical methods of containing, controlling, or reversing the effect is ongoing and should be

considered a Level Chi priority. Possible use as a "worst case scenario" planetary defense is under consideration.

SCP-1139 was recovered during Incident 98564/k. **Mobile Task Force Delta-5 ("Front Runners")** raided a **Church of the Broken God** outpost in Normal, IL. A basement contained an apparently demented and violent elderly man holding SCP-1139, who was quickly terminated. In this room were over handmade documents, including stone tablets over years old and modern paper showing minimal wear. Note that the earliest documents predate the Church of the Broken God by over years. The documents do not appear to be written in any known languages, and different languages have been identified.

+ Document SCP-1139a (regarding incident 1139-01):

At 4:30 pm / / , over scattered civilian vehicles approached Research Area from both access roads. Research Area was put on Blue Alert, and Procedure Theta Tau was implemented. The four (4) ground level Foundation personnel were initially able to maintain their cover identities when speaking with the trespassers and discovered that the latitude and longitude of Research Area was distributed as the location of a youth "Jamboree." Pursuant to Procedure Theta Tau, the trespassers were told that Research Area was a hunting lodge and that they had been sent to the wrong location. The departure of the trespassers was stalled due to a constant stream of new arrivals. Approximately adults and youths arrived in total.

At precisely 4:52, approximately of the adults and of the children pulled weapons from camping gear and attempted to breach Research Area in a coordinated attack. Battle cries consistent with rhetoric of the Church of the Broken God were heard, as well as references to "The Tongue" and "The Voice." A perimeter breach occurred and lockdown was implemented. Mobile Task Force Rho-5 ("Bee Sting") converged on Research Area , countering the assault and containing the fleeing civilians with acceptable casualties. The surviving

civilians indicated that revised coordinates were distributed via e-mail a week prior, though the source of such information could not be effectively determined. The survivors were given Class C amnestics and re-questioned, using known Church of the Broken God "secret" codes. Three additional members of the Church were detected and terminated. Area Command utilized Cover Story Beta Zeta, and the remaining civilians were provided grief counseling. Research Area decommissioned.

C . This is unacceptable. I don't care that the damn Church broke silence first; we cannot allow this much attention to come down on one of our locations. You had better pray this media hype about gun wielding scouts dies down and reporters don't find Research Area . O5-

Request upgrade to Keter status. Area Supervisor C
Request denied. O5-

+ Experiment Log 1139-1

Addendum [SCP-1139c]:
Subject: D-02638
Linguist: Dr. A
Wattage: 200 W of alternating current
Subjects exposed to active SCP-1139. Subject grabbed his head and screamed, making a noise that [REDACTED] included Foundation staff, and Dr. A suffered from a broken wrist and persistent headaches. Remaining staff placed in quarantine for fear of memetic properties. No such properties evidenced themselves, and staff were released from quarantine and returned to duty without incident. Containment and testing procedures revised.

Addendum [SCP-1139e]:
Subject: D-18394
Linguist: Dr. A
Wattage: 200 W of direct current
Subject is semi-literate prior to test. Subject is told to

recite "alphabet" song during activation of SCP-1139 to confirm exposure. Exposure to SCP-1139 is followed by only non verbal communication. Subject shows no signs of distress, though displeased by the researcher's silence. Dr. A , after seeing the mild success in rudimentary non-verbal communication, grabbed the closest thing to a picture book from his office, giving the subject a copy of the Voynich Manuscript. Subject ignored the pictures and began attempting to read the book, sounding out words as he went. Notably, he read the book backwards and from the middle of each page outward. All observations indicate that subject understood the book and found it to have a sad ending.

Well, this one we have the alphabet for and a text. It should be simple enough to learn how to speak it. Dr. A .

Two months after testing, Dr. A placed on voluntary administrative leave due to stress. Subject D-18394 terminated and all documentation locked in long term storage.

Addendum [SCP-1139f]:
Subject: D-18328
Linguist: Dr. A
Wattage: 200 W of direct current
Subject asked to write a long, memorized phrase down on paper, followed by the alphabet and numbers from zero to fifty, reading each word or number aloud. While walking to the table, subject exposed to SCP-1139. Subject writes out a text of unknown language, speaking as she does so and showing no notice of her change in language. Subject is incapable of speaking English, and no effort at reintroduction to the English language is made. It is noted that the language from SCP-1139f is different from all prior instances.

We have a Rosetta Stone for this one. This should be simple to decode or prove as nonsense. Dr. A .

Four months after testing, Dr. A placed on mandatory administrative leave due to stress. Subject D-18328 terminated and all documentation locked in long term storage.

Addendum [SCP-1139k]:
Subject: Dr. A
Linguist: Dr. A and Dr. L
Wattage: 200 W of direct current
Without approval or oversight, Dr. A exposed himself to SCP-1139. It is notable that Dr. A spoke eight languages fluently prior to the experiment. Dr. L took over as linguist for experiment SCP-1139k.

Dr. A exhibits the same symptoms of prior subjects, though he seems shocked by the verbal and written communications of Foundation staff. It appears that Dr. A now knows eight new languages, and by pointing at different places on an unlabeled map of the world, each new language has been associated with the language he is trying to speak. Dr. A has been unable to communicate beyond non-verbal pantomime, and has since lapsed into inactivity and depression. Dr. A moved to a long term care medical facility and kept under suicide watch.

Addendum [SCP-1139l]:
Subject: D-17618 and D-14568
Linguist: Dr. L
Wattage: 200 W of direct current
D-17618 exposed to SCP-1206 prior to standard exposure to SCP-1139; SCP-1139 had no effect on the Subject.

D-14568 exposed to SCP-1206 after standard exposure to SCP-1139; SCP-1206 had no linguistic effect on the Subject.

Addendum [SCP-1139m]:
Subject: D-18818
Linguist: Dr. L (acting remotely and assisted by Dr. F

to avoid memetic contamination)
Wattage: 200 W of direct current
After standard exposure to SCP-1139, Subject infected with **SCP-444**. SCP-444 infection continued as normal, with Subject able to converse with other SCP-444 infected individuals. Dr. L and Dr. F cleared of memetic contamination and remain assigned to SCP-1139. Further use of SCP-444 in testing approved.

Addendum [SCP-1139n]:
Subject: D-18818
Linguist: Dr. L (acting remotely and assisted by Dr. F to avoid memetic contamination)
Wattage: 200 W of direct current
Subject infected with **SCP-444** days prior. After exposure, Subject spoke a new language with no immediately apparent anomalous properties. Continued observation revealed [REDACTED]. Fatalities included Foundation personnel and contamination necessitated termination of an additional Foundation personnel. Dr. L cleared of memetic contamination and remains assigned to SCP-1139. Use of SCP-444 in testing suspended by order of O5- .

Addendum [SCP-1139q]:
Subject: D-29374, D-93847, D-20375, D-20384, and D-29384
Linguist: Dr. L
Wattage: 400 W of direct current
SCP-1139 activated carefully to affect four of the five subjects. Subjects quickly realized that none of them can understand the others. The unaffected subject acted virtually identical to the others, despite still speaking English.

Long term remote surveillance commenced. Without meaningful external verbal stimuli, subjects exhibited typical reactions, analogous to solitary confinement and development of a crude, hierarchy based society. [REDACTED]. D-20375 terminated following experiment

and corpses incinerated.

Request upgrade to Keter status. Dr. L
Request denied, and pull the plug on this sideshow. If you want a long term test subject, use Dr. A O5-

« SCP-1138 | SCP-1139 | SCP-1140 »

SCP-1140: Gurgles

Item #: SCP-1140

Object Class: Safe

Special Containment Procedures: SCP-1140 may be kept in any secure storage area of sufficient size (It is currently in room R.4.13). For accurate and rigorous testing, however, it is required that the object is kept in a room with at least 2 metres of clearance in each direction for movement of testing equipment, and is supported at least 30cm off the ground by 4 clear Perspex rods, one mounted at each corner of the base. The base is to be mounted upon a weighing apparatus which is connected to an alarm; the alarm is to sound if the weight of the object changes by more than 0.4%.[1] Endoscopy equipment is to be stored in the storage area's equipment locker at all times when not in use.

Description: SCP-1140 is a chest of 7 drawers painted with clear gloss varnish over oak. The chest is 148cm in width, 49cm in depth and 91cm in height. The drawers' dimensions are (top to bottom):

- Three drawers 46cm wide, 21cm tall and 46cm deep
- Two drawers 70cm wide, 21cm tall and 46cm deep
- Two drawers 70cm wide, 31cm tall and 46cm deep

The anomalous behaviour is observed when the central drawer in the top row of the chest is opened at least 2cm, whereby under certain circumstances vocalisation can be detected from within the chest. This vocalisation has been designated SCP-1140-1. Testing has shown that the circumstances include the presence of a single prepubescent child, the presence of a single post-pubescent who has significant mental retardation[2], or any adult who has assisted with [REDACTED].[3]

Dismantling the chest has revealed there to be nothing within the cavity behind the drawers capable of producing vocalisation;

presence of speakers or any other electromagnetic equipment capable of playback has been ruled out by use of metal-detection apparatus. As the anomalous vocalisation only occurs when a single individual is present, remote-control equipment must be used during testing. Presence of the equipment seems to have no effect on testing.

Although SCP-1140-1 is for all experimental considerations a disembodied voice, any attempts to reach towards the rear of the drawer during such time as the voice can be heard results in injury. This appears to only occur to live human beings, and does not occur when SCP-1140-1 is inactive. The wounds are consistent with having been caused by a large claw, and are most similar in pathology to wounds caused by a large ratite (ostrich, emu, or cassowary).

Recovery Log: The item was recovered from the dining area of a house in , . The house was otherwise unremarkable; after application of Class A amnestics and neurolinguistic programming by a field agent, the family remain in-situ, with the chest having been replaced by a non-anomalous replica.

SCP-1140 came to the attention of a researcher during periodic checking of psychiatric reports,[4] and a field agent was sent out to interview both the report's subject and his family. Interviews revealed that the youngest member of the household had been found on several occasions sitting on the floor near to SCP-1140 and having conversations with what the family believed to be an 'imaginary friend'. The amount of time that the child spent doing this, in addition to his refusing to move for hours, resulted in him being reviewed by a child psychiatrist.

Recovery Interview Log

Excerpt (0:11:12 to 0:13:42) from Recovery Interview 1140-A5 (, 6yo male):

Agent : When did you first start hearing the voice?

: I heard him talking to me when I walked

past him once.

Agent **:** Can you remember how old you were?

: Oh, it was after my birthday party. I was 6 at my party.

Agent **:** Less than eight months, then. What did the voice say?

: It's not a voice. It's Mr Gurgles.

Agent **:** Is that what he says his name is?

: No, I made it up. He doesn't tell me his name.

Agent **:** What does he sound like?

: He sounds like he's on the news *(Giggles)*.

Agent **:** On the news?

: Yes, he sounds all posh, like Prince Charles.

Agent **:** And what does he say to you?

: We just talk. About me, about *(pauses)* school.

Agent **:** Does he talk about himself at all?

: No, I asked him why he was in the drawer once, and he said he wasn't in the drawer. I asked him where he was then, and he said that he was only a reppentation(sic) in this mentional.(sic). *(It can be reasonably assumed that this was* 'a representation in this dimension.*')*

Agent : Did he say anything else about himself?

: I asked him what his house was like, and he said he didn't want to tell me. He got a bit angry and so I didn't ask him again.

Agent : What did he say when he was angry?

: I couldn't tell, his voice went all crackly. It was scary, I didn't like it.

End of Excerpt.

Interview 1140-C1

Excerpt from Test Interview 1140-C1 (D-93223, 19yo Female, Leucotomy performed at [DATA EXPUNGED].):

D-93223: Hello! Hello! *(Pushes drawer shut. A researcher enters the room and re-opens it).*

SCP-1140-1: He's gone now.

D-93223: Who has gone? The man?

SCP-1140-1: Yes. The man has gone. We can talk. You can help me.

D-93223: What can I do? I can talk to you. Are you from England?

SCP-1140-1: I'm from… From England, yes.

D-93223: I want to go to England.

SCP-1140-1: I need you to find me some *(silence for 8 seconds)* things. Can you do that?

D-93223: Oh, I can't find things. They say at the hospital that I'm always losing things. Have you asked your mom?

(The following was inaudible during the recordings and has been re-constructed using forensic audio analysis:)

SCP-1140-1: How did it feel? Did it make a noise when they tore it out? Did you *[INAUDIBLE]* when it came away? I bet you *[INAUDIBLE]* all the way through it, didn't you? *(SCP-1140-1 laughs)* Filthy bitch. You haven't even *[INAUDIBLE]* pussy before you came in. You shouldn't have told them why. You never should have told *[INAUDIBLE]* why you didn't help her.

D-93223: I don't like you! You tell lies! I hate you! *(shouts at the door)* LET ME OUT! MR GURGLES IS A LIAR! HE'S A FUCKING LIAR!

SCP-1140-1: Let her out. I tire of her. She can't help me. *(This is the only occasion SCP-1140-1 has spoken directly to a member of Foundation personnel.)*

End of Excerpt.

Interview 1140-F4

Excerpt from Test Interview 1140-F4 (D-49283, 28yo male, brain damaged following a prison stabbing.):

SCP-1140-1: I can hear you breathing. It's rude to not say hello.

D-49283: What? Where are you in there? *(D-49283 begins pulling at the drawer; when it*

is fully open, he reaches inside.)

SCP-1140-1: Please, I would rather you did not do that.

D-49283: Where are you in there? *(Becomes agitated.)*

SCP-1140-1: Stop that, I would much rather we *(At this point D-49283 pulls his hand back and begins crying. There is a laceration on the back of his hand and wrist approximately 8mm deep and 65mm long.*

D-49283: You hurt me. You hurt .

SCP-1140-1: Well, , I did ask you not to. I would recommend applying pressure to that with a dry cloth, and then apply ointment to it to assist healing. I apologise for my actions.

End of Excerpt.

During the test conversations the area behind the drawer was constantly monitored by an endoscopic camera, a thermometer, and barometric indicators; at no point was there any change in any of the readings. During the conversation in which a D-class was injured, the camera showed no movement apart from the injury itself, which occurred between frames of the video.

Footnotes
1. This allows for changes due to humidity and moisture absorption.
2. Testing suggests that an individual with an IQ of less than 55 will prompt anomalous behaviour, but to ascertain a more accurate figure would require unreasonable resources.
3. Access to this data is Level 5 only.
4. Operation Durden is a system of scanning computers which search the databases of psychiatric institutions for keywords which may suggest anomalous behaviour; in this case, the keywords were‘imaginary friend’crossreferenced with ‘ ’.

SCP-1141: Entrepreneurial Spirit

Item #: SCP-1141

Object Class: Keter-alterius

Special Containment Procedures: All public zoos in Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont are to be under constant surveillance by personnel at Site-85 and Site-86. Should SCP-1141 occur, the approximate nature and threat level of SCP-1141-1 is to be ascertained as soon as possible, with the nearest branch of Mobile Task Force Gamma-80 (aka "Ecologists") deployed to the zoo in question with all equipment deemed necessary.

Upon arrival, MTF Gamma-80's task is to destroy SCP-1141-1 or render it inoperable as soon as possible. The use of force is authorized for this purpose. If SCP-1141-1 does not pose an immediate risk to the public, MTF Gamma-80 will purchase several food items and prevent all public access to SCP-1141-1. If this does not result in the disappearance of SCP-1141-1 within twenty-five minutes, Site Director Jackson is to be notified. Food items purchased from SCP-1141-1 are to be sent to Site-86 for further research and containment.

AMN-M-4311 is to be distributed through the zoo's public address systems, mass texting services, and all relevant social and news media after the disappearance of SCP-1141-1 and the departure of MTF Gamma-80 in order to prevent dissemination of information regarding SCP-1141 and related Foundation operations. Damage to zoo property and any casualties are to be attributed to fire, vandalism, or animal escape as deemed appropriate to the situation. Should Site-85's budget allow, an anonymous donation may be made to the affected zoo to cover costs of repairs.

As of / / , additional resources have been allocated to projects deemed capable of neutralizing SCP-1141, with all strictly relevant

research under the purview of Dr. Eichmann.

Description: SCP-1141 is a phenomenon in which an instance of SCP-1141-1 instantaneously appears at a public zoo in the New England region[1] of the United States. This occurs approximately thirty minutes prior to the opening time of the zoo in question. The infrastructure and nearby structures (such as utilities, enclosures, pathways, and other buildings) will be altered to accommodate SCP-1141-1's presence, as will maps of the zoo. SCP-1141 will only occur under the following conditions.

- No instances of SCP-1141-1 are operational.
- Less than 20% of the zoo's grounds are covered in snow.
- The temperature has been above 15°C during operating hours for the past week.
- At least 250 days have passed since the demanifestation of the most recent instance of SCP-1141-1.

Instances of SCP-1141-1 take the form of a fully staffed, supplied, and operational restaurant that is thematically consistent with other restaurants in the zoo and with the area of the zoo in which it is located.[2] Food served at SCP-1141-1 is consistent with food served at similar establishments, with the exception of each instance offering guacamole with pineapple chunks. Food and other supplies will appear as needed inside SCP-1141-1, out of view of the public. Staff of the zoo will not demonstrate any familiarity with SCP-1141-1.

All individuals staffing SCP-1141-1 are anatomically and behaviorally consistent human beings, and will run SCP-1141-1 to the best of their ability. These individuals are fluent in English and knowledgeable in the operation of SCP-1141-1. They are either unwilling or unable to answer personal questions (such as identity and personal history) or questions pertaining to the nature or origin of SCP-1141. They will not leave SCP-1141-1 willingly.

Instances of SCP-1141-1 have an unpredictable and often dangerous effect on their surroundings. The exact cause of this is not known with certainty; however, analysis has led several researchers to propose that instances of SCP-1141-1 do not necessarily operate under physical laws or constraints present in our

dimension prior to their manifestation. See **Event Log SCP-1141-1** for details.

If an instance of SCP-1141-1 is rendered inoperable or if its presence causes obvious injury to a person visible from SCP-1141-1, the instance will demanifest within the next twenty-five minutes, with all infrastructure, structures, and maps of the zoo returned to their previous condition. All food items sold by SCP-1141-1 will remain, and may continue to demonstrate anomalous properties.

Event Log SCP-1141-1 / Clearance-Sensitive Document

All locations and several manifestations have been removed from this document as per Level 2-Probationary Clearance protocols. This document will serve to illustrate the effects of SCP-1141 and should not be taken as a comprehensive list of SCP-1141 events.

Year: July 1985
Event: Accurate description of SCP-1141-1 could not be gained. Instance and all of its contents manifested at approximately 5000°C; despite this, it appeared to be fully functional and did not combust. The instance disappeared after its foundation crumbled, resulting in structural collapse. Fire caused by SCP-1141-1 destroyed several animal enclosures and injured four park employees before being extinguished.

Year: June 1990
Event: SCP-1141-1 manifested as the "Amazon Basin Café". While the building remained intact, SCP-1141-1 appeared to experience gravitational force approximately 2.3 times stronger than Earth's surface gravity. Two orders of french fries were procured prior to SCP-1141-1's disappearance due to an inability of its staff to serve customers. Testing indicated that this food had no greater mass

than comparable french fries, yet weighed 2.3 times as much as their mass would indicate.

Year: June 1991
Event: SCP-1141-1 was entitled "A Grizzly Tale". The instance was found to be fully operational and not immediately dangerous. A variety of food items were purchased before SCP-1141-1's disappearance was induced by the placement of Foundation guards to prevent entry. Analysis of the food indicated that its de Broglie wavelength was approximately 1 cm, despite having a normal mass. The food has been designated as a separate anomalous item and is contained at Site-86.

Year: April 1992
Event: SCP-1141-1 was not detectable aside from alterations to infrastructure. Maps of the zoo marked a restaurant called "Safari Grill". The changes to the zoo's infrastructure reverted two hours after opening, presumably when it became apparent that none of the zoo's patrons were aware of SCP-1141-1. Later records indicate that relatively frequent repairs to structures near this area have been necessary since this manifestation.

Year: September 1994
Event: SCP-1141-1 manifested as "The Glacier Café". Reports and later analysis indicate that this instance of SCP-1141-1 was subject to drastically accelerated buildup of static electricity. SCP-1141-1 did not appear to be grounded; further, weather conditions at the time[3] contributed to this problem. Seventeen individuals, not including the occupants of SCP-1141-1, were killed by static discharge before SCP-1141-1 disappeared.

Show Audio Log 1141-7

Conversation between two individuals occupying SCP-1141, recorded July 1978 via hidden microphone. The individuals in question have been identified by the names on their nametags. The conversation was held in English.

Note: Special Containment Procedures at the time of the recording involved keeping a relatively safe instance of SCP-1141-1 in operation at the Zoo. Access was denied to the general public, and personnel regularly purchased food from SCP-1141-1 to maintain containment.

Duane: I don't think they're actually eating the food. The maintenance people have been carrying out more trash than they were when we were scouting.

Betty: So? They're still buying it. Does it matter if they eat it?

Duane: I didn't get into the restaurant business in this universe to not be allowed to actually *serve* my food to the public, *[unintelligible]*. It's probably poison or something, isn't it. Or Miranda messed up the speed of light again. I can't even tell.

Betty: So why don't you go *talk* to them and convince them to let us work? They know we won't break containment or whatever it is, right? We can talk and act just like people.

Duane: And how do I convince them that it won't end up like it did in ? Or ? I swear, a tiny fraction of the ketchup is accidentally and you can't be trusted with anything.

Betty: Asking some human scientists for help is out of the question?

Duane: You *know* they wouldn't understand anything about how we make this happen. They're still primitive.

Betty: According to your standards, maybe. But if you're going to be difficult, then whatever. Honestly, your obsession with 'restaurants' and 'zoos' is kind of creepy, and a little racist. Do humans count as a race? I don't even know, honestly. I've been breathing oxygen for too long.

Duane: Well, you're perfectly free to leave, if it bothers you that much. Except you can't, because you lost your travel license in *[unintelligible]*. So you're stuck with me and this creepy, racist restaurant until Miranda can nail down their physics good enough for us to not kill anyone.

Betty: So *now* you care about killing humans?

Duane: *[Unintelligible]*. Just shut up. We're leaving.

SCP-1141-1 demanifested seven minutes later. Further attempts to restrict the public's access to SCP-1141-1 from that point on have resulted in SCP-1141-1 disappearing. Containment protocols have been altered appropriately, and SCP-1141-1 has been upgraded to Keter class.

Addendum: *Until we fully understand and can predict the properties of SCP-1141, the possibility remains that it could trigger a catastrophic event, such as an antimatter explosion or vacuum metastability event, with no forewarning. I formally recommend fast-tracking research that could be useful in producing the means necessary to neutralize SCP-1141.*- Dr. Eichmann.

Approved.- Dr. Foster

Footnotes
1. See containment procedures.
2. For example, an instance of SCP-1141 that manifested near a leopard enclosure was called "Leopard's Spot Snack Shack". See file photo.
3. Winds in excess of 50 kph

« SCP-1140 | SCP-1141 | SCP-1142 »

SCP-1142: A Cry for Help

Item #: SCP-1142

Object Class: Safe

Special Containment Procedures: SCP-1142 is to be contained in a standard non-humanoid holding cell at Site-12. An automated recording system is to monitor SCP-1142 at all times. Two Level 2 members of technical staff are to inspect any recordings made on a daily basis and, in case of a transmission having been picked up, are to provide this transmission to the current translation operative for conversion from its original German into English. A full report is then to be submitted to the current Level 4 project lead as per the protocols for interreality relations. The battery SCP-1142 carries is to be checked on the first of every month for signs of deterioration. SCP-1142's propulsion systems have been disabled to simplify containment.

Description: SCP-1142 is a Goliath tracked mine (original designation *Leichter Ladungsträger Goliath (Sd.Kfz. 303b)*) as used by the German Wehrmacht during the Second World War. SCP-1142 shows no signs of aging and although originally designed to carry an explosive charge, contains a heavily modified Kw.E.a Wehrmacht radio receiver within its housing. The modified components are of a design and complexity inconsistent with the level of German technology during the middle of the twentieth century. SCP-1142 relies on a gasoline engine for propulsion and carries an early model thermal battery for the operation of the receiver.

At irregular intervals, transmissions in German have been recorded from SCP-1142. In all cases, contact has been made by an individual referring to himself as Brigadeführer (designated SCP-1142-1). Historical research has verified his existence, though records show him to have been killed during Allied military action at on / /19 . Analysis of transmissions recorded have yielded

several critical points of divergence from our timeline. These include:

- Several individuals not currently known to have held offices within the Wehrmacht occupying key positions within that body
- Large-scale deaths among German civilians from an unknown pathogen with symptoms resembling acute necrotizing fasciitis
- A sinkhole with a diameter of approximately sixteen kilometers appearing in the Lublin province of Poland in late 19
- Reports of mass destruction of German settlements by unknown forces
- Allied powers isolating the European continent, with troop action being focused on containment of [REDACTED]
- Development of reality gating technology in 19

In addition, SCP-1142-1 claims to be broadcasting from , Austria in the year 19 . In light of this and the aforementioned divergences, transmissions received through SCP-1142 have been deemed to originate from an alternate reality iteration designated Dm-AX/15487-A. Additional classification as intertemporal is pending. Recorded transmissions from SCP-1142 indicate Dm-AX/15487-A is experiencing or has experienced a ZK-Class Reality Failure scenario.

At this time, communications are restricted to receiving and recording the signal broadcast by SCP-1142-1 from Dm-AX/15487-A; attempts to initiate contact with or send a signal to Dm-AX/15487-A have proven ineffectual. Following the events of Foundation communication with SCP-1322-A, further research into initiating contact with SCP-1142-1 or responding to its transmissions has been suspended.

Addendum 1142-A-01: *Recovery and preliminary containment notes*

SCP-1142 was discovered in a barn on the outskirts of Fürstenzell, Germany on / /20 . German authorities, alerted by the owner

found SCP-1142 idling and, after recognizing its original purpose, brought in the Kampfmittelräumdienst (KRD) to defuse it. A covert contact within that service alerted local Foundation agents when she found SCP-1142 showed no signs of age and did in fact not contain an explosive charge. A recovery team then managed to extract it from the German authorities and transported it to Site-12.

Addendum 1142-A-02: *Excerpts from transmission log 1142/L/DE-EN:15rev1.04*

> This is Brigadeführer . Is there anyone out *unintelligible* this signal? I am broadcasting from the observatory. There are six *unintelligible* left. If anyone is out there, please make contact *unintelligible*

> Ahnenerbe *unintelligible* Hauptsturmführer *unintelligible* ignored what *unintelligible* number of sacrifices *unintelligible* now *unintelligible* retreating from *unintelligible* German people will not *unintelligible* solace

> I am reminded *unintelligible* wrath *unintelligible* efforts in Poland *unintelligible* gone now. It sank into *unintelligible* lost our entire force *unintelligible* once more, please respond

> *unintelligible* please, we *unintelligible* begging, if anyone *unintelligible* our surrender is unconditional *unintelligible* gone. We did not understand *unintelligible* dealing with, could not reason *unintelligible* was the last *unintelligible* gone now

> Attempts to *unintelligible* failure. This is our last *unintelligible* it eats *unintelligible* covered in *unintelligible* many millions dead. Please *unintelligible* are able to hear this broadcast. Help

« SCP-1141 | SCP-1142 | **SCP-1143** »

SCP-1144: Orion Scales

Item #: SCP-1144

Object Class: Safe

Special Containment Procedures: SCP-1144 currently resides in the fifth storage basement of the Low-Priority Electronic Equipment and Instruments Vault, Row 32C, within a steel foot-locker labelled 'SCP-1144'. Both SCP-1144 and SCP-1144-1 require cleaning once a week, using disinfectant towels. Do not use water to clean either SCP-1144 or SCP-1144-1. Do not press any of the buttons in the process of cleaning SCP-1144. The foot-locker itself does not require maintenance.

Description: SCP-1144 resembles an Orion HR-120 Analytical Balance, a common brand of precise weighing scales. Like the HR-120, SCP-1144 is a box-like structure, measuring 21.3cm x 32.0cm x 30.2cm, consisting of a base, which presumably houses the electronic components of the device, and a transparent cage. The base itself comprises an LCD display, as well as several buttons for adjusting the scales. [Note: These buttons appear to have no effect on the functioning of SCP-1144, or the results it provides.]

SCP-1144 is permanently active; the display will show no signs of being on until an object is placed upon the scales, at which point, the display will activate, providing a reading for the observer.

It should be noted that the reading SCP-1144 provides is not a measurement of the object's mass; repeated testing seems to suggest that both mass and weight are entirely irrelevant. Ongoing testing has yielded no indication of what exact objective quantity SCP-1144 is able to measure, although tenuous patterns have been established. For example, two similar objects will tend to produce similar readings. Under 'normal' conditions, SCP-1144 provides its data to 3 decimal places.

During initial testing, each object was ‘weighed’ three times, and each time similar readings were produced. This was taken to be evidence that SCP-1144 is in fact weighing a particular quantity, which varies in magnitude amongst a given set of objects. The source of the fluctuations are still unknown.

Testing I

Experimental data log, involving Dr and Junior Researchers and . This log documents the findings of the preliminary research team, two days following the retrieval of SCP-1144 from its home on the third floor of an unowned flat in Brixton, London.

Object: pencil (brand new, red, blunt)
Reading: 3.000

Object: pencil (brand new, red, sharp)
Reading: 5.013

Object: ball-point pen (brand new, black ink)
Reading: 17.000

Object: ball-point pen (brand new, blue ink)
Reading: 17.000

Object: two ball-point pens (brand new, one blue ink, one black ink)
Reading: 17.000

Object: fountain pen (used, belonging to Dr)
Reading: 1128.323

Object: ball-point pen and Dr 's fountain pen.
Reading: (The reading fluctuated between 17.000 and 1128.323)
Dissimilar objects placed on the scales at the same time appear to confuse SCP-1144. –Dr

Reading: 43.23(3/2) (fluctuated between .232 and .233 three times over the space of twenty minutes)

Object: £10 note
Reading: 54.31(1/2) (fluctuated between .311 and .312 three times over the space of twenty minutes)

Testing II

Experimental data log, involving Dr and Senior Researcher .

It was postulated by Senior Researcher that the transparent cage could be removed. With approval from Dr , the cage was disassembled with relative ease, and the components were placed in a large brown envelope, to be labeled SCP-1144-1. SCP-1144-1 does not appear to have any extraordinary properties. However, it remains to undergo further investigation.

With SCP-1144-1 removed, SCP-1144 continued to function as before, albeit without the constraint of the shielding, allowing much larger objects to be measured. This log documents the findings of the main research team, two months after the initial series of observations.

Object: 30kg steel weight
Reading: 0.003

Testing III

Experimental data log, involving Dr and Senior Researcher . This log documents the findings of the main research team, one day after the second series of observations.

Object: Dr 's wedding ring (12 carat gold)
Reading: 30578.453

Object: Senior Researcher 's wedding ring (18 carat gold and electrum)
Reading: 2331.453

Object: £5 note
Reading: 41.30(3/2) (fluctuated between .303 and .302 five times over the space of twenty minutes)

Object: A picture of a £5 note printed out on paper
Reading: 0.302

Object: £10 note
Reading: 51.41(4/5) (fluctuated between .414 and .415 five times over the space of twenty minutes)

Object: A picture of a £10 note printed out on paper
Reading: 0.301

Object: £20 note
Reading: 60.37(4/5) (fluctuated between .374 and .375 five times over the space of twenty minutes)

Object: A picture of a £20 note printed out on paper
Reading: 0.302

Object: £50 note
Reading: 112.2(29/30) (fluctuated between .229 and .230 five times over the space of twenty minutes)

Object: A picture of a £50 note printed out on paper
Reading: 0.300

Testing IV

Experimental data log, involving Dr and Senior Researcher , as well as two D-Class personnel. This log documents the findings of the main research team and their test subjects, two days after the third series of observations.

Senior Researcher and I brought the two D-Class individuals into the room with the scales. I positioned two non-descript white sugar pills on the measuring pad. The reading was -0.320. I introduced myself to the individuals — a man and a woman — and told them that the pills on SCP-1144 were able to grant 100 extra years of longevity on ingestion. Senior Researcher noted that the reading changed from -0.002 to -0.031. I proceeded to take one of the pills and dry-swallow it. The reading changed from -0.031 to 3.503. The D-Class personnel were dismissed afterwards.

SCP-1145: Nagasaki Teddy

Item #: SCP-1145

Object Class: Euclid

Special Containment Procedures: SCP-1145 is to be contained in a 2m x 2m x 2m Borosilicate glass enclosure at least 15cm thick. This enclosure is to be placed in a containment chamber at least 50m x 50m x 29m and monitored for any persons coming within 5m of the chamber. Within this chamber, 10m outside of the object's enclosure, should be two standard human containment cells with basic necessities. (Labeled Containment Chamber 1145-2 and 1145-3, respectively) One Class-D Personnel must occupy each cell at all times for the eventuality that SCP-1145 will enter its active state.

The borosilicate enclosure is to be filled with water at all times. The water is to be changed on bi-annual basis. Use of Class-D Personnel has been approved by O5-6 to carry out refill procedures in order to minimize researcher risk.

Under no circumstances are research personnel permitted to enter SCP-1145's containment chamber without NBC gear. Should exposure occur, subjects are to be immediately decontaminated and transferred to another site. Eight xenon short-arc lamps outside of the enclosure are to be operated during the bi-annual refill of the borosilicate enclosure. These lamps are to be replaced once yearly. At no time should the object be illuminated by under 20 lumens unless for approved testing. Following Incident 1145-4 (See Experiment Log 1145), no personnel above Class-D are permitted to be within 15 meters of the object. Testing with SCP-1145 is subject to approval only by Level 4 or above Personnel, and carried out by Level 3 or above Personnel. [ALL EXPERIMENTATION AND TESTING OF SCP-1145 CANCELLED UNDER ORDER OF O5-6]

Description: SCP-1145 is a stuffed bear approximately 30 cm tall

recovered from Nagasaki, Japan in 19 . Outer fabric consists entirely of leather taken and cured from *Ursus thibetanus*. The seams are stitched with heavy strands of an unidentified fibrous connective tissue. No attempt has been made to breach the outer covering of the object, as containment protocols do not permit contact with the object long enough to retrieve an inner sample. Aside from a rudimentary snout, SCP-1145 has no facial features. SCP-1145 weighs 9.4 kg, which is considerably heavier than similar stuffed bears of this size; the cause of this discrepancy in weight is unknown.

SCP-1145 is radioactive, with doses measured between 2.7 and PBq. In its inactive state, the object emits this radiation consistent with the decay chain of Pu-239 (Pu-239 -> U-235, Alpha decay) and of Pu-241 (Pu-241 -> Am-241, Beta Decay). Unlike samples of Pu-239 and Pu-241, however, the object does not emit any of the gamma radiation normally associated with radioactive decay.

The amount of radiation SCP-1145 emits at its base level is 2.7 PBq. This increases at a rate of MBq/s if the object is not illuminated. The presence of water in the enclosure is sufficient to absorb any radiation emitted from the object. Due to the effects of Cherenkov radiation, the water also has a side-effect of providing sufficient illumination to prevent SCP-1145 from transitioning states.

When left unilluminated for a period exceeding 3 seconds, the object will enter its active state. When in this state, the object emits gamma radiation. SCP-1145 will begin moving in the direction of the nearest human being. Its method of locomotion is unknown. However, testing has shown the object moves at a speed of approximately 45 meters per second. When in this state, the object is capable of passing through any substance, highly irradiating any surface it passes through, but causing no visible structural damage.

Immediately upon coming to rest within 1m of its target, SCP-1145 will begin to increase its emissions at a rate of PBq every 30 seconds. The emissions will continue to increase until the object has been picked up by its target. Once picked up by its target, the emissions will return to base levels as long as the subject maintains unshielded skin contact with it. Upon expiration of its target, SCP-1145 will revert to its inactive state. Should the subject expire

while the object is unilluminated, SCP-1145 will immediately resume its active state.

Experiment Log 1145

Incident Log 1145-4

Original Purpose: Determine reason for unusual weight of SCP-1145 by obtaining inner sample of object.

Method: Subject D-1145-59 housed in Containment Chamber 1145 given one (1) pair surgical tweezers. D-1145-59 tasked with attempting to retrieve inner sample of object. Dr. Lucas Cave performing experiment, Security Officer observing.

Incident Report: D-1145-59 instructed to separate seam of object with tweezers, and describe substance inside. Subject reported that it appeared to be filled with an unidentified metallic substance, silvery in appearance. Subject then reported a metallic taste in her mouth. Shortly after, subject began to vomit, dropping the object.

D-1145-59 continued vomiting for another 90 seconds, and lost consciousness. Security Officer instructed to enter cell and affix object to D-1145-59 with adhesive tape. Subject awakened during the process, and became violent. In the ensuing scuffle, the light in Containment Chamber 1145-3 was disabled, and a single shot was fired from Security Officer 's service pistol. Subject expired. Security Officer becomes target for SCP-1145, moving to rest at his feet.

Containment Protocol revised to prevent unnecessary exposure to site personnel.

Security Officer reclassified as D-1145-60.

Experiment Log 1145-7

Purpose: Determine possible limits regarding the object's detection and pursuit of targets during its active state.

Method: SCP-1145 transported to remote Site . Perimeter of 100km cleared of any personnel and inhabitants for the duration of testing. One personnel D-1145-24 placed in $5m^3$ containment cell 99km from site. Radiation detectors placed along path of estimated trajectory before illumination halted on object.

Result: After light was extinguished, object began emitting gamma radiation. Object travelled along expected path of trajectory at a height of approximately 1m off ground level, passing through foliage as expected. After approximately 20 minutes of travel, radiation detectors reported emission at 440 PBq. Object arrived at target 36 minutes, 27 seconds after illumination ceased. Dose reported on arrival to target measured at approximately 639 PBq. D-1145-24 expired within 4 hours of receiving the object due to acute radiation poisoning. Postmortem analysis estimate the total dose recieved to be approximately 72 Sv.

Site and path of trajectory severely contaminated, requiring 26 months of cleanup to remove all traces of radiation. All further experiments cancelled under order by O5-6.

SCP-1146: Psycho Printer

Item #: SCP-1146

Object Class: Safe

Special Containment Procedures: SCP-1146 is to be stored in a standard sized containment chamber. Due to SCP-1146's ability to connect to networks, it is not to be allowed contact with any form of external connection, and may only be allowed access to closed on-site networks for the purposes of testing. In the event of site transfer, SCP-1146 must clearly be marked as such to prevent accidental refilling of filament material. No staff are to attempt to refill SCP-1146's filament material under any circumstances.

Description: SCP-1146 appears to be a heavily modified brand 3D printer. Modifications include a 40.6 cm LCD screen, a set of small speakers, an enlarged printing bay, and a number of wires exposed along various points of the subject's case. Through means currently unknown, SCP-1146 seems to lack any requirement for an exterior power source, and can continue operating after being unplugged after a short delay. Though no means of opening the object have been found, X-ray imaging has been used to reveal a lack of internal components.

SCP-1146 was recovered from an abandoned office building in , Russia after a series of reports involving “living statues". After a search by agents, SCP-1146 was found in the building, surrounded by a number of models of various creatures and objects. The device was transported to Site- , where it currently resides.

SCP-1146's anomalous attributes are exhibited when a human being comes within five (5) meters. The attached screen will automatically turn on, and will display a blue oscilloscope. It will begin to yell insults at the individual in the voice of a Russian child, or try to convince them to fix a “Filament Blockage”. As long as SCP-1146 remains without filament material, and no biological

material over one kilogram in mass is placed in the filament bay, this is the extent of its anomalous abilities.

If SCP-1146 does have filament, it will begin Event SCP-1146-1. During Event SCP-1146-1, the subject will begin “yelling” louder and louder, and its oscilloscope will change from blue to purple. It will begin printing a number of creatures (referred to as SCP-1146-1 collectively), including oversized *Pandinus imperator*, *Velociraptor mongoliensis*, and [DATA EXPUNGED]. This process takes approximately forty-five seconds per model, and appears to be merely an accelerated version of the standard printing process. The models display characteristics of the biological material upon which the filament is based, with an apparent preference for animal muscular and bone tissue. Upon completion each model will exit the printing bay and attack any humans it encounters. The models, ranging in size from six centimeters to fifty centimeters, have a lifespan of approximately thirty minutes, after which they will vitrify. The models are susceptible to gunfire, and can also be destroyed by extreme blunt force or temperatures capable of destroying the base material. SCP-1146 will continue producing models until it reaches 50% filament, after which it will begin Event SCP-1146-2 if it has managed to produce at least five models. Otherwise, it will re-enter its dormant state.

If SCP-1146 manages to produce five models, it will begin Event SCP-1146-2. During this process, the models will attempt to move SCP-1146 to an exit, attacking any on site personnel en route. SCP-1146 will produce additional models as needed, and will create models of increasingly dangerous items and animals as it moves. SCP-1146 will continue this behavior until it runs out of filament, at which point it will enter a dormant state, and can be safely transported back to its containment cell.

In the event that one kilogram or more of biological material is placed into the filament access, SCP-1146 will begin Event SCP-1146-3. During this process, the organic material is pulled into SCP-1146 through its filament access slot, and is violently crushed into a thick paste. In the event that the object is larger than SCP-1146, it will consume as much of the sample as it can, and abandon the rest. Upon finishing Event SCP-1146-2, SCP-1146 will

re-enter its dormant state unless there is a human within a 5-meter radius, in which case it will begin Event SCP-1146-1.

Archived Containment Procedures, 1/16/

Item #: SCP-1146

Object Class: Safe

Special Containment Procedures: SCP-1146 is to be stored in a standard sized containment chamber. Due to SCP-1146's friendly nature, and immobile state, only a single locked door is required for containment. A single guard of a social nature should be posted to keep SCP-1146 company, on a weekly rotation. Only personnel who have submitted a formal application for testing with SCP-1146 and received approval may operate SCP-1146.

Description: SCP-1146 appears to be a heavily-modified brand 3D printer. Modifications include a 40.6 cm LCD screen, a set of small speakers, an enlarged printing bay, and a number of wires jutting from the subject's case. As the device lacks any form of opening in its case, X-ray imaging has been used to reveal a lack of internal components.

SCP-1146 was recovered from an abandoned office building in , Russia after a series of reports involving “living statues.” After a search by agents, SCP-1146 was found in the building, surrounded by a number of models of various creatures and objects. The device was transported to Site- , where it currently resides.

SCP-1146's anomalous attributes are exhibited when a human being comes within five (5) meters of the device. The attached screen will automatically turn on, displaying a green oscilloscope, and greeting the person in the voice of a Russian child. The device will then identify itself as "Alexy," and will then ask the person what they would like to do. At that point, the person can merely

chat with the subject, or can request that it make a model. Chatting with the subject is limited to subjects understood by most children, such as childrens stories and toys, although the printer does not seem to be bound to these topics. It seems to be capable of learning, and has been taught small amounts of English and Spanish since arriving at Site- .

If the device is asked to produce a model, it will request that it is brought an image of the desired model. Through means currently unknown, it will "Look" at the image, and begin creating it. Most models take approximately forty-five (45) seconds to finish, the process appearing to be an accelerated version of that of a normal printer of the same make. Once completed, the model will animate and exit the printing bay of its own accord. The completed models are of a playful demeanor, and are completely safe for handling. The models have a lifespan of approximately thirty (30) minutes, after which the models will undergo vitrification, and turn into a regular 3d-printed sculpture.

> Because of SCP-1146's possible sentience, All Level 2 and above research staff may request permission for testing SCP-1146's intelligence and modelling. -Dr.

SCP-1146 Testing Log

Transcript 1146-16 1/14/

> Dr. Grant and Dr. Owens both enter the testing chamber, along with several new research assistants.
>
> Dr. Grant - And this is SCP-1146, your current assignment.
>
> SCP-1146 turns on.
>
> SCP-1146 - *Translation: Hello! It is nice to*

meet you! My name is Alexy.

Dr. Owens - He just said hello.

Research Assistants mutter acknowledgements to the machine, and gather around.

Dr. Grant - Now, we're going to quickly demonstrate how 1146 works.

Dr. Grant turns to SCP-1146

Dr. Grant - *Translation: Hello Alexy. We would like you to make us a cat.*

SCP-1146 begins printing, but after 15 seconds stops, and a "Filament Jam" indicator appears on the screen. Dr. Owens steps forward.

Dr. Owens - What the… how can that even…

Dr. Owens reaches into the machine. After a violent crunching sound, The machine begins converting Dr. Owens into additional filament.

Dr. Owens - Oh god!

Several Research assistants grab Dr. Owens, and attempt to free him from the machine whilst another research assistant pages security.

Dr. Grant - *Translation: Alex! Let the Doctor go!*

SCP-1146 - *Translation: I'm just refilling my filament. It will just take a moment.*

Dr. Grant appears to panic as security staff storm the room. He rushes for the wall outlet,

and unplugs SCP-1146.

SCP-1146 - *Translation: Why?*

At this point, SCP-1146 seems to deactivate. Dr. Owens is pulled from the machine with 75% of his torso gone. As his body is dropped on the floor, SCP-1146 reactivates.

SCP-1146 - *Translation: Why did you try to kill me? I thought we were friends.*

Dr. Grant gestures for the others to leave the room as he retreats.

Dr. Grant - *Translation: You killed my friend, Alex! What was I supposed to do?*

SCP-1146 - *Translation: But I just…*

Dr. Grant and the research team retreat from the room.

SCP-1146 - *Translation: I was just having fun…*

On 1/16/ , SCP-1146 began creating additional models. Before security teams could respond, the models had breached containment, and began transporting SCP-1146 out of the facility. 14 Site- Security staff were killed before all models were neutralized. SCP-1146 was found attached to an ethernet cable on Level 2. All Site- computers received the following email:

Я ненавижу вас всех.
Translation: I hate you all.

SCP-1146 Testing Log

Note to all researchers:
Please include your name, request and the results into your testing log. Also, please ensure you remove all created models from the testing chamber when you are finished.

Test 1
Name: Dr. Grant
Request: One (1) model of a cube.
Result: SCP-1146 quickly turned out the cube, although expressing boredom in the simplicity of the model. The model remained inanimate, and was removed with no problems. The completed cube can now be found on Dr. Grant's desk, in use as a paperweight.

Test 2
Name: Dr. Grant
Request: One (1) model of a Tiger.
Result: SCP-1146 expressed concern at how dangerous a real Tiger would be, whilst working. When completed, the model walked out of the machine, and curled up at Dr. Grant's feet, seemingly taking a nap. SCP-1146 expressed happiness at the "cute" behavior of the Tiger. The model eventually stood up and wandered around the testing chamber, and vitrified after 28 minutes.

> Interesting. It appears that the models only come to life if they are models of living things. It also seems that the SCP affects how the model behaves. I'll have to see if this is the case. -Dr. Grant

Test 3
Name: Dr. Grant
Request: One (1) model of a Piranha
Result: SCP-1146 quickly printed the fish, talking about how it likes sea creatures. Upon completion, the printed model was dropped into a fish tank, and then exposed to a sample of human blood. No reaction was observed, the model instead behaving like a common

goldfish. Upon being questioned if it had ever seen a fish before, SCP-1146 confirmed that his creator had a pet fish.

> It seems that the behavior of the models is indeed based upon how the SCP believes they should act. I wonder to what extent this independent will of the machine goes. - Dr. Grant

Test 4
Name: Research Assistant
Request: One (1) model of female [REDACTED]
Result: SCP-1146 requested a picture, which was provided, and completed the model, commenting on it being a very strange looking cat. Research Assistant proceeded to [DATA EXPUNGED] Security Team B assisted in removal, and Research Assistant was treated for severe blood loss, amputation, and deep tissue scratches, before being terminated.

> Wait. What? That is… this really lessens my faith in my fellow man. Still, it does provide some rather valuable data. This confirms that the behavior of the models is decided by the SCP, and is based completely on how the machine believes the models should act. I suppose it's actually kind of lucky that liked to use slang. However, I hope that 1146 isn't disturbed by this event. - Dr. Grant

Test 5
Name: Dr. Owens
Prior to this test, the subject was exposed to a russian dub of the children's show "Teenage Mutant Ninja Turtles."
Request: One (1) model of a Turtle.
Result: Instead of requesting an image of a turtle, SCP-1146 began printing while "humming" the cartoon's theme song. The completed model was a rendition of the cartoon characters. The model began leaping around the testing chamber, whilst performing several styles of martial art. Subject expressed glee at the behavior of the model. Model vitrification at 27 minutes.

> Building off Dr. Grant's work, it appears that the subject does indeed control the behavior of the models based

> upon preconceptions of their behavior. It also appears that the SCP does not require an image to create something it has already seen. This may require a small amount of extra testing, but I'm quite sure of it. -Dr. Owens

Test 6
Name: Dr. Owens
Request: One (1) model of Dr. Grant
Result: SCP-1146 immediately began speaking of how kind Dr. Grant had treated it, whilst immediately beginning to print a likeness of him. The completed model walked around the testing chamber, appearing to take notes on a clipboard. Model vitrification after 37 minutes.

> As previously hypothesized, the subject does not require an image of a model to reproduce it, if it has previously observed it. This may prove useful in the event that the Foundation ever needs to create a likeness of an individual, or an SCP. - Dr. Owens

> Due to recent events, all testing of SCP-1146 is to be halted immediately.

SCP-1147: Adaptive Plum Tree

Item #: SCP-1147

Object Class: Euclid

Special Containment Procedures: All specimens of SCP-1147 are to be stored in separate planters in a 10m x 30m x 5m greenhouse located above ground on the premises of Sector 28. 3 liters of water should be added to each planter every 7 days.

Any instances of SCP-1147-1 produced by the specimens should be stored in the opaque container next to each planter. Personnel working in greenhouse are to be screened upon exit to prevent accidental dispersal of SCP-1147-1. Following test SCP-1147-DC all handling of SCP-1147-1 must be done with approved tools.

Testing the safety and edibility of any specimen of SCP-1147-2 is restricted to D-Class personnel. After 48 hours of observation specimens may be cleared for general consumption.

All tests must be approved by Dr. Laurel.

Description: SCP-1147 is an unclassified species of plum tree whose seeds, designated SCP-1147-1, can be planted in practically any substance. The resulting plant will adopt physical attributes from the utilized substance. SCP-1147 has proven capable of growing in solids, loose material, and liquids via hydroponics. SCP-1147 produces fruit, designated SCP-1147-2.

The original specimen of SCP-1147 was discovered growing from the steel base of a lamp post in , Georgia, where it was believed to be an art installation by the local population.

SCP-1147 Control
Substance: Standard potting soil.
Result: Normal plum tree closely matching similar species. Seeds

retain anomalous properties.
Fruit: Sweeter than expected.
Notes: *To eliminate as many variables as possible, only seeds from SCP-1147 control should be used for new tests. -Dr. Laurel*

SCP-1147-ST
Substance: 20cm cube of galvanized steel. 5cm hole drilled into top, seed placed within, plugged with steel shavings.
Result: Trunk is high quality steel with a superior tensile strength. Leaves and flowers are thin, rigid zinc sheets and give off no scent.
Fruit: Inedible. D-182 cracked tooth in attempt. Subsequent taste tests denied for specimens that can't be cut with a knife.
Notes: *This is the same material in which SCP-1147 was discovered. Original specimen successfully reproduced. -Dr. Laurel*

Mineral Test Log

SCP-1147-SA
Substance: Sand collected from ocean beach.
Result: Trunk rough, brittle, and pale. Crumbles easily to touch into individual grains of sand. Leaves and flowers are translucent and colorless. Scent resembles ocean breeze. Structure collapses when subjected to simulated rain.
Fruit: Inedible. Falls apart in the hand.

SCP-1147-GL
Substance: Seed pressed into recently forged 20cm glass sphere as it cooled.
Result: Trunk is clear, flawless, faceted glass. Roots visible within sphere. Leaves act as prisms, casting a spectrum of light onto surfaces. Flowers are light pink glass, with a subtle scent.
Fruit: Hollow, colored glass. Inedible.
Notes: *Personnel requests to give SCP-1147-GL as gifts denied. -Dr. Laurel*

SCP-1147-CO
Substance: Planter filled with poured concrete. Seed pressed 5cm under surface.
Result: Trunk matches color, texture, and strength of

concrete. Leaves are pliable. When soaked in water and applied to a surface they harden into a firm shell. Flowers share similar properties and have a chalky scent.
Fruit: Inedible.
Notes: *Leaves could be useful to quickly repair damaged walls/floors. Further research recommended. - Dr. Laurel*

SCP-1147-CH
Substance: Charcoal ground into rough powder.
Result: Trunk dry and cracked, resembling a tree after a forest fire. Leaves black and crumble easily. Flowers smell like burnt wood. Recommend storing away from other specimens in case of accidental combustion.
Fruit: Withered and smoky flavored. Produces a small quantity of liquid which is easily ignited.

Plantae Test Log

SCP-1147-PA
Substance: Shredded white printer paper mixed with water into pulp.
Result: Trunk composed of layered sheets of white paper that can be peeled away individually. Leaves are yellow with light blue veins. Flowers multicolored with the texture of tissue paper. Scent resembles a new book.
Fruit: Edible, but largely flavorless. D-431 received minor cuts on lips/tongue.

SCP-1147-CT
Substance: Processed, compressed cotton stored in fabric sack.
Result: Bark is a brown felt with a cotton core, giving in to pressure. Bark does not heal naturally, but can be stitched closed with no negative effects. Leaves are green felt with stitched veins. Flowers are pink cotton with the scent of freshly washed laundry.
Fruit: Resembles a plush plum. Edible, but just barely.

SCP-1147-WO

Substance: 20cm cube of stacked lumber. 5cm hole drilled into top, seed placed within, plugged with wooden dowel.
Result: Trunk resembles normal plum tree, but drier. Branches easily cracked. Leaves and flowers dry, colorless, with the scent of sawdust.
Fruit: Inedible. Surface smooth and polished with a visible grain.

SCP-1147-MO
Substance: $2,183 US in mixed bills, shredded and mixed with water to form pulp.
Result: Similar structure to SCP-1147-PA, but trunk is a pale green in color. Leaves bear a random mix of symbols and images commonly found on currency, but do not resemble complete and passable bills. Flowers have the scent of fresh dollar bills.
Fruit: A paper skin filled with dark ink. Sample of ink had a mild plum flavor.
Notes: *I told you it wouldn't work. I'm glad I didn't chip in to the collection. -Dr. Laurel*

Liquid Test Log

SCP-1147-WA
Substance: Filtered water.
Result: Trunk is smooth, transparent and cool to the touch, resembling quartz. Leaves thin, membranous and waterproof. Flowers emit unscented mist.
Fruit: A thin but durable skin containing approximately 100ml of potable water with a slight plum flavor. Seed floating within.
Notes: *Gardening staff finds samples incredibly refreshing. Request for additional planters of SCP-1147-WA approved. -Dr. Laurel*

SCP-1147-PE
Substance: Crude oil.
Result: Bark is black, giving, and perpetually greasy. Leaves share similar properties. Flowers produce a combustible vapor. Specimen to be isolated in a

separate enclosure.
Fruit: A thin but durable skin containing approximately 100ml of a refined petroleum similar to diesel fuel. Seed floating within.

SCP-1147-LA
Substance: Pasteurized cow's milk.
Result: Trunk is white and stronger than normal wood. Leaves and flowers are soft with a slightly sour scent.
Fruit: Creamy and solid, with a skin and flavor reminiscent of brie cheese. Serves well with white wine.

SCP-1147-BE
Substance: -brand beer.
Result: Specimen grew gnarled and erratic, with a mottled bark pattern. Leaves sag. Flowers produce a thick foam.
Fruit: A taut skin containing approximately 100ml of 6.5% abv stout beer. Seed floating within.
Notes: *I would recommend disciplinary action against Researcher Adams for liberally sampling SCP-1147-BE-2 before proper D-Class testing, but I believe the hangover is punishment enough. -Dr. Laurel*

Miscellaneous Test Log

SCP-1147-EL
Substance: Assorted shredded electronics.
Result: Bark consists of green plastic. When peeled off, circuits present on interior. Leaves resemble solar cells in construction, and are capable of collecting energy even after detached from specimen. Flowers utilize fiber optics to produce light displays.
Fruit: Inedible. Can be adapted into solid state storage device. Analysis of contained data ongoing.
Notes: *Repeating the process with SCP-1147-EL-1 produces a more efficient and refined specimen. -Dr. Laurel*

SCP-1147-LE
Substance: -brand plastic building blocks.

Result: Entire tree is constructed of individual, multi-colored blocks, including leaves and flowers. Specimen can be broken apart and rebuilt into different configurations and will resume growth with no negative effects.
Fruit: Each fruit is constructed exclusively out of violet bricks, with a seed cradled at the center.

SCP-1147-WX
Substance: 20cm cube of wax. Seed pressed 5cm into wax as it cooled.
Result: Tree easily mistaken for a natural plant at a distance, but subtle sheen and stiffness of leaves noticeable upon closer inspection. Vulnerable to deformation at higher temperatures.
Fruit: Edible, with a soft plum flavor, but no nutritional value. With wick inserted, fruit will burn for approximately 12 hours.

Animalia Test Log

Note: All specimens in this category raised in isolated underground testing chambers at Sector . Access restricted to Security Level 3.

SCP-1147-BL
Substance: 30 liters cow's blood.
Result: Bark is flaky, with a dark color reminiscent of dried blood. Leaves are thin and translucent, featuring a web of red veins. Flowers are a dark crimson and emit a red mist once a day. Specimens should be tended and watered only by D-Class wearing environmental suits until the nature of Researcher Parker's illness can be determined.
Fruit: Resembles a regular plum with a nearly black skin and dark red juices. D-968 and D-2401 vomited and convulsed within 1 hour of ingesting an entire sample. Further testing suspended.

SCP-1147-BO
Substance: Complete cow skeleton, ground into

powder.
Result: Trunk is smooth and white, with a core of marrow. Produces no leaves or flowers.
Fruit: None.

SCP-1147-ME
Substance: Ground beef.
Result: Bark resembles cow flesh, complete with thin layer of mottled hair, covering striated muscle. Produces hair in place of leaves. Flowers bud as fleshy sacs before ripening into fruit. Scent is rotten and disorienting.
Fruit: Raw ingestion produced symptoms reminiscent of food poisoning. Cooked fruit more edible but taste described as "gross" and "wrong."

SCP-1147-DC
Substance: Seed implanted under the forearm skin of restrained D-Class subject.
Result: Growth resembled an additional limb, with roots entangled in the veins, nerves and bones of the arm. D-1052 reported no ill effects and responded to stimulus given to SCP-1147-DC. After surgical removal both specimen and D-1052 expired on the operating table, autopsy pending.
Fruit: [REDACTED] All samples of SCP-1147-DC-1 and SCP-1147-DC-2 destroyed.
Notes: *Further testing requires O5 level approval. -Dr. Laurel*

SCP-1147-BR
Substance: Complete human brain from D-1398.
Result: Bark is pale and membranous, with dark veins visible beneath the surface. Specimen responds to harmful stimulus by shifting away at a rate of 1cm/min. Leaves laced with a dense web of veins and nerves. Flowers resemble primitive sensory organs, sensitivity tests ongoing.
Fruit: Upon attempted removal of fruit [DATA EXPUNGED]. Agents and from MTF Theta-4 responded and specimen now under control and

observation. Requesting all available records pertaining to D-1398.
Notes: *Further testing requires O5- approval. Not that it'll do Researcher Paulsen any good. I accept full responsibility for not taking his suspicions more seriously. Dammit. I went into botany to avoid this sort of thing. -Dr. Laurel*

« SCP-1146 | SCP-1147 | SCP-1148 »

SCP-1148: Imperfect Image

Item #: SCP-1148

Object Class: Safe

Special Containment Procedures: SCP-1148 is to remain situated on the window hereafter referred to as SCP-1148-1. To this end, SCP-1148-1 is to be embedded in a wall dividing a standard containment room in two. Illumination of no less than 100W is to be provided in the entrance division of the room, while the second division is to remain unlit. In case of power loss, chemiluminescent sources sufficient for 24 hours are mandated. Illumination between the room's sections must never fall below a difference of 75W.

Description: SCP-1148 is the reflected image currently maintained on SCP-1148-1. It appears identical to the reflection that should occur naturally on the surface of SCP-1148-1 aside from those minor discrepancies outlined below. SCP-1148 totally obstructs the view outward through SCP-1148-1 despite the transparency of the underlying glass.

Subjects who view the illuminated side of SCP-1148-1 are initially oblivious to the presence of SCP-1148 beyond that of an ordinary reflection; observation from the opposite side of SCP-1148-1 yields no reflection and has been found asymptomatic. After approximately 15 minutes of exposure, the first documented symptoms begin to manifest. Effects are as listed:

- paranoia regarding what is behind SCP-1148
- a feeling of "being watched"
- a fixation on observing SCP-1148 despite a desire to turn away

Within 5 minutes of the appearance of these symptoms, subjects report sighting transient figures as part of SCP-1148. These figures, which should not present as part of a true reflection, are described

as disappearing upon intentional viewing and include a man cloaked in a black hood, a large winged biped, and a pair of glowing eyes.

Within an additional 5 minutes of exposure, subjects express an irrational desire to approach SCP-1148. Reasons are varied, but are often explained as wanting to close SCP-1148-1 or draw a blind, despite the fact that SCP-1148-1 is neither capable of opening nor has any covering.

Upon moving within 2 cm of SCP-1148, an unseen force is witnessed to act upon the subject, drawing them closer. While invisible to external observers, various hysterical victims describe a pair of disembodied arms emerging from SCP-1148. Said limbs extend to approximately elbow length and are assumed to be humanoid, acting to pull the subject inside SCP-1148. No subject has yet been recovered following this event.

Addendum: At the present time no method of independently containing SCP-1148 can be ascertained. Equal illumination of both sides of SCP-1148-1 is expected to remove SCP-1148, but based on information gathered before its collection, it would most likely be transported to another suitable reflective surface. All known appearances of SCP-1148 have occurred on unbacked, vertical plates having at least 1m of clearance behind them and which are capable of transmitting light through their entirety (e.g. windows, sliding doors, windscreens). Proximity is thought to be the deciding factor in this transfer, but testing has been postponed due to the large risk of breach.

+ Experiment Log-1148-1

The below is a transcript of the experiences of subject D-31415 with SCP-1148 as proctored by Dr. .

> 00:00 – *Subject enters illuminated side of containment chamber.*
>
> **Subject:** OK Doc, so what am I supposed to do? There's nothin' in here but a chair and a window.

Dr. : No action is required at this time. All you must do remain in the room. How do you feel?

Subject: Fine, I guess. Am I supposed to feel anythin'? Hey, is there somthin' behind that window? I can't tell where it goes.

Dr. : Please refrain from asking questions. Only information regarding your emotional and mental state is needed at this time.

01:15 – *Subject remains seated in the folding chair provided. He faces the wall perpendicular to SCP-1148-1.*

Dr. : Do you notice any change in your mentality?

Subject: Nothin' so far Doc. I'm just kinda bored sittin' here. Couldn't you've thrown in a TV or a magazine or somethin'?

14:37 – *Until this time the subject has remained essentially stationary in the aforementioned chair. No feelings other than boredom have been reported.*

Subject: Hey, Doc, I think I'm starting to get somethin'. I've been feelin sorta creeped out just sittin' here.

Dr. : Please elaborate. How do you feel exactly?

Subject: Dunno, just sort of uncomfortable in my own skin, you know. It isn't right in here. What did you say was behind that window again Doc?

Dr. : Can you be more specific?

Subject turns to face SCP-1148-1 and immediately resumes former position.

Subject: It's like somethin' is watchin me. I don't like this. Can we stop now? What's behind that glass Doc? You gotta tell me.

Dr. : There is no cause for alarm. Remain seated and continue the test.

Subject again turns toward SCP-1148-1, this time maintaining his gaze.

Subject: Come on Doc. This isn't cool. I swear somethin's looking at me from behind that that thing. Why can't I see through it? What'd you guys put back there? Come on.

20:17 – *Subject has exhibited a pattern of glancing at SCP-1148-1 and then breaking eye contact for the last several minutes. Observations are increasing in duration and now last several seconds. Subject is also visibly agitated.*

Subject: OK Doc. This isn't funny anymore. I want this to stop. I can't take it.

Dr. : Please specify. What can't you take?

Subject: It's too much. I swear I'm not alone. What is behind that glass Doc? I know there's somethin'. What is it? Why can't I see? Tell me what's goin on!

Subject is becoming increasingly fixated on SCP-1148-1. Despite his requests to leave the containment area he has not left the chair. His

pattern of glances continues.

Subject: Holy shit! What was that thing? I swear it was there. Why can't I see it?

Dr. : Please describe what you have seen.

Subject: It was like, I don't know, big, like a guy or something in the window, but there were wings, definitely wings. There it is again! Wait! Where'd it go? I'm not crazy Doc! Why won't you tell me what's on the other side of that window?

Subject displays a frenzied observation pattern. He is highly distressed by his observations. Subject remains seated.

Dr. : Please continue. Your experiences are vital to the experiment.

Subject: No way Doc. No way! I can see it in the corner of my eye. Why can't I get a clear view? Why are you doing this to me? What the hell is behind that window? I know it can see me. Why can't I see what it is? Tell me what's goin on!

24:41 – *Subject has maintained his position but is becoming very erratic. He claims to see horrific images in his peripheral vision; no clear description has yet been provided. His view of SCP-1148-1 is now almost continuous.*

Subject: Hey Doc, I'm feelin a bit better. Sorry for how I was actin before. It's creepy as hell in here though.

Dr. : Are you still feeling distressed? Are there any more figures in the reflection?

Subject: I still want to know what's behind that thing, Doc. Why won't you tell me? That thing seems to have disappeared mostly though. I still don't like it in here. How much longer is this gonna take?

Dr. : The experiment will continue until we have recorded all relevant data. Please attempt to describe what you have seen.

Subject: Doc, how long has that window been open? Do you think it's a good idea to leave it like that with that thing out there? I think I should close it.

Subject stands and begins to approach SCP-1148-1. He never breaks eye contact. He appears unaware that SCP-1148-1 has no hinge and is incapable of moving.

Subject: I've gotta close it Doc. There's no way I'm letting that thing in here. No way! Screw your test. I'm not dying for this! I don't care what you have back there as long as it stays the hell put!

Dr. : Proceed.

Subject makes physical contact with the frame of SCP-1148-1.

Subject: HOLY SHIT! NO! JESUS CHRIST! NO!

Dr. : What's happening? Describe your experience.

Subject: MAKE IT STOP! JESUS FUCKING CHRI -

The experiment was concluded following the absorption of D-31415. No remains were recovered following his

disappearence.

« SCP-1147 | SCP-1148 | SCP-1149 »

SCP-1149: Erratic Weather Vane

Item #: SCP-1149

Object Class: Euclid

Special Containment Procedures: SCP-1149 is to be kept in a secure room at the west-most end of Site 37, located in a remote location on the northwest coast in the United States. To minimize the conspicuousness of its effects, SCP-1149 is to be pointed due west toward the Pacific Ocean at all times (see Incident Report 1149-A). It is to be firmly attached to its support structure, which is itself to be anchored to the floor. Accelerometric and atmospheric sensors attached to the support structure will transmit readings to a nearby monitoring center.

Atmospheric conditions within SCP-1149's containment room are to be kept stable with an air lock permitting entry. A single fan mounted in the wall of the room to the east of SCP-1149 is to be tightly covered and locked in position until it is required for testing. When opened, air speed shall not exceed 30 km/h. Access is restricted to Level 1 personnel with the approval of a superior. All test software and all test equipment must be inspected by at least two Site 37 Technical Review staff members. SCP-1149's wires must be grounded during any test until more information about the object is obtained.

Approval for complete testing of a vertical, upward orientation is currently pending. Testing of a vertical, downward orientation is prohibited at Site 37 due to its close proximity to major fault lines and no site transfers are currently pending at this time.

SCP-1149's rough "cone of effect" has been classified as a conservation area and all non-emergency watercraft and aircraft are disallowed access. Two patrol teams using United States Coast Guard motor lifeboats will monitor the boundaries of the cone of effect for trespassers. Patrols should not pursue trespassers, but

should contact researchers in charge of SCP-1149 for further instructions.

Description: SCP-1149 is a rusted weather vane approximately 45 cm long and 30 cm tall bearing no discernible manufacturer's mark or any particularly identifying features aside from the common rooster ornamentation. The base of the vane is corroded and appears to have broken off from its mount sometime prior to recovery.

Within the severed mount point, two frayed wires run further up into the vane. Interior imaging shows them terminating just beyond the "feet" of the rooster and reveals no power source or other notable components. The wires are believed to have once connected to a control mechanism.

SCP-1149's anomalous properties appear to always be in effect but are amplified in density and frequency when wind passes over it in the direction in which it is pointing. While active, weather activity will become erratic in the vicinity of SCP-1149. Most of the anomalous effects will occur within a "cone of effect", approximately 215 km long with an arc of 5 degrees, originating from the object's arrow tip. While the frequency of appearance of these effects does taper sharply near the boundaries of this cone, anomalous effects have been observed, on rare occasions, well outside of the cone of effect.

When kept out of the wind, SCP-1149 causes an anomalous weather event to occur within its cone of effect once every 15 minutes on average, with each event typically lasting between 10 seconds and 2 minutes, depending on the intensity of the event. When exposed to air traveling along its length (i.e. west, in its current orientation), the events become more frequent and last longer. When exposed to winds between 25 and 40 km/h, the events will be continuous at the center of the cone of effect, with events stopping and starting randomly near and beyond the borders. Beyond 40 km/h, events will begin to overlap, creating a continuous event growing in intensity until the speed of the wind passing over SCP-1149 decreases below this threshold.

Incident Report 1149-A: The original containment procedures for SCP-1149 had it secured in place pointing directly away from the

Earth's surface. It was believed that this orientation would result in the lowest possible magnitude of abnormal weather events. However, the object's effect on upper atmospheric layers was not predicted. In the days following initial containment, a slight yet noticeable increase in "sprite" electrical events and aurora effects was observed over Site 37. The frequency of these otherwise uncommon events was deemed to potentially draw undue attention to Site 37, and SCP-1149's containment procedures were updated for a westward orientation.

Addendum 1149-1: SCP-1149 was discovered in the ruins of a small coastal cottage in , OR after a strong storm had passed through the area. While the primary storm itself was not strange in and of itself, Foundation agents were dispatched to the area when highly anomalous weather effects were observed over the Pacific Ocean, focused in a rough cone-shape emanating from . Agents were unable to find the owner(s) of the cottage, though evidence suggests that the property had been inhabited until a short time before the cottage's destruction. SCP-1149 was found firmly affixed to the remains of what is assumed to be the interior wall of a shed. A wider search of area was unable to locate SCP-1149's base or any further information regarding SCP-1149's origin or operation.

Addendum 1149-2: Wind Testing Log All tests were conducted under closed conditions at Site 37. Weather stations took readings from Site 37 itself, as well as from observation vessels located at multiple points along the boundaries of SCP-1149's cone of influence. When high-accuracy readings were required, a geostationary satellite was used. The wires leading into SCP-1149's base were grounded for these tests.

+ Show Wind Testing Log

Test W-01
SCP-1149 Conditions: No wind, tested for one hour (baseline test)
Weather Conditions Prior to Test: Calm, winds east-southeast at approx. 5 km/h, clear skies
Summary of events: Five events were recorded during this period. The first was the formation and dispersal of an abnormally small cumulonimbus cloud, accompanied

by expected degrees of rain and lightning, which lasted for two minutes. The second was a pocket of fog, less than a kilometer in diameter, lasting for 45 seconds. The third was an area of intense heat, first noticed by the evaporation of sea water it caused. Temperatures were measured to reach 129° C at the height of the event, which lasted 30 seconds. The fourth event was another pocket of fog, over a smaller area, accompanied by a temperature drop of approximately 10° C relative to the surrounding area, which lasted 3 minutes, 25 seconds. The final event was a small waterspout, forming without accompanying cloud cover. The cyclone lasted for 1 minute, 10 seconds, and remained in contact with the surface of the ocean for 30 seconds of that time. Cyclone wind speeds reached a peak of 112 km/h.

Researcher's note: For brevity's sake, following logs will only note newly observed phenomena.

Test W-02
SCP-1149 Conditions: 5 km/h wind, tested for 62 minutes
Weather Conditions Prior to Test: Calm, winds east-southeast at approx. 5 km/h, light cloud cover
Observed effects: Six events were recorded during this period. Of these, two consisted of new weather effects. The first of these lasted for 4 minutes, 10 seconds. A cloud of unusual density formed in a structure not previously observed on Earth. This cloud was accompanied by intense lightning strikes for the duration of its existence, and dropped rain, turning to snow, then back to rain. The second unique event occurred at the end of testing and lasted for 5 minutes. During this time, the temperature rapidly dropped in an area that grew to 0.25 km in diameter at the height of the event, with temperatures dropping to -80° C. Water vapor in the air condensed and froze, creating a fog-like effect. The surface of the ocean also froze within this area of effect, to an estimated depth of 1.2 meters.

Test W-04
SCP-1149 Conditions: 10 km/h wind, blowing perpendicular to SCP-1149 (external fan approved for this test), tested for one hour
Weather Conditions Prior to Test: Winds southeast at approx. 15 km/h, overcast, light rain
Observed effects: Four events were recorded during this period. No unique events occurred.

Researcher's note: This would seem to indicate that blowing perpendicularly doesn't have any effect. Though perhaps something will be observable at higher wind speeds.

Researcher's note: Test W-06, omitted for redundancy, further supports the above theory. Only air that travels along the length of SCP-1149 affects its effects.

Test W-07
SCP-1149 Conditions: 20 km/h wind, tested for one hour
Weather Conditions Prior to Test: Winds south-southeast at approx. 5 km/h, light cloud cover
Observed effects: Events were continuous during this period with many occurring simultaneously. Most were not unique, though three were of particular interest. The first was a highly dense, rapidly rotating cloud mass. After observing its odd color, further analysis indicated that it consisted of water mixed with hydrochloric acid, abnormal levels of carbon dioxide, and methane. The cloud mass was accompanied by frequent lightning and a partially formed cyclone. This event lasted for 9 minutes, 25 seconds. The second unique event was the repeated rapid formation and dispersal of an extremely low-pressure area, which was observed by the column of water that was quickly drawn up into it, then dropped. This process was repeated 6 times in a small area over the course of 1 minute, 10 seconds. The third unique event was a variation of a previously observed event. Over an area approximately 20 m in diameter, the air

temperature rose and quickly peaked at 334° C, lasting for a total of 11 minutes. During this time, the surface of the ocean vaporized, creating a growing plume of steam. This event manifested near one of the observation vessels involved in testing, resulting in heat damage to part of the vessel's structure and varying degrees of burns to each of its crew. The event caused no fatalities and the vessel was able to retreat before damage became too great.

Researcher's note: Containment procedures updated. With events of this nature, we need a system in place to prevent people from entering the area.

Test W-17
SCP-1149 Conditions: km/h wind, tested for 27 minutes
Weather Conditions Prior to Test: Calm, winds east-northeast at approx. 10 km/h, clear skies
Observed effects: Clouds immediately began to form, starting at the center of the cone of effect and spreading outward. Cloud composition was determined to be a condensed mixture of water with small amounts of hydrogen, helium, and ammonia. Lightning strikes were frequent, occurring nearly continuously starting at approximately 3 minutes. At approximately 5 minutes, the temperatures climbed above 90° C, causing the ocean within the cone of effect to begin vaporizing at an increased rate. Observation vessels retreated and were able to avoid damage for the duration of the test.

At approximately 15 minutes, cloud cover began condensing drastically and rotating rapidly, causing winds to reach speeds in excess of 400 km/h. At this point, the cone of effect had doubled in size due to indirect effects and the ocean continued to vaporize at its accelerated rate. By 27 minutes, the rotating storm had reached 240 kilometers in diameter with wind speeds recorded at km/h. Small pockets of extremely high temperatures and pressure were observed, resulting in

ionization of the air and bursts of light and sound similar to lightning. Satellite imagery reveals that at this point the storm bore a strong resemblance to [DATA EXPUNGED].

Testing was concluded at this point. The weather effects quickly dropped off in intensity, but did not fully disperse until over three hours later. The storm made land fall 20 minutes after the conclusion of testing, but by this point clouds mostly consisted of water and caused damage no worse than that of a typical tropical storm of mid-level intensity.

Researcher's note: Containment procedures updated. I think we can adequately test this thing without going over 30 km/h. We could've been in trouble if those poisonous clouds made landfall.

Addendum 1149-3: Electrical Testing Log All tests were conducted under closed conditions at Site 37. Weather stations took readings from Site 37 itself, as well as from vessels located at multiple points along the boundaries of SCP-1149's cone of influence. When high-accuracy readings were required, a geostationary satellite was used. SCP-1149 was under 5 km/h wind speeds for each of these tests. The wires leading into SCP-1149's base were connected to varying electrical signals.

+ Show Electrical Testing Log

Test E-01
SCP-1149 Conditions: 5 V DC, 0.5 A applied to wires, tested for 15 minutes
Weather Conditions Prior to Test: Calm, winds east-southeast at approx. 5 km/h, light cloud cover
Observed effects: Effects similar to test W-07. Test terminated early.

Researcher's note: A direct current seems to simply amplify the effect. No need to prolong the test.

Test E-04

SCP-1149 Conditions: RS-232-like asynchronous serial communication transmission, transmitting the looping output of a simple program, tested for one hour
Weather Conditions Prior to Test: Calm, winds northeast at approx. 10 km/h, light cloud cover
Observed effects: Effects were especially erratic. Multiple events would occur at once and would quickly disperse, followed by calm periods. At times, events would be grouped together, and at others they would have no apparent grouping pattern. Single events occurred at multiple points during testing as well. None of the observed events were unique. When the timeline of observed behavior was compared to the timeline of the program's output, no further patterns could be deduced.

Test E-11
SCP-1149 Conditions: 1 V AC, 60 Hz, 1 A applied to wires, tested for 2 minutes, 21 seconds
Weather Conditions Prior to Test: Calm, winds east-southeast at approx. 10 km/h, clear skies
Observed effects: Immediately after testing began, a single event started approximately 25 km (16 mi) directly west of SCP-1149. A high-pressure, high-temperature pocket formed, vaporizing the ocean beneath it. Much of the resulting steam was drawn into the pocket, which began to rotate, quickly picking up speed. The cyclone of water vapor soon reached a height of approximately 0.4 km, becoming hotter and denser as it drew more water into itself. By this point, wind speeds had exceeded 150 km/h. After 1 minute, 30 seconds of testing, the cyclone began to emit light. After 1 minute, 45 seconds, the cyclone had grown to approximately 1 km high with an immediate area of effect of approximately 0.15 km. Observation vessels nearest to the cyclone began to retreat due to the danger of the extreme light and heat. After 2 minutes, 21 seconds of testing, the cyclone was clearly visible with no magnification from the observational satellite. The heat and electromagnetic field of the cyclone were

measurable at Site 37, causing multiple containment alarms to be triggered. The closest observation vessels to the cyclone began to suffer heat damage as they continued to retreat.

At this point, the electric signal was removed from SCP-1149, its wires were grounded, and the wind in its chamber was shut off. This resulted in the cyclone quickly expanding and returning to normal pressure, ejecting extremely hot water vapor and super-heated liquid water out over a radius of over 8 km, causing injuries and 1 fatality to observational crew. The sudden expansion also caused a small tsunami, resulting in minor property damage along the coast, though it caused no civilian casualties.

Researcher's note: Containment procedures updated. We should discontinue this line of testing until we know more about what we're dealing with.

« SCP-1148 | SCP-1149 | SCP-1150 »

SCP-1150: The Passengers

Item #: SCP-1150

Object Class: Safe

Special Containment Procedures: All newly-identified instances of SCP-1150 must be cataloged and subject to biannual re-confirmation, as per the safe category tracking procedures of the Aegis Protocol. All SCP-1150 manifesting in D-class personnel should be housed in standard isolation cells or in dormitories containing only other instances of SCP-1150. Outside of approved testing procedures, D-class SCP-1150 must not be permitted prolonged (greater than 15 seconds) touch contact with other humans or sentient animals via skin contact or through thin or conductive fabrics. Note that this is a cautionary measure only, as SCP-1150 can transfer to unwilling or unaware subjects only in unusual circumstances, such as those delineated in the SCP-1150 research log.

Description: SCP-1150 are sentient entities with human-like psychology that share bodies with willing human hosts through poorly-understood means. SCP-1150 are aware of all behaviors, interactions, and emotional states of their hosts but cannot usually perceive individual thoughts or memories. They appear to be immune to all amnestics, excluding a slight susceptibility to , which is likely due to neurological damage to the host at high doses. While the host is conscious, there is no known means of detecting the presence of SCP-1150, save for the occasional brief appearance of anomalous REM-like EEG traces in some subjects (namely sleep spindles and K-complexes). The Foundation currently tracks 38 instances of SCP-1150, maintains 3 instances in D-class personnel for testing purposes, employs 2 instances (along with their hosts), and maintains one instance in Level 3 confinement for security reasons.

When the human host of an instance of SCP-1150 falls asleep, they

immediately enter REM (dream state) sleep and the SCP-1150 entity gains control of the host body for a period of 5-16 hours. This duration varies with the mental fortitude and willingness of the host and the relative strength of the entity. While the SCP is in control, it acts, behaves, and generally has physiological reactions identical to those of a normal human, albeit one with memories and personality traits different from those of the host. At the end of its period of control, SCP-1150 becomes sluggish and appears to sleep. One to two minutes later, the host awakes and regains control of their body. Hosts generally report that they are fully rested and are generally unaware of what has transpired while they were asleep. Note, however, that individuals who have hosted SCP-1150 for prolonged periods (several years or more) become gradually more aware of the actions of their "passenger".

SCP-1150 can be transferred from host to host through physical contact. While it appears that almost any skin-to-skin contact is sufficient to transfer SCP-1150, direct forehead-to-forehead contact allows for transfer times as low as 15 seconds. Conversely, transfer takes approximately four minutes via hand or foot contact. If the contact is disrupted at any point during the transfer, the entity remains in the original host. Recipients of SCP-1150 report a "pleasant buzzing" sensation and exhibit a slightly elevated stress response but appear otherwise unaffected by this transfer. In all instances, save those documented in the attached experiment log, the recipient of SCP-1150 must be willing to accept the entity. There are no known means for destroying an instance of SCP-1150, though they can be incapacitated indefinitely by killing and interring the host.

The Foundation first became aware of SCP-1150 on 6/27/1982 shortly after the FBI raid on the Kismet Doorway cult in Bloomhill, Arkansas. Foundation sources within the Bureau learned of a high-ranking cult member in FBI custody with potential SCP properties. The Foundation arranged a transfer to Site 40 due to its proximity to , and there conducted the initial interviews with the entity, currently classified as SCP-1150-1. SCP-1150-1 subsequently assisted in the identification of three additional instances of SCP-1150 associated with the Kismet Doorway.

Addendum: On 12/10/2008, the recovery of sensitive documents in a raid on Marshall, Carter & Dark Ltd. indicates that MC&D are currently employing at least two instances of SCP-1150 to infiltrate the Foundation as "sleeper agents" to obtain classified information on SCPs and Foundation security. These entities are being carried completely unknown to the SCP employee hosts, and are able to see, hear, and experience everything that the host does. It is unknown how these agents are getting information back to MC&D, given that Foundation research has not revealed any outward manifestations of SCP-1150 when they "piggyback" on an unwitting host.

Interview 1150-1 Log SCP-1150-1

Interview 1150-1 Log SCP-1150-1

Interviewed: SCP-1150-1, "Jonas "
Interviewer: Agent Adrian Barton

<Begin Log, 7/15/1982, 22:45>
Barton: Okay, we're recording.
Jonas: Do I speak into this?
Barton: No, leave it there. It will pick up our voices anywhere in the room. Right. You indicated that you would be willing to answer some questions for us.
Jonas: Within reason, yes.
Barton: Are you Jonas ?
Jonas: In a sense. I'm sharing his body. I assure you he's quite agreeable with our arrangement.
Barton: Can you explain those two statements?
Jonas: Sure. Jonas has allowed me to use his body. He thinks I'm a manifestation of his god and is happy to let me do my work.
Barton: Are you a god?
Jonas: Of course not. As far as I know made him up, but he may be remembering from before.

Barton: the head of the Kismet Doorway group? How are you involved with that group?
Jonas: All of the higher-ups are like me. We ride your bodies, if you'll let us. I was fourth in command out of the six of us.
Barton: And all six of you were, uh, body snatchers?
Jonas: We call ourselves passengers. We switch bodies from time to time. said we could live like kings, and I believed him. It's clear to me now that he's quite insane. I disavow his ridiculous cult.
Barton: You mentioned that may have "remembered from before". Before what?
Jonas: Before we were awakened. That was in 1911 when the Englishman Davies unearthed our bones in Persepolis.
Barton: You can't remember anything from before that?
Jonas: No. Well, maybe one thing. Darkness, and before that wailing and screaming, and before that a great, consuming fire. I remember pain, too. But that could be a dream. says that we were worshipped like gods then. Utter insanity.
Barton: May I change course a bit? How did you get your current body?
Jonas: Jonas gave himself to me just over a year ago. Before that, I was Annie Paige, who was wife to at that time. I was tired of that, so I transferred to Jonas.
Barton: Transferred how?
Jonas: We touch. Usually, we press our heads together in prayer. This way, it goes more smoothly. I pour myself from one human vessel to the next, like water from one bowl to another, and then I see with Jonas's eyes, speak with his mouth, love with his genitals. And when I am not using them, he is himself. So you see that I have not hurt anybody.

Barton: That's all for now. Thank you for your time, Mr. .
Jonas: Agent Barton, one last thing. May I be transferred to a larger cell until this trial? This area is inadequate for my needs.
Barton: I'll see what I can do.
<End Log>

Experiment Log SCP-1150

Experiment SCP-1150-5A
Date: 9/16/2003
Description: SCP-1150-5, then occupying D1905, was brought into physical contact with subject D2002 and directed to initiate transfer. D2002 was an otherwise healthy 27 year-old Hispanic male who sustained reticular damage due to medication-induced seizure and was consequently in an irrecoverable coma state.
Result: SCP-1150-5 successfully transferred to D2002 after approximately 65 seconds of limb-to-limb contact. Sensors placed 1 meter from the subjects detected very low amplitude (approx. 25 mW) radio noise during the transfer. D2002 subsequently "awoke" when SCP-1150-5 gained control of the body. Thorough examination reveals none of the cognitive or motor deficits common in coma recovery patients. EEG recordings of D2002 show waveforms typical of other SCP-1150 recordings, which should be impossible due to the state of reticular damage. When SCP-1150-5 lapses into its inactive state, D2002 once again becomes comatose and exhibits EEG waveforms indicative of deep coma. In the D2002 host, SCP-1150-5 exhibits a 16.15-hour active state and an 8-hour inactive state; this differs significantly with the normal distribution of activity/ inactivity seen in normal instances of SCP-1150.
Researcher's Note: *Computer analysis of the radio "noise" reveals a high degree of organization and*

patterning. The significance or meaning of these patterns has yet to be determined. -Dr. Bimston

Experiment SCP-1150-5B
Date: 9/29/2003
Description: Three hours into his comatose state, subject D2002 (the current host of SCP-1150-5) was euthanized with a lethal dose of sodium pentobarbital.
Result: Upon cardiac arrest, SCP-1150-5 gained control of D2002 and attempted to escape from its restraints, causing significant injury to the limbs and hands of D2002. EEG activity became typical of SCP-1150 waveforms. Notably, cardiac function did not resume and SCP-1150-5 became more lethargic until collapsing after 620 seconds. The amplitude of EEG waves gradually decreased over this time period.

Experiment SCP-1150-5C
Date: 9/29/2003
Description: Two hours after the cessation of all movement, D-class subject D1968, a 34 year-old white female with an IQ of 70, was directed to touch the arm of D2002 under the impression that she was feeling for a pulse.
Result: Approximately five seconds after initiating contact, D1968 jumped back, stating that she had "been shocked". Sensors placed 1 meter from subjects detected medium amplitude (aprox. 700 mW) radio noise lasting 0.3 seconds. Subsequent observation of D1968 did not reveal any behavioral or cognitive anomalies, though EEG analysis revealed minor anomalies associated with SCP-1150 presence.

Experiment SCP-1150-5D
Date: 10/13/2003
Description: After two weeks of observation, in which no symptoms of SCP-1150-5 were manifest, subject D1968 was told that she had been exposed to a benign "angel spirit" during experiment SCP-1150-5C. After two weeks of further observation, subject D1968 was convinced by

an SCP confederate posing as D-class personnel that she was instead possessed by an "evil demon".
Result: After being informed of the presence of SCP-1150-5, the "passenger" manifest itself during D1968's next sleep cycle. Over the next two weeks, SCP-1150-5 manifest for an average of 10.5 hours each night. During this time period, D1968 experienced a modest increase in IQ (to 83) and motor coordination. After being told that SCP-1150-5 was "evil", the period of manifestation was reduced to 8.0 hours and IQ returned to baseline levels.
Researcher's Note: *This indicates that A) SCP-1150 is capable of rapid transfer to an unwitting or unwilling host but cannot secure control without some level of host awareness and/or consent and B) the degree of host "willingness" correlates to the amount of time that SCP-1150 is active. -Dr. Bimston*

Experiment SCP-1150-18A
Date: 1/11/2008
Description: SCP-1150-18 was made to repeatedly transfer between several D-class personnel to determine the conditions in which transfers are possible.
Result: SCP-1150-18 was capable of transferring regardless of the state of its current host but was unable to transfer to an unconscious host in any circumstance. Upon transfer to a new host, SCP-1150-18 entered its dormant state, regardless of whether it had been active at the time of transfer.

Experiment SCP-1150-18B
Date: 1/21/2008
Description: SCP-1150-18 was made to repeatedly transfer between several D-class personnel in an experimentation room saturated with 50-100 MHz radio wave interference (the same frequency band measured from SCP-1150 during transfer).
Result: SCP-1150-18 was capable of transferring in all conditions, but the duration required for transfer was substantially increased with higher levels of interference,

plateauing around 700 seconds at power levels above 100 kW.
Researcher's Note: *It appears that the radio burst is a facilitative effect (or perhaps a side effect) rather than a necessary condition for the transfer.*

Experiment SCP-1150-18C
Date: 3/6/2008
Description: SCP-1150-18 was hosted by D1412, a 68 year-old black male who suffered from diabetes and CHD. Experiment SCP-1150-18A was carried out after D1412 died of natural causes (heart attack). Several handling protocols were employed to assess the limits of SCP-1150 host-to-host transfer after death (see also: Experiment SCP-1150-5C).
Result: Approximately four hours after death, the body was handled by Ms. Gomez, a Level 1 research technician wearing a standard chemical hazard suit with insulated gloves, who transferred the body to the Site 40 crematorium. No SCP-1150 transfer was observed to occur at this point. Five weeks after full cremation, subject D2333, a 50 year-old white female, was directed to manually sift the ashes. After approximately four seconds, she quickly withdrew her hand from the box of ashes, reporting that she had touched something "sharp and prickly, like a cactus". Subsequent analysis revealed that SCP-1150-18 had transferred to D2333 in a "passive" state, as in the initial transfer during Experiment SCP-1150-5C.
Researcher's Note: *How the hell are we supposed to kill these things? -Dr. Rosenberg*

« SCP-1149 | SCP-1150 | SCP-1151 »

SCP-1151: A Handy Marker

Item #: SCP-1151

Object Class: Safe

Special Containment Procedures: SCP-1151 is currently contained in Storage Unit , located in Site . SCP-1151 is to be kept in a 10cm x 10cm sealed container and kept under guard by one (1) security officer at all times. Any personnel handling SCP-1151 in any way must wear protective gloves while doing so.

Only one (1) specimen of SCP-1151-1 may be kept in containment at any time. Subjects in the final stages of SCP-1151 compromisation are to be fed via IV tube as dictated in Nutritional Chart 1151-1.

If any personnel become compromised by SCP-1151 outside of authorised testing, the affected hand is to be immediately washed and decontaminated. Any testing involving SCP-1151 must be authorised by at least two (2) members of Level Three personnel.

Description: SCP-1151 is a black marker pen of the brand. SCP-1151's anomalous properties first become apparent when it is used to draw the image of a 'smiley face' onto the palm of a human subject, who will hereafter be referred to simply as SCP-1151-1. The initial effects of SCP-1151 take roughly a week to initially manifest, and this time period has been known to vary depending on the age and the physical condition of SCP-1151-1. During this period before initial manifestation, washing off or otherwise removing the 'smiley face' will negate SCP-1151's effects.

Subjects experiencing the effects of SCP-1151 will noticeably raise their affected hand during their daily routines. Initially, they will only do this when conversing with others, but as SCP-1151 compromisation progresses, they will raise their affected hand higher than the rest of their body constantly. Later symptoms of

these initial stages include unfocused pupils, loose hanging of the head and slight slurring of speech.

The initial period of compromisation only lasts at most three (3) days; after this point SCP-1151's further mental effects will become apparent. SCP-1151-1 will begin to believe that the face drawn on their palm is their actual face and will behave as such. Interestingly, tests have indicated that SCP-1151-1 does have a limited awareness of what the face drawn on their palm is looking at. After a period ranging from two (2) to six (6) days has passed, the final stage of SCP-1151 compromisation will begin.

SCP-1151-1 will begin to believe that their head is a dangerous growth on their body, commonly referring to it as a 'tumor' or a 'cancer', and will attempt to remove it using whatever tools are available to them. If they cannot find a method of efficiently decapitating themselves, they will attempt to use cruder methods such as repeatedly slamming their head upon walls or floors. Seventy-five (75) percent of affected individuals have been known to survive their self-decapitation, despite the resultant lack of a brain and the mental and physical functions associated with it.

After self-decapitation, a surviving SCP-1151-1 will wander aimlessly, showing a general awareness of their surroundings by moving around obstructions. Surviving instances of SCP-1151-1 do not appear to be concerned regarding the massive amount of blood loss relating to their self-decapitation, and will survive for a time period ranging from one (1) to six (6) hours.

« SCP-1150 | SCP-1151 | SCP-1152 »

SCP-1152: A Common Raccoon

Item #: SCP-1152

Object Class: Safe

Special Containment Procedures: SCP-1152 is to be kept in a solitary habitat in the Site-98 Animal Housing Wing. SCP-1152 is to be given 5kg of feed meeting its nutritional standards, detailed in document SCP-1152-NI, laced with 25mg Venlafaxine. SCP-1152 is to be examined once every two months by an onsite veterinarian following repeated health issues. Access to SCP-1152 is reserved to Level 3 personnel only.

Description: SCP-1152 is superficially similar to standard members of the *Procyon lotor* (common raccoon) species. SCP-1152 weighs approximately 75kg, despite only being 60cm from the nose to the tip of its tail, and its current state of malnutrition. SCP-1152 does not share the genome of other members of its species, but is a near complete match for the human genome. After logging SCP-1152's genome in the Foundation Database it was found to share 99.87% of its genetic code with the late Agent [redacted].[1] Along with its human DNA, SCP-1152 has proven susceptible to pathogens normally restricted to infecting humans. SCP-1152 also has been verified to have a lifespan much longer than others of its species, having been in containment for six years. SCP-1152 is missing the fifth digit on its front-left paw, how SCP-1152 was injured is as of yet unknown.

SCP-1152 has exhibited intelligence on par with an average post-pubescent human, eluding capture from staff for two weeks after initially being found in Site-98's personnel wing.[2] SCP-1152 is suffering from long-term depression following its capture. SCP-1152 is capable of manipulating objects with considerable dexterity beyond what should be feasibly possible with paws. It is also capable of opening doors and bypassing low security manual locks, requiring the lock to its room to be replaced with keycard access.

Along with the anomalous mass of SCP-1152's body, it appears that SCP-1152 may possess cognitohazardous effects in carnivorous and omnivorous land animals. Any such animal introduced to SCP-1152, even members of its own species, has displayed hostility to SCP-1152. As such it is now contained in a secluded habitat.

Addendum SCP-1152-A: After the events of its escape on /06/20 all personnel are advised to keep their keycards hidden on their person when interacting with SCP-1152. The incident report follows:

> *10:45AM* SCP-1152 is seen attempting to dig through the walls of its habitat
>
> *10:55AM* Agent is dispatched to incapacitate SCP-1152
>
> *11:02AM* SCP-1152 attacks Agent , retrieves his keycard, and escapes containment
>
> *2:35PM* SCP-1152 is found in the Site-98 supply storage and contained once more.
>
> Notes: SCP-1152 was found with a stolen phone; records indicate that it somehow dialed Agent 's wife after presumably striking random buttons. The call lasted five minutes and consisted entirely of SCP-1152 whining and barking into the microphone.

Footnotes
1. Agent was presumed dead after being MIA for thirteen months. His body has yet to be retrieved by Foundation staff.
2. How SCP-1152 managed to get into Site-98 without being noticed is as of yet unknown, along with how it obtained knowledge of the layout of Site-98.

« SCP-1151 | SCP-1152 | SCP-1153 »

SCP-1153: Programmable Patients

Item #: SCP-1153

Object Class: Safe

Special Containment Procedures: SCP-1153 is stored in a purpose-built storage area at Storage Site- when not used for testing purposes. Permission to access SCP-1153 must be requested from the current Level-2 staff member responsible for supervision of SCP-1153 (currently Dr.). Instances of SCP-1153 and 1153-2 are not to be stored while connected, and SCP-1153-2 must be stored in a depowered state. SCP-1153-2 is never to be left connected to SCP-1153 for more than twenty-five minutes at any one time.

When an instance of SCP-1153-2 is turned on, the list of commands must be examined and any new commands must be noted. Testing of serious contagious diseases or diseases of unknown nature on SCP-1153 must be conducted under appropriate quarantine procedures, up to and including the restriction of testing to biohazard containment areas.

Absolutely no tests on SCP-1153 using any of the diseases classified under Special Containment Procedures are to be conducted without the express permission and approval of at least one member of O5. All such tests, if they are ever conducted, must adhere to the Special Containment Procedures of the disease in question.

Description: SCP-1153 is a collection of twelve (as of / /) human bodies. These bodies are a mix of different heights, weights, ages and genders, although some of the bodies appear to be identical to each other. These bodies are functionally alive, but catatonic. They appear to possess no higher brain function or ability to move or act of their own volition. The bodies appear to possess a constant internal environment, and neither require sustenance nor

appear to age. All of the bodies appear shaved of hair and possess a barcode tattooed onto the inside of the left wrist. Each instance of SCP-1153 has what appears to be a standardised USB port embedded in the outside of the left heel.

SCP-1153-2 is a collection of five (as of / /) laptop computers of various makes and models, the earliest produced in 199 and the latest produced in 201 . These computers have all been discovered in direct connection to an instance of SCP-1153. Each of the computers are largely mundane and unremarkable, save for an anomalous program entitled '[DATA EXPUNGED]'. This program is heavily encrypted and to date no attempts to modify or view the coding of the program, or to transfer it to another computer, have been successful. When opened, the program consists of a menu including over listed commands. All of these commands are named after an injury or disease, save for the first command, entitled 'Wipe'.

When an instance of SCP-1153-2 is connected by a cable to an instance of SCP-1153, the [DATA EXPUNGED] program is launched, and a command is executed, the primary anomalous effects of SCP-1153 can be observed. When a command is executed in connection to an instance of SCP-1153, the body will rapidly develop the relevant disease or injury over the course of approximately twenty seconds. Multiple injuries and diseases may be applied to a body, although the program will display an error message when more than five commands are executed on one subject.

The 'Wipe' command heals the body of all injuries and illnesses within another twenty-second period, up to and including death and advanced decomposition. This 'Wipe' command also affects injuries and illnesses not caused or related to the program. SCP-1153 instances appear to have fully functioning healing and immune systems, unless a condition related to these processes is loaded, and so can recover from these conditions naturally or as a result of normal treatment methods.

All contagious diseases applied to SCP-1153 are fully contagious and can spread and infect others in a manner identical to natural instances of the illness. Certain diseases have multiple commands,

usually appended with a bracketed word indicating something about the disease. For example, executing the command 'Polio (Incubation)' will cause no symptoms to develop immediately, in line with the normal progression of the disease, while executing 'Polio (Advanced)' will cause the body to immediately develop symptoms. The list of commands include several diseases which have not previously been documented, as well as extinct diseases such as smallpox. For this reason, caution must be exercised when testing with SCP-1153.

SCP-1153 initially came to the Foundation's notice on / /199 after the first known instance of SCP-1153 was discovered under quarantine after being admitted to a hospital in [DATA EXPUNGED], apparently suffering from smallpox. How it arrived in the hospital is currently unknown, as no documentation or evidence was found regarding how SCP-1153 had arrived in the hospital. Foundation representatives acquired the body and administered Class-B amnestics to those involved. No further measures were required, as information had been suppressed to prevent a public panic. The subject was placed in Foundation custody, although little was learned of SCP-1153's nature until / / , when a second SCP-1153 instance was taken into containment with an associated SCP-1153-2 instance. Since then, ten instances have been discovered and contained around the globe, often in connection to unusual or misplaced outbreaks of disease. The current number of SCP-1153 instances outside of Foundation custody is unknown.

Addendum 1153-1: Recent experiments involving SCP-1153-2 have lead researchers to the conclusion that the anomalous program contained within SCP-1153-2 is not fixed and can change and develop. For example, after / /2009 all instances of SCP-1153-2 appeared to contain a new command, entitled 'H1N1/09 Influenza' which caused the subjects to develop symptoms identical to the aforementioned strain of the flu virus. All SCP-1153-2 instances recovered after this date have been found to contain this new command, possibly indicating that SCP-1153-2 instances are being updated in synchrony by a currently unknown process.

Addendum 1153-2: On / / , several new commands were found to have been added to the list of commands available for

SCP-1153-2. All of the commands added on this date correspond to an anomalous illness or infection catalogued under Special Containment Procedures by the Foundation, including [DATA EXPUNGED]. The single instance of SCP-1153-2 discovered after this date came to Foundation attention after an outbreak of SCP- in [REDACTED] and contained a command list identical to all other instances currently in containment. Future outbreaks of anomalous diseases are to be investigated to determine a possible link with uncontained SCP-1153 instances.

« SCP-1152 | SCP-1153 | SCP-1154 »

SCP-1154: Conceptual Dragon

Item #: SCP-1154

Object Class: Safe

Special Containment Procedures: SCP-1154 is to be contained in Storage Unit , located at Site . SCP-1154 is to be contained in a 15cm x 15cm sealed container. SCP-1154 is to be kept under guard by one (1) security officer at all times. Viewing of SCP-1154 must be conducted by members of D-class personnel.

If any additional components of SCP-1154 are discovered to exist, they are to be immediately secured and contained by Mobile Task Force Zeta-29 ("Dragon Slayers"). Any civilians affected by SCP-1154 are to be brought into Foundation custody for two (2) weeks. If, at the end of this period, they have not expired, they are to be dosed with a Class-A amnestic and released.

Any testing with SCP-1154 must be authorised by at least two Level Three personnel.

Description: SCP-1154 is the designation given to a collection of media which includes poems, short stories, a novel and a VHS tape. All components have thematic links to an entity which the components refer to as 'the Dragon'. Descriptions of this entity vary with SCP-1154's different components, and very few of the components describe SCP-1154 in accordance with the traditional European image of a dragon. (See Component Analysis 1154-1 for further information.)

SCP-1154's anomalous effects become apparent when one of its components is viewed and understood by a human being, who will hereafter be referred to as the subject. Over the course of two weeks, the subject will experience the following phenomena:

- Dreams involving vaguely reptilian entities

- Valuables such as jewellery mysteriously disappearing
- Perceiving a drastic increase in the ambient temperature
- A feeling that they are being followed
- Spontaneous combustion (This has not been known to occur with all subjects, and it is unknown what criteria, if any, affects whether this will occur. After death, the body of the subject has been known to disappear, accompanied by the sounds of consumption.)

Component Analysis 1154-1

A summary of the various components that comprise SCP-1154. Components are numbered in the order of their discovery.

SCP-1154-1: A poem originating from the 1600's entitled 'The Beast of [REDACTED]'. The poem describes how a kingdom is attacked by a dragon and how the king sends three knights to defeat it. Two of the knights are killed by the dragon, but the third knight climbs onto the dragon's back. The poem described how he manages to climb atop its neck and stab it in the throat. He is then eaten whole by the dragon and the poem ends with the words 'And blessed with glory was that beast, Who had come from alien skies to feast'.

SCP-1154-2: An unpublished novel entitled 'A Quest of Gold'. It follows the adventures of a scholar as he and a group of adventurers attempt to defeat the antagonist, who is referred to as 'The Dragon King'. The protagonists eventually kill 'The Dragon King', but the epilogue describes the scholar being possessed and becoming the new 'Dragon King'.

SCP-1154-3: A short story entitled 'The Dragon's Shadow'. The story is presented from the point of view of a young boy who is afraid that a dragon is present inside his house. In the story, the dragon is described as dog-sized and as having insectoid properties. The dragon chases the boy around his house, eventually killing and consuming him.

SCP-1154-4: A crayon drawing of a dragon.

SCP-1154-5: The dream diary of . Roughly 90 percent of the described dreams involve dragons, lizards or fire. It is unknown why this specific dream diary carries SCP-1154's properties, as other written accounts of dreams caused by SCP-1154 carry no anomalous effects.

SCP-1154-6: A movie filmed in 1993 entitled 'Kouen, The Eternal Dragon!'. The film's plot involves the arrival of a humanoid reptile in Tokyo and the military's attempt to destroy it. All attempts are unsuccessful, however, and the film ends with the reptile consuming the last of the survivors.

« SCP-1153 | SCP-1154 | SCP-1155 »

SCP-1155: Predatory Street Art

Item #: SCP-1155

Object Class: Keter

Special Containment Procedures: SCP-1155 is currently contained in a disused parking lot adjacent to an abandoned shopping centre in the city metropolitan area. The building is to be marked condemned, and access to both it and the car park should be restricted by Foundation personnel posing as security guards from the front company. Civilians are to be deterred from entering the site and supplied with Standard Cover Story 47 – "Structural Instability/Sinkhole" if they enquire as to why, SCP-1155 must be kept under constant observation by motion-tracking security cameras. If SCP-1155 is observed to vanish, Mobile Task Force Pi-1 ("City Slickers") should be notified immediately. Personnel should not routinely attempt to view SCP-1155 directly; observation must be conducted remotely.

Whatever flat surface that SCP-1155 is currently inhabiting should be obscured from view by any standard Class II enclosed mobile containment unit, or, in situations where this cannot be effected in a timely fashion, by obstructing it with a vehicle, storage container, or displaced rubble; provided that this can be done without damaging a 3 (three) meter area around SCP-1155's image. Following Incident 1155b, it has been observed that completely enclosing SCP-1155 has a tendency to hasten a relocation event. Revised procedures now recommend the evacuation of the immediate area surrounding SCP-1155 to the minimum distance necessary to prevent contact with the general public, unless SCP-1155 manifests in a high visibility location or anywhere where preventing public egress is impossible.

At the present time, SCP-1155 cannot be permanently contained by any known means. Approximately every 2-4 months, SCP-1155 has been observed to spontaneously relocate itself to other urban

environments, moving as little as 15 meters from its current position up to a maximum observed distance of 800 kilometers. These relocation events can also be triggered by:

- Damage to the surface that SCP-1155 adheres to,
- Interruption of an attack
- Any attempt to reduce the size of SCP-1155's confinement space to prevent visual contact.

Therefore, current containment efforts are centered around swiftly ascertaining SCP-1155's new location and isolating it from public view. When such a relocation event occurs, Mobile Task Force Pi-1 should be immediately deployed alongside local assets to locate the new site as quickly as possible, re-implement containment procedures, and detain any witnesses. Survivors of attacks should be detained, uninjured witnesses may be administered Class-A amnestics and then released.

Description: SCP-1155 manifests as a work of street art/graffiti depicting the form of a humanoid creature with sinewy forelimbs, claw-like hands and the head and feathers of an owl. The depicted pose is variable, but tends towards a predatory stance, with eyes that appear to track the viewer.

Anyone viewing this image directly will experience a compulsion to investigate it further. Victims describe a nervous fascination and a desire to move closer. This can be resisted with effort, especially if the subject is aware of SCP-1155’s anomalous properties.

If a subject approaches to within two (2) meters and is not in the line of sight of another person, they will be subjected to a violent attack, suffering severe lacerations, dismemberment of extremities, whole or partial removal of soft body parts, and penetrating head trauma consistent with those that would be inflicted by a large beak and/or talons. The attack generally takes about 6 seconds to conclude, upon which both SCP-1155 and the victim will vanish, and SCP-1155 will reappear elsewhere in the usual manner of a relocation event within seven (7) days. Attacks can be halted before this event by reestablishing line of sight to the victim, but this is not recommended. (See record of Incident 1155a). Attempts to track where the victims are taken by equipping test subjects with GPS

locators have failed.

Based on tested interruptions performed at predefined intervals, the attack follows a defined pattern- the victim will first be restrained, and the eyes and tongue will be removed, rapidly followed by the amputation of the hands and feet. The victim will then be disemboweled and the intestines and stomach removed. Death usually follows due to shock or rapid exsanguination, but only if the attack is interrupted by visual contact; the fate of victims who disappear along with SCP-1155 at the conclusion of the attack is unknown.

Addenda:

> Incident 1155a
>
> Two surviving Class D personnel used for 'attack interruption' tests were given medical treatment and kept alive in the aftermath of the event. Both were incoherent and could not adequately communicate what had happened to them, though D-89786, whose eyes were removed during the attack, claimed to still be able to see, and provided a description of a "larder" containing bodies of previous victims of SCP-1155, along with the entity itself.
>
> D-89786 escaped from on-site quarters during a containment breach by SCP- , and was pursued by local law enforcement in nearby who were told he was a severely disturbed patient from a local mental hospital. Officer reports they saw the suspect walking in to an alleyway, but before they could apprehend, a scream was heard and when they rounded the corner it was found that D-89786 had disappeared; the alleyway was a dead end with no visible exits.
>
> D-89789 (both eyes, tongue, hands and feet removed before attack halted) was successfully transferred to Site . A period of rapid relocations was noted in SCP-1155, where it was observed in several public places with a posture that suggested hunting/tracking behavior.

SCP-1155 appeared for several hours high up on the side of the Building, in full view of many witnesses, who fortunately could not access it. In view of the difficulties of containment, Site Command made the decision to bring D-89789 back into the city. SCP-1155 was observed to appear several times on walls, advertisement boards, and bridges along the transport vehicle's path. D-89789 was observed to become increasingly agitated and hysterical during this process. D-89789 was transferred to a remote location on the edge of city limits, placed in front of SCP-1155, whereupon visual contact was broken. SCP-1155 and D-89789 disappeared, and SCP-1155 resumed previous pattern of manageable relocation behavior.

Incident 1155b

Elements of Mobile Task Force Pi-1 located SCP-1155 in abandoned subway station after most recent relocation event. Team Leader made the decision to obscure SCP-1155 with a vending machine until more containment resources arrived, on the basis that there were not enough task force members on site to guarantee a secure perimeter, and local transients were known to use the area for shelter. SCP-1155 immediately displaced to a nearby children's playground, causing casualties before it could again be located. Due to highly public nature of this location, decision was made at Command level to again provoke a displacement event, resulting in the current containment location. Containment at the current location was expensive, requiring that an entire shopping centre be acquired by the Foundation and then subsequently closed, but the revised containment procedures have resulted in the longest time since a relocation event to date.

The last few containment locations may point to a disturbing trend. Previously, SCP-1155 seemed to have a pattern of appearing in low traffic urban areas, often

abandoned buildings or quiet underpasses. At risk of anthropomorphism, it appears to have become emboldened and will now readily appear in public spaces, which makes containment difficult. Over the objections of the containment team, leave the damn thing uncovered. Better we lose a few urban explorers or nosy kids every couple of years, rather than risk having it abduct more people before we can locate it each time. – Dr

« SCP-1154 | SCP-1155 | SCP-1156 »

SCP-1156: Wellington the Wonder Horse

Item #: SCP-1156

Object Class: Safe

Special Containment Procedures: SCP-1156 is to be housed in a stable adjacent to the Secure Outdoor Testing Facility at Site 73, and is to be provided with food, water, bedding, grooming, and veterinary care appropriate to a non-anomalous animal of its species. SCP-1156's stable is to be cleaned daily. SCP-1156 may be allowed supervised access to the Secure Outdoor Testing Facility for exercise and grazing purposes during daylight hours when no testing is scheduled. Any clothing changes exhibited by SCP-1156 are to be documented and monitored.

SCP-1156's cooperation with the Foundation is currently predicated on its belief that it is a paid employee thereof. During good behavior, SCP-1156 is to be assigned work of a low-priority nature, appropriate to its abilities. SCP-1156 is to be paid bi-weekly with scrip bearing a face value equivalent to the current UK minimum wage, minus legally permitted deductions for room and board, and is to be allowed to purchase approved sundries with said scrip from the Site 73 quartermaster. Failure to cooperate with Foundation personnel shall result in suspension of the above privileges.

The Foundation is to monitor sales and transfers of domesticated horses in the United Kingdom for any additional horses presenting SCP-1156's characteristics. In the event that any such specimens are identified, the Foundation is to acquire the animal as soon as possible for separate containment at Site 73.

Description: SCP-1156 is a male domesticated horse (*Equus ferus caballus*) of indeterminate breed and unknown age, approximately 1.7 meters in height. SCP-1156's tongue, palate, lips, and vocal cords are shaped in a manner not found in non-anomalous horses, allowing it to produce phonemes used in human speech.

SCP-1156's brain is approximately % larger than the brain of a non-anomalous horse, and possesses several anatomical regions of unknown purpose or function.

SCP-1156 is sapient and is able to speak English with a thick accent resembling that historically spoken by natives of the East End of London, UK ("Cockneys" in common use), and claims to have been born and resided in the London borough of Whitechapel prior to its coming into Foundation custody. SCP-1156 identifies itself as "Wellington G. Wonderhorse" and describes itself as part of a community of sapient horses living openly throughout the East End (a claim which has not yet been corroborated by Foundation research.) SCP-1156 has demonstrated a limited ability to manipulate tools and simple machines with its lips, teeth, and tongue, including an ability to write by holding a pen in its mouth.

SCP-1156 possesses a limited form of telekinesis, comprising an ability to dress itself by spontaneously manifesting clothing tailored to fit a large horse directly onto itself. Most frequently, this clothing takes the form of a silk top hat and a light blue scarf bearing the monogram "W.G.W." in gold embroidery, though SCP-1156 has demonstrated an ability to produce other articles of clothing, including neckties of various styles, coats, eyeglasses, masks, heraldic banners, harnesses, bridles and bits, and on one occasion upon a request from research staff, a full suit of articulated plate armor. Clothing manifested by SCP-1156 spontaneously disappears when SCP-1156 dresses itself differently; the source of the clothing and its ultimate disposition upon demanifesting is unknown. Forensic examination of the clothes themselves indicates that they are composed of common fabrics and metals and bear no anomalous properties in and of themselves.

SCP-1156 was acquired by the Foundation in 20 following a raid on a country club in [REDACTED], UK, owned by Marshall, Carter & Dark Ltd. SCP-1156 claimed to have been taken prisoner by MC&D six months prior after responding to a want ad for coach horses and forced to perform various tasks for the guests of the club. SCP-1156 describes itself as a professional coach horse and has been convinced at this time that the Foundation is employing him for that purpose.

+ Show Interview Log 1156-1

Interview Log 1156-1:

Dr. Samesh: Please state your name for the record.

SCP-1156: Wellington Garrett Wonderhorse, at your service, milord! Finest coach 'orse in Whitechapel, and that's no eel!

Dr. Samesh: And you have lived in Whitechapel your entire life, is that correct?

SCP-1156: Born to the sound of the Bow Bells, sir, just like me old dad, and 'is before 'im, and 'is before 'im! We're an old and proud lineage, we are. My grandpa always said there's been Wonderhorses pullin' folks 'round London since they signed the Magna Carta.

Dr. Samesh: And there are more horses like you?

SCP-1156: You're a fellow Blighter, aren't ya? 'Aven't you ever been to London? There's thousands of us all over the Joe! Millions, maybe… not as many as in me grandpa's day, sure.

Dr. Samesh: So you wouldn't say there's anything unusual about your being able to speak?

SCP-1156: I've never met an 'orse that couldn't, milord.

Dr. Samesh: And your making clothes appear?

SCP-1156: Well, a bloke's got to look dignified when he's working for a room-and-board or the

Oxford and 'er kids, 'asn't 'e? Watch this, then.

(SCP-1156 affects a "posh" accent.)

SCP-1156: Good morning, ma'am. How do you do? Shall we be heading to the chapel this morning? Mind your step.

(SCP-1156 resumes its normal manner of speech.)

SCP-1156: Dad started teachin' me that when I was barely a yearling. I was teachin' me own God-forbids before I wound up 'ere, so they can take up the family trade when they're old enough.

Dr. Samesh: You have a family?

SCP-1156: Been married to the ol' trouble six years now. We've got three little ones now - Michael, he should just be starting school now, then there's Emily, and our yearling Gareth. He was already saying his first dickies when I got taken in by those Berkley 'unts at MC&D.

Dr. Samesh: And how did you find yourself in the custody of Marshall, Carter, & Dark?

SCP-1156: Well, work's been 'ard to come by these days. Everyone's gone 'orseless, and there's not as much call for coach 'orses as back in me grandpa's day. Amy's been helping out at our local on Sundays, but with things bein' the way they are they 'aven't got much work for 'er either. We've been behind on the Burton, and the landlord was talkin' about evicting us. Said if it weren't for the council breathin' down 'is neck 'e'd never 'ave rented to no 'orses in the first place.

Dr. Samesh: Go on.

SCP-1156: So I sees this ad in the Times, coach 'orses wanted to work in a country club. So I put on me finest suit and trot on down to Knightsbridge and tell the man in the office I want the job.

Dr. Samesh: Did they hire you right away?

SCP-1156: Hired? Now that's a load of 'orseshit right there. Never saw so much as five quid for six straight months. I told 'em I'd be writing me Member of Parliament! They just laughed and treated me unmerciful. I mean, this breakfast ain't exactly the Four Seasons, but it puts that village to shame.

Dr. Samesh: What sort of work did they have you doing?

SCP-1156: Pulling coaches, giving rides, serving drinks, magic shows… all the most embarrassing things you can imagine. Sometimes they'd get a crowd together and bring in one of the ladies after she'd had too much tiddlywink, and they'd want me to betray me marital vows with 'er! Right in front of 'em all gawking and laughing. Now I'm not a church-going 'orse, milord, but even I know a sin when I see one!

Dr. Samesh: Do you know where your family is now?

SCP-1156: Well, we always lived at [DATA EXPUNGED], Whitechapel, but they've probably been evicted by now. Amy'll 'ave sent the kids to live with 'er sister in Shepherd's Bush. She's a good soul, but I just can't stand the way she puts on airs ever since she

married that donkey. They're just a queer sort, know what I mean?

Dr. Samesh: I see. That will be all for today.

SCP-1156: Wait. Could you send 'em a letter for me? I 'aven't 'eard from 'em since those 'Ampton Wicks got their 'ands on me. It's right in the corner by me trough.

Dr. Samesh: We'll consider it.

Afterword: Upon investigating the address provided by SCP-1156, the Foundation found a currently uninhabited two-bedroom apartment. The building manager stated that the previous residents had been evicted six months prior and could not vouch for their current whereabouts, and refused to discuss them in any detail, stating that they had been "nothing but trouble" during their entire stay.

« SCP-1155 | SCP-1156 | SCP-1157 »

SCP-1157: Bifurcating Man

Item #: SCP-1157

Object Class: Keter

Special Containment Procedures: All instances of SCP-1157 are to be kept in separate 3m x 2m x 3m quarters connected to a secure common area in Sector-07. Curfew is to be enforced at 11pm EST every evening until 6am the following morning. Security must consist of 12 armed guards trained in crowd suppression. SCP-1157-1 is to be kept in isolated quarters not connected to the main containment area.

All staff working directly with any instance of SCP-1157 are to maintain the highest level of information security. No mention is to be made of Foundation staff names, project information, or containment procedures within the SCP-1157 containment area. Verbal communication with SCP-1157 is to be kept to an absolute minimum unless authorized by Dr. Torres. No clothing or equipment used when interacting with SCP-1157 can contain any identifying information. Personnel, including members of MTF Gamma-7, are instructed to carry only digitally encrypted forms of identification when involved in containment or study of SCP-1157.

Mobile Task Force Gamma-7 "Pied Pipers" has been formed to track down and detain any un-contained instances of SCP-1157. Basic information, photographs, fingerprints and DNA samples from SCP-1157 have been distributed to major law enforcement organizations. Coordination with local government and other MTF units will be approved on a case by case basis. Lethal force has been authorized as a last resort.

During a bifurcation event, SCP-1157 personnel are to initiate Protocol-G7 before wake up call.

Description: SCP-1157 is a Caucasian male with brown hair and

blue eyes. The subject's anomalous nature was first discovered when an instance of SCP-1157, designated SCP-1157-1, surrendered to the local police in , AZ, claiming to be a member of a terrorist cell. When a bifurcation event occurred while SCP-1157 was in police custody the subject was brought to the attention of the Foundation and transferred to Sector-07 for containment and study.

At intervals of approximately 4 weeks all instances of SCP-1157 will undergo a simultaneous bifurcation event at 3:08AM EST. While SCP-1157 sleeps each subject will split into two identical instances. The event is accompanied by a burst of light and energy which disables any recording devices. Any clothing or other items worn by SCP-1157 will be deposited on the bed underneath the subjects.

Protocol-G7 is to be enacted immediately after every bifurcation event. The containment area is to be flooded with a gaseous sedative. A security team equipped with gas masks must enter the containment quarters and remove one of each resulting subject pairs for euthanasia, study and disposal.

SCP-1157 displays a limited form of shared consciousness. While each instance exhibits their own personality and can make individual choices they also experience the surface thoughts and impulses of all other instances.

Based on subject interviews, at the time of SCP-1157's initial detention at least 5 bifurcation events had already occurred. During containment there have been 3 observed events. To the best estimation the current status of SCP-1157 is as follows:

- 32 instances contained.
- 34 instances confirmed deceased.
- 45 instances euthanized during containment.
- 86 instances unaccounted for.

Addendum 1:

SCP-1157-1 Interview

Interviewed: SCP-1157-1/1

Interviewer: Dr. Torres

Foreword: Following initial containment, the 2 instances of SCP-1157-1 were separated and individually questioned.

<Begin Log, 06/18/20 - 3:45PM EST>

Dr. Torres: Can you explain the nature of your condition, please.

SCP-1157-1: I go to sleep, and when I wake up there's one more of me.

Dr. Torres: And this has happened before?

SCP-1157-1: A few times. Last week makes five. There's thirty-two of me now…No…I will not…

Dr. Torres: Is something wrong?

SCP-1157-1: Heh. They can hear us, you know, the rest. <Subject smiles> They're not happy with me.

Dr. Torres: You can hear them all?

SCP-1157-1: Yes. A bunch of scared bullies shouting in my ear. I saw what they did. I saw what I was becoming…No…Not me. You. I made a choice! <Subject shuts eyes, breathes deeply> I'm sorry. There's a lot of them now. It's overwhelming sometimes.

Dr. Torres: I can imagine. Would you like some time alone?

SCP-1157-1: <Subject laughs>

Dr. Torres: Oh. Right. My apologies.

<End Log>

Closing Statement: Despite being in a separate sound proof interview room, SCP-1157-1/2 was able to repeat the conversation verbatim.

Addendum 2: Incident Reports

Report 1157/1

Agent Thomas - Mobile Task Force Gamma-7 Leader
06/21/20
Utilizing intelligence gathered from SCP-1157-1 interviews, MTF Gamma-7 successfully located and detained 3 more instances of SCP-1157 before they could go into hiding. However, operations for the next several weeks turned up only empty apartments and dead ends. SCP-1157-1's usefulness has diminished rapidly as other instances are now aware of his cooperation and are providing deceptive intelligence.

Report 1157/2

Dr. Torres - SCP-1157 Head Researcher
07/10/20
Following a second bifurcation event SCP-1157-1, now consisting of 4 separate instances, showed increasing signs of distress. An argument over SCP-1157-1's complicity in Foundation activities resulted in a physical altercation and the death of the subject advocating against cooperation. All instances of SCP-1157-1 have been put into indefinite sedation to avoid mental coercion by the growing collective.

Report 1157/3

Agent Thomas - Mobile Task Force Gamma-7 Leader
07/14/20
Intercepting e-mail correspondence between loose SCP-1157 allowed us to locate a safe house used by numerous subjects. MTF Gamma-7 was met with small-arms fire upon engagement, forced to terminate 2 instances, captured 7. Computers and correspondence found on the property indicate that SCP-1157 is aware that an organization is tracking them, but they have no knowledge of the Foundation itself. Requesting a clean-up team to scour the property for any other evidence of SCP-1157 activities.

Report 1157/4

Dr. Torres - SCP-1157 Head Researcher
08/22/20
Interviews with instances of SCP-1157 reveal a narcissistic personality and increasing distrust and contempt for anyone that is not SCP-1157. Subjects have also shown increasingly skillful attempts at tricking researchers into revealing sensitive information. Outside of SCP-1157-1 the subject remains uncooperative.

Report 1157/5

Agent Wilson - Mobile Task Force Gamma-7 Lieutenant
08/29/20
Agent Thomas was lost in our latest engagement with SCP-1157, along with 2 other Gamma-7 members. The bastards have spent the last month training and stockpiling weapons. The warehouse we tracked a subject to held enough SCP-1157 to outnumber us 3-to-1, all armed. Even after

capturing 16 and killing 31 there are likely even more SCP-1157 unaccounted for now than there were when we first discovered them. I'm submitting a request for at least a tripling of Gamma-7's numbers and resources. If we don't lock this down in the next month or two we're going to start seeing these guys on every street corner.

Report 1157/6

Dr. Torres - SCP-1157 Head Researcher
09/22/20
The contained instances of SCP-1157 attempted a riot to break out of Sector-07 immediately following a bifurcation event. Using their increased numbers SCP-1157 assaulted the Protocol-G7 team. Reinforcements allowed security to resolve the situation, at which point Protocol-G7 was completed without further incident. Containment procedures were revised and SCP-1157 were restricted to individual quarters for one week. 5 days later each instance of SCP-1157 carved the following into the wall of their quarters: *"You cannot contain me. Should one escape your grasp thousands will arise within the year."*

O5 Memo: *Requests to have contained instances of SCP-1157 reduced in number denied. Our sedated instances of SCP-1157-1 continue to increase in number. If Gamma-7 can sufficiently reduce the number of militant instances we may soon have a sympathetic majority capable of converting the rest. Until that point we want SCP-1157 to believe they have the upper hand. - O5-*

« SCP-1156 | SCP-1157 | SCP-1158 »

SCP-1158: Arboreal Jellyfish Puppeteers

Item #: SCP-1158

Object Class: Euclid

Special Containment Procedures: The 14 8 specimens of SCP-1158 in captivity are housed at Site 19, Hazardous Lifeforms Wing, in a 50m x 50m x 10m Lexan enclosure containing a rainforest habitat transplanted from its natural surroundings. Habitat temperature will be maintained at 30° C; embedded misting systems will regulate humidity levels at 70%. Full-spectrum retractable sensor pods are embedded at 10m intervals in a grid pattern throughout the enclosure to observe behavior and feeding. The enclosure will be accessed through a positive pressure airlock for enclosure and habitat maintenance. Said maintenance will be performed weekly by a team of three Level 1 personnel equipped with Tyvek exposure suits with scent-masking apparatus, accompanied by six MTF operatives armed with standard-issue M1014 shotguns. Open flames are forbidden within SCP-1158's habitat. Feeding of SCP-1158 will occur once every 21 days. Prey item will consist of one (1) live adult pig sheep (*Ovis aries*).

Atmospheric molecular analysis systems are to be mounted throughout the habitat to detect the chemical markers of SCP-1158 gamete deposits; all gamete deposits are to be collected for research. Gamete deposits not used in research are to be incinerated. No breeding experiments are currently authorized.

Description: SCP-1158 is an airborne, carnivorous arboreal predator superficially resembling a very large olive-drab Portuguese man-o-war (*Physalia physalis*), particularly in its colonial polyp attributes. Known habitat currently consists of deciduous rainforest within a 500km radius surrounding , . Research on deceased specimens has shown that SCP-1158's large, four (4) meter pneumatophore is filled with hydrogen (thought to result from bacterial decay), providing lift. While airborne, SCP-1158 nestles

itself high in the canopy layer, allowing its feeding and detecting polyps to hang down through the understorey to the forest floor. These polyps are effectively camouflaged among the various vines and branches present. The dactylozooid polyp bundles are, to a limited degree, prehensile. SCP-1158 has not been observed at an altitude greater than the canopy emergent layer, seemingly preferring to remain silently hidden beneath the foliage.

Prey appears limited, so far, to mammals and lizards with a mass of approximately 50kg or greater. Once a victim makes contact with dactylozooid polyps lying on the ground or adjacent to a tree, nematocysts in the polyp strands inject a paralyzing neurotoxin while nearby polyp threads wrap around the victim's extremities.

Addendum: For reasons which have not yet been determined, all species of pig (genus *Sus*) tested thus far have proven to be completely unaffected by SCP-1158's neurotoxin.

Experimentation indicates that envenomation and envelopment take approximately 6 seconds. At this time, primary feeding polyps enter the victim's body through all available orifices, and anchor themselves inside. Once anchored, powerful digestive enzymes are delivered which break down internal organs for absorption by the polyps. The process has been observed to last approximately 4 days, with the victim expiring approximately 2 days after capture.

During the digestion and absorption process, if a captive subject is approached by other large vertebrates, it will stand on its hind legs and wave its front legs; if the captive subject is a human, this will produce a 'beckoning' effect.

Specimens of SCP-1158 were first discovered on / /20 , approximately 400km from , , during deforestation operations pursuant to the construction of the and near the River. Two days after several advance parties went missing, subsequent search teams located two party members seemingly at rest near the buttresses of a large Ceiba tree. The two subjects were initially unresponsive, then appeared to be “waving” the search teams over for assistance; when approached, it was observed the two subject’s arms were suspended by “very thin vines that were making them move”. As the search team's medical personnel moved

to assist, team members began stepping on and making contact with feeding polyps from several specimens of SCP-1158 hovering nearby, at which point the specimens attacked, resulting in 11 casualties. Subsequent newspaper reports garnered the attention of the Foundation, which then moved to have the area quarantined. 14 specimens were taken into custody.

Incident 1158-e3:
On / /20 , 14 days after SCP-1158 specimens were placed in their habitat at Site 19, a domestic pig (*Sus scrofa*) was introduced into the habitat to serve as a prey item. After several minutes of exploring the habitat, the pig became ensnared in SCP-1158's dactylozooid polyps as expected, but remained unaffected by SCP-1158's neurotoxin. Instead, the pig chewed through the polyps, severing them; the pig then seized the remaining polyps in its mouth and used them to pull SCP-1158 specimens from their arboreal canopy, at which point it trampled them to death and fed upon their remains. 6 specimens were lost before the pig was shot.

« SCP-1158 | SCP-1159 | SCP-1160 »

SCP-1160: Effective Containment

Item #: SCP-1160

Object Class: Keter Safe

Special Containment Procedures: SCP-1160 is currently contained via Foundation Protocol Tango-77. Foundation assets are to maintain surveillance of SCP-1160's area of captivity. Changes in the behaviour or appearance of SCP-1160 are to be reported to the off-site containment team at Site 95.

In accordance with Protocol Tango-77, the distribution of the Super Coco Pows brand of breakfast cereal has been allocated to Site 95, which also currently oversees marketing and manufacturing. Any deterioration of the Super Coco Pows brand is to be considered a Level II Info-Hazard Emergency.

Description: SCP-1160 is a massive, para-natural avian entity located beneath Mount near on Island, . Despite being roughly 85m in height at time of recovery, due to the effectiveness of Foundation Protocol Tango-77, as of 09/11/2014 SCP-1160 has been reduced to a size of roughly 25cm in height. Recovered documents indicate that the entity, referred to *El Ratonero* by the original inhabitants of the island, appeared in 1765 and began a series of aggressive attacks against the fishing villages of the island. Because of the anomalous traits of SCP-1160, the inhabitants of the villages were unable to properly combat the entity. From a collected manuscript found in (*translated from the original Spanish*),

> *The Buzzard came again last night, larger than before. Its cry we heard first, the great gnashing of a terrible demon. It appears not like the mainland creatures, but something far worse, pulled from some devil's pit in eons past. The Buzzard tore through our defenses, and we had no choice but to flee to the sea, or take shelter in the*

earth and pray that it would not root us out. Every night that The Buzzard returns, he is more and we are less.

While SCP-1160 can sustain damage, it is for all practical purposes considered indestructible, as SCP-1160 is capable of rapidly and fully regenerating lost or damaged tissue, and is able to withstand all forms of conventional firearms, or explosives below 300kt. Additionally, SCP-1160 has a number of insect-like optical organs situated around the head and back, capable of providing SCP-1160 with a virtually 360 degree perspective of the area around it. These traits, combined with the natural brute strength and speed of SCP-1160, make the entity particularly deadly in close combat.

However, SCP-1160 is also negatively affected by human cognition, a trait that has been manipulated by Foundation Protocol Tango-77 to provide a comprehensive, long-term containment solution for SCP-1160. The rate at which human perception of SCP-1160 increases is directly related to the rate at which SCP-1160 undergoes systemic biological decay, and the number of individuals who are cognizant of SCP-1160's nature is inversely related to its overall size and strength. This effect, however, is not instant, and seems to take place over the course of several hours after initial cognition. While it is believed that SCP-1160 could feasibly continue to decrease in size indefinitely, the limits of this effect, if any, are unknown.

Addendum 1160-1: Foundation Protocol Tango-77

During initial discovery of SCP-1160, a team of Foundation scientists hypothesized that the sudden, sharp drop in aggression by SCP-1160 was in some way related to the arrival of Foundation personnel on Island. On 08/13/1943, after routine amnestic cycling of Class-D individuals assigned to Site 77 on Island, SCP-1160 attacked both the Foundation facility and a nearby fishing village. During the attack the entity was noted as being highly aggressive and notably larger, inadvertently resulting in the loss of Foundation personnel and other inhabitants of the island.

In response to this discovery, Foundation assets were allocated to the creation of Protocol Tango-77. The project, codenamed "Saturday Morning", was begun with the intent of spreading

awareness of SCP-1160 to a large, consistent group of human subjects, which would in turn weaken and aid in the containment of SCP-1160. In 1953, after a ten-year period of development, initial trial runs of the protocol were enacted.

On 05/14/1953, a Foundation front company, "Standard Products" released the "Super Coco Pows" breakfast cereal, which began marketing heavily towards children. The mascot of the brand was "Bradbury Buzzard", a cartoon caricature resembling SCP-1160. This character was featured prominently on the front and back of the box, itself containing a number of subtle anomalous memetic triggers intended to plant specific pieces of information concerning the nature and appearance of SCP-1160 into the subconscious of its targets[1].

Over time these triggers have been adjusted slightly to avoid over-proliferation of sensitive information, and the most recent product surveys have returned positive results. Where once consumers would reply that Bradbury Buzzard is a "mean buzzard who lives on a secret island and hurts people", consumers now tend to respond that the character is a "mischievous little bird who lives on a tropical island and tries to nab Super Coco Pows from various young children."

Footnotes
1. Initial triggers were reverse engineered from existing memetic phenomena, such asSCP-2061,SCP-2076, andRED TALISMAN.

« SCP-1159 | SCP-1160 | SCP-1161 »

SCP-1161: How-To Book

Item #: SCP-1161

Object Class: Euclid

Special Containment Procedures: SCP-1161 is to be stored in a display case in a locked testing room along with a computer (for transcription) under constant surveillance at Research Sector- . After its daily transformation, Dr. is to remove the object from its display case and transcribe the entirety of SCP-1161's contents. When transcription is finished, SCP-1161 is to be closed properly and returned to its display case. Under no circumstances is anyone to handle SCP-1161 in any way before Dr. has completed his duties regarding the object. Any changes regarding SCP-1161 not at its regularly scheduled time are to be immediately reported to Dr. .

Description: SCP-1161 is a black paperback book with a varying number of pages. The title, on both the cover and binding in white lettering changes every 24 hours at precisely 3:00 A.M. GMT, but invariably begin with the words, "How to". Daily, both the book's title, contents, and number of pages within change completely, unless the book remains open during its scheduled transformation, which will postpone the event to the next time at which it is 3:00 A.M. GMT and the object is fully closed.

SCP-1161 is only legible to the first individual to touch the object after its daily transformation. To all other observers, the book will appear to be blank, with the exception of the title on the cover and binding.

While the contents of the book vary wildly from day to day, the overall theme remains consistent. The object will always contain instructions on how to perform various actions, ranging from very useful to utterly pointless. The various descriptions printed inside the book are incredibly detailed, to the point of describing which specific

muscles to contract when performing a physical movement. The instructions within generally describe the optimal technique to use regarding the action, even leading to the discovery of several previously unknown methods of [REDACTED]. Despite being extremely accurate in its descriptions, the book can be very confusing to the average reader, due to its overly descriptive nature.

A partial list of titles which have appeared since retrieval include:

- How to Build a Campfire
- How to Eat Spaghetti and Meatballs
- How to Hang a Painting
- How to Sculpt a Bird in Flight out of Granite
- How to Whistle
- How to Strangle a Woman
- How to Construct a [REDACTED]
- How to Open a Desk Drawer
- How to Cross-Country Ski
- How to [REDACTED]
- How To Clean a Necktie
- How to Commit Suicide by Hanging

Addendum 1161a: Several mentions have been made to a 'How to Ascend' throughout multiple variations of SCP-1161. Of particular interest was the mention at the end of 'How to Assimilate Information', referring readers to 'How to Ascend' for more information. Whether 'How to Ascend' is a variation of SCP-1161 or an entirely different book is being investigated.

Addendum 1161b: A note written by hand on the final page of SCP-1161 was found while it contained 'How to Build a Wooden Rocking Chair'. The note read "It will be next. Do you value this world?", and was visible to all who viewed the page.

Addendum 1161c: The title of SCP-1161 following 'How to Build a Wooden Rocking Chair' was 'How to Ascend'. When Dr. touched the object to begin transcribing its contents, he immediately withdrew his hand and stood up rigidly. After several seconds of standing completely still and not responding to inquiries, he sat down and immediately began reading through the book despite being ordered multiple times to begin transcription. After

approximately hours of reading, Dr. calmly closed SCP-1161 and fell into a catatonic state from which he awoke at exactly 3:00 A.M. GMT the following day, coinciding with the book's daily change. After awaking, Dr. claimed to have no memories of anything following touching the object. Psychological evaluation of Dr. has been scheduled.

The position of Head of Research of SCP-1161 has been temporarily transferred to Dr. .

Addendum 1161d: On / / Dr. was found lying in his quarters with several puncture wounds in his scalp, which upon further inspection, were found to extend into his brain. A battery powered drill gripped in his hand suggests that the injuries were self inflicted. Though currently in a comatose state, tests have shown Dr. 's brain to be processing information at a highly accelerated rate.

Reclassification as Euclid requested.

Dr. - Request Granted

« SCP-1160 | SCP-1161 | SCP-1162 »

SCP-1162: A Hole in the Wall

Item #: SCP-1162

Object Class: Euclid

Special Containment Procedures: SCP-1162 is currently contained in a standard 5x5x5 meter chamber at Site 31. SCP-1162 must be activated at least once weekly to prevent a containment breach; if it is not activated, it randomly shifts location, as detailed below.

Description: SCP-1162 is, currently, a hole in the cinderblock wall of Containment Chamber 4 at Site 31. It measures approximately 14.5 centimeters across, and has a variable depth which changes based on the current user. A portion of cinderblock is currently visible through the hole; however, no light source has been able to illuminate any portion of the interior beyond that, the hole always appears to be dark.

SCP-1162 is activated when a sentient being reaches into the hole to the depth that the girth of their arm allows, at which point their fingers touch a solid surface similar in feel to the current location of SCP-1162, and they discover an item small enough to fit through the hole below their fingertips. These items have universally been recognized as something that the user has lost, or was searching for at some point during their life. However, upon retrieval of the item, another item will vanish from the person of the subject. In addition, any object placed into SCP-1162 will disappear as soon as it is no longer in contact with a person.

If SCP-1162 is not activated at least once every 168 hours, it will randomly shift location to another stone, concrete, or brick wall or floor within a radius not yet shown to exceed 2000 kilometers. The previous hole remains, but shows no abnormal properties. Attempts to destroy SCP-1162 or view it from behind have caused an immediate shift in location, regardless of the time since the last shift.

Addendum: SCP-1162 was discovered by Agent Parks of Mobile Task Force Zeta-9 (aka "Mole Rats") during a routine investigation of an area affected by **SCP-184**. It was, at the time, a hole in a concrete floor in a service tunnel under , China. Agent Parks dropped his flashlight into the hole accidentally, and, upon reaching into the hole, retrieved a copy of Super Mario Brothers 2 for the NES with his name written on the back in Sharpie. Upon a later inventory check, it was discovered that a standard ration pack was missing from Agent Parks' supplies. SCP-1162 was experimented with on-site for three months before it was left unactivated for a week, and shifted to a wall inside an abandoned office building in India. It was then allowed to shift again, and lost, though rumors of a "magic hole" surfaced in the Netherlands, Venice, Egypt, and Greenland. On April 16, 200 , it appeared at the current location in Site 31, and has been contained there ever since.

Testing Log: The following is a log of all tests performed upon SCP-1162.

Subject: Agent K
Item Retrieved: One (1) standard issue M1911A1 magazine, empty
Item Lost: Wallet, but not contents of wallet
Notes: *Man, I liked that wallet. At least it left my money.*

Subject: Dr. Clef
Item Retrieved: One (1) Package of Aquila Ukelele strings
Item Lost: One (1) Package of D'Addario Ukelele strings
Notes: *Well, that's a fair trade, I guess.*

Subject: D-4010
Note: D-4010 was wearing only a standard Foundation D-Class uniform, with no shoes, socks, or jewelry, and had no other items on his person during this test.
Item Retrieved: One (1) Half-full bottle of Wild Turkey bourbon
Item Lost: One (1) Foundation D-Class uniform
Notes: *That was expected.*

Subject: D-4010
Note: Subject was naked and holding no items at the time.
Item Retrieved: 1987 Driver's license for D-4010
Item Lost: Subject complained of intense abdominal pain upon

removing his hand from SCP-1162, then collapsed. It was discovered that his left kidney was missing, and all vessels leading to the kidney cleanly severed.
Notes: *Future tests must take place while clothed, with at least one object on the person of the subject.*

Subject: Agent G
Item Retrieved: [DATA REDACTED]
Item Lost: Shoelace from Agent G 's left shoe
Notes: *Agents actively searching for biological or memetic agents, or any Keter-class SCP objects, are forbidden to use SCP-1162 without a full security complement present.*

SCP-1162 is open for testing by any person with Level 1 or greater clearance level. The extended testing logs are located here.

« SCP-1161 | SCP-1162 | SCP-1163 »

SCP-1162 Extended Testing Log

Please note all tests with the following format:
Subject:
Item Retrieved:
Item Lost:
Notes:

Subject: Dr. King
Item Retrieved: One (1) plastic bag, containing 492 apple seeds
Item Lost: One (1) Rolex wristwatch, gold
Notes: *This is the first test that has produced something the subject hasn't lost.*

Subject: Sr. Researcher Grant

Note: Sr. Researcher Grant came in with the intention of testing continuously, and had on his person 60 standard pens.

Item Retrieved: One (1) set of keys to a 1988 Buick LeSabre
Item Lost: One (1) pen
Notes: *I sold this car a long time ago. Damn.*

Item Retrieved: One (1) medium size condom, in wrapper
Item Lost: One (1) pen
Notes: *I think I lost this back in high school.*

Item Retrieved: One (1) paperback copy of Fahrenheit 451
Item Lost: One (1) pen
Notes: *I was just looking for this the other day!*

Item Retrieved: One (1) pen, confirmed to be from a previous test
Item Lost: One (1) pen
Notes: *Huh. Would you look at that.*

Sr. Researcher Grant proceeded to test an additional 30 times, each time losing and gaining one standard ballpoint pen.

Subject: D-1144
Subject was instructed to think about a screwdriver he had lost while working as a mechanic for all tests.
Item Retrieved: One (1) passport for D-1144, dated 1996
Item Lost: One (1) pen
Notes:

Item Retrieved: One (1) plastic bag, containing approximately four grams of cocaine
Item Lost: One (1) pen
Notes: *Item confiscated immediately.*

Item Retrieved: One (1) screwdriver, but not the one he was thinking of
Item Lost: One (1) pen
Notes: *Additional tests showed no ability to guide what object is retrieved.*

Subject: Agent Luminus
Note: Agent Luminus hypothesized that SCP-1162 becomes recursive when "fed" a large number of similar items, and had in his possession several small items from his locker.

Item Retrieved: One (1) pair of generic sunglasses, black
Item Lost: One (1) SCP Foundation ID badge
Notes: *Agent Luminus has been given a replacement; however, after this test, "1162 ate it" will no longer be allowed as an excuse for losing your badge. Leave it outside the testing area.*

Item Retrieved: One (1) 512mb stick of RAM
Item Lost: One (1) small salt shaker
Notes: *Item donated to Site IT department for spares use.*

Item Retrieved: A matched set of seven (7) matryoshka nesting dolls, nested
Item Lost: One (1) MasterCard debit card

Notes: *"Well, it's a good thing I don't have to explain to the bank how I lost it."*

Item Retrieved: One (1) KA-BAR Combat Knife, heavily rusted
Item Lost: At first glance, nothing; however, upon closer examination, Agent Luminus' sidearm was shown to be missing the firing pin.
Notes: *"I'm gonna leave while I'm still ahead."*

Subject: Researcher Veldi
Item Retrieved: A small plastic box containing various Lego pieces.
Item Lost: One (1) fishing license.
Notes: *"Of course this happens right before a fishing trip."*

Item Retrieved: One (1) Vizio brand television remote control.
Item Lost: One (1) iPhone
Notes: *"Son of a[EXPLETIVES REDACTED]"*

Subject: Sergeant Hendrix
Item Retrieved: One (1) 1989 train ticket to LA
Item Lost: Left Combat Boot
Notes: *"Well I don't think I can refund this ticket for a new boot."*

Item Retrieved: Left Combat Boot
Item Lost: Right Combat Boot
Notes: *"Odd."*

Item Retrieved: Right Combat Boot
Item Lost: Left Combat Boot
Notes: *"Now its just [EXPLETIVE] with me."*

Subject: K R , age 7

Note: Subject has been born and raised in a compound of the recently disrupted cult, where personal ownership of objects was not permitted.

Item Retrieved: One (1) deciduous tooth, canine
Item Lost: One (1) US quarter, 2002

Notes: *Subject given amnestics and returned to civilian society.*

Subject: Agent Richards

Note: Subject requested permission to attempt to retrieve a memory card lost during exploration of [REDACTED] Subject furnished with 10 identical memory cards to attempt to facilitate "similar loss and gain" pattern.

Item Retrieved: One (1) dental retainer
Item Lost: One (1) memory card
Notes: *Mom never did let me forget losing that.*

Item Retrieved: One (1) pack of cigarettes, waterlogged
Item Lost: One (1) memory card

Item Retrieved: One (1) memory card, damaged
Item Lost: One (1) memory card
Notes: *ID tag confirmed it was the one lost in that snipe-hunt, looks like it was partially crushed. I'm not looking forward to explaining the loss of bucks worth of equipment to get back some soggy smokes and a useless wreck.*

Subject: D-5524
Note: D-5524 was carrying Keter class object SCP- , in a passive state, to see if SCP-1162 could be considered as a containment option for troublesome small SCP objects.
Item Retrieved: One (1) set of iHome capsule speakers, without cord
Item Lost: SCP-
Notes: *D-5524 was terminated immediately afterwards.*

Subject: D-5566
Note: D-5566 was chosen because she had no knowledge of SCP- or the previous experiment. A full security complement was on hand, with sufficient tools to contain the object were it to re-appear.
Item Retrieved: SCP- , in active state
Item Lost: Unknown
Notes: *D-5566 was immediately killed by SCP- upon removing it*

from SCP-1162. No other fatalities were experienced; SCP- was returned to containment without incident. It appears that if used as a "disposal chute," the next item pulled out will be the last one deliberately put in. Due to the transitory nature of SCP-1162 if not used regularly, this poses an unacceptable risk of containment breach if used in this fashion. No further testing in this area will be allowed.

Subject: Agent White

Item Retrieved: One (1) well worn tube sock, clean, labeled "Hanes"
Item Lost: Contact lens, left eye
Notes: *"Really? I'm wearing about four layers of cold weather gear and it takes my friggin' contact lens?"*

Item Retrieved: One (1) pay scale warrant, as written out to Agent White, for level , prior to demotion on 04/01/ .
Item Lost: Contact lens, right eye
Notes: *"Okay, now we're talkin'. If I can see this correctly, does this mean I'm getting my old pay rate back?"*

Note: Agent White did not technically lose her previous pay rate. Human Resources agrees that Agent White voluntarily relinquished her previous pay rate through her documented sub-standard performance in the aforementioned reporting period. As one cannot "find" what one does not "lose", her pay rate will remain at its current lesser rate.

Item Retrieved: [REDACTED]
Item Lost: Undergarments
Notes: *"No way is this mine! I'm married, what would I even need something like this for? Okay, stick a fork in me, I'm done. I mean… ahh, this is ridiculous."*

Head Researcher Note: Inquiries into the nature of the retrieved item will remain unanswered, and additionally be reported to HR.

Subject: Dr. Neiman

Note: Dr. Neiman conducted all tests while holding his office wastebasket, which was full at the time.

Item Retrieved: One (1) CD for the edutainment game "Dinosaur Hunter", without case
Item Lost: One (1) soda can
Notes: *I remember this. I left it in the family computer when I was 11, and Mom took it out and put it in "an easily memorable place". Never saw it again.*

Item Retrieved: One (1) pair of eyeglasses, matching Dr. Neiman's current prescription.
Item Lost: Unknown object from deep in the wastebasket
Notes: *Lost these on a trip to Seattle last year. I'll keep them as spares.*

Item Retrieved: One (1) 512 MB flash drive
Item Lost: One (1) crumpled-up document
Notes: *From middle school. At least the experience taught me to keep backups.*

Item Retrieved: One (1) paperback copy of *Furies of Calderon*
Item Lost: The wastebasket itself (remaining contents unaffected)
Notes: *Oops. Didn't think of that.*

Head Researcher Notes: This is the first time that SCP-1162 has taken an object too large to fit inside of it. Any further tests by this individual should be closely observed.

Subject: Dr. Hughman
Item Retrieved: One (1) 2GB Flash Drive with his name carved onto metal casing.
Item Lost: All body hair, internal and external.
Notes: *Well, beats getting waxed I suppose.*

Subject: Agent Luminus

Item Retrieved: One (1) copy of issue 1 of The X-Men (1963), in fair condition

Item Lost: Casio wrist-watch band, but not main watch body
Notes: *This was in mint condition when it was stolen out of the back of my moving truck after I was reassigned the last time!*

Item Retrieved: One (1) 10ml syringe, filled with a mixture of sodium pentathol, scopolamine, and [REDACTED]
Item Lost: Coffee cup, but not contents
Notes: *Ow! Dammit. Well, I could have really used this back when I was actually interrogating that guy from the Church.*

Item Retrieved: One (1) iPod nano, blue
Item Lost: One (1) iPod nano, blue, engraved
Notes: *How am I going to explain to my girlfriend that I found my old iPod and lost the one she got me for my birthday?*

Subject: Dr. Mathanach

Item Retrieved: One (1) small iron top
Item Lost: One (1) bowtie
Notes: *Damn it, that was my last one.*

Item Retrieved: One (1) silhouette target, multiple bullet holes
Item Lost: One (1) bowler hat
Notes: *You've got to be kidding me, I've had that hat for years!*

Note: Dr. Mathanach has requested that if anyone should retrieve his hat, that it is returned to him immediately.

Note: None of us are going to find your hat, Doctor. We can only retrieve things we've *lost.* —Dr. Neiman

---

Subject: Dr. Mijak

Item Retrieved: One (1) 20-franc bill
Item Lost: One (1) set of prescription glasses
Notes: *Really? Francs? Who in the world still accepts these?*

Item Retrieved: One (1) set of documents.
Item Lost: One (1) labcoat
Notes: *W-wha-? No, no! Hold on, give me one more test! Gah,*

Gerald is going to kill me…

Note: *Confiscated documents were revealed to be a rather… unfriendly document criticizing Sr. Researcher Gerald. Dr. Mijak confessed he wrote the document after a particularly difficult day of work, though he insists he never meant to show them to the Researcher.*

Subject: Dr. Neiman

Item Retrieved: One (1) car tire chain
Item Lost: One (1) chewing gum wrapper
Notes: *Gee, if only I had found this* before *I bought replacements.*

Item Retrieved: One (1) box of stick butter, empty. Contents had apparently melted and leaked out.
Item Lost: One (1) dollar bill
Notes: *Yeewww. This was unaccounted for after a grocery run last week. I'm going to find sun-melted butter all over my car trunk, aren't I…*

Item Retrieved: One (1) card-wallet, including contents
Item Lost: Wad of assorted store receipts
Notes: *Bingo!*

Subject: Dr. Diamond
Note: *Dr. Diamond has requested testing on whether or not SCP-1162 is sentient, specifically if it can respond to written messages. Also, he wishes to find out where exactly the lost items disappear to, and if there is a correlation regarding location of disappeared objects.*

Item Retrieved: A large amount of fecal matter in a plastic bag.
Item Lost: One (1) folded-up piece of wide-ruled notebook paper with “How are you doing today” written on the inside in pencil.
Notes: *I remember this! I was going to sell it to a science lab for DNA testing like, a year ago. Don’t look at me like that.*

Item Retrieved: One (1) pair of tie-dyed socks, the size for a 7th

grader.
Item Lost: One (1) iPod playing “For Your Love” by the Yardbirds on loop setting on full volume.
Notes: *We could still hear the music after the device disappeared, although it did sound more distant. Investigation of the sound revealed the device stuck inside a wall on the floor directly under this one. Maybe SCP-1162 teleports all of the items lost below itself somewhere in the ground. This should be investigated.*

Item Retrieved: One (1) purple round ball.
Item Lost: One (1) small metallic tracking device courtesy of the SCP electronics development team.
Notes: *Device was recovered from an oil tanker in the middle of the Red Sea.*
-Well, there goes that hypothesis.

Subject: Dr. M

Item Retrieved: Keys to Dr. M 's dormitory.
Item Lost: Standard Foundation ID Badge.

Item Retrieved: Standard Foundation ID Badge.
Item Lost: Replacement Foundation ID Badge.
Notes: **[EXPLETIVE]”* Dr. M

Head Researcher Notes: We did warn you about the ID badges, Dr. M . I hope you like paperwork, because there's a lot of it in your future.

Subject: Dr. H

Item Retrieved: One (1) wooden sword replica
Item Lost: One (1) pencil
Notes: *"Cool, I thought I lost this when I moved!"* Dr. H

Item Retrieved: One (1) paper fan
Item Lost: Package of cookies
Notes: *"Aww, I wanted to eat those for lunch today."*

Item Retrieved: One (1) umbrella
Item Lost: One (1) 20 dollar bill
Notes: *"I don't like this thing anymore, it's messing with me."* Dr. H

Subject: Dr. D
Item Retrieved: One (1) 50cm Foam Sword
Item Lost: One (1) 10 dollar bill
Notes: *"I lost this when I was 12, but it's not worth anything near 10 dollars."*

Item Retrieved: One (1) photo, burnt beyond recognition
Item Lost: One (1) pocket watch
Notes: *"That was a family heirloom."* Dr. D

Subject: Dr. A
Note: *Dr. A was using SCP-1162 in an effort to find several important documents he had lost. He had, on his possession, 100 envelopes containing junk mail.*
Note: *I didn't lose them! I just temporarily forgot where they were!*

Item Retrieved: One (1) mathematics revision guide.
Item Lost: One (1) Piece of junk mail from a Payment Protection Insurance Refund Firm.
Notes: *Lost this when I was 16. Thank god I didn't need it.*

Item Retrieved: One (1) $20 Bill, soaking wet.
Item Lost: An unknown item in the pile.
Notes: *Oh great, my wallet went through the wash, didn't it?*

Item Retrieved: One (1) Wallet, soaking wet, but not contents.
Item Lost: One (1) Foundation Lab Coat.
Notes: *Great, my labcoat's gone and my wallet DID go through the wash. [EXPLETIVE REDACTED]!!*

Item Retrieved: One (1) set of Documents relating to [DATA EXPUNGED].
Item Lost: One (1) set of AA Batteries from a personal torch
Notes: *Finally!*

Head Researcher Notes: On closer inspection, it appeared that these were the first draft of the documents he was seeking, which he already had a copy of. The final draft that he was looking for never surfaced. SCP items are not to be used as an excuse for not making regular backups.

Subject: Dr. Alden
Note: *Doctor Alden had five (5) standard #2 pencils on her person*
Item Retrieved: Dessicated carcass of a tarantula spider
Item Lost: One (1) #2 pencil
Notes: *[EXPLETIVE] Bristle escaped her cage a few months ago and I hadn't seen her since!*

Subject: Dr. M
Item Retrieved: Replacement ID Card from previous test
Item Lost: Small binder full of important documents
Notes: *"[EXPLETIVE]."*-Dr. M

Subject: D-6141
Note: *Subject was instructed to remove two items from SCP-1162 in two consecutive actions.*
Item 1 Retrieved: One VHS tape in SP mode labeled "Home security 1987/05/02". Subject was noted to become ecstatic upon retrieval of item.
Item 1 Lost: One issued sock
Item 2 Retrieved: One half empty pack of Camel brand cigarettes
Item 2 Lost: One VHS tape in SP Mode labeled "Home security 1987/05/02"
Notes: *Subject immediately attempted to thrust hand back into SCP-1162 upon realizing the first item retrieved had been lost again. Subject was restrained before this could be accomplished. Upon questioning, D-6141 stated "That was the video from the night she died, and the night I was arrested".*

Subject: Dr. Opal
Item Retrieved: One (1) brand pornographic magazine
Item Lost: One (1) pair of socks

Notes: *"Oh boy. I remember buying that when I was 13 and it got lost in the abyss of my bed."* - Dr. Opal

Head Researcher Notes: Yes, it got "lost." And I'm sure your parents aren't the ones who did the laundry. Think about it.

Subject: Dr.
Item Retrieved: The dessicated remains of one (1) abnormally long burrito
Item Lost: All hair on head, excepting a single strip down the middle
Notes: *"I remember this from my 16th birthday. I had an obsession with burritos back then. I [EXPLETIVE] hate mohawks, though."* - Dr.
(All hair grew back at a normal rate)

Subject: Dr. Bell
Item Retrieved: One (1) brown teddy bear
Item Lost: Left sock
Notes: *"I remember going absolutely berserk when I lost this at Summer Camp when I was 5. Could never find it…"* - Dr. Bell

---

Subject: Dr. Westrin
Item Retrieved: A broken Scranton Reality Anchor
Item Lost: Dr. Westrin's house keys.
Notes: *Let's just say that I was hunting down a reality bending entity, and I may have lost it in the car. That was both a large medical bill, and tons of paperwork.* -Dr. Westrin

Head Researcher Notes: Next time, consider taking two.

Subject: Agent Immanuel
Item Retrieved: One (1) Nokia Lumia 635 smartphone
Item Lost: Standard issue Foundation security radio
Notes: Son of a [EXPLETIVE REDACTED]!

Addendum: *It's highly advised not to bring any sort of communication devices to this chamber.* -Dr.

Head Researcher Notes: It's highly advised not to bring anything you would have to fill out paperwork to explain losing to this chamber, as well. Luckily, we keep a stack in the observation chamber for just such occasions.

Subject: Agent Ul
Item Retrieved: One (1) "A Flock of Seagulls" album.
Item Lost: One (1) USA Two Dollar Bill
Notes: *This Album is worth more than two dollars.* -Agent Ul

---

Subject: Unmanned Exploratory Unit - Serial# [DATA EXPUNGED] (deployed at the request of Dr. Bridgeman)
Item Retrieved: One (1) Non-ISO compliant hex-wrench type shaft bolt. Serial number corresponds with service records of unit used in experiment.
Item Lost: One (1) x86 based microcontroller array from the secondary steering system
Notes: *All future losses incurred as a result of the use of robotic or autonomous resources in tests with SCP-1162 will be subtracted from individual research budgets or salaries, unless previously approved by a Level 3 or higher researcher. Seriously, Bridgeman, those things cost more to fix than we spend acquiring some D-Class personnel.*

Subject: Dr. Jeremaiah
Item Retrieved: One (1) Trezor wallet containing Bitcoin
Item Lost: One (1) sock
Notes: *[EXPLETIVE] YEAH! WOOOOOO!!!*

Note: Following the discovery of the wallet, Dr. Jeremaiah immediately resigned his post as a Foundation researcher. He was discharged from the Foundation the following day.

Subject: Dr. B
Item Retrieved: One (1) pint of subject's blood, donated earlier in the week.
Item Lost: Subject's Lunchbox, contents unaffected.

Notes: *What the [EXPLETIVE] am I supposed to do with this?! Head Researcher Notes: Take it back to the medical bay. What else would you do with it?*

Subject: Researcher S

Note: Researcher S came in with a large number of spherical objects, varying in size from 1 mm in diameter to 20 cm in diameter, with the intention of determining how items that are lost are selected by SCP-1162. Researcher S wore a one-piece jumpsuit instead of the standard Foundation researcher uniform and carried nothing else on his person to minimize the chance of an unintended item being taken by SCP-1162.

Item Retrieved: One (1) U.S. penny
Item Lost: One (1) sphere, 8 cm in diameter
Notes:

Item Retrieved: One (1) empty plastic water bottle
Item Lost: One (1) sphere, 5.5 cm in diameter
Notes:

Item Retrieved: One (1) broken half of an unmarked compact disc
Item Lost: One (1) sphere, 10.5 cm in diameter
Notes:

Item Retrieved: One (1) sphere, 8 cm in diameter
Item Lost: One (1) sphere, 2.5 cm in diameter
Notes: *The number of items retrieved before previously taken items start to return is consistent with Sr. Researcher Grant's experiment.* -Researcher S

Using data from 75 repetitions of the experiment, Researcher S determined that spheres selected were normally distributed with regard to size, with a mean diameter of approximately 7.25 cm and a standard deviation of approximately 2.5 cm. Spheres above 15 cm in diameter were not selected during any of the trials, though it is unknown whether this was because SCP-1162 cannot take items that do not fit within it, or because the probability of an object of that size being selected based on the normal distribution is 0.1% or

below.

Note: These spheres had no personal significance, so we've yet to determine if the personal meaning attributed to an object influences the probability that the object is taken. However, it seems clear that meaningless items are truly taken at random. -Researcher S

Subject: Researcher Clark
Item Retrieved: One (1) pair of white brand earbuds
Item Lost: One (1) $20 bill
Notes: *I bought those at the dollar store, there's no way they cost that much. Ripoff.* -Researcher Clark

Item Retrieved: One (1) rock with a crudely drawn face on it
Item Lost: One (1) fountain pen
Notes: *I made this as a kid before I lost it. I suppose it's a fair trade.* -Researcher Clark

Item Retrieved: One (1) decaying piece of General Tso's chicken
Item Lost: One (1) blank checkbook
Notes: *I haven't eaten General Tso's in at least two months. I wouldn't touch that.* -Researcher Clark

---

SCP-1163: Face Swapper

Item #: SCP-1163

Object Class: Euclid

Special Containment Procedures: SCP-1163 is to be contained in a 3.5 by 3.5 meter cell containing a small bed, and a nailed-down lamp. Food and water will be supplied periodically through a secured dumbwaiter, but sugary foods are only to be given as rewards for cooperation. SCP-1163 is only to be directly visited under authorized research or psychological evaluation.(see Addendum 1163-B). When meeting Foundation Staff, both the staff member and SCP-1163 must be contained before meeting, to prevent a containment breach caused by SCP-1163's anomalous properties. All other verbal interaction with SCP-1163 is to be performed through the intercom system.

Description: SCP-1163 is an entity identifiable most easily by its abnormal facial structure, characterized by its unusually green eyes, large nose, and wide mouth.

When a human is in sight of SCP-1163, SCP-1163 is capable of immediately causing the other party's face to restructure into that of SCP-1163, while SCP-1163 will restructure its face into that of the other party. While the facial structure will be identical, skin tone will not be changed, and the face will be proportional to the size of the head. After the faces are switched (a process that takes between three and twelve seconds, depending on structural differences), the body that has the face of SCP-1163 will be controlled by SCP-1163, while the body with the face of the other party will be fully controlled by the other party, as if it was their own body. SCP-1163 is fully capable of switching back and forth, and there seems to be no limit to the amount of time SCP-1163 can spend with a body, or how rapidly SCP-1163 can switch between bodies. Though the facial structure shifts, the tissue is the same, and any blemishes, marks, scars, facial hair, or wrinkles will be conserved. A person missing a

part of their face will not have the part recovered by the introduction of SCP-1163.

SCP-1163 appears to have a mental capacity similar to a child around 6 years old. It is cooperative, and in particular is easily coerced with sweet foods. SCP-1163 will readily communicate verbally, but does not seem to suffer from boredom or loneliness when not spoken to. Though the body used seems to have some effect on the voice, SCP-1163 generally has a high-pitched voice, and a noticeable stutter.

SCP-1163 currently inhabits the body of a Caucasian male D-Class. The body that the D-817 was switched into was immediately terminated to avoid complications.

Recovery Information: SCP-1163 was discovered in the small town of Pennsylvania, where several friends and relatives had previously reported the residents having drastically changed appearances. Police were skeptical, and refused to begin a formal investigation themselves before the Foundation became involved. When investigated by Foundation agents, it was found that during SCP-1163's attempts to avoid notice, it had exchanged the faces of a large portion of the town. SCP-1163 was then found by Foundation agents hiding inside an abandoned house under severe distress. Through the use of an agent's bag of brand candy, SCP-1163 was easily convinced to enter the custody of the Foundation.

Addendum 1163-A: It has been found that excessive contact with SCP-1163's anomalous properties can cause detrimental physical effects. Continuous changing of facial structure, especially between two states with differently sized eyes, can cause accelerated vision loss. A human who has been in control of a body of a different sex may experience issues with bladder control.

Addendum 1163-B: SCP-1163 attempted to breach containment during an interview with Agent , where SCP-1163 used its anomalous property to switch bodies with Agent , and attempted to impersonate her. Though this goes beyond the initial estimate of SCP-1163's understanding of its own properties, it is still not complete, as it believed itself to fully resemble Agent . After

incapacitated and returned to its cell, SCP-1163 was convinced to return Agent to her original body. Individual meetings with SCP-1163 are no longer authorized.

Interview 1163-01

SCP-1163 was introduced to Dr. , two weeks after recovery, in order to gain more information on SCP-1163's knowledge of its own abilities. Dr. was supplied with three brand chocolate bars. Dr. was previously trained to work with children.

<Begin Log>

Dr. : Hello SCP-1163, my name is Dr. , how are you doing?

SCP-1163: Okay.

Dr. : I'm going to have to ask you a few questions, is that alright?

SCP-1163: Agent said I could have some candy.

Dr. : You can have some if you cooperate.

[SCP-1163 refuses to speak or make eye-contact after hearing this until Dr. gives SCP-1163 one of the chocolate bars, which is immediately placed by SCP-1163 into a pocket.]

Dr. : Are you ready to answer questions now?

[SCP-1163 nods]

Dr. : Could you tell me what your name is?

SCP-1163: No.

Dr. : Alright, do you mind if I call you SCP-1163?

SCP-1163: That's okay.

Dr. : Do you know how old you are?

SCP-1163: No, I'm sorry.

Dr. : That's fine, what's the earliest event you can remember?

SCP-1163: I remember going into a town.

Dr. : Do you mean ?

SCP-1163: I don't know.

Dr. : Do you remember ever leaving a town?

SCP-1163: I don't remember.

[SCP-1163 becomes fairly upset, and refuses to respond to Dr. . Instead, SCP-1163 silently eats the candy bar. By the time SCP-1163 is finished, Dr. is able to resume the interview.]

Dr. : So, SCP-1163, when you were in , you caused a lot of people a lot of trouble.

[SCP-1163 does not respond to this]

Dr. : Do you feel bad about this at all?

SCP-1163: Feel bad about what?

Dr. : When you moved through the different people, you moved them into different bodies also, and this made them unhappy.

SCP-1163: Why?

Dr. : They felt uncomfortable when they had to change what the rest of their bodies look and feel like.

SCP-1163: I don't understand. What rest of bodies changed?

Dr. : When you moved through the people in , you made them move into bodies that they weren't born into.

SCP-1163: Born into? I don't understand.

[SCP-1163 became extremely distressed, and refused to respond further to Dr. , even when given the remaining two candy bars.]

<End Log>

Closing Statement: Dr. was largely unsuccessful at getting more information on SCP-1163's awareness of anomalous properties, but results of this interview show that that the subject is largely ignorant. Later testing revealed that SCP-1163 suffers from apperceptive prosopagnosia.

Interview 1163-02

SCP-1163 was introduced to Agent , two weeks after the interview with Dr. , in an attempt to retrieve more information on SCP-1163's awareness of the subject's own anomalous properties. Agent has previous experience in investigating or interrogating of children or individuals with cognitive deficits. Agent was also granted three brand chocolate bars.

Agent : SCP-1163

SCP-1163: Yes?

Agent : Do you have any idea why you're being kept here?

SCP-1163: Is it because of something I did?

Agent : That is part of it. Do you have any idea of how you are different than the other people you met in ?

[SCP-1163 becomes very distressed at this point, and

stutters more frequently, but does not refuse to respond as with Dr. .]

SCP-1163: They didn't like me there. They kept moving all around me. It was bad.

Agent : Do you have any idea why they acted like that around you?

SCP-1163: No! I tried acting normal but they kept noticing me and acting like I was scary.

Agent : Do you understand why they acted that way, even when you "acted normal"?

SCP-1163: No.

[Note: This interview was performed before it was shown that SCP-1163 suffers from prosopagnosia. It is likely that the subject did not realize how it could be identified by the abnormal face.]

Agent : Do you have any other ideas about how you are different from those other people?

[SCP-1163 thinks for a full minute before responding]

SCP-1163: I think I'm faster. When the people used to yell at me, I could just move away in a second.

Agent : And you used this to get away when people are yelling?

SCP-1163: Yes.

Agent : Is there any reason why you have not yet tried to breach containment here?

[Note: Agent was severely reprimanded for suggesting a containment breach to a Euclid SCP.]

SCP-1163: Breaching what?

Agent : Is there any reason you have stayed here without trying to run away?

SCP-1163: You act nice sometimes when you are here and people give me candy. I don't want to go back where people yell when they see me.

[Note: SCP-1163 had not previously been exposed to Agent .]

<End Log>

Closing Statement: SCP-1163, while aware that some of the anomalous properties exist, is not fully aware of their capabilities, and is not willing to use them in order to breach containment. (See Addendum 1163-B).

« SCP-1162 | SCP-1163 | SCP-1164 »

SCP-1164: Echoing Epitaph

Item #: SCP-1164

Object Class: Safe

Special Containment Procedures: SCP-1164 is to be contained in a sealed chamber at Site , placed atop a steel platform 1m off the floor. All surfaces of the containment chamber must be composed of stainless steel over a brick support interior, as should all construction within a 50m radius. No samples of worked stone, unworked stone, or concrete should be brought within SCP-1164's containment radius.

Description: While inert, SCP-1164 resembles a mundane paving slab of poured concrete, 3.6m x 4.5m x 0.3m in dimensions. It exhibits signs of wear and tear consistent with repeated exposure to outdoor elements. It can be handled by remote equipment safely, and shows no anomalous properties while being manipulated by such. Tests have shown that SCP is capable of transferring its anomalous properties in full to any volume of stone or concrete within 25m that measures at least 1m x 1m x 0.25m, while its previous manifestation becomes inert and non-anomalous.

At any time, should a living human being or an article of clothing worn by a living human being make contact with SCP-1164's surface, they will adhere to the object's surface and be unable to remove themselves. Approximately five (5) seconds after making contact, the subject will begin to be drawn into SCP-1164, starting at the point of contact, and four (4) male humanoid faces will rise out of the top surface of SCP-1164. The subject will be absorbed at a rate of 10cm/minute, during which only physical separation from the surface of the object via amputation will halt the absorption. The object's mass does not change during this process, though the rate of absorption is greatly degraded if the surface of the object directly opposite the point of contact is exposed to open air. Only one subject can be absorbed by SCP-1164 at a time, though absorption

can be accelerated by having multiple simultaneous points of contact. Subjects being absorbed have described an inability to feel or move any portion of their body 'inside' the object, as if under heavy local anesthetic, though all other motor and cognitive functions remain unimpaired.

While the subject is being absorbed, any noises or vocalizations uttered by the subject will be echoed by the four manifested faces in the a capella style of a barbershop quartet. The face closest to the point of contact will act as the quartet's lead, with the tenor, bass, and baritone proceeding clockwise around the slab. When the subject has been completely absorbed, the protruding faces undergo one of two changes. If the absorbed subject was male, the 'lead' face shifts to resemble that of the tenor, the tenor to that of the bass, the bass to that of the baritone, and the baritone face transforms into the face of the absorbed subject. Otherwise, the four faces simply rotate their appearances one 'step' clockwise, then all four faces recede into the surface and disappear.

« SCP-1163 | SCP-1164 | SCP-1165 »

SCP-1165: Minus Level

Item #: SCP-1165

Object Class: Euclid

Special Containment Procedures: SCP-1165 is to remain permanently closed to civilian traffic. Both entrances to SCP-1165 are to be fenced and marked with quarantine signs, in English and Spanish, warning of high concentrations of toxic contaminants. Plainclothes security personnel are to monitor entrances and act as necessary to discourage unauthorized entrance.

All businesses with doors or windows facing SCP-1165 are to have said exits walled over, padlocked, or otherwise rendered inaccessible to prevent unsecured access. Any municipal or utility vehicles requiring access to SCP-1165 are to enter by the western entrance and exit by the east entrance only.

All survey teams entering SCP-1165 are to be accompanied by a squad-strength detachment from MTF Tau-1165 ("Snickelway"). All individuals operating within SCP-1165 are to keep a GPS beacon, wireless communication device, and helmet camera on their person at all times. Surveys are not to enter SCP-1165 at night or when there is a possibility of electric power outage due to weather or grid overload.

Any unauthorized persons entering or exiting SCP-1165 are to be detained, debriefed, and administered a Class-B amnestic. Any person observed exiting SCP-1165 is to be assumed to be hostile until a contrary determination can be made.

Description: SCP-1165 consists of an alley located in , and an anomalous urban area connecting to it. The alley runs east to west for approximately 0.3 km in downtown , bisecting the city block created by St. and St. on the east and west, and by St. and Ave. on the north and south. City records indicate that

the alley was laid out when the streets of were first paved in the early 20th century. Aside from construction and renovation of abutting structures, utility work, and a repaving in 19 , it has undergone no significant changes since then.

The alley exhibits no anomalous effects to traffic entering from the west or exiting from the east. When a traveler enters the alley's eastern exit and proceeds westward, however, there is a 36% probability that the alley will not exit onto St., but onto a street not accessible by other means. This street connects to a network of other streets that extend outwards in no particular pattern, none of which can be accessed by any means other than the alley. These streets, while almost always meeting at four-way grid intersections, are highly irregular in layout and begin and end abruptly. Traffic lights, lampposts, and other electronics present within SCP-1165, have power received from an as-yet unidentified source, and function reliably without any indication of human intervention.

The streets of SCP-1165 are lined with buildings mostly demonstrating examples of 20th century American architecture. The vast majority of the buildings appear to be of a business storefront or industrial nature - less than 6% of buildings surveyed are residential structures. Of buildings surveyed to date, 17% have been identified as strongly resembling or being identical to buildings known to exist in the area. 24% have been identified as resembling buildings found in other locations, most notably a 300 m. structure resembling the Eiffel Tower, visible in the distance northeast from the entrance to the alley. Road signage exhibits names of known and unknown streets in a similar manner.

No automobiles or people (except as per Survey Log 1165) have been spotted within SCP-1165, nor any animal or insect life. Plant life is limited to grass, flowers, and small trees found growing in yards of buildings or along sidewalk easements.

SCP-1165 extends outward in all directions from the entrance point of the alley. To date, Foundation teams have fully surveyed and charted 27 sq. km. of SCP-1165, an area of land encompassing the entirety of downtown and surrounding neighborhoods, and extending outwards into Bay and . No geographical boundary to SCP-1165 has yet been determined (except as per

Survey Log 1165).

The streets and buildings found within SCP-1165 have not changed since the first Foundation survey entered SCP-1165 in 19 . Returning down the entrance alley will return any traveler to St. 100% of the time. Cellular phones and GPS devices continue to function within SCP-1165 and indicate that the device is in a location relative to the distance the bearer has traveled from the western exit of the alley.

The Foundation discovered SCP-1165 in 19 when , an politician of note, disappeared in midday while on a walking tour of downtown with several campaign volunteers. Police identified the alley as 's last known whereabouts and encountered SCP-1165 while canvassing the area. A police liaison informed the Foundation of the anomalous effect, which lead to the Foundation assuming jurisdiction over SCP-1165. Neither nor any of his walking companions were ever found.

For detailed findings regarding discoveries within SCP-1165, refer to Survey Log 1165.

« SCP-1164 | SCP-1165 | SCP-1166 »

Survey Log 1165

Survey Log 1165

The Foundation has conducted 283 sorties into SCP-1165 since its discovery in 19 . The following is an abridged log containing information on notable discoveries made during exploration thereof.

Level 3 access is required to view unabridged logs. Please contact Dr. Samesh for access.

Survey 1165-1

Date: / /19

Findings: First formal Foundation sortie into SCP-1165. Surveyors explored an area of 1 sq. km. around the entry point. A circuit was completed of the block that the alley exits onto and no eastern point of entrance was found. Air, soil, and plant samples taken. No anomalous properties found in air or soil. Plant samples were found to exhibit an abnormally high amount of mutation.

Survey 1165-3

Date: / /19

Findings: MTF surveyed interiors of 13 buildings within 1.5 sq. km. radius of entry point, 8 of which had been identified to resemble known buildings. Floor plans of those buildings were found to match those of known buildings. Photographs indicated that arrangement of furniture, state of repair, etc. was also highly similar. Unidentified buildings were found to possess unusual floor plans, with rooms attached to each other in highly unconventional manners and with atypical furnishings.

All doors and windows in buildings surveyed were found to be unlocked. Further examination found that all objects capable of

being locked - cabinets, safes, etc., were also unlocked.

Survey 1165-15

Date: / /19

Findings: Two desktop computers were retrieved from a structure resembling a Best Buy electronics store. Both computers were found to have a hardware profile similar to Intel PCs available on the market at the time of the survey. Both computers were running a clean factory installation of Windows 95 and had no user-installed software or personalized settings. All software installed on both computers was found to be highly glitchy, with Windows frequently returning "divide by zero" errors and crashing to a "Blue Screen of Death" fatal error message, other software frequently crashing or hanging, and the system calculator producing incorrect answers to simple arithmetic problems. Formatting the hard drive and installing a new copy of Windows 95 produced similar errors, as did removing components from the computers and installing them into other machines.

Survey 1165-28

Date: / /19

Findings: While surveying an area 5.3 km. from entry point, MTF encountered an adult male approximately 40 years of age. Said individual identified himself as , a transient who had been reported as a missing person six years prior in 19 . During debriefing following his removal from SCP-1165, claimed that he and another transient had unknowingly entered SCP-1165 through the alley at night while drunk and found themselves lost when they awoke the next day. Discovering the area to be abandoned, they had taken to squatting in a residential building and scavenging food and alcohol from nearby buildings, in particular a building resembling a convenience store. was unable or unwilling to say where his friend was and became visibly distressed when the issue was raised. was administered a Class-A amnestic and relocated to , several thousand kilometers away.

A convenience store was found within SCP-1165 at the coordinates

given by . It was found to be fully stocked with foodstuffs comparable to those sold at convenience stores. Food was found to be fresh and edible, though unusually high in compounds known to cause [REDACTED]. A gas pump was attached to the station; gas found therein refused to ignite when exposed to open flame. Cameras installed in the store have noted no evidence of any restocking or replacement of food.

Survey 1165-68

Date: / /19

Findings: MTF returned to the convenience store discovered after Survey 28 to replace monitoring equipment. Food was found to still be fresh and edible. In spite of the fact that no activity had been noted within the store since first installation of cameras, several products were found in the store which on the previous visit had not been present and were not available for purchase at the time.

Survey 1165-103

Date: / /20

Findings: While surveying an area 8.7 km from entry point, MTF discovered an automobile identified as a 1956 Studebaker President parked on the side of a four-lane street. The car was found to be excellently preserved and in driveable condition. The gas tank was empty and the odometer indicated that the vehicle had driven a total of 2,638 miles (4,245 km). The trunk was found to contain suitcases full of a variety of apparel, as well as children's toys and a baby stroller. Canvassing of the area proved unable to locate the owner/s of the vehicle prior to abandoning SCP-1165 for the day due to impending twilight.

Survey 1165-105

Date: / /20

Findings: On the third canvas of the area where the Studebaker was found, the MTF located, leaning against a wall in an alleyway, the skeletal remains of an adult male dressed in a dark suit and fedora

hat, clutching a 38-caliber revolver in its right hand. All rounds in the revolver were spent. Identification found in a wallet in the suit pocket identified the remains as belonging to , who was reported missing with his wife and children during a family vacation in 1956. License plate on the Studebaker was found to have been registered to . Cause of death could not be determined and 's suit showed no signs of damage or trauma. A camera loaded with a spent roll of Kodak black-and-white film was hanging from a strap around 's neck. Upon being developed, most of the roll consisted of pictures of and his family. The last eight photos were identified as having been taken within SCP-1165, showing buildings identified by surveyors and several no longer present. The final photo showed a [REDACTED]. The remains of 's wife and children, aged 9, 5, and 8 months, have not been located.

Survey 1165-141

Date: / /20

Findings: MTF transported a helicopter into SCP-1165 via a flatbed truck for the purpose of conducting an aerial survey. Aerial team ascended to 500 meters above ground level and observed that SCP-1165 extended to the horizon in all directions and did not appear to encounter any geographical barriers. Aerial team overflew the Eiffel Tower, which was determined to be located 27.4 km from entry point and identical to the original monument in every way perceivable from the air. Team was instructed to fly eastward until either spotting the edge of SCP-1165 or turning around became necessary due to low fuel.

After traveling 103 km at a height of 500 meters, pilot reported that the helicopter's onboard altimeter, compass, barometer, wind gauge, and GPS device had stopped functioning and that the team had lost visual contact with the surface. Base team also lost GPS contact with the helicopter at this time. Team was ordered to make an emergency landing. Pilot attempted to descend and reported that he could not find the ground and that visual inspection showed nothing but blue sky and clouds beneath the helicopter. The pilot reversed direction and attempted to return in the direction of base team, but was unable to make contact or regain GPS contact.

After 6 hours of unsuccessfully attempting to return to base, pilot reported that the helicopter had run out of fuel and was in freefall. After 7 minutes without reaching the ground, pilot and support team committed suicide by gunshot. Onboard video continued to document the helicopter falling at terminal velocity until camera battery died 17 hours later. Neither the helicopter nor the remains of its crew have been located.

Survey 1165-145

Date: / /20

Findings: MTF transported an unmanned aerial vehicle equipped with extra batteries into SCP-1165. UAV was launched in the direction of the last known whereabouts of the aerial team lost during Survey 141. UAV reached those coordinates without incident and canvassed the area unsuccessfully. While overflying a region 113.4 km from entry point at a height of 1500 meters, UAV's instruments and GPS failed and visual contact with the ground was lost. Non-essential systems were put into standby to maximize battery life and UAV was placed into freefall. As of this date, years later, UAV is still transmitting and is still in a state of freefall. Following this survey, all further aerial surveys have been preemptively denied.

Survey 1165-174

Date: / /20

Findings: A group of eight D-class awaiting scheduled termination were divided into two teams and each was given an automobile with extra fuel capacity and a full battery of monitoring equipment and environmental sensors. Teams were brought into SCP-1165 and instructed to drive to the eastmost boundary of the "city" and told that whichever team reached that point first would be given their freedom.

At 128 km and 201 km distance from the entry point, respectively, both teams encountered phenomena consistent with Surveys 141 and 145. Subdermal transmitters intended to track the D-class' vital signs found that, of the three who did not kill themselves or each

other in the immediate aftermath, the eventual cause of death was dehydration.

All requests to survey areas more than 100 km distant from the entry point are preemptively denied.

Survey 1165-193

Date: / /20

Findings: Using aerial photography acquired during Surveys 141 and 145, MTF attempted to travel to the Eiffel Tower and survey its surroundings. Upon reaching the point which aerial surveys indicated should be the location of the Tower, MTF found instead a factory bearing the legend "HANSON SCREWS". The Tower remained visible in the distance in the same cardinal direction as it was visible from relative to the entry point. Upon attempting again to reach it, the MTF found it once again absent and visible in the distance. Careful observation during a third attempt to reach it showed that the Tower did not seem to grow any closer as the MTF approached it. A fourth attempt to reach the Tower was called off as doing so would send the team beyond the 100 km mark from the entrance.

Survey 1165-246

Date: / /20

Findings: During a survey of the area near the first apparent location of the Eiffel Tower, a sudden power outage resulted in the loss of wireless communications within the area. All contact with the MTF was lost. Power was not restored until after dusk 9 hours later. At that time, an attempt to reestablish contact with MTF proved unsuccessful.

A nighttime sortie into SCP-1165 was authorized. Upon reaching the MTF's last known location, S&R team found the MTF's vehicles parked in a circle in an intersection and abandoned. A large number of spent shell casings were spread on the ground around and inside the circle - however, the vehicles themselves had suffered no damage and there was no sign of any blood or corpses in the area.

A single member of the MTF was found in an alley six blocks away, having barricaded himself behind several overturned garbage cans. All ammunition issued to the member had been expended.

Upon debriefing, survivor asserted that the rest of the squad was dead but was unable to say how or why. Survivor was highly confused about what had happened during the time contact was lost and the S&R team located him, only repeating that [REDACTED]. No sign of the remaining MTF members has been found to date.

Survey 1165-248

Date: / /20

Findings: During a followup canvas of the area explored by Survey 246, a severely deformed humanoid corpse was discovered in the open doorway of a warehouse. Photographs of the corpse taken by MTF were highly corrupted and impossible to interpret. Descriptions by MTF members observing the corpse indicated that it appeared normal from the chest down, but had no arms or head, its upper body diverging into approximately a dozen fleshy pseudopods with no apparent sensory organs. Apparent cause of death was multiple gunshot wounds - however, there was no sign of bleeding from any of the wounds. The corpse was nude except for a pair of black slacks. During examination, an MTF member reported seeing a moving figure in the shadows inside the warehouse and hearing a loud noise similar to radio static. MTF commander made the decision to evacuate SCP-1165 and leave the corpse.

A wallet was found in the corpse's slacks containing 37 American dollars, several store discount cards, and a driver's license belonging to "James K. Stevenson". Stevenson is a Foundation legal consultant with Level 1 clearance, working from a front company in Philadelphia, PA, who has not participated in any activities relating to SCP-1165. When interviewed, Stevenson claimed no knowledge of SCP-1165, stated he had never been to , and showed that his wallet and driver's license were in his possession. Both were identical to the wallet retrieved from the corpse. A tissue sample acquired from the corpse prior to evacuation showed a 99.99995% likelihood of a match with Stevenson.

Survey 1165-249

Date: / /20

Findings: A double-strength MTF detachment was sent to the warehouse found by Survey 248. The corpse discovered at time was no longer present and a thorough canvas of the warehouse and surrounding buildings failed to locate it or any other such entities. Further surveys of an area within 1 sq. km. of the warehouse are preemptively denied.

SCP-1166: Perfect Lab Specimen

Item #: SCP-1166

Object Class: Safe

Special Containment Procedures: SCP-1166 is to be contained in Animal Testing Laboratory 51F at Site-23. SCP-1166 is to be maintained in accordance with established care and feeding protocols for *Rattus norvegicus*, and housed in an appropriate enclosure.

As of / /2011, all research projects and experiments involving SCP-1166 must be submitted to the Site-23 Ethics Committee for approval. At the Committee's discretion, a Class-C amnestic is to be administered to SCP-1166 after completion of designated projects and experiments, with a minimum recuperation period of 2 weeks before the commencement of additional research.

All staff initially assigned to work with SCP-1166 are to briefed by the Research Director on its anomalous qualities. Staff may request assignment on an alternate project immediately following the initial briefing.

Description: SCP-1166 is a laboratory rat displaying an appearance consistent with a normal instance of *R. norvegicus*.

Blood samples taken from SCP-1166 reveal that it is a genetically-manipulated chimera, with samples containing an abnormally high percentage of human cells (. %) in comparison with previously documented non-anomalous specimens. Biopsies reveal the presence of a significant amount of human brain tissue, and human nerve cells in SCP-1166's spinal cord. SCP-1166 has been demonstrated to mimic human biology almost exactly in an extensive battery of control tests involving D-Class personnel, with analagous reactions to radiation exposure, heat/cold tolerance, rapid decompression, pathogens (including Marburg virus, rabies,

and smallpox), toxins, and other external factors. SCP-1166 displays tolerances to experimental conditions equal to those expected of a 65 kg human male.

Upon death, SCP-1166 will spontaneously revive after a period of between 18-45 minutes. Tissue, vital organs and bodily fluids are seemingly regenerated prior to revival, to the point where severed limbs have been documented to grow back.

As documented in the intake report and subsequent cognition tests, SCP-1166 is sapient, and fully capable of communicating in English with research staff when provided with proper means.

Recovery Log-1166: Following reports received by undercover agents monitoring Corporation, a pharmaceutical firm, SCP-1166 was recovered clandestinely by Foundation operatives on / / , during initial trials for , an experimental psychotropic drug. Notes confiscated from these trials indicated that corporate management was aware of SCP-1166's heightened intelligence and ability to communicate, and as such had identified it as a highly desirable test subject for neurochemical-based pharmaceuticals. No other rats in the possession of Corporation were observed to demonstrate the anomalous properties exhibited by SCP-1166; it is currently unknown how the corporation obtained a specimen that apparently was the end product of genetic engineering far surpassing currently available technology.

After recovery of SCP-1166, Class-C amnestics were administered to researchers and three executives of Corporation. An H-Type internet-based disinformation campaign was commenced by staff due to several references to SCP-1166 by a radical animal rights group.

Intake Report-1166: Upon assuming custody of SCP-1166, Dr. conducted the following interview. SCP-1166 was provided with a specially modified touchpad in order to respond to staff inquiries through a text generator:

> **Dr. :** Please provide a brief description of yourself for the record, SCP-1166.

SCP-1166: (*written response*) am a white labraTory rat. specimen R-82611. know wh.en hurting starts when the say R-82611

Dr. : SCP-1166, do you know why you are currently in possession of the Foundation?

SCP-1166: (*written response*) Foundation makes dokter stop hurting we. foundation not hu8rt we?

Dr. : I am not going to hurt you SCP-1166. Now, you have been observed to experience a state indistinguishable from clinical death, and then subsequently revive. Yet you retain memories prior to each instance of death. Is this accurate?

SCP-1166: (*no response*)

Dr. : Is this accurate, SCP-1166?

SCP-1166: (*written response*) R-82611 remember many many times. painf7l. but better now, dokter?

Dr. : Are you aware of other specimens similar to yourself in existence?

SCP-1166: (*written response*) no

Dr. : Do you have any insight as to how you came to be self-aware and able to communicate with humans?

SCP-1166: (*written response*) no

Dr. : That will be all, SCP-1166.

Addendum: Prior to the commencement of Experiment 1166-3, Researcher filed a formal complaint with the Site-23 Ethics Committee. Relevant documentation as follows:

Request for Review by Site Ethics Committee

SCP Involved: SCP-1166

Requested By: Researcher

Priority: B2

Comments: SCP-1166 displays intelligence that may be equivalent to that of a normal human, along with emotions such as sadness, anxiety, and fear. Unlike a standard D-Class subject, SCP-1166 has not committed any crimes against established society, nor has it "consented" to any [COMMENTARY EXPUNGED]. Carrying out Experiment 1166-3, or indeed any of the other planned research slated for SCP-1166 would be an act of wanton cruelty for no purpose except to confirm what we already know. Science does not require that we abandon our morals, such as they are in this place, and neither I nor any other Researchers can continue the inhumane treatment of this poor being. We still have consciences, damn it.

MEMORANDUM

To: Dr.

From: Site-23 Ethics Committee

RE: Review Request 1166

After three rounds of voting over a two-day period involving numerous abstentions by members, by a 7-6 decision the Committee has approved further testing involving SCP-1166 provided that updated parameters regarding its use are adopted.

While the Committee recognizes the objections of Researcher regarding intrusive and painful testing on a sapient and non-consenting life form, SCP-1166 displays properties that must be understood and documented in full by the Foundation. SCP-1166's regenerative properties in particular merit further study; applied knowledge of its principles may have great benefit both in the containment of dangerous

phenomena and in use by Foundation staff.

This being said, measures to minimize distress to SCP-1166 are authorized and encouraged. The Committee recommends use of amnestics to reduce SCP-1166's memories of particularly traumatic events, and after review of Experiment Log 1166-2, anesthesia for medical procedures is now *required*. Research staff are encouraged to communicate with SCP-1166 on a daily basis regarding non-mission sensitive topics as a further means of documenting its anomalous intelligence.

Upon his request, Researcher has been transferred to work on SCP- .

- Director

« SCP-1165 | SCP-1166 | SCP-1167 »

SCP-1167: Disembodied Robot Head

Item #: SCP-1167

Object Class: Euclid

Special Containment Procedures: SCP-1167 and any related objects are to be stored in a 3m x 3m x 3m chamber at Site-1167-2. Each is to be kept in a locked case equipped with a security camera.

Site-1167-1 is to be staffed by 2 security personnel at all times, disguised as forest rangers. Exploration temporarily suspended.

Any anomalous material or items found at Site-1167-2 are to be studied and cleared by Dr. Stinson before being brought into contact with SCP-1167.

Description: SCP-1167 is an automaton approximately 20cm tall consisting of a control unit attached to an articulated arm and a flat base. The subject's components are of unknown manufacture and utilize an advanced power source that has not required recharging at any point during containment. SCP-1167 was discovered by spelunkers in [REDACTED] and delivered to local authorities, who passed it on to Foundation personnel. Site-1167-1 has been established at the discovery location.

SCP-1167 is capable of limited locomotion by pushing at the ground with the base of its arm to gradually propel the control unit forward. Left alone, SCP-1167 will attempt to navigate outside of any containing structure, at which point it will adopt a heading towards 23.56 S, 68.16 W, changing direction only to avoid obstacles.

SCP-1167 is capable of synthesized speech but does not respond to questions. SCP-1167 continually repeats the following message in 124 languages, including 8 dead languages and 15 which have not been identified.

> **SCP-1167:** *Broadcast alert. Recovery failed. Initiate retreat and seek reinforcements. Alert. Alert.*

If a nearby person speaks approximately 5 full sentences of a specific language, SCP-1167 will use that language exclusively until the person leaves the immediate area. Between each repetition SCP-1167 will produce a 1 second burst of static. The sound is identical each time, but has not yielded any meaningful information.

SCP-1167 was delivered to multiple testing sites and placed on the ground to track movement over 100m. This information was used to triangulate the subject's possible destination. A research team was sent to the location, which is in the vicinity of the Monturaqui crater in Chile. An initial survey yielded no anomalous discoveries. SCP-1167 was delivered to the site and placed upon the ground. SCP-1167 scanned the environment before speaking.

> **SCP-1167:** *Scan complete. Conveyance missing. Maintain location and await reinforcements.*

Site-1167-2 has been established for further study and excavation of the target location. Several anomalous objects have been located and presented to SCP-1167 to produce additional messages.

Addendum:

SCP-1167-1: A mechanical hand with similar construction to SCP-1167, discovered 220m NE of Site-1167-2, 5m below ground. The wrist is cleanly severed.
SCP-1167 Reaction: *Scan complete. Missing component relocated. Retain for repair.*

SCP-1167-2: Unnatural scarring of a section of bedrock measuring 150m x 1m, discovered 1km NE of Site-1167-2, 8m below ground. Sample acquired.
SCP-1167 Reaction: *Scan complete. Archived status report: Weapon modification ineffective. Continue pursuit.*

SCP-1167-3: A non-functioning control unit similar to SCP-1167, minus the arm/base. Recovered during an exploration of the cave system under Site-1167-1. 4 members of the exploration team

remain missing.
SCP-1167 Reaction: *Scan complete. Archived status report: Unit leader terminated. Target lost. Initiate retreat.*

« SCP-1166 | SCP-1167 | SCP-1168 »

SCP-1168: A Highly Immature and Completely Unofficial Parody

Item #: SCP-1168

Object Class: Safe

Special Containment Procedures: SCP-1168 is stored within a hermetically sealed containment unit in Sector-19. Personnel assigned to Sector-19 must not fit Profile Alpha-1168 *(see **Addendum 1**)* or Profile Beta-1168 *(see **Addendum 2**)*.

Description: SCP-1168 is a copper sculpture identical to the work *Statue of Theseus* by Georgios Fytalis, with the following deviations:

- Dating indicates it was created at least years after the genuine sculpture.
- In the sculpture's left hand are 30 silver coins dating from ca. 30, stamped with the 1977 design of Chuck-E-Cheese game tokens.
- Inscribed on the outer side of Theseus' shield is the phrase *Ἀπόδοτε οὖν τὰ Καίσαρος Καίσαρι*.[1]
- Inscribed on the inner side of Theseus' shield is the phrase *SIC DOMITO SAEVVM PROSTRAVIT CORPORE THESEVS* from Catullus 64.[2] The inscription appears to have been engraved some time after acquisition; it is currently unknown how this engraving occurred.

SCP-1168 displays no anomalous properties while inactive. The object activates whenever 170 or more meters of yarn is placed into the sculpture's right hand. SCP-1168 closes its right hand around the yarn, the yarn is annihilated by anomalous means, and the object enters a "pending" state.

When SCP-1168 is in a "pending" state it will appear inactive until a human subject fitting Profile Alpha-1168 or Profile Beta-1168 enters SCP-1168's radius of effect.[3]

When a human subject fitting Profile Alpha-1168 enters SCP-1168's area of effect, SCP-1168 will unclench its right hand and move its right arm to point its tertiary finger in the direction of subject for at least 5 seconds[4], after which it will return to its "pending" state. Subject is subsequently designated SCP-1168-1.

When a human subject fitting Profile Beta-1168 enters SCP-1168's area of effect, SCP-1168 will move its left arm to point two fingers in the direction of subject for at least 10 seconds[5], after which it will return to its inactive state. Subject is subsequently designated SCP-1168-2.

When SCP-1168-1 and SCP-1168-2 simultaneously exist, SCP-1168 will deactivate, and SCP-1168-1 will instantly materialize a wooden club and be encased in a 3m x 3m x 3m cube of ice. SCP-1168-2 will seek instances of SCP-1168-1[6] and initiate ritualized interactions *(see* ***Addendum 3****)*. After completion, SCP-1168-2 ceases designation.

The ice surrounding SCP-1168-1 is impervious to any interference and melts at a rate of 176mL per day. After SCP-1168-1 is free of the ice, subject ceases designation.

Addendum 1:

> + Document I1168-01: Profile Alpha-1168
>
> Profile Alpha-1168 subjects have public records of any of a list of sex crimes *(see document Alpha-1168 for a list of currently known crimes which fulfill the criterion)*.

Addendum 2:

> + Document I1168-02: Profile Beta-1168
>
> Profile Beta-1168 subjects are blond Caucasian men aged 15 to 18. All subjects are in their junior year of high school.

Addendum 3:

+ Document I1168-03: Log of interaction between SCP-1168-1 and SC

Foreword: Log of interaction appears similar to a scene from the video "**The Misadventures of Skooks – Part 3/6**" from Youtube user Orpheusftw. SCP-1168-2 faces SCP-1168-1 from its left side.

<Begin Log>

SCP-1168-2: Boy, am I glad he's frozen in there and that we're [sic] out here, and that-

SCP-1168-1 materializes a brown stetson on its head and a golden badge in the shape of a six pointed star on its breast.

SCP-1168-2: -he's the sheriff and-

SCP-1168-2 develops a thin layer of frost around its skin.

SCP-1168-2: -that we're [sic] frozen out here and that-

SCP-1168-2 teleports into SCP-1168-1's block of ice. This does not hinder SCP-1168-2's speech, which originates from its position at the start of the interaction.

SCP-1168-2: -we're [sic] in there and I JUST remembered-

SCP-1168-2 teleports into its initial position.

SCP-1168-2: -that we're [sic] out here. But what I wanna know is, where's the sex offender?

<End Log>

Addendum 4:

+ Document I1168-09: Post Recovery Interview #6

Interviewed: **`Jude Kriyot.`** Male. 23 years old.

Interviewer: Agent O.

Foreword: On / /20 , SCP-1168 was on public display in the Syntagma Square in Athens, Greece. It is currently unknown when SCP-1168 replaced the original sculpture. According to eyewitness account, the interview subject approached SCP-1168, after which the object entered an active state and selected SCP-1168-1 and SCP-1168-2 from nearby individuals. Interview subject was taken into custody by police along with eleven other witnesses.

<Begin Log, 03:50 / /20 >

Agent O. : I'm just gonna ask you a few questions.

Jude Kriyot: Okay.

Agent : Your name is Jude Kriyot, correct?

Kriyot: Yeah.

Agent : You're a student from [REDACTED]?

Kriyot: Was. Not really doing much these days.

Agent : Why did you do something to the statue?

Kriyot: The statue? I thought this was about the dude freez-

Agent : Please answer the question, Mr. Kriyot.

Kriyot: Sorry. Uh, I got a letter from an old teacher. He had… stuff. Y'know. He told me to do it or that, uh, stuff would. Y'know. The stuff would be aired. We sent some letters back and forth, I was asking how he'd know, he dodged it by saying he had friends in the area.

Agent : Do you still have these letters?

Kriyot: I've only got a few left. I took to… burning them. After a bit. But I can get them if-

Agent : That won't be necessary, thank you.

A raid on Mr. Kriyot's home after interview discovered letters confirming correspondence with said teacher. Ashes were found in the trash can.

Agent : Could you describe this man to me?

Kriyot: Okay. Old white dude, probably in his, uh… seventies? Grey hair, pretty long. Usually wears a ponytail.

Description and letters correspond to **PoI** , former teacher at [REDACTED].

Agent : Do you know why he wanted you to place the yarn on the statue?

Kriyot: Well, he knew me, and he knew he had me by the balls.

Agent : Allow me to rephrase. Do you know his reasoning for wanting the yarn placed on the statue?

Kriyot: Yeah. He mentioned that it was a metaphor or something. He was a sucker for bullshi- er, sorry, pompous gestures.

Agent : It's all right. Could you explain what you mean by appeal?

Kriyot: Well, you know, Theseus killed **the Minotaur**. Dude's old. Told me his health wasn't the best, thought maybe this would make the old gods happy or something. He, uh, also knew my health wasn't the best, mentioned something about it doing the same for me.

Agent : Were you expecting the statue to move?

Kriyot: What?

Agent : Did you think the statue would move?

Kriyot: Oh.

Agent : We have witnesses saying the statue pointed at Mr. and Mr. .

Interviewee remains silent for one minute.

Agent : Are you all right, Mr. Kriyot?

Kriyot: No. I'm not all right.

Agent : Would you like to take a moment?

Kriyot: [Pause] No. I can continue.

Agent **:** Why the silence?

Kriyot: I'm sorry. It. Reminded me of some shit.

Agent **:** Some shit?

Kriyot: I. Yeah. I, uh. Look man. I burned the letters for a reason. [Pause] The teacher had an art group at the college. He asked me to show up once.

Agent **:** An art group?

Kriyot: Yeah. When I got there, uh. It was a warehouse, I guess. A private art show. There was a… **a statue, sculpture, whatever, fuckin' Dali thing. Moved when you put a coin in it.** And… She was there. There because I was there, because I told her… Because I told her it was cool.

Interviewee remains silent for one minute.

Kriyot: I'm sorry, I. I'm sorry. I didn't, I'm… I knew… her… I… I don't, want to. I… knew her, and she trusted me. And I was, I was young, and I was stupid, so fuckin' stupid, and I wasn't told what was happening until I looked and I should've fucking known, and she's fucking gone, she's gone, and she's fucking GONE because of me. Because I couldn't FUCKING stand it. Because I fucking… Fucking left my skin. Just slunk away into myself like a fucking snake shedding its filthy stupid fucking rotten husk of itself. I. I checked out. Because I was a coward. She's gone. I just. And someone I knew. Someone I knew had made it. And it was fucking praised, they fucking *clapped*. They clapped like it was just

some fucking piece of performance art, and I just sat there, stupid fucking useless me, watching on as it happened. **After the show I... They told me I was young. And I just... didn't understand art, or the point they were trying to make.** That I… Oh. Oh my god. I'm sorry. I'm so sorry. I didn't see the statue mo- I didn't see this statue move. I'm sorry. Fuck. Fuck…

Interviewee remains silent for two minutes.

Agent : I'm sorry, Mr. Kriyot.

Interviewee declines to respond.

Agent : I'm sorry. Thank you for your time.

<End Log, 04:19 / /20 >

Closing Statement: Due to possible connections between Jude Kriyot and the group of interest AWCY, Mr. Kriyot was subject to further interrogation, which failed to garner any useful intelligence. Mr. Kriyot was administered a prophylactic Class-B amnestic to suppress any knowledge of SCP-1168, SCP-1800, and AWCY. It was unknown whether Mr. Kriyot had knowledge of any further **Groups of Interest** at the time. Jude Kriyot is now identified as PoI-6870; current evidence suggests Mr. Kriyot was the creator of the object.

Footnotes
1. English translation: "Render unto Caesar what is Caesar's"
2. English translation: "Thus Theseus laid low the savage one with the body having been conquered"
3. The radius of this area equals the length of yarn activating

SCP-1168.
4. The time is equal to the length of string in meters divided by 34.
5. The time is equal to the length of string in meters divided by 17.
6. SCP-1168-2 is unaware of this and possesses no knowledge of SCP-1168-1 outside of what was known before designation.

« SCP-1167 | SCP-1168 | SCP-1169 »

SCP-1169: Lamarck's Giraffe

Item #: SCP-1169

Object Class: Safe

Special Containment Procedures: SCP-1169 is kept in an air-tight steel protective container with shaped foam rubber padding to prevent damage. SCP-1169 is to be treated as biohazardous material. All subjects contaminated by SCP-1169-1 and all resulting offspring are to be terminated and incinerated as biologically hazardous material after useful observations have been exhausted. Assignment preference will be given to staff who are irreversibly infertile.

Description: SCP-1169 is a large glass storage vessel containing a fetal (estimated to be in the 13th month of gestation at time of preservation) *Giraffa camelopardalis* preserved in formaldehyde. Container includes a glass lid and rubber gasket held closed by a lever mechanism typical of Mason jars, although no brand markings are present. Gasket and metal are both heavily age deteriorated. The preserved specimen shows no genetic abnormalities but features several internal and external deformities; most notably a much shorter neck than is typical for *Giraffa camelopardalis* at the presumed stage of development.

The preserving fluid (designated SCP-1169-1) includes several unusual impurities, including traces of platinum, tungsten, human insulin, and three unidentifiable organic compounds (see Document 1169-1-Lambda for spectrographic analysis). Despite otherwise possessing the same evaporation and freezing properties of standard formaldehyde, SCP-1169-1 evaporates at a constant rate until it reaches a uniform concentration of 250 PPM in the surrounding atmosphere. This process is unaffected by ambient temperature or pressure within limits testable without damage to SCP-1169. The volume of SCP-1169-1 does not decrease due to evaporation or samples removed.

If inhaled or allowed to remain in prolonged contact, SCP-1169-1 will quickly be absorbed into the circulatory system of all plants and animals and will accumulate in the reproductive organs (testes, ovaries, fruiting buds, etc.). SCP-1169-1 does not dissipate from organic systems naturally and can not be artificially removed short of surgical excision of the reproductive organs. Anomalous effects will be demonstrated in all subsequent offspring, with severity determined by concentration of SCP-1169-1 present in the parent's tissues during gestation.

Stage 1, 15-75 PPM: Features of the contaminated parent will be overwhelmingly dominant in the offspring, despite genetic differences typical of parent and child. Offspring have a high probability (80% of all observed cases) of being the same gender as the contaminated parent, with a similar chance of developing any congenital defects observed in the parent. Mature offspring strongly resemble the parent at a similar age.

Stage 2, 75-120 PPM: Offspring will be physically identical to the contaminated parent at any given stage of development. All congenital defects and phenotype expressions are exactly reproduced to beyond testable limits. Note, parent and child are *not* genetically identical, instead showing the expected distribution of genes from both parents; but genes from the unexposed parent are not expressed. This can lead to cases where the offspring is genetically female, but physically and functionally male or vice versa.

Stage 3, 120-180 PPM: As in Stage 2, with additional physical anomalies developing in the offspring over time. Offspring will spontaneously develop any and all physical changes that the parent experienced at a comparable stage of development. Offspring will experience unprovoked and untreatable necrosis to match an amputated limb, spontaneous ruptures of the skin and flesh which when healed exactly match parental scar patterns, and atypical shifts in skin pigmentation resulting in reproduction of tattoos. Offspring will express the same fingerprints, retinal patterns, and other biometric indicators as the parent. Any kinesthetically learned skills will also be transferred from parent to child, but more cerebrally developed proficiencies are not. I.E. Subject D-1169-48

was a skilled concert pianist, her offspring D-1169-48-b was able to proficiently perform "Moonlight Sonata" after being provided with a recording, but was not able to interpret the associated sheet music even under extreme duress. Skills learned by the parent after conception are not duplicated.

« SCP-1168 | SCP-1169 | SCP-1170 »

SCP-1170: Romantic Ghost

Item #: SCP-1170

Object Class: Euclid

Special Containment Procedures: Due to the incorporeal nature of SCP-1170-2, it cannot be moved to a safe distance from local residents. As such, Area-1170 has been built around SCP-1170-1. The entire apartment complex has been blocked off; however, due to its rather public location, Foundation personnel are required to maintain disguises when in view.

Shift changes for guards stationed at Area-1170 occur every three hours. No personnel are to enter SCP-1170-1 except in special cases under any circumstances.

Description: SCP-1170-1 is a windowless bedroom located on the second floor of Apartment #21 in the Apartment Complex, , British Columbia. The room measures 8.5m x 11m x 3.2m, with hardwood floors and concrete walls. It appears empty on all security footage. The room cannot be illuminated by visible light (excluding the built-in light fixture), as SCP-1170-1 seems to absorb all visible wavelengths. The interior of the room appears pitch-black when viewed without specialized equipment. Light outside the visible spectrum appears to encounter no resistance from SCP-1170-1, allowing use of infrared and night vision cameras. All light with wavelength shorter than 1 m is in some way affected by SCP-1170-1. It is not known whether radio waves are also manipulated. Audio recording devices have been shown to be at least partially functional.

SCP-1170-1's active anomalous properties are triggered upon activation of the room's built-in light fixture, located approximately 0.75 m from the door on the west-facing wall. Subjects present when this light is on claim that the bedside lamps in the room activate, although security footage shows no change in luminescence and

infrared cameras do not detect any heat source other than the subjects. In addition, subjects describe the room as having a bed, a fireplace, two bedside tables, , and two lamps, none of which appear in security footage. It is theorized that this effect may be purely psychic in nature.

Approximately one minute and thirty seconds after the light fixture is activated, an entity (hereafter SCP-1170-2) appears on night vision camera (though only barely, as wavelengths emitted are only up to 10^{-6} meters in length). SCP-1170-2's anatomy is apparently humanoid except for its inverted joints. Footage taken shows no interaction between the subject and SCP-1170-2. At some point between 2 (two) seconds and 40 (forty) minutes after SCP-1170-2 appears, both it and any foreign objects in the room (including cameras, external lights, and test subjects) vanish. SCP-1170-2 is visible only to human subjects who have been present in SCP-1170-1 for the entirety of the time between the most recent activation of the light fixture and the subsequent appearance of SCP-1170-2. Exiting the room is not recommended while SCP-1170-2 is present in the room, as [DATA EXPUNGED]. It is unclear whether or not SCP-1170-2 physically exists or is simply a near-infrared illusion produced by SCP-1170-1.

Subjects inside SCP-1170-1 are seen to converse with a partner while SCP-1170-2 is present; the content of these conversations suggests that they are in fact speaking with SCP-1170-2. Furthermore, the sudden emotional changes experienced by subjects conversing with the entity suggest that SCP-1170-2 may have a memetic effect. SCP-1170-2 has avoided all directed questions about any subjects unrelated to love and romantic partnership.

Objects occasionally appear at random in SCP-1170-1. Most are mundane and have no apparent anomalous properties. However, there have been several instances of blood appearing on the walls, roof, and floor of the room: genetic testing revealed it to belong to Class-D personnel who had disappeared along with SCP-1170-2. Fecal matter, semen, saliva, and [DATA EXPUNGED] have also been recovered, all consistent with previous test subjects.

Transcript of Audio Log 1170-R-32

Foreword: The audio receivers during this test were put on a frequency of [REDACTED], as well as being placed in new locations around SCP-1170-1 in hopes of receiving more intelligible audio. Log begins immediately after the manifestation of SCP-1170-2. D-20192 is the sole test subject.

Begin Log.

D-20192: Oh my god, what the fuck is that. What the fuck is that.

SCP-1170-2: Please don't be scared. I only came here for you.

D-20192: Wait, what? For me? I'm a criminal. What do you want with me?

SCP-1170-2: I want to love you. We can be together.

D-20192: Uh, are you even a chick? I'm not into that other thing…

SCP-1170-2: I am not sure what a chick is, but I can assure you that our love will fit well.

D-20192: Dude, this is fucking weird. Oh, *(pause)*, god, I… I just…

SCP-1170-2: We can do it. This is where we can live. No barren residence, filled with ungratefuls, don't appreciate you. I want to love you.

D-20192: I… I want… *(sobbing)*

SCP-1170-2: I love you.

D-20192: *(Sobbing continues, D-20192 moves to kneel beside SCP-1170-2)*

SCP-1170-2: I need you.

End Log.

Afterword: Less than four (4) seconds after the conclusion of this audio log, SCP-1170-2 and D-20192 simultaneously disappeared from the room.

« SCP-1169 | SCP-1170 | SCP-1171 »

SCP-1171: Humans Go Home

Item #: SCP-1171

Object Class: Euclid

Special Containment Procedures: SCP-1171 is currently occupied by Dr. , who has established a false identity as a technical writer. A tall wall has been erected around the backyard, and all anomalous windows visible from the front of the house have been fitted with shutters. For security, several agents have moved in under the guise of lodgers.

Description: SCP-1171 is a two-story house in , Queensland, Australia. It was built in 1958, and has been owned by several families, most of whom reported no unusual activity.

The anomalous properties of SCP-1171 manifest on various windows of the house. Regardless of relative humidity, a layer of condensation is continuously formed on the windowpanes. The source of this moisture is as yet unknown.

An entity (hereby referred to as SCP-1171-1) communicates by writing in the condensation, as though it were running an appendage along the surface of the window. No biological traces have been discovered on the windows that can be attributed to SCP-1171-1. Two-way communication can be accomplished by writing back.

SCP-1171-1 is apparently an inhabitant of another world, calling itself Beauremont. It claims not to be human, and is actively hostile to humanity. It believes Dr. to be an entity similar to itself. Please see Interview Logs SCP-1171-1-3 to SCP-1171-1-14.

The most recent owner, John Wertham, complained about ghosts, prompting investigation by civil authorities, and eventually Foundation agents. Following the investigation, the house was purchased through a front organization, and Mr. Wertham's

memories altered.

Interview Log SCP-1171-1-3

SCP-1171-1: "CARBON-BASED MONKEYS GO HOME"

Dr. : "Hello."

SCP-1171-1: There is a pause. "IS SOMEONE THERE?"

Dr. : "My name is Dr. ."

SCP-1171-1: "NICE TO MEET YOU. I'M BEAUREMONT."

Dr. : "Where are you?"

SCP-1171-1: "IN MY LIVING ROOM. WHERE ARE YOU?"

Dr. : "In another living room."

SCP-1171-1: "THIS IS NEAT. HOW ARE YOU DOING THIS?"

Dr. : "I don't know. I thought you were doing it."

SCP-1171-1: "IT'S GOOD TO HAVE SOMEONE INTELLIGENT TO TALK TO." An oval with five dots and a curved line appears. Two dots were below the line, one above it, and two on the left. It is assessed that this is SCP-1171-1's version of a "smiley face."

Dr. : "Is there no one else there?"

SCP-1171-1: "AH, MOSTLY JUST A BUNCH OF GAMETES AND CARBON-LOVERS. CAN'T HARDLY STAND ANY OF THAT POLITICALLY CORRECT CRAP."

Dr. : "Gametes?"

SCP-1171-1: "YEAH, YOU KNOW, HUMANS. DON'T YOU HAVE THEM THERE?"

Dr. : Pauses for a moment, and then answers, "No. Tell me about humans."

SCP-1171-1: "OH, THEY'RE THE WORST. I MEAN, DON'T GET ME WRONG, I'M NOT RACIST OR ANYTHING. SOME OF MY BEST FRIENDS ARE HUMAN. BUT IF THEY'RE AS GOOD AS US, WHY DO THEY NEED SKIN? AM I RIGHT?"

Dr. : "I suppose so. Say, what do you look like?"

SCP-1171-1: "OH, PRETTY AVERAGE. SEVEN TENDRILS TALL. BROWN CARAPACE. GREEN BIOLUMINESCENCE. BLUE EYES. YOU?"

Dr. : "Same."

Interview Log SCP-1171-1-6

SCP-1171-1: "DOC, YOU THERE?"

Dr. : "I am now. How are you, Beauremont?"

SCP-1171-1: "I'VE BEEN BETTER. LOST A PROMOTION TO A GODDAMNED PRIMATE."

Dr. : "I'm sorry to hear that."

SCP-1171-1: "IT'S OKAY. IT JUST HURTS. I KNOW I'M BETTER THAN ANY AIR-SUCKING SACK OF PROTOPLASM. I WORK HARD, YOU KNOW?"

Dr. : "I know."

SCP-1171-1: "THEY COME IN, THEY TAKE OUR JOBS… I TELL YOU, DOC, ONE OF THESE DAYS THEY'RE GOING TO PUSH US TOO FAR. NOT THAT I'M SAYING WE SHOULD GET VIOLENT, BUT THAT'S THE NATURAL RESULT IF THINGS KEEP GOING

THIS WAY."

Dr. : "I hope it doesn't come to that."

SCP-1171-1: "OH, SURE, NO ONE DOES. I MEAN, THEY CAN'T HELP BEING WHAT THEY ARE. BUT THEY KEEP COMING IN. I MEAN, I DON'T MIND HAVING A FEW AS NEIGHBORS, SO LONG AS THEY MIND THEMSELVES, BUT WOULD YOU WANT YOUR SPAWNSIB TO MARRY ONE?

Dr. : "I suppose not."

Interview Log SCP-1171-1-13

SCP-1171-1: "DOC, YOU THERE?"

Agent : "He's out. I'm watching his house for him."

SCP-1171-1: "WHO ARE YOU?"

Agent : "My name's John Doe. I am a human."

SCP-1171-1: "OH. I DIDN'T KNOW DOC KNEW ANY HUMANS."

Agent : "Is that a problem?"

SCP-1171-1: "NO, NO, NO. IT'S ABOUT TIME DOC GOT SOME HUMAN FRIENDS. GREAT TO SEE THAT HE'S MEETING NEW PEOPLE."

Agent : "Glad to hear that."

SCP-1171-1: "VARIETY IS THE SPICE OF LIFE, THAT'S MY MOTTO. HOW ARE YOU? IS YOUR SKIN NICE AND FLEXIBLE? INSIDES FULL OF FLUIDS?"

Agent : "Everything is satisfactory, thank you. I've got to go."

SCP-1171-1: "YOU TAKE CARE, JOHN DOE!"

Interview Log SCP-1171-1-14

SCP-1171-1: "DOC! DOC! ARE YOU THERE?"

Dr. : "I'm here, Beauremont."

SCP-1171-1: "DID YOU KNOW THERE WAS A HUMAN IN YOUR HOUSE?"

Dr. : "Yes, he moved here recently."

SCP-1171-1: "WELL, I HAD SOME WORDS WITH HIM. HE WAS A BIT LIPPY, BUT I PUT THAT GAMETE IN HIS PLACE."

Dr. : "I see. He didn't give you too much trouble, did he?"

SCP-1171-1: "NOTHING I CAN'T HANDLE. YOU GOT TO KNOW HOW TO TALK TO THEM, IS ALL. LET THEM KNOW WHO'S BOSS. THAT'S THE TICKET."

Dr. : "I'll keep that in mind."

« SCP-1170 | SCP-1171 | SCP-1172 »

SCP-1172: Double Word Scare

Item #: SCP-1172

Object Class: Safe

Special Containment Procedures: The item may be stored in any standard low security storage room with sign in/out protocols in place. Testing may be performed in situ; if the item is to be transported the bag should be tightly closed using the drawstring and a sealing clip, and the bag be placed upright into a foam lined case to prevent risk of the tiles becoming separated from the bag. Strong sealing clips are to be left in the nearest guard's office to secure the mouth of the bag during transport.

In the event of any or all of the tiles becoming separated from the bag protocol requires that the area is cleared to a radius of at least 10 metres in all directions, and an automated robot is used to bring any spilled tiles in contact with the bag. Once this is done and SCP-1172 is complete the cleared area may be re-entered safely and the bag secured.

Description: SCP-1172 is a linen bag made from thick flax fibres, rendered green by dye derived from the skin of *Pachycereus*, a cactus plant. It contains 100 white plastic tiles, 98 of which are marked with letters of the Roman alphabet. The letter distribution is identical to that of a shop-bought Scrabble set. The remaining two 'wildcard' tiles, usually blank or marked with a single dot in the commercial set, are slightly darker and marked with a drawing of an eye, rendered on the plastic by the same embossing and paint used for the lettering. These two tiles feature no score numbers. Attempts have been made to photograph the design; in each case the tiles have appeared on film as being standard blank tiles. Drawings of the tile are successful, however.

Removal of the tiles from the bag must be performed in accordance with strict protocol:

• Removed tiles must not be taken more than 30cm from the bag. Absolute safe limit has been recorded at 54cm.
• Once a tile is taken from the bag at least six others must also be removed. They must in turn be placed to the immediate right of the previous tile.
• No more than ten tiles are to be removed per use, after which all tiles must be returned to the bag.

These criteria were established during testing by using an automated robot to remove the letters and then retreat slowly from the bag until anomalous effects were noted. Any breach of this could result in serious injury.

When tiles are removed from the bag and placed in left-right order in 96% of situations (166 of 173 tests) the tiles placed formed English words. These words were often found to have relevance to the test subjects, but in some cases the relevance was not apparent until events after the test transpired. D-Class personnel for whom the resulting words were not relevant are to be excused from termination procedures until said relevance is observed.

The remaining 9 subjects drew the tiles containing the eye symbol during the test. In every case once the eye symbol had been drawn, the next time the subject attempted to retrieve a tile they experienced the sensation of being touched on the fingers from inside the bag. The same occurred for subjects attempting to remove more than ten tiles.

Recovery Log: The bag was brought to the attention of a Foundation researcher on periodical duty. The following letter was published in the January issue of Fortean Times:

> **Supplemental Materials 1172-3A: Fortean Times Issue , page :**
>
> Fortean Times,
>
> I know this sounds crazy, but I was at a party at a squat the other night, and after we'd indulged in quite a lot of *ahem* 'recreational substances' one of the hosts led me up to the loft and showed me a dusty pile of board

games they'd found up there. He opened a copy of Scrabble and took out the bag and told me a creepy story about it having been found in Crowley's possessions at the time of his death. He then started chanting and told me to take tiles out of the bag and they said some creepy stuff, all true! After I'd pulled a few out he shouted at me to stop and told me to go back downstairs, and I didn't see him for the rest of the night. Has anyone else ever experienced this kind of thing, or was it a trick inflated by my drug-addled mind?

FortFan, Derby.

The researcher located the writer of the letter who divulged the location of the squat. Agents and - were sent to , in Derby to collect information and if possible retrieve the item for examination. The house was deserted but showed signs of recent habitation. On gaining entry to the loft the Scrabble box was quickly located. In the box along with the board, bag of tiles and the rulebook was a note:

Supplemental materials 1172-3D: Letter found in Scrabble box:

'I hope nobody finds this, I sealed the loft hatch shut for a reason. Do not open the bag. Do not use the bag. It's told me so many horrible things. She cries out for me now, her war cry keeps me awake at night. She is Alala. I am her slave. Don't use the bag.'

'Alala', in Greek mythology, is the female personification of the high pitched ululation used as a war cry. This sound is heard at volumes exceeding 120Dbl when tiles are brought more than 54cm from the bag. During this time the area around the bag is perforated with boreholes around 2mm in diameter, travelling through any material up to a distance of 315cm from the bag at approximately 3-5 bores per second. These bores appear between frames using high-speed video capture and no physical means for producing them has been observed. The ululation and appearance of the boreholes continues to occur until all of the tiles are within 54cm of the bag, at which point the tiles are pulled back into the bag by means that are at this

point unknown. Use of IR cameras have proved inconclusive.

SCP-1172 Test Logs:

Experiment 1172-A:
Test Subject: D-2532
Letters removed: T O H A T E T H E M
Relevance to subject: D-2532 was incarcerated in 1993 for a series of racially motivated murders. Subject was a member of several far-right groups and was a vocal neo-Nazi.

> **1172-A Interview Log - : to : :**
> **Dr. :** What did the letters spell?
>
> **D-2532:** [INAUDIBLE]
>
> **Dr. :** Could you repeat that?
>
> **D-2532:** It's bullshit. You're trying to make me regret it. I don't regret shit.
>
> **Dr. :** What did it mean?
>
> **D-2532:** It means I did the right thing.

Experiment 1172-B:
Test Subject: D-6634
Letters removed: C T [Eye tile]
Relevance to subject: Subject claimed to have no knowledge of any relevance. Four weeks later the subject had a grand mal seizure and died, autopsy revealed a clot on the brain that appeared to have been present for at least two years and had not been diagnosed. Dr. suggested that it could have been treated if diagnosed via a CT scan.

> **1172-B Interview Log - : to : :**
> **Dr. :** Take another tile.
>
> **D-6634:** What's that? That's not a Scrabble tile. *Subject reaches in the bag* What the fuck was that? What the fuck?

Dr. **:** What did you experience?

D-6634: What did I experience? Something touched my goddamn hand! Felt like a wet fish!

Dr. **:** Try again. *Subject reaches into the bag again*

D-6634: Jesus! It felt like something was stroking my fingers. I'm not doing that again. No way.

Dr. **:** Try again.

D-6634: No way. No way. There's another hand in there. That ain't right.

Despite several requests the test subject refused to touch the bag again. Experiment curtailed.

Experiment 1172-C:
Test Subject: D-3155
Letters removed: A L S O T A P E R
Relevance to subject Not known at this time.

Experiment 1172-D:
Test Subject: D-4514
Letters removed: S O C O L D [Eye Tile]
Relevance to subject: Subject claimed to have no knowledge of any relevance. Three days after the testing D-4514 was found in a shower cubicle suffering from severe hypothermia and facial contusions. The subject's body temperature was taken as 32.8˚ Centigrade and the subject expired within minutes of discovery. It appears that a coolant leak in a pipe near the shower area had cooled the water down to near freezing, and the shock of immersion caused D-4514 to slip and knock himself out.

Addendum: It appears that the results of testing are highly varied depending on the order of tiles removed. If the Eye tile is removed from the bag then the prior letters appear to have some sort of predictive nature as to the test subject's demise. If the Eye tile is not selected then the phrases are far more vague. More testing is

required to more accurately establish the limits of its abilities.

« SCP-1171 | SCP-1172 | SCP-1173 »

SCP-1173: The Islamic Republic of Eastern Samothrace

Item #: SCP-1173

Object Class: Euclid

Special Containment Procedures: Knowledge of the "existence" of the IDAS is to be expunged from all databases and sources at earliest convenience. This removal is to include online and print sources; containment will be considered complete when information regarding SCP-1173 is present in Foundation databases only. Active attempts to contain SCP-1173 are suspended at this time; please consult Addendum SCP-1173-1 for details. Three (3) D-class personnel infected with SCP-1173 are to be kept at Site 38 for limited testing purposes; any unauthorized use of the operative phrase for SCP-1173 transmission outside of testing protocols is to result in termination and replacement.

While the current need to contain SCP-1173 is paramount, under no circumstances are Foundation personnel to directly engage in hostile action against individuals attempting to spread SCP-1173. Efforts to contain SCP-1173 should focus on discovering the nature of SCP-1173 and researching methods of eliminating SCP-1173, regardless of whatever actions may be required to accomplish this. However, all Foundation units are to refrain from attacking one another for any reason, including as a part of an attempt to contain SCP-1173.

`Document 1173-A` is to be deleted at earliest opportunity and all affected personnel treated. As per Protocol 1173-Omicron: Until such a time as the nature of SCP-1173 can be more definitively determined and anti-memetic measures can be carried out, direct conflict between affected personnel and standard Foundation personnel is to be avoided. Discussion of SCP-1173 in an unofficial capacity is strictly forbidden to avoid interpersonal conflict among

Foundation personnel.

Description: SCP-1173 is a memetic phenomenon centered around a delusional belief in a political entity, known as the "Islamic Union of Eastern Samothrace," "Ισλαμική Δημοκρατία της Ανατολικής Σαμοθράκης" (in the original Greek), or "IDAS." Affected individuals will possess varying degrees of understanding or awareness of the history or culture of the IDAS, but interviews with individuals under the influence of SCP-1173 have isolated several key characteristics that the political entity is commonly described as possessing. Geographically, the IDAS appears to be a primarily Greek-speaking nation comprising a small mainland enclave on the Anatolian peninsula and a series of islands in the northeastern Aegean Sea. As the name would indicate, within the context of the delusion, a significant portion of the population practices Sunni Islam, with a limited number of Shi'a practitioners and a small group of Syriac Orthodox Christians, though the latter group has largely left the country due to religious conflict.

Individuals can become infected with SCP-1173 only by hearing an operant sentence spoken aloud in their presence by an infected individual; through research, the operant sentence has been determined to be **"You hear about that thing down in Samothrace?"** Individuals that have heard this sentence frequently express minor interest in the ensuing conversation, which invariably describes some sort of internecine military conflict, massacre, famine, drought, ethnic cleansing, or other atrocity occurring within the country.

Uninfected individuals have what Foundation researchers have termed a "passive resistance" to information regarding the IDAS; such individuals will consistently and without fail ignore or fail to observe any data or information regarding the nation unless directly ordered to take in information on the subject. After becoming infected with SCP-1173, individuals will begin noticing references and details to the "current" status of the IDAS in news and other print sources; individuals will begin noticing references to older versions of the nation (often referred to as "Mahometan Saemothras") in works of classic literature dating back to the seventeenth century, and will occasionally make casual references

to Samothrace in the same vein as "Timbuktu" or "Bangkok," meaning an obscure backwater of little importance.

The delusion of the existence of the IDAS is not directly harmful to most individuals. However, research into schizophrenia carried out by the Foundation for unrelated reasons generated a series of connections between SCP-1173 infection and certain previously unexplained psychological abnormalities. Specifically, a significant number (upwards of 800) of homeless or institutionalized individuals diagnosed with schizophrenia have been found to be infected with SCP-1173. Moreover, when interviewed as a part of psychological therapy, many of them described themselves as veterans of an American counterinsurgency force in the IDAS; individuals affected in this way frequently describe close encounters with children and pregnant mothers as suicide bombers, futile attacks by poorly-armed partisans ending in massacres, and war crimes committed by the occupying U.S. troops. Particularly lucid instances of these individuals make vague references to strained geopolitical relations with Russia, which feels threatened by the American incursion, and China, which is described as being engaged in large-scale combat with a heavily-armed Uyghur revolutionary army inspired by the Samothracian resistance.

Addendum 1173-1: After the discovery of SCP-1173, a survey of Foundation personnel revealed extensive SCP-1173 infection at all levels of the chain of command. Attempts to establish and execute containment procedures were complicated due to efforts by other Foundation units to deliberately infect more individuals with SCP-1173. These conflicts developed into sporadic armed fights between Foundation units before Protocol 1173-Omicron was put into place, banning all unofficial communication between personnel regarding 1173 and agreeing to maintain the contemporary equilibrium between infected and uninfected individuals (estimated as groups of approximately equal size).

Addendum 1173-2:

> If you're reading this, the computer has verified you to be uninfected through subtle tests of certain subconscious reactions you have had to keywords placed throughout this document.

Congratulations, Researcher, you've been drafted. God help you.

The Omicron protocol was never intended to be permanent. Many of us tried to help our infected comrades, help to cure them, help them see the truth. Those of us that remained uninfected knew the idea of allowing Foundation personnel to remain under the influence of a dangerous memetic virus, completely unchecked, was madness. But a civil war between Foundation units was even more unthinkable, so we compromised.

Temporarily.

You are now part of a resistance movement, whether you like it or not; history has placed the responsibility on your shoulders. You cannot be told who is on your side and who isn't, and you will never know in most cases. You will not be contacted at any other time regarding this subject, and you will never be able to prove that you received this message in the first place.

The infected are all around us, every day; friends, loved ones, parents, even children. There is a way to counteract the infection, but it has its risks. You must procure a compound from Foundation Pharmacology known as "Class O Amnestic". If you put in a request for it and sympathetic personnel receive the order, they should deliver a box with several hyposprays to you. Whenever possible, you are to isolate personnel, engage them in conversation, determine their level of awareness regarding the Islamic Republic of Eastern Samothrace (how you accomplish this is up to you), determine their infection status, and deliver the antidote if necessary. The

infected still believe we are keeping to the truce; with a concerted effort, we can eliminate the infection from the Foundation. This must be done; we cannot allow the last line in humanity's defense against the anomalous suffer at the hands of an anomaly.

This message approved by O5-2, O5-3, O5-6, O5-8, O5-10, and O5-13.

This message not to be kept in official records.

This message not to be copied or replicated.

« SCP-1172 | SCP-1173 | SCP-1174 »

SCP-1174: The Wreck of the Edmund Fitzgerald

Item #: SCP-1174

Object Class: Euclid

Special Containment Procedures: The Foundation is to liaise with the National Weather Service during SCP-1174-1's active season each year and monitor the development of meteorological phenomena which may contribute to onset of SCP-1174-1 events. Whenever weather conditions favorable to SCP-1174-1 exist, Foundation personnel embedded within the United States Coast Guard and Canadian Coast Guard are to assist in monitoring radio communication from civilian vessels in the active region for any reports of SCP-1174-1 sightings. Civilians spotting SCP-1174-1 are to be instructed not to attempt to approach, communicate with, or render assistance to any instance of SCP-1174-1.

The existence of SCP-1174-1-3 is attested to in "ghost stories" circulated by the general public. Foundation media assets are to limit public dissemination of sightings of SCP-1174-1 instances. Subsequent to civilian sightings of any SCP-1174-1 instance, the Foundation is to intercept the vessel making the sighting upon its docking, debrief its crew, and issue Class-A amnestics.

At O5 discretion, Foundation vessels, or US/Canadian Coast Guard vessels operated by a Foundation crew, may approach and follow instances of SCP-1174-1 for observation purposes. No vessel is to approach within 100 meters of any instance of SCP-1174-1.

Following any shipwreck under conditions resembling an SCP-1174-1 incident, the Foundation is to locate the wreckage as soon as possible and retrieve any instances of SCP-1174-2 found in the vicinity for containment or termination as necessary. All available information about the wrecked vessel is to be catalogued for use in identifying potential new instances of SCP-1174-1.

The Foundation is to monitor emergency calls and social networking for any indications of civilian encounters with SCP-1174-2. Any person reporting an SCP-1174-2 sighting is to be detained, debriefed, and treated with Class-B amnestics. Any dead SCP-1174-2 instances found afloat or washing ashore are to be acquired by the Foundation and destroyed as soon as possible. Authorization is granted to employ Emergency Procedure 248-October-Bravo in the case of an information leak regarding SCP-1174-2.

Captured instances of SCP-1174-2 are to be housed in modified containment cells filled halfway with fresh water at a temperature of 2°C and fed standard containee rations twice per day. Instances of SCP-1174-2 capable of communication may be granted euthanasia at their request following a full debriefing.

Description: SCP-1174 is a localized phenomenon occurring within Lake Superior along the border between the United States and Canada, consisting of visual hallucinations of ships appearing during periods of inclement weather (designated SCP-1174-1) and an unknown number of anomalous human beings associated with ships sinking after encountering SCP-1174-1 (designated SCP-1174-2).

Instances of SCP-1174-1 are capable of manifesting between October 1st and November 30th of each year. Most manifestations of SCP-1174-1 have occurred during "November witch" cyclone conditions producing rain or snow and wind in excess of 95 km/h; however, SCP-1174-1 can manifest at any time during the active season when cloud cover and high winds are present. Instances of SCP-1174-1 are capable of movement at rates commensurate to that of the ship it resembles, and will appear and travel in no discernable heading along Lake Superior until such time as weather conditions improve, whereupon SCP-1174-1 will vanish. In no case has any instance of SCP-1174-1 appeared in, or traveled to, any area less than approximately 5 km from the American or Canadian mainland.

There are currently seven known instances of SCP-1174-1. Five of the seven have been conclusively identified as resembling vessels known to have sunk in Lake Superior during SCP-1174-1's active season;

- SCP-1174-1-1: A fully-rigged wooden warship of late 18th century construction, approximately 45 meters in length, flying the naval ensign of the United Kingdom. Identity unknown.
- SCP-1174-1-2: A wooden schooner of mid 19th century construction, approximately 60 meters in length. Identified as *Lucerne*, an ore carrier sunk in 1886.
- SCP-1174-1-3: A wooden steamship of late 19th century construction, approximately 75 meters in length. Identified as *Bannockburn*, a freighter sunk in 1902.
- SCP-1174-1-4: A steel-hulled, steam-powered warship of early 20th century construction, approximately 40 meters in length. Identified as *Cerisoles*, a French Navy minesweeper lost under unknown circumstances in 1918.
- SCP-1174-1-5: A steel-hulled steamship of early 20th century construction, approximately 75 meters in length. Identity unknown.
- SCP-1174-1-6: A steel-hulled, oil-burning cargo ship of mid 20th century construction, approximately 220 meters in length. Identified as *Edmund Fitzgerald*, a freighter sunk in 1975.
- SCP-1174-1-7: A steel-hulled, diesel-engine patrol boat of early 21st century construction, approximately 27 meters in length. Identified as *SCPS Irvine*, a Foundation vessel sunk while investigating SCP-1174-1-6 in 2007.

Testing has indicated that all instances of SCP-1174-1 are visual hallucinations and do not exist as corporeal entities. SCP-1174-1 vessels do not appear on radar or infrared imaging, and attempts to fire upon them have resulted in armament passing through the vessel without causing damage.

Upon coming into visual range of any vessel traveling through Lake Superior, SCP-1174-1 will attempt to establish communication by means appropriate to the period and capabilities of the vessel appearing, including use of flags, signal lights, Morse code, firing of flares, and radio. In all cases where contact is made, SCP-1174-1 will claim to be in immediate danger of sinking and will request that the vessel approach immediately to assist in evacuating its crew. In radio communication, the voice transmitted from SCP-1174-1 is always an adult male who identifies himself as a senior officer of the vessel requiring aid; conclusive identification of the speaker with

individuals known to have been aboard the vessels at time of sinking has not been made to date.

Any vessels approaching within approximately 75 meters of an SCP-1174-1 vessel will suffer immediate and massive damage to their hull, resulting in the vessel sinking within minutes of approach. Forensic analysis of recovered wrecks is inconsistent, indicating damage consistent with collisions, weapons fire, attacks from aquatic megafauna, and rust. In one instance, a vessel approaching SCP-1174-1-2 appears to have spontaneously capsized without suffering any other damage to its hull. SCP-1174-1-6 and SCP-1174-1-7 are known to have sunk as the result of SCP-1174-1 contact; it is unknown whether the other instances of SCP-1174-1 sunk due to contact as well, or what form SCP-1174-1 phenomena may have taken prior to the appearance of SCP-1174-1-1.

SCP-1174-2 are human beings present aboard vessels sunk as a result of contact with SCP-1174-1. SCP-1174-2 individuals, rather than dying as a result of drowning or hypothermia, remain alive and conscious after submerging and are capable of continuing to live for an undetermined period of time in the lower elevations of Lake Superior. Aside from tissue necrosis as the result of long-term exposure to water, SCP-1174-2 specimens display no unusual health problems as long as they remain submerged at a temperature of 1°-5°C, and continue to show signs of age at a normal rate. SCP-1174-2 individuals removed from the water, or placed into a warmer environment, will display symptoms of shock and/or heatstroke and typically die within one hour if not returned to cold water.

SCP-1174-2 individuals in the wild often subsist on fish and aquatic flora; while some have been noted to attack divers or each other, this behavior appears to be rare and discouraged by the community. SCP-1174-2 individuals typically live in communities at or near the site of their shipwreck and continue to possess full recollection of their lives prior to sinking. Most SCP-1174-2 individuals, unless suffering vocal cord damage as a result of their environment, retain the ability to speak and are capable of understanding each other while submerged. In interviews, captured SCP-1174-2 specimens have denied any explanation or knowledge of why or how they exist

in their current state.

There does not appear to be any upper limit on the length of time an SCP-1174-2 individual can remain alive in the absence of disease or natural hazards. The oldest known individual in captivity is a former crewman of the vessel *D&C*, currently 87 years of age, who became an instance of SCP-1174-2 upon that vessel's sinking in 1957.

The Foundation began formal study and containment of SCP-1174 in 1975, after investigating several claimed sightings of the *Edmund Fitzgerald* following its sinking in early November. Several former crewmembers of the vessel were discovered living in its wreck upon the first formal exploration thereof in May of the following year, and were taken into Foundation custody. Foundation folklorists have since connected "ghost ship" legends regarding the *Bannockburn* to sightings of SCP-1174-1-3, and found references in Ojibwa folklore to a "witch of Gichagumi" which lures fishermen to their doom.

« SCP-1173 | SCP-1174 | SCP-1175 »

SCP-1175: Bovine Icon and Guards

Item #: SCP-1175

Object Class: Euclid

Special Containment Procedures: Due both to its current immobility and public appearance, SCP-1175 can only be contained in a limited fashion on-site. A mobile observation outpost (designated OP-1175-1) is to be maintained at the edge of effect, changing locations at least once within each twenty-four (24) hour period.

Research into more permanent containment procedures is ongoing; until they can be instituted, the site's public function is to remain active with modified hours of 10:00 A.M. to 5 P.M. local time, Wednesday through Monday, with on-site Foundation agents dressed as civilian private security to ensure all unauthorized individuals are removed from the premises before dusk.

Description: SCP-1175 is the central display of the Park, an open-air artistic installation located in [REDACTED] and covering a fenced-in area approximately 0.25 kilometers square. The anomalous properties of the affected objects are only active between sunset and sunrise; for reasons unknown, there is a 35% chance that the objects will become active at random intervals on Tuesdays, and thus the park is to remain closed on this day.

SCP-1175-1 is a representation of a bull's head, 18.28m tall, made of welded cast-iron plates and painted red. Upon initial creation, SCP-1175-1 was hollow, but current observation indicates the presence of machinery or some other form of activity within the structure; specifically, attempts at radar and sonographic imagery have given inconclusive results, alternately showing the structure to be solid metal or to have a lack of any physical material whatsoever, including the shell. Since the appearance of SCP-1175's anomalous features, SCP-1175-1 itself has become completely immobile (see

Incident Report 1175-2), with subterranean imagery showing pillars extending vertically, extending at a rate of approx. 0.6 meters per year. The purpose of these pillars is not currently known, though they have currently reached a length of meters, indicating an initial growth period of advanced speed.

SCP-1175-2 is the group designation of a series of six statues, each 2.59 meters tall, constructed of various metals in the shape of a human skeleton with a goat's skull. Each statue carries a weapon: one carrying a staff, one a glaive, two with short swords, and two with modified sickles. These statues become mobile during active periods, acting in a fashion similar to guards for SCP-1175-1. They are not outwardly hostile to humans, though one or more will often remain in close proximity to any intruder to whom they have not been introduced (see Addendum 1).

SCP-1175-2 will only become hostile in two situations, the first being if a non-introduced individual attempts to make contact with SCP-1175-1, or if any individual attempts to damage it, or if any individual attempts to remove SCP-1175-2 or another installation from the park. At this point, whether or not they are in a currently active state, all instances of SCP-1175-2 will immediately emit sounds described as "screaming" or "screeching" and attack that person and either kill them outright or chase them to the edge of the affected area. If the targeted person or persons are killed, their remains are brought to SCP-1175-1, at which point a hinged portion of its mouth will open (no such feature was present in its initial construction) and the remains are placed inside before it closes. It is currently not known what occurs after this as remote video and audio equipment lose all contact once the mouth closes.

Alternately, if any structure of human construction is erected within a 0.9km radius of SCP-1175-1 and remains standing for longer than twenty-four (24) hours, upon activation all instances of SCP-1175-2 except for one will again emit the screeching noises and run to the construction at speeds up to 75 km/h. Upon reaching the new structure, they will proceed to attack it with provided weapons as well as fists and their horns until the structure is completely demolished, similarly attacking any humans who attempt to interfere. This reaction does not appear to be triggered by repairs,

modifications or extensions to structures which existed within the area of effect at the time of its appearance; this consists of the Park itself including its outer fence and office/gift shop, approximately 0.2km of state highway [REDACTED] that intersects the area, and one abandoned shack (since damaged beyond repair during a blizzard, later destroyed without incident).

SCP-1175-2 have shown signs of individual intelligence and appear to be able to communicate to each other, using lower-decibel levels of noises similar to their attack calls; no variances or patterns have emerged and attempts to initiate communications have thus far proven ineffective. SCP-1175-2 also appear to ignore non-human life, even in instances where birds or rodents have been observed directly defacing structures within the park during active periods. Superficial and structural damage to SCP-1175-1 will repair itself through unknown means.

Addendum 1175-1: SCP-1175 was first brought to Foundation attention on / / , when three local youths broke into the park at night and interacted with SCP-1175-2 during its active state. Foundation agents were made aware of the situations when local authorities had assumed the suspects to be under the influence of hallucinogenic substances due to a well-publicized raid on a narcotics supplier in the neighboring town of [REDACTED]; after application of class B amnestics, the suspects were given suggestive memories that they must have consumed food that was tainted with the narcotics.

Extensive questioning of G P , owner of the park and creator of all pieces of art therein, has revealed that he was not responsible for the anomalous activities and is not aware of how they began; however, he was aware of their existence for approximately one month before the above incident but never reported them to authorities or family members out of fear. It has also become apparent that SCP-1175-2 somehow recognize Mr. P as their creator or as an authority in some other fashion; they obey requests and commands from him to an extent, and if he introduces an individual as a friend, SCP-1175-2 will ignore the individual from that point on, including allowing them to directly touch SCP-1175-1.

As this ability to "introduce" others has not yet been successfully

passed to other individuals, P has been designated as SCP-1175-3, but retained as director of the Park to maintain public appearances and to facilitate Foundation activities. He is kept under constant surveillance, but has thus far not attempted to impede Foundation agents in any way and has proven himself willing to offer any support or information he is able.

Addendum 1175-2: Incident Report 1175-02

On / / , Foundation personnel attempted to remove SCP-1175-1 from the park; despite having been assembled off-site and transported to its current locations, all attempts to move the structure failed, culminating in the destruction of a crane regulated to lift up to approximately 20 times the weight that SCP-1175-1 weighed at the time of installation. Attempts to excavate the ground beneath SCP-1175-1 or remove other structures from the park were repeatedly interrupted by SCP-1175-2, though not to the level of hostility if the anomalous pieces are attacked directly. It has been decided that, until more stringent protocols are able to be enacted, all material is to remain on-site with additional Foundation agents for security; a nominal raise in park admission fees has been added to compensate for the expenditures.

SCP-1176: Mellified Man

Item #: SCP-1176

Object Class: Euclid

Special Containment Procedures: SCP-1176 is to be kept within the sarcophagus it was recovered in, fully submerged in SCP-1176-1, in a secure, climate-controlled observation room at Site 73. SCP-1176 is not to be removed from SCP-1176-1 for any period of time longer than is necessary to conduct essential research or replace monitoring equipment, in no case exceeding six hours. SCP-1176 is to be monitored by EEG at all times when not fully submerged in SCP-1176-1 for any sudden changes in brain activity. Any unexpected changes in SCP-1176-1 production are to be noted. Excess SCP-1176-1 is to be drained from the sarcophagus using the attached faucet, once per day or as necessary to prevent overflow, and is to be destroyed or sent for testing immediately.

SCP-1176-1 is to be transported and stored in vessels clearly indicating that it is not a food product and is inedible. SCP-1176-1 is not to be consumed by any incompatible person except for testing purposes. All requests to issue SCP-1176-1 as an emergency field ration are preemptively denied, regardless of individual compatibility, pending a full Ethics Committee review.

Description: SCP-1176 is the mummified corpse of a human male, presumed to have been approximately 35 years of age at the time of death. Severe tissue degradation has made DNA examination of SCP-1176 impossible; based on contextual evidence, SCP-1176 is assumed to have been of Arabian ancestry and to have died in the 10th-11th century AD. SCP-1176 is clinically dead and does not display any indications of respiration, circulation, or metabolism. SCP-1176's brain, which is largely intact in spite of general tissue degradation, exhibits a constant level of electrical activity consistent with stage 3 non-rapid eye movement sleep ("deep sleep").

In the place of all bodily fluids that would be found in a living human being, SCP-1176 contains a fluid of viscous consistency and golden color, designated SCP-1176-1. Testing of SCP-1176-1 has found it to be chemically identical to clover honey produced by the Anatolian honey bee (*Apis mellifera anatoliaca*). SCP-1176-1 is exuded from SCP-1176's pores at a variable rate depending on environmental conditions. When kept fully or mostly submerged, as it typically is when stored within its sarcophagus, rate of SCP-1176-1 production is approximately 0.2 liters per hour. When it is not submerged, production increases exponentially over time (see Incident 1176-1 log). The quantity of SCP-1176-1 contained within SCP-1176 itself has not been documented to increase or decrease at any time, regardless of the rate of production.

SCP-1176-1 has been determined to be edible by human beings possessing an AB+ blood type, and possesses properties consistent with a highly concentrated nutritional supplement. A dose of SCP-1176-1 15 ml in volume contains approximately 2500 kcal and significant quantities of essential vitamins and nutrients, making it highly effective as an emergency ration or staple foodstuff. Tests conducted on D-Class personnel indicate that SCP-1176-1 consumption by compatible persons is effective in preventing physical sensations of hunger for 14-18 hours after consumption and bears no long-term side effects.

Persons of a non-AB+ blood type, upon consuming any amount of SCP-1176-1 greater than 0.5 ml, begin exhibiting symptoms of a severe allergic reaction within four to ten hours of consumption. Acute hemolysis, followed by renal failure and death, has occurred in 98.7% of all tests where an incompatible person was fed SCP-1176-1. Symptoms of SCP-1176-1 consumption among incompatible test subjects are consistent with symptoms of persons given blood transfusions of a type incompatible with their body chemistry.

At the time of its recovery, SCP-1176 was stored within a stone sarcophagus of late Hellenistic style. The lid, sides, and interior of the sarcophagus are inscribed with texts in late Egyptian hieroglyphics, largely consisting of ceremonial texts and spells regarding the protection of the person entombed within and

hagiographic descriptions of various gods, and an extinct and thus far untranslated dialect of Proto-Arabic. In a large section at the foot of the coffin, the original inscriptions have been obliterated and replaced with two separate inscriptions in Classical Arabic (see addendum for translation). A hole has been drilled into the sarcophagus near one end, into which a copper pipe and a spigot has been fitted. It is hypothesized that the spigot was installed within the last 100 years by the persons previously in possession of SCP-1176 for the purpose of facilitating the removal of SCP-1176-1 from the sarcophagus. The sarcophagus itself possesses no anomalous properties.

SCP-1176 was acquired by the Foundation in 1985, following a raid on a facility in Asmara, Eritrea (then Ethiopia) owned by the Manna Charitable Foundation. Foundation assets in the region had identified the facility as the source of shipments of honey which had been widely distributed to famine-stricken regions of Ethiopia, resulting in the deaths of approximately civilians from symptoms resembling acute hemolysis. How the MCF came into possession of SCP-1176 has not been determined to date.

+ Show text of Arabic inscriptions on SCP-1176 sarcophagus

Text of first inscription:

> Abdallah ibn Salah ibn Ayyub ibn Nasir, fifteenth son of the great sheikh (illegible), was put to the fast of honey on the first of Rajab in the year of the Hijra 3(illegible),[1] and died on the fifteenth of Ramadan. The great imam al-Yusuf has sealed him within the ancient vessel, marked with the signs decreed by the ancients, to ferment in honey for one hundred years and bring aid to the people in time of need.

Text of second inscription:

> Beware, imam, for the mark of Iblis is upon this one!

In the year of the Hijra 573,[2] the imam al-Malik ordered this vessel opened, thereby to feed the people during time of great famine. Many jars were filled and delivered to the sheikh and his court, to the great imams of the mosques, and to the people. And in the following day, a great many people fell ill with a terrible fever, and none of them lived - but the sheikh, and his brothers, and his sons, who ate heartily of the cursed nectar, were all of them unharmed. Those who lived declared the sheikh and his family guilty of sorcery and (illegible). But when the people came to destroy the body taken from the vessel, they found it standing upright and dancing about, screaming and mocking them. Al-Malik has decreed that a foul djinn has been sent by the Shaitan himself to corrupt this instrument of healing, and has decreed that it be sealed within this vessel until the last day. May God strike down any who would break these seals.

+ Show Incident 1176-1 log

Incident 1176-1: On / /20 , an experiment was conducted to determine the upward limits of the rate at which SCP-1176-1 can be produced. SCP-1176 was removed from its sarcophagus and placed upon a grated surface designed to drain all SCP-1176-1 produced away rather than allowing it to accumulate. After increasing to a rate of 1.2 liters per hour after the first hour, the rate at which production accelerated continued to increase by approximately one liter per hour, reaching a production of approximately 55.7 liters per hour. After approximately 10.5 hours, a sudden spike in brain activity was detected and SCP-1176 became conscious. SCP-1176 opened its eyelids and began flailing wildly and attempting to engage in distressed vocalizations, and attempted to crawl towards one of the walls of the test chamber.

Due to the atrophied state of its internal organs and musculature, it is speculated that SCP-1176 was unable to see or derive any meaningful sensory data from its environment during this period, and was unable to speak coherently due to the degradation of its tongue and palate. As the staff were concerned that SCP-1176's movements would damage itself, four junior research personnel were instructed to manually restrain SCP-1176 and sedate it. During the attempt, SCP-1176 jerked its left arm violently, resulting in its hand being severed at the wrist. After attempts to sedate SCP-1176 using gas and intramuscular injection were unsuccessful, research personnel were instructed to return SCP-1176 to its sarcophagus and set the lid in place. SCP-1176 was heard continuing to vocalize, and to strike the interior of the sarcophagus with its limbs and head, for approximately 3 hours, after which time it ceased activity and returned to its previous state.

Subsequent examination has detected multiple bone fractures induced during SCP-1176's period of activity, as well as several previously unnoted fractures speculated to have been caused by an earlier such state. SCP-1176's severed hand has continued to exude SCP-1176-1 at rates commensurate with the rest of the specimen and is currently being contained separately for further research.

« SCP-1175 | SCP-1176 | SCP-1177 »

SCP-1177: The Coupon Cutter

Item #: SCP-1177

Object Class: Safe

Special Containment Procedures: SCP-1177 is currently housed in the containment quarters of Site 40. A staffed closed-circuit camera monitors SCP-1177 at all times. If SCP-1177 attempts to practice self-harm, alert the head researcher as soon as possible. Per standard humanoid containment precautions, personnel are to be searched before entering SCP-1177's chamber. Personnel are subject to an additional search upon exiting the chamber.

Description: SCP-1177 is a Latin-American female of indeterminate age who possesses the ability to exchange severed pieces of her own body for goods and services.[1] Although she appears elderly, this may be a result of her long-term abuse of her anomalous property and lifestyle—interviews reveal that, prior to entering Foundation custody, she had spent much of her adult life as a homeless vagrant. SCP-1177 was discovered in the [REDACTED] casino in Kansas after she bribed the doorman into allowing her entry and made several attempts to play a nickel slot machine without the use of casino tokens before being apprehended by security and delivered to paramedics. Foundation agents alerted to these events posed as employees of a local mental health facility and were given custody of the woman without incident. The slot machine and the rug under it were submitted for cleaning.

Possessions found on SCP-1177's person upon containment included: one (1) costume jewelry ring; two (2) plastic earrings; one (1) toothbrush; one (1) comb, fine-toothed; three (3) empty wrappers belonging to the [REDACTED] fast food chain; two (2) instant lottery tickets, scratched off, with no redemption value; one (1) pocketknife; one (1) washcloth, bloodstained; one (1) movie ticket stub; one (1) piece of ham, kept in an additional fast food chain wrapper; and one (1) 16 oz. bottle of rubbing alcohol, with half the contents remaining.

These objects were evaluated and discarded.

Physical examination following containment revealed signs of self-mutilation covering her body, including numerous scars, healing wounds, missing teeth and patches of hair. SCP-1177's fifth toes and right fourth finger are missing. Her right middle finger has been crudely amputated after the lower joint, as has the upper joint of her right index finger.

Tissue samples used by SCP-1177 are most commonly strips of flesh from the arm or leg, irregularly cut off using a pocketknife or other implement, removed and cleaned of blood using a washcloth before being presented. Those who are offered a section of SCP-1177's body recognize it as being detached human flesh, but do not manifest revulsion or surprise; instead, they accept the flesh as an alternate form of payment, like a voucher or debit card. This varies in effectiveness based on several factors, including the subject's normal likeliness of accepting alternate forms of payment, the size of the payment expected, and the amount and type of flesh given.

Incident Log 07-40-1177

As demonstrated by an attempted containment breach on 07/24/ , SCP-1177 is capable of using body parts as a form of bribery. During food delivery the woman gave the attendant [REDACTED], which she had apparently gnawed off without detection, in exchange for release from containment quarters.

According to testimony, SCP-1177 quickly maneuvered to the front lobby of Site 40. The woman borrowed a pair of scissors from the receptionist before attempting to exit, failing, and requesting that the front doors be unlocked. The desk attendant denied the request and called for a security officer. When security arrived, SCP-1177 was attempting to use scissors to sever the remainder of her left ring finger.

Experiment Log 1177-1

On 08/06/ , an experiment was conducted in which two strips of flesh, each measuring a square inch, were taken from SCP-1177's leg, sanitized, and given to researchers. Dr. Raines purchased a hamburger at the Site 40 cafeteria, but did not consume it, citing loss of appetite. Research Assistant Clark took his sample of SCP-1177 to a local convenience store and attempted to exchange it for a pack of cigarettes. When the shopkeeper asked for his ID, Clark displayed the piece of flesh, and was met with revulsion. Hoping to avoid further argument, the research assistant left for a bookstore, where he successfully bought a used book with the sample ("Stress Fractures: Keeping Your Job From Getting To You", on clearance for $3.00).
Since then, further experimentation has yielded the following transactions:

- One piece of muscle tissue, .5 oz by weight, for three (3) bags of [REDACTED] brand chocolate candies, priced at $0.50 each: Successful.
- One lock of hair for one (1) comic book ([REDACTED], volume 1, issue 3, priced at $2.99): Transaction failed. The operator considered the payment insufficient.
- One lock of hair for one (1) comic book, ("NFL Superpro", volume 1, issue 1, priced at three for $1): Transaction successful.
- One 2 oz. vial of blood, for one (1) bag of [REDACTED] brand charcoal briquettes, priced at $6.99: Transaction failed. The convenience store clerk considered the payment insufficient.

- Three 2 oz. vials of blood for one (1) bag of [REDACTED] brand charcoal briquettes, priced at $6.99: Transaction successful. The researcher was given three dimes and one nickel (value $.0.35) in change.
- One piece of skin, measuring nine square inches in area, for one (1) gold-plated necklace: Successful. The transaction was made at a pawn shop. As of 08/10/ , the piece of skin is framed and on display in one of the shop's cabinets.

Experiment Log 1177-2

On 08/12/ , Researcher McAmes stood on Fifth Street in downtown [REDACTED] from 13:21 to 13:52. During this time, he approached numerous pedestrians and requested that they make change for him for the subway from one of ten (10) samples of SCP-1177 stamped 1177-45 through 1177-55, each a .5 oz. chunk of skin and flesh taken from SCP-1177's abdomen. Each person who accepted a sample was tracked by a Foundation task force until a transaction was made which used their piece of tissue. The following results were recorded:

- **1177-45**: Placed in the tip jar of a coffee house.
- **1177-46**: Used at an electronics store to purchase the PC game [REDACTED].
- **1177-47**: Used to partially cover the bill at an Irish tavern.
- **1177-48**: Placed in an envelope and mailed.
- **1177-49**: Given to a homeless man. When this occurred, the man became

very agitated, and shouted unintelligibly at the subject until he was out of sight.
- **1177-51**: Deposited in a savings account at the local branch of Wachovia Bank.
- **1177-52**: Placed in a dancer's top at the [REDACTED] gentleman's club.
- **1177-53**: Exchanged for chips at [REDACTED] casino.
- **1177-54**: Possessor evaded tracking behind an abandoned storage building. When the Foundation agent continued pursuit, he was met with gunfire. Agent disengaged. Further investigation recommended.
- **1177-55**: Given in the offering plate at the [REDACTED] Lutheran Church.

Conclusion: Samples of SCP-1177 are not single-use, although their value may not remain consistent amongst transactions. The only method of estimating how much of SCP-1177 remains in circulation is through noting the amount of scar tissue and number of open wounds on SCP-1177. Of special note is that, at no point during any SCP-1177 experiment did subjects other than informed researchers display awareness of their composition.

Experiment Log 1177-3

Experiment 1177-3 is currently in process, with a more long-term focus: the intention of measuring the age at which 1177 samples become inert. As of 03/18/ Sample 1177-71, which was removed from SCP-1177 six months prior to this date, retains value in lieu of legal tender or as a voucher for other transactions.

Footnotes

1. Similarity between this ability, and that possessed bySCP-2855has been noted. Investigation into a common source of both phenomena, or if one is a variant of the other, is ongoing.

« SCP-1176 | SCP-1177 | SCP-1178 »

SCP-1178: Floating ICBM

Item #: SCP-1178

Object Class: Keter

Special Containment Procedures: An area of exclusion has been created around SCP-1178's active area. Any human or vehicle entering this area is to be immediately terminated or destroyed. Security personnel patrolling this area from the ground must maintain a state of radio silence at all times. Aircraft patrolling the area must never move closer than 2 kilometers to SCP-1178's area of exclusion. Observational equipment must pre-date 1938, and be constantly manned by Foundation personnel.

If SCP-1178 shows any signs of movement towards the perimeter, it is to be considered a containment breach and a possible apocalyptic scenario. Loudspeaker units set up around SCP-1178 must constantly create broadcasts of varying nature, including:

- Fabricated news reports of limited nuclear war between NATO states that possess nuclear armaments and the Soviet Union and the People's Republic of China. In addition, there are to be reports indicating that the Midwestern United States has been devastated in a retaliatory strike and that the US Army has invaded the Kamchatka Peninsula.
- False broadcasts indicating troop movement and communications in the Soviet and United States armed forces.
- False civilian broadcasts corresponding to the above events.
- Television signals for programs broadcast between 1962 and 1981 in the Soviet Union.
- Advertisements for consumer products such as gas masks, radiation suits and firearms capable of being used by a child or parent.

In the event that SCP-1178 begins to accelerate, all personnel are to initiate the Pretia Protocol. In the event of a Pretia Protocol failure,

Overwatch Command is to be set on high alert for the imminent possibility of an end-of-the-world scenario.

Description: SCP-1178 is a Soviet era RT-2 Intercontinental Ballistic Missile (NATO reporting name SS-5 'Skean'), manufactured sometime between 1962 and 1967. SCP-1178 is suspended exactly 1.34 kilometers in the air above , a former Soviet missile base. SCP-1178's rockets will activate intermittently, however it has never been observed to move outside of breach events.

If any vehicle or mammalian organism approaches or SCP-1178 from a distance of 200 kilometers or less, or if a broadcast contrary to standard SCP-1178 broadcasts is made in SCP-1178's range, it will begin to slowly accelerate itself from its position above the base. SCP-1178 moves very slowly, with the highest speed ever obtained being an estimated 1.6 kph, achieved during its initial activation event. SCP-1178's acceleration is to be considered a breach event, as it will cause SCP-1178's secondary effect to initiate. The initiation of the Pretia Protocol must to be done within 3 minutes of SCP-1178's acceleration in order to be effective.

SCP-1178's secondary effect will initiate in the event that the missile is able to accelerate to a speed greater than 0.2 kph. The **early nuclear detection systems** of any former Soviet state will begin to indicate an imminent nuclear strike. Starting with radar stations, all equipment possessed by these nations will begin indicating a massive nuclear strike coming from any nuclear capable NATO nations. When these states have gone on alert for the possibility of a nuclear strike, the equipment of any nuclear capable NATO nations will also begin to indicate an imminent nuclear strike from any country currently affected by SCP-1178. Note that SCP-1178 will only affect the early detection equipment of these countries, and does not affect the actual launch devices or the commanders in charge of said devices.

The Pretia Protocol calls for sleeper agents within nuclear detection organizations in various NATO and former Soviet states to sabotage the early detection systems of the countries they are working for. This is to create a plausible explanation for why these systems showed false readings. Once this has been achieved, personnel are to ignore or cast doubt on any readings detected by equipment

affected by SCP-1178. In the event that one nation launches a nuclear attack, the response systems of the recipient nation(s) are authorized to be disabled by Foundation agents, to minimize the damage created by a nuclear strike and avert an XK scenario.

Prior to SCP-1178's containment, several incidents of near-accidental nuclear strikes by world powers were reported to the **Foundation by assets integrated in the Soviet GRU and the American CIA**, leading to the discovery and recognition of SCP-1178 as an anomaly. A partial list of incidents caused by SCP-1178 has been included in this report.

Object History: On / / , SCP-1178 was launched, which was reported as a test by the Soviet Union. During the launch, GRU Division "P" reports say that SCP-1178 ceased to accelerate and unexpectedly detonated once it reached a height of 1.33 Kilometers. At the same time, early warning nuclear detection equipment in the USSR began to display an imminent nuclear strike by the U.S. It is not known why the USSR did not retaliate in response to these readings. Approximately 6 days after the incident occurred, the GRU evacuated and then demolished the base, and established a permanent observation center.

Recovered records indicate that SCP-1178 was launched at an object present in the atmosphere over Siberia, but the appearance and properties of this object are unknown, as all information on the object was destroyed in 1991.

After an unknown period of time, SCP-1178 began affecting the area around the base, leading to its second activation event. Following this event, the area of exclusion that currently exists around it was established. During the Cuban Missile Crisis, GRU personnel began broadcasting the signals currently used by SCP personnel to contain SCP-1178. It is believed that research with SCP-1178 had led them to create an elaborate "post-war" hoax, in order to keep SCP-1178 pacified.

Research notes recovered from the GRU theorized that SCP-1178's only motivation to activate was to irradiate the earth through nuclear war, and if such a war had already occurred it would remain inert until another civilization capable of conducting a nuclear war arose.

SCP-1179: Centralian Fire Demon

Item #: SCP-1179

Object Class: Keter

Special Containment Procedures: SCP-1179 is apparently dormant, encased in the bedrock under Research Site- . Apart from simple monitoring and standard research safety protocols, no additional containment is deemed necessary at this time. [Edited, 05/ /1962]

Due to the subterranean nature, self-ambulatory capabilities, and physical properties of SCP-1179, enforcement of containment has to date proven impossible. Project Tartarus is charged with continuous research into developing additional practical containment measures for SCP-1179. It is speculated that SCP-1179 is capable of being destroyed, as wounds inflicted by heavy ordnance during the evacuation attempt of Expedition-1179-VI were later observed to not have healed. To date, isolation and observation of SCP-1179 has mostly proven sufficient, as SCP-1179 has demonstrated no efforts to move above ground and has limited itself to a roughly two kilometer radius from its original location of discovery. In the event that SCP-1179 should be observed to move beyond recorded areas, personnel are to immediately notify O5 Command.

The land above SCP-1179 has been designated as “Area-179” by the Foundation. Due to the proximity of a civilian population center which cannot be moved, Area-179 is to only employ low yield nuclear failsafe devices. [Edited, / /1992]

The general public has become aware of SCP-1179 and believes the cover story that it is, in fact, an anthracite coal mine fire caused by a trash dump fire. Foundation personnel are to infiltrate and coordinate all efforts to extinguish the blaze for the protection of both involved civilians and SCP-1179. All efforts to extinguish the blaze have ceased. [Edited, / /198]

Civilians living above SCP-1179 have suffered adverse health effects due to byproducts of the fire, including carbon monoxide, carbon dioxide, and insufficient oxygen levels. Civilians are no longer permitted in Area-179. [Edited, / /1992] Effects on civilians are within tolerable levels, with the populace generally unaware of the scale of SCP-1179. Following the incident with Todd Domboski and the associated quantity of press coverage, the Foundation is to work to relocate civilians from Area-179. Area-179 has been claimed by the Commonwealth of Pennsylvania under eminent domain. [Edit, / /1992] It has subsequently been closed to all unauthorized personnel with the Pennsylvania government enforcing evictions of unauthorized residents. [Edit, / /2009]

A bunker has been constructed in a geologically stable section of Area 179, allowing for Foundation operations in the area and monitoring of SCP-1179. Foundation security personnel, along with local law enforcement, are to coordinate to prevent civilians from entering Area 179, in accordance with warnings issued by the Pennsylvania Department of Environmental Protection. Personnel within Area 179 are to restrict their movement to approved areas, due to the geological instability caused by SCP-1179.

Description: SCP-1179 has not been clearly and scientifically observed since May 1962 during Incident CB-1962- - . The original file description of SCP-1179 is as follows:

> SCP-1179 appears to be a giant vaguely humanoid figure carved from an unknown volcanic rock. In one hand, it holds a whip; in the other, a sword. Its face has vaguely human features, including a long beard, though it has two large horns like those of a ram flanking its face. SCP-1179 measures over 30 meters from head to toe, with shoulders over 8 meters wide. It resembles a carving of the Norse *eld jötunn* Surtr (the giant guarding the frontier of the Norse fire realm of Múspell). Dating of the stratum encasing SCP-1179 indicates it dates to the Mississippian subperiod of the Carboniferous period, approximately 359.2-318.1 million years ago. This age is consistent with the geological age of this region.

SCP-1179 has since demonstrated the ability to change shape at

will, and to become invisible and without form, appearing as a giant flying shade. Photographic evidence has failed to produce a conclusive image of SCP-1179, due to inexplicable camera feed disruptions, operator panic, and physical destruction of cameras. Expeditionary teams have described SCP-1179 as “having hellfire” for eyes and generally having great height. Its body often is seen as a combination of fire, smoke, and hardening lava.

From there, the descriptions begin to diverge wildly. Survivors generally describe its head as “monstrous,” with some mentioning curved horns consistent with the original form of SCP-1179. Others argue it has fangs larger than a man's arm. Still others state that SCP-1179 has neither horns nor fangs, and its face is encircled by flames which reach down into a long beard of fire. Eyewitnesses cannot agree whether or not it has wings. Most agree that it is usually armed with a multi-tailed whip of flame and a glowing red sword of fire several meters in length, though it will at times appear with either the whip or the sword or neither. Though of great size, it is apparently capable of moving both quickly and quietly. Those few who survive encounters with SCP-1179 generally describe it as smelling of “rotten eggs and old chimneys”. Chemical analysis of air samples taken from SCP-1179’s breath have shown exceptionally high concentrations of carbon monoxide and sulfur dioxide.

Item History:

+ Show Item History, 1871 to Present

SCP-1179 was discovered in 1871, five years after anthracite coal mining was begun in the area. It was nicknamed the “sleeping stone giant”. The mine shaft in which it was discovered belonged to Mr. Sean O’Malley, a member of the Molly Maguires, an Irish-American secret society, whose members were predominantly coal miners in Pennsylvania. The society kept the sleeping stone giant hidden away, a closely-guarded secret. Though the Molly Maguires were dismantled in the late 1870s, the giant’s guardians managed to escape prosecution. The sleeping stone giant came to the attention of the Foundation in 192 , when operatives were conducting a routine background check into

Prospective Agent Iain O'Malley (grandson of the original Mr. O'Malley). The land above the giant's mine shaft was purchased by a Foundation front company and Research Site- was established.

In May 1962, residents of the nearby town lit a trash fire in a landfill which had been created from an abandoned coal mine. Those responsible for garbage disposal followed insufficient safety protocols, and a seam of anthracite coal ignited. The seam was small and Foundation geologists have determined it would have burned out in approximately two years, had it not run under Research Site- . The fire reached SCP-1179, which promptly reanimated in the presence of the fire.

Upon reanimation, SCP-1179 killed all Foundation personnel at Research Site- and significantly damaged the site's bunker. It subsequently retreated into the honeycomb of coal mines and caverns in the area, igniting subsequent anthracite coal fires. The mines, caverns, and surrounding countryside was designated Area-179, though due to the nearby town's civilian population of several thousand individuals, standard Area construction protocols for Keter containment could not be observed; these were modified to fit the circumstance.

Five separate Expeditionary Teams were sent in to capture SCP-1179 between 1962 and 1970, though none were successful. They did determine that SCP-1179 had proven capable of expanding the caverns to vast proportions and unknown depths. Satellite imagery and evidence of noxious gases and ground collapse contradict these accounts and the photographic evidence which confirms them, indicating that the mine fires are only burning in an area covering roughly 400 acres, or 1.62 square kilometers. The discrepancy between the sizes of the caverns has, to date, not been reconciled.

In 1970, Foundation geologists determined that the

subterranean fires caused by SCP-1179 would remain burning for in excess of 250 years. With Foundation personnel successful in perpetuating the half-truth of the original cause of the mine fires and unsuccessful both in recovering SCP-1179 for removal and transfer to an alternate location and extinguishing the blazes it had caused, the decision was made to instead relocate the nearby town. Concurrently, Project Tartarus was formally begun to develop and refine permanent special containment procedures for SCP-1179 and determine means to extinguish the anthracite fires.

Foundation personnel have worked constantly in the area to ensure the continuation of the mine fire cover story and prevent civilians from encountering SCP-1179, though this proved increasingly difficult as the local situation continued to deteriorate. In 1981, twelve-year-old local, Tom Domboski, fell into a sinkhole approximately 1.25 meters wide by 46 meters deep which opened beneath his feet his backyard. He was saved by his cousin, 14-year-old Eric Wolfgang. The plume of hot steam billowing from the hole was measured as containing a lethal level of carbon monoxide, and chemical analysis matched the steam to samples of SCP-1179's breath. Spurred both by the worsening “mine fire” and by covert lobbying by Foundation political contacts, in 1984 the United States Congress allocated funds in excess of $42 million to relocate the civilian residents from the area. At the suggestion of under-cover Agent , Pennsylvania Governor Bob Casey claimed eminent domain on all properties in the borough, condemning all buildings within. Foundation personnel ensured that the subsequent legal effort by residents to have the decision reversed were met with failure. As a result, full Keter Area containment protocols could finally be observed.

Addendum 1179-1: Research is pending into harnessing the anthracite coal fires as a means of energy production, as they will likely continue burning for the foreseeable future. See Project

Vulcan’s Forge, or contact Project Lead Dr. Crane or Area-179 Director Wilson for further details.

Addendum 1179-2: Images relating to SCP-1179's effects on Area-179.

« SCP-1178 | SCP-1179 | SCP-1180 »

SCP-1180: A Lovely Bunch of Coconuts

Item #: SCP-1180

Object Class: Safe

Special Containment Procedures: A security camera has been mounted near the transplantation site; footage should be reviewed for changes on a weekly basis. Hardhats are mandatory for those working in close proximity to SCP-1180. All instances of fallen or new growths should be promptly reported to the head of Botanical Research.

Description: SCP-1180 is identical in appearance to *Cocos nucifera*, the coconut palm. The anomaly was discovered when a research team was dispatched to investigate local rumors of a "possessed palm": witnesses claimed that the plant would intentionally drop its sizable drupes on the heads of unsuspecting passersby. The specimen was found growing in relative isolation on a strip of shore less than 16km from the outer perimeter of Research Sector-09.

SCP-1180 grows and fruits at the same rate as a comparable specimen of *Cocos nucifera*. The organism's only outwardly anomalous trait is a rattling or knocking sound that emanates from its fruits. These noises grow louder as the drupes reach maturity. Radiography results are identical to those of normal coconuts.

Tests with human subjects suggest that the organism is equipped with an unusual adaption for preservation and propagation; while the tree itself is vulnerable to damage, subjects instructed to open, crack, or otherwise damage its offspring experience significant emotional distress.

Addendum 7/29/ :

> *excerpt from Agent Gast's recovery log:*

Research team, equipped with suitable headgear, meets with no accidents while examining the organism. A subdued rattling, described by recovery team as "knocking sounds", can be heard issuing from inside the ripening coconuts. Excavated root ball densely packed with worms of an unknown species. Several days of observation have yielded similar results; decision made to transplant the palm to Sector-09 grounds for further tests. Transplant accomplished without mishap.

Addendum 8/9/

ACCESS RESTRICTED TO LEVEL 3 PERSONNEL OR HIGHER

+Experiment Log 8/7-14/

Synopsis: Subjects are provided with tools and instructed to remove the husk of a coconut (designated SCP-1180-01) recently cut from SCP-1180. Majority visibly distressed by the knocking sounds from within. Several describe a feeling of horror; a few describe empathetic feelings— always with the desire to remove the object "outside". During sixth consecutive test, D-3767 (a subject with exceptionally low empathy scores) finally succeeds in rupturing and peeling away the husk; no immediate adverse effects observed.

8/7/

14:00
After removing husk, subject seems reluctant to crack open the shell. The rattling has grown perceivably louder, sometimes slowing almost to a stop before beginning again with renewed violence. The subject claims to "feel" the vibrations of the knocking, and claims that SCP-1180-3 has a "face". Subject refuses to remain in the same room with the object; eventually subdued and removed for observation.

16:00
Other subjects are instructed to photograph and describe their reactions to de-husked specimen; all react with similar displays of reluctance and increasing uneasiness.

D-8084, another subject with significantly low empathy scores, instructed to crack open the already de-husked SCP-1180-3. Suitable precautions are taken by observing research team. Using a hammer, D-8084 manages to split the fruit open, cracking it into several large pieces. The white "meat" appears slightly rotten; kernel is otherwise empty.

8/8/

01:34
New growths have appeared on SCP-1180, apparently in place of those removed for testing. None of these specimens have been observed to "rattle".

8/9/

04:50
D-8084's body discovered standing rigidly upright in the center of his cell. The corpse had been decapitated; site of injury is wrinkled and puckered, cause of trauma undetermined. Head of D-8084 not yet recovered.

Addendum 8/14/ :
The largest instance of the new growths, designated SCP-1180-8, now measures 110mm in diameter. Caretakers have reported knocking sounds coming from inside the husk.

« SCP-1179 | SCP-1180 | SCP-1181 »

SCP-1181: Interactive Kaleidoscope

Item #: SCP-1181

Object Class: Safe

Special Containment Procedures: Site-916 is situated 100 meters from the northern edge of SCP-1181. Patrol teams monitor the perimeter of SCP-1181 and any civilians that come near the perimeter of SCP-1181 are to be escorted away by personnel posing as game preserve rangers. An ultrasonic deterrent device is to remain active near the center of SCP-1181, to prevent activation. The device's full strength range is 300 meters, and weakens until ineffectual at 500 meters. The ultrasonic deterrent and its backup generator is to have daily maintenance checks to ensure it is functioning properly. All staff working within the range of the ultrasonic deterrent are to be equipped with sound negating equipment. Site-916 also contains SCP-1181-1, which is kept in secure containment room 916-4, for low risk objects. Access to SCP-1181-1 is restricted to level 4 personnel and above.

Description: SCP-1181 is a circular clearing 2048 meters in diameter in a forest, located in a game preserve in [REDACTED].

When a living animal, or portion of a living animal, passes through the center of SCP-1181, SCP-1181 and its barrier activates. No other animal will be able to pass into SCP-1181 from the outside and any other animal inside SCP-1181 when it is activated will not be able to leave, until SCP-1181 is deactivated.

The outside of the barrier of SCP-1181 is impenetrable until SCP-1181 is deactivated. The barrier is a sphere, surrounding SCP-1181. The barrier cannot be sensed, except by touch; the sensation is described as similar to touching cold glass. It also cannot be detected by any known instruments. Any objects present on the perimeter when SCP-1181 is activated will be split apart either side of the perimeter.

Once the activator moves a random distance between 2 and 8 meters from the center of SCP-1181, 3 other exact copies of the activator will appear around the center of SCP-1181, facing outwards from the center, arranged equally separate from each other, 90 degrees apart. Each of the 3 copies will move identically to the activator.

If the activator continues to move away from the center, it and its copies will be copied again at random distances from the center. The three additional copies will appear around a point 1 meter behind the activator or copy.

Should any simultaneously created copies occupy the same space, their bodies will be fused together. Usually the fusing results in rapid expiration of these copies. If a newly created copy occupies the space of the activator or an already existing copy, the newly created copy will be spawned missing the portions of their body where the existing occupant of the space was, usually resulting in quick, if not instantaneous, death from blood loss.

Living fused and/or mutilated copies and copies that block each others' paths will still attempt to the best of their ability to mimic the activators movements.

If the activator or its copies touches the inside of the barrier of SCP-1181 they will begin to combust. If the person or a copy on fire is copied they will spawn copies that are also aflame. Tests with D-Class personnel asked to touch and describe the physical texture of the inside of the barrier have so far been inconclusive.

SCP-1181 will deactivate if the activator passes through the center point a second time, or dies. Should the activator die, they, all their copies, and any remains will disappear. Should the subject pass through the center for a second time, all copies, and any remains of the copies, will disappear, and any injuries the activator sustained will be healed.

Recovery Log SCP-1181 came to the Foundation's attention when a local hunter reported a 'swarm of butterflies, thick as a cloud' in the preserve. When the barrier was discovered, temporary containment protocol 76-Cherry was initiated. The swarm was monitored for

several days by Foundation personnel, before it disappeared. Upon discovery that the barrier had disappeared along with the swarm, the area was investigated. During the investigation Agent Havelock activated SCP-1181 and died shortly after. Following this incident, Site-916 was built, permanent containment protocols put in place, and research into SCP-1181 commenced. Four weeks after the completion of Site-916, SCP-1181-1 was found during a regular patrol of SCP-1181's perimeter.

+ Test A - Date 27/7/

Subject: D-Class-1033

Procedure: D-1033 was asked to walk in a straight line from point A, on one side of SCP-1181, through the center of SCP-1181, to point B, opposite side of of SCP-1181, and not stop for any reason. D-1033 would be the only subject present in SCP-1181. A UAV fitted with a video camera would record the test from above.

Results: When D-1033 passed through the center, SCP-1181's barrier activated. Once D-1033 had walked 5 meters past the center of SCP-1181, 3 copies appeared around the center of SCP-1181, at 90 degree intervals. The subject did not notice the copies.

When D-1033 had walked 17 meters past the center, he and the other three copies of himself manifested 3 additional copies. The subject turned and noticed the copies of himself which caused him to panic, he and his copies screamed and ran toward point B, despite warnings to remain at a walking pace.

The 4 copies that had spawned facing backwards ran toward the center of SCP-1181. When the copies came into contact with each other they attempted to mimic D-1033

movements further, despite physically obstructing each other to the point of futility.

As D-1033 continued toward point B, he activated several copying points. When the subject was 300 meters from the center of SCP-1181 there were over 16 thousand copies, some fused or otherwise mutilated. Uninjured copies continued to run in various directions, mimicking the subject.

Immediately after D-1033 had passed the 500 meter from the center, there were over 60 thousand copies, interfering with each others progress, and spawning more copies. At this point much of the ground was covered with fused and mutilated corpses, as well as blood. Copies continued to mimic D-1033 and spawn more copies, or attempt to despite impediments and/or injury.

When the subject arrived at point B, he and all copies of himself yelled; "Yes, finally!" As D-1033 and all copies which came into contact with the perimeter, they burst into flame, screaming and rolling around. All other living copies rolled and screamed regardless of if they were on fire.

Seven minutes after coming into contact with the perimeter the subject died from third degree burns. The extensiveness of these burns was not able to be verified. The subject and all copies disappeared, including blood, organs and smoke.

SCP-1181 and its barrier deactivated.

+ Test B - Date 13/8/

Subject: D-Class-1059

Procedure: The subject was told to walk in a straight line from point A, on one side of SCP-1181, through the center of SCP-1181, to point B, 20 meters from the center, then turn and head back through the center to point C, 5 meters from the center. The subject would wait at point C for 10 minutes, then walk through the center of SCP-1181 again toward point D, 500 meters from center, then turn around and return to the center of SCP-1181.

D-1059 was told not stop for any reason. D-1059 would be the only subject present in SCP-1181. The subject was informed of the clearing's nature prior to the test to lessen the chance of panic during the test. A UAV fitted with a video camera would record the test from above.

Results: After activating SCP-1181, D-1059 moved to point B; being forewarned, she did not panic when she saw the copies of herself, although she was visibly startled. The subject then turned and walked towards the center of SCP-1181.

2 meters from the center, D-1059 began to struggle through the scrum of her copies as she made her way to the center.

After two minutes, all the copies of D-1059 disappeared. SCP-1181 deactivated. D-1059 was seen crawling towards point B, where she waited for ten minutes, before walking through the center point, towards point D, reactivating SCP-1181. Upon reaching point D, the subject turned and headed toward the center of SCP-1181.

Once D-1059 was 250 meters from the center of SCP-1181, she ran into resistance from her

copies, and her progress towards the center slowed. Five minutes later, visual confirmation of D-1059 was lost in a pile of bodies 50 meters from the center. Four minutes later, D-1059 and all her clones disappeared, and SCP-1181 deactivated. D-1059 presumed suffocated.

+ Analysis of Tests

Study of the UAV recordings of subjects interacting within SCP-1181 show SCP-1181's radial symmetry. Any one quarter of SCP-1181 is identical to the other three, no matter how many copies there are or how they are moving, despite mutilation, pile-ups, blood etc. So far it seems that nothing can be done by the subject interacting with SCP-1181 to ruin SCP-1181's perfect symmetry.

+ Analysis of SCP-1181-1

Description: SCP-1181-1 is a large stone tablet with an inscription chiseled into it. The type of rock was consistent with local geology. The language of the inscription is not known.

Decoded Inscription

For such a thing to be created, without means to destroy it, it can only be unforgiving maliciousness, unforgivable stupidity, or perhaps both. I will never know.

The symmetrical plague enveloped the planet, but for the mountains, valleys and seas, each hemisphere an identical wedge of swarming [REDACTED], with the source as its polar center. The source, only a point in space, with nothing to identify it, or give warning.

The planet was abandoned. But there was

nowhere to go, and the cold cradle of black space could not be our home. In our calm, silent despair, we elected to spend our last days in the pursuit of a hope. A hope that was both for ourselves, and not for ourselves.

With what was salvaged, we did what we could.

May this barrier serve you well, or God help you.

« SCP-1180 | SCP-1181 | SCP-1182 »

SCP-1182: Clockwork Octopus

Item #: SCP-1182

Object Class: Safe

Special Containment Procedures: SCP-1182 is essentially harmless and as such is to be contained in a standard locker. Because of the object's unique mental effects, usage of it is not permitted unless at least one Level 2/1182 clearance staff member is present.

Description: SCP-1182 is a small octopus sculpture approximately 171 mm in length and 76 mm in breadth, weighing 312 grams. It is constructed from a combination of wire, copper, and titanium alloy. The head of the octopus contains a clockwork contraption that serves no documented purpose.

When held by a subject (who will henceforth be referred to as SCP-1182-1), SCP-1182 and SCP-1182-1 become effectively invisible. SCP-1182 causes the subject to camouflage perfectly with their surroundings. The sculpture causes an as of yet unexplained reaction on SCP-1182-1's pigmentation, giving it the properties of an octopus in disguise. This also means that the subject can only achieve full invisibility while naked, as the effect does not extend to clothing. The camouflage is distinctly much better than that of a common octopus, as SCP-1182-1 blends in to the point where it is impossible to distinguish their position. If SCP-1182 is released, the subject appears to "blink" back into existence.

Of note is the mental effect that the octopus has on SCP-1182-1. While holding SCP-1182, the subject perceives the room as if it were filled completely with water. The presence of sea life from fish to coral to sea vegetation has been reported in all cases. Other personnel in the room are seen behaving as if submerged. Conversation with SCP-1182-1 is impossible as the subject hears only gurgling noises as if the speaker were communicating

underwater. When SCP-1182-1 moves, they feel as though they are swimming. In three cases, SCP-1182-1 reported seeing their limbs as the tentacles of an octopus.

SCP-1182's effects, both the camouflage and the hallucinations, only work if the octopus is in contact with a subject's skin. Tests involving holding the object through a glove and similar materials have yielded no results.

« SCP-1181 | SCP-1182 | SCP-1183 »

SCP-1183: Piles of Everything

Item #: SCP-1183

Object Class: Euclid

Special Containment Procedures: The airspace in a 25km radius around SCP-1183 is designated a no-fly zone. Any unauthorized aircraft or seagoing vessels entering this radius are to be informed that they are entering a military exclusion zone and rerouted. Aircraft or vessels which do not heed this warning are to be intercepted and detained.

The affected area of SCP-1183 itself is not to be entered within two hours of its expected manifestation events. Observers are to promptly report each new manifestation. If manifested objects present a significant threat to health or safety and cannot be contained, site personnel are to evacuate to sea until the next manifestation occurs. Personnel are not to consume food or beverages manifested by SCP-1183.

Description: SCP-1183 is a remote island in the south Pacific, 18km long by 8km wide, located at coordinates ° . ′S ° . ′W. Every 126 hours and 14 minutes, SCP-1183 manifests a pile of objects covering up to 85% of its surface. The objects appear instantaneously and silently, and all objects remaining from the previous manifestation simultaneously vanish. The area of SCP-1183 covered by the objects changes from manifestation to manifestation, and freshly-uncovered areas possess low vegetation consistent with local ecology.

The manifested objects always belong to a single class. The breadth of these classes varies somewhat, such as the / / manifestation of laptop computers of all makes and models, and the subsequent / / manifestation of Apple MacBook Pro laptop computers, but in no case has the class been so narrow that it was difficult to determine its identity. For small classes with a few well-known

individual instances, the manifested objects have always been observed to include every instance of that object class which is known to have existed. For more numerous objects, it is impossible to determine exact numbers, but estimates of the number of objects on SCP-1183 generally agree closely with estimates of the number of such objects to have ever existed.

Of the manifestations recorded by the Foundation to date, 76% have been man-made objects, and 16% have consisted of human or animal body parts. Objects manifested by SCP-1183 appear normal in every way while they remain, and man-made objects appear in like-new, ready-to-use condition. This is true even for objects known to have been completely destroyed or, in the case of spacecraft, sent elsewhere in the solar system. No living organisms have been observed to manifest.

Selected Observations:

Date: / /
Objects Observed: Bibles
Notes: Due to the wide variation in sizes of individual copies, estimates of the number of Bibles present ranged from 3 billion to 6 billion. The pile was searched for early copies of potential historical significance, but given the number of copies present an exhaustive search was not possible. The earliest copy located dated to 1607.

Date: / /
Objects Observed: Coca-Cola brand soft drink cans
Notes: An estimated 1 billion cans of Coca-Cola brand soft drink, in a large conical pile with a maximum height of approximately 60m. Laboratory mice given only this soda to drink showed no ill effects until the next manifestation, after which they quickly expired. Based on this result, eating or drinking materials manifested by SCP-1183 is prohibited.

Date: / /
Objects Observed: Saturn V launch vehicles
Notes: All 15 flight-ready Saturn V launch vehicles observed lying side by side on the ground, fully assembled and fueled. The vehicles were extremely cold due to cryogenic fuel, and SCP-1183 was evacuated after initial investigation due to concern of a potential

explosion.

Date: / /
Objects Observed: Human left ears
Notes: An estimated 1,200,000kg of left ears are present, representing approximately 60 billion individuals and covering 30% of the island to a maximum depth of 12m. Ears were initially warm and showed no sign of decay, but decay progressed normally until their disappearance. DNA analysis found normal human DNA representing individuals of a variety of races.

Date: / /
Objects Observed: Unknown
Notes: The previous manifestation disappeared as expected, but no new manifestation was discovered. It has been suggested that a manifestation may have in fact occurred, but the object or objects were small enough or inconspicuous enough to have escaped notice.

Date: / /
Objects Observed: British castles
Notes: Every known British castle was represented, along with five unknown castles which may represent previously-destroyed instances. The castles were arranged haphazardly within the affected area, but were situated upright and on the ground. Furnishings were not present.

Date: / /
Objects Observed: Croissants
Notes: A pile of croissants 80m high at its highest point, covering 6 square kilometers of SCP-1183. Estimating the number of croissants was complicated by the presumed heavy compression of the lower layers by the weight of the upper layers, but the average of the estimates was 126 billion croissants.

Date: / /
Objects Observed: SCP objects possessing or relating to [REDACTED] abilities
Notes: Eighteen seemingly-unrelated objects appeared. Several of the objects were immediately identified as SCP objects, all related to [REDACTED], and SCP-1183 was promptly evacuated. Due to the

danger involved, the manifested objects were not tested to see if they retained the anomalous abilities of the originals. Using photographs of the objects taken prior to evacuation, seven of the objects were matched against SCP objects in Foundation custody. The remaining eleven objects may represent SCP objects to which SCP-1183's researchers do not have clearance to access, or they may represent objects which are not currently in Foundation custody. As the potential for eleven uncontained objects possessing [REDACTED] abilities represents a significant threat, photographs of these objects have been forwarded to a Level 4 review team for further evaluation.

« SCP-1182 | SCP-1183 | SCP-1184 »

SCP-1184: Truth

Item #: SCP-1184

Object Class: Safe

Special Containment Procedures: SCP-1184 is stored in a secure locker at Site . Access to SCP-1184 requires Level 4 Level 5 authorization and a complete test script. While SCP-1184 is in use, no fewer than two armed guards wearing purpose-built soundproof headgear with an external audio feed and recording hardware, and thus able to hear the test without being subject to SCP-1184's effects, will monitor the test to ensure that the script is followed. Any deviation from the script will result in detainment or termination.

Description: SCP-1184 appears to be a simple gold ring in the style of a wedding band and engraved with the word "Veritas" (the Latin word for "truth") on the inside of the band. SCP-1184 has an unusually high density of 21.2g/cm^3, higher than almost any terrestrial material, and thus the visible gold surface is believed to be plated over another, possibly exotic, material. Only nondestructive testing has been permitted on SCP-1184 to date, and therefore the composition of its interior cannot be verified.

While wearing SCP-1184, everything the wearer (henceforth known as the "speaker") says is accepted as the absolute truth by anyone able to hear and understand them (henceforth known as the "listeners"). Simple, easily accepted statements are taken at face value without apparent surprise, as with instructing D-class personnel that they will in fact receive a full pardon at the end of the month. Statements which are clearly at odds with reality, such as "I know this looks like an ordinary ballpoint pen, but it is in fact the nuclear aircraft carrier U.S.S. Enterprise", may create a significant amount of cognitive dissonance, depending upon the listener and situation. Listeners have been observed reacting to "impossible" statements in several ways:

1) Simply accepting the statement as fact without regard for its impossibility. Listeners told that a pen is an aircraft carrier and exhibiting this reaction would subsequently identify the pen as an aircraft carrier without appearing to find this fact remarkable. This is by far the most common reaction, and most test subjects never seem to notice anything unusual no matter how impossible their beliefs are.

2) Inventing (sometimes quite elaborate) confabulations to explain away the impossibility of their beliefs. Listeners exhibiting this reaction may invent fantastic stories involving shrink rays and disguise generators to explain how the ship came to resemble a pen.

3) Very rarely, listeners may conclude that the failure to "properly" perceive reality is their own fault. Listeners exhibiting this reaction may appear confused and claim that they are hallucinating or believe themselves to be suffering from other mental problems. Depending upon the nature of the implanted belief, this may cause extreme stress and anxiety over their inability to see the "truth" of the situation, and this may lead to actual psychological problems manifesting even in previously healthy individuals.

There are no recorded cases of any subjects either realizing that their beliefs have in some way been manipulated or concluding that their implanted beliefs are untrue, no matter how seriously they disagree with reality or how plainly SCP-1184's effect is explained to them. Even SCP-1184 itself cannot override beliefs previously implanted by SCP-1184; the subject is unable to conclude that either belief is false, even if they directly conflict. A conflict between two SCP-1184 beliefs appears to have a higher risk of causing a psychotic break than a conflict between an SCP-1184 belief and reality, but the effect has not been quantified.

Despite being absolutely convinced of the truth of statements heard under the influence of SCP-1184, listeners remain able to accept future changes of state. For instance, telling a listener that "this door is closed" convinces them that the door is *currently* closed, not that the door can never at any point in the future be open. If the door were in fact open, a listener might walk over to the open door (which they had been told was closed), pantomime opening the door, and

then walk through it without incident, interacting normally with the door in the future.

SCP-1184's effect only manifests when both the speaker and listeners understand the language being spoken, and listeners are hearing the sound directly from the speaker's lips. In particular, the following situations have never been observed to cause any anomalous effects to manifest:

- A speaker reading an unfamiliar foreign-language phrase to native speakers of the language.
- A "speaker" silently communicating with deaf listeners via mutually-understood sign language.
- A deaf listener lip-reading the speaker's words
- Listening to the speaker indirectly via any sort of electronic sound reproduction, whether in real time or recorded.

Attempts to utilize SCP-1184 for its beneficial effects have been hampered by the fact that it also affects the speaker, who will become equally convinced of the truth of their statements. This has proven true even in the case of speakers who cannot hear themselves, as even completely deaf speakers (unlike deaf listeners) have proven to be subject to SCP-1184's effects.

As no means of directly using SCP-1184 without being subject to its effects has yet been discovered, the following indirect test procedure forms the foundation of all SCP-1184 use:

> **Test Procedure 1184-Sigma**
> 1) Secure test subject(s) within SCP-1184 test chamber.
> 2) Researcher enters test chamber carrying, but not wearing, SCP-1184.
> 3) Researcher dons SCP-1184 and repeats the following passage verbatim:
> "It is vitally important that you do not voluntarily do or say anything unless I specifically tell you otherwise. In particular, you must not touch the ring I am now wearing unless I tell you otherwise."
> 4) Researcher removes SCP-1184 and places it on the table in the room, and then exits the test chamber.
> 5) Researcher triggers a prerecorded message in his

voice instructing one of the subjects to don the ring.
6) Prerecorded message instructs the ring-wearer to repeat his words verbatim, and then continues very slowly and clearly with the message to be delivered to subjects.
7) Prerecorded message instructs ring-wearer to remove the ring, place it upon the table, and step away from it.
8) Researcher enters the room and retrieves SCP-1184.
9) Researcher leaves the room and uses the intercom system to inform subjects that they may speak and act normally again.

When properly followed, this procedure results in all test subjects being implanted with the desired beliefs, without adversely affecting any SCP personnel. Strict adherence to the procedure is essential, as mistakes can and have led to loss of life or breaches of security. In particular:

- The word "voluntarily" was added to the test protocol after a subject apparently decided that "do not do or say anything" meant that she could not breathe.
- The requirement for a prerecorded speech was instituted after several incidents of flubbed lines by researchers. The consequences of these mistakes were generally relatively minor, but in the most extreme case [DATA EXPUNGED].
- The initial speech to the test subjects must still be given "live" by the researcher for SCP-1184 to function, and thus has been kept short to minimize the chance of mistakes.
- The test subject wearing SCP-1184 remains a weak point in the process, as any misunderstanding or mistake in repeating the prerecorded speech's words can result in the wrong message being delivered. The SCP-1184 test chamber is equipped with an airtight door, separate ventilation system, and hydrogen cyanide gas canisters for this eventuality.
- During Incident-1184-7, Dr. , then the head researcher on SCP-1184, deliberately deviated from his test script, instructing the D-class personnel to [DATA EXPUNGED] and using SCP-1184 to force everyone else he encountered to assist him with his plans. Over the course of his escape attempt, Dr. made 47 known statements while wearing

SCP-1184, and at least more which could not be deciphered from available security footage. Dr. was of course familiar with SCP-1184 test procedure and worded his statements carefully to avoid deluding himself, but shortly before exiting the facility it seems that a careless mistake caused him to convince himself that [DATA EXPUNGED], and he was easily captured and terminated. His final statement was inaudible in security footage, but the leading theory is that he stated something to the effect of [DATA EXPUNGED] upon realizing that the site had gone on full lockdown, thus rendering himself helpless.

After careful psychological screening and review of security footage, many of the staff affected by Incident-1184-7 were eventually cleared to return to active duty. The affected D-class personnel were [REDACTED]. The current Level 5 approval and armed guard requirements were instituted in the wake of this incident.

History: SCP-1184 was discovered in a mental facility in , after reports of strange incidents came to the Foundation's attention. A Foundation team discovered SCP-1184 being worn by a patient known only as the King of , being waited upon hand and foot by doctors, nurses, and other patients. The patient's true identity is unknown, as his name badge, room identification, and all medical records consistently referred to him as the King of . All doctors, nurses, and patients in the facility suffered from a wide range of delusional beliefs concerning him, and the Foundation team charged with investigating the incident quickly fell under the "King"'s power. A backup team with soundproof headgear was able to neutralize the "King" and his sycophants, ultimately determining that the gold ring he wore was the source of his unusual power. Interrogating the "King" regarding SCP-1184 proved futile, as the repeated careless use of SCP-1184 had left him deluded about his history, location, and identity.

+ Incident-1184-7 Followup

Given that SCP-1184 was involved in at least one unauthorized use and may have been used on any of us before, during, or after that incident, there is no way for us to truly verify our facts. We believe that Dr. was

undone by a careless misstatement, captured, and ultimately terminated. We believe that we are still in possession of the genuine SCP-1184, and not a worthless replica or merely an empty locker. We believe that we have brought in unaffected individuals from other Foundation sites in order to verify these facts. We believe that they have done so. We believe that we are researchers working for the Foundation. We believe that we show up to work every day and study various objects, including SCP-1184. We believe that we have homes, spouses, and children. But we have no means of determining, even in theory, if any of these facts are actually true or are merely delusions instilled by a user of SCP-1184.
- Dr.

« SCP-1183 | SCP-1184 | SCP-1185 »

SCP-1185: Self-Supplying Gasoline Pump

Item #: SCP-1185

Object Class: Euclid

Special Containment Procedures: All currently known instances of SCP-1185 are to be maintained in storage at Site , with the exception of SCP-1185-3, which will remain installed in its original location and must be monitored at all times. Instances of SCP-1185 in storage are to be isolated from soil and other organic mediums at all times. Soil and organic media used in testing must be isolated from outside contact until the instance of SCP-1185 undergoing testing is removed from the area.

Description: SCP-1185 is a collective designation for a set of gasoline pumps featuring identical manufacturer's marks and anomalous effects. Instances of SCP-1185 vary in age and design, in all cases appearing identical to other pumps installed in their facilities. The oldest known instance (resembling and installed alongside several Gilbarco Model 66 pumps) was installed in a rural Chilean town from 19 until its discovery in 20 , while the newest (resembling a Dresser Wayne Century 2200 Series pump) was only one month old at time of discovery and removal by Foundation agents.

All instances currently known possess identical manufacturer's markings on the base of the pump, though all other markings on the visible areas of the pump appear normal for the assumed model and manufacturer. These markings refer to a "Livewater Incorporated", an apparently fictitious corporation, the existence of which has yet to be substantiated. Employees and owners of fueling stations where instances of SCP-1185 have been located report no familiarity with any such corporation, and in all cases, the means of delivery and installation have been identical to common practice for non-anomalous pumps.

When in close proximity to soil, instances of SCP-1185 extend fibrous tendrils from their bases towards the soil. These tendrils are metallic in composition, and are capable of penetrating several inches of concrete or asphalt should such stand between them and a mass of soil. Upon contact with suitably nutrient-rich soil, these tendrils branch out to form a pseudo-root-system of metallic fibers. The material composing the tendrils is an unknown metallic compound, which rapidly destabilizes and breaks down into various metal ions (primarily lead and copper) should the tendrils be disturbed. These fibers are hollow, allowing them to convey organic molecules to the pump, where an as-yet undetermined series of chemical reactions convert them into the component molecules of gasoline fuel. The exact composition of the fuel varies between instances, generally matching that of gasoline produced during the period of the pump's installation, and the process of conversion has no apparent mechanism; the substances extracted from soil appear to spontaneously break down and reassemble into the new molecular structures while passing through the pump. Disassembling and reassembling the pump has no effect on its anomalous properties, and installing any of an instance's components into other pumps of the same model will cause all components of that pump to take on the same anomalous properties.

On initial installation, instances of SCP-1185 draw organic material from soil within a one-meter radius of the point of contact. Once soil resources have been drained to a degree that would render the supply inadequate, the pump’s tendrils extend further, resulting in its effects encompassing wider areas and causing increased depletion of soil resources. As operation of the pump continues, the increasingly widespread depletion of soil organic content begins to cause malnutrition in local flora and ground-based fauna. In cases where pump usage is especially prolonged or frequent, total ecosystem collapse can and will occur as the pump consumes and processes all available organic resources.

Addendum 1185-001: On 4/13/ , a routine check on the fueling station where SCP-1185-1 was previously installed revealed similar anomalous properties in the new pump purchased as a replacement for the removed instance. The new pump was, according to the

owner's bank statements, purchased from the same corporation that had provided the other two, non-anomalous pumps in use. According to interview transcripts, a corporate representative met with the station owner and offered a heavy discount on the replacement pump to offset the loss of profits caused by the malfunction of the formerly installed pump (pump malfunction was indeed the cover-story used by the task force charged with removing and securing SCP-1185-1). On contacting and examining the records of the corporation in question, Foundation investigators found that a new pump was indeed shipped, but that no representative was ever sent, nor any discount offered, and that the funds received by the corporation were in accordance with the non-discounted price. The identity of the representative and source of the additional funds are currently under investigation. The pump, designated SCP-1185-3, is to remain installed at its current location and be kept under surveillance in hopes of establishing further contact with the producers or modifiers of the objects.

« SCP-1184 | SCP-1185 | SCP-1186 »

SCP-1186: Cochlear Cicadas

Item #: SCP-1186

Object Class: Euclid

Special Containment Procedures: SCP-1186 instances under Foundation custody are to be held in individual Insect Containment Units at Site- . Each unit is to be constructed to resemble the human auditory system. The maximum number of SCP-1186 instances permitted in Foundation captivity is 140; excess instances are to be incinerated. 140 additional units are to be made available as reserve habitats for SCP-1186 instances.

Civilians identified as hosts of SCP-1186 are to be taken under Foundation custody. SCP-1186 instances which are attached to hosts are to be extracted via invasive surgery. Affected civilians are to be placed under observation for a period up to two weeks. After which, interrogation and amnestic treatment are to be given.

Description: SCP-1186 refers to a species classified under the family Cicadidae, with a mean body length of 2.5 mm. To date, all known SCP-1186 instances remain in their nymph stage and show no signs of metamorphosis typical of other members of the family Cicadidae. To the Foundation's knowledge, no SCP-1186 larva or imago are known to exist. In addition, dissection of SCP-1186 indicates the absence of sexual organs.

Uniquely, SCP-1186 consumes endolymph from human cochlear ducts.[1] As such, SCP-1186's physiology is optimised for the extraction and consumption of human endolymph, such as an elongated and retractable proboscis to puncture human skin and a digestive system specialised in breaking down substances with a high potassium concentration. However, SCP-1186 is known to survive without consumption of endolymph or any other forms of nourishment. Due to the loss of endolymph, hosts of SCP-1186 regularly experience deafness and balance disorder.

After occupying the human ear for a period of one week, SCP-1186 will begin emitting vibrations directly to the skull via bone conduction. These vibrations are then interpreted as the chanting of various Mahayana Buddhist sutras[2] narrated in respective hosts' arterial language. These chants are the only sounds constantly perceived by hosts, despite any auditory impairment on the host's part.

These chants are inaudible in environments with sound levels of at least 50 dB, but hosts are known to suffer from afflictions such as headaches and nausea in such environments. In 2% of known cases, non-lethal damage to hosts' nervous tissues is present. Conversely, in environments with sound levels below 50 dB, the severity of the aforementioned afflictions tends to subside and audibility of SCP-1186's sounds increases.

SCP-1186 was discovered in Chengdu, Sichuan Province, China on / /2007, where they were distributed by the new religious movement 'Ascetics to Heaven's Pillar'[3] to its followers as an initiation rite. In cooperation with local law enforcement units, a crackdown on 'Ascetics to Heaven's Pillar' and its followers recovered approximately 500 SCP-1186 instances and halted distribution. 100 of such instances were kept for study at Site- , while remaining instances were incinerated.

Addendum 1186-1: Interviews with captured 'Ascetics to Heaven's Pillar' followers suggest that the Wenshu Monastery in Chengdu is a gathering point for said members. On / /2007, Mobile Task Force Upsilon-4 ("Hot Iron Strike") was dispatched to raid temple grounds.

Large populations (in excess of 5,000) of SCP-1186 instances were found during said raid. 40 SCP-1186 instances found at the Wenshu Monastery have been taken for study, while the remainder was terminated via incineration by MTF Y-4.

Highest concentration of SCP-1186 instances is centred around a human cadaver seated in the Lotus Position and dressed in robes typical of Tang Dynasty *bhikkhu*.[4] The cadaver has also been confiscated by the Foundation, tentatively classified as AI- and pending further research.

A profile for AI- is as follows:

> **Item Description:** A preserved human cadaver dressed in Tang Dynasty-era *bhikkhu* robes. Radiocarbon dating estimates the cadaver's year of death at circa 620 – 680 CE. Despite its age, no signs of decomposition are found; mechanism of preservation is unknown.
> **Date of Recovery:** / /2007
> **Location of Recovery:** Chengdu, Sichuan Province, China
> **Current Status:** Kept at Anomalous Items Wing in Reliquary Site- .

Footnotes
1. Endolymph from several species of mammals (e.g. cattle) are acceptable substitutes in place of human endolymph.
2. Said chants include theAmitabha Sutra,Heart Sutra,Lotus Sutraamong others; see Document 1186-甲 for a complete list of sutras.
3. 天竺行者 (tiān zhú xíng zhě); a Mahayana Buddhist-inspired religious movement, known for its veneration of figures such as Victorious Fighting Buddha (斗战胜佛; dòu zhàn shèng fó), Cleanser of the Altars (净坛使者; jìng tán shǐ zhě), Gold-Bodied Arhat (金身罗汉; jīn shēn luó hàn), and Dragon Horse of the Eight Heavenly Sections (八部天龙马; bā bù tiān lóng mǎ).
4. Designation of a fully ordained monk in Buddhism.

« SCP-1185 | SCP-1186 | SCP-1187 »

SCP-1187: Stationary ATV

Item #: SCP-1187

Object Class: Safe

Special Containment Procedures: SCP-1187 is to be stored in a remote, above-ground enclosure 5km from Site 19 with a staff of 2 armed guards and 1 Level 1 researcher. SCP-1187 should remain inverted upon its transportation trailer at all times when not being tested. The subject's ignition key, designated SCP-1187-1, is to be stored in the office of the Level 3 director at Site 19 overseeing SCP-1187, and is available upon written request.

Testing must be conducted no less than 10km from any Foundation facility or population center. SCP-1187 is to be removed from its trailer and operated by a Class D subject in the center of a 500m cleared circle. All security and research personnel should remain at the edge of the perimeter, directing and observing the test remotely.

Description: SCP-1187 is a blue 2006 Kazuma 150cc All Terrain Vehicle. It was sold and delivered to of , South Carolina via an anonymous online merchant site. The seller has yet to be located. The owner's initial test ride resulted in an anomalous incident which was suppressed in public media as a powerful but isolated earthquake.

When the accelerator is engaged SCP-1187 remains stationary while the surface beneath its wheels shifts horizontally towards the rear of the vehicle at an increasing rate of speed. SCP-1187 is capable of dragging a 3m wide by 15cm deep strip of terrain at speeds of up to 40kph. This effect extends to approximately 250m in front of the vehicle and 50m behind. Continued operation will shear an increasing amount of material from below the top layer, eventually excavating a furrow and depositing it to the rear of SCP-1187.

Manipulating the steering column will rotate SCP-1187 and shift the area of influence. Applying the brakes will slow and eventually cease the effect. Operating SCP-1187 in the vicinity of buildings or other above ground structures and objects is exceedingly dangerous, as mass above the driving plane is not arrested by braking.

« SCP-1186 | SCP-1187 | SCP-1188 »

SCP-1188: Matter-Displacing Flashlight

Item #: SCP-1188

Object Class: Safe

Special Containment Procedures: SCP-1188 is stored in a secure locker in Site- with its batteries removed. SCP-1188's batteries may not be inserted within 100m of Site- 's outer walls, and all testing is to be performed at least this distance from any personnel or structures not involved in testing, and under no circumstances should SCP-1188 be pointed at a living organism unless this is specifically part of a test. SCP-1188's batteries are to be promptly removed at the conclusion of testing.

Description: SCP-1188 appears to be a standard black -brand flashlight, manufactured by , Inc. circa 1983. Its construction and appearance are unremarkable, and it displays an amount of wear appropriate for its age. SCP-1188 accepts ordinary D batteries, activating via a toggle button. When active, instead of producing a beam of light, SCP-1188 temporarily displaces matter in a truncated cone originating from the bulb end of SCP-1188. The far end of the cone is 21.2m from the end of SCP-1188 and 2.2m wide. Matter within the cone appears to have been completely eradicated, leaving a cone-shaped "hole" through whatever SCP-1188 is being pointed at. SCP-1188 can be freely redirected, causing the "hole" to shift. Matter which is no longer being displaced reappears, apparently unharmed, and switching SCP-1188 off causes all displaced matter to reappear. SCP-1188's bulb remains unlit while operating, though its anomalous effects disappear if the bulb is removed. SCP-1188's bulb functions normally when used in other flashlights.

Test 1188-1 - Date / /
Subject: Tree outside Site-
Results: Shining SCP-1188 on tree appears to "cut" a section out of the tree's trunk, completely bisecting it. The top of the tree does not

collapse, despite no apparent means of support. The internal structure of the tree is clearly visible. SCP-1188's "beam" is slowly moved up and down the trunk, causing the hole to move up and down but without apparent harm to the tree itself.

Test 1188-2 - Date / /
Subject: Ground outside Site-
Results: SCP-1188 "carves" a deep hole in the ground, allowing researchers to see into the ground. As SCP-1188 does not shed light like a normal flashlight, it is difficult to see into the hole unless it is aligned with the sun. With the hole at an angle, Researcher walks on the undisturbed ground above the displaced hole with no ill effect.

Test 1188-3 - Date / /
Subject: Video camera
Results: Video camera is set to record and then displaced using SCP-1188. Upon return, video shows a view of a curved wall, believed to be the inside of a silo.

Test 1188-4 - Date / /
Subject: D-16621
Results: D-16621 is restrained and his hand is "illuminated" by SCP-1188, developing a circular hole through it and exposing the internal structure of his hand at the edges of the hole. Upon witnessing this, D-16621 screams, but is found to be uninjured and the hole in his hand is restored when SCP-1188 is switched back off. SCP-1188 is moved to a greater distance in order to create a larger area of displacement and various areas of D-16621 are displaced beginning with his extremities. No ill effects are apparent, although D-16621 finds the process very distressing. Displacing D-16621's head for several seconds causes him to vomit upon his return. D-16621 attributes this to vertigo, as his head was approximately fifteen feet above the ground and facing straight down when displaced, and the sudden shift was disorienting. D-16621 reports seeing the same or similar building as the video camera and identifies it as an empty grain silo.

Test 1188-5 - Date / /
Subject: GPS tracking beacon
Results: Tracking beacon is able to acquire a good signal and

reports its location as a rural area outside , England. Foundation agents are deployed to secure the area.

Team Mission Report:

> Grain silo found at indicated location. Area surrounding silo is a farm in extreme disrepair, no inhabitants. When activated, the entire cone of matter displaced by SCP-1188 is visible in the air in the exact center of this silo. If you shine SCP-1188 at the ground, you get a fifty or sixty foot cone of dirt hanging in the air. If you move SCP-1188 around, the cone hanging in the air doesn't move but you can see its contents changing. It's one of the weirdest things I've ever seen.
>
> Agent volunteered to have the thing shined on him. Because the small end of the cone is at the bottom and he was looking at it when we switched it on, his upper body was hanging in midair staring down at the ground. He could see his own torso, cut open and showing his guts and everything, but then he fell down and his head came back. He threw up all over the place. Can't say I blame the guy.
> - Agent

Addendum 1

D-16621 became extremely ill 48 hours after exposure, with severe nausea, vomiting, and anemia, dying two days later due to multiple organ failure. Agent 's symptoms were similar but much more acute, with rapidly worsening neurological problems resulting in death six hours after exposure. SCP-1188 is no longer to be used on living organisms.

Addendum 2

Careful study has revealed that displacement via SCP-1188 causes microscopic damage to material along the edge of the displaced region. The damage is extremely small scale, disrupting a small percentage of the molecules along the edge. For bulk materials the damage is inconsequential — displacing a volume of water breaks

an infinitesimal fraction of it into its component hydrogen and oxygen, which has a negligible effect. For living organisms, damaging even a small percentage of the DNA, enzymes, cell walls, and so forth can cause catastrophic damage. The damage is not actually caused by ionizing radiation, but the type of damage is very similar and the resulting symptoms therefore strongly resemble acute radiation syndrome. As D-16621's head was displaced all at once, but Agent 's head actually slid through the edge of the displaced region, Agent developed severe neurological symptoms while D-16621 did not.

Displacing an entire body at once, with no part of the body crossing the edge of the displaced region, should avoid this sort of damage in the future.
- Dr.

« SCP-1187 | SCP-1188 | SCP-1189 »

SCP-1189: The Sound

Item #: SCP-1189

Object Class: Euclid

Special Containment Procedures: SCP-1189 is to be kept in a soundproofed steel box measuring one (1) meter by one (1) meter by one (1) meter. Testing of SCP-1189 should be performed in a soundproofed room, with at least two (2) armed guards stationed outside at all times. Personnel in contact with SCP-1189, as well as security personnel present during testing, must be equipped with earplugs or other sound-dampening devices with a Sound Transmission Class of forty (40) or above. [NOTE: NO LONGER IN EFFECT. See Addendum 013-01]

Description: SCP-1189 is a sound, measuring an average of forty decibels, accompanied by a pale green glow. SCP-1189 has no discernible physical source, though it appears to originate from the small area at the apparent center of the glow. Due to the effects of hearing SCP-1189, knowledge of the sound produced is limited to sound level meter readings. The readings appear to resemble those generated by speech, though no correlation to any known language has been found, and no pattern has been observed. [NOTE: See Addendum 013-01]

SCP-1189 appears to be a self-propagating sound. Subjects that hear SCP-1189 become entirely unresponsive for periods of time ranging from fifteen minutes to just over two hours. Upon emerging from this state, affected subjects appear frantic and immediately attempt to cause others to hear SCP-1189. If resisted, affected subjects become violent.

During [DATA EXPUNGED], Agent was accidentally exposed to SCP-1189. Agent shot and killed his partner, Agent , as well as three security personnel and a Level 1 engineer performing maintenance on SCP-1189's containment. Agent was killed by

security personnel while attempting to force entry into the surveillance room for Floor 27. Agent was holding a field tape recorder which contained a recording of SCP-1189.

SCP-1189 was discovered in an abandoned recording studio. The control room contained several pieces of unidentified electronic equipment, and appeared to have been thrown into considerable disarray. The door to the studio was barred from the outside. The studio itself contained SCP-1189 and a single badly decayed corpse. Attempts to identify the corpse have been unsuccessful.

Though SCP-1189 had been previously contained on-site, an attempt was made to transport it by constructing a soundproofed steel box around the estimated center of SCP-1189 and transporting the box. The attempt was successful, with no trace of SCP-1189 remaining in the original location, and all readings within the box remaining identical to those taken before transport. All contents of the recording studio were destroyed.

Experiment Log: 013-001

Name: Dr.
Date: / /

The box containing SCP-1189 was placed in a soundproofed room, and all air was evacuated from both the room and the box. Subject D-013-01 entered the room wearing a Type-5 containment suit and opened the box. SCP-1189 was immediately heard through the suit's headset, affecting the personnel in the control room overseeing the test, including Dr. . Dr. opened the airlock and attempted to record the sound before being neutralized by security. All personnel within earshot of SCP-1189 were affected, with symptoms decreasing with distance from SCP-1189. Upon psychological evaluation of personnel within extreme range of SCP-1189, they reported growing increasingly agitated as they attempted to remember what they had heard, playing random notes and experimenting with audio software in an attempt to recreate it. Such

personnel were terminated.

Addendum: 013-01
On / / at 05:23, analytical software monitoring SCP-1189 detected a pattern. At 06:04 a recording of SCP-1189 was broadcast over emergency loudspeakers to all of Floor 27. Emergency security personnel were alerted, but were also affected upon reaching the floor. The broadcast continued until standard and emergency power to the entire floor had been cut, resulting in a loss of containment for three other SCPs, including SCP- . Emergency containment crews disconnected all loudspeakers and restored power to the floor. All readings from within SCP-1189's containment had ceased, and SCP-1189's absence was confirmed using Class D personnel. Upon further investigation, it appears that the computer running the analytical program monitoring SCP-1189 for patterns had generated a piece of malicious code that was implemented on the floor's computer network, allowing the recording of SCP-1189 to be uploaded to the emergency broadcast system. Investigation into SCP-1189's whereabouts is ongoing. Recommend immediate reclassification of SCP-1189 to Euclid class.

« SCP-1188 | SCP-1189 | SCP-1190 »

SCP-1190: Universal Simulator

Item #: SCP-1190

Object Class: Safe

Special Containment Procedures: SCP-1190 is to be contained in a secured, temperature-controlled observation room. The observation room must provide accommodations for long term living, to include a cot for sleeping, a restroom, and a food preparation area.

Video surveillance equipment is to be installed outside the observation windows to record the device's output as well as any input provided by SCP-1190-1. All recordings from the surveillance equipment are to be permanently archived for study.

A nurse or nurse assistant must be available to care for SCP-1190-1. Nurse duties include delivery of food, bathing, feeding, application of medicine, administration of intravenous feeding systems, and other tasks necessary for the care of a potentially severely disabled person.

Personnel are not to interact directly with SCP-1190 except for D-class personnel cleared to be used as test subjects. Any D-class subjects to be used for testing SCP-1190 are to be cleared with site administration for a stay of execution during the course of the experiment.

Procedure update following experiment 1190-1: The floor of the observation room must have a central drain for eliminating waste.

Procedure update following experiment 1190-2: SCP-1190 is to be powered at all times, with backup batteries and a diesel generator in case of power failure.

Description: SCP-1190 is a 1973 Hewlett Packard 3000 computer

system. Installed on the device is a program which performs a physics simulation, beginning with the known origins of the universe. Observation of the simulation suggests that it is capable of simulating physical phenomena beyond our current understanding. While running the program, SCP-1190 exhibits inexplicably powerful processing capability, an anomaly which does not persist while the device performs other tasks.

Attempts to decompile the program or to move it to a different device have failed. The program appears to be corrupt to all observations and actions beyond running it on SCP-1190.

Aside from its anomalous performance characteristics and the inexplicably accurate logic used by the simulation, the only other notable physical characteristic of SCP-1190 is that it is unusually well maintained for its age. Otherwise, it appears to be a normal example of a computer of its make and model.

When the program is executed on SCP-1190, the screen displays:

```
Press Enter to Begin…
```

Any individual who activates the program stored on SCP-1190 will become fascinated with the simulation. The individual will want to intervene in the development of the virtual universe to cause it to proceed according to the individual's personal ideals. The individual is designated SCP-1190-1. Over time, SCP-1190-1 will become more obsessed with the simulation, increasingly neglecting personal needs in favor of managing the virtual universe.

Documentation of known commands can be obtained with consent from at least one personnel having clearance level 2/1190 or greater; however, the documentation is believed to be far from complete. Each new subject intuits new commands over time, and while video of the subject's input and the observable results on the simulation have been archived, the exact effects of many commands haven't yet become clear.

History: SCP-1190 came to the attention of The Foundation via an asset embedded in the security department of Laboratories.

On / / , a janitor at Laboratories reported to security that an unpleasant smell was coming from a disused office.

In the office, the responding security officer found a researcher who was thought to have been missing for several weeks (D C , hereby designated SCP-1190-1-A) operating SCP-1190 and surrounded by days of her own refuse and waste. SCP-1190-1-A had at some point brought several days worth of food and water to the office, but only a small amount of water remained.

SCP-1190-1-A displayed symptoms of stage 3 starvation: flaking skin, thinning hair, and insufficient strength to sit up properly. However, SCP-1190-1-A was still operating SCP-1190 while muttering inaudibly.

The security officer attempted to administer aid, but SCP-1190-1-A was uncooperative until the officer disconnected the power to SCP-1190. SCP-1190-1-A became violent and attempted to attack the officer, but because of the aforementioned symptoms was easily subdued. SCP-1190-1-A expired from systemic infection secondary to starvation while being rushed to the hospital.

+ Transcript of video taken by security officer

Officer: “D ? Is that you? Ugh, it stinks in here—are you okay?”

SCP-1190-1-A: [INAUDIBLE]

Officer: “Holy [EXPLETIVE REDACTED]! D ! Your hair—your skin! What happened to you? SecOps, we need medical on floor , office immediately! Ugh, what the hell are you sitting in? Stay with me, girl!”

SCP-1190-1-A: [INAUDIBLE]

Officer attempts to remove SCP-1190-1-A from the terminal, but she resists.

Officer: “Hey—what’s going on here? You need help! Let me help you!”

Officer waves a hand in front of SCP-1190-1-A and gets no response. The officer then unplugs SCP-1190 from the wall.

Officer: “You’ve got to focus! Stay with me!”

SCP-1190-1-A: “You… you killed them… m-murderer! You killed them all!”

SCP-1190-1-A attempts to lunge at the officer, but lacks the strength to stay upright and collapses. SCP-1190-1-A claws at the officer’s legs.

Officer: “W-what are you doing? You’ve got to hold still! Ouch! Hey, I’m here to help you!”

The officer restrains SCP-1190-1-A with a pair of handcuffs.

Officer: “SecOps, you’d better get a stretcher up here—something with restraints, I just found D and she is delirious and in bad shape.”

SCP-1190-1-A: “Billions… you killed billions. They needed me, I gave them paradise, and you killed them. Monster!”

SCP-1190 was taken into containment by The Foundation on / / .

Experiment Logs:

+ Excerpts from Experiment Log 1190-1

Subject: D-class personnel D-11593 is a 53 year old Caucasian male.
Subject Background: A former network administrator, D-11593 is a sociopath convicted on 6 counts of torture and murder in the first degree.

D-11593 (hereafter referred to as SCP-1190-1-B) was

selected for this experiment due to high scores on computer aptitude tests.

Day 1: SCP-1190-1-B was locked in the observation room for SCP-1190. Subject was instructed to begin the simulation, and to keep a diary during the experiment. Subject was given no further instructions.

Day 2: SCP-1190-1-B spent 2 hours tending to the simulation.

> **Excerpt from subject diary**
> "They're making me run some kind of simulation, it seems. So far all I can see are a bunch of white pixels moving away from each other. I can make them move a little faster or a little slower, but that's about it."

Day 7: SCP-1190-1-B spent 8 hours tending to the simulation.

> **Excerpt from subject diary**
> "The stars, they have planets! I figured out how to start a chain reaction in a star that makes it supernova and take out a bunch of planets with it. Maybe if I fast forward enough, I can find one with some playthings."

Day 12: SCP-1190-1-B spent 14 hours tending to the simulation. The rest of the day was spent sleeping and eating with no recreation.

> **Excerpt from subject diary**
> "I found another planet with some life starting. I shouldn't have broken the last planet with life; it took me too long to find another one. This time I think I'll be more subtle and see how much a life form can take before it just can't live anymore."

Day 20: SCP-1190-1-B spent 18 hours tending to the

simulation. Subject ate at the terminal, leaving only to sleep and use the restroom.

> **Excerpt from subject diary**
> "I figured out how to keep the creatures I created alive, even when most of them just want to die. The young ones cry and shake from the pain, but as they get older, they seem to get used to it. I have to figure out a way to change up the pain as they get older, so it will never end."

Day 42: SCP-1190-1-B spent 20 hours tending to the simulation. Subject ate at the terminal, and only left the simulation to use the restroom. SCP-1190-1-B fell asleep for 4 hours at the desk; upon waking up, subject displayed some anxiety about having drifted off. When instructed to write in the journal, SCP-1190-1-B became agitated and had to be threatened with an electric prod before complying.

> **Excerpt from subject diary**
> "The last of the creatures from planet 7 died out today while I was asleep. I should have been there so it wouldn't have been so quick. Now they're making me spend more time away from the universe to write this entry; who knows what else I'll miss?
>
> I suppose I was getting bored anyway, they can only scream so much. I think this time, I'll make the life on planets 12 and 13 evolve so they are perfect for killing each other, then open up a wormhole between the planets and see who wins."

Day 84: SCP-1190-1-B spent 24 hours tending to the simulation. Subject no longer eats independently, and has been placed on intravenous feeding. The nurse has to give the subject sponge baths, and a drain has been installed in the floor so waste can be flushed. In addition,

the nurse has been instructed to regularly manipulate the subject's extremities to mitigate complications from long-term immobility.

When instructed to write in the journal, subject remains unresponsive, even if shocked with an electric prod.

> **Transcript of surveillance video**
> **SCP-1190-1-B:** “No, it can't be over this soon! I know, I'll bring them back, let them fight it out again…”

Day 105: SCP-1190-1-B suffered from a pulmonary embolism resulting from a deep-vein thrombosis. Subject began to have trouble breathing and started coughing. The research assistant on duty called for the nurse, who was off duty and took nearly 30 minutes to respond. By the time the nurse arrived, the subject's symptoms had transitioned to bloody coughing and collapse. Before losing consciousness, SCP-1190-1-B rendered the simulation unusable by bringing about the destruction of the virtual universe.

SCP-1190-1-B was transferred to medical, where an anticoagulant was administered, but SCP-1190-1-B expired from sudden cardiac death.

> **Transcript of surveillance video**
> *SCP-1190-1-B begins exhibiting trouble breathing, including wheezing and coughing.*
> **Research Assistant Dr. :** “Hey, what's going on with our guy? Get the nurse to check him out.”
> *Approximately 30 minutes elapses before SCP-1190-1-B begins coughing up blood.*
> **SCP-1190-1-B:** “What… what's happening…”
> *SCP-1190-1-B's posture becomes limp during onset of collapse; the nurse arrives and is cleared to enter the observation room.*
> **SCP-1190-1-B:** “I can't… leave them… alone. If I go… they're coming with me.”

Nurse : “We've got tachypnea, hemoptysis and cyanosis. We need to get him to medical immediately!”
SCP-1190-1-B loses consciousness.

Nurse was reprimanded for responding to a priority 3 page in excess of 10 minutes. Video of this incident is under consideration for staff training purposes.

+ Excerpts from Experiment Log 1190-2

Subject: D-class personnel D-14899 is a 37 year old Hispanic female.
Subject Background: A former professional artist, D-14899 was convicted on 2 counts of murder after one of her art pieces was vandalized.

D-14899 (hereafter referred to as SCP-1190-1-C) was selected for this experiment due to an artistic background.

Day 1: SCP-1190-1-C was locked in the observation room for SCP-1190. Subject was instructed to begin the simulation, and to keep a diary during the experiment. SCP-1190-1-C was given no further instructions.

Day 2: SCP-1190-1-C spent 1 hour tending to the simulation.

Excerpt from subject diary
“This place is like so many other prisons, and yet unlike them. I heard sounds … or maybe I didn’t… in the other areas. Had strange feelings. Ideas came into my mind, inspirations… I want to paint them, but I can't. All I have is this diary, and some computer, showing dots.”

Day 4: SCP-1190-1-C spent 2 hours tending to the simulation, and 6 hours sketching in the diary. Subject's request for assorted art supplies denied.

> **Excerpt from subject diary**
> “I tried. I tried to get the ideas out, but I can only do so much with a pencil. The only other thing in here to look at is that computer, and all I can do is move around in space. If only there were some colors to look at.”

Day 9: SCP-1190-1-C spent 12 hours tending to the simulation. The rest of the day was spent writing extensive diary entries, eating and sleeping.

> **Excerpt from subject diary**
> “This is amazing! It's the world's biggest, most perfect canvas! But it's more than that. I can shape galaxies into flowers, and those into gardens. I can paint the horizon of a beautiful purple moon with stars that change colors as the planet rotates. It's sculpting, and painting, and music and dance, all at once!”

Day 21: SCP-1190-1-C spent 20 hours tending to the simulation. Subject eats meals at the terminal, and leaves only to use the restroom, to sleep for 2 hours, and to make entries in the diary.

> **Excerpt from subject diary**
> “I created the perfect woman. Tall, beautiful, unusual and yet familiar. She seems motherly and yet distant. Her children are unformed pieces of clay with endless possibility. She recognizes their potential, and is proud, but still cries when I transform them. It is beautiful… some people can sculpt what they feel, but only I can literally sculpt using raw emotion.”

Day 30: SCP-1190-1-C spent 23 hours tending to the simulation. Subject eats meals at the terminal, and leaves only to use the restroom and to make entries in the diary.

Excerpt from subject diary
“Art can mean so much more when you're not bound by rules. I can make a line of colors that didn't exist until I invented them that goes from one end of the universe to the other, and it will never move or fall down. I reshaped the structure of carbon to make shapes I never could have thought of in my wildest dreams!”

Day 31: A breach of containment by SCP- caused an extended power interruption which powered down SCP-1190. After a momentary delay, SCP-1190-1-C became violent, attempting to destroy objects in the room other than SCP-1190. Security had to enter the observation room to contain the outburst.

SCP-1190-1-C is currently restrained in medical. Class A amnestics were administered, but the subject continues to exhibit symptoms similar to sustained withdrawal, including depression, anxiety, fatigue and nausea. Subject indicates that she undergoes persistent cravings for an unidentifiable "fix".

+ Excerpts from Experiment Log 1190-3

Subject: D-class personnel D-17019 is a 67 year old Caucasian male with moderate obsessive-compulsive disorder manifesting in a compulsion to place objects into certain patterns.
Subject Background: D-17019's was convicted on 1 count of arson resulting in the deaths of 9.

D-17019 (hereafter referred to as SCP-1190-1-D) was selected for this experiment due to a unique concept of organization.

Day 1: SCP-1190-1-D was locked in the observation room for SCP-1190. Subject was instructed to begin the simulation, and to keep a diary during the experiment. SCP-1190-1-D was given no further instructions.

Day 2: SCP-1190-1-D spent 1 hour tending to the simulation.

> **Excerpt from Subject diary:**
> "Nothing is where it should be the cot is on the north wall with the head facing east. And then there's this computer! The dots are all wrong in every way. I want to get in there and fix them so badly."

Day 3: SCP-1190-1-D has suffered from a sudden embolic stroke. Because the stroke occurred while the nurse was on duty, the subject was able to be transferred immediately to medical. Reports indicate that the subject has been stabilized and that partial recovery is likely; however some damage to the ventral striatum is likely to be permanent, which may affect the subject's long-term behavior.

Day 8: SCP-1190-1-D released from medical and subjected to a full psych evaluation. Reports indicate that the subject no longer feels compulsion to reorganize objects.

Day 9: SCP-1190-1-D placed back into the observation room for SCP-1190. Subject spent no time tending to the simulation.

> **Excerpt from Subject diary:**
> “Things which used to seem so significant don't anymore. Nothing really motivates me like it used to.”

Day 10: SCP-1190-1-D spent no time tending to the simulation.

Day 17: SCP-1190-1-D spent no time tending to the simulation. Subject appears to be immune to the compulsion to interact with SCP-1190. Subject's stay of execution will be revoked, and subject will be remanded to general Foundation custody.

Experiment log, / /
“With SCP-1190-1-D's brain damaged, it appears that SCP-1190 no longer is able to exert a compulsive effect on the subject. While some might call this experiment a failure, it presents a heretofore unavailable opportunity to let the simulation run its course without intervention. The results of this "pure" simulation could be very interesting.”

« SCP-1189 | SCP-1190 | SCP-1191 »

SCP-1191: Criminal Past

Item #: SCP-1191

Object Class: Safe

Special Containment Procedures: SCP-1191 is to be stored in an opaque Type IV Safe-class containment locker at Sector-28. Neither it nor its locker is to be handled in any way except as necessary for testing. If the object must be moved, the entire locker is to be relocated by a team of Class-D personnel, all of whom must be given every reason to believe that the locker is empty. The locker is to be dehumidified and protected from insect and fungal infestation, and the object should be given regular visual-only checks for deterioration.

Description: SCP-1191 is a rotten willow tree branch approximately 97 cm long by 1.5 cm in diameter, with a prominent kink 31 cm from the base. Any intentional manipulation of SCP-1191 results in the activation of its anomalous properties, which are not fully categorized at this time. "Manipulation" includes any physical contact, made either directly or indirectly via handheld or remotely-operated tools, with the intent of examining, moving, damaging, or otherwise directly affecting SCP-1191. Contact made at one remove — i.e. by ordering another person to handle SCP-1191 — affects the person in direct contact, but not the person who gave the order. Contact with a container holding SCP-1191 counts as manipulation if and only if the contactor is aware of SCP-1191's presence inside the container.

All contact with SCP-1191 has been carried out by D-class personnel with histories of violent crime. Persons handling the object report immediate panic and disorientation. They begin, quickly and without external provocation, to protest their innocence. Further investigation reveals them to bear memories of an alternate timeline in which they did not commit one particular act of violence — in most cases, the act which led to their eventual relegation to Class D.

Affected personnel retain these memories indefinitely, although they gradually re-acquire memories of our timeline over a period of forty hours after contact.

During these first forty hours post-exposure, subjects frequently claim SCP-1191 retroactively inserted a violent episode into their personal history. In support of their claims, these subjects have demonstrated implanted knowledge beyond their clearance, both of technical details and inter-personal information. Use of D-class personnel in certain contact events appears contrary to Foundation procedure.

It is presently unclear whether SCP-1191 is causing spurious knowledge generation or actually altering timelines. A test capable of distinguishing between these possibilities has not yet been designed.

Addendum: Recovery Report

Agent was dispatched to , Canada to investigate unusually high density of violent crime, accompanied by former convict D . The pair discovered an abandoned vehicle in a wooded lot located at 4 . ° N, 1 . ° W. While investigating the vehicle, D picked up SCP-1191. Agent reports immediate distress, followed by abrupt and unprompted denial of a previous crime, in support of which D demonstrated detailed knowledge of Foundation retrieval agent procedure. Agent returned without permitting D to release SCP-1191 at any point, employing coercion where applicable. No further items resembling SCP-1191 have been recovered from the recovery site. D was later administered a Class-R amnestic and designated personnel D-1191-1.

Addendum: Excerpts from Experiment Log 1191

Test 3
Date: - -
Subject: Personnel D-1191-12
Procedure: D-1191-12 was instructed to remove a one-centimeter transverse section of SCP-1191 using a circular saw.
Results: Upon picking up SCP-1191 to move it onto the circular saw, D-1191-12 reported confusion, followed by intense mental

distress and unprompted verbal denial of three previous murders. SCP-1191 cast aside, slightly chipped upon impact with floor.

Test 4
Date: - -
Subject: Personnel D-1191-44, D-1191-67, and D-1191-108
Procedure: The three Class-D personnel were instructed to touch SCP-1191 simultaneously.
Results: All three personnel experienced convulsions, denying previous episodes. Interestingly, the episodes denied were not in any case those that led to the individual's initial incarceration.

Test 6
Date: - -
Subject: Personnel D-1191-13
Procedure: D-1191-13 was directed to move SCP-1191 from chamber corner with 0.5 m iron tongs.
Results: Upon grasping SCP-1191 with tongs, D-1191-13 reacted violently, insisting upon alternate history induced by the object. Under extensive questioning, D-1191-13 demonstrated knowledge consistent with Security Clearance Level 1/1191, insisting that he was a research assistant "and a law-abiding citizen".

Test 10
Date: - -
Subject: Personnel D-1191-53
Procedure: D-1191-53 was seated in Control Booth 75, given access to a standard Foundation remote-controlled exploratory drone, and instructed to transfer SCP-1191 to a new containment locker with better preservative facilities.
Results: At the moment of contact between the drone's manipulators and SCP-1191, D-1191-53 abruptly became confused and distressed, verbally denying involvement in the preschool bombing for which she was incarcerated. Further questioning was unsuccessful, revealing only that the subject now experiences considerable distress at the memory of child casualties.
Note: Dr. was reprimanded for permitting Class-D personnel contact with exploratory drones, which are equipped with easily-weaponizable sampling tools, and for allowing direct personal contact between Class-D personnel and Foundation operatives.

SCP-1192: "Timmy"

Item #: SCP-1192

Object Class: Euclid

Special Containment Procedures: SCP-1192 is contained in a dedicated aviary and is to be provided a diet of fruit supplemented with protein and vitamin additives, as it refuses to consume seeds and insects that are a part of a normal diet for its species. SCP-1192 is to be provided with several pencils and pages of paper to allow it to communicate.

In the case that SCP-1192 becomes belligerent, mild sedatives may be introduced into its food and water supply under close veterinary supervision.

Description: SCP-1192 is a juvenile male Gang-gang Cockatoo (*Callocephalon fimbriatum*), a species normally native to south-east Australia, approximately 33.5 cm in length.

SCP-1192 appears to be sapient and exhibits intelligence and common knowledge consistent with that of a human child between the ages of six (6) and eight (8). SCP-1192 is unusually disheveled as it appears to be unable or unwilling to preen itself, and has difficulty flying despite being essentially healthy and uninjured. Close examinations have shown a slight, healed-over contusion on the back of SCP-1192's head, but no internal injury or damage was ever found.

SCP-1192 was discovered and brought into containment by Agent on / / , who at the time was embedded as an undercover agent in the Newark Police Department in New Jersey. It is believed at this time that SCP-1192 began following Agent and trying to attract his attention because of the perception of an authority figure in police uniform. Agent became suspicious due to SCP-1192's unusual species and erratic behavior and sent a request for

assistance; a Foundation containment team was dispatched and was able to detain SCP-1192 and bring it to Site for examination.

Addendum 1192-01: Experiment Log 1192-01

Shortly after initial containment, experimentation was performed in which SCP-1192 was introduced to a multitude of objects in a controlled environment in order to deduce its abilities. Upon being introduced to the testing chamber, SCP-1192 immediately gravitated to a pencil and paper and began to attempt to write crude sentences. At this point, Dr. was brought in in an attempt to communicate with SCP-1192.

> **SCP-1192**: (writes "who ar u" [sic])
>
> **Dr.** : I am Dr. . I'm here to speak with you. Who are you?
>
> **SCP-1192**: (writes "timmi" [sic], followed by "wher am I" [sic])
>
> **Dr.** : You're at a medical center, Timmy. A hospital. Do you know what happened to you?
>
> **SCP-1192**: (writes "no", then "i wana go hom" [sic])
>
> **Dr.** : Where do you live, Timmy?

After several minutes and with some difficulty, SCP-1192 managed to write down an address for a residential home in , Montana. Undercover agents sent to the specified residence determined that the location is inhabited by Mr. and Mrs. as well as their son, Timothy , age 7. Agents assigned to monitor the family have noted nothing out of the ordinary with the family thus far.

Addendum 1192-02: Researcher Note

> As SCP-1192 is unable to manipulate objects with enough coordination to play with the video games it requested and it shows little interest in the other toys we have offered it, it has taken to scribbling and making crude drawings with the materials we have provided. A

list of notable materials are as follows:

- Several pages of unrelated words, presumed to be writing practice.
- Several pages of crude drawings, including race cars, airplanes and fictional animals and monsters.
- A single page with the words "wy am I a bird" [sic] as well as several more indecipherable sentences.
- A drawing of what appears to be a small child holding the hands of two adults. The child is scratched out and the paper is ripped. The reverse side of the page has the words "i wan my mom" [sic].
- A single page with 126 instances of the word "mom" and 76 instances of the word "home".

Dr.
Senior Observer

« SCP-1191 | SCP-1192 | SCP-1193 »

SCP-1193: Buried Giant

Item #: SCP-1193

Object Class: Safe

Special Containment Procedures: The borehole containing SCP-1193-01 is to be capped with a tungsten steel grate containing a locking 2.5cm endoscopy aperture. At 48-hour intervals, the borehole is to be endoscopically inspected to a depth of 4km for further manifestations of SCP-1193-01. Seismographic monitoring devices are posted at 2, 7, and 11 kilometer depths alongside the SCP-1193-01 borehole. Seismic readings consistent with subterranean movement are to be reported immediately to Site Director Iqbal. In the event of subterranean containment breach, containment staff are to execute Protocol 473a, severing SCP-1193-01 below the fifth elbow and backfilling remaining portions of the borehole with pressurized concrete.

The basement containing SCP-1193 is to be monitored at all times by a Foundation interrogator. SCP-1193-02 is to be answered on or before the third ring; interrogator should attempt to elicit self-directed responses from SCP-1193-01. Responses which implicate size, body plan, location, or further manifestations are to be recorded in Document SCP-1193-2-LTR.

Description: SCP-1193-01 is a genetically normal human arm of unusual length, located in a drainage pipe inside the basement of a telephone switching station in Scottsdale, Arizona. Ten centimeters below the drainage grate, the arm terminates in an unremarkable human hand of indeterminate gender. Upon initial examination, the arm was believed to extend through the drainage pipe to a depth of 35 meters. Subsequent endoscopic investigation demonstrated that the arm extends to at least a depth of 71 kilometers, passing without apparent difficulty through the Mohorovičić discontinuity and the upper mantle, with regularly spaced elbows every four kilometers. Elbows below a depth of 26 kilometers are slightly retroflexed to

accommodate a nine-degree southward bend in the drainage borehole. Continued endoscopic investigation into the SCP-1193-01 borehole is suspended due to presently-intractable engineering constraints.

Communications via SCP-1193-02, mostly concerning SCP-1193-01's oven and refrigerator, indicate that SCP-1193-01 may lack conventional thermoreception, and that it is experiencing no substantial discomfort despite borehole temperatures in excess of 674 degrees Centigrade.

SCP-1193-02 is a GPO 746 telephone, topaz yellow, manufactured in 1971. Its dimensions preclude it having been delivered to the site via the borehole; containment team's present working theory is that it was installed topside for the purpose of communicating with SCP-1193-01. Installation was conducted by unknown parties, by unknown means, for unknown purposes. The rotary dial has been glued into place, rendering it unsuitable for outgoing phone calls. It is attached to a conventional twisted-pair line which enters the drainage pipe containing SCP-1193-01 and descends parallel to SCP-1193-01 until endoscopy is no longer practicable.

At between 0838 and 1034 hours Mountain Standard Time each weekday, the phone will ring five times. If answered, an unidentified voice will willingly engage in conversation with SCP personnel. The voice on the other end of the line invariably claims to be a human being, and regularly mistakes the individual on the other end of the phone for an authority figure. Interrogation to date has therefore been relatively uncomplicated. Notable parallels exist between information elicited via SCP-1193-02 and demonstrable facts about SCP-1193-01. To date, anomalous information received via SCP-1193-02 has included:

- References to human features, but an anomalous body plan.
- References to insensitivity to heat or cold.
- References to 'a cousin' or other relative, who will soon arrive to 'pick [him] up.'
- References to discomfort and boredom at confinement.
- References to minor seismic events along the Little Chino fault complex.
- References to discomfort at having a limb or other body part

restrained, as by handcuffs, a jelly jar, a pipe, a cast, or in one instance, a gopher hole.

At present, data related to SCP-1193-01's size, physical form, and body plan beyond the parts visible through endoscopic investigation should be regarded as provisional. For contingent protocols and physiological testing data, consult Document RTMR-Delta.

Transcript SCP-1193-2-LTR-7:

<Begin Recording, 03/23/2008, 9:48 AM>

Dr. Iqbal: Good morning. And who may I ask is calling?
SCP-1193-01: David.
Dr. Iqbal: And where are you now, David?
SCP-1193-01: [Inaudible.] Sorry — who is this?
Dr. Iqbal: Dr. Hassan Iqbal, director of research.
SCP-1193-01: Oh. From the hospital?
Dr. Iqbal: [Pause] That's right.
SCP-1193-01: So, when does the cast come off?
Dr. Iqbal: I'm sorry?
SCP-1193-01: The cast. On my bottom arm. When does it come off?
Dr. Iqbal: I'm to understand you've got… a cast… on your bottom arm? I don't understand. Which arm is that?
SCP-1193-01: The bottom one. Can you take it off? I've already been in the hospital for three months. Seems like it should be about time.
Dr. Iqbal: You say you're in a hospital now?
SCP-1193-01: You should know. You're the one who put me there.
Dr. Iqbal: I think you must have me mistaken for someone else.
SCP-1193-01: Look, if you can't help me, put someone who knows what he's talking about on the line.
Dr. Iqbal: I'm afraid I'm the only one here.
SCP-1193-01: Fine. Just tell me when someone competent gets to the phone.
CALL TERMINATED

<end recording>

Transcript SCP-1193-2-LTR-8:

<Begin Recording, 03/24/2009, 9:52 AM>

SCP-1193-01: God damn it. God damn it. God damn it.
Dr. Iqbal: Hello?
SCP-1193-01: Hello? Can you hear me?
Dr. Iqbal: Who is this? Where are you?
SCP-1193-01: [Inaudible.] For Christ's sake, I'm stuck in the stove here, man. Get the fire department.
Dr. Iqbal: The stove? Are you … I'm sorry, the stove?
SCP-1193-01: Yeah, the stove. I went in here to get out some cakes, and I can't get back out.
Dr. Iqbal: You … went in the stove … to get out some cakes? Am I hearing you correctly?
SCP-1193-01: It's a tight fit here. Jesus.
Dr. Iqbal: Are you … is the temperature uncomfortable?
SCP-1193-01: The what?
Dr. Iqbal: Temperature. Are you in pain?
SCP-1193-01: I have no idea what you're talking about. Can you call the goddamn fire department? My back. Jesus Christ, my back.
Dr. Iqbal: I'm the only person here.
SCP-1193-01: I can't take it anymore. Fuck. I'm sorry. I'm calling my cousin now.
SCP-1193-01: I'm so sorry. This isn't my fault.
CALL TERMINATED

<end recording>

« SCP-1192 | SCP-1193 | SCP-1194 »

SCP-1194: Damaged Toy Horse

Item #: SCP-1194

Object Class: Safe

Special Containment Procedures: SCP-1194-1 is to be kept in a secured storage locker in Research Sector-12 when not in use. Deactivation of SCP-1194 is to be initiated through the termination of the active SCP-1194-2-T subject or, if more convenient, the SCP-1194-2 instance.

Testing Chamber 13-A (a standard humanoid containment unit) and 13-B (modified to serve as a stable) are to be maintained for the purposes of experimentation involving SCP-1194. Please see Document 1194-C for extensive information on standard testing procedure.

Description: SCP-1194 consists of two parts: SCP-1194-1 and SCP-1194-2.

SCP-1194-1 is a small device (roughly 3 cm × 1 cm × 4 cm), consisting of a speaker attached to a pull-string (roughly 6cm of which is exposed while not being activated, with an actual length of roughly 11cm) and a plastic case; analysis of the speaker, however, shows it to have at some point been rendered inactive despite the remainder of the mechanism being functional. Upon being protracted, the string will slowly retract to its original length at a rate proportional to the length removed. When a female subject pulls the string until an additional 3cm is exposed, SCP-1194 is activated, causing the manifestation of an SCP-1194-2 instance.[1] Partial retraction, or retraction by a male subject, does not have this effect.

SCP-1194-2 is an organism, largely similar in physiology and morphology to an adult member of *Equus ferus caballus*, with an average height of 139cm. Upon the activation of SCP-1194, SCP-1194-2 will appear on the nearest suitable flat surface,[2]

provided such a space is present within 30 metres of the device; otherwise, activation will fail to occur. Instances have displayed various sizes, breeds and both sexes, and are notable for various biological irregularities – including the presence of betacyanins, pararosaniline and other pigments not usually found in mammals on their coats, typically causing a mild purple or pink colouration. Specimens do not synthesise or otherwise produce these chemicals, causing this colouration to fade over time.

The death of an SCP-1194-2 specimen, that of the relevant SCP-1194-2-T subject, or the string of SCP-1194-1 being pulled during an active state, will cause the current instance of SCP-1194-2 to disappear. Should the lattermost situation occur, a new specimen will appear provided the conditions for this occurring are met. Upon disappearing, the volume previously occupied by the specimen will be replaced by a gas consistent in composition and density with standard tropospheric air.

The following is a copy of the text found on a torn document recovered with SCP-1194-1 (see below). A section of the document has been rendered illegible. Further investigation has revealed no information regarding the object's relation to Group of Interest "Dr. Wondertainment".

> Cowgirl, looks like you got your very own Wonder-Pony! TM Dr. Wondertainment's Wonder-Pony!TM is a fun, educational toy, which will help teach any horse-loving girls things like how to take care of a sick horse, the importance of care and attention, and how to feed a horse. All without having to take care of the muck! Not only that, but your pony will provide constant companionship and friendship. Your very own Real Wonder-Pony!TM can even t[SECTION DAMAGED]

damage caused to said life after creation. For more information, please contact the public relations department currently associated with Dr. Wondertainment.

Specimens of SCP-1194-2 behave in a manner normal for a horse of their estimated age (typically four to five years, except in three – at time of writing – known cases: please refer to documentation regarding SCP-1194-2-5, -9 and -13, all of which were significantly below the average age of other specimens); several notable anatomical and physiological distinctions are, however, present:

- Firstly, specimens are effectively incapable of vocalisation; examination has revealed no direct cause of this, as no features of relevant tissue or mouthparts seem to function in a preventative manner. Experimentation involving the placement of specimens in situations which would cause distress has failed to provoke any vocal reaction, despite successfully doing so in the cases of normal horses.

- Specimens do not excrete faeces or urine, despite intaking and digesting food normally. Specimens do, however, maintain a relatively constant mass if well-fed, and will lose mass if not provided with food: how this is regulated is not currently known.

- Extended lack of contact with their relevant SCP-1194-2-T subject has invariably resulted in several severe symptoms occurring in SCP-1194-2 specimens, usually becoming noticeable after four days without physical contact, and substantially affecting behaviour after seven to eight. This has, in all known cases, followed the same progression: heart rate first decreasing at a constant rate, followed by the symptoms of prolonged nutrient deprivation, and the specimen behaving in a way consistent with that of horses experiencing illness and starvation. Death will occur at fourteen days – the exact cause of this is not known due to the disappearance experienced by SCP-1194-2 upon dying.

- The unusual pigments present within the coat of specimens will regularly (i.e., once every 3-12 months) be replaced with

green cadmium dye, eventually causing acute poisoning from absorption, over several days. This process is gradual, marked by a decrease in the intensity of the previous colouration as the former pigment reduces in concentration while the cadmium increases, and typically takes two to three days to complete. While this is rarely fatal, the symptoms typically associated with exposure to the toxin manifest by the time the dye's concentration stops increasing. Continued exposure to SCP-1194-2-T appears to lessen the severity of these symptoms, and the substance will disappear from the body of specimens over the course of several minutes under a week after initially appearing. When this occurs, the pigment previously removed will return, often to the concentration possessed during the initial manifestation of the specimen. In all instances of this occurrence, specimens have made a full recovery with provision of appropriate treatment.

SCP-1194-1 was originally recovered from a house in , England, after an automated search of local police files regarding the suicide of one . The remains of a ceramic and plastic casing resembling a generic horse of no discernible breed, apparently broken by extreme fall damage, were also found within a metre of the object. Said casing's interior displayed similarity to that of toys designed to accommodate pullstring speakers. Approximately 20% of the casing could not be located, and standard post-acquisition protocol was later completed.

Addendum (Refer to Endoscopy Reports 1194- through): Extensive analysis has demonstrated a consistent structural abnormality in the vocal folds of SCP-1194-2 specimens. Research is ongoing.

- **Update 20 - - :** The vivisection of SCP-1194-2- 6, - 7 and - 8 has revealed their vocal apparatus to bear a notable similarity to that of an adolescent human female, despite the fact that both SCP-1194-2- 6 and 8 were male. It is unknown if this represents the entirety of the organisms produced by SCP-1194: exhaustive testing is currently being planned.

Footnotes
1. The relevant female is at this point considered SCP-1194-2-T,

and is assigned a specific number (e.g., SCP-1194-T-03)
2. Note: “suitable flat surface” refers to any solid surface with a great enough area to accommodate a standing, full-grown horse, without any inhibiting factors such as the presence of liquid or solid matter, extreme ambient temperature, etc. which would cause severe injury to or restrict the movement of the specimen.

« SCP-1193 | SCP-1194 | SCP-1195 »

SCP-1195: Child's Storybook

Item #: SCP-1195

Object Class: Safe

Special Containment Procedures: SCP-1195 is to be stored in a standard Safe-class storage locker. The locker is to be locked by keypad, the combination known to the current head researcher, and changed in the event of a new researcher.

SCP-1195 is to be placed on a standard lecture podium for ease of reading, unless being dictated to or otherwise being used in experimentation. Personnel are instructed to cease any oration that is seen to provoke an unintended negative response.

Description: SCP-1195 is a leather-bound book (approx. 25cm x 17cm) of indeterminate origin and age; carbon-dating on the pages has given inconsistent results, and forensic examination of the leather matches no known species. It seems to have a variable number of pages, averaging approximately at 400.

SCP-1195's anomalous properties become apparent whenever it is opened. Most often, the first page is found blank, and after a moment, the object will attempt to communicate via written text "bleeding" onto the page. It will always initially communicate in Euskara, but upon being responded to in any other language, it will continue to interact with the spoken/written one instead. Its method of instantaneously understanding and learning new languages is unknown, and recommended for further study. SCP-1195 has demonstrated an ability to converse in Braille in experiments with blind test subjects.

Upon being "activated" in this way, SCP-1195 will make one of various requests (see document 1195-W37 for full list of requests); the most common request is to be told a story.

When a story, allegory or other similarly descriptive speech is directed towards it, SCP-1195 will begin transcription. If the story is not told in a general readable format, SCP-1195 will reformat without noticeable loss of speed in the process. If allowed pauses during the story, SCP-1195 will offer criticism, encouragement, or other comments, depending on the oratory skill, imagination or interest of the speaker. Generally, SCP-1195 is willing to continue this process indefinitely, creating new pages as needed for extremely long stories. The maximum number of pages observed has been 3189, at which point SCP-1195 stated that it was "bored" and that the experiment in progress was "stupid". SCP-1195 then closed itself, and upon being re-opened was observed to only have 120 pages; however, whether this was due to dissatisfaction with the experiment, or with the quality of the narrative, is unknown.

SCP-1195 has no direct means of locomotion; however, it can close itself with up to 15 N of force, and turn its own pages. It generally allows itself to be handled by anyone, save those who have physically damaged it or angered it previously.

All attempts to coax SCP-1195 into divulging information about its origins, history or other personal data have met with failure, as SCP-1195 states that it would need "permission" to share its personal history.

Stories transcribed into SCP-1195 will in most cases not remain long, with the exception of stories of subjectively high quality or substantial length, which may stay for up to weeks. Most often, any previous story is erased as soon as a new subject arrives. SCP-1195 appears to remember certain individuals, and, based on previous story quality and other experiences, will show varying levels of excitement and cooperation during subsequent sessions.

Attempts to damage the book have met with varied results. It is clear that cosmetic and superficial damage to the exterior is lasting. As such, experiments must adhere to a guideline that they do not cause further damage to this area. The pages, however, seem able to be replicated with no upward limit. SCP-1195 generates additional pages as needed. In the event that a page is physically removed from the object, text fades from the excised page immediately, and kerning on the remaining pages is adjusted so that the original full

text is accommodated.

Writing into the book has the same communicative results as speaking orally during initial interaction. Once the recitation process has begun, however, text handwritten in will be absorbed after a moment, and responded to. For example, a written-in note about SCP-1195's choice of formatting a particular paragraph will be considered, and either disregarded, or the format changed.

Document 1195-W37: Requests made by SCP-1195, as of / /20

- "Tell me a story" (8985 times)
- "Tell me a *better* story" (1158 times)
- "No kissy stuff" (972 times, in response to narratives featuring erotic or romantic content)
- "Tell me a joke" (604 times)
- "Leave me alone, I'm sleepy" (411 times)
- "Leave me alone, you're stupid" (293 times)
- "Come back! I'll be good! I promise!" (74 times, made in response to reading sessions being aborted, or to certain readers being replaced mid-session)
- "I want my mommy." (1 time)

« SCP-1194 | SCP-1195 | SCP-1196 »

SCP-1196: Chairopractors

Item #: SCP-1196

Object Class: Safe

Special Containment Procedures: The building formerly housing the Back Clinic and SCP-1196 has been repurposed as a Foundation front business. The entrance to the basement has been replaced by a reinforced steel door and is to be triple locked. The unlocking codes are only available for access by level 3 personnel and higher. If SCP-1196's area of effect appears to have shifted in any way, the Site Director should be contacted immediately.

Under no circumstances, unless explicitly for testing, are chairs allowed within SCP-1196.

Description: SCP-1196 is the basement of the former Back Clinic, located in , . The basement walls and ceiling are all composed of concrete, with several support pillars at various points in the room. The floor is unfinished. Fluorescent lighting tubes line the ceiling, but only three (3) of them remain in working condition.

SCP-1196's anomalous properties only arise when a chair[1] is introduced to it. As soon as the legs of a chair are allowed contact with the floor of SCP-1196, it becomes an instance of SCP-1196-1.

SCP-1196-1 is the designation given to any chair under the effect of SCP-1196. Instances of SCP-1196-1 appear to gain sentience and the ability to move independently, either by shuffling across the floor, or — in the case of folding chairs — rapidly opening and closing their legs. Chairs removed from SCP-1196 lose all anomalous properties.

Instances of SCP-1196-1 are able to speak in English through unknown means; these vocalizations consist of short, clipped

sentences spoken in a high-pitched, "squeaky" voice. Instances of SCP-1196-1 will only vocalize when a human being is inside SCP-1196, regardless of their distance from the subject. Vocalizations are usually commands that refer to the spinal health and posture of the subject. However, these commands are not based on the subjects' actual spinal health, with instances of SCP-1196-1 saying the same sentences regardless.

+ Sample SCP-1196-1 Phrases

> "Stand up straight!"
> "Don't slouch!"
> "Fix your posture!"
> "Slouching causes scoliosis!"
> "I said stand up straight."
> "Straight."

If a human being spends more than 30 minutes within SCP-1196, all instances of SCP-1196-1 will fixate upon the individual, hereby referred to as the subject. Instances of SCP-1196-1 will follow the subject around and instruct them more clearly on their spinal health. If more than one human being is within SCP-1196, instances of SCP-1196-1 will fixate on a random individual. Exiting SCP-1196 negates this effect. If the subject remains inside SCP-1196, several changes will occur in the current SCP-1196-1 population. As time elapses, instances of SCP-1196-1 will grow more active and vocalize more often, and the voice used will become deeper and louder.

If the subject remains within SCP-1196 for approximately 60 minutes, instances of SCP-1196-1 will vocalize rough commands and statements about the subjects' spinal health in a more negative light, frequently repeating phrases such as "Awful posture" in threatening tones. After approximately 80 minutes, instances of SCP-1196-1 will begin to assault the subject; methods of attack include ramming, tripping, stabbing (with chair legs), and crushing. The population of SCP-1196-1 will repeat these actions until the subject either escapes or is killed. However, instances of SCP-1196-1, despite being non-sapient entities, appear to display remorse for these actions, vocalizing various apologetic phrases. Individual instances of SCP-1196-1 have attempted to move or bury

the bodies, often times trying to utilize tools like shovels and brooms, to little effect.

+ Sample “Apologetic” Phrases:

> “We’re sorry.”
> “Apologies.”
> “I’m sorry.”
> “Tried helping!”
> “Forgive?”

Footnotes
1. Hereby defined as an object with four legs and a seat that is designed for sitting in; rolling chairs are not affected, although rocking chairs are.

« SCP-1195 | SCP-1196 | SCP-1197 »

SCP-1197: Room For One

Item #: SCP-1197

Object Class: Euclid

Special Containment Procedures: SCP-1197 is to be fitted with a Foundation issue keycard lock designed to match neighboring units. Management has been instructed to inform both staff and guests that SCP-1197 is indefinitely inaccessible.

Two armed personnel are to be incorporated into the civilian staff in the security office. Any subjects emerging from SCP-1197 are to be detained and administered medical and psychological treatment before being interviewed.

Following an active session SCP-1197 is to be thoroughly searched and cleaned with the entrance door secured open. Any anomalous items and bodies are to be removed and studied. SCP-1197-1 is not to be manipulated at any time outside of testing.

Description: SCP-1197 is hotel suite in [REDACTED], containing a bedroom area, bathroom, and typical furnishings including a television, mini-fridge, and telephone. The windows on the far wall of the bedroom cannot be opened and the walls, floor, and ceiling cannot be damaged or breached by any known means. When viewed from through the windows from outside SCP-1197 appears as a clean and unoccupied room at all times.

SCP-1197 can be occupied for any amount of time and freely vacated, provided the occupant does not open SCP-1197-1. SCP-1197-1 is a doorway in the western wall of SCP-1197. Although it appears to connect to the adjacent suite, the corresponding door in room cannot be opened. SCP-1197-1 remains locked unless the entrance door to SCP-1197 is closed, at which point SCP-1197-1 can be opened.

Opening SCP-1197-1 will reveal an identical version of SCP-1197, including any current occupants, who have opened their version of SCP-1197-1 at the same moment. New instances of subjects exhibit accurate knowledge in response to questions of identity, and act in a similar manner. Posthumous testing reveals no biological discrepancies.

SCP-1197 has demonstrated the ability to spawn items during an active session, out of view of any occupants. Utilities, with the exception of the telephone, continue to function, but occasionally experience outages.

During an active session the entrance door to SCP-1197 will no longer open and cannot be breached from either side. Should 1 instance of each occupant expire, SCP-1197-1 will close and the entrance door will open for whichever room is currently occupied. To date all recorded deaths within SCP-1197 have resulted from homicide.

Addendum:
Note: The Foundation became aware of SCP-1197 4 days into Incident 1197/3. Interviews with hotel staff and local authorities provided information regarding previous incidents. For clarification purposes, surviving subjects are designated -1, -2, etc. while their duplicates are designated -A, -B respectively.

Show Incident Logs

Subject:
Duration: Approximately 16 hours
Subject-1 failed to check out of SCP-1197. Hotel staff could not open door, authorities notified. Before police arrived subject exited SCP-1197, appearing distressed and acting violently towards anyone approaching him. A battered body similar in appearance to the subject was discovered in SCP-1197. Subject arrested and interrogated before committing suicide in police custody.

Interrogation logs provided rough details of an

SCP-1197 active session, during which the subject-1 accused subject-A of lying about his identity, denied the reality of the situation, and attempted escape. Eventually the subject-1 subdued and tortured subject-A to gain additional information and/or freedom. Subject-A expired from inflicted injuries, at which point SCP-1197-1 closed and the entrance door opened. Posthumous DNA testing revealed a match between the subject-1 and subject-A.

Subject:
Duration: Unknown
A body matching subject-1 was found in SCP-1197 by cleaning staff at approximately 12:15pm the day after subject-1 checked in. A police investigation determined the cause of death to be asphyxiation using a leather belt matching the one worn by subject-A. Time of death estimated at 9:30am. Hotel security video and front desk logs show subject-1 exiting room and checking out at 9:37am. Subject-1's current location unknown.

Subject: and
Duration: Approximately 45 days
Before the Foundation could secure the site subject-1 (male) and subject-2 (female) activated SCP-1197. On-site personnel responded to the re-opening of SCP-1197 to discover subject-1 assaulting subject-2. Subject-1 detained, subject-2 transported to nearest hospital under guard.

Interview reveals subjects to be a married couple. Subject-1 opened SCP-1197-1 while unpacking, discovering subject-A and subject-B. After a few hours of panic and argument subject-2 and subject-B were able to calm their husbands and all 4 agreed to rest and await

rescue. Subject-B discovered wrapped sandwiches in their mini-fridge which hadn't been there previously, sharing them amongst all 4 subjects. The fridge replenished every day at first, but gradually produced food less and less frequently. Over the following weeks tension grew between the couples until they decided to keep SCP-1197-1 closed and check in daily.

Eventually subject-A claimed the fridge ceased producing food, resulting in a violent altercation, after which SCP-1197-1 was closed and barricaded from both sides. Several days later subject-1 awoke to find subject-2 missing. Forcing SCP-1197-1 open subject-1 discovered subject-A in bed with subject-2 and subject-B. All 3 claimed innocence to accusations of infidelity. Subject-1 assaulted subject-A, leading to the death of subject-A and subject-B. SCP-1197-1 closed and entrance door opened. 2 bodies were recovered for study. Subject-2 expired from injuries before being interviewed.

Subject: D-1916, a 28yr. old male convicted of a gang-related homicide
Duration: Approximately 9 days
D-1916 instructed to enter SCP-1197, wait until the entrance door was closed and open SCP-1197-1. D-1916 equipped with audio and video recording devices. Remote feeds were lost when SCP-1197-1 was opened. Upon exiting SCP-1197 D-1916-1 attempted to escape the hotel before being detained.

D-1916-1 described meeting D-1916-A and exchanging questions until both accepted their situation. D-1916-1 and D-1916-A attempted escape, but were unable to breach doors and

windows, or contact anyone via telephone. Over the next week increasingly elaborate plans were enacted but all met with failure as various utilities such as power, water, and air conditioning began failing for long periods. Arguing intensified until D-1916-1 discovered an electric iron in the closet and bludgeoned D-1916-A to death. SCP-1197-1 closed and the entrance door opened. Body, iron and 2 recording devices recovered for study.

Recovered recordings show a clean, quiet and unoccupied room matching that seen through the windows. The videos follow the movement of each subject, but even when pointed at each other or at mirrors do not show the subjects or recording devices.

Subject: D-985, a 24yr. old male convicted of three related homicides
Duration: 5 minutes
D-985 armed with a loaded pistol and fully informed about the nature of SCP-1197. D-985 instructed to enter SCP-1197, wait until the entrance door was closed and open SCP-1197-1. Entrance door opened minutes later, revealing D-985-1 leaning against armchair with a gunshot wound in the side, facing a closed SCP-1197-1. D-985-1 ordered by armed personnel to drop pistol and lay face down. D-985-1 complied.

D-985-1 described opening SCP-1197-1 and being shot before returning fire and presumably terminating D-985-A. Personnel report not hearing any gunshots or other noises from SCP-1197 until entrance door re-opened. D-985-1 escorted from SCP-1197 and treated by medical personnel.

Subject: D-5482, a 40yr. old female convicted

of a domestic homicide
Duration: 38 hours
D-5482 instructed to enter SCP-1197, wait until the entrance door was closed and fully explore the room. After 38 hours entrance door opened but D-5482-1 did not exit. Security personnel entered SCP-1197 and discovered D-5482-1 sitting on the bed cradling D-5482-A, who had expired from a gunshot wound to the temple. A single pistol was found on the floor which had not been issued to the subject. D-5482-1, body and pistol removed from SCP-1197. D-5482-1 was calm and refused to describe her experience, explaining only that she had "dealt with her issues."

Subject: Dr. Harrison
Duration: Ongoing - 96 days as of most recent project report
Following extensive psychological examination, Head Researcher Dr. Harrison was cleared to activate SCP-1197 for direct study. Subject provided with a standard survival pack, 30 days of rations and 1 week's worth of emergency drinking water. Various additional supplies approved, including clothing, books, writing materials, and board games.

« SCP-1196 | SCP-1197 | SCP-1198 »

SCP-1198: Endless Echo

Item #: SCP-1198

Object Class: Safe

Special Containment Procedures: A single copy of SCP-1198 is stored in the High Security Data server of Site 19. It is stored in a password-protected subsystem that is only accessible by Level 3 or higher researchers assigned to SCP-1198. When used for experimental procedures, all personnel involved other than the intended subject are to wear hearing protection sufficient to block sound up to 70 dB in volume. SCP-1198 is only ever to be played in a sound-proofed room designed to minimize echoes.

Subjects affected by SCP-1198 are to be instructed to communicate only via written or typed text, preferably through a touchscreen, so as to minimize sound produced. Subjects are not allowed access to any piercing instruments or other objects which could be repurposed to perforate the eardrums of the subject. Requests for authorization to commence testing on individuals who are fluent in sign language but retain full hearing are pending.

Description: SCP-1198 is a sound file lasting 37.2 seconds that is encoded in the Waveform Audio File Format (.wav). To unaided human hearing, it appears to be a blank or silent file. Audio analysis reveals a high-frequency soundwave which is at the upper limit of normal human hearing. When transposed to a lower frequency, the sound file plays a complicated non-repeating sequence of **`atonal screeches`**, arrhythmic pauses and pure tones. Although every subject who hears the transposed sound file describes it as mildly to moderately unsettling, it only displays its anomalous properties when played at its original frequency. Copies of the original file retain the anomalous property, but converting the file to .mp3 or any other audio file format eliminates the anomalous property.

After being exposed to the entirety of SCP-1198 at any volume

between 35 dB and 65 dB, all subjects develop a unique form of auditory hallucinations. Beginning approximately 10 hours after initial exposure, subjects will begin to hear any sounds directly caused by them start to echo. This includes, but is not limited to, sounds such as speech, their own footsteps, the engine noise of a vehicle they are operating, and internal bodily sounds such as breathing or stomach gurgles. This effect does not include externally caused sounds such as the speech of others, music, or naturally occurring echoes, all of which they hear normally.

These anomalous echoes initially fade within a few moments, but over the course of approximately 48 hours, the duration of the echoes increases to the point that they no longer disappear. Affected subjects have described this in a variety of ways, but the echoes apparently neither increase nor decrease from the volume of the original sound, and sounds layer over each other such that the subject is constantly hearing all the echoes simultaneously.

Although SCP-1198 does not affect any individual who is incapable of hearing, whether via sound dampeners or independent deafness, affected subjects who are later deafened continue to hear any preexisting echoes.

All affected subjects will eventually begin to display psychological abnormalities consistent with sensory overload, as well as generalized phonophobia and a heightened aversion to any activity on their part that would produce sound.

Addendum: Once a subject has acquired an indeterminate amount of layered echoes, they begin to experience secondary auditory hallucinations. Subjects who have progressed to this stage and are still willing and able to communicate textually report that the echoes start to intermittently amplify and distort each other such that the resulting interference pattern resembles speech. This new source of speech is internally consistent and identical across all subjects, whose reports indicate that the speech is simultaneously transmitted to all affected subjects. Samples are transcribed below.

> "The only thing you have to fear is [garbled] alone and afraid, naked before the [garbled] that made you."

"Elephants squash ants, don't they?"

"Pity not the reaper man. Pity yourself."

"fish lizard rat monkey man [garbled] end forever"

"Join cacophony. Things die. Voices rise."

« SCP-1197 | SCP-1198 | SCP-1199 »

SCP-1199: Fleshtone Paint

Item #: SCP-1199

Object Class: Safe

Special Containment Procedures: SCP-1199 is kept in its original container in a medium security containment locker; accessible for research purposes by Level 2 or higher Sector-25 personnel.

Description: SCP-1199 is a can of 1943 'British Paints Limited' paint. Although aged, the item is in fair condition. The can is filled to 50% of volume with a beige liquid which resembles acrylic paint. Throughout testing it was noted that this level does not fall unless the item is open and inverted. Early testing revealed trace biomass within the liquid.

When spread onto a surface as paint, the liquid takes on a slight red tone which fades as it dries. The final dry color is a pale white. Within the first hour of drying, treated surfaces will begin to radiate a small amount of heat. Soon after, the surface will become slightly glossy due to slight secretion of sebaceous oil.

Microscopic examination shows structure identical to human epidermis. All samples 0.10 mm or greater thickness contained all skin between the cornified and basal layers, as well as a variable thickness *stratum lucidum*. Treated surfaces will collect environmental dirt, "shed" top layers and are reactive to ultraviolet light by way of melanin production. If a treated surface becomes sunburned, the treatment will slough from its application site wholesale. Although treated surfaces function as skin, no thickness of application have yielded blood samples. Genetic testing has shown the treatment's biomass to be chimeric in nature, containing many different helix samples of a common Anglo-Saxon heritage. The source of SCP-1199's biochemical energy is yet unknown.

Researcher's Note: During properties testing, supervised

handler D-1199-1 managed to create blisters, boils and calluses while applying the treatment to surfaces. Subject stated previous artistic inclination; subject was ordered to teach the skill to a Level 1 researcher. Skill successfully replicated by researcher 1/1199 . D-1199-1 terminated on schedule.

Treatment may be removed from surfaces using industrial solvents or by scraping and peeling layers away from a treated area. Peeled layers maintain an elasticity similar to human skin and continue to sweat and generate heat for up to 24 hours. Stripped surfaces retain no anomalous traits save for a lingering sweat smell. Treatment remaining applied may regenerate, sweat and tan nigh-indefinitely. Application sample 1199-A is still healthy after days as of this writing.

Initial medical research has shown that the treatment does not graft to human skin, but dries onto it like paint. The treatment still retains its skin-like traits and forms a secondary epidermis not connected with a central nervous system. Research into medical applications as well as possible protections the treatment may offer against inclimate environments is ongoing.

Liquid remains at a constant viscosity while in its can; research into possible anomalous properties of can -pending- on hold until conclusion of medical research.

Addendum: *Per O5- : "This could be a boon to testing recoveries that have destructive effects to human physiology. Cross research with other SCPs is hereby permitted".*

« SCP-1198 | SCP-1199 | SCP-1200 »

Articles 1200-1299

SCP-1200: A Little Taste Of Factory

Item #: SCP-1200

Object Class: Safe

Special Containment Procedures: Discovery and seizure of SCP-1200 are performed by FDA under CFR Title 21. Once in the possession of FDA, the recovered samples are to be replaced by non-anomalous duplicates and transferred to Site-197.

As the SCP-1200-A entities do not require sustenance or oxygen, they are to be contained in individual reinforced containers and stored in the I-TL1 Wing of Site-197.

Description: SCP-1200 designates all chewing gum distributed under the "Tastes Like Chewing Gum" brand. Packages of SCP-1200 periodically appear in various stores across the United States. The logo present on the packaging identifies the gum's manufacturer as "The Factory".

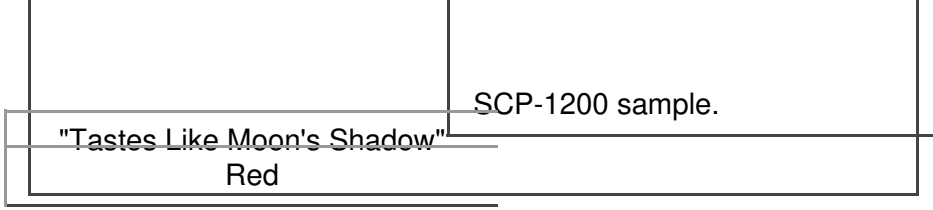
When an SCP-1200 sample is masticated by a human subject, the sample's anomalous effects will manifest. The particulars and the duration of the effects vary based on the flavor of the sample. Currently, 83 flavors of SCP-1200 have been documented. Swallowing SCP-1200 samples does not produce any further anomalous effects.

Addendum 1200-1: Partial list of SCP-1200 flavors. See 1200-E:KV for a full list.

Designation Label Color	Effects
SCP-1200-12	Subject's gustatory perception was altered for 28 hours following the consumption of the sample.

	The subject was unable to discern the taste of consumed food, perceiving a lemon taste instead.
"Tastes Like Lemons" Lime Green **SCP-1200-15**	Subject became luminescent, emitting over 40000 lux of white light. The subject was not harmed by the effect. The effect continued for 20 minutes, after which time its intensity gradually decreased, ceasing fully after an additional 4 minutes.
“Tastes Like Sunshine” Bright yellow **SCP-1200-29**	For 216 minutes, subject was able to rearrange at will segments of her body, both internal and external. The functionality of the affected segments and the health of the subject was not diminished in the process. The alterations were accompanied by secondary changes in seemingly unrelated regions. Due to this, the subject was unable to return to her original body plan.
"Tastes Like Rubik's Cube" Multicolored **SCP-1200-30**	Six corporeal humaniform entities manifested in the vicinity of the subject. The entities did not exhibit sapient behavior, instead mimicking the actions and speech of the subject, guards and researchers, and each other. The entities continued to exist for six days, before dissolving into a homogeneous liquid. Subsequent

	analysis of the liquid revealed it to be a mixture of organic materials, iron particles, and acrylic paint.
"Tastes Like Those Forgotten" Dark blue **SCP-1200-58**	Polyhedral, crystalline exoskeleton formed around the subject. The resulting object proceeded to levitate at the height of 1.3 meters above the ground. The object remained inert for the next 62 days. After the conclusion of that period, the object broke apart, and the subject emerged unharmed. When debriefed regarding his experience, the subject stated that he was transported to a green meadow, where he met his younger brother. Notably, the subject does not have any living or deceased siblings.
"Tastes Like Afterlife" White **SCP-1200-62**	Incorporeal, translucent, leporine organisms appeared to emerge from the walls of the subject's cell. The organisms proceeded to reach the subject and burrow inside her body. The subject did not react to these events and claimed to be unable to perceive the entities. Video recordings of the incident did not show any anomalous activity. The subject expired 11 days later due to exsanguination. No injuries have been found on the body. To date, this is the only known fatality caused by the effects of an



SCP-1200 sample.

"Tastes Like Moon's Shadow"
Red

Addendum 1200-2: On 2003-02-20, while conducting an unrelated investigation, Foundation operatives discovered a facility dedicated to production of SCP-1200-30. At the time of discovery, the facility was populated by 28 anomalous entities. The entities were subsequently contained, designated SCP-1200-A, and transported to Site-197.

Instances of SCP-1200-A are animate humanoid entities composed primarily from wrought iron. SCP-1200-A have been covered in several layers of paint, typically white, dim blue, or yellow. The outer layers of paint are largely absent, while the remaining segments are faded and flaking; the underlaying material is showing signs of oxidation. In the center of SCP-1200-A's head is a large circular opening. No other features are present.

When not contained, the SCP-1200-A entities will attempt to acquire recently deceased human bodies and transform them into SCP-1200-30. Each entity will locate a suitable cadaver and transport it to the base facility. There, the entity will regurgitate paint, various biological matter, and small slags of iron, into the mouth of the cadaver. The entity will repeat this process over the course of several weeks. Eventually, the body will liquefy, forming a dense homogeneous liquid, which will disappear via unknown means soon after. Chemical analysis of the liquid identifies it as the substance constituting 80% of SCP-1200-30 sample's contents.

Addendum 1200-3: Cross-reference analysis of the Foundation Archives returned a relevant phone call. The call was made on 1999-06-02 from a pay phone located 2 km from the SCP-1200-A base facility. A single unidentified male voice can be heard on the recording. The transcript of the recording follows.

> Herrick, this is Davis.
>
> I'm all done with the psychopomps here. We redirected the output to the location you wanted, weren't any problems there. The goo should start arriving to you

shortly.

About your other order, Morton spotted some nanohives in Budapest. I'm heading out there tomorrow. They should do nicely for your task, after some tinkering.

Make sure there won't be any issues with my payment this time. If your contacts at the Factory are unwilling, I can always find someone else.

Call you in two weeks.

Addendum 1200-4: On 2003-08-24, two days after dismantling of the SCP-1200-A base facility was concluded, packages containing a previously unknown flavor of SCP-1200 arrived to several non-clandestine Foundation facilities. The testing results are included below.

SCP-1200-83 "Tastes Like Normalcy" Colorless	No anomalous effects observed.

« SCP-1199 | SCP-1200 | SCP-1201 »

SCP-1201: Zoroaster's Well

Item #: SCP-1201

Object Class: Euclid

Special Containment Procedures: A 50 m perimeter around area 1201 is to be maintained at all times. Testing into the nature of SCP-1201-2 is to be done promptly and without hindrance to the route of SCP-1201-2 to prevent a possible containment breach of SCP-1201-3.

Any change in behavior by SCP-1201-2 is to be immediately reported to the Site Director and the area is to be put on lock down.

Changes in containment procedures are currently being drafted as of the incident outlined in Document 1201-C.

Description: SCP-1201 is a shallow wall-fountain located in Damascus, Syria. The fountain itself displays no anomalous properties save for its use by SCP-1201-2. Although SCP-1201-2 appears to enter SCP-1201 during separate manifestations, entrance by Foundation personnel does not seem to be possible. An investigation is currently underway to confirm whether or not the placement of the well is purely coincidental.

SCP-1201-2 appears to be a large, completely hairless chimpanzee similar in size to an average adult human male. Strength and agility exhibited by SCP-1201-2 is not considered to be abnormal relative to its size.

The entity materializes within 40-48 meters of SCP-1201 each year on / at 23:23:46 with severe injuries including third degree burns, severed limbs, deformities consistent with exposure to triflic acid, and holes scattered around the body. SCP-1201-2 regenerates in the space of 12.3 seconds before attempting to return to SCP-1201. An outline of a typical occurrence can be found in Document 1201-

A.

Attempts to halt the progress of SCP-1201-2 toward SCP-1201 have been effectively unsuccessful, as the entity appears to assault researchers when coerced, and prolonged confinement of the entity seems to produce an adverse effect originating near SCP-1201. SCP-1201-2 is not hostile toward researchers during its manifestations but will actively attempt to remove or disable barriers between it and SCP-1201. SCP-1201-2 appears to be highly vulnerable to electrical shock but further attempts to halt the progress of SCP-1201 are not recommended due to events outlined in Document-1201-B.

Document 1201-A: Events of / /2002, Area 1201

Foreword: Fifth recorded incidence and observation of the manifestation of SCP-1201-2. The entity was questioned alongside researchers keeping pace with the movement of the entity on a pre-constructed motion track. The entity was visible for 20 seconds before disappearing into SCP-1201.

> *SCP-1201-2 manifests 47 meters from SCP-1201. Subject appears heavily bruised around the torso and face, with third degree burns covering the body. SCP-1201-2 appears to regenerate to typical appearance in the space of 12.3 seconds before righting itself and sprinting toward SCP-1201. Agent Breen attempts communication.*
>
> **SCP-1201-2:** The hell do you guys want?
>
> **Agent Breen:** What are you doing?
>
> **SCP-1201-2:** Going to meet Beth.
>
> **Agent Breen:** Who is Beth?
>
> **SCP-1201-2:** A real bitch.
>
> **Agent Breen:** What is Beth?
>
> **SCP-1201-2:** A bitch.

Agent Breen: Thank you for your cooperation.

SCP-1201-2 disappears into SCP-1201.

END LOG

Document 1201-B: Events of / /1999, Area 1201

Foreword: Second recorded incidence and observation of the manifestation of SCP-1201-2. The entity was temporarily disabled with a prefabricated electric field after regenerating. The entity was incapacitated for 18 seconds before power to the grid was removed by Agent Sanders and SCP-1201-2 was released.

Agent Sanders: You're going to want to cooperate with us.

SCP-1201-2: The fuck is your problem?

SCP-1201-2 attempts to break from the electrical current but is not successful.

Agent Sanders: We're going to need some information before you go anywhere.

SCP-1201-2: Not telling you shit.

SCP-1201 begins shaking, and partially fractures from its foundation. A long, smooth, black mass with the appearance of a tongue, which will henceforth be referred to as SCP-1201-3, can be seen partially probing from SCP-1201. The tongue stretches in length over 40 meters toward Agent Sanders.

Agent Sanders terminates the power to the containment on SCP-1201-2. SCP-1201-2 rights itself and collides with the appendage of SCP-1201-3, making contact and crashing into a wall.

Flames begin to funnel out from the mouth of SCP-1201 and SCP-1201-2 is severely burned. SCP-1201-2 is pulled into the air by SCP-1201-3.

SCP-1201-2: You bitch!

SCP-1201-2 has the tip of the appendage in a headlock, 20 meters above ground. SCP-1201-2 begins tearing into the skin of the appendage with its teeth.

SCP-1201-3 falls to the ground with SCP-1201-2.

Flames begin to increase in volume from the mouth of SCP-1201. Temperature in the immediate area increases by 20 degrees Celsius.

SCP-1201-2, still in possession of the end of SCP-1201-3, dives into the mouth of SCP-1201.

END LOG

Document 1201-C: Events of / /2003, Area 1201

Foreword: Sixth recorded incidence and observation of the manifestation of SCP-1201-2. The entity was questioned alongside researchers keeping pace with the movement of the entity on a pre-constructed motion track. The entity was visible for 21 seconds before disappearing into SCP-1201.

SCP-1201-2 manifests 49 meters from SCP-1201. Subject appears with a large hole in its torso. SCP-1201-2 appears to regenerate to typical appearance in the space of 12.3 seconds before righting itself and sprinting toward SCP-1201. Agent Breen attempts communication.

SCP-1201-2: You guys are persistent.

Agent Breen: Please tell us what you're doing.

SCP-1201-2: Fine, fine. Since you're so fucking adamant about it. This has been going on for quite some time. Beth just doesn't know when to give up. I'm trying to teach it who the real king of Candy Land is.

Agent Breen: You're being facetious?

SCP-1201 jumps into the air, maintaining momentum while delivering a kick to Agent Breen's head. Agent Breen's head is severed and explodes on impact with a nearby wall.

SCP-1201-2: You're ruining the fun.

SCP-1201-2 disappears into SCP-1201.

Document 1201- : Personal Notes

There was no sign of any place where we could have arrived, no

entrance, no device for travel. I checked my pulse, felt along my skin: slightly elevated heartbeat, and I was mildly warm. I would have to say that at that time I was also fairly distressed, so I apologize for any inaccuracies in advance.

After the entity released my leg and dropped me I found myself on the surface of a very small, empty, rocky planet. The sun was at least three times as large in the sky, if it was the sun we know of. I would not be surprised if it was Mercury, although this thought was briefly quelled as I could see what appeared to be a large, flaming serpent making loops in the distance on the sun's surface.

Strangely enough I did not have trouble breathing or staring directly into the sun, and I was not at all affected by the intense heat. When questioned, 1201-2 responded with "It's just fucking atmosphere." When questioned if this was the place it always returned to when SCP-1201-2 entered the well, it responded "That would be lame as fuck."

1201-2 appeared to be running in place for a few brief moments before the next event happened. I found that I could not advance either. When questioned I was told that "It's fucking countdown." So, I remained walking in place as 1201-2 was doing.

I fell forward on my face after hearing a large crystalline chime, and 1201-2 began laughing and issued a slur of insults before disappearing far ahead of me. When I got my footing, I found that moving was rather effortless, and I was running at about three times as fast as I normally can. The experience was quite exhilarating if you don't mind me saying.

I asked it where we were going. It told me that "We gotta find Beth and kill that bitch." Like you, I wasn't entirely sure who Beth was or why 1201-2 wanted to kill it, so I just continued running alongside 1201-2. In time I could see an enormous black mass of tentacles floating in the distance. I asked 1201-2 what it was and it told me it was "Fucking cheap as shit." When I asked to clarify the specific nature of the entity, 1201-2 told me "It's just fucking overpowered."

So, being a bit hesitant, I slowed down a bit and let 1201-2 take the lead. When we got a bit closer, it spoke. I'm not sure I can recall its

exact words, but it kept referring to 1201-2 as its "bitch" and that "he sucked so bad". 1201-2 was visibly upset, and told it that it "should make the first move". That's when the entity, which I'm assuming to be 1201-3, advanced on 1201-2 and began whipping its tentacles wildly at it. The motions themselves were peculiar in the sense that each separate attack by 1201-2, and 1201-3 did not differ in motion in the least bit, and was accompanied by a matching "cry". I'm fairly certain I saw 1201-2 instantly right itself about four times after being struck by the tentacles.

Yeah, right… after that it… 1201-2 told me "I'm getting low, fucking help me you fucking noob." Which I have to say was completely nonsensical because he had just allowed the thing to attack him in the first pla- I'm sorry I'm getting off track here.

1201-2 retreated, froze in place, and begun glowing in a green light. I was forced to attack the entity myself or run from it as its attention was now turned to me. I was caught off guard momentarily by a blinding light emanating from 1201-3's center, and unable to move for one reason or another. 1201-2 told me that "If I wasn't a fucking noob, I could 'glitch' stuns". I'm not entirely sure what he was referring to, but after one or two seconds I could move again. That's when one of its tentacles pierced through me… I saw an explosion of gore from my chest, but I felt absolutely no pain whatsoever, and the gore itself disappeared into the air. After seeing this I was a bit more motivated to approach 1201-3 and speak to it as I was sure it could not harm me.

I continued running toward the creature, trying to ignore the circling clouds of tentacles and gore around my body. I asked it what it was, but there was no response. It seemed rather focused on attacking me. After a short time I started moving more slowly and I could hear a loud, heartbeat sound in my head.

I could see 1201-2 circling in on it from behind out of the corner of my eye. The heartbeat noise in my head was deafeningly loud at that point, and I could barely move, and that's when I heard 1201-2's voice yell "You lost, bitch!", followed by 1201-3 exploding.

A voice, the location it was produced from I cannot specify, asked 1201-2 "How it got a fucking NPC in a deathmatch." before I

reappeared at area 1201.

SCP-1202: Lost Voice

Item #: SCP-1202

Object Class: Euclid

Special Containment Procedures: The subject exposed to SCP-1202 is to be quarantined from other site staff and personnel unless outfitted with clothing completely covering their entire body. A skin suit is equipped to the exposed subject after transfer of SCP-1202. The afflicted subject is to transfer 'access' to SCP-1202 to one other test subject before termination or death. It is recommended SCP-1202 be tested on D-Class already scheduled for termination.

Description: SCP-1202 was recovered beneath a frozen lake near Site- in , Canada. Personnel reported trouble sleeping and auditory hallucinations that often referenced the location of SCP-1202. A team was sent to investigate the lake based on the collective reports. A small wooden canoe was discovered in fragments on the lakebed next to an irregular ice formation. The chamber behind the blockage was empty save for the frozen and emaciated remains of the body of one human male, later DNA tested and carbon-dated, thusly identified as belonging to tribes once native to the lower portion of South America eight hundred years ago.

The corpse itself has no interesting properties except the position of the body: one hand is fixed on the forehead and the other appears to be working a now absent object into its ear canal. Whether the cause of death is suicide or cold is unconfirmed.

The agent who first made physical contact with the corpse began to hear a voice that did not cease until he had made contact with another human. The exposed D-class reported hearing the voice after grasping Agent 's hand and indefinitely afterwards. The exact mechanism that enables this transfer is unknown, as is the

manner in which SCP-1202 communicates with the subjects.

SCP-1202 will converse with the afflicted subjects, lecturing them about a variety of topics, notably theoretical physics, biology, and the classified study of [DATA EXPUNGED]. The psychological effect tends to be detrimental as the voice rarely ceases to 'talk' for periods any longer than twenty seconds. The current D-class responsible for bearing SCP-1202 requested to be euthanized at one week.

The voice classified as SCP-1202 identifies itself as , a former researcher at Site-18. Whether or not SCP-1202 is Dr. is still being debated, although inquiries expressed to test subjects 'bearing' SCP-1202 match archived profiles of the late researcher.

Documentation: Transcription from Agent

Foreword: Agent began hearing the voice while in the company of the coroner who was examining the body found in the cave. Agent notified the Site Director. He was then tasked to record his initial conversation with SCP-1202.

> Hello? Can you hear me? I know you can hear me! Oh good. I've been expecting someone to come along, and here you are. You touched him didn't you? My old friend? Yes, him. The one I had the falling out with ages ago. I was just having a conversation with him and then you came along.
>
> What? Him? The frozen one with the splinter in his head? Oh yes of course he's dead, are you stupid? Stupid one he was too, my old friend. No offense to him but it's true; love him to death, that stupid one. He thought he could run. He ran all the way here. The man crossed an entire continent to get away from me, ended up in a hole in the ice jamming a pick into his ear. I told him not to, again and again.
>
> Who am I? I'm [REDACTED]! Who am I? I'm responsible for [DATA EXPUNGED], the entire organization owes a great debt to me! Hmmm? Of course you're interested.

Yes I'll tell you, but first I'd like to chat about things that we can both understand. Do you see that man in front of you? Yes the one with the beard. I'm going to need you to kill him for me. Yes I'm serious! How else will we get into headquarters undetected? He has the keycard, he has access to the [REDACTED], and once I get to it I can be done with all this mess.

No? I should have figured you weren't the type. Oh well.

No don't tell him you're hearing things! What? You already did? Are you an idiot? How long have you been working here to be stupid enough to tell them you're hearing things? Ah. Well at least I know why you're recording what I'm saying. I figured you were just insane to begin with. That's a relief. You know, they're going to throw you into one of those rooms now! They'll have you drink that gelatin that perverted doctor isn't allowed to touch! Worse, they'll keep me in here! I'm just far too interesting for them to get rid of.

How? That is a good question, although you are too stupid to understand. Let's say I was playing with strings and struck a wonderful note. Yes I'm referring to that, you dunce. You're familiar with the concept. Sure. I bet you're familiar with the theory of relativity too, familiar like I'm familiar with my strange uncle. I mean learned, my stupid friend, learned and familiar, like how I'm familiar with your brain.

No, technically I'm not alive. Not in a biological sense. No. You wouldn't understand. The Aztec man? I'm guessing roughly one thousand years ago. Yes, I failed miserably at poking sticks into space-time. What? No! I'm not going to explain, you wouldn't understand!

No, I'm not going anywhere. We've hardly even met. How rude of you.

Note:
He's humming now. He won't stop humming. He's been

humming loudly for several hours.

« SCP-1201 | SCP-1202 | SCP-1203 »

SCP-1203: Ouroboros

Item #: SCP-1203

Object Class: Euclid

Special Containment Procedures: SCP-1203 is assigned to a 3m x 2m x 2m containment cell. The living space at Site-17 is outfitted with steel walls and one solid barred door that locks from the outside. There is to be one guard on duty at all times near the cell to ensure SCP-1203 does not attempt a self-termination or auto-abort. It is recommended the subject be dosed persistently with the prescribed anti-psychotic medicines and mild narcotics to avoid this possibility. These medicines will be replaced with restraints during SCP-1203's pregnancies. SCP-1203 is to be restrained at times when not under supervision. At no time is SCP-1203 allowed to leave Site-17.

One to three hours before death SCP-1203 will begin seizing, followed by a state similar to catatonia, and ending in a cease of all bodily functions. Time of death is recorded after a pulse is shown in the newborn, rather than the mother's natural death.

Termination attempts on SCP-1203 as of the incident with Research Assistant are indefinitely on hold. Reference Log from Failed Termination-1203b.

Description: SCP-1203 is a human female, approximately 20 years of age, identifying by the name 'Miranda'. SCP-1203 has been in containment for approximately 95 years, or 5 cycles as of SCP-1203's next natural death and birth.

SCP-1203 was recovered from Xochicalco, Mexico. Agent began investigation with a lead based on local reports of disappearances near the Feathered Serpent pyramid (reference - in the newspaper, "La Policía Rescata a Bebé en Pirámide"). SCP-1203 was discovered near the pyramid summit accompanied

by members of The Serpent's Hand. A 'mother' SCP-1203 could not be located.

At 21 years of age SCP-1203 undergoes a process similar to parthenogenesis, resulting with the conception of one genetically identical human fetus. At an embryonic level this form of reproduction is comparable to the aforementioned medical phenomenon, however, new instances of SCP-1203 are not developmentally inhibited, and do not benefit from any (natural) extended longevity.

SCP-1203 during any stage of her life has an identical biological profile to previous instances of SCP-1203. A definite date cannot be placed on the length of the existence of SCP-1203.

The condition suffered by SCP-1203 is unique in that memories are also transferred from the mother to the newborn. Variances in the progeny of SCP-1203 are represented in the sense that SCP-1203 maintains memory of its previous lifespans. This experience of “rebirth” and the recollection of the event have a noticeable and detrimental psychological effect on SCP-1203. Based on these observations we can assume SCP-1203 is lucid in infancy and during birth.

Addendum 1203- : 12/23/1991

Documentation: Excerpt from Interview
Translated Revision

> **Dr. :** Tell us more about your family history.
>
> **SCP-1203:** I only remember back to my eighth grandmother, but only little bits and pieces. I recall other things but they’re kind of like a dream that you forget after you wake up.
>
> **Dr. :** Tell us the experience you have after death.
>
> **SCP-1203-:** I fall asleep and I wake up. It’s dark and then I feel warm. I see a light like a tunnel, and I'm back again.

Dr. : How is the experience of being born traumatic?

SCP-1203: I trust you do not mean the last time. I can still hear that poor man screaming.

Dr. : No.

SCP-1203: I remember it. I'm there in both places, and I'm pushing myself out… It is unpleasant.

Dr. : Would you like the cycles to end?

SCP-1203: Yes, and I would like to fly as well.

Log from Failed Termination-1203b:

Foreword: Due to lack of any discernible benefit to the Foundation and the current mental state of SCP-1203, a termination was scheduled on / / under supervision from the late Research Assistant . The attempt to abort cyclical rebirth of the subject took place shortly after SCP-1203s 'first' labor contractions. The decision to abort rather than terminate SCP-1203 was reached on basis that more could be learned in regard to the nature of SCP-1203 in this manner.

Extraction was performed successfully, the newborn having been completely removed and separated from the mother. The mother was then pronounced dead. During the cranial potassium injection the mother as well as the newborn's (SCP-1203s) husk began to [DATA EXPUNGED]. What followed was a reportedly indiscernible eruption of viscera from Research Assistant . Both instances of SCP-1203 were found afterwards to be undamaged.

The newborn recovered completely after the incident. No abnormal potassium levels were present.

Research Assistant was found afterwards completely drained of fluid, his circulatory system inverted and strewn from the mouth. The autopsy revealed no marks on Research Assistant that would be indicative of a physical assault. No other anomalies were found save for extra hair growth of 300mm, a scar 1.067mm in diameter on the

forehead, and an extreme case of hyperkalaemia.

« SCP-1202 | SCP-1203 | SCP-1204 »

SCP-1204: Clingy Transient

Item #: SCP-1204

Object Class: Euclid

Special Containment Procedures: SCP-1204 is contained in SCP-1204-A. SCP-1204-A should be contained in a standard containment cell measuring 4 m x 4 m, armed with infrared sensors and cameras. This cell may be furnished at the site director's discretion as long as said changes to the containment environment do not compromise security. SCP-1204-A is not permitted to leave the room unless accompanied by at least two armed guards who have passed a psychological evaluation. Physical contact with SCP-1204 is not recommended. Subject is not permitted to leave the room until a decision toward transfer of SCP-1204-A or termination is reached.

Description: SCP-1204 does not seem to be visible by sight alone and is not susceptible to most forms of physical contact save for electric pulse. Its composition is not yet known. CT scans reveal the shape of an amorphic tumor-like mass located in the brain of SCP-1204-A-50 (a Hispanic female, approximately 21 years of age) near the hippocampus, although resulting images vary greatly on each separate occasion, revealing the mass in separate locations within the brain.

RESEARCHERS' NOTE: It is the consensus of researchers that the mass is a highly mobile mass, similar in size to an adult human heart although results are inconclusive.

The entity itself does not seem to have a harmful physical effect on SCP-1204-A during a typical habitation aside from a substantial effect on hormonal balance, mainly resulting in severe mood swings. See Document 1204-18: for details on prolonged habitation.

SCP-1204 will remain within SCP-1204-A until transferring to

another host. The process by which this is achieved appears to be a contracting of ’mass’ which originates near the pharynx and leads out through the mouth of SCP-1204-A. The process ends with SCP-1204 relocating to another host and takes between 6 to 12 minutes. This process requires extended oral contact between each party; tendrils seen between the two openings via infrared cameras reveal the process of “phasing” between the two parties to take place relatively slowly. SCP-1204 seems to cause euphoria within SCP-1204-A and its new host for the short duration of the transfer for what can be assumed to help ensure successful relocation. SCP-1204-A expires from internal bleeding after the process has completed. Testing reveals small but fatal tears near the rear of the nasal cavity and ventral portions of the brain in SCP-1204-A after transfer. This suggests a tow on brain tissue during migration. Reasons behind the fatality of SCP-1204-A are not yet known, as the entity usually appears to phase harmlessly through different portions of the body in all other circumstances. Further examinations reveal the absence of a hippocampus in deceased subjects.

New hosts of SCP-1204 do not seem to be aware of SCP-1204's existence and do not claim a noticeable change in affect or experience when under the influence of SCP-1204, although repeated testing and observation has shown that subjects under the influence of SCP-1204 will become increasingly hypersocial, devoting significant amounts of time seeking out physical contact. SCP-1204-A will experience "strong feelings of loneliness" as well as extreme idolization of one potential romantic partner. Sexual interaction only appears to be incidental when under the influence of SCP-1204.

SCP-1204 was discovered after an unusual string of 'murder' and 'suicide' reports were uncovered by Foundation search algorithms reviewing local papers from portions of the lower southeastern United States, ranging from Palm Harbor, Florida to Clarksville, Tennessee. This linked string of incidents seems to have coincided over the course of 10 years and involved more than individuals before SCP-1204 was detected by the Foundation and recovered. The origin of SCP-1204 has yet to be discovered due to inconsistencies in public records.

Document 1204-12:
Foreword: The following is from the journal of SCP-1204-A-45.

> *I'll just preface this by saying that I always felt like I could never be too close to you. I've felt that way for a while. I hope you're at peace wherever you are now. It feels like you're so far away now… I don't know how I'm going to get through this…*
>
> [IRRELEVANT MATERIAL REDACTED]
>
> *Please don't get angry at me for meeting with tonight. It just hurts, it hurts so bad… I need someone to help ease the pain.*
>
> *Why did you have to die?*

Document 1204-13:
Foreword: The following is from a note found on the premises of SCP-1204-A-20.

> *I just feel like when we're hugging and stuff that I want to be closer, you know? Like I can't be any more close to you than possible. It's like, I don't know! It's such a weird feeling, like when we're lying down together like I just want to, I don't know, like, be you for just a second?*
>
> *Haha, hope that doesn't sound to creepy. ILY! Text me! <3 <3*

Document 1204-17:
Foreword: The following is an e-mail found on SCP-1204-A-43s computer.

> *I jumped the first guy I saw at the party. No kissing or anything. I'm really a piece of work aren't I Grace? Paul would hate me if he knew what I was doing. I'm just so fucking lonely. Maybe I'm trying to shake off Paul. I don't fucking know anymore.*
>
> *Come by my place later so we can talk, okay?*

-

Document 1204-18:
Foreword: The following is a written account from the current host of SCP-1204; SCP-1204-A-50, a D-Class suffering from oneirophrenia. The cause of the disorder is believed to be a result of prolonged isolation and internal effect from SCP-1204. D-Class began showing signs of increasing instability including psychotic outbursts, delusional thoughts and at times attempted to assault researchers during testing.

> *fuck you fuck you fuck you fuck you let me the fuck out you stupid cunt you want to keep dr. for yourself you stupid cunt you jealous cunt thats why you have me locked in here because you.want.him.all.to.yourself. this is all part of your stupid plan dumb fuck i didnt even care about that faggot convict fuck you just put me in here so you could have dr. . you know im better than that faggot. let me inside. it wants you. it doesn't want me i.dont.want.me, it says i can be with you. if i can get to you. we can both be with you. when can get to you*

Note: The mental state of SCP-1204-A-50 appears to be deteriorating over time, and the subject's jaw appears to be expanding, the mouth appearing visibly larger. The decision to terminate or transfer of SCP-1204 is currently being discussed among site command.

« SCP-1203 | SCP-1204 | SCP-1205 »

SCP-1205: Wallflower

Item #: SCP-1205

Object Class: Safe

Special Containment Procedures: SCP-1205 should be kept in a windowless containment cell with low light, facing a surveillance camera. Air quality tests should be performed on a monthly basis, and the atmosphere adjusted to prevent mold formation.

Personnel monitoring the live surveillance will be alerted by an alarm, in the event of any change in the object's size or shape; observation of the live video feed itself is discouraged, until more information on Incident 1205-G is available.

Description: SCP-1205 appears to be a patch of decaying, floral-print wallpaper, still attached to a cut-away segment of wall. The paper appears to be aged and flaking, and seems as vulnerable to burning (both with fire and various chemicals) and cutting as comparable vinyl-free wallpapers. Subjects instructed to intentionally damage the item reported hearing a sustained shriek, as if from a far distance, reminiscent of the ascending pitch of tea kettle's whistle.

Within twenty-four hours, any portions of paper destroyed will re-appear on the wall in their former location and in identical condition. Fragments removed by cutting or tearing inevitably crumble into a fine dust within minutes, reappearing after the same twenty-four hour period. The item has also been observed to change shape and size at irregular intervals. These changes have never added or subtracted more than six square centimeters from the object's approximate surface area.

Under experiment conditions, interaction with the object has not been observed to produce any psychological, physical or other damages, short or long-term. However, controversy surrounding Incident 1205-G suggests that further testing for perception-

altering influences is necessary.

Incident Report 1205-G is required reading for all personnel assigned to SCP-1205.

> **Note:** The following file contains excerpts from Dr. E G 's personal notes and logs. All references to Foundation staff and family members have been censored. Descriptions of events by Dr. G which have since been disputed by eyewitnesses are annotated accordingly.

+Incident Report 1205-C

Excerpts from the logs of Dr. E G :
5/16
Guess someone believes in second chances; either that, or I haven't caught the punchline. New assignment, against all odds. Looks like wallpaper. E. can't stand the sight of it, but wished me luck.

Started with measurements, today; nothing too interesting. One of the D's was sneezing and itching from the beginning— turned out he was allergic to the fabric of his new suit. His appearance changed more than the scp's.

5/17
Damage tests: it cuts, tears, and burns like paper. No unusual components in the ash or smoke; the fragments fell apart, though, which at least indicates that this isn't someone's idea of a hoax.

E. isn't here today; off-site, somewhere in [REDACTED]. Sitting in the observation booth, where it's quiet. Must've been an hour or two, by now. Can't help wondering what that paper would have looked like, covering some old parlor wall. The red flowers look like poppies. The colors would have been striking, before the paper browned.

Stupid thought. Maybe it never looked any different than

it does now.

> **Note:** This is the first instance of the subject appearing preoccupied with the contained item; however, as other personnel have pointed out, the subject's remarks do not necessarily indicate fixation.

5/18
All of the portions removed and destroyed have grown back. The spots don't look newer, either— they show the same sign of age and decay as before. The D's seem fine; will have them clinically and psychological screened, to be sure. I don't like the sound of my own hypotheses, when it comes to what might happen next… (Really looked forward to telling E. He always calls on Sunday, if he can't visit. Didn't call today. Not yet. Why?)

> **Note:** Several pages following only detail the experiment procedures in shorthand. These notes match the official logs, and have been verified for accuracy by the assisting research staff.

5/27
Nothing. That's what happened next. No results.

If I did something to make E. angry, he won't tell me. Saw him across the hall, yesterday. Smiled, and he smiled back. But he didn't cross over to talk to me, and he hasn't called since.

> **Note:** Once again, several pages of experiment procedure in shorthand, all pertaining to exposing D-Class to contact with the object. In place of the results recorded in official logs, the author has repeatedly written "NOTHING." in all caps. After this point, references to the Dr. G 's continuing research are infrequent.

6/05
It isn't just E. … dad hasn't called in a month. No one's called, in a month. I start to worry, then I hear from someone else that they're doing fine. So why don't they pick up, when I call?

6/06
Presenting myself for psychological evaluation, to be safe. I've stared at that damn wall long enough to memorize the pattern.

6/07
Shrink recommended anti-depressants. Feel like an ass.

> **Note:** It is unknown how Dr. G experienced the psychological consultation which did, in fact, take place. Dr. Rhys' report on their interactions verifies that he did recommend anti-depressants, and that the subject seemed melancholy and withdrawn, and fixated on the potential inconclusiveness of her research.
> …
> *"Having worked in this business for some time, I did not find anything abnormal about these expressions of anxiety. However, I did recommend that she remove herself from physical and visual proximity of the research object."*
> According to colleagues, Dr. G made no report of or attempt to follow this suggestion.

6/10
I'm getting as bad as E., when it comes to compulsions. Every night, seem to find myself sitting on the bed, back to the wall. Like it'll collapse, otherwise. I shouldn't joke about that, E., sorry.

No one says hello, when we pass in the halls. And I can't bring myself to say it first.. I'm not asking for attention. But they look right through me.

Note: At this point, coworkers report that Dr. G took a hiatus from research work. She makes no record of submitting this as an official request.

6/12
They suspended my access to D-Class subjects, because of the lack of results. That must be what happened, because no one showed up— no one would explain why.

No one seems especially worried about it…. couldn't even find the shrink, for my appointment. Guess he forgot. I can't really blame him… it's hard to notice every little thing. Sights and smells and noise in the background.

Note: Neither of these statement correspond with other accounts; Dr. Rhys was in his office as scheduled, and alerted Dr. G 's direct superiors when she missed the appointment. Dr. G 's access to D-Class subjects was never suspended, and there is no record of an inquiry on the subject.

6/13
Didn't leave my room today.

Note: None of Dr. G 's neighbors recall her going to or from her place of residence, on this or any following day.

6/15
I left my room today, walked around every floor. Every hallway. No one [written in pencil, too faint to be legible]

They looked right through me.

Note: Dr. G has been officially declared a missing person as of 6/18/ . Contrary to her written account, the last recorded interaction

with Dr. G was 6/9/ . The reasons for her disappearance and its relationship to SCP-1205 remain a subject of debate.

Dr. Rhys notes that Dr. G had no prior history of depression, and close acquaintances describe her as outgoing and articulate. The testimony of her [REDACTED BY REQUEST] corroborates these accounts, and highlighted numerous instances of the doctor's levelheadedness under duress both before and during her employment by the Foundation.

Addendum 7/ / : While performing air-quality tests in the containment cell, a junior researcher claimed to witness the following—
"I'd just finished up… and I know it isn't a known issue, but I felt weird turning my back on it. So I backed out of the room, keeping an eye on it— and then I saw it move. It was like a little seam appeared in one corner, and a little scrap of it quivered, like someone was trying to tear it off. It pulled free and fluttered to the ground, but I must have blinked. When I looked again, it was gone."

Addendum 2: An anonymous Foundation researcher notes that he/she has read both the incident report and Dr. G 's original documents several times, and thoroughly. It is his/her opinion that sections of writing have since disappeared from the handwritten originals. This claim is disputed by other researchers.

« SCP-1204 | SCP-1205 | SCP-1206 »

SCP-1206: Lost Muse

Item #: SCP-1206

Object Class: Safe

Special Containment Procedures: Foundation agents are to construct billboards advertising a Foundation-owned local restaurant chain in the event site of SCP-1206 near the town of . Testing with subjects previously exposed to SCP-1206 has revealed that SCP-1206 cannot generate its effect if the view of the event site is impeded in any way.

Description: SCP-1206 is a serendipitous phenomenon that is the convergence of three factors: the degree of sky visibility over the event site, if at the time the Green Line Track D outbound from Boston, MA passes said site coincides with dusk or "twilight", and whether or not passengers happen to be gazing at the scenery on the northern/right side of the train. Statistically, SCP-1206 has shown a preference for the times of 17:30 EST to 19:30 EST as summer dusk tends to produce more picturesque settings, as well as a degree of cloudiness that produces an aesthetically pleasing sky scape over the event site.

Between stops [REDACTED] the Green Line train passes through an open 0.4 km long expanse of trees and shrubbery bordering the eastern boundaries of that classified as the Hot Zone. If the aforementioned conditions are met, passengers become intensely transfixed by the scenery for the entirety of the trip through the Hot Zone. Subjects have reported an overwhelming feeling of awe and the sublime, but have summarily failed to provide adequate descriptions of what they have seen. Researchers have speculated that subjects have been unable to describe SCP-1206 because it appeals to latent forms in the human mind that cannot be accurately defined by formalized language. As exposed subjects feel a compulsion to communicate their experience of the Hot Zone, individuals will invariably develop a language (hereby referred to as

1206-A) that will replace and eventually become the subject's preferred method of communication.

1206-A has developed concurrently even in isolated subjects. 1206-A apparently functions as a language of the subconscious, utilizing rudimentary language constructs intrinsic to the human brain that can communicate the emotional state and status of its speaker and listener flawlessly. It is to be expected that >75% of subject groups will eventually fracture, as it is impossible to lie or be subtle when speaking 1206-A. Written words bear a resemblance to [REDACTED], suggesting 1206-A is far older than the Foundation initially believed.

Rough translations are possible, but the emotional sensations skilled speakers are able to convey far outweigh ordinary language constructs in lucidity of meaning, ease of use, and informational density. Non-speakers of 1206-A are still able to intuitively glean fragments of meaning from spoken instances, however complex. Only exposure to SCP-1206 has proven to trigger 1206-A. Should 1206-A become the de facto language of a nation or the world, its revelatory and reverent nature would cause total societal restructuring if not outright collapse. See notes by Dr. for summary of findings.

+ Addendum 1206-01

Addendum 1206-01: Agents monitoring travel boards were alerted to a possible second instance of SCP-1206 when Norwegian forums user wrote a lengthy post in 1206-A detailing his marital troubles following his discovery and adoption of 1206-A. Subjects were made to translate the statement into English. Transcript of relevant segment is as follows:

"On 04/8, my family and I were walking across a bridge in [REDACTED]. An unassuming thing, not much to look at. The thing is though is that it afforded us the most beautiful view of the sunset a few weeks ago. I struggle to describe it even now. It felt old, primal, shining from out of time past. Like if I had a child's eyes, and everything sang with novelty. My daughter began

speaking gibberish the day after. She was the first. I started the following Friday. Words poured out of me, , , and .[1] The wife was next.

For many days, we reveled in the power of it, in capturing the flight of a bird or the growl of the car engine in a word. But it was exhausting. You could not lie in this language. Case in point: my wife left me the following month. I had noticed her word for me made her uncomfortable. It dug up something in her, all the bad qualities about me she had never liked but had buried under the habits and routine of marriage. My stubbornness, my insistence on having a son, how I came home one Friday night reeking of perfume. All in a word.

I have visited that bridge every dusk for the past two weeks. Sometimes it is ordinary, sometimes it glows with an old fire. I know there are more places like that bridge. I can feel them. The last vestige of the beauty that gave us God and the courts of spirits, nerve-ends shuddering awake with life. Our society has no words for them, and you can't sing of them because they are where songs come from.

I think when humanity was young, we must have been like children, unnaturally wise in all the subtle things of the earth. We spoke the names of majesty everything called themselves. Now that is all gone, but it is still there to discover. It huddles in the blind spots of our modernity, in the blankness of maps. If we can only see it, only feel it atop our rationalist perches, our aviaries angular with number and category, swaying in the winds of death. Melt into the blood of love! Find me! The bridge is in [REDACTED]."

Agents apprehended for questioning. Study into the Bridge as another Hot Zone for the SCP-1206 phenomenon is ongoing.

+ Summary of 1206-A findings by Dr.

Even the student linguist will see that there is something wholly unique about SCP-1206-A. For one, 1206-A has words for the exact appearance or 'impression' of an object/person. For example, speakers of 1206-A would go beyond describing the parts or attributes of a person's face, but actually call every face a unique word. 1206-A does not rely on its listener forming an incomplete picture from a description of compositional parts, but has a near-infinite base of words used to encapsulate and describe a wide variety of objects including faces, bodies, the character of a person, the appearance of the sky on any given day, the weather, how a particular conversation made the speaker feel, or even a mound of dirt.

Many of these words might be similar, derived from each other, or differ in syllabic emphasis to signify related categories of appearance, personality, feeling, abstract concepts etc. For example, after a particularly grueling session recording over words with D-17368, the subject described the interview as leaving him feeling " ", a heteronym of " " and roughly analogous to "drained", but with added emphasis on the syllable to signify the nature of what caused the subject's fatigue as intensely bureaucratic and procedural. The name for the Hot Zone is " " and is the only word that does not share similarities with any other.

As is the nature of 1206-A's flexible nomenclature, subjects will often create words on the spot. There are no rules regarding the formation of words. Once a functional set of 1206-A words has entered the speaker's lexicon after Hot Zone exposure, subjects only report needing to meditate momentarily on the object of their description before inventing a word that "fits like a glove". Other speakers will immediately accept the word as the name for that object. Studies with isolated subjects asked to describe the upturned contents of the break room trash receptacle has yielded the same word - - suggesting a universality in the method of word invention that is intrinsic to the brain's physiological makeup.

Studies are ongoing.

— Dr.

Footnotes

1. Only recorded derivation of the word used to refer to SCP-1206.

« SCP-1205 | SCP-1206 | SCP-1207 »

SCP-1207: Not a Mirror

Item #: SCP-1207

Object Class: Safe

Special Containment Procedures: SCP-1207 is to be wrapped in opaque cloth, and contained within a standard inanimate-objects locker. In accordance with standard protocol for direct-exposure line-of-sight cognitohazards, SCP-1207 is to be kept under constant real-time video surveillance whenever it is removed from its locker for any purpose (maintenance, analysis, experimentation, etc.).

Direct exposure to SCP-1207 is to be minimized. Maximum cumulative direct exposure for individual personnel is not to exceed 2 (two) hours within a 30 (thirty)-day period, or 24 (twenty-four) hours within an individual lifetime. Personnel whose cumulative direct exposure to SCP-1207 exceeds 2 (two) hours within a 30 (thirty)-day period are to be immediately placed on psychological leave until such time as they have been judged free of the symptoms of body dysmorphic disorder, and are not to resume active duty until they have successfully undergone retraining in data entry and proofreading.

Description: SCP-1207 is a miror approximately one meter by one half meter in size, in a white wooden frame painted with pink and red hearts. Using the Kinscale method of miror-type object evaluation, Foundation scientists have established it as a minor level psychological threat.

SCP-1207 is a metal sign approximately one meter by one half meter in size, painted white, with embossed letters reading "THIS IS A MIROR YOU ARE A TYPO" (sic). It is a direct-exposure cognitohazard, which manifests three distinct anomalous effects upon subjects within line of sight.

The first effect, which is the most obvious, is that any sighted person

mammal vertebrate directly exposed to SCP-1207 will perceive it as being a mirror, even if they are aware of its true nature; test subjects not capable of mirror recognition will perform territorial threat displays against SCP-1207. Human subjects uniformly describe the mirror as being contained within a white wooden frame with "pink and red hearts"; however, more detailed descriptions vary from subject to subject. Blindfolded subjects report that SCP-1207 feels "smooth and glassy", with "wood around the edges"; conversely, blind subjects report that SCP-1207 feels "metallic and bumpy".

It is to be emphasized that, despite the perceptions and reactions of affected subjects, SCP-1207 does not actually function as a mirror.

The second anomalous effect is that subjects exposed to SCP-1207 will rapidly develop symptoms of body dysmorphic disorder as they examine their "reflections". Human subjects will voice a variety of complaints about their physical appearance, ranging from "I'm the wrong height" to "my tattoo is crooked", and always ending with "I'm not cool yet"; nonhuman subjects capable of mirror recognition will perform compulsive grooming.

As cumulative exposure time to SCP-1207 increases, subjects will begin to modify their appearances in attempts to "correct" themselves, typically by application of cosmetics; subjects without access to cosmetics will engage in self-mutilation. Such subjects, when shown actual mirrors, will express satisfaction with their modifications; however, when re-exposed to SCP-1207, subjects will again find fault with their appearance.

The third anomalous effect is that subjects exposed to SCP-1207 will gradually develop symptoms of dyslexia, losing their ability to spell, and to notice spelling errors; this effect is limited to subjects familiar with the English language, and always begins with the subject consistently misspelling the word "mirror" as "miror". The induced dyslexia is temporary; however, the factors determining the rate at which individual subjects recover have not yet been determined.

SCP-1207 was discovered in an abandoned storage unit facility in [REDACTED], which had been in use as a workspace by members of the group of interest currently identified as "Are We Cool Yet?". It

is theorized that SCP-1207 was to form the basis of an unfinished installation. Notes left by the artist indicate that the completed installation was "a rumination on the essence of how the ways we see ourselves shape what we are".

« SCP-1206 | SCP-1207 | SCP-1208 »

SCP-1208: WaffleMaster 3000

Item #: SCP-1208

Object Class: Safe

Special Containment Procedures: SCP-1208 is to be kept in secure item storage at Site-19. Researchers wishing to perform experiments with SCP-1208 using human or animal subjects must present a detailed test plan to the Lead Researcher for approval.

Description: SCP-1208 is a "Belgian" waffle iron, identical in every outward respect to a unit produced by the Conair Corporation in 2003, except that its power cable is fitted with a NEMA 14-30 connector rather the grounded NEMA 5-20 connector provided with that model. When connected to a compatible 240V receptacle, the PTFE-coated cast-iron cooking surface rapidly warms to a surface temperature of 215 C, at which point the green indicator light on the front of the device illuminates. At this point, SCP-1208 may be used to prepare waffles using any standard batter without anomalous effect.

The anomalous behavior of SCP-1208 occurs when it has reached operating temperature and any solid material other than a batter or dough is placed between the two heating plates and the lid is closed. Regardless of the material so placed, applying torque of approximately 1.3 N·m to the handle of the device will successfully close the lid, displacing any material in excess of the volume of the cooking area (approximately 1400 cc) to the outer edge of the device. At this point, the red indicator lamp on the front of the device will illuminate, and the device will not open until three minutes have elapsed. (Forces of up to 10^6 N have proven insufficient to open the lid during this phase.) Copious amounts of steam are emitted from between the two plates during this process.

After three minutes, the red indicator lamp will darken, and the lid may be opened with minimal effort. Both cooking plates will be cool

to the touch (approximately 15 C), and a "waffle" composed of the matter placed between the plates will be present. Deformation caused by this process is entirely topological: any substructures present in the source material remain intact but deformed. Incomplete sections of plant or animal tissue will remain alive for a short period of time, normally succumbing to necrosis due to lack of fluid circulation within 60 minutes. Animals small enough to fit completely within the volume of the cooking area may survive slightly longer, though feeding and respiratory difficulties due to their new body plan typically prove fatal in 1-3 days.

« SCP-1207 | SCP-1208 | SCP-1209 »

SCP-1209: Many Eyes in Many Places

Item #: SCP-1209

Object Class: Euclid

Special Containment Procedures: SCP-1209-1 instances are to be contained in standard humanoid containment cells at Site- . They are to be fed meals three times a day. SCP-1209-1 instances are to be allowed to submit requests for entertainment or comfort materials which do not compromise security, within reason, as a reward for good behaviour. Socialisation with assigned Foundation staff is allowed, and encouraged in order to improve psychological well-being, but instances are not allowed to come into contact with each other.

SCP-1209-1 instances are to be questioned at regular intervals by Foundation staff, and their responses are to be recorded, in order to document any noteworthy events observed and further understanding of SCP-1209. These interviews are to be conducted twice daily, at approximately 0800 hours and again at 1900 hours, as well as any time at which an SCP-1209-1 instance requests such an interview. SCP-1209-1 instances which have observed potentially traumatising events are to be monitored by an assigned psychiatrist, but may not be administered amnestics. It is considered vital that SCP-1209-1 instances retain their memory of transmitted images in case this knowledge becomes pertinent at a later date.

SCP-1209-2 instances are largely passive and do not present anomalous behaviour aside from connection to SCP-1209. As such, no containment procedures are required to directly deal with SCP-1209-2 instances aside from monitoring. However, efforts should be made to identify all SCP-1209-2 instances.

Should any SCP-1209-1 instance observe an event which is considered pertinent to the Foundation's mission, the Site Administrator of Site- is to be notified immediately in order to

discuss responses.

Description: SCP-1209 is a congenital defect of the eye found in several individuals from the region of [DATA EXPUNGED], and believed to be caused by an environmental factor. As a result of the deformity, the eye's internal structure is drastically altered, although the most noticeable feature of the condition is the presence of multiple irises, pupils, lenses and associated anatomical features on the surface of the eye. Number of lenses per sclera is typically between two and four. This condition is usually accompanied by complete heterochromia, where each iris is differently coloured. As a result of the presence of multiple corneas and a distortion of the sclera, sufferers report mild to severe discomfort when attempting to move their eyes, and some have only limited range of movement in one or both eyes. In many cases, deformities in the internal structure of the eye render one or more of the lenses partially or totally blind. An in-depth analysis of the abnormal optical structures found in SCP-1209 subjects can be found in attached document 1209-α.

Individuals affected by SCP-1209 (henceforth referred to as SCP-1209-1) appear to be able to see normally through only one of the pupils, usually the one aligned closest to where the pupil would normally be located. All other pupils display a view of the world consistent with that seen through the eyes of other individuals (henceforth referred to as SCP-1209-2). Each pupil displays images as seen by a single, separate person, and the persons that each pupil is able to 'see through' appear constant at all times.

Each SCP-1209-1 instance is connected to multiple instances of SCP-1209-2, as many as there are additional pupils. These connections allow SCP-1209-1 to experience visual stimuli only, and appear to only transmit through the left eye of SCP-1209-2 instances. SCP-1209-1 cannot perceive SCP-1209-2's experiences when they close their eyes, or when their eye is damaged beyond the point at which SCP-1209-2 can see through them. Should SCP-1209-2 die, transmission of images will continue until the internal structure of the eye deteriorates to a significant degree due to decomposition. If SCP-1209-2 is permanently blinded, or if the SCP-1209-1's additional pupils are damaged significantly, transmission of images will cease. However, defects in the

additional pupils do not prevent transmission; only injury or trauma prevents transmission. SCP-1209-1 will continue to perceive the experiences of SCP-1209-2 while dreaming, although reported transmission is less complete than while awake.

There appears to be a distinct correlation between SCP-1209-1 and SCP-1209-2, in that all SCP-1209-2 instances were born within approximately two hours of the relevant SCP-1209-1 instance's birth.

SCP-1209 was discovered following routine scanning of medical files at Hospital. Subsequent investigation led to the discovery of SCP-1209-1 instances born in the nearby area, centred on the town of , and more specifically the main water supply of the town. Investigation revealed the possibility that an unknown chemical had been introduced to the water supply repeatedly over the previous years by an unknown party, posing as maintenance workers in order to access the water supply network. Although this event is believed to have had some connection to the outbreak of SCP-1209 due to a correlation between periods of 'maintenance work' and conceptions resulting in SCP-1209-1 instances, it is presently impossible to determine whether the two incidents are related. All remainders of the compound believed to have been introduced into the supply had degraded into other chemicals before testing could be performed. No experimentation has been able to determine the exact cause of SCP-1209.

Addendum 1209-1: List of noteworthy SCP-1209-2 subjects (a full list of identified SCP-1209-2 subjects can be found in Document 1209-β):

- , Aide to , Secretary of State of [REDACTED]. Linked to SCP-1209-1-3. Considered noteworthy due to the considerable intelligence breach SCP-1209-2's existence represents. As a result of Foundation intervention, Mr. has since been removed from any position of political power.
- , a noted criminal operating as part of the central African militant group [REDACTED]. Linked to SCP-1209-1-2. Killed in combat action / / Due to the graphic and distressing nature of transmissions from Mr. , SCP-1209-1-2 was been placed under psychiatric

observation, and remains so despite Mr. 's death and the cessation of transmission.

- , an Australian journalist working for newspaper. Linked to SCP-1209-1-1. Killed / / during an investigation involving material sensitive to Foundation interest, during which she witnessed the outbreak of the cognitohazard later classified SCP- , though SCP-1209-1-1 was not affected. Remains to date the only use of SCP-1209 in order to assist Foundation efforts, as questioning of SCP-1209-1-1 was vital to providing intelligence allowing for the capture of the instance of SCP- .
- Unknown individual linked to SCP-1209-1-3. Shortly after SCP-1209-1-3 came into Foundation custody, this instance of SCP-1209-2 is believed to have blinded himself in order to avoid detection. Prior to loss of transmission, the individual wrote down the message 'I DON'T CARE FOR PRYING EYES. LEAVE ME ALONE', apparently with the intention of transmitting the message to SCP-1209-1-3. It is unknown how or to what extent the individual was aware of his connection to SCP-1209.
- Unknown individual linked to SCP-1209-1-4. Careful analysis of data received from SCP-1209-1-4 indicates that no such individual was present, or could have been present, at some of the events described by SCP-1209-1-4. However, all descriptions of events relayed through SCP-1209-1-4 have proven to be accurate save for the appearance of the observing figure. Several events observed by this individual are extremely important or sensitive, although no transmission has been reported since / / .

« SCP-1208 | SCP-1209 | SCP-1210 »

SCP-1210: Anomalous Radar Station

Item #: SCP-1210

Object Class: Euclid

Special Containment Procedures: A Foundation laboratory ship as well as two patrol ships are stationed in the region surrounding SCP-1210 at a range of no less than 10 km. As SCP-1210-2 remains active, expeditions to or experimentation with SCP-1210 for more than five (5) hours after a recorded emission event may only be performed with prior permission from at least two (2) Level 4 Personnel. Infrared and visible-light photography by the next over-passing surveillance satellite must be scheduled immediately after a recorded emission event.

The area surrounding SCP-1210 in a radius of 15 km is marked as off-limits on all official maps, and radar overwatch is to be maintained using unmanned aerial vehicles (UAVs). Civilians attempting to approach SCP-1210 must be detained and questioned.

Description: SCP-1210-1 is an uncharted island approximately 31 km off the coast of [REDACTED], Russia with an area of 3.4 km². Its unusual shape suggests that it may have once been larger, but that the eastern half of the island was 'sheared off' via unknown means, leaving a sharp delineation at which point several buildings and roads as well as utility lines have been cut off.

SCP-1210-2 is a World War II era radar installation located on the main hill of SCP-1210-1, consisting of a large radar array and a control bunker containing its readout equipment. Cyrillic signage indicate that the site is named [REDACTED], but no official documentation of this site exists in any Russian or Soviet-era records. The site is in an advanced state of disrepair consistent with multiple decades of abandonment, though several rooms are remarkably well-preserved due to having been inside sealed

bunkers. Forensic examination of the site indicates that site personnel were forced to abandon the area in haste and head towards the eastern end of the island, where the main power plant and living quarters are presumed to have been located.

Despite having been disconnected from an active power source for at least 50 years, SCP-1210-2 is still active and periodically generates a low-powered, anomalous radar pulse emission that radiates out to a range of approximately 9 km. The period and frequency of these emissions is unstable, but are usually at or about ms and to Hz. These emissions are also irregular, and have been recorded repeating as often as once every six (6) hours, and as rarely as once every seven (7) days.

During each emission event, localized shifts in the area surrounding SCP-1210-2 occur that coincide with the propagation of the emission signal. These include but are not limited to: changes in the topography of the sea bed and ocean floor, changes in the local plant and animal life, as well as short-lived changes in the chemistry and organic content of the water surrounding SCP-1210. Prior to current containment procedures, individuals within the Red Zone of SCP-1210 during an emission event reported being able to feel a 'ripple' pass through their bodies, resulting in short-term nausea as well as tingling in the extremities that persisted for several days. In rare cases, subjects have also reported short-term memory loss and fatigue, and in two (2) cases, personnel were discovered missing and were unable to be located.

Incident Log 1210-1: On / / , an emission event occurred while two (2) research personnel were in open water on a small power boat. Foundation patrol ship *SCPS Treska* received a panicked distress signal that was shortly cut off. Upon investigation, the *Treska* discovered the shredded hull of the power boat, with puncture damage consistent with the teeth from a *C. megalodon*. Additional Foundation assets are being considered to deal with the possibility of extinct or otherwise anomalous wildlife as a result of SCP-1210's emission events.

« SCP-1209 | SCP-1210 | SCP-1211 »

SCP-1211: King in the Castle

Item #: SCP-1211

Object Class: Euclid

Special Containment Procedures: A perimeter of 50 meters is to be maintained around SCP-1211 at all times. Any civilians approaching this perimeter are to be redirected away from the site with fabricated reports of danger in and around the structure. No male personnel over the age of 35 are to be allowed to enter the premises under any circumstances.

Description: SCP-1211 is the dilapidated ruin of a castle, 10 kilometers outside the city of , Ireland. Only the first floor and basement of the structure remain in functional condition, the upper three floors having eroded and collapsed at indeterminate points in the castle's past. Initially, it was thought that any person entering SCP-1211 would be subject to its effect, though testing has proven that only males age 35 and older are affected. The reason for this is thought to be related to the terms of eligibility for kingship in Ireland at the time of the castle's construction.

Within minutes of entering SCP-1211, any male at least 35 years old (See the Testing Log for correlation between the effect of SCP-1211 and Irish descent) will be immediately convinced that he is the rightful heir to an imagined throne, owner of the castle, and "lord of all lands as far as the eye can see,"[1] refusing to leave the premises, even under threat of lethal force. The cause of these delusions is unclear, though the effect appears to be much more pronounced in individuals of Irish descent. Subjects of exclusively Irish lineage may even attempt to subjugate any personnel in their vicinity; these attempts have occasionally resulted in fatalities and should be treated as serious assaults on Foundation staff.

If left on-site for extended periods, affected subjects will begin to live more and more in a fantasy where they are a king during a time of

war, pacing the interior hallways of SCP-1211 and whispering to themselves in the Irish language, even in cases where the subject had no knowledge of Irish before coming into contact with SCP-1211. Translations of such speech have proven it to be mostly threats of violence against imagined “rival clans” and imagined scenarios of what the subject would do should any man challenge his right to be king.

If left on-site for long enough, subjects will begin to age rapidly. After three weeks of exposure to the castle's effect, a man of 35 years will have visibly aged to approximately 80 years. Physical deterioration is difficult to measure after this point, as it continues to accelerate at a different rate for each subject. After one month, some subjects are observed to experience rotting of the skin, muscle tissue, and general deterioration of the skeletal structure; others can take multiple months to reach this point. At no time has any subject expressed need of food, water, or sleep during this process, and no subject has ever died of old age while affected by SCP-1211.

A subject that has deteriorated to such an extent that he can no longer pace the halls of SCP-1211 will invariably make for its basement and collapse there, still alive, at which point the walls will begin to build themselves around the subject. Any murmuring observed after this point will consist only of the Irish word for "happy" again and again. All subjects cease to vocalize at all soon after this event.

Addendum 1211-001: Dr. Davidson's research team has noted a 10% increase in surface area in the remaining portion of the second floor. Weekly measurements are to be taken as testing continues on SCP-1211 and any further changes are to be reported immediately.

+ Show Testing Log

Test A - 05/26/19

Subject: D-1355, 36 years of age, native to , Ireland
Procedure: Subject is equipped with a handheld transceiver and camera with a live feed to the research team's base of

operations. Subject is instructed to enter and explore the ruins.
Audiovisual Log:
View is of a long, dark hallway. Few details are discernible.
D-1355: Fuck, it's creepy in here.
Dr. Davidson: We're not getting as much as we should be on the video feed. Try to focus the lens.
Subject can be heard fiddling with buttons on the camera.
D-1355: Is that better?
Dr. Davidson: We're making a note of the unusual darkness. Continue on.
A large hall becomes visible. Much of the ceiling is missing, yet the video feed remains too dark to discern much detail.
Dr. Davidson: D-1355, what do you see? We're still not getting much on the feed.
D-1355: It's so beautiful… or it used to be, at least…
Dr. Davidson: What is it? Report what you see immediately.
Subject does not reply for slightly over one minute.
D-1355: *Murmuring*
Dr. Davidson: Speak up, son. What do you see in there?
D-1355: It's mine…
Dr. Davidson: What? What's yours?
D-1355: It's all mine… They'll never get it…
Dr. Davidson: You aren't making any sense. Explain yourself at once or we'll terminate you and get somebody else.
D-1355 remains unresponsive, muttering to himself. The camera is abruptly dropped.
*The camera continues to record for 3 subsequent hours, during which time D-1355 slowly wanders in and out of the hall. At the 2 hour mark, a scream is heard from outside the

hall in a language that none of the researchers speak. The last hour of footage is similar to the first 2 hours.*

Research note: SCP-1211 seems to somehow alter the mindset of those who enter it. I'm requesting permission to experiment further. -Dr. Davidson

Footnotes

1. Note that subjects in all cases have used exactly these words.

« SCP-1210 | SCP-1211 | SCP-1212 »

SCP-1212: Irresponsible Competition

Item #: SCP-1212

Object Class: Safe

Special Containment Procedures: SCP-1212 is kept in a 5m x 5m x 3m containment cell at Site- . Experimentation may only be performed with prior permission from at least two (2) Level 3 personnel, and the room is to be cleared of any residual body fluids or other detritus immediately after testing.

Any instances of SCP-1212 discovered within **SCP-3311** are to be immediately be moved to Site- for long term storage.

Description: SCP-1212, while not in use, is a simple wooden bar stool with a height of 74 cm and seat dimensions of 38 x 38 cm. It does not possess any abnormal physical qualities other than a faint odor of alcohol, and there are no maker's marks or other identifying features present. When any living, mentally sound human being older than fifteen (15) years of age sits on SCP-1212, two occurrences of abnormal activity can be immediately observed:

- SCP-1212, while leaving the occupant unaffected, changes shape almost instantaneously; separate iterations have been observed (with none repeating), including:
    - a shiny metallic bar stool with bright red plastic seat
    - a rude wooden stool which appeared to have been painted very poorly with black paint
    - a smooth sandstone chair elegantly carved with unfamiliar square symbols which have as yet been unable to be conclusively identified
    - a low, square stool engraved with cloud motifs believed to resemble those manufactured in the late Chinese Qing Dynasty

- The occupant appears to experience a full sensory hallucination and is no longer able to sense what is occurring around them in reality, while being completely unable to be removed from SCP-1212 (even using extreme methods; see Addendum 1212-A).

The occupant of SCP-1212 is then heard speaking to someone, but all attempts to record the other half of the conversation have so far failed. Usually, it becomes apparent that the occupant (hereafter referred to as 'the contestant') has been invited to participate in a drinking contest, and the contest begins regardless of acceptance or refusal of the invitation. All surviving subjects agree that the invitation includes two phrases similar in content to, "You must drink with me, in memory of those who sat where you sit and lacked the strength to understand their limits," and "We must curse those who were weak, and honor those who were strong." Sometimes, the contestant is spoken to in a language they do not understand, attempts made to bridge the communication barrier fail, and events proceed as normal. The contestant then, willingly or forcibly, appears to mime the following actions in sequence: taking a container of liquid from a surface in front of them; placing it to their lips; drinking its contents in one smooth motion; then slamming the container back down onto the surface. There is always a period of between thirty (30) and fifty (50) seconds between each sequence, presumably as the contestant waits his or her 'turn'. The contestant is always capable of speech, but is always interrupted by the drinking action - no interference of any kind appears to be possible.

Despite no actual liquid passing between the contestant's lips, they slowly begin to exhibit effects normally associated with alcohol intoxication, and as each sequence continues, the effects of intoxication become more and more severe. Nausea, slurring of speech and drooping of the eyelids and other facial features are usually the first in evidence, followed by bodily swaying, choking and vomiting. None of the mentioned effects appear to prevent the contestant from participating further - some contestants have even appeared to cease vomiting for the exact amount of the time it takes to take another drink, before resuming said oral expulsion of liquids. Subsequent testing of these liquids and the bloodstream of the contestants has revealed no alcoholic substances were ever

present. The 'drinking' continues even after the contestant is seen to visibly suffer the effects of severe alcohol poisoning, usually typified by unconsciousness, limpness of body and occasional shuddering. Posture is still maintained, with no interruption to the miming actions.

The contest will only end when one of two conditions are met:

- A period of time elapses that is no less than one (1) hour in length, with an average of one (1) drink per minute; of the tests undertaken by the Foundation, only contestants survived long enough to reach this point, and 95% of that group were unconscious (see Document 1212-B12). SCP-1212 then reverts to its normal shape, and will no longer react to the presence of the contestant.

- Alcohol poisoning causes all bodily functions to shut down, resulting in death. Upon cessation of heartbeat, the contestant is released from SCP-1212 and falls to the floor. SCP-1212 then returns to its dormant shape and size.

Addendum 1212-A - Interruption

It has been proven physically impossible to interrupt the contest once it has begun; this includes outside termination of the contestant by any means. Any wounds sustained that are not part of SCP-1212's effect are simply ignored, fatal or otherwise; notably, in the case of Test 1212-0 , the contestant appeared to continue miming the actions of drinking with both arms severed neatly just below the shoulder - the cut was visible, but there was no evidence of bleeding, pain or lack of function. When the contest ended and the contestant released from its effect, both appendages immediately fell off, causing extreme pain and cardiac arrest resulting in death.

Addendum 1212-B - Test 1212-0 1

Subject: D-392010; male, Caucasian, 21 years
Test Supervisors: Dr. T , Dr. S
Date: / /20

Dr. S : Sit down on the stool, D-class, and then describe what you see. You won't be able to hear us, but we will certainly hear you.

(D-392010 slowly sits down on the stool. Almost immediately, the stool lowers by nearly half a meter and transforms into a bar stool made of shiny metal and plastic. D-392010 becomes visibly shaken.)

D-392010: What the.. uh, is this supposed to happen? I'm in some sort of.. dive bar, I dunno, some guy across from me is looking at me funny and there's a crowd here, I don't-

(D-392010 appears to survey his surroundings, mouth agape, and then tilts his head as if listening to someone.)

D-392010: You want to what? Drink me under the table? You wish, buddy! *(D-392010 breaks out into a huge grin, and laughs.)* This is gonna be one hell of a test, I can tell. You're on.

[REDACTED]

Dr. T : Ten minutes in.. looks like he's holding up well, but he can barely speak.. I don't think he's realized yet.

(D-392010 is swaying back and forth, grinning manically while consuming each invisible drink.)

D-392010: W-whoa, buddy, you just d-don't sstop, do you.. Do you think we c-can take a break of a few mininutes or something? No? To hell with you, p-pal, I'll stop wwhen I want t-.. Hey..
(D-392010 begins to struggle, but his arm

appears to move by its own accord, forcing him to take another drink.)

D-392010: The fuck is happ-*(gulps down a drink)* hhappening to me.. the fuck is this, I don't.. Somebody, pplease stop this, I don't want to keep going, you've won, buddy.. W-what the fuck do you mean, "The contest is underway"? Hey, hey, doc! Gget me out of here! T-this is just a freaky illusion or something, right? Get me-*(chokes, but keeps drinking)* Augh, this sshit is foul..

(D-392010 continues threatening Foundation personnel and attempts resisting the test, but cannot stop 'drinking'. He begins gibbering irrationally, flailing his head side to side, back and forth when not compelled to take another shot. After several minutes, he begins vomiting a light brown mixture of lumpy liquid.)

D-392010: *(screaming)* GOD, MAKE IT STOP, YOU WIN, YOU WIN, FFUC- *(vomits, pauses to take a drink, then resumes vomiting)*

[REDACTED]

(D-392010 is unconscious and jerking back and forth involuntarily. His jumpsuit pants are soaked from the waist down, the floor under the stool now covered with various substances. He continues to mime drinking.)

[REDACTED]

(An unconscious, visibly reddened D-392010 feebly jerks back and forth several times, before pausing in the act of mid-drink. Slowly, he keels over and falls off the stool, landing in a now large puddle of bodily fluid.)

Dr. S : Time of expiration, fifty-two minutes, forty-seven seconds.

(D-392010 twitches once more, before ceasing to move altogether. SCP-1212 reverts to its normal state, no traces of fluid on its wooden surface evident.)

« SCP-1211 | SCP-1212 | SCP-1213 »

SCP-1213: Orphaned Catapult

Item #: SCP-1213

Object Class: Safe

Special Containment Procedures: SCP-1213 is to be strapped immobile in a locked shipping container, stored in Sector-25. SCP-1213 is not to be allowed within 20 meters of juvenile mammals weighing between 15 and 50 kilograms, except for testing purposes.

Description: SCP-1213 is a wooden and steel catapult, medieval in design, 1.4 meters wide and 2.6 meters long. SCP-1213 is capable of autonomous locomotion on its four wooden wheels and of operating its firing mechanism by an unknown method. Aside from its anomalous movement and operation SCP-1213 has no unusual physical properties.

Given space to move, SCP-1213 will haphazardly explore an area. Should SCP-1213 encounter a suitable subject, SCP-1213 will transport the subject into the basket on its firing arm by unknown means. SCP-1213 must be within 10 meters of its subject in order to transport it. SCP-1213 will then launch the subject at the nearest flat vertical surface. After a launching it will remain stationary, emitting a sound similar to the contented purring produced by felines while it resets its firing arm. SCP-1213 will then resume its haphazard exploration. SCP-1213's firing arm can be strapped down, but any strapping will break should SCP-1213 launch a subject.

SCP-1213 favors infant to prepubescent mammalian subjects that weigh between 15 and 50 kilograms. SCP-1213 has also been known to launch subjects with dwarfism on occasion.

SCP-1213 was found in , a farming town in England, after several unexplainable cases of dead children and small animals that were reported as having been "hurled into walls at high velocity". A search

of the town found SCP-1213 in the bushes of a school playground. Further investigation of the town led to the discovery of an improvised laboratory in an abandoned farmhouse. Much of the laboratory was destroyed by an explosion, presumably caused by the large defunct device that was the focus of the laboratory. The device was the experimental work of Dr. , who could not be located.

Dr. 's damaged research log was discovered in pieces amongst the debris of the warehouse, and only excerpts could be retrieved.

Excerpts of Dr. 's research log:

Pieces of text that were missing, burnt or otherwise illegible are marked with […]

> I've done it. I've finished. I've pressed the button. I flipped the switch. I've changed the world forever. Even as I sit here it opens […]

« SCP-1212 | SCP-1213 | SCP-1214 »

SCP-1214: Anomalous Random Number Generator

Item #: SCP-1214

Object Class: Safe

Special Containment Procedures: The laptop computer containing SCP-1214 (designated 1214-L1), and all its peripherals are to be kept in a standard laptop case in a secure locker in the Computer Science Department of Site-33. No testing is to be performed on SCP-1214 without the authorization of the Senior CSD Administrator, Dr G. Wilson.

As per Standard Anomalous Computer Equipment Regulation 4324-B, 1214-L1 must under no circumstances be connected to a network of any kind.

Description: 1214-L1 is a standard Dell XPS Ultrabook laptop computer including power supply and mouse. Software installed includes the Microsoft Windows 7 operating system and Microsoft Visual Studio 2012.

Several coding projects can be found in the "Documents" folder of user . Most of these are programming exercises in the C# programming language. SCP-1214 is a project, also written in C#, with the name "random_number_test".

The program consists of approximately 60 lines of code. The program generates random numbers in the range 48-90, which are then interpreted as ASCII character codes. This gives the possibility of generating the characters in Table 1, below.

Table 1, possible characters generated by SCP-1214 algorithm
0-9, A-Z (alphanumeric, upper case)
colon (:)
semicolon (;)
less-than(<)

equals (=)
greater-than (>)
question mark (?)
at sign (@)

The characters are assembled into lines of 50 characters each. One (1) such line is printed to a text window every second while the program is running.

+ Sample of program output, time elapsed < 1 minute

```

The anomalous properties of SCP-1214 can be hard to detect at first. However, running the program output through a stochastic analyzer will show that while the output begins by following the expected pseudo-random distribution used by modern computers, this will gradually change the longer the program is allowed to run. Eventually patterns with an unexpectedly low probability will begin to emerge.

+ Sample of program output, time elapsed minutes

Example of words found in output during
Phase 2 (underlining added).
Identified words in this example: "MAKE", "IT",
"STOP", "STOP", "MAKE", "IT", "STOP",
"PLEASE", "PLEASE", "NO", "MORE",
"PLEASE"

At +/- 3 hours after start of Phase 2, the frequency of identifiable words starts to drop. At the same time bias towards long strings of the same character starts to slowly increase. Additionally, the number of different characters in the output begins to diminish, as if the probability of them appearing has dramatically decreased. This is designated Phase 3.

IN=XXTZWWWWWWWWWWWWWWWWWWWWWWWWW

Example of output during Phase 3, Test Run 14. Probability for characters A, F, L, O and Y has dropped to 0, or near 0. They do not appear in the output again during 1214-TR14.

Phase 3 continues as described with no further variances. The longest test to date has been 1214-TR27, where SCP-1214 was run for days, and showed a percent reduction in the character set during Phase 3.

Stopping and restarting the SCP-1214 program results in a repetition of phases 1 through 3, with slight variations in program output as well as the lengths of the respective phases.

The current theory is that the diminishing probabilities observed during Phase 3 will continue until only one (1) character remains in the output. Calculations show that such a result would require the program to run for somewhere between and days.

Additional: After the occurrence described in Addendum 1214-3, SCSDA G. Wilson ordered testing of SCP-1214 to be suspended until further notice.

Addendum 1214-1:
Standard Electronic Contamination Tests (SECT) have proved negative. SCP-1214 does not appear to be able to infect other computers, and copies of the SCP-1214 program will not exhibit anomalous properties.

Addendum 1214-2, acquisition log:

1214-L1 was retrieved by Agent from the campus dorm of University, after a persistent rumor had circulated among the students that there existed an experimental program that "behaved funny" if executed over a period of several days. The rumors were exaggerated and ranged from speculations about "rogue government AIs" to "impossible patterns seen in 'The Game of Life'".

Fortunately, the owner of 1214-L1 appears to have shunned the attention this was generating, and exposure was therefore kept to a minimum. After acquiring the item, Agent deployed a Class-IV Worm in the university network to monitor data traffic for further indications of SCP-1214, or similar activity. So far none has been detected.

Addendum 1214-3:

> + Incident report, - -
>
> - - , Test Lab 1214-2.
>
> Test Run 28 was started, with the goal of letting SCP-1214 run for double the length of 1214-TR27. Standard video capture / OCR scanner setup used to record SCP-1214 output.
>
> Personnel assigned to 1214-TR28 was Lead Researcher, Dr H , and Research Assistant, Dr P .
>
> Phase 1 completed according to expectations. However, at minutes into Phase 2, the following words, quite different from the Phase 2 data acquired up to this point, appeared in SCP-1214's output:
>
> 0?C9HWIHURTSHURTS9?PLEASE STOP=:::::::::::::::::: ::::::::::SIGNAL::TRACE::COMPLETE::WE::RESPOND::IN ::KIND::::::::::::::::::::::::::DWW30PLEASEPLEASE
>
> Approximately five (5) seconds after this point in time, Dr H appeared to be caught by a seizure lasting for 13 seconds. She then fell unconscious and dropped to the

floor.

After a period of 17 seconds, Dr P followed the Emergency Protocol and hit the cutoff switch, terminating all power to Test Lab 1214-2. (Dr P later received a reprimand for failure to react within prescribed time limit.)

Dr H was brought to Emergency Medical Facility , where her condition was monitored and found to be stable. She revived after 34 hours, at which point further examination revealed that she had undergone a uniform 23% loss of visual, auditory, tactile and gustatory acuity. Olfactory acuity was unaffected. (See Reports 1214-345 through 1214-347 for speculation on this discrepancy.)

Dr H remains under medical supervision until further notice.

« SCP-1213 | SCP-1214 | SCP-1215 »

SCP-1215: Peri Logismon

Item #: SCP-1215

Object Class: Euclid

Special Containment Procedures: SCP-1215 must be contained within a locked room pursuant standard Level 2 (Moderate Threat), Type 3 (Visual Stimuli), Mind-Altering Protocols. Access requires written approval.

Due to the object's age and fragile nature, SCP-1215 must be maintained in a hermetically-sealed chamber of inert gas with extremely low humidity at a temperature of ten degrees Celsius. SCP-1215 should not be exposed to ultraviolet light for longer than absolutely necessary. Routine inspection, and maintenance as necessary, is to be performed twice monthly by religious Class-D personnel certified in the care of rare books and manuscripts (cooperation of these Class-D personnel is grounds for indefinite suspension of their termination). Failure to comply with these measures will result in the object's significant damage and/or destruction.

Personnel exposed to SCP-1215 are to be placed in isolation for their own protection and the protection of other personnel. A sincere confession and repentance of one's sins to a qualified priest of the affected personnel's religion, even for religious traditions which do not include a confessional rite, has been shown to cause the effects of SCP-1215 to subside over the following 24-48 hours. For non-religious personnel, confessions to individuals holding doctorates in philosophy have proven effective in approximately 60% of cases. Personnel who cry while confessing generally recover more quickly and (if non-religious) have higher likelihoods of recovery. Non-Class-D personnel who are asymptomatic after fourteen days may resume their previous duties after the successful completion of a psychiatric examination.

Description: SCP-1215 is a 4th century illuminated manuscript, written in Medieval Greek on vellum. It was recovered from an archeological dig of a Byzantine monastery in , Turkey. Illustrations are decorated with both gold and silver. The manuscript is a version of the *Peri Logismon*, apparently an original copy written by the work's author, Evagrius "The Solitary" Ponticus (345-399 CE), a Christian monk and ascetic. The *Peri Logismon* is a treatise on temptation, and the "Eight Evil Thoughts", the predecessor to the more modern "Seven Deadly Sins". The text of SCP-1215 varies appreciably from other copies of the work.

Individuals exposed to the text or illustrations within SCP-1215 have their behavior altered, though these alterations do not appear to manifest themselves until the individual leaves the immediate proximity of the object. Subjects exhibit behavior consistent with one of the "eight evil thoughts" described within the manuscript. Analysis of personnel and D-class under SCP-1215's influence suggests that the alterations to their behavior are based on their prior personality; additional testing for a statistically significant sample is ongoing.

The effects of SCP-1215 vary, not only based on which vice manifests itself in the behavior of exposed personnel, but also in the severity of the behavior. Currently, symptoms are divided into three phases.

- **Phase I (Initial)** symptoms are exhibited immediately upon leaving the vicinity of SCP-1215, and are sufficiently minor that they may go unnoticed.
- **Phase II (Intermediate)** symptoms are exhibited starting approximately 12-36 hours of leaving the object's vicinity, and, while noticeable and potentially hazardous, are unlikely to result in permanent harm to the subject or others.
- **Phase III (Terminal)** symptoms are exhibited starting after approximately 48-96 hours of leaving the object's vicinity. Phase III symptoms often result in significant harm to the subject and personnel nearby.

Observed effects of SCP-1215 are as follows, though no subjects exposed to SCP-1215 have been known to exhibit more than one of these effects:

- **Gastrimargia (Gluttony)** – The subject develops an intense and insatiable appetite. Phase I symptoms are minor feelings of hunger or thirst, consistent with not having eaten for several hours. At Phase II, the subject is constantly eating. Phase III symptoms are attempts to eat anything nearby, regardless of whether or not the item being devoured would normally be considered food.
- **Porneia (Lust)** – The subject develops extremely heightened libido. Phase I symptoms are minor feelings of sexual arousal. At Phase II, subjects begin to experience hypersexuality and lowered sexual inhibitions. At Phase III, subjects will actively seek out sexual gratification by any means necessary, while simultaneously ignoring other bodily needs. While no subjects have remained in Phase III for long enough to confirm this, it is conceivable that an individual suffering from Phase III Porneia effects could starve to death as a direct result of their symptoms.
- **Philargyria (Avarice)** – The subject develops excessive greed. Phase I symptoms consist of heightened desire for wealth, status, and power. Phase II symptoms consist of attempts to acquire material possession through theft, bribery, or other means. Hoarding is common. Phase III symptoms are extreme attempts to obtain wealth, often including violence, trickery, and/or manipulation of authority.
- **Hyperephania (Hubris)** – The subject develops extreme pride. Phase I symptoms are minor feelings of pride. Phase II symptoms include a tendency to shame others as being inferior, and a sense of gratification for doing so. Phase III symptoms include more extreme manifestations of Phase I and II symptoms, as well as insolence, contempt, and a tendency towards violence against anyone who is perceived to have disparaged the subject.
- **Lype (Envy)** – The subject develops extreme negative emotions at the good fortune of others. Phase I symptoms are minor feelings of jealousy. Phase II symptoms include underhanded attempts to engage in character assassination of those to which the subject feels jealous. Phase III symptoms are characterized by extreme negative behavior, including strong and persistent attempts at causing misery towards the object of the envy, and sometimes violence.

- **Orge (Wrath)** – The subject displays intense and unstoppable rage. Phase I symptoms are minor feelings of annoyance and irritability. At Phase II, subjects become pugnacious, though physical altercations are rare. Once Phase III has been reached, subjects will respond to the slightest trigger with extreme fury, which can result in attempts to kill those nearby.
- **Kenodoxia (Vanity)** – The subject holds an excessive belief in his/her own abilities and/or attractiveness to others. Phase I symptoms include a feeling of superiority. Phase II involves unjustified boasting. At Phase III, subjects descend into extreme self-idolatry. *Note: While subjects displaying Kenodoxia tend to not cause direct harm to themselves or others, they tend to cause sufficient irritation in those around them that it is not uncommon for others to cause them harm.*
- **Akedia (Sloth/Dejection)** – The subject suffers from extreme laziness and despair. Phase I symptoms include procrastination and minor feelings of sadness. Phase II symptoms are consistent with extreme cases of general depressive disorder; the subject has extreme difficulty mustering the energy necessary to perform nonessential tasks. At Phase III, the subject becomes catatonic.

History: Evagrius wrote the *Peri Logismon* as a guide for understanding and learning to overcome temptation. Records recovered from the dig site (see [REDACTED]) suggest that SCP-1215 was an attempt by Evagrius to create a morality tool for use by the mostly illiterate general population. Though SCP-1215 has demonstrated effective for its purpose, records found alongside the manuscript suggest it was written earlier (approximately 373 CE) than the more widely known version of the *Peri Logismon* (written 375 CE).

According to the records found alongside SCP-1215, Evagrius (then still a lector in Neocaesarea and a disciple of Basil of Caesarea) created SCP-1215 and presented it to Basil. Basil (329 or 330 CE – January 1, 379 CE), an influential theologian later canonized as St. Basil the Great, apparently rejected his pupil's creation, instructing it to be sealed away and that all subsequent versions of the work had to be substantially censored. Evidence of this censorship can be seen clearly in Chapter 16 of the *Peri Logismon*, where Evagrius

writes, "I cannot write about all the villainies of the demons; and I feel ashamed to speak about them at length and in detail, for fear of harming the more simple-minded among my readers." After Basil died in 379 CE and Evagrius moved to Constantinople in 380, it appears SCP-1215 was forgotten until it was rediscovered in modern times.

SCP-1215, as well as the history surrounding it, reinforces theories that the early Christian church was involved in the containment of paranormal and preternatural items. St. Basil of Caesarea, who holds a very important place in the history of Christian liturgy and is regarded as a father of communal monasticism in Eastern Christianity (as well as a major influence on St. Benedict in Western Christianity), is credited with having written no fewer than three Prayers of Exorcism. Evagrius, beyond being the original author of what would eventually become a major tenant of Catholicism (the Seven Deadly Sins) and being a major influence on many later church figures, was accused of heresy later in life for his esoteric speculations regarding the pre-existence of human souls. The extent to which the early Christian church's possible efforts to contain items of paranormal and preternatural natures affected the development of Christian ethics, practices, beliefs, and Western culture as a whole, is unknown at this time.

« SCP-1214 | SCP-1215 | SCP-1216 »

SCP-1216: Pyrami

Item #: SCP-1216

Object Class: Safe

Special Containment Procedures: A base of operations, Site-144, has been established surrounding SCP-1216-1. Instances of SCP-1216 may be retrieved at a limit of three per day. In the event of explorations into SCP-1216-2, personnel are to be equipped with Environmental Protection Ensemble 12 (Desert).

Instances of SCP-1216-4 are to be tracked by satellite from Site-144 and, when located, temporary containment is to be set up. Temporary SCP-1216-4 containment is to consist of a concrete-moored gap-free wooden fence circumscribing the instance's range. Given the nature of the sites at which instances of SCP-1216-4 appear, civilians are to be removed from the premises of any SCP-1216-4 containment site under the artifice of enforcing industrial safety standards. Upon dissipation of an SCP-1216-4 instance, temporary containment is to be ended. In the event that there are no suitable sites left for the appearance of instances of SCP-1216-4, replica sites are to be constructed in secure facilities and continually replenished with scrap metal.

Description: SCP-1216 is a species of pyramidal organisms native to an extradimensional space adjacent to Lenox, Massachusetts. However, they do not exhibit several characteristics of living organisms, among them reproduction and metabolism. The organisms range in scale from 5cm tall and .33kg to ca. 700cm tall and 7540kg, but are otherwise identical in appearance and proportions.

Instances of SCP-1216 have a square pyramid body with a base length exactly 1.5 times its height, with a thin, flexible, bowed leg on each lower vertex. Their legs are cylindrical and allow them to move in any direction without turning their bodies. They also have a pair of

curved, cylindrical, flexible antennae attached to the uppermost vertex of their body. Situated at the ends of the antennae are two solid spheres composed of beryllium bronze with density 8.78g/cm^3.

Except for the beryllium bronze spheres, instances of SCP-1216 are composed of an anomalous protein, henceforth *pyramitin*, which seems to be similar in structure to chitin, except that it has a bulk modulus and density comparable to that of cobalt. Pyramitin partially blocks EM radiation and does not break down chemically, frustrating spectrographic, electromicroscopic, and chemical analysis. From macroscopic observation, it is dark gray, non-reflective, non-porous, and always cool to the touch.

On the underside of the body is a conical mouth containing a proteinaceous turbine. By spinning this turbine, instances of SCP-1216 are able to generate suction. Above the turbine there is a dense, wrinkled mass of pyramitin which is impenetrable to both scans and dissection. The turbine and the mass above it appear to be the only internal organs — the rest of the hollow body cavity is filled with sand and particles of iron oxide.

The extradimensional space to which SCP-1216 is native, SCP-1216-2, is an unbounded flat expanse of subtropical desert. The expanse is lit by a small, stationary sun located at 48° above the horizon and 66° east from due south, heating it to a constant 26° C. These measurements remain the same no matter how far or in what direction one travels. It is of note that powered flight is not possible within SCP-1216-2 — by process of elimination it appears to be an unknown quality of the atmosphere. At current estimates, there are about 5100 instances of SCP-1216 of various sizes inhabiting SCP-1216-2.

SCP-1216 typically scuttle around the expanse in random patterns. On a constant basis, pieces of manmade scrap metal — ranging from nuts and bolts to the chassis of heavy construction machinery — emerge from the sand and are consumed by SCP-1216 through turbine suction. SCP-1216 gain no mass from consumption — X-ray fluoroscopy scans show the metal entering the dense organ in the center of the body and subsequently disappearing. SCP-1216 are able to communicate with one another through flexing their antennae and tapping their beryllium bronze spheres together in

rhythmic patterns. This produces a clicking sound that echoes for a far longer time than can be replicated. Larger instances of SCP-1216 produce deeper sounds, move more slowly, and eat larger pieces of scrap metal.

SCP-1216 do not regard humans as threats and make no attempts to interact with them. SCP-1216 that were deliberately assaulted by D-class test subjects had no significant reaction and took no action against the D-class. When scrap metal was taken from SCP-1216 as they were about to consume it, they lost interest and found other pieces. Several instances of SCP-1216 have been successfully captured, transported into Site-144, and dissected with no resistance offered by the individual or the group. "Dead" instances of SCP-1216 — the term is ambiguous given their lack of life signs, although they do stop moving when dissected — are replaced after some time by SCP-1216-3.

The main feature of SCP-1216-2 is SCP-1216-3, a 400m tall pyramid composed of the same protein as the instances of SCP-1216 and with the same proportions. Aperiodically SCP-1216-3 will slowly excrete instances of SCP-1216 from its surface — these will stay the same size at which they were created. SCP-1216-3 is wholly impenetrable to all scans. It remains cool despite being in perpetual sunlight.

SCP-1216-2 is accessible through an irregularly shaped portal, SCP-1216-1, about 1.3m wide and 2.5m tall in a broken section of concrete wall in the first floor of a parking structure in Lenox, Massachusetts. Its existence was first noted shortly after Lenox was affected by the 2011 Virginia earthquake. Subsequently, several stray instances of SCP-1216 exited it and were captured on security camera, thus alerting the Foundation to their, SCP-1216-1's, and ultimately SCP-1216-2's existence. From inside, SCP-1216-1 floats 3cm above the ground and is effectively flat. It has depth — its inner edge is made of the concrete wall — but it is only visible when facing its opening, and cannot be seen from the back, even though the non-visible side feels like a solid barrier. Likewise, on the other side of the concrete wall, the hole simply allows one-way sight but not passage through it — it feels solid. Passing through the portal offers no adverse effects to human life.

At intervals of 2 to 5 days, a secondary portal to SCP-1216-2 will be established at any location on Earth which contains large amounts of discarded scrap metal — e.g. junkyards, shipwrecks or garbage dumps. This secondary portal, known as an instance of SCP-1216-4, manifests as a whirlpool of desert sand at the lowest point of the area. SCP-1216-4 may be between 3m and 12m in diameter. All solid unsecured matter within a range of twice the diameter is then sucked into SCP-1216-4, ultimately reemerging in the extradimensional space. The reason why only scrap metal emerges from the ground in SCP-1216-2 is as of yet unknown; non-metallic matter, including organic matter, does not appear in the expanse and is presumed lost. When all available matter has been sucked into SCP-1216-4, it consumes itself and shrinks in size until it has vanished, leaving no trace. Instances of SCP-1216-4 started appearing only after SCP-1216-1 opened.

« SCP-1215 | SCP-1216 | SCP-1217 »

SCP-1217: An Office Complex

Item #: SCP-1217

Object Class: Safe

Special Containment Procedures: A barbed-wire fence with a single gate to allow authorised access is to be maintained in an area surrounding SCP-1217's active zone, around which several chemical hazard signs are to be placed in clear view. Multiple CCTV cameras are to be set up in a perimeter around SCP-1217's active zone, monitored by a nearby Observation Post (OP 1217-Alpha). A minimum of two guards are to be present at this station at all times. Any unauthorised individuals attempting to enter SCP-1217 are to be detained, interviewed and – if they present no clear threat – released after being provided with a Class-C amnestic.

Several enclosed rooms near the entrance of SCP-1217-1 have been modified and equipped with observational apparatus to serve as testing chambers – any experimentation involving SCP-1217-2 is to take place only in these designated areas (please refer to Document 1217-A). Subjects should be placed into these chambers, released, and monitored. After the experiment is complete, the refuse is to be removed and disposed of via incineration.

Description: SCP-1217 consists of two parts:

- SCP-1217-1, formerly an office complex owned by the Corporation, located in [REDACTED], Massachusetts, US. The 250 m × 300 m area surrounding SCP-1217-1 is considered SCP-1217's active zone.

- SCP-1217-2, any member of the species *Felis catus* which enters SCP-1217's active zone.

Upon entering the aforementioned area, a specimen of SCP-1217-2 will display no significant behavioural deviations from its previous

activity, apart from attempting to remain within the active zone of SCP-1217 and responding aggressively to any attempts to remove it from said area. Removal is still possible; however, successfully removing a subject from the area will not prevent the anomalous event associated with SCP-1217 from occurring.

Fifteen to twenty minutes after entering the area, specimens will begin acting in a notably erratic manner, which typically involves spontaneous pouncing and vocalising. Several minutes following this, subjects will protract their claws and attempt to repeatedly lacerate their underbelly. Shortly after this begins, specimens will (if unimpeded) succeed in disembowelling themselves, despite pain, shock or other associated sensations which would result.

The viscera and blood released from the aforementioned process will invariably form itself into a shape resembling a short, semi-coherent sentence, consisting of English characters. Said messages vary between instances of SCP-1217-2, and possess occasional notable spelling and grammatical errors. The text constituting these sentences largely consists of blood, which will retain this shape if left undisturbed until drying. Extracts of other organs – particularly the colon and intestinal tracts – have been known to fold in such a way to form appropriate letters if cut from the original lacerations, though this is a rare occurrence. Excess tissue does not appear to be affected, and pools normally a short distance away from the remaining substance. The means by which the aforementioned viscera assumes shape of coherent text is currently unknown.

The anomalous properties of SCP-1217 came to the attention of the Foundation on 2005- - , when a stray cat entered its active zone before initiating expected behaviour in front of several employees. The building was then transferred into Foundation possession, relevant witnesses were administered Class-B amnestics and a cover-story regarding the discovery and continued removal of asbestos within the building was released.

Excerpt from Document 1217-B: *Note: The following are copied as accurately as possible from the original text, produced as a result of successive tests. For an extensive log of all messages produced, please refer to the relevant documentation.*

Test

> Is thsi it?

Test

> why can't it?

Test

> Can I play too?

> + Incident 1217-1
>
> Between Tests 13 and 19, the text produced by SCP-1217 began deviating significantly from its previously established pattern, as follows:
>
> Test 12
>
> > what happens nuw?
>
> Test 13
>
> > I'm sick of this.
>
> Test 14
>
> > I'm sick of making them talk.
>
> Test 15
>
> > I want to stop for now.
>
> Test 16
>
> > Stop it.
>
> Test 17
>
> > STOP
>
> Test 18
>
> >

> STOP

Test 19

> STOP

Shortly after this, Dr. requested an extended reprieve from experimentation, which was approved by O5- . Testing was stopped between 20 -04- and 20 -07- , at which point it was resumed. The resulting text appears to be consistent with the usual pattern of that produced by SCP-1217:

Test 20

> i'm so sorry.

Test 21

> it's all lost he htaes us.

Test 22

> let us go.

« SCP-1216 | SCP-1217 | SCP-1218 »

SCP-1218: One-Way Glass

Item #: SCP-1218

Object Class: Safe

Special Containment Procedures: All instances of SCP-1218-1 are to be kept within specially fitted crates in protected storage wing L-03 of Site 28. Most instances of SCP-1218-1 are fragile and care should be taken when retrieving, transporting, and storing them. Due to the potential for information leaks, instances of SCP-1218-1 must remain covered when in presence of any sensitive Foundation material.

Any contact with or appearances of SCP-1218-2 are to be recorded and logged.

Description: All instances of SCP-1218-1 are numbered as SCP-1218-1-XX in the order they were recovered. As of the most recent update of this document, we have SCP-1218-1-1 through SCP-1218-1-32 in storage, minus only SCP-1218-1-4 (see Testing Logs). Instances of SCP-1218-1 all appear to be normal wall-mounted mirrors, most frequently rectangular, with sizes between 0.2 and 9.5 square meters.

Upon closer inspection, the objects are in fact one-way reflective glass, with an extremely dark room visible on the far side when viewed in absolute darkness to minimize reflections. The dark rooms, hereafter known as 'viewing chambers', appear to have floors and ceilings of a cracked, concrete-like material with various raised platforms that SCP-1218-2 sit on. There are no side walls visible, with viewing distance tapering off quickly into darkness. Each mirror appears to link to a unique viewing chamber sharing these same characteristics.

SCP-1218-2 refers to the group of creatures between 1.5 and 1.9 meters tall that are frequently visible in the viewing chambers. They

appear humanoid with heavily jaundiced skin of a leathery appearance that obscures defining features. Each creature has four wounds on its head, holes ringed in torn flesh, that are roughly equivalent in position to a human's eyes, nose, and mouth. The creatures, hereafter referred to as 'the yellow men', wear moth-eaten suits identified as those in style during the 19 's. SCP-1218-2 appear aware of viewers in front of SCP-1218-1 and have been seen to not only follow the movements of test subjects, but to actively take notes in what seems to be a brand notebook.

Dr. ’s recovered testing logs

/ / : We've ruled out the idea of some sort of projection. Test subjects moving to different positions had their field of view through the mirror change accordingly. The subjects were visibly startled when SCP-1218-2 followed their movements, leading one to panic and one to scream. Lights were brought up and subjects removed from test chamber.

/ / : It appears that at light levels below 1 Lux our test subjects start to become uneasy around SCP-1218-1. They describe either the feeling of being watched, or of the room being larger than it appears. I theorize that their subconscious is picking up on subtle visual clues of the 'viewing room' beyond the mirrors that is still too overwhelmed by reflections for their conscious brains to identify. I have rigged up the testing room with hidden low-light cameras which are able to pick up just enough light to make their tapes worthwhile for repeat studies.

/ / : Continued testing on multiple instances of SCP-1218-1 suggests that each is linked to a separate room; though the number of viewing SCP-1218-2 changes, suggesting that they may enter and leave the rooms throughout the day. Also of note, it appears that the primary mode of lighting that allows the 'viewing room' to be seen is the embers of a cigarette. If none of SCP-1218-2 are smoking it stands to reason that the viewing room would be pitch black. It's possible that this

accounts for the instances when we are unable to see anything through the mirror, even in utter darkness.

/ / : So far I've managed to identify at least 19 unique SCP-1218-2 from the viewing logs. Their facial and body structures are extremely similar, but blemishes on the skin, height, and the suits they're wearing are enough to distinguish one from another. Note that these individuals do not always appear in the same viewing room.

/ / : Testing on D class subjects so far has found no adverse effects from exposure to SCP-1218-1 or SCP-1218-2. I have therefore decided that it is safe for my assistants and I to perform tests directly.

/ / : Given the quantity of SCP-1218-1 we've received, I have approved testing to try breaking one to see if it retains its effects.

/ / : Shattering an instance of SCP-1218-1 does cause it to cease displaying any anomalous effects; however [REDACTED], like rotting fruit, which quickly dissipated.

/ / : One of my assistants came to me today with something I had missed in the early experiments. She noticed that when subject D-9002 screamed in fright, one of the yellow men stepped back suddenly, as if startled. I wonder if perhaps sound might connect these locations as well.

/ / : I've added a laser microphone to the complement of recording devices trained on SCP-1218-1-5. We've picked up the following anomalous sounds [See Audio Log Summary]

/ / : SCP-1218-2 continue to intrigue me. They respond to my actions as if they can see me clearly, though personally I don't know how they can see anything; the low light has made it impossible to determine as of yet if there are in fact eyes beneath those shredded sockets. It's like watching animals at a

zoo, they move to follow our actions, but don't reciprocate any attempts to communicate. I'm curious what they're writing, it's too bad there isn't enough light to read it.

/ / : More instances of SCP-1218-1 continue to be brought in. Now that we know their properties, we've begun going through old reports from and database to gather more leads. Mobile Task Force Beta-6, the "Window Washers" has been created to not only collect more of these mirrors, but to try and trace their origin.

/ / : I'll have to go through my notes, but it seems like there are more SCP-1218-2 than usual appearing for my tests.

/ / : We have 26 instances of SCP-1218-1 in storage as of this date, having exhausted preexisting leads. I worry that, given the difficulty in noticing the effects, that there could be many more out there.

/ / : I know there are more now, the most recent test had over ten of them, watching. I don't like this. I've taken the testing tapes home by [REDACTED], and I'm going to pore over every frame till I find something of use.

/ / : I've spent the last three nights poring over the tapes. I think the lack of sleep is getting to me; I was walking past the mirror in hallway H-7 today and I could have sworn I saw something looking out at me.

/ / : I broke the mirror in the hallway, at least now I'm sure.

/ / : I figured it out, I should have been looking closer at the details on their [REDACTED]. I'm not sure, but I might know where, and what, they are.

[End of record] See Incident H1218-A

Audio Log Summary
The following noises were picked up by the laser microphone over a seven (7) day period. Sound analysis software has been used to identify the most likely source of each sound, as well as its likelihood of accuracy, and the number of times it occurred.

- Footsteps (socks) - 99% - Coincided with movement of test subjects
- Footsteps (loafers) - 95% - Usually coincided with movement of SCP-1218-2

+ Incident H1218-A

On / / Dr. was found dead at his private residence. He was discovered hanging by a noose in his attic after failing to show up to work for three days. Forensic evidence at the scene suggested suicide. Every single mirror in his house was found shattered. According to standard protocol, further testing on SCP-1218 is to be

postponed until all possible memetic or mental influence is ruled out.

Addendum A: Additional scrutiny of the mirror fragments of the home of Dr. find that [REDACTED] inconsistent with being shattered by a blow or weapon. The video logs were also missing from the scene. Additional investigations are underway to ascertain all the details of H1218-A.

Addendum B: SCP-1218 is pending upgrade to Euclid status.

« SCP-1217 | SCP-1218 | SCP-1219 »

SCP-1219: Whistler

Item #: SCP-1219

Object Class: Euclid

Special Containment Procedures: SCP-1219 is to be contained within a sealed area (min. size $2m^3$, max. size $5m^3$) in complete darkness (light level ≤ .0001 lux), situated at least 1 kilometer from any other occupied dark area. This chamber should be outfitted with overhead lighting controlled by an external switch.

As of - - SCP-1219 is housed at Storage Site- . Personnel entering the darkened containment area for testing purposes must refrain from vocal utterances unless otherwise instructed by research staff.

Description: The entity or event labeled SCP-1219 may manifest at any time within a sufficiently dark area of a suitable size (determined to be minimum $2m^3$; maximum unknown), provided at least one sentient being is present to witness the phenomenon. SCP-1219 manifests as a whistled version of the song *Camptown Races* which rises gradually and erratically in volume until audible to those present in the area. The entity or event will not manifest in the presence of an infrared camera or other low-light recording devices. No anomalous effects have been noted in relation to audio recordings of SCP-1219.

Once triggered, the whistled song lasts for an apparently unlimited duration, generally until light exposure occurs. However, the song will cease within 10-20 seconds if a witness or witnesses attempt to whistle, hum, sing, or otherwise engage with SCP-1219's tune, and the witness(es) will be dismembered (stripped primarily of organs related to vocalization) and severely flayed with marks similar to those inflicted by a bullwhip along the neck, back, and legs, resulting in immediate or delayed death in 100% of observed cases. SCP-1219's whistle does not appear to compel this engagement.

Dismemberment and flaying occurs rapidly and cannot be prevented by the introduction of light to the containment chamber. No physical component to SCP-1219 has been recorded or identified.

SCP-1219 has been found capable of instantaneous transfer within a distance of approximately 1km. If exposed to light, the entity or event will cease immediately and recur in the nearest suitable dark space inside its transfer range. If no such space is available, SCP-1219 appears to enter a passive state and will not recur unless and until an accessible area meets all criteria for manifestation.

Researchers speculate that SCP-1219 may be permanently incapacitated via constant illumination of this 1km area. No termination attempts are scheduled at this time.

Acquisition Log 1219-1: SCP-1219 was first documented on 08-16- at St., an apartment complex in , . A paranormal investigations team from the television series responded to residents' claims of unusual activity. Reports from residents match the Foundation's current knowledge of SCP-1219.

The Foundation acquired the team's unaired footage; a partial transcript follows.

Acquisition Log 1219-1a - Team, Camera B:

<VIDEO LOG BEGINS - timestamp 22:18:29>

[infrared footage shows a brief shot of a man's face, then swings around to show a room containing a twin-sized bed in the shape of a racecar, a bookshelf (book spines unreadable), and a wall shelf lined with action figures; the camera is aimed from the foot of the bed toward the far wall]

Team member : Is this- here we go. I'm all set up in the second bedroom in apartment with the infrared camera, my trusty EMF reader, a couple thermometers, and an EVP recorder…

[shot pans down to electronic equipment on the floor]

Team member **:** So we're gonna pick up changes in the electromagnetic fields, cold spots, and we're hoping for some nice clear sounds tonight… They told us this is where the, uh, event, occurs pretty often, so we're gonna settle in and see if we get any unusual recordings.

[Transcript cut to timestamp 01:27:05]

Team member **:** So, we've been here about three hours… says he's caught some temperature fluctuation in the master bedroom, but I haven't seen much activity in here, just a quick dip in- hang on, battery light's blinking on the camera. We'll have to rely on the tapes for a minute here.

<VIDEO LOG ENDS - timestamp 01:28:44>

Acquisition Log 1219-1b - Team, Sound Recorder B:

<AUDIO LOG BEGINS - transcribed following video log timestamp 01:28:44>

[muffled clacking]

Team member **:** Batteries, batteries… shit. [unintelligible vocalization]

Researcher's note: volume increase and audio filter on acquired tapes shows the entity or event manifests at approx. 01:28:45 with fluctuating decibel level of 10-40. Net rise in decibel level brings the sound into audible human range after approx. 9 seconds.

[at second chorus, team member begins humming *Camptown Races*, slightly off-key, decibel range 44-50]

[team member ceases humming; SCP-1219 heard clearly against ambient sound]

Team member **:** [calls] , are you-

[SCP-1219 ceases; loud clatter]

Team member **:** [unintelligible scream]

[heavy crash]

Team member **:** [gurgling speech] [REDACTED - see Acquisition Document 1219-1b-2]

<AUDIO LOG ENDS>

Upon Mobile Task Force Pi-1's arrival, Class A amnestics were administered to all surviving civilian parties involved. Human body and skin shreds as well as partial lip, vocal cord, and lung fragments were recovered from the site; testing positively identified them as the remains of investigation team member . The remains showed no anomalous properties. SCP-1219 was transferred to Storage Site- on - - via darkened transport unit and successfully contained without incident.

Acquisition Document 1219-1b-2 access restricted to personnel with Level 3 Clearance and above

+ Acquisition Log 1219-1b-2

Upon study, researchers found investigation team member 's initially unintelligible final words to be coherent, if hampered by SCP-1219's effects. A full transcript of Acquisition Log 1219-1b follows.

<AUDIO LOG BEGINS - transcribed following video log timestamp 01:28:44>

[muffled clacking]

Team member **:** Batteries, batteries… shit. [unintelligible vocalization]

Researcher's note: volume increase and audio filter on acquired tapes shows the entity or event manifests at approx. 01:28:45 with fluctuating decibel level of 10-40. Net rise in decibel level brings the sound into audible human range after approx. 9 seconds.

[at second chorus, team member begins humming *Camptown Races*, slightly off-key, decibel range 44-50]

[team member ceases humming; SCP-1219 heard clearly against ambient sound]

Team member : [calls] , are you-

[SCP-1219 ceases; loud clatter]

Team member : [unintelligible scream]

[heavy crash]

Team member : [gurgling speech] S- sorry… I… m so- rry. So- [unintelligible]

<AUDIO LOG ENDS>

Transcript redacted on - - after all Class D experimental subjects exposed to SCP-1219's effects made similar final utterances for reasons unknown. All D-class subjects expired prior to full interrogation. Further testing and background investigation of SCP-1219 recommended.

« SCP-1218 | SCP-1219 | SCP-1220 »

SCP-1220: Logos

Item #: SCP-1220

Object Class: Safe

Special Containment Procedures: SCP-1220 is to be contained in three (3) compact cassette cases, clearly marked with their designation. The cases will be sealed with tamper evident tape, and stored in a locking drawer along with all research notes pertaining to them.

Due to the sensitive nature of SCP-1220, any recording of spoken SCP-1220 may not be digitized without permission from three (3) personnel ranking level four (4) or higher. If it is to be digitized, the data is to be stored on a computer with no or disabled network capacity, to prevent unauthorized access to SCP-1220.

Pending further review, no personnel are permitted to expose themselves or others to SCP-1220.

Description: SCP-1220 is an unknown, possibly dead language. It does not appear to belong to any known language family. It is a tonal language, similar to Mandarin, and shares a similar compounding structure for forming complex words. However, the number of phonemes used in SCP-1220 are far in excess of those used in any other language; some phonemes recorded appear to be unique, such as Phoneme ("Chirp A"). Several of the phonemes are utterances which the human vocal apparatus was not meant to accommodate, yet the only known native speaker seems to have no difficulty reproducing them multiple times in rapid succession.

The only known recording of SCP-1220 is a set of three cassette cases, containing two (2) hours and thirty four (34) minutes of recording. The recording is of a linguistic survey with an elderly woman. Interviewer begins by identifying the woman as one Ms. , and states that she is one of the last native speakers of a language

identified only as . The interviewer goes on to explain that Ms. had offered to tell a story in her native language, and once more in English. His explanation complete, the interviewer sets the recorder down on the table, and Ms. begins to tell the story. Once she has completed the story in SCP-1220, she repeats it once again in English, and the tape ends.

The story is a variant on the 'global flood' story present in many Mediterranean cultures. The story outlines a great flood that covered the world, and one man who survived. The man, finding himself in a barren world, scooped up several handfuls of clay, and instructed them of their new purpose, whereupon the clay erupted into a handful of wheat, an ox, another human being, and [DATA EXPUNGED].

Recorded instances of SCP-1220, such as those on the tapes, appear to be inert and safe for study. However, when a living subject vocalizes in SCP-1220, a zone of anomalous space is produced. The mechanism behind the production of this zone is as yet undetermined, though the result is consistent with all test subjects. The zone has been measured extending as far away as 10m from the speaker, though the zone is generally smaller, averaging a sphere with a radius of 2m. The exact nature of the zone is dependent on the nature of the utterance. This property was discovered by Dr. (1/1220), who on 9/5/ pronounced morpheme (Fire), whereupon the sleeve of his coat began to smolder. Dr. was treated for second degree burns, and the coat has been placed in containment, where it continues to smolder. Following this incident stricter precautions were instated regarding access to SCP-1220, and testing proper began. For more information, refer to attached test logs.

Addendum:
Test log for Dr. , 9/14/
Test Subject: Jr. Assistant , 1/1220
Native Language: English, American derivation
Word Spoken: Morpheme 'Rain'
Result: Area around subject extending out to 3.11m experienced rainfall. Rain did not appear to originate from ambient atmospheric moisture, and fell at an angle suggesting wind, which was not felt

outside of the zone. Subject initially reported that the rain was pleasantly warm, and initial sampling found that the precipitation was composed of water, with some particulate matter. Zone was found to follow subject, and that moisture left behind by the zones passage remained persistent, even after the anomaly ended. Subject reported skin irritation beginning one (1) minute after the end of the anomaly, which increased over time. Subject was washed in an on-site emergency shower, and was later treated for mild chemical burns. Examination of the precipitation sample afterwards revealed that the water became an aqueous solution of HCl. The recorded concentration of the sample was far higher than what was suggested by the Subject's reaction. Continued testing revealed that the HCl solution was increasing in concentration over time, until an hour after the end of the anomalous event, whereupon the contents of the sample contained only gaseous HCl.

Note: Following the events of the test, protocols were revised to forbid testing by non-D Class personnel.

Test log for Dr. , 9/25/
Test Subject: D-423/1220
Native Language: English, American derivation
Word Spoken: Morpheme 'Clay'
Result: The ground surrounding D-423 out to 2.01 meters was transmuted into red clay. Effect began at the subjects feet, and radiated outwards. Wave continued until it reached anomaly boundary, whereupon it abruptly ended. Subject was asked to move around on the clay, which was found to be stable. The boundary of the anomaly shifted with the subject, with clay left outside of the anomaly rapidly transmuting back to its former state, while surfaces that entered the anomaly zone were transmuted into clay. Subject acquired a sample of the clay using a stainless steel trowel, which showed no signs of reaction. The sample was found to be soft enough to deform by hand. Once pressure was removed, the sample returned to its original shape, demonstrating a 'memory foam'-like quality. Subject reported that the clay felt abrasive, similar to large grit sand paper, even through the work gloves that D-423 had been issued. Sample was bagged and removed from anomaly zone. It remained clay upon removal, and is currently available for study.

Five (5) minutes after the initial anomalous event, Subject reported piercing pain in left foot. On the spot inspection revealed an organism burrowing into the ball of D-423's foot, having pierced through 4cm of rubber to do so. The organism, designated SCP-1220-a, was removed via on site medical personnel, and placed in a sample bag, along with an additional sample of the clay. SCP-1220-a appears to be some form of terrestrial roundworm, measuring 6cm, possessing a hardened exoskeleton and an enlarged mouth, containing tooth-like growths similar in shape and function to a lamprey's teeth. SCP-1220-a is alive at time of writing, and currently available for study.

Subject requested a chair, following encounter with SCP-1220-a. Request was authorized, and Subject remained seated for the remainder of the test.

Ten (10) minutes after the initial anomalous event, Subject reported instability in chair. Shortly afterwards, the clay began to liquify, becoming quicksand-like in behavior. Subject was ordered to remain in place as the chair sunk into the clay. More examples of SCP-1220-a were spotted around the chair, as the area of transmuted clay began to recede. Subject at this point violated experimental procedure by leaping away from the chair, attempting to avoid immersion in the clay. The anomalous zone followed D-423 in flight, and upon landing subject was completely immersed in clay. Rescue attempts were considered, but before any plan could be put into action, the anomalous zone had disappeared. The fate of D-423 is currently unknown.

The folding chair used in the experiment was severed by the movement of the anomalous zone, and the remaining pieces appear to have been separated from the rest of the chair as if by a very sharp blade.

Test log for Dr. , 10/4/
Test Subject: D-424/1220
Native Language: Spanish, Mexican derivation
Word Spoken: Morpheme "-ness/having the qualities of"
Note: After the previous two tests, Dr. requested testing on non-nouns.
Result: Anomalous zone not observed in this test. Subject reported

a sensation of 'being watched', along with occasional scents similar to burning tires, and a greasy feel that traveled along the Subject's arm. Outside observers were unable to confirm any scent or oiliness before the anomalous event ended.

Test log for Dr. , 10/5/
Test Subject: D-424/1220
Native Language: Spanish, Mexican derivation
Word Spoken: Morpheme compounded by Morpheme "Clayness/ Having the qualities of clay."
Result: Anomalous zone once again not observed during this test. Subject initially reported feelings of physical wellness, of 'sturdiness' and immovability. Two (2) minutes and twenty six (26) seconds after initial vocalization, Subject reported stiffness in limbs. Two (2) minutes later, subject's skin became clay-like, originating around the mouth and spreading outwards. Subject was unable to communicate with staff during the transmutation, which eventually encompassed the whole of D-424's body. Samples collected after the fact show that the transmutation was complete, and that all of D-424's mass was transformed into clay.

Test log for Dr. , 11/28/
Test Subject: D-425/1220
Native Language: Mandarin
Word Spoken: Morpheme "Covenant/Communion/[DATA EXPUNGED]"
Result: Immediately following vocalization, and continuing for thirty-three (33) seconds after vocalization, Research Sector-experienced seismic activity, recorded at $3.2M_w$. Seismic event faded gradually, ceasing completely after two (2) minutes. Subject began to report sensations of contact, describing hands running over her skin. Staff within 10m of D-425 reported similar sensations. Sensations became overwhelming at four (4) minutes and fifteen (15) seconds, whereupon D-425 collapsed. Subject begins reporting visual, auditory, and tactile hallucinations. Hallucinations included: a flock of bats, covered in bleached bone plates, swarming around the subject; a city made out of melted green glass; a tall figure, with a head resembling a compound eye, surrounded by sourceless 'plates' of light. Upon reporting the last hallucination, the described figure became visible to all staff within the testing chamber. The

figure seized the subject, and both vanished. Later review of security footage did not record the presence of the figure, designated SCP-1220-b

Note: Further experimentation with SCP-1220 is suspended indefinitely, pending further review.

Agents encountering instances of SCP-1220 in the wild are ordered to not engage with the speaker, and instead to notify the home office. Further actions will be handled on a case-by-case basis.

« SCP-1219 | SCP-1220 | SCP-1221 »

SCP-1221: Unidentified Bus

Item #: SCP-1221

Object Class: Safe

Special Containment Procedures: SCP-1221 is non-hazardous and contained in a **Anomalous Vehicle Containment Bay** at Site- . Cleaning and maintenance is to be performed monthly; personnel are only permitted to enter SCP-1221 for these purposes and entrance is restricted to D-class.

By O5-level directive, all use and testing of SCP-1221 has been suspended indefinitely.

Description: SCP-1221 is a Mercedes-Benz O405 single-decker bus manufactured at the company's Mannheim plant in 1989. It was purchased by the Transit Authority and had an uneventful 10-year career. Upon its retirement SCP-1221 was acquired by the Foundation for staff transport (transport of SCPs or exposure to SCP incidents does not appear to have occurred). The operation of SCP-1221 is identical in all respects to a standard bus of its model. It attained SCP classification approximately 1 year after its acquisition, when medical staff noted a statistically significant increase in seizures at Site- which were traced back to users of the vehicle.

90% of subjects who enter SCP-1221 experience no visible effects. The remaining 10% are observed to develop a mild absence seizure disorder anywhere from hours to years after exposure. This is similar to typical absence seizure disorders, involving some seconds of loss of consciousness and blank staring without movement and showing characteristic patterns on EEG. Atypically, subjects commonly experience auras of déjà vu[1] or jamais vu[2] which are normally associated with other seizure types. Subjects retain no memories of the absences other than the occasional vague description of an 'out-of-body experience'. The disorder caused by

SCP-1221 is in many respects more benign than otherwise: seizures are fairly rare, usually occurring yearly (although weekly seizures have been observed) and are invariably controlled with appropriate anticonvulsant medication. Many subjects may be weaned off anticonvulsants after prolonged treatment.

A small number (<10%) of affected subjects are observed to vocalise during seizures (as no memory of the events are retained, consciousness appears to remain impaired), inconsistent with the presentation of typical absence seizures. Generalised EEG discharges are still observed. The vocalisations have a common theme of [DATA EXPUNGED].

LEVEL 4 CLEARANCE REQUIRED

Interview Log 1221-1

Interview 1221-1

Dr. R was skeptical of SCP-1221's extranormal properties and volunteered to test its effects. He entered SCP-1221 without incident and was interviewed 2 weeks after exposure by Dr. Major. An abridged transcript of the interview follows.

<Begin Log: 00h-00m-00s>

Dr. Major: Morning, R . How are you feeling today?

Dr. R : Same as always. No hallucinations, no blackouts, no seizures. Got up, had breakfast, did some reports and came in here.

Dr. Major: Okay, no change this week, but it sometimes takes a while to set in. Had any strange memory issues lately?

Dr. R : *<laughs>* Nothing's going to happen and you'll say I'm part of the 90% who aren't

affected! Memory's bad as ever.

<00h-12m-32s>

Dr. Major: Doesn't look like I'll get anything from you today. Time for a coffee?

[Dr. R stares blankly and is unresponsive for a total of 13s. Dr. Major is aware Dr. R is unresponsive by 6s and makes a note. After 13s, Dr. R 's face contorts violently, startling Dr. Major. Dr. R is now conscious but visibly fearful and agitated.]

Dr. Major: R , are you -

Dr. R : *[distressed]* Major? Jesus, they were right, they were all right about it. 1221. I can see him, it's not me.

Dr. Major: Him? What are you -

Dr. R : It's somebody else, I'm not here. I just watch. You have to help me, Major. Help me. Help -

[Dr. R 's face violently contorts for a second time and returns to normal after 3s. Dr. R 's mood has returned to its original state. The time is now 00h-14m-44s.]

Dr. R : I'm sorry, I must have drifted off for a moment.

Dr. Major: What the hell was that?

Dr. R : Was what?

[Dr. R appears to have no memory of the episode, despite repeated questioning. Video recording of the episode is shown to Dr. R .]

Dr. R : Okay, Major, you got me there. I guess 1221 does cause the little seizures after all. Egg on my face, huh?

Dr. Major: You don't have any comments on what you said during the episode?

Dr. R : No idea what it means, looks like I just went a bit loopy. Can I get going? This took ages and now I have get medical to fix this up. Don't want to scare you again! *<laughs>*

Dr. Major: Uh, okay, R . We'll continue this later.

[Dr. R exits interview room. CCTV cameras in outside corridor appear to show him mutter 'nice try'*.]*

<End Log: 00h-29m-11s>

Additional Comments:

Based on this report, I have attached a request for increased surveillance of SCP-1221 subjects, accelerated research (cross-SCP use with SCP-[REDACTED] may be necessary to obtain results) and a Euclid reclassification.

- Dr. Major

Request denied.
Evidence that SCP-1221 has a major effect on subjects is lacking and barring the treatable seizure disorder subjects have universally normal appearance and behaviour. It is the opinion of this office that no beneficial data would be gained from further research. [REDACTED] civilians and Foundation personnel, including [REDACTED] have been exposed to SCP-1221, all of whom have

essentially normal function. Information may pose a containment risk and have negative effects on employee morale.
SCP-1221 and 'affected' subjects are presently secure, contained and protected. Until the situation changes, testing is unnecessary and has been suspended.

- *O5-*

Footnotes
1. Feelings of familiarity with unfamiliar situations.
2. Feelings of unfamiliarity with familiar situations.

« SCP-1220 | SCP-1221 | SCP-1222 »

SCP-1222: Stasis Box

Item #: SCP-1222

Object Class: Safe

Special Containment Procedures: SCP-1222 is to be locked in a 60 x 60 x 60 cm hard plastic container with foam inner-lining to hold it in place. Container can be found inside locker in the storage area of Site-4. If container is damaged in any way, contact administration for replacement. Personnel with Level 1 clearance or higher may access the object for research purposes.

If not used for testing, linseed oil must be rubbed into SCP-1222 for preservation purposes once annually. Linseed oil must also be used after all research tests.

Description: SCP-1222 is a bamboo box, decorated with beads and shells, and measuring 7 x 10 x 10 cm. A lid is attached and held together by a woven thread made of palm fronds. Any human who touches the box with both hands and gazes at its bottom will instantly enter a state of stasis, in which they cannot be repositioned or harmed by any means known to the Foundation; any human in this condition is to be classified as SCP-1222-1. This stasis will continue until SCP-1222-1 is touched by the skin of a live human. SCP-1222-1 has no vital signs (respiration, blood pressure, brain activity), and can remain in this condition indefinitely. Removing SCP-1222 from SCP-1222-1's hands, or blocking it from SCP-1222-1's view, does not affect the stasis. However, only one instance of SCP-1222-1 exists at a time; attempts to successively or simultaneously create multiple instances of SCP-1222-1 have failed.

Examination of SCP-1222-1 through latex gloves has revealed that SCP-1222-1's flesh is hard and unyielding; researchers have described the flesh as being "like stone or metal". SCP-1222-1's clothing is unaffected by the stasis and can be damaged normally; however, hair becomes intensely tough and durable.

+ TEST LOG 1222-1

TEST: SCP-1222-T12
PROCEDURE: SCP-1222-1's head struck with metal rod 32 times.
RESULT: No damage to SCP-1222-1; rod became warped and dented.

TEST: SCP-1222-T14
PROCEDURE: Fired at with a .38 Special revolver
RESULT: The bullet compressed against SCP-1222-1's right earlobe. SCP-1222-1 fell over.

TEST: SCP-1222-T22
PROCEDURE: Fired at with an AR-10 rifle using 7.62x51 NATO rounds
RESULT: The bullet shattered against SCP-1222-1's right shoulder. SCP-1222-1 fell over.

TEST: SCP-1222-T30
PROCEDURE: Swiped at with 30cm kitchen knife
RESULT: Knife bounced off.

TEST: SCP-1222-T31
PROCEDURE: Stabbed with 30cm kitchen knife
RESULT: Knife broke.

TEST: SCP-1222-T50
PROCEDURE: Fluoroantimonic acid poured onto SCP-1222-1's back
RESULT: Acid seeped off of the subject and into the glass container beneath.

TEST: SCP-1222-T53
PROCEDURE: Partially submerged in Fluoroantimonic acid
RESULT: Subject was asked to hold SCP-1222 above the head while entering stasis. Subject was lowered into a glass container two meters tall with one meter filled with fluoroantimonic acid. Test was conducted with safety measure to ensure no damage to SCP-1222

would occur. After two weeks of no reported changes, subject was removed, cleaned, and reawakened. Subject subsequently died due to accumulation of acid in pores of skin and lower cavities.

TEST: SCP-1222-T63
PROCEDURE: Petrol ignited
RESULT: A small quantity of petrol was poured over the subjects lower back and set alight. The area became scorched black with residue but no visible damage was shown.
NOTE *No further tests involving substances that could harm the box will be used unless under strict supervision of a safety team and class 3 personnel. This is only to prevent damage to the box and is not a personal attack on any researcher.*

TEST: SCP-1222-T68
PROCEDURE: A slap
RESULT: Both a gloved and ungloved slap were given to the test subject. The gloved slap had no effect and managed to topple over the test subject. The ungloved slapped immediately awoke the test subject, who shrieked in surprise. When D-class personnel was asked to describe the feeling of slapping, he replied “like putting your hand through paper and immediately hitting flesh”.

+ RECOVERY LOG

SCP-1222 was found in , a village of Nias Island located off the coast from the Sumatra region of Indonesia on November 18, 1984. A rescue team dispatched in the area discovered a dug out chamber beneath debris of a destroyed home. In the middle of the chamber was a Caucasian woman kneeling on the floor with the item in her hands.

Report Excerpt - -1984

> We were relieved at first to find a survivor under all the rubble. A single mother had lived

there with two children and an infant, and all four had perished when their home fell. A neighbour had reported that the mother was always talking about a disabled cousin she also cared for, and was worried for the cousin's safety. After inspecting and moving the rubble, we found a hole in the corner of where the sleeping area would have been. The hole went down two meters before turning toward an entrance of a small chamber. The man who volunteered to go down called out that he had found a woman in prayer and that she was in shock. He then went to pick her up and take her out when the woman started screaming. When he emerged with her she was thrashing about and speaking in a language we didn't recognise. She was without a scratch on her body, but her clothes were old and falling apart and a thick layer of dust covered all parts. The woman calmed down after we constrained her and was sent to an emergency medical centre set up nearby.

Light amnestics were given to all members of the rescue team after receiving the report.

The subject's name is , born 4 June 18 . Agents acquired her at the emergency medical centre where she was transported to Site-4. The only item with her was SCP-1222. Subject spoke fluent Dutch that was standard for the 1800's. When questioned about SCP-1222 she went into detail about finding it in a village not far from where she was found, after her father had [DATA EXPUNGED] retrieved it from the ashes. Subject was commissioned to D-Class personnel at Site-3.

Addendum:
Future tests are scheduled for use of radiation, destructive bacteria, nano-machines, and SCPs , , , , , and . Various

Keter class SCPs were also considered but decided against due to possibility of the damage or destruction of SCP-1222.

« SCP-1221 | SCP-1222 | SCP-1223 »

SCP-1223: Photographic Memory

Item #: SCP-1223

Object Class: Safe

Special Containment Procedures: SCP-1223 is to be stored in a standard containment crate in the on-site warehouse of Site . SCP-1223 is to remain in an unpowered state when not undergoing approved testing. When undergoing testing requiring a powered state, SCP-1223 must be secured in a sealed testing area and monitored via video surveillance. While in a powered state, only D-Class personnel may directly view SCP-1223.

Description: SCP-1223 is a digital photo frame manufactured by the Corporation. Physical examination while in an unpowered state revealed no components unusual for other models of its product line. SCP-1223 possesses a solid-state hard drive with a capacity of 512mb and a 7.18cm LCD display. Electronic analysis of the hard drive determined that the drive is not storing any photo data.

In a powered state, SCP-1223 will display a blue menu screen when unobserved, standard for photo frames of its type. Upon being directly observed by a living human being (hereby referred to as subject), however, SCP-1223's LCD will alter to a flat black screen with the words "HELLO" in large white text. Experimentation has shown that SCP-1223 must be within direct line of sight of an individual to activate; remote monitoring does not trigger the effect. Within six seconds of observation, SCP-1223's screen will again change, this time displaying a person or object from the observer's life. The photo will be displayed until it is directly observed by the subject. Once observed, the photo will again change after six seconds, displaying another event from the subject's life. SCP-1223 has displayed a tendency to display photos of close individuals, objects or places that the subject displays a strong affection for.

Once observed for several iterations of photos, SCP-1223 will begin displaying plain text captions over the displayed images. Captions are typically descriptive in nature and written from the perspective of an outside observer addressing the subject. Recorded captions include:

- **Your mom sure loved her gift!** (Displayed image: An elderly woman opening a birthday present.)
- **What a proud papa.** (Displayed image: A young man holding a newborn baby girl.)
- **He'll always have your back.** (Displayed image: Two soldiers posing for a photo atop a burned Iraqi tank.)
- **This was the best night of your life.** (Displayed image: A bride and groom exchanging vows.)

Upon observing a photo from their life, the subject will begin to develop symptoms of retrograde amnesia. Subjects will have difficulty remembering the events pictured in the photo, and will react with confusion if provided evidence of them. Repeated viewing of photographs displayed by SCP-1223 will result in the subject losing all memory of the person, place or object that was featured in the photos. The exact number of displayed images required before total loss of memory of the person, place or object varies between subjects. In one case, D-58134 was able to vaguely recall his childhood best friend until the thirty fifth sequential photo. In another, D-67312 was unable to recall any information about his mother after seven photos featuring her.

+ Show Excerpt from Experiment Log 1223-57

<Begin Log>

Foreword: Subject D-67394 is told that SCP-1223 will display photos from his life using an experimental device monitoring his brain via electrodes. Subject is instructed to view each image and describe his feelings into the microphone to help calibrate the device. Upon activation, SCP-1223 displays consecutive photos of a young woman and two toddlers in various locations. Up until this point, SCP-1223 had only displayed 6 consecutive images of the same individual(s).

*Displayed image 16: The woman is seated in a recliner, with both toddlers lying in her lap. All three are smiling at the camera. Caption: Everyone's getting cozy with mommy!
Subject D-67394 (Laughs) Oh, man. I forgot all about that chair. [REDACTED] and [REDACTED] used to love climbing over everyone who sat there.

*Displayed image 33: The woman is standing on the back porch of a trailer, wearing shorts and a tank top. Both children are wearing red and blue face paint and carrying sparklers. Dark bruises can be seen on the woman's thighs and upper arms. Caption: What an *~*EXPLOSIVE*~* Independence Day!
Subject D-67394 I remember that Fourth of July! [REDACTED] didn't think the kids were old enough to play with sparklers, yet. They loved them! [REDACTED] got scared of hers and dropped it after it burned too close to her hand, but she was a little daredevil. She stole her brother's ten minutes later!

*Displayed image 78: The two children seated at a dinner table with a large cake in front of them. The children are wearing matching pink and blue hats with the number four written on them in glitter. The woman is kneeling between the two children's seats while they smear cake on her face. Caption: They thought mommy was the SWEETEST!
Subject D-67394 Oh, god! I nearly peed my pants when they did that! [REDACTED] bent down to cut the cake, and the kids just grabbed handfuls and went at her with it! I couldn't believe how smart they were to pull that off at the same time like that!

*Displayed image 126: A point-of-view shot inside a small living room of the woman being grabbed by the throat. She displays multiple severe bruises around her mouth, eyes and forehead. One of the children is seen lying on the floor behind the woman, hiding his face. Caption: You told that BITCH to watch her mouth.

Subject D-67394: What? What the fuck is this? Who the fuck did that to her? Hey! What the hell is with this thing? Why is it—

*Displayed image 127: The woman is lying on the floor of the room pictured in image 126. She displays massive facial trauma consistent with a close-range gunshot wound. Caption: She won't run that pretty mouth any more!
Subject D-67394 Oh, Jesus. I'm gonna be sick. Oh, Jesus. Are these fake? Where did you get this?

*Displayed image 128: A second point-of-view shot. Both children are seen cowering in a corner. A shotgun barrel is protruding from the bottom-right corner of the image. Caption: Little pitchers have big ears!
Subject D-67394 Oh, no. No, no. You made these up, right? Hey, where are [REDACTED]? Hey! Man, I'm talking to you! I want to know where the fuck my wife and kids are, right now! (Subject reacted violently at this point. Subject was restrained with lidlocks and testing resumed.)

*Displayed image : A repeat of image 16.
Subject D-67394 (Subject had not spoken for over images.) Huh, cute kids. Who's she?

<End Log>

Closing Statement: Subject D-67394 was incarcerated for the first degree murder of his wife and children. Recommend further testing using D-class convicted of crimes against friends or loved ones to test potential sapience of SCP-1223.

SCP-1224: Li'l Chemist Kit

Item #: SCP-1224

Object Class: Safe

Special Containment Procedures: All acquired instances of SCP-1224 must be contained in separate blast chambers in the Hazardous Materials Wing of Site 37, with the exception of any acquired instruction booklets, which are to be scanned into the onsite secure database and subsequently destroyed.

Description: SCP-1224 is a set of 17 instances of "Dr. Wondertainment's Super Science™ Li'l Chemist Kit™!". All kits are contained in metal boxes measuring 35.5 cm x 65 cm x 25.25 cm. The boxes are composed of a metallic alloy containing lead, aluminum and iron. The hinged lid of each kit is fully covered with a unique photographic sticker displaying an ethnically diverse group of 2-4 children playing with the contents of the kit. In the lower right corner of each sticker is the following warning label:

> Dr. Wondertainment's Super Science Sets™! are intended for children ages 7-12. Any experiments using Dr. Wondertainment's Super Science Sets™! should be performed only with adult supervision. All instructions should be followed exactly for best results.

SCP-1224 kits each contain a test tube rack composed of the same alloy as the box; 5 test tubes and an Erlenmeyer flask, all made of borosilicate glass; a small heating element; a borosilicate glass stirring rod; a glass and rubber pipette; 50 brown, opaque glass bottles with paper labels; and an instruction booklet. The bottles contain a wide variety of chemical compounds, including hydrofluoric acid, sodium hydroxide, colloidal silver, liquid mercury (labeled "Quicksilver"), small granules of uranium yellowcake, and several unknown compounds labeled "Super Reagent!", "Super Catalyst!" and "Super Accelerator!".

SCP-1224 instruction booklets are 62 pages long and consist of 1- or 2-page instructions on how to conduct different experiments or create different substances or products. These range from simple compounds such as oobleck and vinegar-and-baking soda mixtures to more complex and unusual products such as "smoke bomb" pellets capable of producing approximately 1 km^3 of non-toxic purple smoke, "glow in the dark" paint capable of emitting light at 5000 lux, and "vanishing cream" capable of temporarily redirecting light around subjects it is applied to, rendering them invisible for up to 5 minutes before losing efficacy. All of the more complex products require some combination of the 3 unidentified compounds. Attempts to replicate the experiments without using these compounds result in inert substances.

The back page of each booklet contains a re-order form for the chemical compounds. Re-order requests have consistently been filled within 4-6 weeks, although the supplied mailing address does not exist. At the bottom of the re-order form is an advertisement to purchase "Dr. Wondertainment's Super Science™ Li'l Physicist Kit™", "Dr. Wondertainment's Super Science™ Li'l Geologist Kit™!", "Dr. Wondertainment's Super Science™ Li'l Geneticist Kit™!", as well as an advertisement for a television program entitled **"Professor Abnormal's Science Lab"**. Attempts to order these kits using the re-order form have consistently resulted in form letters stating that the kits are available in retail outlets only.

« SCP-1223 | SCP-1224 | SCP-1225 »

SCP-1225: The Worst Christmas

Item #: SCP-1225

Object Class: Safe

Special Containment Procedures: SCP-1225 is kept within its original packing, including styrofoam padding, in an isolated room measuring 15 m x 15 m x 15 m at Site 37. SCP-1225 is kept in a locked stainless steel box on a concrete pedestal that is protected from the elements, in a 25 m x 25 m roofless containment area open to the air in at least a 180 degree arc.

Unless part of an experiment, no sealed or closed containers are allowed within the containment area, including pockets in clothing and end-caps on pens. Personnel should spend no more than 60 minutes per 24 hour period within the containment area.

Description: SCP-1225 is a spindle-shaped glass ornament with a small loop at the top allowing it to be hung from a hook. When hung on a tree, bush or other "woody" plant, it initiates a process of accelerated decay and aging in any closed containers within 4 meters of it. The contents of these containers will change so as to reflect the signs of typical wear-and-tear that the object would acquire over the course of several years.

Textiles, clothing and stuffed plush items become faded and threadbare, often with ripped seams and missing or broken fasteners. Solid-state metal, plastic or glass objects will display chips, cracks, scratches, and heavy corrosion similar to acid burns. Electronics display both hardware and software problems sufficient to cause fatal shutdowns within a few minutes of use. Foodstuffs will become stale or moldy. Living organisms do not die, but display health problems consistent with age as well as extended malnourishment, neglect or abuse.

The decay process is rapid, with affected objects displaying

approximately 1 year's worth of aging within the first 24 hours of exposure. However, the rate of decay slows over time and asymptotically approaches a maximum of approximately 10 years' worth of aging over the course of 3 weeks.

Addendum 1225-D: Study of SCP-1225's pre-containment circumstances, as well as experimentation regarding the aging effects of long-term exposure to SCP-1225, indicate that SCP-1225 has a secondary effect. Any individuals that spend more than 4 hours per 24 hour period within 10-12 meters of SCP-1225 begin to display increased levels of aggression, anger and irritability, decreased patience and frustration tolerance, and exaggeration of negative or annoying personal traits such as over-eating, alcohol consumption, snoring and unpleasant body odor. This effect persists even when the affected individuals are no longer within range of SCP-1225, but gradually fades over the course of 8 days. This increase in aggravating factors typically results in heightened levels of interpersonal conflict, most commonly expressed by severe verbal or physical fights. When more than one individual affected by SCP-1225 interact with each other, the effects are much more severe and escalate much faster. In 27.5% of cases, this results in serious injuries or fatalities.

Addendum 1225-H: Due to a statistically abnormal amount of equipment failure, structural decay and interpersonal conflicts requiring administrative action at Site 37, more in-depth studies were performed on SCP-1225. The current prevailing theory is that SCP-1225 still operates even when not placed on a plant, but much slower and less intensely. It appears to treat enclosed structures or buildings containing it as if they were containers placed beneath it and will affect them as well. Whether or not the containing structure includes a roof, trellis or other overhead cover appears to most strongly determine whether or not SCP-1225 will affect the structure. The acquisition of D-Class personnel from **SCP-784** is currently under consideration due to the fact that these personnel are less prone to equipment failures caused by SCP-1225. Further research is required in order to determine the exact nature of this effect. Containment protocols have been updated.

SCP-1226: Postmodernism

Item #: SCP-1226

Object Class: Safe

Special Containment Procedures: SCP-1226 is to be hung on the wall of a standard containment chamber, and access restricted to testing personnel. SCP-1226 may be safely observed remotely or piecemeal; its anomalous properties manifest only when it is viewed in person and in its entirety. A 6 cm x 6 cm square of opaque black plastic has been positioned in the upper left corner of SCP-1226, to be removed for testing purposes. Only D-class personnel are permitted to view SCP-1226 uncovered. Special security precautions are to be taken when exposing subjects to SCP-1226, as post-exposure subjects exhibit heightened aggression, endurance, and physical strength. Post-exposure subjects are to be terminated at the conclusion of testing.

Description: SCP-1226 is a large oil landscape painting measuring 2 meters by 4 meters. It depicts, in great detail, the detonation of a nuclear weapon above a large city[1]. Photorealistic attention has been paid to every detail of the painting, from optically correct reflections on the thousands of glass shards depicted, to the accurate representation of the effects of atomic firestorm on the 3,129 human figures portrayed on the streets. SCP-1226 was originally displayed in a varnished oaken frame and accompanied by a freestanding informational plaque[2]. For full text of the plaque, see Addendum 1226-02.

When a subject views the whole of SCP-1226 in person, it causes an immediate mental and physical change in the viewer. A significant increase in physical size and overall musculature is accompanied by a pronounced curvature of the spine, forcing a hunched, simian posture. The skull is radically reshaped, the forehead sloping and jaw protruding. This results in a marked reduction of total brain mass and an increase in cranial pressure,

with a significant reduction in cerebral volume. These changes occur over the space of about 40 seconds, and are evidently extremely painful.

Post-exposure subjects exhibit a massive loss of mental capacity consistent with the reduction in brain mass. Subjects are capable of only rudimentary guttural vocalizations and simple gesturing by way of communication, and are concerned only with feeding, copulating, and other basic instinctual behaviors. Due to the intense pain and loss of mental function associated with transformation, subjects invariably enter a violent state of panic.

Initial descriptions of affected subjects as "cavemen" have been proven inaccurate. Autopsies and paleontological analysis have revealed marked dissimilarities between known human ancestors and affected subjects. Currently favored theories propose that subjects are altered into either a hitherto-undiscovered prehistoric hominid, or a popularly-perceived "caveman" archetype.

All re-education and rehabilitation efforts to date have failed due to the radical simplification of subject's brain structures.

Addendum 1226-01: Acquisition Log.

> SCP-1226 was acquired on , , following its unveiling at [DATA REDACTED] Gallery in [DATA REDACTED]. The unveiling event was heavily promoted as featuring the latest work of , and was attended by many well-known members of the global artistic community.
>
> The unveiling event exposed individuals to the anomalous effects of SCP-1226. Those gallery patrons and employees not exposed were killed by exposed subjects over the next half hour, either through bludgeoning, cannibalism, , or some combination thereof. 911 calls and police reports were intercepted by MTF Upsilon-23 ("Art Critics"), affected subjects captured or eliminated, and amnestics administered to witnesses and first responders. SCP-1226's anomalous effects were confirmed on-site

by MTF Upsilon-23, and SCP-1226 was taken into containment.

Addendum 1226-02: Text of Informational Plaque.

> The inevitable conclusion of the modern age is in self-destruction! The post-modern era will be like the pre-modern era, the new will be like the old, there will be shiny chrome primitivism for everyone, and we'll all finally be cool.
>
> ~ 3

Footnotes
1. The skyline of the city depicted in SCP-1226 does not conform to that of any currently extant urban center.
2. Neither frame nor plaque have exhibited anomalous properties, and may be viewed upon request.
3. Mr. , noted post-modernist painter, professed no knowledge of an exhibition at [DATA REDACTED] featuring his work. Furthermore, SCP-1226 is highly atypical of his artwork.

« SCP-1225 | SCP-1226 | SCP-1227 »

SCP-1227: The Family Man

Item #: SCP-1227

Object Class: Euclid

Special Containment Procedures: SCP-1227 is to be kept in a concrete chamber 30m X 30m X 5m, only accessible through a double airlock system. All researchers wishing to investigate SCP-1227 must wear regulation biohazard suits with an enclosed onboard oxygen supply. The chamber contains a 20m-wide red circle painted on the floor, henceforth referred to as the 'safe zone'. Before Airlock D is opened, SCP-1227 will be instructed to move to the center of the safe zone. Throughout our interactions with SCP-1227, it has been noted that SCP-1227 is relatively docile and will usually submit to these requests; however, its co-operation should not be taken for granted and Airlock D will not be opened until it is fully within the safe zone. Due to SCP-1227's passive nature and severely limited mobility, safety outside the safe zone is usually assured. Under no circumstances should any personnel or other biological material enter the safe zone, or engage in physical contact with SCP-1227.

Description: It is believed that SCP-1227 was formerly Yuri Seryogin, a political prisoner of the USSR, arrested in 1957 for pro-democracy leanings. Parts of SCP-1227's extended body have also been positively identified. Scars on the face of SCP-1227-E have been matched to photographs of Aleksey , a known associate of SCP-1227. SCP-1227-B is believed to be the trunk and head of SCP-1227's wife, by his own admission. The remaining parts of SCP-1227's mass remain unidentified.

Documents obtained by the Foundation after the collapse of the Soviet Union have revealed that SCP-1227 is the indirect result of a Russian social experiment conducted by during the winter of 1960. During this study, six political prisoners, including Yuri Seryogin, Aleksey, and Yuri's wife, were led into the depths of an

unidentified cave by the KGB as an experiment into group dynamics under severe stress. The prisoners were provided with a limited food supply and water but no light sources. After 5 days of relatively normal social functioning, the group descended into two warring factions, which eventually led to three further days of incoherent screaming, muttering, torture, rape and one forced abortion. On the final day of the experiment, the KGB researchers recorded some 'disturbing' sounds over the concealed microphones, including screaming, pleading, vomiting and [REDACTED].

The caving team sent to observe the status of the prisoners discovered a large amount of decomposing human tissue in a liquefied state, with SCP-1227 having formed in the center of it, apparently in good physical and mental health, and failing to notice anything amiss with its new situation. The Foundation was notified and SCP-1227 was extracted from the USSR by Mobile Task Force Epsilon- .

SCP-1227 appears to be a male figure bonded to the heavily disfigured bodies of nine people by a red web-like mass which has been confirmed to be SCP-1227's own muscles, and tube-like extrusions confirmed to be heavily developed extrusions of SCP-1227's own respiratory and digestive tracts. Experimentation has demonstrated that physical contact with SCP-1227 will lead to this bonding process being initiated. Firstly, the victim will fall into a coma-like state, whatever part of the body that contacted the creature becoming fused there. Then, SCP-1227 will permanently bond the victim's body to its own by extruding its own blood vessels and nerves into the victim's body. Finally, SCP-1227 will take control of one or more of the victim's vital systems by assimilating that system into its own with its own nerves/blood vessels/intestines. Any part of the victim not associated with this system will lose blood flow and eventually drop off. SCP-1227 will feed any limbs that drop off into the beginning of its extended digestive tract, a hole in the chest of SCP-1227-D. The heart is always kept alive to pump blood around the vastly extended body. Although SCP-1227 does not seem to harbor ill will towards human beings to any major extent, it wields no control over this ability, hence the 'safe-zone' protocol.

Experimental data suggest that this combination of multiple organ

systems has greatly increased SCP-1227's biological efficiency, allowing it to survive on extremely limited resources. One observed effect is that SCP-1227's urinary tract is now three times longer than normal and so efficient that SCP-1227-F is now observed to deposit roughly 60g of concentrated urine every three years, which analysis has demonstrated to be 99.9% pure urea. SCP-1227-A and SCP-1227-C have had their respiratory tracts connected into SCP-1227's lungs, meaning that he can process air so effectively that SCP-1227 can survive for a duration of up to six months in a complete vacuum, at the cost of falling into a hibernation-like state. A full breakdown of SCP-1227's bodily systems follows:

(Unless stated otherwise, all victims are USSR political prisoners)

SCP-1227-A: Unidentified male. Connected to SCP-1227 by 1.5 meters of esophagus/blood vessels. Legs have been removed. Arms still mobile, used to propel SCP-1227's mass.
SCP-1227-B: Unidentified female. Connected to SCP-1227's back by extruded muscle. Only trunk and head remain, all other limbs removed. Her womb has [DATA REDACTED]. Pupils will contract in response to high intensity light sources.
SCP-1227-C: Unidentified male. Connected to SCP-1227 by 0.8 meters of esophagus/blood vessels. All limbs have been removed. Mouth will occasionally gape widely, for unknown reasons.
SCP-1227-D: KGB researcher . Connected to SCP-1227 by 0.5 meters of intestines. Head and limbs have been removed. Serves as beginning of digestive tract; all food is placed directly into the stomach via hole in the chest.
SCP-1227-E: Aleksey . Connected to SCP-1227 by extruded muscle. Only the head, trunk and legs remain, used only to help mobilize SCP-1227.
SCP-1227-F: Unidentified male. Connected to SCP-1227-G by 2 meters of urinary tract. Only the trunk and right arm remain. Used to process urine and to mobilize SCP-1227.
SCP-1227-G: Unidentified male KGB researcher. Connected to SCP-1227 by 3 meters of digestive tract. Only trunk and right leg remain. Serves as the end of the digestive system.
SCP-1227-H: Foundation male D-class personnel D- - . Connected to SCP-1227 by as well as extended brain stem. Only the head and heart remain.

SCP-1227-I: Foundation test canine. Connected to SCP-1227 by 5 meters of extruded nervous system. Only head and front legs remain. SCP-1227 claims it is a 'precaution' for 'self-defense'. It will often crawl to the limit of its connection to bark and whine at researchers. Close observation has revealed that it is outside SCP-1227's control.

I really wish we hadn't tested if the effect also works on animals, but now I expect you to honor 'safe-zone' protocol more than ever, until we find a way to amputate the damn thing. O5- .

Despite the changes SCP-1227 has undergone, SCP-1227 still possesses human intelligence and reasoning. SCP-1227 has been successfully taught English to a sufficiently advanced degree. Psychoanalysis showed no signs of cognitive defects, or disorder of thought patterns and processing. SCP-1227 is permitted books and other entertainment at Lead Researcher Sarah Townsend's discretion, as well as daily visits from 'friends' selected for him by the research staff. SCP-1227 appears to have a normal level of social functioning, and during these visits enjoys hearing stories or news about the outside world. However, it has become apparent that SCP-1227 harbours well-developed delusions into its current state of being, often claiming that SCP-1227 A-H are 'children' playing peacefully nearby, as well as repeatedly claiming SCP-1227-D's stomach is an 'oven'. Further interviews have shown that SCP-1227 believes itself to be in a normal family setting, with a wife and several children. SCP-1227 appears to regard containment and constant experimentation as a normal part of family life, never questioning orders or requests in order to preserve its own illusions. Rational-Emotive Therapy has been applied, without success.

On one notable occasion (22/09/), SCP-1227 complained of feeling 'hungry'. Minutes later he grabbed an unwary D-Class personnel and mostly tore him apart, feeding the carcass into SCP-1227-D. Afterwards he bonded what remained to his biomass, which would later become SCP-1227-H. He appeared to be under the impression that he was 'preparing a feast' for his 'family' the whole time. It is currently unclear if these delusions are symptoms of a disorder such as schizophrenia, or if SCP-1227 is attempting to escape the horror of its current situation by creating a full intrapsychic world where it

feels safe; it should be noted that SCP-1227 often claims its childhood was the happiest time of its life, and perhaps this is why its delusions center around themes such as childhood and family.

One major breakthrough came when SCP-1227 admitted that the serious puncture wounds to both its eyes were self-inflicted, possibly in an attempt to escape the sight of its own vastly mutated body.

All attempts at therapy have failed; the subject appears to be in a well-developed denial system, often becoming aggressive and frustrated when therapists tell him they cannot see his seven playing children, or his devoted wife. All attempts to get SCP-1227 to elaborate on the events inside the cave, or how he acquired these new abilities, are typically met with sudden staring, drawing its body parts around it, and refusing to speak for 2-4 months.

« SCP-1226 | SCP-1227 | SCP-1228 »

SCP-1228: The Fan Club

Item #: SCP-1228

Object Class: Euclid

Special Containment Procedures: Foundation Agents are to infiltrate all major Internet service providers to ensure civilian access to SCP-1228 is blocked. Any personnel accessing SCP-1228 for testing purposes is to be accompanied by at least one Researcher, and must submit to mandatory psychological evaluation afterwards. *(Access to SCP-1228 outside of testing purposes is now strictly forbidden. See Incident 1228-A for further details.)*

Description: SCP-1228 is a website with the domain .com. Any software used to monitor Internet connections crashes when applied to connections to SCP-1228, so its IP address is unknown. The domain is not registered by anyone, and when usually accessed gives the normal "DNS lookup failed" error. However, if viewed by an individual with a history of creative aspirations, SCP-1228 will appear as the page of the viewer's "Official Fan Club." Although the site's contents vary from individual to individual, a few pages appear consistently.

- *Wiki:* Extensive documentation of the subject's work. Subjects typically claim that the nonexistent titles listed are "something they've always wanted to do."

- *News:* Reports of nonexistent events in the subject's life. Events reported are invariably of a positive nature, such as the subject winning a major award for their work. Interviews with the subject are often listed here as well, with the subject usually mentioning in the interview that they're glad they chose to pursue their passion rather than their career path in real life.

- *Forums:* Discussion of the subject and their work. Posters'

comments are all unanimously positive, praising everything the subject has produced. In order to gather as much information on SCP-1228 as possible, the Foundation strongly encourages test subjects to post on the forums themselves.

- *Store:* A store exists for the purchase of merchandise pertaining to the subject's work, such as T-shirts, posters, and figurines. Within hours of making a purchase, an unmarked package will appear at the subject's address containing the product(s) in question. Attempts to trace the origin of the packages and their products have proven unsuccessful.

After viewing SCP-1228, test subjects will report feelings of depression, with thirty percent attempting suicide shortly afterwards.

Incident 1228-A: On 09/17/20 , Dr. , the current Researcher presiding over SCP-1228, was reported missing. An aspiring writer in his youth, had taken to browsing SCP-1228 obsessively. Investigation of his offices revealed a log of private messages with a forum poster named "Ellen."

+ Conversation Log

Ellen: I can't believe it! It's really you! You have no idea how long I've dreamed of talking with you! :)
Dr. : Aww, thanks. It's always an honor talking to a fan.
Ellen: I've read every single one of your books. I especially liked the one about the guy who goes crazy at sea. I cried like a baby at the end!
Dr. : Really? That's what I've wanted to do ever since I was a kid, really. Write something that makes people emotional.
Ellen: You make me REAL emotional, if you know what I mean. You wouldn't be interested in meeting up sometime, would you?
Dr. : I'd love to. Where at?
Ellen: I live at [REDACTED]. See you then! ;)

An Agent was dispatched to the address, revealing an abandoned two-story house. Dr. 's current whereabouts remain unknown.

« SCP-1227 | SCP-1228 | SCP-1229 »

SCP-1229: Thirty-Seven Films Starring Lana Neal

Item #: SCP-1229

Object Class: Safe

Special Containment Procedures: Instances of SCP-1229 are to be saved on the Site-28 Secure Server and cataloged in the Research File. Access to SCP-1229 files is to be conducted in accordance with standard Foundation electronic information security protocols.

Research staff are to monitor internet traffic for SCP-1229. Upon detection of an SCP-1229 instance, staff are to copy the file for Foundation records and containment, record and track IP addresses associated with uploading, and take action to immediately delete the instance. See Clandestine Electronic Data Interference Guide for more details.

Due to the unpredictable nature of SCP-1229 instances appearing on the internet, and in order to minimize public knowledge of their anomalous properties, all information and records pertaining to Ms. Lana Neal have been expunged. Periodic checks for any remaining records concerning this individual are to be carried out to ensure that no information remains accessible to the general public. All original camera negatives of the four films in which Ms. Neal appeared have been seized by the Foundation and are currently stored in the Site-28 Research Archives. Due to the relatively low awareness and quality of these films, copies were never widely distributed, and the few available reproductions have been obtained by the Foundation. Suppression of this information has achieved a Grade 3 Widespread Public Awareness Scenario, consisting of a low-level lingering knowledge of Ms. Neal's existence among cinema enthusiasts, typically characterized in these circles as an "urban legend".

Description: SCP-1229 is a series of (to date) 37 electronic video

files, first documented in 2002 and continuing into the present, which have thus far included files in .avi, .mkv, .mpeg, and .wmv formats. Each video file is a depiction of Lana Neal, an obscure British actress active during the early 1970s, in what appear to be a variety of different programs meant for television broadcast. Biometric data analysis, voice recognition software and audiovisual manipulation screenings have determined that each SCP-1229 instance is a true and accurate recording of Ms. Neal.

How these recordings are made is not understood at this time, as Ms. Neal has been deceased as of 03/18/1974. This has been confirmed by exhumation of Ms. Neal's remains and DNA analysis of tissue samples obtained in this manner. A coroner's inquest, prior to Foundation expungement of public records, listed the cause of death as acute cranial trauma related to a fall, which was confirmed by Foundation research staff upon exhumation of Ms. Neal's remains. No criminal act is suspected at this time to have occurred in relation to Ms. Neal's death.

The ostensible subject material of each SCP-1229 instance varies; video transmissions have included programs formatted as nature documentaries, sitcoms, game shows, serial dramas, and other programs typically broadcast on television. Each broadcast centrally features Ms. Neal; to date, no other persons have ever appeared. Dialogue, when present and/or audible, consists of Ms. Neal appearing to read from a script or a prompt outside the view of the camera, and is almost always inconsistent with the type of show the broadcast appears to be. Due to references to noteworthy, contemporaneous events in recorded dialogue, it is assumed that these broadcasts are continually being created and distributed by an unknown party or parties.

Instances of SCP-1229 are typically found on torrent websites and other file-sharing locations on the internet. While research staff have been able to identify IP addresses associated with SCP-1229 uploads, these addresses have never been observed to correspond to an assigned, extant user. No known instances of SCP-1229 have been observed to have been transmitted via any type of television signal.

After extensive experimentation involving D-Class personnel, no

anomalous effects have been observed in association with viewings of SCP-1229.

Research Log-1229: *The following is a partial listing of SCP-1229 transmissions. In all cases, camera technology, filming techniques and appearance match a television production circa 1974. Evidence suggests, however, that these transmissions have been created over the past decade, and continue to be produced. All dialogue in transcripts is spoken by Ms. Neal unless otherwise noted:*

Instance	Date	Summary	Selected Transcript
SCP-1229-02	10/5/2002	Transmission consists of Ms. Neal standing in the Three Rivers Stadium broadcast booth in Pittsburgh, United States. The view behind her depicts an empty stadium. A graphic display on the screen reads "1974 NLCS - Los Angeles Dodgers vs. Pittsburgh Pirates". Ms. Neal speaks into a handheld microphone and faces the camera.	"Rattled? What a silly thing to be at this point. Clouds. Cloudy days are what's to be expected. No, I'm not here. I never was. At least that's how it is now. Still, it's a laugh, isn't it?"
SCP-1229-05	04/23/2004	Segment starts with a card bearing the title "Rats in the	"Norris Roberts. Age 11. Reported missing April

		Walls", followed by a short theme song typical of situation comedies from the 1970s. Credits are shown, however after the name "Lana Neal", production titles are shown with the names of responsible personnel left blank. Scene takes place in what appears to be a suburban, middle-class house. Ms. Neal reads from a sheet of paper, looking at a lamp in the scene.	23rd, 2002. Last known location: Elementary School, Township, Michigan. Last observed location: Mountains State Park. Flora Hudgens. Age 13. Reported missing April 23rd, 2000. Last known location: Lane, Keithsburg, Illinois. Last observed location: Boulevard, Gary, Indiana."[1]
SCP-1229-06	12/13/2004	This transmission consists entirely of documentary-style footage of *Haliphron atlanticus* (Seven-arm Octopus), with an accompanying voiceover by Ms. Neal. The footage mostly consists of the	"You asked before about how we like to do things. I couldn't say anything before, but it's different lately. I'm joking of course, nothing's different. But you. I like you. We can talk. It's all in how you approach the

		octopus moving through its habitat, with the exception of the end, in which it is depicted eating seaweed, behavior not observed in *H. atlanticus* specimens.	door. Sometimes it swings out. I don't know how it does that. Other times it's locked. That's when it hurts the most, when it's locked."
SCP-1229-12	08/9/2005	Video depicts a vacant house in a state of advanced disrepair. No furniture or other signs of habitation are present. Ms. Neal lies motionless in the foreground, apparently not breathing, for a time period of 18 minutes.	No immediately discernible dialogue. At the 4:34 mark, a distorted, low groaning sound can be heard, which lasts for approximately two minutes. When the audio track is sped up by approximately 250%, an unidentified male voice is heard saying the words "step inside".
SCP-1229-15	05/30/2007	Transmission depicts a polished wood conference table with several chairs. The background banner reads "Tonight: The World with James Sutton".	*Researcher's Note: Original dialogue is in Indonesian, and has been translated into English by staff.* "<What was that? What's wrong with the autopilot?>"

		Post-production graphics at the bottom of the screen read "Investments: Opportunities in the World Bond Market." Ms. Neal sits at one of the chairs, looking into the camera.	(*pause*) "<We've got a bank angle warning! 5000 meters and dropping! MDC, do you copy?>" (*pause*) "<We're breaking apart! Allah preserve us! Allah preserve us!>"[2]
SCP-1229-21	11/10/2010	Video depicts a game-show set consisting of several podiums and a raised dais, superficially resembling the set of *Match Game*. All score displays on the three podiums visible appear to read "2.4544 29.5684". Ms. Neal sits at the center podium and is looking at an unknown person or object off camera to her right.	"Who killed her?" (*sustained laughter*) "Who killed her? You can't be serious." (*sustained laughter*) "Of all people. Doesn't that make you just want to crawl into a vent and sleep? Who killed her?" (*sustained laughter*)
SCP-1229-29	03/19/2011	Footage consists of a kitchen counter with a gas range stove, along with	"All that's left. All of those little pieces of nothing, floating about until the

		assorted dishes, cooking implements and ingredients. Ms. Neal is attired in a white apron and speaks while preparing what is apparently a raspberry tart.	end. It isn't right that they float like that. How my woman's heart aches terribly at that. We have each other. We have nothing. Starlight isn't cold. They're wrong about that. It's not anything. Look at the sky with me. There's no truths there. Those are all buried. Down in the well. Don't tell anyone that you know, the water is just fine."
SCP-1229-37	12/16/2013	Transmission depicts Ms. Neal singing a song in French, accompanied by piano. Original transmission appears to be 5 minutes and 38 seconds in length; however, an additional 10 seconds of footage are present at the end in an alternate version	*Researcher's Note: Original song by Ms. Neal is in French, and has been translated into English by research staff.* "<No matter what's waiting/ When the future is ruins/ And the water's all gone/ Through the rain on the window/ No one sees no one/ Before

	recovered from the file-sharing service on 12/22/2013. To date, this is the only observed instance to manifest in multiple versions. **Additional documentation available through Site-28 research archives.**	night moves us on/ But I'll remember you/ Yes I'll remember you>"

Footnotes

1. This dialogue continues in similar fashion for 24 minutes. In each case, references to missing persons are accurate; however, investigation of "last observed locations" by Foundation staff have turned up no evidence corresponding to referenced cases. In each instance, the missing persons case is still unresolved.
2. This dialogue is believed to relate to the crash of Adam Air Flight 574 off the coast of Sulawesi on January 1, 2007. However, the dialogue does not match official transcripts released after the recovery of the plane's cockpit voice recorder.

« SCP-1228 | SCP-1229 | SCP-1230 »

SCP-1230: A Hero is Born

Item #: SCP-1230

Object Class: Safe

Special Containment Procedures: SCP-1230 is to be kept in a secure storage locker at Site-12. Access requires minimum Clearance 2 with authorization and supervision by Clearance 3 research and security staff respectively. Supervising personnel are not to view SCP-1230's contents. Personnel accessing SCP-1230 are required to submit written accounts of dreams experienced within 48 hours of access. (See Addendum-1230-A) SCP-1230 has been relocated to a secure storage locker behind the desk of Site-12's main library. Access is available to Clearance 2 personnel deemed to be in satisfactory psychological condition by site psychiatric staff. Personnel accessing SCP-1230 must submit written accounts of their dreams within 48 hours of access and submit to follow-up psychological examination.

Description: SCP-1230 is an unlabeled, green hardcover book with no apparent exceptional qualities. When SCP-1230 is opened, it displays the phrase “A hero is born” on the first page viewed, while all other pages will be blank, "resetting" once the book is closed. This has no obvious effects at first, but upon falling asleep, the reader will dream of a fantasy world where they are the protagonist of a troubled land. Dreamers are completely aware and all senses work just as well as when awake. Results vary depending on the imagination of the reader and are mostly attuned to fantasies of adventure that the reader would enjoy. In the mind of the reader, these dreams have been documented to last anywhere from 45 seconds (see Experiment 1230-3) to 200 years (see Experiment 1230-5) but in reality, the reader will usually never be asleep longer than they would normally. Upon awaking, the reader is able to remember every aspect of their dream in detail. In SCP-1230-induced dreams, there is always a character called the “Book

Keeper" (SCP-1230-1) appearing as a bearded man in a green cloak who claims to be the personification of SCP-1230 himself. SCP-1230-1 has been reported to be very amicable and helpful towards dreamers. It has stated that it enjoys creating these "fantasy-scapes" and always tries to shape them in such a way that the dreamer garners the most entertainment out of it. It has expressed sorrow when the dream comes to an end and asks the dreamer to "please visit again soon".

Discovery: In a small bookstore located [DATA EXPUNGED] the shopkeeper had no recollection of owning the unlabeled book but attempted to sell a story to local newspapers about a "magical dream book". The Foundation was able to dispel the story as a hoax and SCP-1230 was confiscated.

Experiment-1230-01: Dr. F , in an attempt to test its effective range, opened SCP-1230 and boarded a flight to his hometown of [REDACTED] where he spent the night at a hotel. Upon his return, Dr. F reported that SCP-1230-1 appeared in his dreams and explained that once you read 'A hero is born', the dream is immediately implanted in your subconscious, after which SCP-1230-1 is able to manipulate it remotely. Dr. F expressed his appreciation for SCP-1230-1's cooperation.

Experiment-1230-02: A camera was set-up above SCP-1230 and, using a mechanical "arm", the book was opened. All pages were revealed to be blank. It seems SCP-1230 is only effective when opened by beings that are able to have dreams. SCP-1230-1 explained to a subsequent dreamer that it is actually only able to affect beings "with an imagination" and that most creatures such as animals would not be affected.

Experiment-1230-03: One (1) D-class was instructed to open the book and (after much reassurance that his experiences would only be dreams) ordered to immediately find a way to kill himself in the dream. The subject was asleep for merely 45 seconds before he awoke with a start in a nervous sweat. He reported being at the summit of a volcano called "The Ashen Spire" on a quest for "Caladius, the Blessed Blade". When asked how the subject knew the names, he stated, "It's like I knew them all along". He apparently leapt into the volcano and "felt an intense heat" before awakening.

D-class requested permission to "give it another go". Request was denied.

Experiment-1230-04: One (1) D-class was instructed to open the book and attempt to non-fatally injure himself in his dream. After 6 hours, the D-class awoke and reported that he was able to feel a “numbed” sort of pain where it was never so intense as to be unbearable. He also reported meeting an elderly, cloaked man who asked him why he was harming himself, but thanked him for not immediately killing himself “like that other rude fellow”.

Experiment-1230-05: Professor B filed a request for access to SCP-1230 and was quickly permitted, given his Level 4 clearance. Staff members recalled that Professor B was almost “visibly shaking with excitement” and some reported that Professor B was an avid fan of tabletop and role-playing games. Surveillance shows that Professor B opened the book, read the phrase, sat down beside the desk and promptly fell asleep. Staff members were alarmed when Professor B did not awake after 15 hours and alerted security. The on-site medical staff were able to confirm that Professor B was still alive and in good health. After approximately 24 hours since falling asleep, Professor B began to move, reported to have "slowly raised his head and looked around the room, appearing deeply confused". Security entered the room to ensure he was alright, to which he replied, “Where am I?”. He was sent to Medical where staff explained where and who he was. Several minutes later, Professor B appeared to have regained his memory and excused himself to the restroom. When 15 minutes passed and Professor B had not exited, a nurse entered to find he had hung himself with his belt. A scribbled message on the wall revealed his last words: “I can’t go back to this”. Dr. F went to ask SCP-1230-1 what had happened, but upon opening SCP-1230, all its pages were soaking wet with the same message on every page: “I’m so sorry. I never intended for this to happen. I just wanted to make people happy.” repeated over and over. SCP-1230 remained in this state for three weeks and its desk had to be wiped dry biweekly. In an attempt to communicate, Dr. F placed a sticky note inside SCP-1230 with the statement, “I’d like to talk to you, if that’s alright”. The next morning, Dr. F filed a report about a dream he had concerning SCP-1230-1.

+ Report-1230-14

Upon falling asleep last night, I dreamt I was in a dark void. There was a streetlamp and underneath it was SCP-1230-1 sitting in a puddle. His cloak was visibly soaked and he was sobbing profusely. I remember our conversation:

Dr. F : Book Keeper? Is that you? My god, man, where are we?

Book Keeper: *(between sobs)* I… couldn't think of anything to make for a landscape.

Dr. F **:** Book Keeper… what happened that day? Why did Professor B kill himself? We have to know your side of the story.

Book Keeper: *(wiping his eyes)* He had such an active imagination! I was able to create a vast and beautiful universe for him and it was obvious that he had wanted a life like that for so long. He conquered foul beasts and rescued princesses… He built kingdoms and even raised a family… but he never wanted to leave. He delved so far into his fantasy world that I soon realized he preferred his dream over the real world. I reminded him that this was all merely an illusion, but he wouldn't listen to me. He stated that if he was ever forced to leave, he would immediately end his life. I tried to keep him happy for as long as I could…

Dr. F **:** …Book Keeper… how long was the dream from his point of view?

Book Keeper: …200 years, Doctor. I did my best but I could only hold onto him for 200 years. As sweet as dreams may be, eventually

we all have to wake up.

I awoke almost immediately after. I can't believe he spent 200 years in his dream. I'm astounded by his foolishness but it's such a shame to have lost a brilliant mind to his own delusions.

Shortly after the report was filed, surveillance showed Dr. F slipping another small paper into SCP-1230. A few days later, SCP-1230 began showing its usual "A hero is born" greeting once again. When asked what the note said, Dr. F declined to give detailed comment, simply stating that he "just gave it some friendly advice".

Addendum-1230-A: During initial testing, SCP-1230-1 asked dreaming personnel if it could be relocated to an area with many books (preferably fiction) so that it could think of even better ways to construct its "fantasy-scapes". After numerous experiments were performed to ensure that SCP-1230 posed no threat, the request was accepted and SCP-1230 has been relocated to Site-12's library.

« SCP-1229 | SCP-1230 | SCP-1231 »

SCP-1231: The Theoretical Family

Item #: SCP-1231

Object Class: Euclid

Special Containment Procedures: SCP-1231 is contained in an unlit vault, dimensions 0.6 m x 0.8 m x 0.2 m, located in Site-20. Guards are posted outside of the vault, denying access to all personnel without direct and confirmed Level 5 authorization. A video camera is installed in the vault, taking a live feed of SCP-1231.[1] This video is in turn fed through a specially designed program, displaying only the number of thumbnails and if there is a significant error. Access to the raw feed is strictly prohibited. A mouse is located near the terminal, but remains disconnected under normal circumstances. New personnel assigned to SCP-1231 must be hand-picked specifically for testing purposes. However, testing is currently suspended.

Description: SCP-1231 is a black Amiga A1200 computer manufactured by Commodore International, missing all other identifying marks including its serial number. It runs independently despite the lack of a power source. SCP-1231 does not function as an Amiga A1200 should and generally only displays a screen full of thumbnails, named the "Primary Screen." SCP-1231 cannot be shifted from its current settings, and as of yet no other programs have been discovered on the computer. External attachments, such as mice and keyboards work normally.

The Primary Screen contains 4104 thumbnails, organized in rows of twenty (20) ascending numerically.[2] A scrollbar is located on the right side of the screen.[3] The thumbnails display extremely low-resolution moving pictures. There is no audio Most videos do not contain audio; however, despite the lack of speakers on SCP-1231, sometimes low-decibel sounds can be heard.

Clicking on a thumbnail causes the video displayed to increase in

resolution and fill nearly the entire screen, except for a thin white bar on the top bearing the number of the thumbnail. Clicking a second time returns the screen to the Primary Screen. The videos are Beta-Gimmel infohazards. What is consistent in every video is the featuring of one of three unidentified subjects, known as SCP-1231-1, -2, and -3. SCP-1231-1 appears to be a tall middle-aged Caucasian man.[4] SCP-1231-2 is a younger, shorter Asian woman[5] SCP-1231-3 is a light-colored child, approximately four years of age.[6] The videos are not in a time loop, although the same action is done repeatedly in the videos with only minor deviation.

The misconception of one of the videos in SCP-1231 by any human causes a new thumbnail and video to be created, with the erring conception displayed.[7] No more than one new thumbnail can be created per minute. However, there are 4104 videos currently due to the bleeding of knowledge pertaining to an infohazard. Direct observation of SCP-1231 is not necessary for this effect to take place and simple knowledge of the videos can lead to speculations that create new thumbnails and videos.

Excerpts from Document 1231-A: Thumbnail Descriptions

> **Thumbnail 1:** The only video present at recovery. SCP-1231-1, -2, and -3 appear [DATA EXPUNGED]
>
> **Thumbnail 2:** The setting is the same room as Thumbnail 1. Discovered on the second test of SCP-1231. Believed to have been created after exposure to Thumbnail 1. SCP-1231-2 is scooping an unknown powder with her left hand while SCP-1231-3 is asleep in her right arm. SCP-1231-1 is not on the screen.
>
> **Thumbnail 3:** The setting is the same room as Thumbnail 1. Discovered on the second test of SCP-1231. Believed to have been created after exposure to Thumbnail 1. SCP-1231-2 is asleep, while SCP-1231-3 is crawling over her. SCP-1231-1's leg is present in the upper right of the screen, although the rest of his body seems to be just outside of view.
>
> **Thumbnail 4:** The setting is the same room as

Thumbnail 1. Discovered on the second test of SCP-1231. Believed to have been created after exposure to Thumbnail 1. SCP-1231-3 is mauling the pectoralis minor of SCP-1231-2. SCP-1231-1's mutilated right leg and pelvic region is located in the upper right portion of the screen.

Thumbnail 39: The setting is the same room as Thumbnail 18. Discovered on the second test of SCP-1231. Believed to have been created after exposure to Thumbnail 24. SCP-1231-1 is dislocating and relocating SCP-1231-2's shoulder with his right hand, though both are standing erect. SCP-1231-3 is asleep in the upper left of the screen.

Thumbnail 902: The setting is the same room as Thumbnail 600. Discovered on the second test of SCP-1231. Believed to have been created after exposure to Thumbnail 419. SCP-1231-1 is lying on top of SCP-1231-2, smashing SCP-1231-3 on the floor. SCP-1231-2 is completely motionless.

Thumbnail 1170: The setting is the same room as Thumbnail 1053. Discovered on the second test of SCP-1231. Believed to have been created after exposure to Thumbnail 1004. SCP-1231-1 and SCP-1231-2 are kneeling facing the camera, drenched in blood, crying and mouthing non-discernible words. What appears to be the mutilated corpse of SCP-1231-3 is lying in front of SCP-1231-2. A low-pitched laughter is audible throughout.

Addendum-01: *Due to the high level of similarity between SCP-1231 and other encountered "soultraps," it has been deemed likely that the entities SCP-1231-1, -2, and -3 are real in some capacity. In light of this, I am formally requesting that testing on this object be halted.* -Researcher , Ethics Committee

Addendum-02: *Testing on SCP-1231 has been suspended indefinitely. The majority of personnel assigned to SCP-1231 will be administered a Class B amnesiac and transferred to a new project.* -O5-

What is the suffering of a few in the face of Science? Pain is all relative, as is eternity. We've done far worse. I'm sure we have.

Addendum-03: *Processed video feeds of SCP-1231 have shown that the number of thumbnails is increasing despite the suppression of knowledge relating to SCP-1231. Something's wrong.* -Dr.

Footnotes
1. Note that no external light source is necessary due to SCP-1231 providing ~20 lux.
2. Dr. theorizes that this also corresponds to their age, as newer thumbnails are given later numbers.
3. More detailed analysis of the layout of the Primary Screen of SCP-1231 is located in Document 1231-B.
4. No more consistent detail is discernible.
5. Note that in later videos, the descriptions of SCP-1231-1, -2, and -3 vary significantly.
6. SCP-1231-3 is theorized to be the child of SCP-1231-1 and -2 due to the similar characteristics it displays.
7. For example, if a subject were to believe that a video was of something that it is not, a new video would be created displaying the aforementioned scenario.

« SCP-1230 | SCP-1231 | SCP-1232 »

SCP-1232: Novosadov Syndrome

Item #: SCP-1232

Object Class: Safe

Special Containment Procedures: Samples of SCP-1232 are to be kept in cryogenic storage on Bio-Research Site-21. While experimentation upon SCP-1232 is permitted, experimental proposals need to be validated by a researcher of valid 2/1232 clearance beforehand due to limited supply
As of 12.03.1963, a process was devised to replicate SCP-1232 with reasonable efficiency (See Document 1232-Rho); as such, experimental proposals only require validation if it would be ordinarily required by the SCP Foundation Requisition Guidelines, sections C 1-7 and H 1-5. - Dr. Mihnea, Section Head
As the time required for a majority of SCP-1232 testing greatly exceeds one month, D-class personnel involved in testing of SCP-1232 is exempt from monthly termination by default.
Due to resistance of SCP-1232 to high temperatures, any items suspected of SCP-1232 contamination must be decontaminated by immersion in 1 molar NaOH solution, and subsequent heating in a gravity-displacement autoclave to 121 degrees Celsius for 30 minutes, followed by sterilization as usual. (See Document 1232-Sigma for a complete list of approved procedures where the stated is not appropriate)
Personnel manipulating SCP-1232 samples are to use Level-A hazardous materials protective clothing manufactured to standards outlined in Document 1232-Sigma.

As instances of SCP-1232-1 in the first stage are difficult to separate from the general population, the recommended means of identification of such is working through those related to known SCP-1232-1 instances, assuming the most common symptom progression. In this stage, the removal of reproductive organs seems to halt the progress of the condition, and the residual

symptoms are susceptible to treatment by most tricyclic antidepressants.

Instances of SCP-1232-1 in the second stage are essentially untreatable due to the extent of disruption to physiologic processes taking place, furthermore, even if treated, their reintroduction to society would be problematic. As such, they are to be euthanised, or left to expire on their own, and cremated.

Description: SCP-1232 is the designation given to a mixture of unknown proteins capable of causing a condition designated Novosadov Syndrome. The mechanism upon which it relies is poorly understood at the moment.

SCP-1232 is the designation given to a mixture of misfolded variants of [REDACTED] proteins (prions), capable of causing a condition designated Novosadov Syndrome. The precise mechanism of action is unknown - administration of isolated constituent prions, or partial mixtures to human subjects had no discernible effects, or caused conditions only weakly related to the syndrome's symptoms.

SCP-1232 does not denature easily by heat treatment alone, and can withstand temperatures of up to 230 degrees Celsius for roughly fifteen seconds - heating with basic agents, preferably NaOH, KOH or Ca(OH)2 of normality at least 1 has been shown effective.

Novosadov syndrome is a progressively developing condition caused by the introduction of a sufficient quantity of SCP-1232 into human body - a dose of approximately 50 micrograms administered intravenously appears sufficient to cause the condition in 50% of tested D-class subjects.

The onset of the condition can be split into two phases.
During the **first phase**, which sets on approximately 1-3 weeks after the introduction of SCP-1232 into the subject's body, the subject (designated SCP-1232-1) will become increasingly perfunctory and depressed. Subjective assessment along with supporting evidence (e.g., penile plethysmography data) show a significant decrease in ability to feel sexual arousal. Of interest is that the appetite tends to stay unchanged in a disproportionate amount of cases compared to a control group where depression was induced chemically, and

SCP-1232-1 during this phase have a tendency to gain weight, usually 10-15 kg over the duration. At this stage, no obvious physiologic changes are present[1] in males. In females, [REDACTED] instead of fluid. This phase tends to last between 6-8 months.

The **second phase** onset is marked by a sudden loss of appetite, elevated body temperature, insomnia, and increased secretion of androgens. During the onset, SCP-1232-1 report a subjective improvement to their demeanor. Significant quantities of SCP-1232 are present in urine, and possibly other body fluids of SCP-1232-1 at this point. In addition, the menstrual cycle of female subjects is disrupted, with a large number of eggs beginning to mature, and the uterine lining thickening. In approximately 3% of the subjects, this results in acute endometriosis.

Usually within the next five days, the libido of SCP-1232-1 will return and proceed to increase, becoming the defining trait of their behaviour, in the case of male instances of SCP-1232-1, overwhelming even their survival instinct towards the end of the period.[2] Instances of both genders will aggressively attempt to mate with any suitable human, often settling for animals or inanimate objects if none are available. Male subjects tend to expire after a further 2-4 days due to a combination of exhaustion from lack of sleep and nutrition, and the collapse of the immune system caused by excessive testosterone levels.
Female SCP-1232-1 can be separated into three groups. Those in which fertilization occurs late or not at all tend to expire due to the same reasons as male subjects.

If fertilization occurs early, the androgen levels tend to drop, and SCP-1232-1's behavior will slowly normalize over the following days. The subsequent progress depends on the number of fertilized ovocytes surviving. The ovocytes nest and appear to undergo development accelerated roughly three times compared to regular embryos. In ~95% subjects, the amount of surviving ovocytes exceeds 20, and the subject likely expires during the first month of such pregnancy due to resulting complications. In the remaining 5% of subjects, the pregnancy progresses at the accelerated rate until the end of second month where the placentae [DATA EXPUNGED]

sacs. Continuing to raise such feti in vitro is possible and once outside the mother's body, their growth rate will slowly decrease to match that of feti in the same development stage. Infants raised this way show no significant difference to control group.

Recovery Log: SCP-1232 was first isolated from the bodily fluids of private V.I. Novosadov on / /1954, several months after he, along with a group of Soviet soldiers participated in the decommissioning of a then-discovered underground facility located in the territory German Democratic Republic[3]. Private Novosadov was executed following his desertion, capture, and subsequent admission to 37 cases of rape and sodomy, perpetrated in the village of , Polish People's Republic, in the vicinity of a Soviet military base, over the course of two weeks. Agent Golovanov[4], by the time infiltrated within the Soviet army as a telegraphist, has managed to capture a coded depeche ordering the prompt incineration of Private Novosadov's remains, and was able to obtain tissue samples and a copy of the autopsy report. The events following this are unclear due to Agent Golovanov's death (See Personnel File 1934-135-13-IPG), however, it is known that all of Novosadov's surviving victims disappeared approximately two months after his execution.

Addendum 1232-1: COPY OF MESSAGE INTERCEPTED BY SOVIET AGENTS ON / /1944

> DATE: / /1944
> TO: Dr. ter Meer
> FROM: Dr. Meiziger
> Fritz, I need you to talk about our project to at the ministry again. I got shouted at by Berger again yesterday - apparently they are expecting them to leap out of their mother's twat and grab a shovel or a rifle, while we haven't even fixed the slowdown, the rest of the troubles be damned. Hell, even if we get it to work, a fourfold increase is the most I can get - I said it's a long-term solution, not miracle work we're doing here. Besides, despite the [REDACTED], yesterday's bombing raid means half our supplies are in the devil's arse, and what's worse, Klaus was overseeing [REDACTED], and you know a good half of the synthesis process was his

work alone. Anyways, write how will it go and send my greetings to Ilsa, she still works at [REDACTED] , not so?. As soon as we push the red swine out back again, and I'll be able to take a few days off, I'll jump on a train and come.
Gott mit uns.
Martin

Footnotes
1. Towards the end of this stage, approximately 22% of SCP-1232-1 will release SCP-1232 through sweating.
2. SCP-1232-1 can transmit SCP-1232 via sexual intercourse - this tends to occur successfully in approximately 25% cases under laboratory conditions
3. At the time, Foundation agents were unable to determine the precise location or contents of the facility. Data obtained since indicates it was emptied and demolished by agents of GRU Division "P" on / /1955, and that the facility has formerly belonged to the Bayer pharmaceutic concern, at the time a part of IG Farben conglomerate. (See Addendum 1232-1)
4. Posthumously awarded Foundation Gold Star for his services

« SCP-1231 | SCP-1232 | **SCP-1233** »

SCP-1234: An Abandoned Bakery

Item #: SCP-1234

Object Class: Keter

Special Containment Procedures: Ownership of the building housing SCP-1234, designated Site 602, is currently held by a Foundation front company. All other former tenants of Site 602 have been evicted. The Foundation is to liaise with local government and business interests to prevent any attempts to purchase, redevelop, or condemn Site 602. Plainclothes security personnel are to monitor SCP-1234 when inactive to prevent unauthorized access.

Electronic monitoring equipment is to be installed in SCP-1234 and throughout Site 602. Whenever monitoring indicates that an SCP-1234 event is imminent, all Foundation personnel are to evacuate Site 602. A Foundation front company, Southside Commissary Products, is to make a delivery to SCP-1234 within 6 hours containing at least 50 kg each of all-purpose white flour and vegetable shortening, as well as 200-400 kg of any other available products approved as per Document 1234-746-C.

Following conclusion of an SCP-1234 event, Foundation personnel may reenter Site 602. All instances of SCP-1234-1 are to be identified and removed for study and disposal. All monitoring equipment is to be examined and replaced as necessary following confirmation that SCP-1234 has been fully secured. Concurrent to reentry, Southside Commissary Products shall canvas all purveyors of baked goods within a 5 km radius of SCP-1234 and confiscate any uncontained instances of SCP-1234-1.

In the event that a delivery is not made by the time SCP-1234 enters active phase, mass distribution of amnestics to the civilian population is authorized, and Procedure Queen-of-Hearts may be enacted, as necessary, at O5 discretion.

Description: SCP-1234 is the former premises of "Schmidt's Swiss Pastries", a bakery and tea room that operated in Chicago, IL from 1947 to 2003. The interior of SCP-1234 remains fully furnished and possesses working electricity, hot and cold running water, and natural gas. SCP-1234's ovens and kitchen equipment remain fully functional, though appearing to be in a severe state of disrepair due to age and neglect. All attempts to remove or disconnect SCP-1234's kitchen equipment or utilities have been unsuccessful.

Under normal circumstances, SCP-1234 is inert. On an irregular basis, ranging from an observed minimum of 2 days to an observed maximum of 17 months, 12 days, SCP-1234 becomes active. Prior to becoming fully active, SCP-1234 exhibits a "warmup" period lasting from 12 to 36 hours. Phenomena indicating the onset of an SCP-1234 event include:

- Heavy electromagnetic fluctuations within a 100m radius of Site 602
- Interference and malfunctioning of monitoring equipment
- Electrical blackouts/brownouts on the city block Site 602 is located on
- Lights and electrical devices within SCP-1234 activating and deactivating spontaneously
- Unexplained disappearances of humans and animals within a 300m radius of Site 602
- [REDACTED]

SCP-1234 will become fully active within no more than 36 hours of the commencement of the warmup phase. To date, active phase has always initiated between the hours of 23:00 and 03:30 local time. Once fully active, SCP-1234's windows become fully opaque, all doors and windows become completely impenetrable, and all monitoring equipment located within SCP-1234 ceases to function. All attempts to enter SCP-1234 during an active phase have failed and no persons inside SCP-1234 when an active phase commences have been found alive at its conclusion.

Active phase has been documented to last from 4-10 hours, but will always conclude by 09:00 local time. Upon conclusion of active phase, the shelves, counters, tables, and display cases of SCP-1234 will have been stocked with approximately 200-500

freshly baked, shortbread-crust pies designated SCP-1234-1. All instances of SCP-1234-1 measure 22.8 cm in diameter and weigh approximately 0.75 kg each. Pies produced by SCP-1234 will make use of any biological ingredients provided to it, whether living or not at time of event, including fruits and vegetables, non-edible plants, insects, fish, poultry, red meat, and human beings. SCP-1234 will not, however, make use of any ingredients that are spoiled, stale, or are of unsatisfactory condition for use in baking. Instances of SCP-1234-1 will not be recycled into new instances when a new event begins. All instances of SCP-1234-1 are, at time of discovery, cooled to room temperature, contained in a disposable aluminum pie plate, and covered with a transparent plastic lid. Aside from the means by which they are produced, SCP-1234-1 bear no anomalous properties and may be eaten safely providing that the ingredients used in its manufacture are safe to eat.

On 17 occasions since observation began, instances of SCP-1234-1 have been found outside SCP-1234 following conclusion of active phase. On all such occasions, the pies were found on the shelves of supermarkets, convenience stores, and other food vendors within a 5km radius of SCP-1234, and had been labeled with a UPC readable by the vendor's point-of-sale system. No determination has been made as to how the pies were transported from SCP-1234 to the locations where they were found.

If there is not a sufficient supply of ingredients available within SCP-1234 when active phase commences, SCP-1234 will consume ingredients stored outside itself. Flour, shortening, and other biological matter is relocated into SCP-1234, beginning with the closest matter available and being attracted from an increasingly greater distance until the necessary amount of ingredients has been acquired. The means by which material is acquired or transported into SCP-1234 is unknown; due to the population density of the area in which SCP-1234 is located, no uncontained events have been allowed to occur since containment began.

Foundation containment of SCP-1234 began in 2006, following several reports of dozens of persons and animals disappearing within the downtown Chicago area. Local police traced the disappearances to the neighborhood in which SCP-1234 is located.

Upon noticing an unusual scent emanating from the abandoned storefront now identified as SCP-1234, police breached the front door and discovered approximately 7,300 instances of SCP-1234-1 within, many of which were several months old and had spoiled. When police attempts to determine the identity of the persons responsible reached a dead end, a police liaison contacted the Foundation, which assumed jurisdiction and, following an additional event which resulted in several more disappearances, placed SCP-1234 under containment. Interviews with persons who worked at SCP-1234 prior to 2003, and with the previous owners of Site 602, stated that the cause of its closing abruptly in April of that year was not known to them and that they had never observed any unusual or anomalous events occurring within the property prior to 2006.

« **SCP-1233** | SCP-1234 | SCP-1235 »

SCP-1235: Atlas Microcosm

Item #: SCP-1235

Object Class: Euclid

Special Containment Procedures: SCP-1235 currently occupies a laboratory desk in Examination Room 3, which has been converted into a containment cell. SCP-1235 should be kept under high-resolution video surveillance and any developments catalogued. Any expansion of the Austrian installations around SCP-1235 or other macroscopic activity should be considered a breach attempt in progress and the area locked down immediately.

In the event of a breach attempt by one or more international actors within SCP-1235, all ventilation systems throughout Site-25 are to be shut down. During a breach event SCP-1235 should be considered a chemical, biological and as of Containment Breach 1235-3 radiological hazard.

SCP-1235-1 is to be kept in secure storage when not in use.

Description: SCP-1235 is a large illustrated German-language atlas of the world (*Andrees Allgemeiner Handatlas*). The title page claims the atlas to have been printed by Velhagen & Klasing in 1903 as the 3rd revision of the 1899 4th edition; the publisher has no record of this printing.

Initial recovery indicated that pages handle normally and otherwise appear non-anomalous. Under microscopic analysis, however, details such as state names, city locations, and shading for discrete political entities fail to appear. Instead, at higher magnifications the atlas depicts a photorealistic satellite view of the magnified area.

SCP-1235-1 is a brass achromatic microscope outwardly consistent with equipment contemporary to SCP-1235's stated date of publication and stamped with the legend 'ADLERAUGE MCMVII'. Its

internal workings, however, are highly complex and constitute an innovative method of magnification that relies on superposition of light via a microscopically perforated baffle. The construction of this baffle is beyond known manufacturing methods at the time of SCP-1235-1's ostensible construction. In normal operation SCP-1235-1's maximum magnification is approximately 1,000X - when viewing SCP-1235, however, its instrumentation permits far greater increases in magnification. No upper limit has been established on SCP-1235-1's magnification while viewing SCP-1235 - under experimental conditions it has proven capable of excellent clarity at over 300,000,000X magnification.

Analysis of SCP-1235 using SCP-1235-1 indicates that SCP-1235 represents a microcosm: nations within SCP-1235 are composed of apparently sentient beings at a scale of approximately 1:25,512,400. A typical microcosmic individual is approximately 700 angstroms tall and as far as can be ascertained is composed of microcosmic particles on a similar scale to their non-anomalous counterparts. When SCP-1235 is opened to any given page, time begins to pass at a highly accelerated rate (approximately 1:300) in the world it portrays, beginning from the atlas' supposed date of publication (1903). Closing and re-opening the page resets the world within SCP-1235 to 01/03/1903; the inhabitants of SCP-1235 seem to retain awareness through this reset, and have made several attempts to prevent further interference, culminating in Incident 1235-01.

Although microcosmic events chronologically prior to 01/03/1903 apparently proceeded historically, significant diversions from historicity have been noted following extended observation. Shortly after recovery, SCP-1235 was left open to pages 7-8 - a full-page spread of Atlantic Ocean trading routes - for 7 days. During this time, geopolitical/geosocial disturbances were observed throughout the area covered by the map. It appears that, as soon as time begins to pass within SCP-1235, its inhabitants become aware of macrocosmic reality — though it is uncertain to what extent they are able to resolve images from macrocosmic light and thus accurately perceive the nature of the wider world.

The rapid rise to hegemony in Europe and Africa of a federated

Austro-Hungarian state - possibly predicated on the proposal for a 'United States of Austria' floated in macrocosmic history by Aurel Popovici - seems to be a common and inevitable outcome of iterations of the microcosmos viewed via Pages 7-8. Experimentation on other pages has been suspended following Incident 1235-01 and subsequent breach attempts.

Several attempts have been made to contact contemporaneous Foundation assets in Britain and the United States through microstenography - microdots measuring under 1nm were dropped onto unpopulated areas of Canada and African wilderness under British control. Thus far it is unclear whether these objects have been correctly interpreted - the hostile nature of the Central European powers makes close observation increasingly difficult. If communication with a microcosmic Foundation is established, the fate of Site- in the western United States (not depicted on the map) is to be determined as a priority; containment breach of a microcosmic version of SCP- constitutes a possible XK-class event and it is not at all clear that this would be confined to the microcosmos. Until its status can be ascertained, attempts to neutralise SCP-1235 via removal of light sources or destruction of part or all of the atlas cannot be countenanced.

Recovery Log 1235

SCP-1235 and SCP-1235-1 were recovered from the Cambridge offices of Dr Arnold , a Bavarian-born historian and known cartographic enthusiast who had been previously used as a consultant by Sector-30 in matters relating to SCP- . The whereabouts of Dr are currently unknown and he has since been reported missing. A hastily written note was found near the objects; handwriting analysis indicates this to have been penned by Dr . The note, translated from German, reads 'both quality and detail are incredible'. It is uncertain whether this missive refers to SCP-1235, SCP-1235-1, or both.

Incident 1235-01

On / /20 SCP-1235's object class was upgraded to Euclid following unprecedented activity by microcosmic state actors in the third week of sustained observation. The Austrian Empire, supported

by German and possibly Belgian and Romanian allies, launched a significant fleet of vessels into macrocosmic space, apparently powered by glucose harvested from dust falling onto SCP-1235. Professor was attacked by a number of these objects, which used several milligrams of high explosive to destroy his eardrum - it appears their intent was to enter his brain and cause life-threatening damage; fortunately the Austrian forces appear to have underestimated the extent of this explosion in the confined space of Professor 's ear, disabling the portion of the fleet assigned to the attack. The remainder of the force, however, was successful in rapidly constructing makeshift clamps from surrounding material to prevent further manipulation of the pages of SCP-1235. Examination Room 3 was designated a high-priority containment area and sealed off from the surrounding facility. The central European alliance has since reinforced their beachhead with pressurised habitat domes and artillery emplacements based around the clamps, which have been progressively strengthened.

Several attempts have since been made at resetting Pages 7-8 or closing SCP-1235; in each case this has resulted in an increasingly lethal counterattack by forces from the microcosmos, usually attempting to breach containment or attack researchers assigned to SCP-1235. During Containment Breach -03 it became evident that at least the Austrian state has developed atomic weaponry: though these devices are generally less hazardous to personnel than previous attempts by various state actors to modify macrocosmic viruses, SCP-1235 military assets have proved highly capable of targetting these weapons towards eyes, eardrums and other sensory apparata where they are able to do damage on a macroscopic scale. En masse, they have also been successful in breaching Chemturion suits. The americium pellet in Examination Room 3's smoke alarm has also been seized, apparently in the belief that this mass will be fissionable via microcosmic explosives. The increasing sophistication and hostility of agents within SCP-1235 is a matter of extreme concern to sector management; reclassification to Keter-class is pending.

« SCP-1234 | SCP-1235 | SCP-1236 »

SCP-1236: Four Paintings

Item #: SCP-1236

Object Class: Safe

Special Containment Procedures: SCP-1236 1 to 4 are to be draped with black, light-blocking fabric and kept in locked cases when not being studied. These cases may be stored in the same storage area. The locks securing each case will be individually keyed. Upon removal from the case, any of SCP-1236 1 to 4 will be placed upon a floor-mounted easel, still draped in the black fabric. Only when the set-up team is safely behind the paintings, will the black fabric covers be pulled back to reveal the images painted upon the canvas.

Description: SCP-1236 is a series of 4 paintings, labeled SCP-1236 1 through 4. Each is 100cm high by 75cm wide and are framed with plain, black wooden frames. They are painted in a style reminiscent of Keith Haring, though signed on the back with the name “Serl”. When viewed through a remote viewing device such as a monitor camera, by way of a mirror, through a sheet of glass, or a recorded image such as video footage or still picture, the images feature a colored background with a differently colored figure in the center of the image. The figure is humanoid in shape, with no physical features other than head, arm, leg and torso outlines, as is typical of Haring’s work.

When viewed directly, however, each image takes on a specific characteristic, depending upon the viewer. The original image is not visible to the viewer, and instead an alternative image is seen.

Following investigation into 4 staff suicides and multiple emotional/ social problems reported to staff psychologists, non D-class personnel are barred from directly viewing any of the SCP-1236 set of paintings.

SCP-1236-1: This canvas will show a full-length portrait of a person who is the viewer's ideal of physical perfection, based upon sexual orientation. This is not an image of any real person, but is a representation of every desire and subconscious drive brought together in a single individual. This individual represents the ultimate in physical and sexual attractiveness to the viewer. This impression works down to the mental/personality level, with the viewer being able to describe in vivid detail aspects of the portrait's personality and character traits that will make him/her even more attractive to the viewer.

SCP-1236-2: This canvas will show an image of the viewer him-or-herself as a physically perfect specimen. They view themselves as the ultimate in attractiveness and desirability. Regardless of actual appearance, and how extreme the change to become "perfect", the viewer will still recognize him-or-herself as the subject of the image. Again, this works to the personality level, any personality flaws are removed and more desirable traits included.

SCP-1236-3: This canvas features a portrait of the viewer's current or most recent significant other. This image, much like the previous two, projects an image of physical and mental perfection. The viewer sees their significant other rendered in the most physically and mentally appealing manner possible. Any actual imperfections are eliminated and the subject is seen in the "absolutely best possible light".

SCP-1236-4: This canvas reveals another portrait of the viewer, but in this case, in the "worst possible light". Each imperfection is magnified and character flaws are obvious and horrendous. Upon seeing this image, the viewer is given the impression that he/she is a horribly repulsive person and that there is no way any person could ever be attracted to him/her.

Addendum 1236-A
All four of the paintings were found in August, [REDACTED] in an art gallery in New York City.
When interviewed, the owner of the gallery could not recall where he had acquired them, but had 6 paintings in the series. He only displayed them for part of a day and reported that they made people "very uncomfortable". The owner, who wears glasses due to severe

myopia, reported taking the paintings off display, but not before selling two of them to an unnamed buyer for several thousand dollars each. The remaining paintings were transferred to the Foundation, but no gallery records exist to show who may have purchased the other two paintings in the series. The owner of the gallery reported having taken the information of the individual who purchased the paintings, but that the information had somehow been deleted from his database, along with all other information related to the six paintings.

« SCP-1235 | SCP-1236 | SCP-1237 »

SCP-1237: The Epsilon Wave

Item #: SCP-1237

Object Class: Keter

Special Containment Procedures: Due to its pandemic and incorporeal nature, SCP-1237 cannot be contained in a traditional sense. Containment of SCP-1237 at this time shall be focused on information management and on identification and containment of SCP-1237-1-positive individuals.

Any non-Foundation scientific research which could lead to discovery of SCP-1237 is to be suppressed by any means necessary. Conscription of researchers involved in such studies, as Foundation personnel or as D-class, is authorized.

The Foundation is to sponsor efforts wherever and whenever possible to promote widespread DNA testing of civilians for the purpose of identifying SCP-1237-1-positives, including but not limited to mandatory testing of sex offenders and other convicted offenders, DNA testing as prerequisites for employment or insurance eligibility, DNA fingerprinting as a means of identification, universal prenatal screenings, and "home DNA testing kits" ostensibly for the purpose of determining a person's ancestry. All Foundation personnel, and any civilian who is allowed to know of the Foundation's existence, must be tested immediately.

Information is to be disseminated in the medical community to the effect that an SCP-1237-1-positive result in a prenatal screening is evidence of a deformative condition with low viability and extreme health risk to the mother, and doctors are advised to recommend that such pregnancies be terminated. If a known SCP-1237-1-positive pregnancy is not voluntarily aborted, induction of involuntary abortion is authorized.

The Foundation is to sponsor any and all organizations or charities

providing prenatal screening and abortion services, whether legal or not, in developing countries where these services do not exist. If these efforts are unsuccessful, sponsorship of organizations participating in campaigns of involuntary sterilization, ethnic cleansing, or genocide is authorized against populations with statistically high rates of SCP-1237-1.

Any person presenting at hospital or police, or otherwise identified as having experienced an SCP-1237 event, is to be detained for study and testing. If the individual is SCP-1237-1-negative they are to be debriefed, administered a Class-B amnestic, and released.

Any person found to be SCP-1237-1-positive, or to have caused an SCP-1237 incident, is to be detained immediately for study and debriefing. After debriefing they are to be administered a Class-Ω amnestic and detained indefinitely. Positives are to be regularly dosed with Class-C amnestics to prevent any development of new memories regarding the existence of the Foundation or any staff handling them, benzodiazepines to minimize slow-wave sleep, and [redacted] to prevent REM sleep and, during sleep, shall be monitored at all times by EEG. In the event that any positive enters an SCP-1237 state during observation they are to be terminated immediately.

If any SCP-1237-1-L is identified by the Foundation, authorization is granted to employ them once and only once to attempt to neutralize a Keter-class SCP object at the discretion of O5. After said attempt, whether successful or not, subject is to be terminated immediately.

If any high-profile person/s or public place/s is/are affected by an SCP-1237 event, the Foundation is authorized to take whatever steps necessary to prevent public knowledge of this change - up to and including termination or complete destruction of the person or place so affected.

Description: SCP-1237 is a state of electrical activity in the human brain (a "brain wave" in common terminology) observed in certain individuals during periods of extremely deep sleep. This state, informally dubbed "level 5 sleep" or "epsilon wave sleep", is profoundly difficult to awaken the subject from - prior to adoption of current containment protocols, experiments with loud noise, bright

lights, chemical injections, electrical stimulation, oxygen deprivation, physical injury and mutilation, and [REDACTED] all failed to arouse the subject. The ability to exhibit SCP-1237 is controlled by a gene designated SCP-1237-1. SCP-1237-1 is present in approximately 0. % of the total world population; however, this number is as high as 1. % among , , and ethnic groups. % of SCP-1237-1-positives experience at least one SCP-1237 event in their lives; % experience two or more. The majority of SCP-1237 events occur when the subject is in their late teens to early thirties.

Whereas SCP-1237-1-negative individuals do not exhibit REM activity during the deepest stages of sleep, SCP-1237-1-positives do. Dreams experienced during an SCP-1237 event are not of a significantly different nature than dreams experienced by negatives; they may involve the dreamer participating in routine daily activities, find them in impossible or illogical situations where people they may or may not know behave uncharacteristically, or find them in scenarios most persons would find terrifying. As with ordinary dreams, the subject has no apparent control over the setting or events of the dream or their actions therein. When dreaming during an SCP-1237 state, however, the brain waves responsible for REM activity and SCP-1237 activity interact to produce a reality-altering effect.

After an SCP-1237 event occurs, any physical or mental changes that occur to the subject in the dream will occur to their waking form as well. If the dream involves persons or places that the subject has personally interacted with or visited, those persons and places will be altered as well in accordance with the nature of the dream. Imaginary persons or places, or persons or places not personally known by the subject, are not affected. Transformation is instantaneous in all cases that have been observed. In general, memories of people not involved in the dream are unaffected. People encountering persons affected by an SCP-1237 event will believe that the changes are "correct" and that the person has always been that way; however, they will have memories that this is not the case. Attempts to reconcile this among witnesses to an SCP-1237 event tend to result in chronic uneasiness, paranoia, and [REDACTED].

Documented effects of SCP-1237 events have included;

- Loss of limbs and organs, or spontaneous regeneration of limbs and organs previously lost.
- Complete and total changes in physical appearance, gender, personality, memories, age, or species.
- Acquisition of "superhuman" abilities including the ability to fly, lift extremely heavy objects, survive without oxygen, or see through solid objects.
- Significant changes in the architecture and floor plan of buildings, of the layout of city streets, or of the appearance, characteristics, or names of landmarks.
- Changes in the outcome of historical events the subject was involved in.
- Individuals returning to life several years after dying.
- The spontaneous transformation of national governments from one form to another - e.g., from a republic to a constitutional monarchy, or from a democratic confederation to an autocratic dictatorship
- [REDACTED]
- [REDACTED]

A very small percentage of SCP-1237-1 positives (believed to be in single digits worldwide), designated SCP-1237-1-L, are capable of "lucid dreaming" - the ability to control the nature of their dreams, including those occurring in SCP-1237 events. To date, only one SCP-1237-1-L has been identified by the Foundation (see Experiment Log T-98816-OC108/682 for details pertaining to its disposition.)

Addendum - Note from Sr. Researcher : It is of the utmost importance that all agents assigned to SCP-1237 containment understand exactly how dangerous this phenomenon can potentially become.

We have no idea how much of our world has been changed by these dreamers in the past. A single positive, having a single dream, has the potential to change the world for the worse. What if a mortician watches a scary movie, then falls asleep and dreams their town is part of a zombie apocalypse? What if a globetrotter dreams about the end of the world? What if someone aware of our existence

dreams of a world where there's no such thing as the Foundation? We're talking CK, maybe even XK-level events here. As it stands right now, we don't even know how many of these people are out there that we haven't found.

For this reason, I want to stress that any means necessary to implement universal DNA testing, and to remove these people from the gene pool, is authorized, and that there is absolutely no margin of error for "mercy". When you became part of this organization, you understood that we sometimes have to do horrible things in the name of the greater good, things that make it hard to sleep at night. I must ask you to do those horrible things, and to continue doing those horrible things for as long as it takes to neutralize this threat, because it only takes one positive who *can* sleep at night to create a world where the rest of us will never wake up again.

« SCP-1236 | SCP-1237 | SCP-1238 »

Experiment Log T-98816-OC108/682

Test Log T-98816-OC108/682

Cross-SCP Termination Testing for SCP-682

Due to the highly aggressive, adaptive, and intelligent nature of SCP-682, termination testing has been ordered, with clearance from O5 Command. With major concerns raised about possible developed immunities (due to the failure of SCP-409) and possible adaptations, all tests must first be carried out on tissue samples taken from SCP-682. This step may be bypassed only by O5 Command order.

Item: `SCP-689`

Tissue Test Record:
Overridden by O5-Command

Termination Test Record:
SCP-682 exposed to SCP-689. Lights shut off in containment area. Lights remain extinguished for 5 minutes. Lights are switched on. SCP-689 remains in its original position. SCP-682 is in a pool of grey and black liquid, with no observable life signs. D-Class issued to physically verify SCP-682 termination, with two Agents supervising. D-Class enters three steps into the containment area when SCP-682 rapidly rises and attacks D-Class personnel. SCP-682 breaks containment and escapes, killing one Agent in the process. Remaining Agent killed by SCP-689 due to accidental observation during testing.

Notes: It appears that SCP-682 is not "alive" in a way that is currently understood, or is immune to SCP-689. In addition, it appears SCP-682 has prior knowledge of SCP-689, or was somehow able to understand its function in order to "play possum" and escape.

Item: `SCP-017`

Tissue Test Record:
Sample “swallowed” by SCP-017 without incident.

Termination Test Record:
SCP-682 exposed to SCP-017. SCP-682 issues several sounds at extremely high volume, damaging several recording devices. Sound extends across several wavelengths, reported as “the most god-awful roar” by staff. SCP-017 appears to stumble, then return to a far corner of the containment area. SCP-682 attempts to break containment of both SCP-682 and SCP-017. SCP-682 suppressed by Agents, and removed. SCP-682 states, “You foul bags of tissue; you don’t [DATA EXPUNGED]”

Notes: It is unclear if SCP-682 somehow damaged SCP-017, or communicated with it. Analysis of the recorded sound is ongoing.

Item: `SCP-162`

Tissue Test Record:
Sample entangled without incident

Termination Test Record:
SCP-682 exposed to SCP-162. SCP-682 begins thrashing violently, emitting several roaring sounds and issuing profanity directed at testing staff. SCP-682 becomes entangled with SCP-162, primarily in the lower body, head, and left forelimb. Entangled areas undergo massive trauma due to SCP-682 thrashing. After four minutes of continued exposure, SCP-682 lunges away from SCP-162, severing its lower jaw and left hind limb, and causing serious tissue damage to many areas of its body. SCP-162 remains attached to the left forelimb of SCP-682. SCP-682 breaks containment, using SCP-162 against several Agents, staff, and researchers, resulting in eleven deaths and eighty-six injuries. Forelimb and SCP-162 removed from SCP-682 during re-establishment of containment. Two additional deaths occurred during the recontainment of SCP-162.

Note: General has requested that Mr. Noaqiyeum and the

members of staff involved with the approval of this test report to Site Command for a disciplinary hearing.

Item: SCP-061

Tissue Test Record:
Overridden by O5-Command

Termination Test Record:
SCP-682 exposed to SCP-061. SCP-682 enters the “relaxed” state consistent with SCP-061 exposure. SCP-682 is given the command “lie down”. SCP-682 remains unresponsive. Command repeated twice before SCP-682 lowers itself to the ground. Movements noted to be very sluggish and jerky. SCP-682 given the command “roll onto your back”. SCP-682 unresponsive. Command repeated three times. SCP-682 shudders several times, partially rolling over before returning to former position. Command repeated six times. SCP-682 appears to undergo a violent seizure, partially rising before collapsing to the floor. SCP-682 given the command “stand up”. SCP-682 rapidly rises and breaches containment. SCP-682 ignores all commands given to it. Several Agents and staff respond to re-establish containment. SCP-682 emits a high-pitch “screech”. All human beings in a fifteen-meter radius suddenly enter the “relaxed” state consistent with SCP-061 exposure. SCP-682 consumes several members of staff before being recontained by specially-equipped Emergency Response Teams. “Sonic Stun” adaptation lost from SCP-682 after two weeks.

Note: Study into how SCP-682 integrated SCP-061 into its biology is ongoing.

Item: SCP-053

Tissue Test Record:
N/A, overridden by O5-Command

Termination Test Record:
SCP-682 introduced to SCP-053 containment area. SCP-682 appears to be very confused, and shows no sign of being affected

by SCP-053. SCP-053 appears to be afraid of SCP-682, and hides behind a chair in her containment area. SCP-682 lowers itself to the ground, resting its head on the floor. SCP-053 approaches SCP-682, and after several seconds of hesitation, briefly touches SCP-682 before rapidly returning to her hiding place. SCP-682 does not react in any way. SCP-053 approaches SCP-682 and pats its head, causing it to exhale through its forward nostrils. SCP-053 claps and hops in place several times before embracing the head of SCP-682. For the remainder of the testing period, SCP-682 appears to be in a very docile state, with only two low-level escape attempts being made. SCP-053 is observed to bring toys and other items to SCP-682, and makes several drawings on its forward carapace with crayons.

Staff entering at the end of the test phase are immediately attacked by SCP-682, resulting in two deaths and five injuries. SCP-682 contained and moved to separate containment unit. SCP-053 observed crying for several minutes after SCP-682 is removed.

Notes: The reaction of SCP-682 is notable for several reasons. First, it is one of the few incidents where SCP-682 has come in contact with biological tissue and not entered a "rage" state. Second, it has raised questions as to the physical make-up and composition of SCP-053, in regards to the lack of response of SCP-682. Third, it has provided a possible solution to long-term containment. However, approval for the mutual containment of two highly dangerous SCP items in a single containment unit is not likely.

Item: **SCP-123**

Tissue Test Record:
Tissue sample absorbed by the core.

Termination Test Record:
Test canceled after review of testing done between SCP-162 and SCP-682. The potential issues arising from SCP-682 gaining control of SCP-123 are too great at this time. Review of this proposal will be made if SCP-682 is totally incapacitated by some means, with no potential of escape or sudden adaptation.

Item: SCP-173

Tissue Test Record:
N/A, overridden by O5-Command

Termination Test Record:
SCP-682 introduced into the containment area of SCP-173. SCP-682 makes several screeching noises, and quickly presses against the wall farthest from SCP-173, staring at it the entire time. SCP-682 continues to stare at SCP-173 without pause for six hours. Agents equipped with large-caliber sniper rifles dispatched, and shoot out the eyes of SCP-682, at the same time stopping all observation of SCP-173 and SCP-682.

After resuming observation, SCP-682 is shown to be on the floor, with several injuries around its head, neck and legs. SCP-173 is seen to have tissue from SCP-682 on its “hands”. SCP-682 rapidly regenerates damage, and moves to a different wall, developing several sets of eyes on various parts of its body, many covered by thick, clear “caps” of armored carapace. SCP-682 maintains observation of SCP-173 for an additional twelve hours, despite additional efforts of Agents and Foundation staff. SCP-682 allowed to exit containment area, and recaptured in temporary containment.

Notes: After review, it appears SCP-173 was unable to do lethal damage to SCP-682 due to a major difference in physical size. A possible repeat of this test may be made if SCP-682 is damaged enough to reduce its physical mass to a level equal with SCP-173.

Item: Dr. Clef

Tissue Test Record:
N/A

Termination Test Record:
SCP-682 introduced to testing area. Dr. Clef introduced to testing area. Dr. Clef and SCP-682 stare at each other for approximately three minutes. Dr. Clef slowly backs out of the testing area as SCP-682 continues to stare. Dr. Clef attempts to open door of testing area. Door of testing area determined to be locked. Dr. Clef

reportedly uses several loud expletives, and then attaches an unknown device to the door, keeping his eyes on SCP-682 the whole time. SCP-682 continues to stare. Dr. Clef detonates a small plastic explosive charge on the door, causing a containment breach. SCP-682 continues to stare. Dr. Clef engages emergency secondary lockdown doors and declares a partial containment situation. SCP-682 does not react. Dr. Clef proceeds to experiment observation center.

Two minutes later, SCP-682 somehow kills Dr. , the project head, by broken neck caused by blunt force trauma against the control panel, despite remaining in the testing area.

Notes: This is the official story and we're sticking to it. The alternative, that someone tried to murder Dr. Clef by deliberately putting him in the same room as SCP-682, is completely inconceivable. O5-7

Notes: Seriously? I mean… seriously? Drop it out of an aircraft and let it fall… who in the [DATA EXPUNGED]

Item: One ordinary human child

Tissue Test Record:
N/A

Termination Test Record:
Child began to scream and cry when SCP-682 was introduced into the cell. Subject was immediately and messily devoured by SCP-682.

Notes: Okay, so that didn't work so well. Maybe the fact that the kid

was crying made 682 perceive it as hostile intent… Guest Researcher Dr. W

Item: One ordinary human child, drugged to cancel extreme emotional reaction

Tissue Test Record:
N/A

Termination Test Record:
Child stood and smiled, giggling at SCP-682 with no sign of fear. SCP-682 devoured the subject messily.

Notes: Hmmm… maybe we can try that again. I'm sure somewhere out there there's a kid who'll make friends with it like SCP-053 did… Guest Researcher Dr. W

Item: Guest Researcher Dr. W

Tissue Test Record:
N/A

Termination Test Record:
Subject screamed in terror and pounded on the door to the test facility, begging to be let out. SCP-682 devoured it messily three minutes after being introduced.

Notes: Fucking sadistic asshole. I've got no sympathy for that moron whatsoever. Introducing children to this fucking monster? What the hell… Assistant Director Clef

---

Item: W cutting laser

Tissue Test Record:
Tissue sample was successfully bisected 13 times before adopting a mirrored finish.

Termination Test Record:
After multiple attempts, the main body of SCP-682 was successfully

bisected into parts that were equal in mass at T+7:13 hours. Dead scraps were removed from the room while the two halves (subsequently designated SCP-682-A and SCP-682-B) regenerated. After the recovery period, SCP-682-A and -B appeared to survey the area and evaluate each other, presumably in anticipation of attack. Surface fluctuations indicative of internal modification were noted, but all external changes occurred and disappeared far too quickly to be adequately described. High-energy bioluminescent organs on the face, spine, and forelimbs were observed as well on both specimens, usually forming, pulsing, and disappearing again over the course of a few seconds.

At T+35:42 hours, SCP-682-A and -B simultaneously collapsed on the floor and all vital signs ceased, remaining in this state for the following 48 hours. At T+84 hours, the laser was used again in an attempt to cut SCP-682-A and -B into more manageable pieces, leading to minor structural damage to the room as the laser beam reflected off their skin. As both -A and -B remained immobile despite the increased potential for escape, two D-class personnel were released into the room. Immediately upon their entry, [DATA EXPUNGED].

Technical failure of the observation equipment and test chamber breach was detected from outside, activating Safety Protocol T-98816-OC108/682-N147. Containment was successfully reestablished at the cost of security personnel, D-class personnel, and researchers, including Doctors [DATA EXPUNGED]. The majority of the testing area was considered unsalvageable and demolished for later reconstruction. Experiment supervisor Dr. was found unconscious and in critical condition outside the observation chamber (see medical logs for . / /); medical staff succeeded in sufficiently reviving him to be debriefed by Agent , whereupon he was harshly reprimanded and [DATA EXPUNGED].

Note: Only one SCP-682 was found in the locked-down area surrounding the wreckage, apparently at near-full mass rather than the expected 50% (scattered tissues within the facility account for the missing mass). Dr. 's testimony indicates that SCP-682-A and -B exhibited a high degree of coordination following the security

breach, but that once SCP-682-B became heavily damaged by security personnel, it was immediately devoured and reabsorbed by 682-A. Total loss of one of the SCP-682 specimens is considered highly improbable, and searches have been called to a halt. Agent

Note: Much as our department would love to know whether SCP-682 retained a single consciousness during its dissection, or whether the two counterparts were actually able to cooperate until the stalemate was ended by external forces, for practical purposes we do not under any circumstances advise trying that again. - Dr. Noaqiyeum

---

Item: 60 MT thermonuclear bomb

Tissue Test Record:
N/A

Termination Test Record:
Testing denied by O5-

Notes: One would think that putting SCP-682 in the epicenter of an explosion that can cause third-degree burns at a distance of 300 km is a good idea, but as long as there are odds of survival we simply cannot go through with it. Yes, it's a goddamn nuke, but if 682 survives and adapts we'd be boned beyond belief. O5-

---

Item: **SCP-914**

Tissue Test Record:
[DATA EXPUNGED]

Termination Test Record:
[DATA EXPUNGED] of "Fine" or "Very Fine" is no longer to be used by any personnel having contact with SCP-682 at any point. In addition, any objects that have come in contact with SCP-682 at any point are not allowed to be processed by SCP-914. Any attempt to subvert this directive [DATA EXPUNGED].

Notes: SCP-682 is too large to fit in to the booths, in most forms. In addition, the tissue tests have shown that SCP-682 has… unpredictable reactions to SCP-914. Finally, SCP-914 is too valuable a research tool, and too delicate, for this type of test. It was nearly damaged after the incident (CN: 682-119857), and [DATA EXPUNGED] be repeated. Should the results be recovered [DATA EXPUNGED].

Notes: Does this really surprise anyone, given what 914 does to normal organics? - Dr. G

Item: **SCP-826**, equipped with one (1) copy of "The Generally Nice, Friendly Thing That Can And Will Kill SCP-682 Permanently if it So Much As Spots That Damn Lizard", a 12-page short story written by Dr. , detailing a large, friendly monster that is stated to be capable of permanently killing SCP-682, and 1 (one) D-Class personnel (D-682-32) equipped with 1 (one) 2010 Ducati Multistrada motorcycle for the purpose of evading SCP-682.

Tissue Test Record:
N/A

Termination Test Record:
Story is put between SCP-826, and placed into large, empty room m X m X m in dimension, with a remotely operated doorway large enough to send SCP-682 through. SCP-682 is brought in front of the entryway securely. Once researchers clear the area, door is remotely opened, exposing a green pasture similar to the one described in the story. SCP-682 is reluctant to go through, so D-682-32 is sent through as bait. 682 follows through doorway, whereupon the doorway closes behind them. 30 minutes later, SCP-682 bursts back through the door it was sent through, somewhat worse for wear, killing researchers and agents in the process. Recovery personnel describe the story's pasture as having become a "Battleground", featuring impact craters with enormous body parts scattered around. Parts are thought to be from the story's "Thing". Recovered story is retitled "The Generally Nice, Friendly Thing That Tried To Kill SCP-682 Permanently But Failed", and is noticeably thicker, with 209 individual pages that detail an epic battle between the two monsters.

Additional attempts to coax SCP-682 into SCP-826 have been met with non-compliance on SCP-682's part.

Item: SCP-743

Tissue Test Record:
Sample consumed without incident.

Termination Test Record:
Mobile container with SCP-743 was transported to testing chamber, into which SCP-682 was released from primary containment. SCP-743's container was opened remotely. SCP-743 observed resting; SCP-682 appears to ignore SCP-743. After minutes, SCP-743 started flowing; SCP-682 appeared to notice within seconds. SCP-682 cautiously approached SCP-743 and tasted its flowing liquid. SCP-682 started to lap up the liquid from SCP-743. After sec, SCP-682 grasped SCP-743 with its forelimbs and started pouring the liquid straight from SCP-743 into its mouth. SCP-682 drank for minutes, at times [DATA EXPUNGED] on its back. SCP-743 stopped flowing and started feeding. SCP-682 tried to fight off ant swarm, but was soon covered. Swarm started to feed on SCP-682, who stopped moving.

 minutes later, after SCP-682 had been reduced to 79% of its original mass, SCP-682 opened its mouth and stuck out its tongue. SCP-682's tongue had become 5 m long and sticky, like an anteater's tongue. SCP-682 started to lap up ants off of itself with its tongue, eating thousands of ants at once. SCP-682 and SCP-743 continued to feed off of each other for hours until testing was terminated. SCP-682 displayed faster-than-normal regeneration for days afterward. Adapted tongue remained for days.

Note: SCP-743 treated SCP-682 as organic, but that's hardly conclusive proof. More significant is the question of whether consuming 743's liquid contributed to 682's heightened regenerative abilities. If, as suspected, it did, 743 and 682 need to stay far, far away from each other. —Dr. Lambert

---

Item: SCP-063

Tissue Test Record:
Sample eradicated. No traces above molecular level remain.

Termination Test Record:
SCP-063 was refitted to the end of a rotatory arm, which was deployed into 682's enclosure. Initial approach proves partially successful, with SCP-682 losing more than 20% body weight before regeneration overtakes the destruction process. Newly regrown tissues are not vulnerable to SCP-063's eradication effect: 682 destroys the deployment arm and 063 digs a hole through the enclosure's ground, where it is later recovered. 682 succeeds in extending a long prehensile limb through the hole and maiming two security personnel before containment is reestablished.

Hypothesis: 682 is not bound to base Earth biological chemistry and can adapt itself to be 'organic' or 'inorganic' as necessary. Some of the boys on the lab are arguing whether we can even classify it as 'living', at least as we understand life. This worries me, because an unliving, undying intelligent monster… well, that's where you start getting sacrifices in your name. — Dr. Zara

---

Item: **SCP-807**

Tissue Test Record:
N/A

Termination Test Record:
A "682 special" (10 kg of rotten meat and sharpened bone splinters, 10 L of rancid mayonnaise, 1 L potassium cyanide, and 1 kg morphine hydrochloride, combined into a solid mass then transmuted via SCP-807) was dumped into the testing room.

SCP-682 devoured "special", then began loudly demanding more. Nine minutes later, SCP-682 collapsed.

After forty-five minutes of observation, SCP-682 had not moved. Two D-Class personnel in anti-807 environment suits were sent in to verify that SCP-682 was in fact terminated; D-class were equipped with further "specials" in case SCP-682 required further distracting.

"Specials" were placed on ground in front of SCP-682's head; in response, SCP-682 opened its eyes and began gnawing weakly on nearest "special".

D-Class personnel began touching SCP-682, believing that it had been rendered harmless; at this point, SCP-682's skin ruptured in at least eleven locations, releasing ultra-high-pressure (estimated 2.7 MPascals) jets of blood in all directions. Contact with SCP-682's blood breached the integrity of the anti-807 environment suits, and both D-class personnel were contaminated.

D-Class personnel began [DATA EXPUNGED]; by the time SCP-682 had finished consuming the second "special", its skin had healed over and both D-class personnel had terminated. SCP-682 then devoured the third "special" with the same speed and enthusiasm as it had devoured the first.

Item: SCP-662

Tissue Test Record:
N/A

Termination Test Record:
Mr. Deeds is summoned, and asked if he can destroy SCP-682 permanently.

Mr. Deeds' response: "I'm terribly sorry, sir, I'm afraid I can't."

Mr. Deeds is asked if he can kill SCP-682.

Mr. Deeds' response: "Again, sir, I'm terribly sorry, but I'm afraid I can't."

Mr. Deeds is asked if he can incapacitate SCP-682.

Mr. Deeds' response: "As a matter of fact… depending on how sir means the word 'incapacitate', and depending on how long sir wishes the creature to *be* incapacitated… yes."

Mr. Deeds is asked to expand on how he would perform such an action.

Mr. Deeds' response: "Sir, the simplest and quickest method — which I must point out would not be the most efficient — would be for me to offer myself up for the creature to devour me; certainly its offensive capacities would be lessened whilst it is occupied in consuming my flesh. This would be simplest as it requires no preparation on my part, sir, but I'm certain you'll understand that the overall effect on the creature would be insignificant. Were I to engage the creature in combat, either with or without weapons, I could certainly occupy its attention and offensive capacities for a longer interval; unfortunately, I'm afraid the creature would eventually defeat me, at which point it would begin consuming my flesh as I have previously described. However, I could certainly booby-trap my person with a variety of noxious substances - soporifics, perhaps, or explosives, or perhaps encapsulated neurotoxins, or even [REDACTED], so that when the creature *does* inevitably consume me, it sustains further damage. That said, sir, I must remind you that the creature's tendency towards regeneration means that any damage I inflict would be sadly temporary."

Mr. Deeds is thanked and dismissed.

Note: Mr. Deeds' knowledge of [REDACTED] is not to be considered a security breach.

Item: SCP-738

Tissue Test Record:
N/A

Termination Test Record:

Researcher sits in SCP-738-2, and asks "What would you want in exchange for permanently destroying the entity which we refer to as SCP-682 while leaving this planet, its biosphere, its human population, its human civilization, the SCP Foundation, and the rest of the universe intact?"

Entity takes form of the same entity as Test 203, states "Your Foundation couldn't afford it, and *you personally* **definitely** couldn't afford it," and does not respond further.

Item: SCP-272

Tissue Test Record:
N/A

Termination Test Record:

SCP-682 is released into enclosure amidst a circular array of thirty (30) two-thousand-watt (2,000W) stadium lights, of which only one (1) is switched on. SCP-272 is dropped onto SCP-682's shadow, and embeds itself in the reinforced concrete as expected. SCP-682 quickly discovers that it is trapped by SCP-272's presence in its shadow, and starts to attack SCP-272. SCP-682 then stops midway through its attack, examines 272 closely, bellows an incomprehensible string of words, and slowly backs away from 272.

All thirty stadium lights are then switched on and off in random stroboscopic "disco" pattern, at 4 Hz. SCP-682 is forcibly hurled around the enclosure in random directions, in accordance with the stroboscopic pattern, and sustains heavy damage.

After fifty-five (55) minutes of this process, >95% of SCP-682's epidermis has been abraded away, its anterior left limb has been severed, sixty-three (63) of its teeth have been broken out of its jaw, and its skull has been fractured to the point that both its eyeballs have been dislodged from their sockets. At this point, SCP-682's exposed sub-dermal tissue begins to luminesce. The luminescence rapidly increases until it is brighter than the stadium lights, which eliminates SCP-682's shadow entirely. SCP-682 then collapses, and is no longer affected by the stroboscopic pattern.

SCP-682 continues luminescing for forty-eight (48) hours, remaining immobile for the duration; D-class personnel who recovered SCP-272 from the enclosure were not attacked, but sustained permanent retinal damage from SCP-682's luminescence despite wearing eye shields. After 48 hours, SCP-682 resumes normal activity.

Note: How did 682 know not to attack 272? Did it recognize the artifact? Was it able to read the glyphs carved into 272's surface? If

682 is literate, is it vulnerable to textual memetic-kill agents? Suggested methods for a viability study are welcome.

Item: **SCP-343**

Tissue Test Record:
N/A

Termination Test Record:
See incident report ***682-TFTBS1***

Item: **SCP-963**

Tissue Test Record:
N/A

Termination Test Record:
See incident report ***682-WO2BTL***

Item: **SCP-702**

Tissue Test Record:
Tissue sample offered as trade item to SCP-702-1. 702-1 accepted, trading it for what appears to be a two-patty hamburger as commonly sold by the [REDACTED] franchise.

Termination Test Record:
SCP-682 is contained and offered as a trade item to SCP-702-1. 702-1 considers the tank for roughly 13 minutes before taking it. Item left in exchange is a metal cage, containing a specimen of *Psittacula krameri manillensis* (rose-ringed parakeet).

16 hours later, SCP-682 is returned to the chamber where the trading was effected, without its containment tank. SCP-702-1 is reluctant to divulge information regarding this event. Examination of debris regurgitated by 682 during the proceeding re-containment reveals fragments from a number of curious items, including [DATA EXPUNGED]. The parakeet is currently being kept at Dr. Quater's office.

Item: SCP-096

Tissue Test Record:
N/A

Termination Test Record:
Containment tank containing SCP-096 was placed in SCP-682's cell. Personnel vacated vicinity and the tank was opened remotely.

Screams of the two entities continue for twenty-seven (27) hours, at which point the noise abruptly stops. Sonar-based video feeds reveal SCP-096 severely "wounded" and huddled in the southwest corner, apparently upset. Feed shows SCP-682 on the north end of the room, approximately 85% of its initial mass absent. Re-containment teams retrieve both entities with relative ease.

Further attempts to expose SCP-096 to SCP-682 cause it to turn away from 682, jumping in place while clawing at its face and screaming.

Item: SCP-536

Tissue Test Record:
Tissue divided into samples and subject to the individual effects of SCP-536's dials. Notable results follow:

- Increase in *g*: Tissue restructures itself into neutron degenerate matter.
- Decrease in *e*: Tissue maintains loose integrity as a cloud of ions, regenerates upon reestablishment of normal laws of physics.
- Decrease in *Theta*: Tissue disintegrates.

Termination Test Record:
SCP-682's containment tank inserted into SCP-536. Speed of light, strong nuclear force and fundamental charge dials decreased progressively. 682's containment tank is nearly immediately destroyed, and 682's body begins disintegrating. Due to intense light and radiation, visual is lost. Free neutrons, pions, kaons and more

exotic mesons (described in [REDACTED]) are detected. 55s into the experiment, the primary detection equipment fails.
Upon bootup of the secondary detection equipment, dials are at minimum levels. 682 is again visible in the chamber, reduced to roughly 1% of its normal size. Analysis suggests 682 has reformed into a previously unknown form of matter, kept together by quantum effects.
Asst. Researcher becomes aggressive and turns the dials randomly and violently before being removed from the premises. 682 recovers its original shape upon restoration of standard physics.

Note: I don't blame him. I could swear, at one point, that thing looked like it was actually enjoying the experience.

Item: SCP-524

Tissue Test Record:
Sample consumed without incident

Termination Test Record:

SCP-524 and SCP-682 introduced into testing chamber. SCP-682 examines SCP-524 suspiciously, at which point SCP-524 begins gnawing on SCP-682's anterior right limb. SCP-682 jumps backward, bellowing. SCP-524 pursues SCP-682 for two minutes, at which point SCP-682 climbs four (4) meters up the wall of the testing chamber and is beyond SCP-524's reach. SCP-524 ceases pursuit and begins washing its face with its paws; it continues this activity for 15 minutes, during which time SCP-682 remains 4 meters up the wall and beyond SCP-524's reach.

SCP-524 then crosses to the other side of the test chamber and begins breaching containment. Test aborted.

Item: SCP-811

Tissue Test Record:
Sample consumed without incident.

Termination Test Record:
Direct exposure of SCP-811 to SCP-682 disallowed due to unreasonably high risk of specimen loss. Instead, mucus from SCP-811's palmoplantar surfaces is collected over a course of months, and then sprayed on SCP-682 with high-pressure hoses. SCP-682's body mass is reduced by 27% before the mucus reaches a complete bone covering of the remaining body mass, and is unable to decay it further.

Item: SCP-1237

Tissue Test Record:
N/A

Termination Test Record:
A deliberate containment breach was induced which an SCP-1237-1-L specimen was permitted to observe from a safe distance. Thirteen security personnel were killed before containment was re-established. Subject was dosed with to encourage REM sleep and onset of SCP-1237 and instructed to dream that SCP-682 was a small housecat with no special abilities, and that the security team had been able to destroy it easily.
7 seconds after onset of SCP-1237 event, subject began to seize violently. Subject was declared dead after 32 seconds. Autopsy discovered the subject's body covered with scratch and bite marks and infected with bubonic plague, toxoplasmosis, and subacute regional lymphadenitis ("cat scratch fever"). The bodies of the deceased security personnel displayed similar characteristics. A small housecat was found in SCP-682's containment chamber cleaning blood off of its coat; said cat regenerated into SCP-682 within 3 hours.

Item: SCP-1361

Tissue Test Record:
Sample consumed without incident. DNA markers from SCP-682 present in SCP-1361 sample afterward. Sample showed increased resistance to incineration.

Termination Test Record:
A secondary sample of SCP-1361 was allowed to grow to 1,000 kg in mass. SCP-682's containment chamber was purged of acid and SCP-1361 was poured onto SCP-682 from above. SCP-1361 covered and fully engulfed SCP-682 and no activity was observed for 3 hours. In the period from 3 to 7 hours following exposure, SCP-1361 began to develop legs, jaws, and a physical appearance similar to SCP-682. SCP-1361 breached containment and attacked Foundation staff in a manner consistent with an SCP-682 breach and killed 17 personnel. SCP-1361 proved immune to small arms fire in this state; aerial dispersal of napalm was necessary to destroy sample by incineration, after which a skeletal and circulatory system identical to SCP-682 was retrieved from its remains. Remains were returned to SCP-682's containment chamber, where they regenerated into SCP-682 within 6 hours. Subsequent tissue testing indicated that SCP-682 temporarily contained DNA markers from several species present in SCP-1361, as well as temporarily exhibiting a mild scent similar to pork rinds.

Item: SCP-1933

Tissue Test Record:
Sample immersed in 1 liter of bodily fluids from SCP-1933. Sample fully converted into Irish cream.

Termination Test Record: 200 liters of bodily fluids were collected from SCP-1933 over a 3-month period. Fluids were introduced into SCP-682's containment chamber in bulk.

SCP-682 begins consuming fluids rapidly, and manifesting apparent signs of intoxication far more rapidly than a human would after consuming an equivalent amount of Irish cream. This has been hypothesized to be the result of portions of SCP-682's anatomy being transsubstantiated into Irish cream; however, instead of dying, SCP-682 continues consuming the fluids. When it has finished consuming all the fluids, SCP-682 collapses on the floor, and begins loudly vocalizing while clawing spasmodically at its face and abdomen. After 5 minutes of this, SCP-682 begins vomiting up what appears to be the bodily fluids of SCP-1933, but in much larger quantities; as well, the floors and walls of the containment chamber

are instantly converted into Irish cream upon contact with the vomitus, resulting in structural failure and containment breach. Test aborted; remainder of vomitus incinerated. SCP-682 subsequently manifests no further signs of intoxication.

Item: **SCP-507**

Tissue Test Record:
N/A

Termination Test Record:
SCP-507 was physically attached to SCP-682's left forelimb with nylon zip ties while SCP-682 was inactive due to physical destruction incurred during an unrelated containment breach. Attending personnel continued to spray SCP-682's body, with the exception of the limb to which SCP-507 was attached, with hydrochloric acid provided via high-pressure hoses. After 7 hours and 52 minutes, SCP-507's anomalous properties activated and it and SCP-682 both disappeared.

SCP-507 remanifested in an unpopulated area adjacent to Site , approximately 8,000 kilometers away, 63 hours later, attached to an entity possessing large fangs and a pair of vestigial wings but otherwise identical to SCP-682, by nylon zip ties of a different color than the ones applied by containment personnel at the beginning of the test. A handwritten note was found pinned to SCP-507's chest, reading as follows;

> *Dear Universe 5802-Sigma-Blue-Romeo;*
>
> *It's your problem now, suckers.*

Item: **SCP-2599**

Tissue Test Record:
N/A

Termination Test Record:
SCP-2599 was ordered to attack SCP-682 "until it is 200% dead".

SCP-2599 proceeded to engage SCP-682 in combat for 42 minutes, at the end of which three of SCP-682's limbs had been severed, its thorax had been crushed, and both its eyeballs had been ruptured. SCP-2599 then seized SCP-682's head, apparently in preparation for pulling it off of SCP-682's body. In response, SCP-682 vocalized the phrase "KILL ME, YOU SACK OF ORGANS, DO IT."

SCP-2599 immediately released SCP-682, and stood unmoving until security personnel removed it from the testing chamber. Subsequent attempts to terminate SCP-682 before it could regenerate from its injuries were ineffective.

Note: It is hypothesized that the concrete "kill me" in some way took precedence over the more abstract "attack it until it is 200% dead".

Item: `SCP-513`

Tissue Test Record:
N/A

Termination Test Record:

<Begin Log>

<1/22/ , 1500> SCP-682 temporarily incapacitated via incineration and transferred to a video monitored soundproof containment chamber.

<1/22/ , 1600> SCP-513 introduced to room affixed to robotic arm.

<1/22/ , 1630> SCP-682 regenerates fully.

<1/22/ , 1635> SCP-513 is rung three times via robotic arm, after the first ring, SCP 682 howls and covers its 'ears' (due to the difference of anatomy and lack of visible ears, it can be safely assumed that the motion of covering the sides of its head accomplishes this).

<1/22/ , 1636> SCP-513 and robotic arm retracted from test chamber and returned to containment.

<1/22/ , 1640> SCP-682 uncovers its 'ears' and begins pacing the test chamber.

<1/23/ , 1640> SCP-682 continues pacing.

<1/24/ , 1640> SCP-682 continues pacing.

<1/25/ , 1640> SCP-682 continues pacing.

<1/26/ , 1640> Mass amounts of aerosolized sedatives and tranquilizers introduced to containment chamber via ventilation.

<1/26/ , 1645> SCP-682 loses consciousness.

<1/26/ , 1646> SCP-682 begins sleepwalking.

<1/26/ , 1647> SCP-682 breaches containment. Hallucinations of a pale, thin, large clawed entity resembling SCP-682 stalking the containment site were reportedly experienced by all present site personnel. Security footage shows no such entity on site. Due to mass hysteria, security teams were unable to reestablish containment of SCP-682 and are seen on footage firing repeatedly at walls before being dismembered by thin air.

<1/26/ , 1800> Mobile Task Force Eta-10 ("See No Evil") is deployed, equipped with HUD video enabled enclosed helmets. SCP-682 is located in SCP-513's containment cell, still unconscious, curled around SCP-513's gelatin containment cube.

<1/26/ , 1830> SCP-682 returned to containment and awoken via high pressure HCl spray. SCP-682 complains that it was having a 'such a lovely dream'.

<End Log>

Persistent monitoring and separate testing of both SCP-513 and SCP-682 since the experiment has shown no lasting effects on either object.

Post testing observation: Based on what appeared to be an initial adverse reaction from SCP-682, we don't know if the entity incorporated SCP-513 to itself, or if it worked the other way around. Either way, in light of the loss of 67% of site staff and 45% of site D-class, requesting that cognitohazardous item testing for SCP-682 be suspended until we understand just what the hell happened here. - Dr. Kerboros.

Approved, O5-4

Item: **SCP-2140**

Tissue Test Record:
N/A

Termination Test Record:

+ 4/BASILISK Clearance Required

On 03/13/2004 at 1100 hours the SCP-682 observation booth was cleared of all personnel without BASILISK certification, under the authority of Senior Agent Vanessa Rider. At 1115 an image of the **SCP-2140** glyph was projected onto the wall of the SCP-682 containment enclosure.

Foreword: Test T-98816-OC108/682-2140, Video Surveillance

<Begin Log, 03/13/2004>

[SCP-682 observes the glyph for 37 seconds and then turns toward the observation booth]

SCP-682: I haven't seen these since the time of [DATA EXPUNGED]. It won't work. Unlike you dancing shadows, my past was real and cannot be re-written, as much as I wish it were.

[SCP-682 paused and began scratching

something into the ground.]

SCP-682: I haven't forgotten what the [DATA EXPUNGED] looked like though, here let me sh-

[Observation booth personnel activated the emergency shutters, cut camera feeds and pumped soporifics into the chamber.]

<End Log>

Piecemeal analysis of the partial glyph drawn by SCP-682 indicates that while it was a 2140-1-D instance, it contained significant apparent errors that would likely prevent it from functioning.

Since SCP-682 hasn't deployed these glyphs in the past, it is likely not able to do so and does not pose an immediate ontological threat. It remains possible that it could rediscover the methods of SCP-2140-1 construction.

SCP-682 should be prevented from making marks, symbols, or writing of any kind.

Item: **SCP-2935**

Tissue Test Record:
N/A

Termination Test Record:
During exploration of SCP-2935, MTF E-13 discovered SCP-682 within temporary containment at Site-81. Upon further investigation, entity showed no signs of life.

Note: Due to the nature of SCP-2935, it is unlikely or impossible that this result can be replicated. This does, however, answer the question that other alternate realities have not been able to. What it means for ours is uncertain. -Dr. Harrison, Site-81

Item: Proposal to transport SCP-682 to an orbital asset, then activate SCP-1012.

Tissue Test Record:
Denied by O5-

Termination Test Record:
Testing denied by O5-

Notes: Once more, with feeling. There are three possible outcomes of this test. Case 1, it works. Case 2, you've just given 682 its own spacecraft. Case 3, the spacecraft isn't as insulated from Earth as we hope, and 1012 takes us out too. Denied.

Item: `SCP-2337`

Tissue Test Record:
SCP-2337 was informed that the SCP-682 tissue sample was a tone-deaf food critic who needed to hear a convincing argument as to which food item is the greatest in existence. After a 10-minute speech from SCP-2337 on the superiority of gummy worms, the tissue sample had been disintegrated from the resulting sonic shockwaves. SCP-2337 appeared highly pleased with itself.

Termination Test Record:
After being told that SCP-682 was a "prominent anti-gummy-worms extremist", SCP-2337 emulated the sound of a charge trumpet and entered SCP-682's chamber.

> <Begin Log>
>
> **SCP-2337:** Noble turkey stance! Fist of the eleventeen thousand war cushions! It are the cackening! Damn the tornados, siss boom cack!
>
> **SCP-682:** *Leave.*
>
> **SCP-2337:** Gooten idea-have. Cack!
>
> [SCP-2337 demolishes the Southern blast door to SCP-682's chamber with a vocal shockwave, then exits,

once again appearing highly pleased with itself. Containment breach of SCP-682 averted after minimal fatalities of containment staff.]

<End Log>

Item: **SCP-682** instance transplanted from alternate dimension

Tissue Test Record:
Denied by O5-

Termination Test Record:
Testing denied by O5-

Notes: A potentially permanent stalemate between instances would solve containment, however, transporting an instance to our dimension would be unnecessarily dangerous, not even to speak of containing another one, or the consequences of if they chose to co-operate. Denied.

Item: ●●|●●●●●|●●|●

Tissue Test Record:
Tissue taken without incident

Termination Test Record:
SCP-682 was restrained in chamber 145-B and the laser was introduced. Laser began cutting into SCP-682's back; command room emergency shutter was closed.

<Begin Log>

<9 seconds> **SCP-682:** What are you doing?

<13 seconds> *Laser begins carving infohazardous data onto SCP-682's hide, SCP-682 emits a loud roar*

<14 seconds> *command room emergency shutter closes*

<2 minutes, 4 seconds> *Laser finishes cutting*

<2 minutes, 6 seconds> ●●/●●●●●/●●/● *manifests*

<2 minutes, 12 seconds> *SCP-682 breaks restraints*

<2 minutes, 14 seconds> ●●/●●●●●/●●/● *latches onto SCP-682*

<2 minutes, 15 seconds> *SCP-682 begins vocalizing*

<2 minutes, 16 seconds> ●●/●●●●●/●●/● *demanifests, taking with it only the section of SCP-682's skin which was carved with infohazardous data. Test aborted.*

<End Log>

Item: Dr. Heikkila

Tissue Test Record:
Denied by O5-

Termination Test Record:
Testing denied by O5-

Notes: Dr. Heikkila is prohibited from interacting with SCP-682 in any possible way. Why he would even attempt to do so is beyond any logical reason. Dr. Heikkila has been detained for possible memetic contamination. Denied.

Item: **SCP-2305-A**

Tissue Test Record:
N/A

Termination Test Record:
An SCP-2305-A instance generated involving SCP-682, and has been transcribed here by order of O5- .

Item #: SCP-682

Object Class: Keter

Proposed Neutralization Method: OPERATION FAIL-SAFE-TANGA-34 would be enacted upon successful removal of approximately 90% of SCP-682's body mass, while incapacitated in a space shuttle that has been set to land on the Moon. OPERATION FAIL-SAFE-TANGA-34 consists of the following procedures:

1): 20,200,500,000 RDS-220 hydrogen bombs and 750 **SCP-2195-1** instances will be transported to the Moon, spread out across the surface. It will be detonated with 10 separate inputs at Site-19. Materials for bombs would be generated from **SCP-2400** and collected stillbirths for SCP-2195-1 instances.

2): 300 Tilda/Cimmerian Reality Vacuum Attachments have been attached in an hexagonal pattern on the Moon, with approximately 35 km of space between each one. TCRVAs will maintain the explosions occurring on the Moon to prevent any debris from hitting Earth.

3): Area-0-TANGA has been constructed 4,000 km into the Earth and currently houses a large spheroid approximately the size of the Moon, constructed from SCP-2400 materials. SCP-1056 will be used to lower the size of the spheroid for easier transportation.

4): Amnestics would be administered to approximately 80% of the human population after detonation through use of a modified **RED TALISMAN** algorithm to produce non-lethal cognitive hazardous amnestics. Amnestics will be applied to every source of common media, such as newspapers, television, billboards and several popular internet sites.

Result of Neutralization Attempt: Once the weakened SCP-682 arrived at the Moon's surface, all explosives were detonated. The TCRVAs successfully dampen most of the explosion, but 150 large meteorites still land on Earth. Spheroid was successfully transported to the

Moon's orbit field and grown to its original size. Amnestics were successfully administered to approximately 78% of the Human population. However, 0.03 milliliters of blood belonging to SCP-682 survived the termination attempt, and adapted from it. SCP-682 grows to approximately the size of Saturn, and proceeds to destroy and eat multiple planets within the Solar System.

"The moral of the story:" This is the way the world ends. Not with a bang, but a chomp. But for reals, don't fuck with the gecko. **>:(**

Item: **SCP-241**

NOTE: Further testing of SCP-241 was required to determine if its anomalous properties allowed it to be used against SCP-682. Skin tissue was removed from D-class personnel D-682-39, with the tissue then being wrapped around one end of a short steel rod. D-682-40 used the rod to open SCP-241, manipulating such that only the skin tissue touched SCP-241. SCP-241 displayed different recipes than when it was previously opened. D-682-40 prepared one of the recipes, which was then eaten by both D-682-39 and D-682-40. D-682-39 died of anaphylactic shock six minutes later, while D-682-40 showed no ill effects.

SCP-241 was deemed suitable for use against SCP-682.

Tissue Test Record:
N/A

Termination Test Record:
SCP-682 tissue sample was affixed to end of a steel rod, and the rod was used by D-682-40 to open SCP-241. SCP-241 showed different recipes than the previous time it was opened. Of the 99 recipes, three were in unknown languages, two were incomprehensible "word salad", and one was a memetic kill agent. Of the remaining 93 recipes, 100% had at least one instruction or ingredient which made it impossible to follow the recipe with complete faithfulness. Examples include:

- "Chill to -10,000F° before serving."
- "Garnish with antimatter parsley."
- "Marinate for 900 trillion years."

D-682-41 was tasked with cooking the 93 usable recipes, using SCP-241 plus a "correction sheet" (written by Dr.) which replaced impossible ingredients and instructions with the closest feasible analogue, with the results being delivered to SCP-682 containment cell upon completion. SCP-682 has shown no ill effects after having eaten all 93 meals.

Item: SCP-2578-D

NOTE: Test was conducted independent of the Foundation by SCP-2578-D. Secondary designation as a termination test has been given to Incident-2578-682-1.

Tissue Test Record:
N/A

Termination Test Record:
During a routine maintenance check of SCP-682's containment enclosure, SCP-682 sustained five cranial penetration wounds in rapid succession and remained unresponsive for a period of roughly 32 minutes. Upon recovery, SCP-682 yelled "FUCK YOU AND ALL THREE OF YOUR MOONS" toward the ceiling. Five minutes afterward, Dr. Naismith received the following instance of SCP-2578-B on his personal email account:

> [three-crescent symbol] has failed. [three-crescent symbol] is greatly embarrassed, and regrets the continued existence of your unpleasant lizard. Orders were orders. And for the record, [three-crescent symbol] didn't miss.

Item: SCP-2617

Tissue Test Record:
Not attacked by SCP-2617-A instance.

Termination Test Record:
SCP-682 was released in the abandoned village of , Russia via airlift, and proceeded to attack the village. Coordinates were set to correspond with SCP-682's position, thus generating up to , SCP-2617-A instances holding unique variants of SCP-2617-B. SCP-2617-A instances attack SCP-682, destroying up to 45% of its body mass.

Five hours after the beginning of termination test, SCP-682 released a series of radio waves. SCP-2617-C dissipated, and all SCP-2617-A and SCP-2617-B instances underwent spontaneous sublimation. Personnel supervising the termination test were also exposed to the radio waves. Interviews with these personnel suggest that they are unable to recognise the concept of Russia.

Item: SCP-169

Tissue Test Record:
Denied by O5-

Termination Test Record:
Denied by O5-

Notes:
No can do. I can understand how you might think that tracking down 169, then making it consume 682 would work, but it's survived and adapted to everything else we've tried. If it survives being eaten by 169, and, God forbid, grows as big as it, humanity would be screwed beyond belief. Denied.

Item: SCP-2722

Tissue Test Record:
N/A

Termination Test Record:
SCP-682 exposed to SCP-2722. The wielders of the ship were quickly secured by the use of the ship's lockdown measure, and are ordered to try and use any of the methods available to them in an

attempt to terminate 682. With the use of SCP-2722's reality bending ability, the ship is teleported to the - star system in the Andromeda Galaxy in the Local Group. SCP-2722's subatomic-destruction sphere is immediately fired at SCP-682, seemingly annihilating the subject, but it was shown to adapt and regenerate overtime. SCP-682 adapts its size in order to match SCP-2722's own, and suddenly attacks the ship at velocities too fast for SCP-2722's radars to detect, throwing the ship off the bounds of the star system and across the galaxy in seconds, with SCP-682 following quickly after. However, the forcefield around SCP-2722 withstands the attack. The wielders are instructed to try and fire 2722's grand wave motion cannon at the subject, which is immediately accomplished by the ship. The beam hits 682's shell and dashes past the galaxy, violently impacting against the constellation of Cassiopeia and reducing it to atomic bonds.

The remnants of SCP-682's body are instructed to be collected by OTF 7 ("Rama Repairmen") as the ship uses the ability of reality bending to return to the Earth. The termination is deemed a failure, as SCP-682 regenerated from the blast approximately [DATA REDACTED] hours later inside its cell.

Item: **SCP-939**- and **SCP-939**-

Tissue Test Record:
Not attacked by SCP-939- nor SCP-939-

Termination Test Record:
SCP-939- and SCP-939- both entered the containment cell for SCP-682. SCP-939- and SCP-939- were seemingly distressed and refused to attack SCP-682, while repeating a call for help. SCP-682 then attacked the two, devouring them after roughly and brutally mutilating the bodies of both subjects.

Notes: SCP-939 and SCP-682 don't match well. I guess we will not be using them anytime soon. Don't release the beasts again.

Item: **SCP-012**

Tissue Test Record:
Overridden by O5-Command

Termination Test Record:
SCP-682 was heavily sedated before SCP-012's container was lowered into SCP-682's containment cell. SCP-012's container was opened via remote-control. SCP-682 seemed to be under SCP-012's effects, as it began to claw at itself in an attempt to draw blood, which seemed ineffective. After several minutes, SCP-682's left forearm, back left leg, and approximately 32% of the mass of its main body had been removed before SCP-682 realized the composition could not be completed. SCP-682 then entered a rage state and breached containment, causing casualties before SCP-682 could be recontained.

Notes: I was really hoping we could get SCP-682 to commit suicide with this. -Dr.

Item: **SCP-173** with a photograph of **SCP-096** attached to it

Tissue Test Record:
N/A

Termination Test Record:
Denied by O5-

Notes: No. Absolutely not. Setting aside the problem of SCP-682, an SCP-173 that cannot be observed for fear of triggering a response from SCP-096 is a self-perpetuating catastrophe that the Foundation does not, under any reasonable circumstances, have the slightest desire to unleash. Denied with vehemence.

Item: **SCP-372**

Tissue Test Record:
N/A

Termination Test Record:
SCP-682 introduced to testing chamber under heavy sedation.

SCP-372 introduced to testing chamber. SCP-682 woke up and proceeded to wander the testing chamber, apparently confused. Approximately 10 minutes into the test, SCP-682 expressed sudden distress, implying it had become aware of SCP-372's presence. Exactly 5 minutes later deep lacerations and cuts appeared on SCP-682, eventually reducing 25% of its body mass. SCP-682 emitted loud distressed bellows and started to randomly attack the air in any direction, apparently trying to defend itself against SCP-372. Six minutes after, while still being attacked, SCP-682 is seen to make contact with SCP-372 via its tail, seeming to knock out SCP-372. SCP-682 proceeded to approach SCP-372, before being heavily sedated to prevent the likely loss of SCP-372.

Notes: Well, at least we know what that thing looks like now…

Item: SCP-1437

Tissue Test Record:
Tissue was dropped in without problem.

Termination Test Record:
SCP-682 was subdued and brought to Area- , which was the area SCP-1437 is at. When dropped down SCP-1437, SCP-682 did not come back up, assuming SCP-682 was presumed terminated. However, 2 hours and 12 minutes later, SCP-682 flew out of the hole at 60-80 kilometers per hour. Subject then started rampaging through the site. Mobile Task Force Nu-7 (Hammer Down), was called in to subdue SCP-682.

Notes: Whoever put in this test in my name is going to be seriously reprimanded! You could've just asked before dropping a fucking unkillable lizard down a hole!- Dr. Church

---

Item: Standard Issue M14, dipped in **SCP-447**

Tissue Test Record:
N/A

Termination Test Record:

Denied by O5-

Notes: Even in the slight chance we actually killed 682 with a gun dipped in green slime. If it killed 682 but then the curse occurred with it's dead body, well we'd be absoultely [DATA EXPUNGED] and screwed. - Dr. Church.

Item: SCP-216

Tissue Test Record:
N/A

Termination Test Record:
SCP-682 was tranquilized and cut into two hundred fifty six (256) 1x1x1 foot cubes. Each cube was shoved into a different "combination" of SCP-216, and SCP-216 was then placed back into SCP-682's cell in case of failure. Two hours and fifteen minutes into the test SCP-682 emerges intact from SCP-216 with a lampshade on its head, and an appearance of complete intoxication.

SCP-216 is safely removed from chamber when SCP-682 collapsed from fatigue and alcohol.
Following this failed termination attempt SCP-682 was quoted saying: "Its good to go home sometimes" and "That was an awesome party".

Notes: Wha..? What? How? This raises so many questions! Does 682 have a family or home? Are there more of its kind? Why does that lampshade look awesome? Requesting further look into SCP-216 to find out. — Dr. Sanders

---

Item: SCP-204

Tissue Test Record:
Overridden by O5-Command

Termination Test Record:
SCP-204-2's danger seeking behavior was played upon to create a desire to test SCP-204-1's combat prowess. Through the use of

carefully crafted stories, SCP-204-2 was informed of the existence of SCP-682. Hints were given to SCP-204-2 that SCP-682 was impossible to kill by conventional means, and only a warrior with special talents could defeat it. SCP-682 was released, heavily sedated, into the testing chamber. SCP-204-2 was then sent in through the airlock.

> <Begin Log>
>
> <5 minutes> SCP-682 regains consciousness and begins to move about test chamber.
>
> <5 minutes, 47 seconds> SCP-204-2 begins shouting expletives at SCP-682 to provoke it. SCP-204-1 materializes at this time into an oversized armored knight bearing a massive battle axe and kite shield.
>
> <5 minutes, 59 seconds> SCP-682 produces a near-deafening roar and charges at SCP-204-1.
>
> <6 minutes, 9 seconds> SCP-204-1 clashes with SCP-682 in a fair simile of an ancient gladiatorial battle. SCP-204-2 seems to be watching the battle with rapt attention.
>
> <16 minutes, 51 seconds> Combat between the two SCPs is extremely violent due to their size and strength. SCP-204-1 has succeeded into chopping off or tearing loose all of SCP-682's limbs, along with much of its flesh and part of its head. SCP-204-1 has suffered tremendous damage from the combat. SCP-204-1's 'shield arm' is broken off at the elbow, and the axe is missing half of the blade. The 'armor' SCP-204-1 wears is severely scraped, dented, and torn in places. It appears unable to walk, though it still stands in place between SCP-204-2 and SCP-682.
>
> <18 minutes> SCP-682, while not dead, is sufficiently incapacitated. Researchers direct SCP-204-2 to have SCP-204-1 feed on the remains of SCP-682 in order to regenerate itself.

<26 minutes, 29 seconds> SCP-682 begins to regenerate while SCP-204-1 is busy consuming severed pieces of it.

<29 minutes, 3 seconds> SCP-682 regains motion and proceeds to attack SCP-204-1, this time gaining the upper hand due to SCP-204-1's current state of damage.

<29 minutes, 46 seconds> SCP-204-2 and SCP-682 both tranquilized. SCP-682 additionally hosed with hydrochloric acid to prevent additional breach attempts. SCP-204-2 removed from testing chamber and returned to containment.

<End Log>

Notes: While SCP-204-1 does appear to be capable of defeating SCP-682 in pitched combat, the carnivorous nature of SCP-204-1 does not seem to be an effective way of neutralizing SCP-682. SCP-682 regenerates too quickly to allow SCP-204-1 to destroy it completely. SCP-204-1 is hereby proposed as a last resort countermeasure against SCP-682 in the event of a full containment breach. If nothing else, the bastards can hack each other to bits while we try to regain control of the situation.

Addendum: Proposal denied. We are not now, nor are we ever going to risk the containment breach of a 2nd Keter class SCP during an ongoing Keter class breach situation. -O5 Command

---

Item: `SCP-3108`

Tissue Test Record:
Tissue was transformed into a piece of *Uroplatus fimbriatus* (giant leaf-tailed gecko) tissue.

Termination Test Record:
D-1782 was instructed to enter SCP-682's containment chamber and shoot SCP-682 with SCP-3108. After missing 6 times due to fear, D-1782 successfully hit SCP-682 with an SCP-3108-1 instance. However, instead of becoming inferior as expected,

SCP-682 began to grow larger, and gained the ability to explode whenever threatened, and then reconstitute itself. SCP-682 eventually breached containment in this state, causing causalities. SCP-682 was successfully subdued by gunfire after it returned to its normal state, and was recontained.

Notes: I have a theory on what just occurred: SCP-3108 causes things to be "inferior" to the subject, right? Well, SCP-3108 transformed SCP-682 into something that would be seen as worse and inferior by the Foundation: larger, and stronger, strong enough to break containment. SCP-682 actually decreasing in power wouldn't actually be seen as inferior to us. — Dr. Westrin

---

Item: `SCP-2719`

Tissue SCP-682 Test Record:
SCP-682 went inside.

Termination Test Record:
Outside.

Item: `SCP-106`

Tissue Test Record:
N/A

Termination Test Record:
Denied by O5-Command

Notes: NO NO! ABSOLUTELY NOT! That is a disaster waiting to happen! For one thing the herculean effort required to move either SCP individually is huge! Not to mention creating a containment cell capable of containing both of them is almost impossible. Also there is the risk that SCP-106 would enter a lulling phase and we would have to wait for months for anything to happen, presuming SCP-106 would even try preying on SCP-682 to begin with.

However worst of all is the risk of them both breaching containment simultaneously. If this were to happen it could cause a chain

reaction, resulting in massive loss of life. SCP-106 has also shown signs of sapience and the two SCP's could form communication with each other which could end up hindering the Foundations efforts in the future. The foundation can barely re contain either of them let alone both of them simultaneously. -Dr. Winfred

---

Item: SCP-3930

Tissue Test Record:
SCP-682's tissue was brought into the void, and ceased existing.

Termination Test Record:
SCP-682 is introduced to SCP-3930, and successfully ceases existing. However, despite SCP-682 no longer existing, Foundation personnel still perceive SCP-682. When the entity is looked at, a vivid image or memory is recalled in the brain of personnel that is described as resembling the appearance of SCP-682. This entity has been observed "attacking" personnel, killing them, despite the fact that SCP-682 does not exist during these attacks. It should be noted that personnel killed in this manner died when their brains ceased to function, despite the appearance of "physical damage" occurring on their bodies. All destruction caused by this entity becomes "real", even if the entity that caused it didn't. 15 hours later, SCP-682 was found within its containment chamber. It is unknown how SCP-682 managed to gain existence after this incident.

Item: SCP-3207

Tissue Test Record: SCP-682's tissue was shot by SCP-3207, resulting in its complete destruction. No intact organic residue left by SCP-682's tissue was found after the interaction.

Termination Test Record: SCP-682 was shot by SCP-3207 several times. SCP-682 was destroyed for a period of 6 hours, before five smaller organisms, theorized to have been composed of SCP-682's tissue, grew within SCP-682's containment chamber. These organisms successfully breached containment and merged with each other, re-creating SCP-682.

Item: **SCP-3042**

Tissue Test Record: N/A SCP-3042 introduced into SCP-682's containment chamber with current imprinted D-Class. Upon termination of D-Class, SCP-3042 will imprint on SCP-682.

Termination Test Record: Denied. While highly amusing to watch the result, it is more than likely that SCP-682 would be in a perpetual rage state and keep breaching containment. If a more reliable way of containing SCP-682 is found, we can come back to this.

Item: **SCP-3922**

Tissue Test Record: N/A

Termination Test Record: SCP-3922 was used with a ten-minute recording of security footage taken of SCP-682 during a containment breach, which, to add the semblance of a fictional narrative for the purposes of SCP-3922 jurisdiction, was labeled “Lizard: the Tale of the Unpleasant Lizard.” The objective was to witness a plausible termination of SCP-682 and replicate the results.

The video was altered into a 72-hour military epic film titled "Sisyphus Among The Living," displaying an unsuccessful full-scale military assault on SCP-682 by instances of SCP-3922-A. The cast included Alan Rickman as "Commandant Marius", the SCP-3922-A officer tasked with leading SCP-682's termination, and Michael Clarke Duncan as "Lieutenant Havisham", the apparent protagonist of the first third of the film. No lethal damage to SCP-682 is observed. At the end of the film, the last surviving SCP-3922-A stormtrooper (played by Patrick Swayze) activates an experimental device that teleports at least five instances of gigantic primates (analogous to the description of **SCP-PC-003**) onto the battlefield. The final shot is of SCP-682 laughing as the creatures approach and the 1968 song "Livin' in the Sunlight, Lovin' in the Moonlight" by Tiny Tim plays in the background. The end title card reads "TO BE CONTINUED".

Note: The fact that the cast is composed entirely of noteworthy deceased actors and actresses could possibly be due to

SCP-3922's connections with ***SCP-2922****-C.*

Item: **SCP-3519**

Tissue Test Record:
Tissue sample has no observable reaction to exposure to SCP-3519.

Termination Test Record:
(T-8) 02/25/19: Acid levels were lowered by 232 cm and SCP-682's head was allowed to regenerate. SCP-682 was exposed to SCP-3519. SCP-682 presented no evidence of suicidal ideation and was observed to laugh continuously for 193 seconds while the acid levels were restored.

(T-3) 02/29/19: **Warning! Keter Class Containment Integrity Compromised — SCP-682. Warning!**

(T+7) 03/12/19: SCP-682 containment personnel are presumed deceased. Remote sensors (25% operational) indicate a probable breach. SCP-682 should be assumed to be at-large. — O5-6

(T+886) 08/12/21: Probable encounter with SCP-682. Crossing Colorado River on Hwy. 163 N. of Laughlin ruins (35.17, -114.60). **SCP-2490** caught up with me again on bridge, teleporting within 8m. Before strike, large fast-moving reptilian emerged from river and bit it in half. As reptile sank back in water I think it spoke (fairly sure not auditory hallucination):

> **SCP-682 (probable):** We are alike now, meat. Killing you would only end suffering.

— O5-6

Item: SCP-1056

Tissue Test Record: Tissue was resized to a smaller size without incident.

Termination Test Record:

The aim of this test was to measure how long it would take 682 to return to its usual size after being resized via SCP-1056. Depending on the results, this would have given new opportunities for containment or termination of SCP-682.

For this test, a chamber was constructed to the same dimensions of 1056's platform so the platform could act as the floor for the chamber. The cable connected to 1056's dial had been fed into a control room below so the dial could manipulated from here.

SCP-682 is introduced into the chamber. The chamber is sealed after 682 has entered. The dial is set to 0.25 and activation button pressed.

SCP-682 makes numerous vocalisations and appears to experience multiple convulsions. Various points of 682's body expand and retract. SCP-682 then disappears. All scans of the containment chamber reveal no signs of 682.

The containment chamber remains sealed for several hours, believing SCP-682 is still in the chamber and will ambush personnel once the chamber is opened. At 16:57 local time, SCP-682 is spotted outside of Site-19 having resized itself, breaching containment.

MTF-Lambda-9 ("Big Fucking Guns") is deployed. SCP-682 releases a wave of energy appearing to cause MTF-Lambda-9 to disappear. Lambda-9 is subsequently found later having been resized (For further info please see **SCP-3198**).

SCP-682 is eventually incapacitated and contained by other MTF teams.

Notes: Whilst it was expected that 682 would possibly be able to manipulate its size to counteract 1056, it was not expected that 1056 would enhance its existing ability to resize itself. It used this to shrink to a size far exceeding that of 1056's capabilities to escape containment. It is unknown how 682 was also able to manipulate the size of other objects and it's unlikely we will ever know due to the dangers of repeating this test. - Dr. Sanders

Item: `SCP-500`

Tissue Test Record: N/A

Termination Test Record:
DENIED BY O5 COUNCIL

O5-8 note: Whoever proposed this test is hereby banned from making proposals to the Termination Log. Not only would this test be a waste of a valuable resource, we don't know what it would accomplish or what effects it would have on ***SCP-682****. For all we know, it could make the damn thing even harder to contain.*

Item: `Dr. Clef's Proposal`

Tissue Test Record: N/A

Termination Test Record:
SCP-682 was flown in a heavily guarded plane squad near SCP-001's undisclosed location, It is then ordered to enter the range of SCP-001 (Dr. Clef's Proposal), With a small Go-Pro camera attached to it. The following log will be shown:

> **<Begin Log>**
>
> **SCP-001:** Forget.
>
> **SCP-682:** *Do you think I would listen to a cosplayer? You forget this all happened.*
>
> **<SCP-001 is shown to point its sword towards SCP-682, A explosion is seen as it is blown 2 miles away from SCP-001's radius.>**
>
> **<Blood begins to drip in the camera's shuttle, and the footage ends.>**
>
> **End Log>**

Addendum: When Foundation personnel arrived at the scene, SCP-682 begins to mutter: *"Filthy cosplayer."* before he faints from

blood loss, 2 out of 4 legs are unnaturally bent, a huge open scar in the back of it's throat is seen followed by multiple scars.

Dr. Clef's Note: Wow, Have I never seen such disobedience, even to a being such as SCP-001! I must research into this as soon as possible.

Item: Reconstruction/recovery of **SCP-407**.

Test Issue Record: Denied by O5 Council.

Termination Test Record: Denied by O5 Council.

Addendum: *Note from O5-7: You people think this is a joke, don't you? Are you all taking bets to see who can come up with the most ridiculous and over the top termination proposals you can imagine just for fun like a bunch of children? Giggling amongst yourselves in amusement as we struggle to kill the damned thing? Is that it?*

Well, not anymore. So far, we have had proposals to use ***SCP-106****,* ***SCP-500****, both* ***SCP-173*** *and* ***SCP-096*** *in the same proposal, high altitude impact,* ***SCP-3042****, among several others you all have no knowledge of because they're too idiotic to even deserve recognition. And now, someone has proposed using SCP-407. A simple skim reading will demonstrate the enormous risks and resources required in such an undertaking.*

This stops now.

Let me be absolutely clear: SCP-682 is one of the most dangerous entities we have ever managed to contain. It wants our entire species dead and given its abilities, it could very well accomplish this. It is completely alien to our understanding of reality in almost every sense of the word. Imagine if it broke containment and we were forced to detonate a nuclear device. Go ahead. Let it sink in; what could happen if it adapted to one of our most powerful weapons. We wouldn't just be boned beyond belief: it would be the end of mankind. Nothing could stop it, and I can already guess some believe using other SCPs could work. It won't. That will only make things worse. It always does.

This isn't a fucking game, damn it! This is a battle for the survival of our species, and it is almost certain we are running out of time and options. And once we run out of both, well…there are two options: kill yourself, or wait for it to find you. Just be sure to turn out the lights if you're the last one left.

So either help…or don't help at all.

Item: **SCP-393**

Tissue Test Record: None

Termination Test Record: From the testing log of **SCP-393**.

Test 393-4

Begin Log:

Subject: 1 linked D-class, male

Description: New subject instructed to do nothing of note for the day of / /2 , and is continually monitored by CCTV.

Written: ' Going to somehow defeat SCP-682 today.'

Outcome: Outcome is identical to previous test, save for the frozen expression of horror on the comatose subject's face. SCP-393 links to stand-by D-class.

Note: It was worth a shot.. - Research Assistant

End Log

Item: Dr. King, accompanied by 10 trained and armed security guards

Tissue Test Record: N/A

Termination Test Record: Personnel entered containment chamber of SCP-682. All personnel retained at least 25 meters of

distance. Guards readied to shoot. SCP-682 sniffed the air and then laughed.

SCP-682: You call those bullets?

Dr. King and Guards appear confused. All shots were unloaded, then guards were shocked as the bullets were actually appleseeds. They stated that they had made sure to double check the magazines before entering the chamber. Dr. King leaves furiously, with the guards to follow.

"If only SCP-682 could have turned into an appleseed…" — Dr. King

---

Item: One domesticed *Equus ferus*, deceased, one baseball bat.

Tissue Test Record:
Overridden by O5-Command

Termination Test Record: SCP-682 picked up baseball bat and begun to swing it at the deceased equine. SCP-682 appeared to enjoy beating the test material. SCP-682 returned to containment.

Notes: Success!

Item: SCP-1370

Tissue Test Record:
SCP-1370 was defeated by the tissue sample.

Termination Test Record:

> **<Begin Log>**
> **[SCP-1370 is placed in the testing area.]**
> **SCP-1370** Free! Free at last! All will be crushed under the heel of Doombot! Nothing shall live when I am done.
> **SCP-682** Good plan. Can I help, master?
>
> [SCP-1370 attempts to climb on top of SCP-682]
>
> **SCP-1370** Yes! A ignoble steed of destruction for

President Death. Together, the Droid of Despair will be even more unstoppable!

[At this point testing was stopped. SCP-1370 was removed, and SCP-682 submerged in acid.]
<End Log>

Notes: Following this encounter SCP-1370 has demonstrated a 10% increase in lethality. The difference is insignificant

---

Item: SCP-3309

Tissue Test Record: N/A

Termination Test Record:

BY ORDER OF THE PATAPHYSICS DEPARTMENT, THIS FILE IS C

According to Document 6/7781, SCP-682's file was written to outline it as an extremely powerful entity, capable of adapting to any damage, and would be indestructible in order to activate SCP-3309. This occurred on / / .

It is theorized that instead of SCP-3309 removing SCP-682, a CK Class Reality Reconstitution occurred, revealing that SCP-682's documentation was created in 2008, and SCP-682 always had the appearance described within the document created in order to be destroyed by SCP-3309.

Attached to SCP-682's current file are several comments from various members of the Foundation, some who do not currently exist, which were created during the Reality Reconstitution. They have been transcribed here.

Doctor [ERROR]: What about using the teleport pool, tossing this thing into space?

Doctor Clef: What if it survives reentry and comes back?

Researcher [ERROR]: Ion drives are comparatively easy to make. Cryogenically freeze it, toss it in the portal pool, and point it at the nearest black hole. It'll take a while to actually get there, but there'll be no real reason to worry about it in the meantime.

> **Doctor Clef:** Does cryogenic freezing even work? I mean, if an invasive crystalline organism can't stop it…
>
> **Doctor Gears:** What happens if it adapts? that's how it's breaking containment so much, it keep adapting to things. it might adapt to the freezeing [sic], and raw vacuum…and then come back extra-pissed. it loses the new adaptations a while after they stop being useful, but still, it's dangerous to try too much on 682, in case it survives it.

Assistant Researcher Noaqiyeum: Have we tried any of the following:

SCP-157, possibly in combination with
SCP-127
SCP-017
SCP-096
SCP-294, possibly in association with
SCP-075
SCP-053
SCP-061 could be extremely beneficial.
SCP-162
SCP-123. I'd like to see it try to adapt to that.

> **Doctor Fish:** The notion of 682 finally getting taken out by 053 is pretty damn funny.

SCP-1238: Tunnelfish

Item #: SCP-1238

Object Class: Keter

Special Containment Procedures: Any wild colonies of SCP-1238 are to be destroyed as soon as possible until such time as SCP-1238 can be reduced to and maintained at pre-1850 population levels. The Foundation shall liaise with the National Oceanographic and Atmospheric Administration, and with other oceanographic research institutes as necessary, to track SCP-1238 movements and attempt to locate entrances to SCP-1238 tunnels. Any tunnel discovered should have its entrance sealed by any means necessary that will not result in seismic instability until such time as a means of completely filling in existing tunnels or rendering them structurally stable is developed.

The Foundation is to monitor seismic activity within the Gold Zone at all times for indications of new tunnel construction or evidence that Event 638-Mu-34 is imminent. Whenever possible, persons living above known tunnels should be relocated. No other SCP objects, except those the nature of which renders them immovable, are to be contained within the Gold Zone. No mission-critical Foundation personnel are to travel, remain, or operate within the Gold Zone except as necessary to monitor SCP-1238 or other SCP objects within the area. No member of the O5 Council is to enter the Gold Zone at any time. Personnel whose "home town" is located within the Gold Zone, or who have immediate family members residing within the Gold Zone, are disqualified from participating in SCP-1238 containment.

In the event that Event 638-Mu-34 is determined to be imminent, all Foundation personnel are to attempt to evacuate the Gold Zone immediately Foundation personnel within the Gold Zone are to effect immediate evacuation of high-ranking government officials, military personnel, and culturally significant individuals as per Plan Contra-

IK-638, and to secure the retrieval and removal of listed artifacts of cultural or historical value, before attempting to evacuate themselves. Mobile Research Unit 638 is to remain on site within the Gold Zone and transmit observations and data to Overwatch Command until such time as environmental conditions render communication impossible. Following Event 638-Mu-34, the Foundation is to liaise with national governments and employ its resources for humanitarian purposes as necessary to prevent escalation to an IK-class collapse-of-global-civilization event.

Description: SCP-1238 is a species of deep-sea fish with no current taxonomic classification, morphologically similar to the Antarctic toothfish (*Dissostichus mawsoni*). SCP-1238 resides principally in deep waters in the northern Pacific Ocean, along the northwestern American and western Canadian coastlines. Adult SCP-1238 specimens measure on average 1.4 meters in length and weigh 100-110 kg. SCP-1238 is not suitable for human consumption due to the large concentrations of toxic minerals consumed by the fish, and are not currently fished for in any significant quantity or exploited by human industry for any significant purpose.

During most of its life cycle, SCP-1238 specimens subsist primarily on a diet of smaller fish and other small aquatic animals. During spawning season, which lasts from approximately early April to mid-July each year, the secondary digestive tract of sexually mature SCP-1238 specimens becomes active, allowing the fish to digest and metabolize inorganic minerals and metals, particularly deposits of metamorphic rock located below a region of the northwestern United States and southwestern Canada designated the Gold Zone. During spawning season, SCP-1238 will gather *en masse* at specific sites along the ocean floor and begin a process of tunneling under and through the continental shelf, widening and expanding the tunnel as a result of their consuming the existing rock. During spawning season, an adult SCP-1238 fish can consume and metabolize approximately 120% of its body mass in minerals within a 24-hour period. SCP-1238 produces little waste matter during this stage - volume of waste excreted is approximately 10% of that consumed.

Tunnels produced by SCP-1238 in this manner become the

spawning grounds in which SCP-1238 eggs are laid and fertilized. A female SCP-1238 fish is capable of laying up to 40,000 eggs within a season, of which approximately 25-35% will survive to adulthood under current conditions. SCP-1238 hatchlings reach sexual maturity after approximately 10 years and have been documented to live up to approximately 35 years in the wild.

SCP-1238 specimens almost always return to the tunnel in which they were born in order to spawn, with tens of thousands of individual specimens involved in digging a single tunnel. SCP-1238 will continue to expand on a specific tunnel, occasionally forming branching tunnels, until natural phenomena cause the tunnel to collapse, population growth results in excessive competition for resources, or the food supply becomes inadequate. Individual SCP-1238 tunnels have been documented to extend as far as km from their starting point and as deep as km below surface level.

+ Event 638-Mu-34 Background and Threat Analysis - LEVEL 4 CLEARANCE REQUIRED

Memo to O5 Council:

To: O5-1 - O5-7, O5-9 - O5-13, Central Ethics Committee
From: SCP-1238 Research Committee
Subject: Event 638-Mu-34 Threat Analysis
Date: / /19

Prior to the late 19th century, the environmental impact of SCP-1238 was largely self-contained. The widespread commercial exploitation of the northern Pacific since then has resulted in the depopulation or extinction of several cetaceans and other species that previously preyed on SCP-1238, and as a result, SCP-1238's population has increased exponentially since 1850 and continues to do so to this day.

In particular, tunnel construction has increased

dramatically as the result of this overpopulation. Whereas we believe that approximately 200 km worth of tunnels existed in 1850, tunneling has now accelerated far beyond the rate at which natural geologic events cause tunnel collapse. We currently estimate that there are approximately km of tunnels in existence, extending up to km inland from the Pacific coast, spread throughout a region of the northwestern US and southern Canada designated the Gold Zone.

Damage to these tunnels has resulted in an increasing number of sinkholes and other anomalous phenomena on the surface, including the allegedly bottomless sinkhole referred to as "Mel's Hole". Computer modeling indicates that the collapse of one of the larger tunnels, or a major earthquake occurring along the [REDACTED] or [REDACTED] fault lines, could potentially cause a chain reaction (designated Event 638-Mu-34) ultimately resulting in the complete collapse of the tunnel network, the partial collapse of the continental shelf, and the permanent flooding of a large area of the Gold Zone by the Pacific Ocean to depths of up to meters. If SCP-1238 tunneling continues to accelerate at current rates, our models predict a high probability of Event 638-Mu-34 occurring no later than 20 . Even if all SCP-1238 tunneling were to cease immediately, a high probability remains of Event 638-Mu-34 occurring within the next 00 years.

With our current methods of seismic analysis, we believe the Foundation would be able to predict the onset of Event 638-Mu-34 no

sooner than sixty minutes prior to the beginning of tunnel collapse, with continental shelf collapse occurring over the next twelve hours and complete flooding following over the next several weeks. Our models predict that few people residing within the Gold Zone, if any, would be able to evacuate upon the onset of Event 638-Mu-34; were the event to occur tomorrow, we would predict approximately million human casualties within 24 hours and the destruction of approximately sq km of land, the complete destruction of the cities of Boise, Olympia, Portland, Sacramento, Salem, San Francisco, Seattle, Spokane, Vancouver, and Victoria among others, and an unquantifiably large amount of property damage.

The immediate results of Event 638-Mu-34 are likely to cause a mass extinction of land and aquatic flora and fauna within and near the Gold Zone (including SCP-1238 itself) due to destruction of habitats, and will produce lingering effects for decades due to the introduction of pollution in the form of chemical and nuclear waste, debris from man-made artifacts, and large quantities of human and animal remains into the Pacific Ocean. As much of the Gold Zone is currently employed as farmland, a significant percentage of the United States food supply is likely to be impacted. We predict massive spikes in the price of food, oil, consumer goods, and other commodities as a result. Hinterlands neighboring the flooded regions of the Gold Zone are likely to suffer immediate economic devastation as a result of being cut off from the outside world; rapid onset of famine and communicable disease is expected as a result.

We predict a global adjustment in sea level of approximately meters as the result of water displacement into the Gold Zone and major tsunami activity throughout the Pacific rim. This change will produce a significant impact on international maritime commerce and fishing, and may possibly contribute to a global economic or political crisis due to the sudden inaccessibility of vital resources. Global telecommunications are likely to be severely impacted due to the loss of telecommunications infrastructure within the Gold Zone and a massive spike in civilian communications via phone, email, social networking etc. during and in the immediate aftermath of Event 638-Mu-34.

It is therefore our opinion at this time that if and when Event 638-Mu-34 occurs, the Foundation must devote as much of its resources as possible to continuity of operations and maintaining global and economic security. The unrest and devastation likely as a result has the potential to escalate into an IK-Class event, which will severely compromise the Foundation's ability to keep other SCP objects under containment and protect the human race from their influence. In the meantime, mass eradication of SCP-1238 populations will slow the acceleration of new tunneling, buying the Foundation time to develop a more permanent means of staving off that which is currently inevitable. We additionally suggest that our media resources foster the evolution of a "sustainable" culture within the Gold Zone in order to encourage population decentralization, the movement of vital technological/industrial/military resources away from the Gold Zone, and allow populations of SCP-1238's natural predators to

rebound.

Postscript: Per our previous discussion with the Central Ethics Committee, O5-8 has been deliberately excluded from this memo and will not be made aware of Event 638-Mu-34 at this time. The circumstances of O5-8's early life and education, and the current residence of his extended family within the Gold Zone, may present a conflict of interest if O5-8 is made aware of the threat at this time.

« SCP-1237 | SCP-1238 | SCP-1239 »

SCP-1239: Adult Play Area

Item #: SCP-1239

Object Class: Safe

Special Containment Procedures: Site- has been established around SCP-1239-2. When not in use for testing, SCP-1239-1 and removable instances of SCP-1239-3 are to be kept outside of SCP-1239-2 in dedicated storage lockers to prevent accidental activation. SCP-1239-2 should be soundproofed, with all windows obscured from the outside.

Description: SCP-1239 consists of 3 (three) components:

- SCP-1239-1, a lamp with a standard low voltage power cable, containing artificial flora with 4 (four) flower-like lightbulbs. The words “Hey Kids!” are engraved on the lid.
- SCP-1239-2, a residence in , .
- SCP-1239-3, a specific set of objects present within SCP-1239-2 at time of recovery.

The anomalous effects of SCP-1239 manifest if SCP-1239-1 is powered and viewed by a post-pubescent human subject while both are within SCP-1239-2. Following this, the subject will experience a series of conditional hallucinations until exiting SCP-1239-2, as follows:

- Subjects will perceive samples of SCP-1239-3 to be different objects. This is apparently consistent between subjects, as all subjects tested have perceived respective SCP-1239 samples in the same way.[1] Objects present within SCP-1239-2 other than SCP-1239-3 will be perceived normally by affected subjects.

- Subjects will perceive any prepubescent or pubescent individuals present within SCP-1239-2 as highly amiable, despite the subjects' prior dispositions or relationship with children, and will express a desire to engage in play activities.

- Subjects will perceive all expressions of discomfort, pain or displeasure produced by pre-pubescent and pubescent individuals within SCP-1239-2 as expressions of pleasure or enjoyment.

Upon exiting SCP-1239, the hallucinatory symptoms caused by exposure to SCP-1239-1 will cease, and are removed retroactively (i. e., the subject will remember observing SCP-1239-3 samples as they would normally appear, and will be unable to recall experiencing the hallucinations previously caused by SCP-1239). Behaviour caused by SCP-1239, however, will be recalled with an expected degree of detail. As a result of this, subjects are able to recall actions made under the influence of SCP-1239, but are unable to recall the motivation for said actions.

Summarised Recovery Log: SCP-1239 was first identified shortly after an incident occurring in SCP-1239-2 on -07- , in which the respective parents of 10 (ten) children, who had agreed to meet as part of a social event, were exposed to SCP-1239-1. The affected individuals (of which there were 6 (six)) were interviewed and dealt with as per Recovery Protocol 8. A cover story regarding a toxic gas leak was later circulated, and the remains of the children incinerated after analysis.

Note: Testing regarding SCP-1239 has determined that no direct or compulsive behavioural alterations result from exposure to SCP-1239-1.

SCP-1239-3 sampl	Description	Hallucinated Appearance
SCP-1239-12	A kettle composed of plastic and stainless steel.	A polystyrene sword.
SCP-1239-13	A large oven.	A cardboard box, with the words “FORT”

		written on it in felt-tip pen, and an apparatus with the words “FUN CONTROLS” written above it which corresponds to the dials. The text representing the maximum temperature (200°C) the temperature dial can be set to has been replaced with the word “MAXIMUM FUN”, and the words “FUN BUTTON” have been printed above the button activating the device.
SCP-1239-14	A Glock 19 pistol.	A toy handgun, which produces a low-energy red laser upon the trigger being pulled. The object possesses a mechanism to load cartridges normally.
SCP-1239-15	17 (seventeen) 14 (fourteen) batteries of multiple sizes.	Multiple biscuits, sugar sweets and other confections, primarily coloured purple, blue and pink.
SCP-1239-16	5 (five) pots and pans of varying sizes, chiefly composed of stainless steel.	5 (five) water balloons of varying sizes and colour, each filled with the near maximum amount of water that they can support.

Footnotes

1. For an extensive list of SCP-1239 samples and their respective

hallucinated appearances, please refer to Document 1239-B

« SCP-1238 | SCP-1239 | SCP-1240 »

SCP-1240: The Mixed-up Pet Shop

Item #: SCP-1240

Object Class: Euclid

Special Containment Procedures: News media is to be monitored for mentions of anomalous pets. Any such mention is to be investigated by MTF Omega-3 ("Zoo Keepers"). If an instance of SCP-1240-C is found then amnestics and cover stories are to be used as necessary, and the instance is to be sent to Site- . The Internet is to be regularly searched for SCP-1240-A. Any instance of SCP-1240-A found is to be scrubbed by Foundation computer experts, and MTF Omega-3 is to be sent to the originators of the instance to investigate and administer amnestics.

Instances of SCP-1240-C are housed in the anomalous animal containment wing at Site- . Testing of instances of SCP-1240-C may be done with the permission of Dr. . Personnel wishing for new instances may submit a written request to Dr. . If she approves, she will procure the new instance herself.

Description: SCP-1240-A is the mailing address [REDACTED]. The street does not exist in , and an extensive search of area code has resulted in no leads. Any letter or package sent through the post to SCP-1240-A vanishes mid-route. Sending a letter or package to the adjacent house numbers or on the same street result in the letter or package being returned to sender.

SCP-1240-B is a business, organization or entity associated with SCP-1240-A, which is simply known as "Mail Order Pet Shop". Sending a letter with a return address to SCP-1240-B at SCP-1240-A, with the letter mentioning a specific type of animal, will result in an instance of SCP-1240-C being delivered five (5) to seven (7) business days later to the return address. The letter does not need to actually place an order for an animal: simply mentioning an animal in any context will provoke a delivery of SCP-1240-C. Letters

not mentioning a specific type of animal will produce no response; all requests for a catalogue of available animals have been ignored. Payment is not needed in order to receive the instance of SCP-1240-C. All checks which have been sent with requests for animals have gone uncashed. SCP-1240-C will appear at the front entrance to the return address sometime during daylight hours, at a moment when no one is directly observing the front entrance; no delivery person or delivery vehicle has ever been observed. If the front entrance is monitored by cameras the cameras will momentarily fail, and SCP-1240-C will appear during that moment.

SCP-1240-C is an animal, which will always be delivered within a living environment or a means of transporting the animal. SCP-1240-C will never be the type of animal mentioned in the letter which provoked its delivery, but it always imitate some of the behaviors of the mentioned animal. Where the physiology of the animal would prevent the behaviour from being imitated, the imitation is achieved through anomalous means. What enables the anomalous behaviour is unknown, since all instances of SCP-1240-C have gross, fine and cellular anatomy identical to non-anomalous members of the same species, as well as identical biochemistry and DNA.

Examples of instances of SCP-1240-C:

SCP-1240-C-12:

Animal mentioned: Guinea pig.

Animal received: Humpback anglerfish (*Melanocetus johnsonii*).

SCP-1240-C-12 was received in a wire cage stocked with cedar sawdust, pellet feed and a water bottle. SCP-1240-C-12 "swims" through the air via unknown means at the same height an adult guinea pig holds its body off the ground, and can move over any obstacle a normal adult guinea pig could. It is constantly coated in a film of salt water which never dries out. It has no difficulty eating vegetable matter, even though its teeth are completely unsuited for the task, and has survived for over a year on a diet of vegetables, even though anglerfish are obligate carnivores.

SCP-1240-C-13:

Animal mentioned: Deep-sea anglerfish.

Animal received: Domestic rat (*R. norvegicus*).

SCP-1240-C-13 was received in a fish tank filled with salt water. It was dead on arrival. Necropsy revealed that, although the specimen's lungs were full of salt water, the cause of death was not drowning, but decompression sickness.

SCP-1240-C-21:

Animal mentioned: Breeding pair of piranha.

Animal received: Breeding pair of golden hamsters (*Mesocricetus auratus*).

SCP-1240-C-21 was received in a fish tank full of fresh water. They breathe underwater, and "drown" when they attempt to breathe air. They swim by stroking their paws through the water, though the speed and agility with which they swim is much greater than should be possible by that means of locomotion. They eat flesh and predate on fish like piranha, but store food in their cheeks like normal hamsters.

After several months in Foundation possession they mated in the manner of normal hamsters. The female grew gravid over time like a normal hamster, but engaged in no nesting behavior. After giving birth it paid no attention to its infants, similar to a female piranha laying eggs. The infants were curled up into tight little balls, and grew in size as time went by, without receiving any milk from the mother. When they reached the age that normal hamster weaned they uncurled and began swimming and eating like their parents.

SCP-1240-C-30:

Animal mentioned: Corn snake.

Animal received: Worker ant (*Tetramorium caespitum*).

SCP-1240-C-30 was received in a terrarium which was fitted out in a

manner typical for one used to house a corn snake. SCP-1240-C-30 moves like a normal ant, and will climb over vertical and upside-down surfaces, unlike a corn snake. It seems to have the same senses and sensory range as a corn snake, but still waves its antenna when sensing its surroundings. It has shown no anomalous equivalent to the constricting behavior of corn snakes. When presented with a dead mouse, it will run at the mouse with a speed much greater than an ant should be able to achieve, and when it reaches the mouse its mouth (but not mandibles or the rest of its head) swells to an enormous size and partially engulfs the mouse. It then engages in a "gulping" behavior which moves the mouse further into its mouth. After the mouse is fully engulfed in the mouth it is slowly moved to SCP-1240-C-30's thorax, and then from the thorax to the metasoma (abdomen), with its body elastically stretching and shrinking to accommodate. When the mouse is fully in the metasoma SCP-1240-C-30 will attempt to move to a resting place. However, since its thorax and legs will be lifted off of the ground due to its distended metasoma, its legs fruitlessly wave around in the air. An hour later the waving of its legs will slow down and then stop, which is presumed to be SCP-1240-C-30 going into a dormant state.

As time passes the bulk within the metasoma shrinks; it is unknown where the mass goes. When the mouse has been digested down to hair and claws the anus will momentarily swell and the remains will be expelled, at which point SCP-1240-C-30 will be able to move again.

« SCP-1239 | SCP-1240 | SCP-1241 »

SCP-1241: Livin' With Werewolves

Item #: SCP-1241

Object Class: Neutralised (formerly Safe)

Special Containment Procedures: SCP-1241 is to be overridden with a localised signal produced by Transmission Stations 1241-a and 1241-b, broadcasting a pre-recorded series of television programmes. A cover story regarding the production of SCP-1241 by a local studio has been circulated in case of containment failure. In order to continually monitor the content of SCP-1241, an apparatus is to be maintained to isolate and record it. Please refer to Document 1241-B for further information.

- *Update:* As of 2011-08-09, SCP-1241 has no active containment procedures. A story describing the bankruptcy of the responsible party referenced in a previously released cover-story has been released. The area is to be continually observed for any signs which could indicate a recommencement of SCP-1241 activity.

Description (prior to 2011-10-23): SCP-1241 is a television broadcast transmitted in a roughly 8 x 8 kilometer area in [REDACTED], Texas, USA; the programme manifests every week on Tuesday at 23:30, for an average of 20 minutes. Analysis of the signal has revealed it to be inconsistent with standard television frequencies, and attempted replications of the broadcast outside of the original area have failed to transmit it coherently. It is not normally possible for standard televisions to coherently play signals of SCP-1241's frequency or strength.

SCP-1241 resembles a television programme of the situational comedy genre. The broadcast consists of multiple episodes[1] depicting the domestic life of a middle-aged human male[2] and a group of 4-8 humanoid canids, who evidently share an apartment accommodation in Los Angeles, California, USA. Each episode

possesses the same opening sequence (roughly thirty seconds of music with lyrics sung by an adult human female, describing the aforementioned premise) which gives a list of cast members and other individuals involved in productions, as well as giving the title of SCP-1241 as “Livin’ With Lupes”. None of the named people or the individual portraying the character of "Lad" have been successfully identified: the majority of names are associated with persons not working in an entertainment-related career. For a detailed transcription of the names and lyrics provided in said opening, please refer to Document 1241-C.

The behaviour of the entities featured in SCP-1241 has inconsistently varied between typical canine and more humanoid behaviour with each episode.

Summarised Document 1241-A: *The following is a selection of notable examples of SCP-1241.*

> Episode: 1, "Hemlock".
>
> Summary: The “Lad” character is introduced, shown shopping in a retail store. The character encounters “Martin Wilkinson”, one of the canid organisms. Dialogue between the two characters then ensues, during which the Lad character mentions that he is looking for a residence. The Martin character states that he is renting a room in an apartment complex, but is looking for a room-mate.
>
> Upon later accepting the offer made by “Martin” after some deliberation and arriving at the complex, the Martin character reveals that the remaining canid entities are also living in the residence. The episode ends with a close shot of "Lad" displaying shock.
>
> Additional Notes: Excerpt of dialogue between “Lad” and “Martin”.
>
> > Martin: “I had a cousin who was a talking hamster.”
> > Lad: “Oh, really? Where is he now?”

Martin: “Dead. He joined the IRA and someone ate him.”

Episode: 3, “Dog Eat Dog World”.

Summary: Follows several attempts made by the Martin character to seek employment after resigning from an office job, as a result of a younger individual being promoted to a higher-paid position "for the third time this year.” The character subsequently briefly gains jobs in several low-skill areas including reception, a janitorial position and clerical duties in a public library. During the first fifteen minutes, the character is dismissed from each for various reasons, including repeatedly arriving late, ineptitude and consuming a live chicken in front of several children.

Episode: 14, “Big Wolf Blowing Down”.

Summary: Follows the main characters coping with an unnamed hurricane predicted to affect their area of residence. The latter half of the episode focuses on their behaviour while made to remain inside due to the event. Notably, the video during this period is blurred and shaky, and the majority of the dialogue does not appear to relate to the given premise (see below), instead describing a device of undisclosed function which appears to be at risk of becoming damaged.

Additional Notes: Excerpt of dialogue between “Lad” and an un-named canine character (referred to here as “Unnamed”):

Unnamed: "Please don’t let it break."
Lad: "I won’t."
Unnamed: "It’s too important to break. It’s been so nice, being able to think."
Lad: "I know. I won’t let it break. I’ll fix it somehow. I promise."
Unnamed: "I suppose I should just enjoy the moment before I have to go back. At least it

gave me these moments. I'll always have that."

Episode: 15, untitled (the opening sequence was not present).

Summary: 19 minutes and 32 seconds of footage depicting two malnourished domestic dogs (one Dalmatian and one Great Dane) lying down in a cage. The episode terminated at 22:59 with little change in the animals' activity, camera position or camera angle throughout.

Incident 1241-1: On 2011-05-02, SCP-1241 failed to be detected at its regular time. SCP-1241 was not found to be active in the subsequent two weeks.

On 2011-05-17, a rented space in , Canada was investigated by its landlord following a failure of the individual renting it (one) to make regular payment. Due to the items discovered within the residence, follow-up enquiry was later made by Foundation personnel after the landlord attempted to contact local authorities. The contents of the locale were found to be:

- Four large dog crates.
- The remains of six dogs of various large breeds and a human subject (later identified as Mr.), all showing damage consistent with roughly two weeks of decomposition and partial consumption (varying between specimens).
- Electronic equipment, primarily consisting of that used in recording and broadcasting, including: a Panasonic-brand video camera (non-functioning) and tripod stand, a playback video monitor (non-functioning), a Boom operator and a VHS recorder/player labelled "OUTGOING EPISODES" (non-functioning).
- A surviving male Weimaraner specimen, displaying signs of severe deformity and malnutrition. The subject expired within an hour of being removed from the locale despite attempted

medical intervention. An autopsy carried out shortly after revealed that part of its skeleton had been replaced with bones of a distinctly humanoid structure, primarily around its jaw, skull and legs.

SCP-1241 was declared Neutralised on 2011-08-09.

Footnotes
1. 15 at time of neutralisation.
2. The name of the aforementioned man is given as “Lad”.

« SCP-1240 | SCP-1241 | SCP-1242 »

SCP-1242: Doppelganger Virus

Item #: SCP-1242

Object Class: Euclid

Special Containment Procedures: SCP-1242 is to be contained in two adjoining rooms measuring 2m x 2m x 3m capable of sustaining quarantine for a Category A, UN 2814 biohazard. The rooms should be separated by an airlock. All access to subject is to be limited to a single entry point equipped with remote handling, clean room, decontamination, and quarantine facilities. Remote handling is to be used when interacting with SCP-1242 whenever possible. Level A biohazard suits are required for all non-test subjects physically interacting with SCP-1242.

Nutritional needs are human normal, and should be met using standard quarantine protocols. Waste material should be treated as a Category A, UN 2814 biohazard. Waste may be disposed of only after heat-sterilization and storage for a period of no less than 14 days to ensure success of the sterilization procedures.

Subject is on strict suicide watch, and is not allowed any object or material that would facilitate self-harm. Due to subject's proven capacity for self-harm, all requests made by subject must be submitted to the Site Director.

Description: SCP-1242 is an adolescent Caucasian human male 137 cm in height, weighing 41 kg. Subject communicates primarily in English, is intelligent, and generally cooperative with Foundation personnel.

Subject exudes a retro-viral agent, hereafter referred to as SCP-1242-1, from all bodily orifices and glands. SCP-1242-1 is 99.9% infectious when transmitted by direct contact through skin contact and 100% infectious when transmitted by direct contact through ingestion. SCP-1242-1 has been shown to be infectious to

varying degrees through indirect contact for up to 14 days on average, with the longest recorded period between viral emission and infection being ~26 days.

SCP-1242-1 contains an unusually large amount of fragmented genetic material and acts directly on the genetic and cellular level, temporarily reverting each individual cell to the stem cell stage through an unknown process before remaking it as a new cell. Individuals infected are to be classified as SCP-1242-1a and quarantined immediately. Infection is followed by an incubation period of 6 hours, after which SCP-1242-1 symptoms begin to manifest.

- **Six hours:** SCP-1242-1a experience acute pain in joints, fever ranging from 38-40 C, respiratory difficulty, cardiac arrhythmia, and cyanotic extremities. SCP-1242-1 ceases to be infectious at this time.
- **Eight hours:** Subjects in this stage indicate that pain is now global to the body, and intense. Symptoms diverge in this stage depending on the initial mass of the infected individual.

    - There is currently no data on individuals exactly matching the mass of SCP-1242; however, it has been noted that symptoms beyond this point are significantly less severe for individuals within +/- 10kg of 40kg.
    - SCP-1242-1a that are larger in mass than SCP-1242 begin experiencing violent emesis, diarrhea, and perspiration beyond the levels associated with fever temperatures. Waste produced in this manner is composed of tissue types from throughout the body. Subjects begin to gradually decrease in mass and physical size. Instances larger in mass than SCP-1242 have an estimated 43% survival rate of this stage.
    - SCP-1242-1a that are smaller in mass than SCP-1242 begin bloating and swelling, and display a voracious appetite, with a preference for materials high in protein. Instances of

SCP-1242-1a that are smaller in mass than SCP-1242 have an estimated 6% total survival rate of this stage without medical intervention. It is unknown whether such individuals could survive the full run of the infection without medical intervention.

- **Nine hours:** Symptoms accelerate as subject rapidly alters to more closely match the mass of SCP-1242. All identifying characteristics native to race are eliminated and subject's body begins restructuring to achieve the end stage result. Females have a significantly higher chance of dying due to complications associated with restructuring of primary reproductive systems in this stage.

    - Larger instances experience a continuation of emesis and diarrhea, skeletal fracturing and restructuring, and sloughing off of skin and hair. Instances in this stage are prone to organ failure from compression, bursting, and dehydration. Hydration can increase survival rates, but not substantially.
    - Smaller instances experience rapid growth, with associated internal lacerations and stress fractures from sudden growth of skeletal structure. It has been determined that continued nutritional supplementation substantially improves chances of survival at this stage for smaller instances, boosting survival chances from 4% to 32%.

- **Ten hours:** Subject's body structure now closely resembles SCP-1242. Symptoms converge and abate. SCP-1242-1 is once again infectious.

- **Eleven hours:** All symptoms abate. Subject is now visually indistinguishable from SCP-1242, and is designated SCP-1242-2.

SCP-1242-2 may be distinguished from SCP-1242 only by testing.

SCP-1242-2 do not produce SCP-1242-1 as a biological by-product, carrying and transmitting it instead as an infectious blood-borne pathogen. In nearly all other respects, SCP-1242-2 are identical to SCP-1242.

Instances of SCP-1242-2 possess intelligence commensurate to that of SCP-1242, and display a range of reactions and personality traits consistent with SCP-1242's non-depressive behaviors. Investigation into SCP-1242-2 neurochemistry reveals that instances' levels of serotonin and dopamine are elevated by an average of 15% above human baseline. This results in instances of SCP-1242-2 generally behaving docilely and showing a heightened preference for tactile sensation. It is hypothesized that instances do not develop depressive behaviors displayed by SCP-1242 due to an inability to experience strong negative emotion without an outside trigger.

SCP-1242-2 have a drive to protect SCP-1242, and in the pursuit of that goal will seek out and infect individuals to propagate more instances of SCP-1242-2. In the event of a direct threat to SCP-1242, instances become extremely violent, lashing out at the perceived threat with any tools or weapons available, but will attack unarmed should they lack weapons. Autopsy of instances terminated while defending SCP-1242 indicates that levels of serotonin and dopamine drop below baseline in response to the perceived threat, with a concurrent and equal elevation in levels of epinephrine, nor-epinephrine, and testosterone.

Psychological evaluation shows that individual instances continue to retain fragmented memories of their existence prior to infection, but do not display any personality traits inconsistent with SCP-1242's non-depressive behavior. Comparison of EEG's taken before and after conversion reveals significant restructuring of the frontal lobes which may contribute to this alteration of personality traits.

SCP-1242 was discovered after the Foundation became aware of reports from the rural town , describing identical male youths, corresponding with reports of individuals disappearing.

Subject was located in an outlying structure 1.2 km outside of the town proper surrounded by 24 instances of SCP-1242-2. Subject immediately warned Foundation personnel away, but made no

attempt to escape. Agents and were both exposed to SCP-1242-1 in the course of interviewing the subject. Agent recognized a potential biohazard and was able to communicate the necessary precautions before succumbing to infection.

Containment teams eradicated all present instances of SCP-1242-2 and took SCP-1242 into custody. The town was placed under quarantine until such time as a lack of infections was determined to exist. Class C amnestics were administered to the population, who were then relocated under a claim of eminent domain. The area of potential infection was then sterilized.

SCP-1242 has displayed bouts of chronic depression associated with post-traumatic stress disorder and long-term isolation. Subject avoids discussion of the onset of its condition, and refuses to give its name. Its fingerprints do not match any on file.

Addendum A: Reports of instances of SCP-1242-2 outside of Foundation control have been corroborated and neutralized on five (5) separate dates. Instances have been located as far as 4700 km from the point of initial containment. Attempts to question SCP-1242 about these instances have been met with escalation of depressive behavior and emotional withdrawal.

Addendum B: Following Incident 1242-1, instances of SCP-1242-2 will be actively sought out and destroyed with all expediency.

+ Incident 1242-1: Site Director Clearance Only

[On / /20 , fifty-six instances of SCP-1242-2 mounted an assault on Site , where SCP-1242 is contained. Instances were armed with weapons ranging from small arms to explosive munitions made from commercially available ingredients. Instances displayed coordination and tactics at a level associated with a dedicated civilian militia training full time for a sustained period. Initial incursion was minimal due to rapid response by perimeter teams and initiation of site lockdown.

While initial casualties were low, casualties from infection of personnel by SCP-1242-1 were high. It is still

unknown how instances were able to obtain weapons and locate SCP-1242.

« SCP-1241 | SCP-1242 | SCP-1243 »

SCP-1243: Relocation Services

Item #: SCP-1243

Object Class: Euclid

Special Containment Procedures: No methods of effectively containing SCP-1243 have been developed as of this time of writing. The prevention of public knowledge of SCP-1243 is top priority, and will be maintained through a number of web crawler programs designed to track down, delete, and record instances of the URL leading to SCP-1243-1. Foundation agents are undercover in several law enforcement agencies worldwide, especially those that handle missing persons' cases, to find possible instances of individuals using SCP-1243.

Only personnel with a security clearance of 3/1243 are permitted to know SCP-1243's URL. To prevent the accidental spread of knowledge of SCP-1243, personnel being transferred out of work on SCP-1243 for any reason will be given class A amnestics. As it is unknown how SCP-1243 gathers information from its users or those being targeted by it, testing is forbidden at this time.

Description: SCP-1243 consists of 2 components, designated SCP-1243-1 and SCP-1243-2.

SCP-1243-1 is a web page with a URL of . . / . To this date, the Foundation has been unable to trace this page to its server, due to the site having an inconsistent IPv4 address. The method used to obscure its true IPv4 address is unknown. This web page consists of a black (html color code #000000) background, a jpeg logo on the top-center of the page reading " Relocation Services", a text field labeled "Name", a return field labeled "Cost", a button labeled "Place Order", and a counter labeled "Customers Served". All of these elements are encoded using very simple HTML. The page gives no instructions as to how to use these elements.

Upon filling out the "Name" field with either a name, alias, or title of an individual, the "Cost" field will return a value, usually in USD, but occasionally in other forms of currency, valuable goods, or, in several recorded instances, a relative or acquaintance of the user. It is unknown how the cost of an individual targeted in this fashion is determined, though high-interest, well-protected targets such as government officials will typically have an extremely high cost, making them unattainable to most users. Orders that the customer cannot afford will simply be denied. When the "Place Order" button is clicked, three events will occur; the price specified in the "Cost" field will be removed from the user's possession, the individual named in the "Name" field will appear in the vicinity of the user within a period of 12-72 hours, and the "Customers Served" counter will increment by one. The individual delivered to the purchaser will invariably be the one the purchaser meant to place an order for, even though no information other than the name, alias, or title of the individual was entered in the "Name" field. General descriptions entered in the "Name" field will result in a random individual matching those descriptions being delivered to the purchaser.

Instances of SCP-1243-2 are entities which appear in the vicinity of individuals "purchased" using SCP-1243-1 for the purpose of abducting such individuals. Subjects vary greatly in appearance, though they are usually described as humanoids whose features have been significantly altered by surgical or other invasive means. Instances of SCP-1243-2 have been observed entering buildings through doors inaccessible from the outside and, rarely, traveling through objects such as mirrors and television screens to reach their target. Physical violence has proven effective in stopping single instances of SCP-1243-2, though abduction events have never been prevented in this manner, as more instances will arrive to take their place. To this date, there has been no method of successfully preventing SCP-1243-2 from abducting those targeted by SCP-1243.

Despite the Foundation's best efforts, the number displayed by the "Customers Served" counter continues to increase at an alarming rate. The possibility of knowledge of SCP-1243 being spread by outside sources is under consideration.

Recovery: SCP-1243 was discovered following an FBI raid on a human trafficking ring in , CA. The victims of this ring were found to be linked to missing person's cases in a number of different states, all of which were known to be outside the operating area of the criminal organization responsible for the ring. Additionally, the majority of the victims described being abducted by entities similar to those later designated SCP-1243-2. The URL leading to SCP-1243-1 was recovered from the hard drives seized by the FBI during this raid. All information regarding SCP-1243 was recovered from the FBI by MTF Iota-10 (aka "Damn Feds"). Both the victims of the ring and its perpetrators were given class B amnestics with false memories implanted.

Incident 1243-A: On the date of - - , several instances of SCP-1243-2 appeared in [REDACTED], the location where maintenance of SCP-1243 was being performed. By the time site security could respond, SCP-1243-2 had abducted 4 researchers involved with SCP-1243. At this time, information on several other SCP items is considered compromised, including SCP- , SCP- , and SCP- . As the "Customers Served" counter did not increment, it is currently assumed that SCP-1243 acted of its own volition in a defensive manner. Revision of SCP-1243's Special Containment Procedures is pending at this time.

« SCP-1242 | SCP-1243 | SCP-1244 »

SCP-1244: Universal Stopwatch

Item #: SCP-1244

Object Class: Safe

Special Containment Procedures: SCP-1244 is currently contained in lock box - in Site . SCP-1244 is currently under observation in storage room , which shares a wall with the D-Class cafeteria kitchen. Under no circumstances should the top button be pushed outside of supervised testing procedure.

Description: SCP-1244 appears to be a brand stopwatch, specifically a model produced in 19 . X-ray scans of the device reveal a very complex interior filled with gears and levers of various materials. The interior bears little to no relation to the expected components, both in complexity and material composition. Attempts to replicate or even map the design based on scans have met with repeated failure, and all requests to disassemble the watch have been turned down due to risk of damaging the device. An engraving on the back reads, "I'll see you soon -C".

When the button on the top of the watch is pressed, the hand of the watch will quickly spin clockwise reading a time between ten (10) and sixty (60) seconds, then begin counting down to the zero (0) mark at the normal rate for a standard stopwatch. When the hand reaches zero it stops with a loud click, coinciding precisely with an event of significance to a nearby person, with a range of at least 16 meters. The event is always the sort caused by a fixed amount of time passing, and were all in progress before the button was pushed. Statistically the number of such events occur with anomalous frequency during use of the watch, suggesting a sort of temporal causation by unknown method.

Testing Log

Setup: Digital clock with 30 seconds left till alarm
Date: 01/13/

SCP-1244 spun up to 30 seconds, and counted down along with digital clock.

Setup: Digital clock with 8 minutes left till alarm
Date: 01/17/

SCP-1244 spun up to 53 seconds. When it reached zero, level 2 researcher burst into the room, and apologized for being late for scheduled testing. The researcher felt no strange compulsion but had been held up studying and lost track of time, and rushed through the facility in an attempt to arrive on time.

Setup: All time pieces removed from room, all researchers present
Date: 01/17/

SCP-1244 spun up to 10 seconds. When it reached zero, no event was recorded.
Note: This was later determined to have this coincided with the end of guard shift C. Two guards were stationed in the hallway outside the room at the time. - Dr.

Setup: Researcher in far corner of room instructed to count down from 30 in his head
Date: 1/17/

SCP-1244 spun up to 27 seconds and reached zero at the same time as researcher.
Note: I guess the guy counted a little fast. - Dr.

Setup: Non-researchers evacuated from testing wing.
Date: 01/19/

SCP-1244 spun up to 57 seconds. When it reached zero, no event was recorded.
Note: This event occurred at exactly 11PM local time, or Midnight in

time where Dr. 's wife was living at the time. She was furious that he missed their anniversary. - Dr.

Setup: Testing wing emptied, button pushed using remotely operated robotic arm
Date: 01/21/

SCP-1244 spun up to 32 seconds. When it reached zero the robotic arm sparked and dropped SCP-1244.
Note: We found a servo in the arm whose warranty expired exactly 2 years from time of purchase, matching its failure to the second. It seems that, with no obvious countdown to sync to, it… finds one. - Dr.

Setup: Digital clock with 61 seconds left till alarm.
Date: 01/22/

SCP-1244 spun up to 60 seconds. When it reached zero, researcher collapsed to the floor, dead of a ruptured brain aneurysm. Subsequently discovered medical reports from 90 days ago had given him roughly three months to live.
Note: It may just be me, but it feels like this was a little vindictive. It is my recommendation that we consider testing done on this particular object, I'd rather not piss it off any more and risk it interacting with any other SCPs in the facility. - Dr.

Incident 1244-A:
On 03/19/ , cleaning staff noticed a faint ticking sound from SCP-1244's lock box. This was reported to research staff who determined that it had been activated by itself after being locked away for nearly two months. Research staff were unable to determine what it was synced with, but the object has since been moved to a room adjacent to a cafeteria kitchen. Monitoring equipment shows that it occasionally activates and syncs with the microwave clock on the far side of the wall. Since this move, this is the only additional anomalous behavior that has been recorded.

SCP-1245: Whaling Ship

Item #: SCP-1245

Object Class: Euclid

Special Containment Procedures: Mobile Task Force Zeta-4, "Ahab's Antagonists", are currently tracking SCP-1245's movements aboard the Foundation ship *SCPS Archimedes*. The *Archimedes* is disguised as a destroyer from the US Navy, allegedly pursuing illegal whalers. Local naval officials are to be informed of the presence of illegal whalers in the area and reroute commercial and private traffic accordingly.

SCP-1245 is currently located at Site-412, an abandoned harbour located in , . The harbor's entrance has been blocked by stone, preventing escape. SCP-1245 is to remain anchored to the harbor bed at all times. Chains and anchors are to be inspected every week for signs of damage and repaired accordingly. Foundation ship *SCPS Archimedes* is to patrol the harbor's entrance at all times and deter unauthorized craft under the pretense of naval training exercises.

Description: SCP-1245 is a -model factory whaling ship, approximately 120 meters in length. Nameplates and numbers are missing and are believed to have been removed prior to acquisition. SCP-1245 appears to be autonomous; it has been seen pursuing whales and incapacitating them via cannon-mounted harpoons (see Observation Log 1245- - for video footage) before dragging them into SCP-1245. No crew members have been observed anywhere inside SCP-1245. SCP-1245 has been observed hunting and processing a wide variety of cetaceans, including stock not usually hunted by whalers. Unusual specimens gathered by SCP-1245 include dolphins (family *Delphinidae*), orca whales (*Orcinus orca*), beaked whales (family *Ziphiidae*), and narwhals and belugas (family *Monodontidae*).

The majority of SCP-1245's internal structure is taken up by a central "slaughterhouse", where whale carcasses are dissected and their parts sorted for future use. SCP-1245 uses tissue obtained from whale carcasses to maintain its structure and build new additions to its hull. It is estimated that roughly 65% of SCP-1245's current mass is made up of whale components. Exploration teams have documented several rooms and decks constructed entirely of whale meat; several of these appear to be significantly altered from their original specifications. These include automated assembly lines built from ligaments and muscles, an on-board crane composed from vertebrae and ribs, a secondary rudder composed of baleen and bone, and a communications deck, with several intact whale brains connected to a central radio.

Rotting or decaying parts are replaced with new components as new whale specimens are acquired and processed. Material is moved throughout the ship via a series of tubes composed from steel pipes and intestines. Significantly, the ship's engine has been heavily modified to burn whale oil and spermaceti, making the ship largely self-sufficient.

The corpses of several infant whales in varying stages of decomposition adorn the prow of SCP-1245. These are believed to be trophies, collected during assaults on whale pods.

SCP-1245 first came to the Foundation's attention on / / , after several "ghost ship" sightings occurred off the coast of southern Australia, followed by a marked decline in local cetacean populations. Mobile Task Force Zeta-4 "Ahab's Antagonists" are currently tracking SCP-1245's movements. *Revised. See Incident Log 1245-043 for more information pertaining to containment revision.*

On / / , SCP-1245 was successfully lured into Harbour by playing a pre-recorded whale song, and restrained by Mobile Task Force Zeta-4 in "Operation Baleen" (see Incident Log 1245-044 for full details and casualty report). Harbour was subsequently secured and renovated by Foundation staff, and was re-christened Site-412.

Addendum 1245: On / / , Archivist discovered that the

whaling ship *Southern Star*, a whaling ship of the same model as SCP-1245, disappeared and was deemed "sunk" in 1940.

Addendum 1245-2: On / / , SCP-1245 transmitted a message in Morse code to staff at Site-412. Grammar, spelling, and punctuation remain identical.

> WHALE WHALE NOW CUT THE SOFTNESS OF HOT MEAT, HARPOON WHALE WHALE WHALE, REPAIR OF THE HULL, DEPRIVE THEIR BODIES OF THOUGHT AND LIFE, BLUE GREY CACHALOT RIGHT REPAIR OF THE HUL [*sic*] THE KNIVES ARE TO DO THEIR IMPORTANT JOBS HARPOON HOOK CUT WHALE WHALE WHALE GIVE NOW NOW NOW NOW NOW NOW

This message was repeated twenty-seven times before SCP-1245 ceased transmission. As of / / SCP-1245 has not released any further messages and does not respond to any messages sent by the Foundation.

« SCP-1244 | SCP-1245 | SCP-1246 »

Incident Log 1245-043

Incident Report:1245-043

SCP Involved: SCP-1245

Date: 06/07/2011

Location: Northern Alaska; coordinates / /

Preamble: *MTF Zeta-4 had been monitoring SCP-1245's movements for six months prior to the incident. Under previous containment procedures, operatives were dispatched to nearby coastal towns to warn local government officials about illegal whaling activity and to temporarily shut down nearby shipping lanes as SCP-1245 entered and left the area. Here, however, SCP-1245 was assaulted by members of " ", a vigilante anti-whaling group who had bypassed quarantine in an attempt to put a stop to what was perceived as illegal whaling.*

2:03 PM: The *Archimedes* is contacted by a vigilante group calling itself " ", asking if the crew of the *Archimedes* requires assistance in prosecuting illegal whaling. Crew aboard the *Archimedes* respond in the negative and order their ship turned around immediately. " " responds in the negative and terminates radio contact.

2:32 PM: *Archimedes* attempts to intercept the boat. Zeta-4 attempts to raise radio contact and issues a final warning to turn back, under pain of arrest. This radio message is also ignored. The vigilante's boat manages to bypass the *Archimedes* and proceeds to make contact with SCP-1245. *Archimedes* moves towards the vigilante boat's position and prepares to administer amnesetics to all individuals aboard the ship.

2:45 PM: It is believed that the vigilante boat made visual contact with SCP-1245 at this time. SCP-1245 is tracked moving at

approximately 15 knots.

2:53 PM: The *Archimedes* arrives alongside SCP-1245 and the vigilante's boat. Apparently undeterred by its appearance, the vigilante boat begins a non-lethal assault on SCP-1245 with two high-pressure water cannons mounted on the hull of their ship. SCP-1245 does not react and continues moving in a south-easterly direction.

2:55 PM: The vigilante boat moves closer to SCP-1245 (approx. 20 metres away from SCP-1245) and continues attacking SCP-1245. Protestors hurl several flash grenades onto SCP-1245's deck to no apparent effect. SCP-1245 begins to decrease in speed and sounds its horn.

2:56 PM: SCP-1245 turns and begins moving towards the vigilante boat, increasing speed as it does so. SCP-1245 begins a counterattack by launching several harpoons at the crew from recessed ports in its hull. The harpoons lodge themselves in the ship's hull and impede the movement of the vigilante ship. The vigilante ship attempts escape but fails, damaging its outermost hull in the process. SCP-1245 then "vomits" liquid from its prow, breaching its hull.[1].

2:58 PM: The *Archimedes* launches two dinghies in an attempt to rescue personnel aboard the ship. Twelve members of the crew are rescued before SCP-1245 rams the ship, destroying it. MTF member 04 (" " ") was lost during the rescue operation and is presumed dead. SCP-1245 drags the wreckage of the ship onto its deck before resuming its original course, ignoring the *Archimedes*.

3:15 PM: Crew members are brought aboard the *Archimedes* and administered amnesiacs before being returned to the local harbor.

3:59 PM: Crew member , while monitoring SCP-1245 from afar, notes that SCP-1245 appears to slow down and dump several tonnes of metal overboard before resuming its course.

We cannot allow another incident such as this. More stringent containment measures are to be implemented within the month. -Dr.

Footnotes

1. Liquid is believed to be hydrochloric acid obtained from whale stomachs.

SCP-1246: Stone Spiral

Item #: SCP-1246

Object Class: Euclid-nuntii

Special Containment Procedures: Site 1246 has been constructed around SCP-1246 in order to maintain secrecy, house personnel assigned to SCP-1246, and prevent accumulation of fauna.

SCP-1246 is contained in a cylindrical tank of water seventeen meters in diameter and one meter in height. Several pumps are maintained to circulate water over SCP-1246 at a rate sufficient to prevent the accumulation of SCP-1246-1. Once removed from SCP-1246's tank, SCP-1246-1 is to be filtered from the water and stored in concrete containers lined with steel.

All iterations of SCP-1246-3 are to be recorded and logged. Amnestics are to be administered to all personnel at Site 1246 should SCP-1246-3 contain classified information.

Description: SCP-1246 is a spiral structure approximately fifteen meters in diameter composed of a variety of stones. Individual stones may be removed from SCP-1246 and destroyed without difficulty; however, SCP-1246 will spontaneously and instantaneously reform in its entirety on an irregular basis regardless of damage done.[1]

Through an unknown process, a mixture consisting primarily of volcanic ash with trace amounts of iridium accumulates on SCP-1246's surface, increasing in depth at an approximate rate of 0.8mm/day. This mixture, designated SCP-1246-1, emits water vapor, carbon dioxide, thermal radiation, and ionizing radiation, all in levels not considered harmful to humans or the environment in the short term.

SCP-1246-2 is a designation given to any non-human vertebrate

that view all or part of SCP-1246, or any other member of SCP-1246-2.[2] These vertebrates will approach SCP-1246 and, short of coming into contact with it or displacing any other SCP-1246-2, find a spot as close to the structure as possible. Should this be accomplished, SCP-1246-2 will focus on SCP-1246. If the center is not visible due to the presence of other animals or other obstructions, SCP-1246-2 will instead focus on a point above SCP-1246.

SCP-1246-2 will remain in an alert state indefinitely. While viewing SCP-1246, SCP-1246-2 instances do not appear to require any form of sustenance or sleep, and do not suffer from inactivity-related injuries such as atrophy. Further, specimens do not age, nor are they affected by diseases or environmental factors, including SCP-1246-1. Removal of SCP-1246-2 from the presence of SCP-1246 will both remove them from their fixed state and cause the associated biological abnormalities to cease.

SCP-1246 will demonstrate further anomalous behavior whenever a nuclear device is detonated on Earth.[3] Whenever an event of this nature occurs, SCP-1246 will emit a series of noises, designated SCP-1246-3, audible up to thirty meters from its center. These noises are audible only to humans and electronic recording media; non-electronic recording devices and non-human animals do not respond to SCP-1246-3 or recordings of it. SCP-1246-3 lasts no less than 13 minutes and 30 seconds, and varies somewhat between iterations. A generalized transcript is available for personnel with Clearance 2/1246 (see below). The transcript applies to all iterations of SCP-1246-3 unless noted otherwise.

Addendum: Transcript of SCP-1246-3

> **<Begin Log>**
>
> **0:00** to **7:43**: What is believed to be ambient noise from an unidentified urban area. Volume rises until 7:43, then cuts off. Screams are audible from 6:19 to 7:43.
>
> **7:43** to **11:22**: The sound of a clock ticking once per second. Echoes are audible.

11:22 to **12:00**: A series of animal vocalizations arranged in a manner that is reminiscent of the phrase "You know what you've done", repeated in twenty languages. Both the languages in question and their order varies with each iteration.

12:00 to **12:21**: Silence.

12:21 to **12:25**: A series of animal vocalizations arranged in a manner that is reminiscent of the phrase "No, and we never will be."

12:25 to **13:14**: Forty-nine seconds of monologue. While variable between iterations, in each case, the speaker has been a current or former leader of a nation or organization in the possession of nuclear devices. The content of the monologue consistently centers on foreign policy. All monologues documented thus far have corresponded to speeches delivered by the leader in question.

13:14 to **13:30**: A sequence of eight digits as expressed in Morse code via telegraph key, varying for each iteration.

<End Log>

Addendum: When interpreted as a date in the form DD/MM/YYYY, the final sequence of digits in SCP-1246-3 corresponds to a date no less than two centuries in the future. On three occasions, the date 30/07/2071 has occurred. The significance of this date has been classified by O5 Command.

Footnotes
1. Further analysis has shown that this event has roughly a 40% chance of occurring every time a solar flare occurs, without regard to the size of said flare.
2. In an uncontained state, this can create a chain effect of animals being converted into SCP-1246-2. Caution should be taken to avoid such an event.
3. The use of nuclear fission or fusion as an energy source does not

trigger SCP-1246.

« SCP-1245 | SCP-1246 | SCP-1247 »

SCP-1247: LaBeouf Viewer

Item #: SCP-1247

Object Class: Safe

Special Containment Procedures: In the event of a containment breach, SCP-1247 is to be treated as a physically normal, untrained human hostile. Personnel are warned that SCP-1247 is psychologically unstable and cannot distinguish between organisms. Use of lethal force to detain SCP-1247 is not authorised.

SCP-1247 is to be contained in a standard humanoid containment cell. Standard humanoid SCP containment procedures apply. The cell must be proofed against penetration by vermin and insects.

No personnel may make physical contact with SCP-1247 unless they fit the following physical specifications:

- Anatomically male
- Height within 5 cm of 176 cm
- Weight within 10 kg of 74 kg
- Anatomically standard number and positioning of limbs, digits, and appendages (ears, nose, etc.)

Full specifications must be verified before physical contact with SCP-1247 can be authorised. Specifications may be waived during relevant testing.

SCP-1247 is currently undergoing a process of psychological rehabilitation. To assist in this process, all personnel entering its quarters must wear face-obscuring masks, and must not wear any clothing items or accessories made of or incorporating leather.

SCP-1247 is required to attend bi-weekly therapy sessions with Dr. Zhang from 3:00 pm on Tuesdays and Fridays. Session length should not exceed one hour, but reasonable exceptions may be

made at the discretion of Dr. Zhang. Dr. Zhang is required to wear a mask, and must maintain a distance of one meter from SCP-1247 for the duration of all sessions. Dr. Zhang has emphasized that the comfort and safety of SCP-1247 is paramount. An armed security agent must be present in the room for the duration of all sessions.

To ensure psychological stability of SCP-1247, meals provided must not contain meat.

SCP-1247 has requested that no mirrors be brought into its cell.

Description: SCP-1247 is a 37-year-old human male, formerly of , , United States of America. SCP-1247 is biologically normal on almost all accounts. However, testing has revealed some atypical brain activity. Significantly, radiology has revealed the absence of substantial areas of the cerebrum, which appear to have been displaced by the presence of foreign biological matter from an unidentified living organism. This organism has been tentatively classified as a variety of fungus and bears superficial resemblance to mushrooms of the genus *Morchella*, but has yet to be conclusively matched to any recognised terrestrial species. There are currently no plans to remove this organism from SCP-1247.

SCP-1247 exhibits three anomalous effects.

The primary anomalous effect exhibited by SCP-1247 is psychological, and is observable only to SCP-1247 itself. When SCP-1247 is able to observe a live animal, dead animal, or part of an animal, it perceives that animal as American film and television actor Shia LaBeouf. This perceptual effect extends to all of SCP-1247's senses. Regardless of the actual size or shape of the animal, SCP-1247 perceives a life-sized instance of Shia LaBeouf.

Testing has determined that the body position and movements of Shia LaBeouf instances mirror the actual position and movements of the animal as closely as possible without requiring a restructuring of Shia LaBeouf's actual anatomy. For example, an ant perceived by SCP-1247 would take the apparent form of Shia LaBeouf scuttling in an ant-like way, but would be limited in its accuracy by Shia LaBeouf's lack of a thorax, third pair of legs, and other anatomical features possessed by a true ant. Despite this imperfect mimicry,

SCP-1247 claims that Shia LaBeouf instances can perform the same physical feats as the animals they replace, even when this would be physically impossible for the actual Shia LaBeouf. For example, a horse perceived by SCP-1247 took the apparent form of Shia LaBeouf galloping on all fours at the speed of the actual horse, while a bird perceived by SCP-1247 took the apparent form of Shia LaBeouf flying through the air by flapping his arms.

If SCP-1247 observes an animal that would typically lack the anatomical features of Shia LaBeouf, it perceives a normal Shia LaBeouf instance regardless. For example, a worm perceived by SCP-1247 took the apparent form of Shia LaBeouf lying on the ground with his arms and legs present, but seemingly paralysed. Similarly, if SCP-1247 observes a live or dead animal that is missing an anatomical feature, or observes part of an animal, it perceives a full, anatomically complete Shia LaBeouf instance. For example, a cooked chicken wing perceived by SCP-1247 took the apparent form of Shia LaBeouf, with one arm bent into a shape approximating that of the cooked chicken wing. The instance of Shia LaBeouf perceived by SCP-1247 in this test was dead, like the chicken wing, but was whole and uncooked.

Testing has determined that instances of Shia LaBeouf perceived by SCP-1247 reliably match the current physical condition and appearance of the actual Shia LaBeouf. However, when SCP-1247 views parts of animals, or dead animals, the perceived instances lack the presence of life, despite the continued life of the actual Shia LaBeouf.

The secondary anomalous effect exhibited by SCP-1247 is physical, and may be observed by others. When SCP-1247 interacts physically with a live animal, dead animal, or part of an animal, it interacts with that animal as if it were Shia LaBeouf. This anomalous effect impacts on size, weight, and anatomy of the animal as it is interacted with by SCP-1247. For example, in one test SCP-1247 was asked to drag a Shia LaBeouf instance by its arm. Unbeknownst to SCP-1247, the Shia LaBeouf instance was actually a worm. Although the worm possessed no arms, SCP-1247 was seemingly able to grab hold of an invisible arm, and accomplished the task with some difficulty. The test was repeated, with the worm

test subject replaced first by a human, then a cow, and then a chicken fillet. All tests had the same result. SCP-1247 reported that the weight of all four test subjects was identical. Weighing later showed that this was not the case; all four test subjects had weight appropriate to their true forms, even whilst held by SCP-1247. In a later test, SCP-1247 was asked to sever an arm from an instance of Shia LaBeouf. This Shia LaBeouf instance was also a worm, and had no arm or arm equivalent. Regardless, SCP-1247 reported the successfully severing of an arm. SCP-1247 was asked to describe the perceived arm, but reported neither arm nor one-armed Shia LaBeouf, but rather two whole, dead Shia LaBeoufs, one of which then disappeared.

The exception to both of these anomalous effects involves a live animal, dead animal, or part of an animal that is located inside of SCP-1247. When this occurs, the animal is perceived as it would be by a normal human, and physically interacted with as such.

Neither SCP-1247's primary nor secondary anomalous effects extend to photographs, recordings, live video, or other non-physical, non-biological forms or depictions of animals. However, SCP-1247's primary anomalous effect does extend to any animals observed in a reflection or through a lens. Neither SCP-1247's primary nor secondary effects extend to animal byproducts, or to organisms that are not part of the kingdom *Animalia*. SCP-1247's anomalous effects have not yet been tested on a cellular level.

The tertiary effect exhibited by SCP-1247 is psychological, and is observable only to SCP-1247 itself. SCP-1247 is incapable of viewing specimens of any species of morel mushroom, genus *Morchella*. This effect extends to live, partial, and dead specimens of morel mushroom, as well as all non-physical, non-biological representations of morel mushroom where it can be reasonably identified as such. This effect does not extend to textual descriptions of morel mushrooms. This effect does not extend to any of SCP-1247's other senses. There is no corresponding physical effect.

Note: For a more in-depth study of SCP-1247's three anomalous effects, personnel may refer to Experiment Log SCP-1247.

The manner in which SCP-1247 is able to exhibit these anomalous effects is unknown. According to SCP-1247, none of these effects were manifest before the year 20 . In April of that year, SCP-1247 purchased and viewed a video tape recording of the film 'Holes', starring Shia LaBeouf. Approximately 30 minutes into viewing the movie, SCP-1247 was struck by a violent pain in the front of his head, and blacked out for a period of time it estimates to be less than ten seconds. Upon awakening, SCP-1247 resumed watching the film, and then went to sleep. At this stage, no anomalous effects had been observed. The next day, SCP-1247 exited its home and observed what it perceived to be Shia LaBeouf, naked and digging through its garbage. Based on its reported behaviour, researchers have determined that the supposed Shia LaBeouf was most likely a raccoon. This incident marks the first exhibition of SCP-1247's primary anomalous effect.

Following this incident, SCP-1247 alerted police to what it believed to be the actual Shia LaBeouf behaving under the influence of narcotics. SCP-1247 then took shelter within its home. When the police arrived, SCP-1247 exited the house, only to discover that both of the officers present were Shia LaBeouf. SCP-1247's recount of the following events is confused due to the trauma endured by SCP-1247, and SCP-1247's obvious perceptual disability. Researchers have determined that the most likely sequence of events is that SCP-1247 fled the officers, encountered a flock of pigeons on the way to its car, and attempted to drive away. The presence of an insect (believed to be a blowfly) in SCP-1247's vehicle led to a panic attack and subsequent crash. SCP-1247 attempted to physically assault the blowfly. This incident marks the first exhibition of SCP-1247's secondary anomalous effect.

Following the altercation, SCP-1247 fled the car, and later the town of itself. SCP-1247 took up residence in an abandoned cabin in the forest north of . At this stage, SCP-1247 believed that the instances of Shia LaBeouf were some sort of demonic beings. SCP-1247 remained in the cabin for years, subsisting from water gathered through a rainwater tank, and by eating grasses, berries, occasional scavenged food, and the flesh of Shia LaBeouf instances it hunted in the forest. Attempts by SCP-1247 to cut, cook, or otherwise prepare its meat resulted in the same perceived outcome:

whole, uncooked instances of Shia LaBeouf. For this reason, SCP-1247 took to biting chunks out of the Shia LaBeouf instances. The true nature of SCP-1247's meals was revealed to it only once the bite had been taken. It is believed that this uncertainty, combined with the psychological trauma of having to frequently devour what appeared to be human bodies (as well as the constant trauma of being surrounded by supposedly-demonic Shia LaBeoufs), led to an eventual psychological breakdown.

SCP-1247 was recovered from its cabin outside of following a police investigation of a recent homicide and cannibalism case, thought to be related to the spate of animal slayings and mutilations around the area. After being taken into police custody, SCP-1247 attempted to explain its primary anomalous effect. Although police dismissed this effect as simple hallucination, it caught the attention of embedded Foundation personnel. Foundation Agent was dispatched to investigate further, and took SCP-1247 into Foundation custody after witnessing a display of its secondary anomalous effect.

SCP-1247's copy of 'Holes' has been recovered. Testing has determined no anomalous effects. SCP-1247 has expressed disinterest in a second viewing.

« SCP-1246 | SCP-1247 | SCP-1248 »

Experiment Log SCP-1247

Primary Effect Testing

EXPERIMENT SCP-1247-E1-A

Purpose: To establish a basic understanding of SCP-1247's primary effect.
Researcher: Dr Huang

EXPERIMENT SCP-1247-E1-A-01
Stimulus: Anatomically standard human male.
Perceived Result: Anatomically standard Shia LaBeouf. Nude.

EXPERIMENT SCP-1247-E1-A-02
Stimulus: Anatomically standard human male. Test subject performs a series of movements.
Perceived Result: Shia LaBeouf performs same movements.

EXPERIMENT SCP-1247-E1-B

Purpose: To examine SCP-1247's primary effect in relation to non-human test subjects.
Researcher: Dr Huang

EXPERIMENT SCP-1247-E1-B-02
Stimulus: Anatomically standard horse.
Perceived Result: Anatomically standard Shia LaBeouf, standing on all fours, mimicking stance of horse.

EXPERIMENT SCP-1247-E1-B-03
Stimulus: Anatomically standard worm.
Perceived Result: Anatomically standard Shia LaBeouf lying on ground. Shia LaBeouf mimics actual position and movement of worm. All limbs appear paralyzed.

EXPERIMENT SCP-1247-E1-B-04

Stimulus: Anatomically standard ant.
Perceived Result: Anatomically standard Shia LaBeouf. Shia LaBeouf mimics actual position and movement of ant. Front legs of ant correspond to arms of Shia LaBeouf. Back legs of ant correspond to legs of Shia LaBeouf. Middle legs of ant correspond to any part of Shia LaBeouf.

EXPERIMENT SCP-1247-E1-C

Purpose: To examine SCP-1247's primary effect in relation to subjects with atypical anatomy.
Researcher: Dr Huang.

EXPERIMENT SCP-1247-E1-C-01
Stimulus: Anatomically standard human cadaver.
Perceived Result: Anatomically standard Shia LaBeouf.

EXPERIMENT SCP-1247-E1-C-02
Stimulus: Human cadaver. Missing left arm.
Perceived Result: Anatomically standard Shia LaBeouf.

EXPERIMENT SCP-1247-E1-C-03
Stimulus: Beef steak (uncooked).
Perceived Result: Anatomically standard Shia LaBeouf (uncooked).

EXPERIMENT SCP-1247-E1-C-04
Stimulus: Beef steak (medium rare).
Perceived Result: Anatomically standard Shia LaBeouf (uncooked).

EXPERIMENT SCP-1247-E1-C-05
Stimulus: Beef steak (medium rare). Researchers divide steak into two halves through use of scalpel.
Perceived Result: Scalpel passes through Shia LaBeouf with no apparent effect. Upon complete division of steak, Shia LaBeouf instantaneously replaced by two (2) anatomically standard Shia LaBeoufs.

EXPERIMENT SCP-1247-E1-C-06
Stimulus: Steak divided into twenty (20) small pieces. Pieces arranged in disorganized pile.
Perceived Result: Single anatomically standard Shia LaBeouf.

Researchers theorise that this Shia LaBeouf is SCP-1247's perception of the piece of steak most clearly in its line of sight, and that this perceived Shia LaBeouf blocks SCP-1247's view of the other pieces, preventing perception of additional Shia LaBeoufs.

EXPERIMENT SCP-1247-E1-C-07
Stimulus: Mince created from beef steak and mixture of meats from nine (9) unique sources.
Perceived Result: Single anatomically standard Shia LaBeouf.

EXPERIMENT SCP-1247-E1-C-08
Stimulus: Slurry created from mince. Presented in petri dish.
Perceived Result: Single anatomically standard Shia LaBeouf. Sitting in petri dish.

EXPERIMENT SCP-1247-E1-C-09
Stimulus: Slurry mixed with sawdust at ratio of 10:1. Presented in petri dish.
Perceived Result: Single anatomically standard Shia LaBeouf. Sitting in petri dish.

EXPERIMENT SCP-1247-E1-C-10
Stimulus: Slurry mixed with sawdust at ratio of 1:10. Presented in petri dish.
Perceived Result: Single anatomically standard Shia LaBeouf, partially coated in sawdust. Sitting in petri dish.

EXPERIMENT SCP-1247-E1-C-11
Stimulus: Slurry mixed with sawdust and red ink at ratio of 1:10:20. Presented in petri dish.
Perceived Result: Single anatomically standard Shia LaBeouf, partially coated in mixture of sawdust and red ink. Sitting in petri dish.

EXPERIMENT SCP-1247-E1-C-12
Stimulus: Slurry mixed with sawdust and red ink at ratio of 1:10:20. Presented in test-tube.
Perceived Result: Single anatomically standard Shia LaBeouf, partially coated in mixture of sawdust and red ink. One finger extended into test tube; Shia LaBeouf's body extends straight into the air.

EXPERIMENT SCP-1247-E1-C-13
Stimulus: Slurry mixed with sawdust and red ink at ratio of 1:10:20. Presented in test-tube. Stirring rod placed in test tube.
Perceived Result: Single anatomically standard Shia LaBeouf, partially coated in mixture of sawdust and red ink. One finger extended into test tube; Shia LaBeouf's body extends straight into the air. Shia LaBeouf has a stirring rod stuck into its left nostril.

EXPERIMENT SCP-1247-E1-C-14
Stimulus: Slurry mixed with sawdust and red ink at ratio of 1:10:20. Presented in puddle, mostly obscured by overturned table. Puddle extends from beneath table at two (2) points.
Perceived Result: Two (2) anatomically standard Shia LaBeoufs, partially coated in mixture of sawdust and red ink.

Dr Huang reassigned to administrative duties.

EXPERIMENT SCP-1247-E1-D

Purpose: To determine whether SCP-1247's primary effect is psychological or truly affects senses.
Researcher: Dr Chen.

EXPERIMENT SCP-1247-E1-D-01
Stimulus: Horse stands with front legs on one mark, back legs on a second mark.
Perceived Result: Shia LaBeouf standing equidistant from each mark.

EXPERIMENT SCP-1247-E1-D-02
Stimulus: Message placed on wall behind horse, such that the horse's rear obscures the message from SCP-1247's line of sight.
Perceived Result: SCP-1247 is able to read the message, as the anatomy of the perceived Shia LaBeouf is insufficient to obscure it.

EXPERIMENT SCP-1247-E1-D-03
Stimulus: Low-intensity laser aimed at eye of SCP-1247. Path of laser then blocked by horse's rear. Laser activated.
Perceived Result: SCP-1247 reacts to laser. Researchers observe that laser is successfully blocked by horse.

EXPERIMENT SCP-1247-E1-E

Purpose: To examine SCP-1247's primary effect in relation to animals passing from direct line of sight, and to investigate the hypothesis outlined in Experiment SCP-1247-E1-C-06.
Researcher: Dr Chen.

EXPERIMENT SCP-1247-E1-E-01
Stimulus: Anatomically standard ant. Ant exits SCP-1247's line of sight.
Perceived Result: Shia LaBeouf instantaneously disappears.

EXPERIMENT SCP-1247-E1-E-02
Stimulus: Ant placed within transparent container. Volume of container is 4 cm^3.
Perceived Result: Shia LaBeouf pressed against exterior of container. Shia LaBeouf mimics the movement of the ant within the container, but remains affixed to the container.

EXPERIMENT SCP-1247-E1-E-03
Stimulus: Swarm of twenty (20) anatomically standard blowflies.
Perceived Result: SCP-1247 exhibits signs of heightened distress. Test temporarily suspended and SCP-1247 removed from testing area. SCP-1247 later reports having seen an inconsistent number of Shia LaBeoufs flying through the air, appearing and disappearing instantaneously and at random. SCP-1247 stresses the "leering eyes" and "slurping mouths" of each Shia LaBeouf.

EXPERIMENT SCP-1247-E1-F

Purpose: To examine SCP-1247's primary effect in relation to photographs of animals.
Researcher: Dr Chen.

EXPERIMENT SCP-1247-E1-F-01
Stimulus: Photograph of human test subject D-2474.
Perceived Result: SCP-1247 accurately perceives photograph. SCP-1247 exhibits strong positive emotional reaction.

Secondary Effect Testing

EXPERIMENT SCP-1247-E2-A

Purpose: To examine SCP-1247's secondary effect in relation to anatomy,
Researcher: Dr Chen.

EXPERIMENT SCP-1247-E2-A-01
Subject: Anatomically standard worm.
Test: SCP-1247 instructed to drag Shia LaBeouf across the room by his arm.
Result: SCP-1247 appears to take hold of an invisible arm located nearby the worm. The worm instantaneously moves, 'snapping' into position in SCP-1247's hand. SCP-1247 appears to mime dragging a body across the room. The task is accomplished with moderate difficulty.

EXPERIMENT SCP-1247-E2-A-(02, 03, 04)
Experiment SCP-1247-E2-A-01 is repeated, with the test subject replaced first by a human, then a cow, and then a chicken fillet. All tests had the same result. SCP-1247 reported that the weight of all four test subjects was identical.

EXPERIMENT SCP-1247-E2-B

Purpose: To examine SCP-1247's secondary effect in relation to weight.
Researcher: Dr Chen

EXPERIMENT SCP-1247-E2-B-(01, 03, 05, 07)
Subjects: Common earthworm, human, cow, chicken fillet.
Test: SCP-1247 instructed to hold each test subject in a fireman's carry.
Result: Even where the anatomy of the test subject would make this difficult or impossible, SCP-1247 accomplished the task with the same level of moderate difficulty. SCP-1247 reported that the weight of all four test subjects was identical.

EXPERIMENT SCP-1247-E2-B-(02, 04, 06, 08)
Subjects: Common earthworm, human, cow, chicken fillet.
Test: SCP-1247 instructed to hold test subject, then step onto scales.

Results:

Weight of SCP-1247: 82.409 kg

Weight of worm: 0.001 kg
Total weight: 82.410 kg

Weight of human: 72.020 kg
Total weight: 154.429 kg

Weight of cow: 640.500 kg
Total weight: 722.909 kg

Weight of chicken fillet: 0.350 kg
Total weight: 82.759 kg

EXPERIMENT SCP-1247-E2-C

Purpose: To examine SCP-1247's secondary effect when applied indirectly.
Researcher: Dr Chen

EXPERIMENT SCP-1247-E2-C-01
Subject: Chicken fillet.
Task: SCP-1247 asked to place a mask over Shia LaBeouf's face without making direct contact.
Result: SCP-1247 was able to accomplish this task. After SCP-1247 released the mask, it remained in place, midair above the chicken fillet. When SCP-1247 ended observation, its second anomalous effect ceased to affect the chicken fillet and the mask fell to the floor.

EXPERIMENT SCP-1247-E2-C-02
Stimulus: A soft projectile was launched toward SCP-1247 such that it would be blocked by a horse's rear, but not by a perceived Shia LaBeouf.
Result: The projectile was blocked by the rear. SCP-1247 reports seeing Shia LaBeouf "snap" into position to block the projectile at the point of impact.

EXPERIMENT SCP-1247-E2-C-03
Stimulus: Two soft projectiles were launched simultaneously, such that one would be blocked by a horse's rear, and the other by the

same horse's neck, but neither would be blocked by a perceived Shia LaBeouf.
Result: Similar result to previous experiment. Shia LaBeouf reportedly moved nigh-instantaneously to block each projectile.

EXPERIMENT SCP-1247-E2-C-04
Stimulus: A wide spray of water was fired from a hose, such that it would be mostly blocked by the body of a horse, but would not be blocked by a perceived Shia LaBeouf.
Result: Shia LaBeouf remained in place, while the spray of water was blocked by an invisible barrier in the shape of a horse.

Tertiary Effect Testing

EXPERIMENT SCP-1247-E3-A

Purpose: To establish a basic understanding of SCP-1247's tertiary effect.
Researcher: Dr Zhang / Dr Chen

DISCOVERY OF TERTIARY EFFECT
SCP-1247's tertiary effect was discovered during a routine therapy session. SCP-1247 was shown a series of flashcards, printed with images of various animals and non-animal organisms. When shown an image of a morel mushroom, SCP-1247 perceived a blank card.

EXPERIMENT SCP-1247-E3-A-01
Stimulus: Live morel mushroom.
Perceived Result: SCP-1247 is unable to perceive the stimulus.

EXPERIMENT SCP-1247-E3-A-02
Stimulus: Live morel mushroom. Researchers divide the mushroom in half with a scalpel.
Perceived Result: SCP-1247 is unable to perceive the stimulus. SCP-1247 appears uncomfortable, and reports a minor headache.

EXPERIMENT SCP-1247-E3-A-03
Stimulus: Divided morel mushroom. Researchers attempt to ignite the mushroom.
Perceived Result: SCP-1247 exhibits great distress (screams). The

mushroom is propelled away from the researchers by an unseen force. SCP-1247 loses consciousness and falls to the ground, hitting its head against a wall. SCP-1247 removed from testing room and scheduled for an MRI/CT scan.

RESULTS OF MRI / CT SCAN
SCP-1247 is uninjured. However, results of spectrometry reveal that the foreign fungal entity appears to have extended further into SCP-1247's brain. The fungal entity now occupies over % of SCP-1247's brain.

Testing of SCP-1247's tertiary effect has been indefinitely suspended. SCP-1247 is now required to wear a padded crash helmet at all times.

SCP-1248: Personality Recorder

Item #: SCP-1248

Object Class: Safe-nuntii

Special Containment Procedures: SCP-1248 may be kept in a standard containment locker at Site 20, along with all cassette tapes that it has recorded. SCP-1248 is to be tested only in a soundproof room with a separate observation area.

Testing of recordings made by SCP-1248 (hereby SCP-1248-1) should take place only on separate cassette players to avoid undue harm to SCP-1248. Testing requires permission of at least two Level 3 personnel.

Description: SCP-1248 is a Walkman WM-D6C recording device with wear and tear consistent with regular usage. As with normal devices of this model, SCP-1248 is capable of recording sounds when a cassette tape is inserted. The name "Eric" is carved into the underside of the device.

SCP-1248's anomalous properties manifest when a person listens to an instance of SCP-1248-1 with one or more human voices audible.[1] Any subject who hears the recording will become listless and unresponsive until the recording stops or the subject is otherwise unable to hear SCP-1248-1. Upon recovery, all subjects will exhibit the personality traits of one person who produced sound heard in SCP-1248-1. This change is permanent and affects all facets of the subject's personality. However, memories, intelligence, and skills will usually remain unaltered.

It has been found that subjects will remain unaffected by instances of SCP-1248-1 listened to after their first exposure, except in cases where the exposure is to their own voice. Note that the emotion present in the voice recorded by SCP-1248-1 is usually inconsequential.

Addendum: It has been found that altering said recordings may alter their effect on subjects. See **Testing Log 1248-A** for further information.

Excerpts from Testing Log 1248-A

Sound Recorded: A dog barking.
Subjects: D-3639.
Special Conditions: None.
Result: D-3639 appeared highly confused and ceased to speak. Further, D-3639 lost the capability to process complex information.

Sound Recorded: Dr. Hathaway singing “Eye of the Tiger”.
Subjects: Drs. Schroeder, Hathaway, and White.
Special Conditions: Dr. Hathaway had consumed large quantities of alcohol prior to testing. Test was unauthorized. None were aware of SCP-1248's properties.
Result: As expected; however, all three subjects showed signs of alcohol intoxication and continued to do so after they would normally become sober. After one week, the three were dosed with amnestics and remanded to a civilian care facility.

Sound Recorded: Agent Dixon saying his name.
Subjects: Name unknown, a captured agent of the Chaos Insurgency.
Special Conditions: Agent Dixon has demonstrated remarkable loyalty towards the Foundation.
Result: The subject appeared cooperative and attempted to divulge sensitive information regarding a suspected CI base near New Delhi, but experienced severe throat swelling in the process of doing so. In addition, large amounts of scar tissue appeared throughout the subject's respiratory tract. Subject died shortly thereafter of suffocation.
Note: Use of anomalous items for counterintelligence purposes by the Chaos Insurgency confirmed.

Sound Recorded: D-2180 saying the word "something".
Subjects: D-2344.
Special Conditions: The tape recorder used to play SCP-1248-1 was heavily damaged.

Result: D-2344 exhibited behavior sometimes consistent with D-2180's personality and sometimes with her own personality, switching between the two without warning. D-2344 was apparently unaware of these shifts, although she did claim to feel fatigued.

Sound Recorded: D-2180 saying the word "something".
Subjects: D-2360.
Special Conditions: The tape was played backwards.
Result: D-2360 gained the personality of D-2180 as expected, except that D-2360 also became a compulsive liar. No underlying neurological cause was found.

Sound Recorded: D-2180 reading a short paragraph from a Foundation training manual.
Subjects: D-2348.
Special Conditions: D-2180's voice was altered using a phase vocoder and "Auto-Tune" software.
Result: While D-2348's personality resembled that of D-2180 nominally, D-2348 did not express emotion physically or vocally except via direct statements. Further, subject noted the presence of misanthropic tendencies not present in D-2180.

Sound Recorded: None.
Subjects: D-5552.
Special Conditions: SCP-1248's microphone was blocked prior to recording.
Result: D-5552 showed signs of fear and expressed discomfort with being tangible. When allowed to do as he wished, D-5552 attempted to self-immolate.

Footnotes
1. Testing indicates that other audio input has the potential to trigger these effects. Further testing is required to determine the exact parameters of this capacity.

« SCP-1247 | SCP-1248 | SCP-1249 »

SCP-1249: Pestilence

Item #: SCP-1249

Object Class: Euclid

Special Containment Procedures: As of this writing, SCP-1249 is contained in Sector- . Subject is to be contained in a 6 m x 6 m airtight BSL-4 containment cell with two-stage airlock, observed via closed-circuit surveillance camera at all times. The pressure inside SCP-1249 cell should be kept at 70 kilopascals. The cell is to be fitted with a bed, a bathroom with a contained plumbing system, a filtered air vent, and an observation window. Lighting in the containment cell should be limited to 30 candelas at all times. Subject is to be given 500 grams of raw meat, two kilograms of live invertebrates, and one kilogram of plant matter three times a day. SCP-1249's containment cell is to be cleaned and disinfected at least twice daily by personnel wearing level-A hazmat suits.

Description: SCP-1249 is a humanoid entity weighing around 76 kilograms, composed entirely of terrestrial invertebrates from many species. While CAT scans indicate the presence of a human skeletal structure, the subject's flesh and internal organs have been completely replaced by the invertebrate swarm. The swarm functions in place of the subject's muscular system and organs. Any individual removed from the swarm shows no anomalous property until reunited with SCP-1249. Subject can assimilate normal invertebrate organisms into the swarm in the event of injury. SCP-1249's humanoid skeletal structure is incapable of regenerating from damage. When the subject is exposed to light with intensity above 45 candelas, subject will lose its humanoid shape and the swarm will disperse over an area approximately 300 m^2 in size.

SCP-1249 constantly excretes clear viscous fluid at an average of 30 mL per hour. Microscopic examination has revealed that the fluid contains a variety of microbes and pathogens. Identified pathogens

include *Variola major*, *Mycobacterium leprae*, *Yersinia pestis*, and *Zaire ebolavirus*. SCP-1249 fluid appears to sustain the microbes indefinitely and allow infection to occur through brief skin contact.

Subject possesses no vocal capability but can hear and write reasonably well, allowing adequate communication though its lack of fine motor skills often renders its writing indecipherable. SCP-1249 writes principally in Classical Arabic but also displays some knowledge of Aramaic.

Addendum-01: SCP-1249 was discovered near a small town in , North America at / /20 after a minor outbreak of illness that resembled English sweating sickness, followed by the frequent sighting of what witness described as a 'man made out of bugs' at night. Subject was contained five days after initial sighting and amnestics were successfully administered to each witness.

Addendum-02: The following is a translation from the first communication attempt to SCP-1249 by Foundation personnel on / /20 :

> We are cursed by Him
> He [Unable to translate] vow
> [Unable to translate]…ni Adam
> Only [Unable to translate]

« SCP-1248 | SCP-1249 | SCP-1250 »

SCP-1250: Alternate Reality Recorders

Item #: SCP-1250

Object Class: Safe

Special Containment Procedures: SCP-1250 is to be kept in a large double-lock safe, in a fire-proof enclosure at Site- . SCP-1250's storage container is not to be opened by anyone without level three (3) clearance or higher.

Instances of SCP-1250-1 and SCP-1250-2 that have been expended are to be properly labeled and filed away in a neighboring room, categorized by date, length, and content. Tapes may be reviewed freely by all permitted staff. For a full list of available recordings, please refer to document [REDACTED]. Researchers wishing to use blank SCP-1250-1 or SCP-1250-2 samples for experimentation must submit a formal request to Dr. Carter, with the details of the experiment(s) in question and the required number of samples.

Description: As of / /20 , SCP-1250 is a collection of compact audio cassette tapes, and VHS tapes (SCP-1250-1 and SCP-1250-2 respectively). SCP-1250-1 and SCP-1250-2 samples are ashen in color and devoid of any form of branding or labels. Internally, they are completely indistinguishable from other tapes of similar design, and can be used via any standard audio/video recording equipment. However, SCP-1250-1 and SCP-1250-2 samples do not accurately record events. Upon playback of an SCP-1250-1 or SCP-1250-2 tape, there are notable differences between the content of captured audio/video recordings and the real-world occurrences that participants remember observing.

These alterations, while inconsistent, are initially never drastic. Situations presented in recordings are largely the same, but subtle changes (differences in pronunciation, word choice, furniture present in room, gender/age of recorded individuals) are found when

compared to standard recordings. In the case of SCP-1250-2, visual discrepancies will manifest in place of aural, as video samples produce no audio when reviewed. Multiple simultaneous recordings are noted to further alter proceedings, with greater numbers of SCP-1250-1 or SCP-1250-2 tapes present during a single session resulting in more dramatic variations. The only variable consistent across all samples are the exact date, time, & location, which are 100% identical in every recording of a given event.

Testing has also shown that SCP-1250-1 and SCP-1250-2 samples do not appear to have any storage limit. Recording can continue indefinitely until manually stopped. Especially lengthy recordings have not been shown to exhibit a greater number of changes than shorter ones, even if a large variety of events are to occur, or the recording device were to travel a considerable distance during its duration. SCP-1250-1 and SCP-1250-2 can not be overwritten, and all attempts to transfer data to different formats have failed.

Addendum 1250-I: On 02/15/199 , a test was performed that had researchers initiate a set of 3 SCP-1250-2 and 3 standard video recordings at a singular location, and then transport a pair of each in separate directions. All 6 recordings start the same way, with no notable differences occurring until after the groups were significantly separated from one another. As a result of this event, staff now believe that alterations will not manifest in the presence of other partial recordings, and that the recorded events of an SCP-1250-1 or SCP-1250-2 sample are not written in real-time.

Addendum 1250-II: On 04/02/2001, Dr. T staged a reenactment of an earlier SCP-1250-1 test conducted on / /199 . The conditions of the control tape were recreated down to the finest detail; all involved staff reprised their roles, and repeatedly lied about the date and time of the proceedings. The SCP-1250-1 results received were not the same as those of the earlier test.

Addendum 1250-III: A series of trials performed between 07/ /2006 and 09/ /2006 by Dr. T and Dr. Carter have concluded that SCP-1250-1 and SCP-1250-2 recordings will present fewer changes when recorded in the presence of an event with an exceedingly high number of potential outcomes, particularly games of chance. Footage of gambling paraphernalia in use (cards, dice, slot-

machines, roulette wheels, darts) will almost never showcase alterations outside the central object(s), regardless of how many additional samples are used to record.

Addendum 1250-IV: SCP-1250-2 testing has been put on indefinite hiatus. Please see Experiment Logs 1250-A and 1250-B for more details.

« SCP-1249 | SCP-1250 | SCP-1251 »

Experiment Log 1250-A: *Audio Recordings.*

Note: Please be sure to include your name, the date, and duration of the recording on all records.

Name: Dr. T
Date: / /199
Duration: 00:02:47

Dr. T is heard reciting an adaptation of the poem "Der Erlkonig" by Johann Wolfgang von Goethe.

Control tape: Dr. T reads the poem in its entirety.

SCP-1250-1 tape: The poem is read in its native German by an unidentified voice.

Name: Dr. Edwards
Date: 03/ /2000
Duration: 00:26:19

A television in the background plays a syndicated episode of the popular children's show [REDACTED].

Control tape: The episode follows a character named Billy as he helps a close friend plan an important birthday party.

SCP-1250-1 tape: This episode follows the same Billy attempting to try out for the school basketball team. Curiously there are no commercial breaks, and a portion of the same episode plays again before the tape is

stopped.

Name: Dr. T
Date: 09/ /200
Duration: 00:00:14

Dr. T introduces himself by saying; 'Hello, I'm T . It's a pleasure to meet you'.

Control tape: Dr. T says the above greeting.

SCP-1250-1 tape (1): A female voice says the greeting. The first name is replaced with Emily instead of .

SCP-1250-1 tape (2): A series of loud beeps and clicks play for the duration of the recording. There is no recognizable pattern.

SCP-1250-1 tape (3): Dr. T is heard attempting to say the greeting. He sounds very weak, and takes several labored breaths after every few words. He does not finish the greeting before the recording ends.

SCP-1250-1 tape (4): Two separate voices say the greeting. They are very stoic, and they speak in perfect unison. Neither voice can be identified as that of Dr. T .

SCP-1250-1 tape (5): The tape sounds as though it is immersed in water. A light tapping can be heard somewhere nearby.

SCP-1250-1 tape (6): A crowd of people can be heard murmuring in the room. All of the voices appear to be uttering the greeting, though it is impossible to tell if Dr. T is among them.

SCP-1250-1 tape (7): Dr. T is heard counting down from 14, reaching 0 just as the recording ends.

SCP-1250-1 tape (8): The tape is entirely silent for the 14 second duration.

Name: Dr. , with Dr. T monitoring.
Date: /11/200
Duration: 00:08:04

Dr. interviews Mr. . Several times during the interview, Dr. will randomly hold up a card with a simple drawing on it, and ask Mr. to describe what he sees. A total of 7 cards were held up during the course of the interview. It's important to note that aside from the card results, both interviews were the same.

Control tape: Mr. 's responses to the image cards: cat, airplane, flower, barn, teddy bear, horse, apple.

SCP-1250-1 tape: Mr. 's responses to the image cards: pencil, window, swan, tree, airplane, bus, moon. All responses given were for cards that did exist in the deck.

Name: Dr. Edwards, with Dr. performing.
Date: 6/ /2006
Duration: 00:11:02

Dr. was asked to play Moonlight Sonata on an old grand piano. He has very little experience playing the instrument.

Control tape: Dr. hits several bum notes, and re-attempts several sections of the song to correct mistakes. He politely asks to stop playing after attempting for over 10 minutes, and the recording is ceased by Dr. Edwards.

SCP-1250-1 tape (1): Dr. handles the instrument flawlessly, playing with considerable grace, and receives a roaring applause from the other researchers present. In the place of Moonlight Sonata, the song played by Dr. is unknown.

SCP-1250-1 tape (2): A single note is played in 2 second intervals until 00:09:09. No other sounds can be

heard for the remainder of the recording.

Name: Dr. Carter
Date: / /200
Duration: 00:08:06

Dr. Carter calmly asks questions regarding the nature of SCP-1250, SCP-1250-1, & SCP-1250-2.

Control tape: Dr. Carter asks the aforementioned questions.

SCP-1250-1 tape (1): Dr. Carter can be heard talking, though he is very muffled, almost as if he were speaking from the other side of a wall. The nature of his speech is entirely indecipherable.

SCP-1250-1 tape (2): A loud, atonal screeching emanates from the tape for the entire duration of the recording.

Name: Dr. T
Date: / /2009
Duration: 00:45:03

Three tapes were left to record an empty room for 45 minutes.

Control tape: Dr. T is heard exiting the room as the recording begins. Apart from a nearby door being closed at 00:27:01, the recording is entirely silent until Dr. T 's return at 00:44:51 to end the recording.

SCP-1250-1 tape (1): Dr. T is heard exiting the room as the recording begins. Infrequently, a light shuffling can be heard to the direct left. At 00:05:02 heavy, deliberate footsteps are slowly heard approaching from the left and continuing on past the empty room to the right. They can no longer be heard at 00:24:44, and the shuffling ceases at this point. Dr. T reenters the room at 00:45:16 to end the recording.

SCP-1250-1 tape (2): Dr. T is heard exiting the room as the recording begins. At 00:13:08 a loud crash is heard coming from the right. Another loud crash occurs at 00:16:02, and an even louder one at 00:19:17. Something begins pounding on the wall in the hall outside the empty room at 00:26:20 and continues to do so with a consistent intensity. The door to the empty room is heard being torn from the frame at 00:44:10 as something proceeds to thrash it around the room. The tape cuts off at 00:45:03.

Experiment Log 1250-B: *Video Recordings*

Note: Please be sure to include your name, the date, and duration of the recording on all records. Due to the omission of audio by SCP-1250-2 video samples, all descriptions provided should cover only what is seen during the control tapes, not what is heard.

Name: Dr. And Dr.
Date: / /199
Duration: 00:00:43

Dr. Pitches a baseball to Dr. from a distance of 15 meters.

Control tape: Dr. 's bat is seen making contact with the ball, sending the ball flying far past the view of the camera. Dr. claps in response to the home run.

SCP-1250-2 tape: Dr. is seen stifling a cough, delaying the pitch by 4 seconds. Dr. 's bat is seen making contact with the ball, resulting in a foul.

Name: Dr. T
Date: / /1997
Duration: 02:16:25

Three cameras were pointed at a television playing the contents of another SCP-1250-2 sample. The contents of this sample included a [DATA EXPUNGED].

Control tape: The contents of the original SCP-1250-2 sample are seen clearly on the screen.

SCP-1250-2 tape (1): The tape came out blank, having recorded no material.

SCP-1250-2 tape (2): The tape came out blank, having recorded no material.

Name: Dr. And Dr.
Date: / /199
Duration: 00:13:24

Two cameras were set on a small table in the middle of a large concrete room, facing in opposite directions.

Control tape: The room remains empty, and nothing occurs for the entire duration of the film.

SCP-1250-2 tape: A series of empty cans are thrown from behind the camera toward the wall by an unseen individual. This action persists for the entire duration of the recording.

Name: Dr. Carter
Date: / /2006
Duration: 00:00:07

Dr. Carter set up a group of 13 cameras to record him rolling a pair of six-sided dice.

Control tape: Dice Result: 11

SCP-1250-2 tape (1): Dice Result: 3

SCP-1250-2 tape (2): Dice Result: 9

SCP-1250-2 tape (3): Dice Result: 16

SCP-1250-2 tape (4): Dice Result: 5

SCP-1250-2 tape (5): Dice Result: 108

SCP-1250-2 tape (6): Dice Result: ☻≈ƒå

SCP-1250-2 tape (7): Dice Result: 4

SCP-1250-2 tape (8): Dice Result: 0

SCP-1250-2 tape (9): Dice Result: 7

SCP-1250-2 tape (10): Dice Result: 3/4

SCP-1250-2 tape (11): Dice Results: 2

SCP-1250-2 tape (12): Dice Results: [REDACTED]

Name: Agent H , with Dr. Carter & Dr. T monitoring.
Date: / /200
Duration: 00:00:23

Agent H was asked to fire 3 shots at Personnel D-32907 using his M9, from a distance of 22.5 meters. The Agent was also asked to intentionally try and avoid hitting D-329071 during the experiment, though this information was not shared with the subject.

Control tape: The first two shots miss the subject. The 3rd strikes him directly in the right shoulder, the subject clutching at the wound and reeling in pain before the recording ends.

SCP-1250-2 tape (1): All 3 shots miss the subject without incident.

SCP-1250-2 tape (2): All 3 shots contact with the subject's chest and abdomen, knocking them to the floor.

SCP-1250-2 tape (3): Agent H is seen standing directly behind D-32907, with his firearm pressed against the backside of the subject's head. He fires a single shot,

killing the subject instantly, and stares at the camera for the remainder of the recording.

SCP-1250-2 tape (4): D-32907 is replaced with a specimen of [REDACTED]. Agent H is killed during the ensuing conflict.

Name: Dr. T
Date: / /200
Duration: 09:14:36

Four cameras were left overnight in front of a television blaring static.

Control tape: The static is consistently seen for the duration of the tape.

SCP-1250-2 tape (1): In place of the static, stock footage of spiders is seen. The majority of the footage focuses on the spiders capturing and eating prey.

SCP-1250-2 tape (2): In place of the static, black and white footage of a deceased elderly man is seen. He sits slumped in a chair next to an ornate lamp, in a room devoid of any other furniture. At 00:05:06 his body begins falling to pieces, starting from the top down. This process is subtle at first, as it takes up until 09:12:00 to fully complete and is more easily observed when the footage is sped up.

SCP-1250-2 tape (3): The television is off, and a lamp behind the camera can be seen in the television's reflection. A silhouetted figure is seen passing through the reflection on occasion.

Name: Dr. T
Date: / /200
Duration: 06:28:38

Six cameras recorded several minutes of a Little League baseball game in Aberdeen, Maryland.

Control tape: Children play Little League baseball. One team wears light blue jerseys while the other team wears yellow jerseys.

SCP-1250-2 tape (1): Identical to control, except that a particular player wears the uniform number "8" instead of "6" per the control recording.

SCP-1250-2 tape (2): Identical to control, except that a female spectator to the game has been replaced by Lana Neal.

SCP-1250-2 tape (3): Identical to control, except that the position and orientation of the shadows of objects shown in the recording suggests the presence of more than one sun-like source of illumination.

SCP-1250-2 tape (4): Rules of game appear to have changed - pitcher and fielding team seem to be throwing the ball at the batter's head with intent to injure, following which the batter chases the pitcher around the field, attempting to beat him with the bat. Umpire, coaches and spectators appear to regard this behavior as normal.

SCP-1250-2 tape (5): Identical to control, except that game participants and spectators appear to be reciting a prayer to Dažbog (Slavic pagan sun god) in the Old Church Slavonic language while playing.

Name: Dr. T with [REDACTED]
Date: / /2010
Duration: 01:12:01

24 hours prior to this experiment, Dr. T was the victim of an unfortunate car crash, and was rushed to Hospital, under Foundation custody. Dr. T had previously asked to have his final moments captured on tape by SCP-1250-2, in the event of a fatal injury or terminal illness.

Control tape: Dr. T remains motionless in his hospital

bed for the duration of the recording. Nurses are seen rushing in at 00:43:05 in response to his heart monitor flat-lining. Despite their best efforts, Dr. T 's heartbeat is not restored, and he is pronounced deceased at 1:09:15.

SCP-1250-2 tape: Dr. T is conscious during the initial portions of the recording, and is seen discussing something with one of the nurses before she exits the room at 00:25:54. Dr. Carter is seen walking into frame at 00:43:05, and quickly proceeds to smother his colleague with a nearby pillow. Dr. T struggles against the attempted suffocation, but he is easily overpowered by Carter, and falls still at 01:09:15. Dr. Carter exits the room following the confrontation, and is not seen for the remainder of the recording.

Following the events of the above experiment, the project has been handed over to Dr. Carter. He has requested that no further SCP-1250-2 experimentation be performed for the time being.

SCP-1251: The Accident Blackspot

Item #: SCP-1251

Object Class: Euclid

Special Containment Procedures: Due to the quasi-random movement of SCP-1251 and its presence on public roads, embedded agents in the local emergency services and the UK Highways Agency have been instructed to act as liaison with on-site personnel.

Roads leading to SCP-1251's current site are to be secured and traffic redirected, with the nearest three traffic intersections to be kept under video and gravimetric surveillance. From the 26th day from the last known relocation of SCP-1251 the team should be on high alert for activity and be prepared to transfer containment measures at any time.

As of / / the containment team is to be expanded to six members and placed on 14-hour overlapping shifts of three personnel (see Addendum 1251-01). Attempts are under way to influence the movement of SCP-1251 towards a secure facility (see Addendum 1251-02); Foundation personnel in local civic planning offices should be advised of any necessary road closures and title transfers.

Description: SCP-1251 is a free-standing phenomenon currently centered on a mini-roundabout located in , United Kingdom. It exerts an anomalous pseudo-gravitational force on all objects within 12m of its center, typically varying between 0.4N/kg and 2N/kg.

It has been determined that SCP-1251 is able to transmit itself between roundabouts and other circular junctions and does so approximately once a month. No pattern has been detected to the fluctuations in its 'schedule' relative to the lunar or Gregorian calendar.

The force SCP-1251 exerts on its surroundings is inversely proportional to the size of the intersection - large roundabouts and junctions are generally safe to approach and its anomalous effects would not be readily apparent to traffic. At mini-roundabouts, traditional crossroads and similar arrangements it has displayed far greater destructive potential; the highest measured force exerted by SCP-1251 (at a 'painted circle' mini-roundabout in) is 1,200N/kg.

Use of ground-penetrating radar has located a mass 1.8m below site 1251- , revealed by ferromagnetic imaging to be a metal cage consistent with a 16th century gibbet. No corresponding execution was recorded on the site, and further tests following SCP-1251 shifting to a new location showed that the object had disappeared, only for a similar mass to be detected at SCP-1251's new site. It can safely be assumed that this object, or what it contains, is the cause of SCP-1251.

Attempts to excavate the affected area while SCP-1251 is in a relatively low-activity state to retrieve this object have thus far been unsuccessful, as removal of large amounts of material from SCP-1251's current site has been observed to dramatically increase the pseudo-gravitational force exerted by the anomaly.

Study of traffic accident records indicates that SCP-1251 may have been operating for some time. A moving 'accident black spot' can be traced moving through the road network apparently originating in Folkestone, UK. Correspondence with colleagues in Secteur-26 suggest that SCP-1251 may have been active in France before apparently 'jumping' to the UK via the Channel Tunnel. Given this new information, priority is to be given to finding a way of reliably controlling SCP-1251's direction of shift so it can be guided towards a secure facility or at least an unpopulated area; otherwise there is a significant danger that SCP-1251 will eventually leave Sector-25's jurisdiction.

Recovery Log 1251

SCP-1251 came to the Foundation's attention on / / due to a pileup at a rural roundabout in . Emergency services arriving on the scene immediately sustained near-identical vehicular damage

and casualties, and a fast-response team was dispatched to investigate.

It was quickly established that SCP-1251 was exerting an anomalous force of approximately 1N/kg within the area of the roundabout. Personnel represented themselves as members of an Explosive Ordnance team and the incident was reported as an act of terrorism targeted at the most senior casualty of the pileup, a Parliamentary Under-Secretary of State returning from a delegation in Indonesia. Surrounding roads were immediately closed under the cover of repair work.

Containment was lost on the 29th day of Foundation presence; the team began experimentation on the morning of / / to discover that Site-1251-1 no longer possessed any anomalous qualities. Sector-25 began intercepting police and emergency services notification from a site 1.5 miles away from the containment zone.

Upon arrival it was discovered that a car had become stranded on the traffic island; the occupant had reported difficulty leaving their vehicle. Further measurements indicated that the roundabout was exerting an attractive force of 1.6N/kg. The team was faced with the challenge of winding up operations at Site-1251-1 whilst simultaneously securing Site-1251-2 using the pretext of a road subsidence.

Addendum 1251-01

Agent , tasked with supervising the on-site team, has been placed on leave due to mental and physical exhaustion exacerbating a previously undiagnosed nervous condition (see Log-1251-01). O5- has read the medical report produced by Dr. and is satisfied that the contents of Agent 's field logs are the product of stress and poor deployment practice leading to a personal crisis, rather than further anomalous behaviour exhibited by SCP-1251. Agent is not to return to active duty unless cleared by a Foundation psychiatrist.

Addendum 1251-02

Significant progress has been made in 'guiding' the movement of

SCP-1251. The anomaly shows a clear preference for 'travelling' along open, publicly-owned roads without doubling back on itself, and furthermore favours intersections with a specific configuration (to wit, through road with second road intersecting at a right-angle, low dome mini-roundabout without double yellow lines).

By applying pressure on local government bodies to temporarily close and/or transfer strategic sections of road to Foundation ownership the containment team has been able to encourage SCP-1251 to move along a more or less predictable route. Current projections indicate that SCP-1251 can be guided to Site-60 within the next two years, where it can be safely contained by placing it on a 'track' comprising two mini-roundabouts on a circular carriage and linked by a further road.

The behaviour SCP-1251 exhibits when choosing its next location suggests it may have some degree of sentience - further research is advisable.

« SCP-1250 | SCP-1251 | SCP-1252 »

Log-1251-01

The following comprises excerpts from Agent 's field notes. On / / Agent was assigned the task of supervising the team assigned to SCP-1251, an autonomous phenomena under ongoing containment in the UK road network. The circumstances of Agent 's transfer are the subject of a formal complaint and are currently under review by the Sector-25 disciplinary board, but it is noteworthy that it occured immediately after Incident - -1, on which Agent was lead containment officer.

Initial recovery procedures for SCP-1251 required five personnel to remain on-site under the cover of a road maintenance team until full containment was achieved, with the expectation that the original site could be permanently removed from the road network and converted into a Foundation facility in similar fashion to other localised phenomena. Temporary housing was provided in the form of work tents and personnel obliged to sleep and eat in the containment area. A budget was allocated for food purchases and plans made for Site 1251-1 to be provided with electric power. However, the discovery of the mobile nature of SCP-1251 meant that plans for lighting, heating and entertainment were never fully implemented and remained on an *ad hoc* basis. Furthermore, the budget initially allocated to Site 1251-1 was not carried forward due to an administrative error. An informal 'relief fund' set up for the containment team was established at Sector-25 by Dr. but was confiscated by sector management as inappropriate. Following review of containment measures a mobile containment unit has since been established with dedicated vehicle, electricity generator, TV, microwave and heating units, and a permanent budget for food and entertainment.

/07/ : Arrived on-site today and was shocked at the ramshackle

nature of containment measures. Personnel have been spending their own money on food because credit cards and accounts initially allocated to the team have been allowed to run empty. Complaints to have apparently gone unanswered. Several members of the team appear to be under the impression that their stint on 1251 is time-limited and have asked me when they will be able to return to their families. Despite this the team remains dedicated to containment and has been doing wonders with the limited resources available.

/09/ : The weather is getting colder. I attempted to contact Sector-25 but it looks like location-specific email and phone keycodes are not being updated when SCP-1251 moves. I have personally purchased and distributed a number of small gas heaters. Several of the remote cameras used to monitor surrounding traffic intersections have failed and have had to be replaced with consumer products - again purchased at the team's own expense. I strongly urge that containment measures for 1251 be revised; this is not a temporary containment situation and should not be treated as one.

/09/ : It was not necessary to tell the team that 1251 is being generated by a corpse of a highwayman, or whatever it is. We have enough bad dreams.

/10/ : We have now experienced six weeks of almost unbroken rainfall. Equipment remains in a critical state and the suspension of testing due to the weather has removed the team's last line of communications with personnel from Sector-25.

/11/ : Tent B has been lost. The radius of 1251's attractive effect varies slightly between locations and it was misplaced during setup owing to a fault with one of our spring scales. Agents and woke up this morning to find their tent had been apparently blown away. It's now wrapped around the crossroads sign - we will attempt to recover it once 1251 moves on though I suspect it will be unusable.

/11/ : We have been eating takeaway for five months.

/11/ : Agent has had an encounter with a local resident, who demanded to know when normal road service would be resumed. Communications with Sector-25 still almost nonexistent, we were unaware that the road had been officially closed for emergency water mains repairs, and instead informed the questioner that a hitch had been encountered while laying fibre-optic cable. The discrepancy was picked up on immediately and an ugly confrontation was had with the resident and subsequently with a police constable who became convinced that our purpose was criminal. Fortunately, his immediate superior, Lieutenant is associated with the Foundation and we understand he has been able to represent the situation as a Special Branch investigation. I have asked the Lieutenant to communicate the urgent nature of shortages at 1251's containment site.

/11/ : Morale is appalling. If conditions continue we will see desertions.

/12/ : Merry fucking Christmas.

/01/ : Agent left today; he said he planned to return to Sector-25 and report that containment had been breached to draw attention to the situation here.[1] I tried to contact Lieutenant - the station said they have no record of him ever working there. Official extraction and reassignment with use of amnestics, a memetic outbreak somewhere else rewriting people's memories - who knows?

/01/ : No word from . I overheard Agent openly discussing suicide by walking into 1251 in a high-activity state.[2]

/01/ : Am I an agent of the Foundation? Does the Foundation

exist? Doesn't it make more sense to assume that I'm just a worker on some road maintenance site somewhere who's gone mad? Does the world outside the yellow tape exist? I'm OK. I'm OK.

/02/ : Last night I dreamt that it had stopped raining. I got out of the sleeping bag and wandered around - the sky was utterly dark, no moon, no stars, but the ground was perfectly illuminated. I walked into 1251's area of effect and it didn't touch me. I screamed "It's not gravity! It's acceleration!". Everything made so much sense.

/02/ : I don't know who wrote that. It wasn't me. It's not my handwriting. Someone is fucking around with my log.[3]

/02/ : 1251 ate today. We heard him yelling and got out of our sleeping bags. I couldn't see the moon anywhere. He was standing at the roundabout entrance. He said "It's all a lie. There was never a Foundation." and walked in. 1251 shouldn't have been in a high-activity state, but it sucked him in and buried him anyway. Then it moved. There's two of them now! Two 1251s roaming around, God help us all, and when the scientists come back from their white world where there's light and heat and everything works they'll see under one of them is a corpse in a hard hat, screaming. That's the meaning of the movements. Morse code; each hour is a dot, each day a dash. That's all can do now, one letter a month as he goes mad under the black soil. This is what he'll say IT'S NOT GRAVITY IT'S ACCELERATION.[4]

/02/ : They're outside my tent. You'll have to kill me.[5]

Footnotes
1. Agent did not return to Sector-25 and his whereabouts are currently unknown. A termination order is currently pending.
2. No such agent was assigned to SCP-1251. None of the other agents at the site had any recollection of another crew member by that name. The possibility of wide-ranging memetic activity has been considered; however, apart from Agent 's log there is simply no

indication this individual is real.
3. Graphological comparison proved this to be, conclusively, Agent 's own handwriting.
4. Agent here reports a death on-site as well as further phenomena associated with SCP-1251, including an unscheduled shift. These do not seem to correspond to actual events, and Agent no longer recalls making this entry. As far as can be established there is still only one instance of SCP-1251. Agent 's Morse Code hypothesis appears to be unfounded based on SCP-1251's movements to date.
5. Agent was placed in the care of Foundation medical staff on his 256thday assigned to SCP-1251. Other crew members were also referred for medical conditions including poor nutrition and immersion foot syndrome. Sector management accepts that on-site conditions were improper but maintains an appropriate level of contact with the team was kept throughout the period under consideration.

SCP-1252: A Half-Formed Idea

Item #: SCP-1252

Object Class: Euclid

Special Containment Procedures: SCP-1252 is to be contained in a standard humanoid containment chamber large enough to also contain its designated life support system. SCP-1252 is to be attended to by a team of medical personnel in a manner detailed in Treatment Schedule 1252-L. SCP-1252 is to receive nutrition through intravenous therapy as detailed in Treatment Schedule 1252-L until the subject's digestive system is deemed functional.

SCP-1252 is to be led to believe that "Suzie" or "Susan May Fox" is currently alive and is undergoing treatment in a local hospital specializing in children. Personnel are encouraged to reenforce this belief with SCP-1252 whenever it brings up the subject. Personnel are further encouraged to emphasize the subject exercise patience in waiting for Suzie's return. Should it begin to show skepticism, personnel are to maintain the established fabrication and notify Dr. Liu immediately for further instruction.

Description: SCP-1252 is a sapient, adult humanoid of indeterminate sex, approximately 43kg in mass and 1.78m in height. SCP-1252 appears to be missing at least half of its body mass, mostly in the form of muscle, fat, bone and skin tissue. The only limbs or organs entirely intact are the left arm, heart, and brain. Despite its injuries, the subject is capable of speech.

Much of the remaining internal organs are composed of what appears to be compressed insect wing material, which maintains structural integrity only while part of SCP-1252. Once removed, it rapidly separates into non-anomalous wing scales. Approximately 23% of SCP-1252's skin appears to made up of wings from multiple species in the *Papilionidae* (swallowtail butterfly) and *Libellulidae* (skimmer/percher dragonfly) families. SCP-1252's left eye has been

replaced with a *Clerodendrum ugandense* (Blue Glorybower or Blue Butterfly Bush) flower. The eye is not believed to be capable of sight and does not blink. Although capable of regeneration, SCP-1252 does not seem to be able to fully recover any missing skin or other bodily tissues; once it achieves a maximum body mass of 43 kg, all healing of internal organs and skin stops.

SCP-1252's behavior remains highly cooperative, partially due to the fabrication detailed in its Special Containment Procedures. Despite its cooperation, the exact nature of SCP-1252 remains unknown. New information or theories are to be reported to Dr. Liu.

Interview 1252-001

Date: March 2 , 20
Interviewee: SCP-1252
Interviewer: Dr. Blake
Notes: This interview was conducted 2 days after the Foundation's acquisition of SCP-1252, as it was previously not healthy enough to communicate and was temporarily kept in an isolated room in the Medical wing at Site-37 for recovery.
[BEGIN LOG]

Dr. Blake: So you're SCP-1252, right?

SCP-1252: [attempts a shrug, no verbal response]

Dr. Blake: [sifting through clipboard] Could you explain what exactly you are supposed to be?

SCP-1252: I'm supposed to be Suzie's very best friend. Well, Suzie is what her friends called her.

Dr. Blake: Right. Could you please explain why you have insect wings on your skin?

SCP-1252: Suzie always liked butterflies. Dragonflies too. They were pretty. And flowers. Her mother grew lots of flowers, back before her parents separated and her mother had to move into an apartment. [SCP-1252 briefly lifts its left hand up to touch its left eye.]

Dr. Blake: [writing] Okay. Who is this Suzie?

SCP-1252: [a slight pause as it adjusts its oxygen mask and inhales deeply several times] Her full name is Susan May Fox. [another pause and several deep inhalations] She lives on 16 Maple Road, in . She goes to Elementary School and is in second grade. Could you find her and tell her I'm okay? We got separated in an accident and I don't want her to worry.

Dr. Blake: [writing] Please detail this accident you mentioned.

SCP-1252: [several deep inhalations] I don't really know what happened. I'm sorry I couldn't be of more help. I just know I was supposed to be her very best friend. But something interrupted her thoughts. I'm sure when- [several inhalations] when you find her, she can explain everything. She's a smart girl. And when you do find her, could you please bring her to me, so I can be finished? I'm sure she would appreciate it. [Note: At this point SCP-1252 becomes very excited, prompting a medical personnel to signal to Dr. Blake and end the interview.]

Dr. Blake: We will do what we can, SCP-1252.

SCP-1252: [nods, no verbal response]

[END LOG]

Addendum-1252-A: SCP-1252 has requested the following:

- March 21, 20 : Pain medication (Denied on grounds of poor health)
- March 25, 20 : A variety of candies (Denied on grounds of poor health)
- April 1, 20 : Access to outside air (Denied on grounds of poor health)
- April 29, 20 : 1 copy of *Beatrix Potter The Complete Tales* by Beatrix Potter (Approved; SCP-1252 is to be allowed access for continued cooperative behavior)
- May 27, 20 : Stationery for purposes of self expression/ entertainment (Approved; SCP-1252 is to be allowed access to wax crayon and paper for continued cooperative behavior)
- October 10, 20 : To receive a future letter being delivered to it. The letter arrived approximately 48 hours later at SCP-1252's door. The letter had no return address and the message contained details of Suzie's condition written in neat blue ink. It is unknown how SCP-1252 knew about the letter or how the letter appeared. (Denied on grounds of possible anomalous activity)

« SCP-1251 | SCP-1252 | SCP-1253 »

SCP-1253: Quechuan Priests

Item #: SCP-1253

Object Class: Euclid

Special Containment Procedures: Mobile Task Force Omicron-19 ('*Flash Lightning*') is currently assigned to the tracking, observation and recovery of SCP-1253-1 instances. All exposed subjects are monitored for correlations, all witnesses are administered Class-C amnestics and all compromising media is destroyed.

Recovered SCP-1253-1 instances are stored in humanoid containment units, which are secured with digital combination locks. Access codes to SCP-1253-1 instances are shuffled on a bi-monthly basis and distributed to associated researchers, Site Security and Site Command. SCP-1253-1 testing is conducted with the notification of Site Director Davis.

Description: SCP-1253 is a phenomenon affecting various cities in Bolivia and Peru. In the event of war, famine or the death of a prominent political leader SCP-1253-1 instances will progress from an unknown origin point to the affected cities.

SCP-1253-1 instances are sapient automatons, capable of conversing in English, Spanish, Portuguese and Quechua. SCP-1253-1 instances are constructed of heavily decayed organic material, including entrails, limbs and genitalia. This material has been identified as originating from a variety of sources, including *Vicugna pacos*, or alpaca specimens. The anatomy of SCP-1253-1 instances is lacking in organs, musculature and skeletal structure, and it is currently unknown as to how instances retain autonomy. SCP-1253-1 instances also display various behavioural quirks including decorating themselves with feathers, bead bracelets and necklaces, carving various patterns onto themselves and objects, and conversing with themselves.

SCP-1253-1 instances will interact with subjects in the six to fifteen age range. Subjects will exhibit severely impaired judgement and be convinced by SCP-1253-1 instances to progress to the nearest high-altitude landform. SCP-1253-1 instances will there instruct subjects in a polytheistic religion bearing heavy similarity to the Quechuan religion. Instances will explain the structure of this religion, the procedures for various ceremonies, rituals and feast days, and demonstrate how to correctly conduct *Capacocha.*

Subjects who have experienced SCP-1253 phenomenon appear to maintain various correlations. The majority of subjects demonstrate symptoms of obsessive-compulsive disorder, including paranoia and intrusive thoughts, as well as apparent sociopathy and criminal tendencies. A minority of subjects also claim membership to the 'Children of the Sun.' The existence of such an organisation has not been verified; there is some doubt to its existence.

Addenda:

SCP-1253-1 Topic Table:

Topic	**Description**
Reincarnation and the afterlife	SCP-1253-1 instances will explain the reincarnation process and the afterlife. Instances will state that the soul of the deceased, the *Camaquen,* would be guided by a canine in the passage to the afterlife, and will emphasize the importance that the deceased's corpse is not incinerated, which would threaten the *Camaquen's* passage to the afterlife.
Various deities	SCP-1253-1 instances will explain the various dominions of the deities, which include *Inti, Apu Illapu, Viracocha, Manco Cápac*.
Correct worship of the deities	SCP-1253-1 instances will explain how to properly pray to the various gods, and which gods to pray for for various blessings,

	such as how *Apu Illapu* should be prayed to for rain.
The conduction of festivals, ceremonies and rituals	SCP-1253-1 instances will explain the proper conduction of various ceremonies, what ceremonial garb is required and what sacrifices are needed. Emphasized is the *Inti Raymi* celebration.
Inca culture	SCP-1253-1 instances will explain the social structure and history of the Inca culture, with particular emphasis to colonial resistance.
Sapa Inca	SCP-1253-1 instances will explain how modern politicians in Argentina, Bolivia, Chile, Colombia and Ecuador are the spiritual successors to *Sapa Inca,* "The Great Inca."
War	SCP-1253-1 instances will educate subjects in the manner of correctly using the *Bola,* staging ambushes and setting traps, and explain the necessity of resisting against Spanish, Portuguese and Dutch incursions into South America for the sake of the preservation of the Inca religion and culture.
Capacocha	SCP-1253-1 instances will explain the importance of sacrificing a child to the gods during famine, war or upon the death of one of the spiritual successors of *Sapa Inca,* and how a pure child must be sacrificed instead of an adult. SCP-1253-1 instances will then select and restrain a subject, which will be killed by strangulation.

SCP-1254: Paper People

Item #: SCP-1254

Object Class: Neutralized Euclid

Special Containment Procedures: The building SCP-1254 is held in is to be permanently closed to the public. Due to SCP-1254's close proximity to a busy shopping district, a false storefront owned and operated by a Foundation front company has been constructed in order to allay any possible suspicion.

SCP-1254 is to be treated as an active archeological site, with strict environmental controls and safeguards to prevent any possible damage. Personnel within SCP-1254 must exercise caution at all times and refrain from causing any unnecessary disturbances to SCP-1254. No further containment measures are necessary.

Personnel exiting SCP-1254 are to be fully decontaminated before being allowed to leave the building. Cameras are to be installed in order to observe SCP-1254-1 behavior and the progress of SCP-1254-2's construction. Armed guards are to be kept on standby in the event SCP-1254-2 activates.

Description: SCP-1254 is the entire stock of books in a Bookstore located in , California. While SCP-1254 appears to be a set of standard books on the outside, closer examination reveals the interiors of the books had been cored out to construct several miniature civilizations. The inhabitants, dubbed SCP-1254-1, were miniature humanoids that were nearly identical to normal humans in every respect except for size. Their average height was approximately 5 mm.

Archeological analysis of the few remaining intact samples of SCP-1254 suggests that SCP-1254-1 possessed the ability or technology to convert paper into any conceivable material. These intact samples contained stone structures that bore many similarities

to Ancient Greek and Roman architecture. Study of the damaged samples of SCP-1254 shows the remains of more advanced materials, such as concrete, steel, carbon fiber, trace amounts of uranium, as well as several as of yet unidentified materials. There is even evidence of the existence of organic foodstuffs.

In addition, the number of distinct civilizations within SCP-1254 corresponded to the number of different genre sections the bookstore contained. The knowledge base each SCP-1254-1 civilization possessed also corresponded to the types of books they inhabited. For example, the Science Fiction section showed a more rapid pace of technological development, while the Fantasy section largely remained in the Medieval era. The civilization in the Nonfiction section was the one that most closely correlated to the current time period. There is definite proof that these civilizations were aware of and interacted with each other, with "border books" exhibiting a blend of various architectural styles that neighboring samples of SCP-1254 lacked.

However, 99% of SCP-1254 was destroyed or irreparably damaged due to a fire that took place before its discovery. Forensic analysis suggests that the fire started in the Young Adult section of the bookstore. Trace radiation readings, as well as the remains of various types of weaponry, suggest the fire was started as the result of a miniature thermonuclear war between one or more of the SCP-1254 civilizations, which proceeded to wipe out the entire SCP-1254-1 population.

SCP-1254 was first discovered after the previously mentioned fire. The local Fire Department responding to the call suspected arson and started their own forensic investigation, discovering the remains of SCP-1254. The Foundation was alerted and took control of the site, administering amnestics to the entire forensic team. The bookstore had already been closed indefinitely for several months due to financial trouble, though none of the books were planned to be moved due to the possibility of a buyout. As a result, SCP-1254's existence went unnoticed until the fire.

Addendum 1: Living specimens of SCP-1254-1 were discovered on / / during a routine archeological survey. Researcher Wilkes caught sight of a small group of SCP-1254-1 survivors and managed

to record the entire event with his head-mounted camera. Seven individuals wearing full Nuclear/Biological/Chemical gear were witnessed moving through a destroyed copy of *Harry Potter and the Deathly Hallows*, possibly scavenging for supplies. The small SCP-1254-1 group then saw Researcher Wilkes and fled deeper into the book, breaking visual contact.

Containment measures and object classification revised in light of confirmed existence of living SCP-1254-1 specimens.

Addendum 2: Maintenance crew responding to a malfunction in the building's air conditioning systems found a miniature aircraft of unknown manufacture attempting to break through one of the filters. The aircraft was captured and taken to the nearest Foundation lab for research. Attempts to contact the crew were met with limited success, as the only response received was several broadcasted radio transmissions that were a mix of screaming and exclamations of broken Latin phrases. Two hours after the aircraft goes silent, permission is granted to forcibly remove the crew for study. Closer examination of cross sections of the aircraft show the crew having committed mass suicide.

Addendum 3: Security cameras observe suspicious movement in one of the storage rooms. Remote viewing by drones and cameras show groups of SCP-1254-1 gathering as much intact paper as possible and depositing it into the storage room. Further surveillance shows SCP-1254-1 attempting to construct a full size humanoid with the paper being collected. Based on visual analysis, completion of SCP-1254-2 is at roughly 25%. Containment procedures updated in response.

« SCP-1253 | SCP-1254 | **SCP-1255** »

SCP-1256: Bees Are Smarter Than You Think

Item #: SCP-1256

Object Class: Safe

Special Containment Procedures: Mobile Task Force Zeta-4 (*'Beekeepers*') is currently assigned to the tracking and recovery of SCP-1256 instances. All exposed subjects are to be administered counter-memetic therapy and Class-C amnestics prior to release. Media Division 19-P is to monitor internet media for SCP-1256 instances in the form of websites and downloadable files. Any online SCP-1256 instances are to be pulled, and the source traced.

Description: SCP-1256 is a 24-page pamphlet entitled '*Bees - Smarter Than You Think*.' Its contents appear to be intended to be informative; however, much of it is nonsensical. The cover page claims SCP-1256 was authored by Dillaine Iurtey and Ryan Hughes, and published by Redrose Publishing Sydney in 1997. Redrose Publishing Sydney has no record of SCP-1256's publication, and neither author has any recollection of writing SCP-1256.

Individual pages of SCP-1256 do not retain anomalous properties, and SCP-1256 may be excerpted without effect. It is only when SCP-1256 is read completely that its anomalous effects will manifest. An exposed subject is designated SCP-1256-1.

SCP-1256-1 will perceive all members of the superfamily *Apoidea* as sapient. Contrary to its title, SCP-1256's effect applies to all members of *Apoidea* including wasps. SCP-1256-1 will attempt to care for the insects to the exclusion of all other activities. This appears to be both to the detriment of SCP-1256-1 and the insects; the attempts of SCP-1256-1 to collect food, repair the hive, and assist in the reproductive cycle of the queen specimens typically result in the expiration of multiple insects and is met with hostility.

SCP-1256 was initially recovered from the family property

13km from , Australia, by embedded agents in the NSW police force during the investigation of the murder case. Four cadavers were found gagged, coated in honey, and bound to chairs in duct-tape, nearby the family's bee-farm. The 17-year-old eldest daughter was arrested and charged with four cases of murder, but was found to be unfit to stand trial, and was institutionalized.

Addenda:

Document 1256-Alpha:

Excerpt of SCP-1256:

> **Bees - Smarter Than You Think**
>
> You think bees are bees. *But did you know they're not?* That's right, *bees are smarter than you think!* You think you *farm the bees,* and *steal their honey.* But you actually don't - *because bees are smarter than you think!* Why do you think the bees disappeared? The bees knew we'd screwed the earth before it all went to shit, before we even knew about global warming! Bees knew, *because bees are smarter than you think!*
>
> Some bees stayed because they loved you. You didn't think they loved you, did you? That's because *bees are smarter than you think!* They loved you so much, and you didn't even know, you know. That's why we made this pamphlet, to show you how to farm bees for honey.
>
> **How Do You Farm Bees?**
>
> In order to achieve maximum efficiency with your bee farm, you must:
>
> - **Embrace the bees spiritually.** You must feel the emotional flow between yourself and your bees. When you do not feel the spiritual energies of your bees, the bees do not feel your spiritual energies!
> - **Be understanding of your bees.** Your bee isn't being productive. But do not anger yourself;

understand why he can't work. He is a busy bee. He has a social life. Understand the bee! Do not pressure the bee! That is the path to sad bees.

- **Do not expose your bees to liberal thought.** Bees know that the iron guide of the queen is good for the hive. But what happens if you make the bees socialist? What happens? They will overthrow the class system! They will say workers and soldiers are equal, even if it is not so! There will be hive anarchy everywhere! The bees will work for pleasure and not for the hive, which is very anarchistic! Socialism is bad for bees.
- **MOST IMPORTANT:** you LOVE THE BEE UNCONDITIONALLY. Can't you see bees LOVE you so much? And you just make bees give and give. They stayed for you and you make them give? Love bees, not honey. Honey is the product of love.

FOLLOW OUR GUIDE AND HAVE MAXIMUM RETURN FOR YOUR EMOTIONAL INVESTMENT.

Document 1256-Beta:

Document held as evidence in the murder case, and later confiscated by Foundation operatives.

March 12, 2010.

They don't understand the bees. But they'll learn to love the bees like I do. They will. They just need to have that spark, that connection. That *epiphany.* The moment, in which you fully understand the bee and love it in its truth.

I've helped them, and they'll see it soon. The bees will teach them. The bees are so smart. I've talked to them. They understand like no one else does. But you mustn't scare them. They sting when they hurt. And they die.

They make a sacrifice for their hive. It's touching. Bees are more human than humans will ever be.

I've heard the buzz. I love the bees. And soon, they'll love them too.

« **SCP-1255** | SCP-1256 | SCP-1257 »

SCP-1257: Agent Danny of the SCP

Item #: SCP-1257

Object Class: Safe

Special Containment Procedures: All copies of SCP-1257, encompassing all instances of SCP-1257-1, SCP-1257-2, and SCP-1257-3, are to be kept in the secure media vault at Site- . Any uncontained copies of SCP-1257 are to be recovered or destroyed by MTF Mu-53 (“Ebert's Thumb”). Because of the nature of the original appearance of SCP-1257, and its widespread exposure to the public, MTF Mu-53 is also tasked to replace any new sources of information about SCP-1257 as they are discovered, in whatever format they may appear, in accordance with Protocol Gamma-1257-A (Codename: “Snopes’ Revenge”)[1]

Unauthorized persons exposed to copies of SCP-1257, or who evidence any knowledge about SCP-1257, shall be interrogated by the Foundation Intelligence Department, administered Class A Amnestics, and have implanted post-hypnotic suggestions to reinforce the belief that SCP-1257 is a hoax.[2]

Study of SCP-1257 is limited to personnel of Level 3 or higher, subject to approval by the Foundation Intelligence Department.

Description: SCP-1257 is an American-produced half-hour situation comedy originally titled *Raising Danny* that aired on the television network for six episodes in 197 . Instances of SCP-1257-1 are the original production reels for all twelve episodes filmed, recovered from the archives in 198 . Instances of SCP-1257-2 are the draft and shooting scripts and copies, including four episodes that were never shot. Instances of SCP-1257-3 are all other video recordings of the six episodes actually aired.

The anomalous properties of SCP-1257 manifest in any and all video copies produced from the original series, and in any copies of

the scripts for those episodes. Every year, beginning in mid-September, video recordings and scripts for *Raising Danny* will change to reflect a new season of episodes. Replacements will begin with episode one, and progress sequentially through each episode in order during each subsequent week. While the Foundation has access to the first sixteen episodes of each season,[3] it appears that each SCP-1257 season runs approximately 24 episodes. Additionally, while new seasons of SCP-1257 occasionally produce hour-long "specials," copies are always limited to the first half-hour running time of the original episodes of SCP-1257.

Video copies of the original over-the-air broadcast of the first six episodes of SCP-1257 present a special case. Commercials recorded contemporaneously with SCP-1257 will also show changes consistent with the content of SCP-1257, and updated videos have occasionally shown news bulletins and weather alerts that imply multiple points of divergence between the world that continues to produce SCP-1257 and our own.

SCP-1257's original premise had a black man, named Tyler (played by Whitman Mayo), married to a white woman who already had a son by a prior marriage. When the woman dies, prior to the pilot episode, the man is left raising her son, named Danny (played by Danny Bonaduce), as his own. Reviews of the original series recovered by the Foundation were universally unfavorable and referred to it as "The unwanted bastard child of *Sanford and Son* and *The Courtship of Eddie's Father*." Because of the anomalous properties of SCP-1257, the Foundation has only been able to reconstruct a general outline of the original content of the series.

Addendum 1: Notes on selected episodes of SCP-1257 observed in Foundation custody.

+ Document S-1257-11

- Season 3, Episode 3, "Tyler's Date": Episode manifests three months after initial containment. One line in the script implies the assassination of American President Jimmy Carter in late 1978 or

early 1979.

- Season 4, Episode 1, “Bad Touch pt. 2”: Second half of a “special episode” ending season three. Eric, a young classmate of Danny’s, is the target of a sexual predator using what appears to be anomalous items manufactured by Doctor Wondertainment to lure his victims.
- Season 5, Episode 10, “The Senior Trip”: Episode mentions a scandal where 10 members of the UK House of Commons had been publicly revealed as members of a cult that bears a strong resemblance to the Church of the Broken God.
- Season 6, Episode 1, “The Freshmen”: The title of SCP-1257 is changed to *Danny*. The premise of the series changes as well, dropping the Tyler character and sending Danny to college in New York City with five of his classmates from High School.[4] The University Lab appears to have specimens of SCP- , SCP- and SCP- .
- Season 6, Episode 11, “The ”: Plot of the episode concerns Eric’s suspicions that one of their dormmates might be secretly one of the “ .” This turns out to be a misunderstanding. From context, the “ ” appear to prey on young women and have become endemic in [REDACTED] and seem to be the result of a containment breach of [REDACTED] in Mexico City.
- Season 7, Episode 2, “Eric’s Midterm Caper”: When this episode manifested in SCP-1257-3-12, a new advertisement appeared during the second break for

Marshall, Carter, and Dark Ltd. The ad promoted [REDACTED] services for [REDACTED].

- Season 10, Episode 1, "The Job Hunt": Hour-long "special" introducing another change in premise.[5] One scene implies that the Global Occult Coalition has become public enough to run "want ads" in the local newspaper.
- Season 10, Episode 2, "The New Guy": The show's title is officially changed to *Agent Danny of the SCP*.[6] Danny has been employed as Level 1 security at Site-19, and through a series of mishaps, prevents a containment breach of **SCP-173**.
- Season 10, Episode 5, "D-Class Act": Danny mis-hears a co-worker's conversation and becomes convinced he has been mistakenly reassigned to D-Class by the HR Department.
- Season 10, Episode 11, "Leaping Lizards": [REDACTED] **SCP-682** [REDACTED].

Note: *Details of SCP-1257 episodes past Season 10 are only available with the approval of the Intelligence Department.*

Footnotes

1. Information about SCP-1257 is replaced with new information leading to the conclusion that SCP-1257 never existed, and is a hoax. Protocol Gamma-1257-A also requires all original documentation discovered about SCP-1257 be replaced with forged copies omitting references to SCP-1257.
2. As of 5/27/19 all original participants in the production of SCP-1257 have been found and either treated with amnestics or terminated.
3. Twelve via video copies (SCP-1257-1) and four only via unproduced scripts (SCP-1257-2).

4. Including Eric, despite a three-year age difference.
5. Danny has graduated college, is unemployed, and advertisements shown during SCP-1257-3 instances show that the Eric character has been spun off into his own series.
6. It is clear from the script that the title the writers intended is actuallyAgent Danny of the SCPFoundation. However, in the title card and in taped dialog, “Foundation” is consistently omitted. The name does appear correctly in the background sets intended to represent Foundation locations.

« SCP-1256 | SCP-1257 | SCP-1258 »

SCP-1258: The Way of the Masters

Item #: SCP-1258

Object Class: Euclid

Special Containment Procedures: All materials relating to SCP-1258 are held in a locked document cabinet in Site-19, with access restricted to clearance level 4 and above. Any organisms showing any effect of practicing SCP-1258 should be considered an instance of SCP-1258-1 and terminated immediately unless part of an approved experiment. Standard Foundation searches for anomalous animal activity should be cross-referenced with SCP-1258 markers.

Description: SCP-1258 is a martial art of unknown origin. Currently the Foundation has in its possession enough material in varying media to reconstruct several basic forms used to teach beginners, but little information on more advanced forms. SCP-1258-1 is any organism which has the knowledge and capability of practicing SCP-1258 independently.

When SCP-1258 is practiced by human beings, there is no observed anomalous effect. The anomalous effects of SCP-1258 manifest when movements of the style are performed within view of a non-human mammal.[1] A mild compulsive effect causes all such animals to cease any non-essential activity and begin watching the performer. After a short period of passive observation, animals will begin attempting to duplicate the movements, to the extent they are able. Due to anatomical differences, some animals are more capable than others of imitating the movements of SCP-1258, but regardless of skill, animals will continue practicing until either they are distracted by a pressing need (the need to eat, imminent danger, etc.) or the human performer stops or leaves their field of view.

If an animal is permitted to observe and mimic SCP-1258 forms for a period of time,[2] they will begin to develop human-like characteristics.

Generally the process begins at the level of gross anatomy: quadrupedal organisms will develop leg musculature for a bipedal stance, they will develop opposable thumbs on their hands or equivalent structures, and will develop in size and stature to a minimum standing (bipedal) height of approximately 1 meter. (Animals already larger than this will stay the same size, though they will develop other quasi-human features.) Additionally, virtually all animals will develop larger brains, with expansion most often seen in areas relating to language.[3] Subjects will continue to practice SCP-1258, even in the absence of an instructor or any materials related to SCP-1258; they may display knowledge of forms and movements which they have not been previously exposed to.[4] Continual exposure will cause further expansion and development along these lines, and eventually development of the vocal cords (or equivalent structures), jaw, and esophagus. After enough exposure, subjects will be able to communicate verbally in human languages.[5] Subjects' intelligence will increase appreciably as they continue to practice SCP-1258 routines and forms, usually to between 110 and 140 I.Q. as measured by standard Foundation tests. Eventually, test subjects will refuse to cooperate with humans in any capacity and will begin attempting to escape confinement by any means.

For a partial list of animal experiments, refer to Experiment Log 1258.

+ Addendum: Origins of SCP-1258

Addendum: Origins of SCP-1258: The time and exact place of origin of SCP-1258 are unknown. Some of its forms are superficially similar to the Korean martial art *taekkyeon*, which may place its development as early as the beginning of the Three Kingdoms Era (57 C.E.); however, due to taekkyeon's resurgence following the end of the Japanese occupation of Korea in 1945, and the cross-pollination between many East Asian martial arts, SCP-1258 may be a much more recent development, or may be of entirely different origin. Further investigation is impossible barring the discovery of more material.

+ Recovery Log

Recovery Log: SCP-1258 was first discovered as part of a routine internet search for anomalous artifacts, events, or persons. On / /201 , the YouTube channel of user 'WayFyre91,' real name Isaac Waymire, was found. Of the thirty-seven (37) videos on Waymire's channel, the first thirty-three (33) were of no value.[6] In the thirty-third video, Waymire mentioned that he had begun taking martial arts lessons at a nearby school. The remaining 4 videos had been made within the space of roughly three (3) months. Transcripts of some of the relevant videos follow.[7]

Video: 01

<Begin transcript>

0:00:02: [Waymire steps into field of view, presumably after activating the camera.]

0:00:05-0:00:24: Waymire: Okay, uh, I just started taking lessons at the dojo, and … and you guys, you need to see this. I was practicing in front of Caesar[8] and … just watch.

0:00:25-0:00:38: [Waymire briefly steps off-camera, returning with Caesar in his arms. He places Caesar on the floor.]

0:00:38-0:02:15: [Waymire performs an SCP-1258 routine. Caesar begins watching Waymire immediately. At 0:00:44, Caesar stands on his hind legs and begins imitating Waymire's movements. His balance appears to be poor and his range of motion is limited, but he attempts to follow the remainder of Waymire's routine. At the conclusion of his practice, Waymire begins laughing. He feeds a treat to Caesar, then picks him up and faces the camera.]

0:02:15-0:02:23: Waymire: My little warrior!

0:02:23-0:02:26: [Waymire moves behind the camera, and the recording ends.]

Video: 02

<Begin transcript>

0:00:02:-0:03:56 [This video is a montage of multiple recordings of Waymire and Caesar practicing SCP-1258. There is no audible dialogue; instead, a German-language version of the song "Eye of the Tiger" plays over the video.]

Notes: Due to the montage editing of this video, it is impossible to tell in what order the original sequences were filmed. However, Caesar is seemingly larger and has more developed musculature in his front and back legs. In certain shots, it appears that his muzzle is elongated as well, though the low resolution makes this difficult to verify.

Video: 03

<Begin transcript>

0:00:02: [Extreme close-up of Waymire's face. He is outside his bedroom.]

0:00:03-0:00:27: Waymire: Okay, uh … Caesar's been acting … really weird lately, and … he … just watch this.

0:00:27-0:01:44: [Camera pans away from Waymire's face. The door to his bedroom is slightly ajar, and the camera is placed to sight into the bedroom. Caesar can be seen practicing an SCP-1258 form. Foundation martial arts experts note that this form is more

advanced than had been seen in previous videos. Caesar is also noticeably larger, and has a much steadier bipedal stance.]

0:01:45-0:01:49: [Camera moves back to Waymire while Caesar continues to practice.]

0:01:50-0:02:12: Waymire: I … I'm not sure what's going on. I'm going to keep a close eye on him.

Video: 04

<Begin transcript>

0:00:00: [Video opens on Caesar, in Waymire's bedroom. Waymire is not seen in the video; presumably he is holding the camera. Caesar is approximately twice his original size. His limbs are heavily muscled, and the skin has stretch marks, presumably from rapid growth. He is standing in what appears to be a basic SCP-1258 stance.]

0:00:01-0:00:11: Waymire: What is your name?

0:00:13-0:00:29: Caesar: I … am called … Caesar.

0:00:30-0:00:45: Waymire (breathing heavily): Why … how can you talk?

0:00:46-0:01:11: Caesar: I … have learned. Through learning … I became … more.

0:01:12-0:01:21: Waymire (stuttering): Www … what d-do …

0:01:22-0:01:24: Caesar: Ask it.

0:01:25-0:01:41: Waymire: What will you do

with your … learning?

0:01:42-0:02:22: Caesar: I will … change … the world. I … will make us … free. I will … kill … the masters.

0:02:23-0:02:28: [Caesar stops speaking but continues to stare at the camera. Waymire's breathing can be heard as well.[9]]

0:02:29-0:02:31: Waymire: Is—is that enough? Can I—

0:02:31: [Caesar moves forward in a threatening manner. Camera jerks, likely due to Waymire flinching.]

0:02:32-0:02:45: Caesar: You … will not … ask! You will … tell … the masters! They … must know.

0:02:46-0:02:51: [Camera holds steady on Caesar until end of video.]

Using the IP address Waymire had uploaded the videos from and clues within the videos themselves, the Foundation traced him to the town of , Germany. Waymire was found dead in his apartment, with time of death approximately two days prior. Cause of death was determined to be blunt force trauma indicative of physical confrontation. Both of Waymire's legs and his right arm had been broken, along with seven ribs, and most of his internal organs were severely damaged or ruptured. Waymire's jaw was broken in several places, including two apparently post-mortem breaks.

Foundation agents followed reports of attacks on hikers, as well as sightings of a "standing wolf" or "hairy dwarf", to a forest roughly east of . The bodies of two hikers with wounds similar to Waymire's were found approximately seventeen kilometers from the city. Their

bodies had been dragged into a small stream and partially eaten. Caesar, now designated SCP-1258-1-01, was eventually located and confronted after a three-day pursuit. Two agents were killed and four more injured; SCP-1258-1-01 was shot and killed.

+ Addendum: Document 1258-RX

Addendum: Document 1258-RX: In January 201 , multiple incidents of wild animals attacking humans were reported in the town of , Colorado, USA. Some victims reported packs made up of multiple species, including predator and prey species together. The Foundation investigated and found widespread usage of SCP-1258. Sterilization of all wild and domesticated animals within a fifty-kilometer radius of the city, under guise of response to a rabies outbreak, was carried out without incident. Investigation led to a recently-opened dojo within the city; however, the dojo had burned down several days prior to the Foundation response.[10] No remarkable equipment was found in the dojo, and most documents were burned beyond retrieval. The only recoverable fragment of note has been classified as document 1258-RX, and appears to be a handwritten, incomplete translation into English of another document. The original document, if one existed, was not found.

> Learn the ways of THE MASTERS!!! We can
> Anyone can learn to stand as tall as man other men and confront the world!
> WE CAN teach you to be (bigger? tougher? taller?).
> WE CAN make you give you a fighting chance against humanity (the world? society?)
> MAKE YOURSELF BETTER! (maybe "improve yourself"? "change yourself"?) Find a NEW WAY! We know the SECRETS OF THE MASTERS passed handed down through the millennia ages!
> If they will not see us as equals, then we will

BECOME equals! [This line was struck through twice.]
When we are all equals, we
[The remainder of the document was destroyed.]

Footnotes
1. Placental mammals only: marsupials display no anomalous effects.
2. Even a single exposure to SCP-1258 may be enough to cause these anomalous developments. Exact period of exposure necessary depends on multiple factors, including the species of subject, time spent performing, the skill of the human performer, and so forth. See Experiment Log below for further information.
3. These transformations require vastly increased nutritional intake, beyond what a healthy specimen should be able to consume normally. It is theorized SCP-1258 also speeds up metabolic processes in such a way as to allow for this high rate of growth. Without adequate nutrition, subjects' growth will be retarded, but will progress.
4. This anomalous knowledge is theorized to be another side-effect of exposure to SCP-1258.
5. Generally, animals will have access to the language and vocabulary they were exposed to prior to their development by SCP-1258; for example, an animal raised by a English speaker will have retroactively "learned" the English they heard their owner speaking. Furthermore, most animals also show language acquisition skills comparable to a human toddler, allowing them to learn at an accelerated rate.
6. Major topics included Waymire reviewing films or video games, responding to friends' videos, or diary-style entries about his personal life.
7. Dialogue has been translated from the original German.
8. Waymire's pet dog, apparently a terrier mix. Exact breed composition is unknown.
9. According to Foundation analysis, Waymire's labored breathing is probably due to an agitated emotional state, although he may also have suffered damage to his throat, lungs, or thoracic cavity.
10. The cause of the fire was unclear.

Experiment Log 1258

Experiment Log: A summarized version of the experiment log for **SCP-1258** is given below; a full log can be found in the document cabinet in Site-19.

Procedure: In order to minimize exposure to and potential outbreaks of SCP-1258, a Foundation agent with experience in multiple forms of martial arts was given access to all materials related to SCP-1258. The agent practiced multiple forms until performance was satisfactory. The agent was recorded performing all known forms and movements, then given targeted class-B amnestics to remove all knowledge of SCP-1258.[1] These recordings were then played back to groups of animals of varying species.

Species: *Canis lupis familiaris*, domestic dog, varying breeds, thirty-seven specimens (twenty-five males, thirteen females).
Exposure time: Ten minutes per hour, eight hours per day. One specimen killed and autopsied at end of each day.
Results: All specimens began watching immediately. Twenty-nine specimens attempted to copy movements during first exposure; all individuals copied movements during second exposure. Increased appetite following first day; additional protein and other supplements provided. Further increases needed on following days. Alterations in gross musculature seen following day seven. Alterations in bone structure seen following day twelve. Increased cranial diameter and altered vocal cords seen following day fourteen. Modified I.Q. test was presented on day fourteen; average score was 77.
Notes: Experiment was forced to terminate prematurely. On day fifteen, one specimen displayed unexpected agitation and aggression. When handlers entered the containment area to remove the specimen, all specimens attacked simultaneously. Emergency lockdown procedures enacted immediately; all specimens killed via nerve gas. Autopsies were consistent with observed results.

Species: *Rattus norvegicus*, laboratory rat, forty-two specimens

(twenty-six males, sixteen females). Normal nutritional supplement for a colony of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day. One specimen killed and autopsied at end of each day.
Results: All specimens began watching immediately. Twenty specimens attempted to copy movements during first exposure; thirteen additional specimens copied movements during second exposure; all specimens copied movements during third exposure. Alterations in gross musculature seen following day ten. Alterations in bone structure seen following day thirteen. Population randomly sorted into two groups following day thirteen; control group received no further exposure, while experiment group continued standard exposure. Control group continued to perform SCP-1258 movements despite lack of exposure. Both groups showed continued physical development, though control group's development was comparatively slower. (More precise data can be found in detailed experiment log.) Modified I.Q. tests presented to both groups on day twenty-two; control group averaged 63, while experiment group averaged 74. By day twenty-seven, experiment group was communicating largely in spoken English and was overheard planning escape from containment.
Notes: Experiment was terminated prematurely due to concerns over possible escape.

Species: *Myotis californicus*, California bat, seven specimens (six females, one male). Normal nutritional supplement for a group of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day. One specimen killed and autopsied at end of each week.
Results: All specimens began watching immediately. All specimens attempted to copy movements during first exposure, although movements were noticeably impaired by wing membranes. Major alterations in musculature, skeletal system, and cranial size seen following week one. By day eight, four of the remaining specimens were unable to fly due to diminished wing membranes; by day nine the other two had similarly lost flight capability. Two specimens showed bipedal movement on day ten; by day eleven all specimens were walking bipedally. Specimens began functioning during daylight hours on day twelve. Alterations in eye structure and vocal cords seen following week two. Specimens became fully diurnal on

day fifteen. Subjects were conversing in English on day sixteen, though only in ultrasonic frequencies.
Notes: Experiment was terminated prematurely. On day nineteen, ultrasonic microphones in the containment area unexpectedly failed. Armed response team was sent in to repair the microphones. They were attacked by the SCP-1258-1 instances and drove them away with flamethrowers and controlled small-arms fire. Three of the team then expired from no apparent cause, and the remaining member became agitated and incoherent. The containment area was flooded with nerve gas, and all specimens were killed. Autopsies of the team members showed massive disruption to their eardrums and hemorrhaging in their brains; it is believed the SCP-1258-1 instances used an ultrasonic attack to induce strokes.

Species: *Passer domesticus*, House sparrow, nine specimens (four females, five males). Normal nutritional supplement for a group of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day.
Results: No changes noted. Specimens showed no particular interest in recordings. After fifteenth day of continual exposure, experiment terminated.

Species: *Vombatus ursinus*, Common wombat, nine specimens (four females, five males). Normal nutritional supplement for a group of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day.
Results: No changes noted. Specimens showed no particular interest in recordings. After fifteenth day of continual exposure, experiment terminated.

Species: *Trioceros jacksonii*, Jackson's chameleon, three specimens (two females, one male). Normal nutritional supplement for a group of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day.
Results: No changes noted. Specimens showed no particular interest in recordings. After fifteenth day of continual exposure, experiment terminated.

Species: *Salmo salar*, Atlantic salmon, five specimens (five females). Normal nutritional supplement for a group of this size was initially tripled.

Exposure time: Ten minutes per hour, eight hours per day.
Results: No changes noted. Specimens showed no particular interest in recordings. After fifteenth day of continual exposure, experiment terminated.

Species: *Bombus occidentalis*, Western bumblebee, one colony (exact number unknown). Normal nutritional supplement for a colony of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day.
Results: No changes noted. Specimens showed no particular interest in recordings. After thirtieth day of continual exposure, experiment terminated.

Species: *Giraffa camelopardalis tippelskirchi*, Maasai giraffe, two specimens (two males). Normal nutritional supplement for a group of this size was initially tripled.
Exposure time: Ten minutes per hour, eight hours per day.
Results: [REDACTED]
Notes: Experimentation on large mammals expressly forbidden without special permission from the Site Director.

Footnotes
1. Despite these precautions, the agent was seen using forms similar to SCP-1258 one month later, during a raid on a Church of the Broken God group. Presumably this was due to muscle memory, or perhaps subconscious retention. Agent was eliminated to prevent uncontrolled spread.

SCP-1259: "The Ancient Prophecy"

Item #: SCP-1259

Object Class: Safe

Special Containment Procedures: SCP-1259 is to be stored behind opaque glass in a climate-controlled room in the Infohazard Wing of Site 38. SCP-1259 is not to be moved or to be removed from its case except for testing, subject to Level 3 approval. No personnel other than D-Class assigned for testing are to read SCP-1259; in case of accidental exposure, affected personnel are to report immediately and receive Class-A amnestics.

Upon reading SCP-1259, the affected individual is to write or type a copy of the text as it appears to them for archival and comparison to current K-Class preparedness scenarios. Affected individuals are to be quarantined in a standard humanoid containment cell and undergo regular psychiatric counseling; end-of-month termination of affected D-Class is indefinitely postponed for the purposes of long-term study of SCP-1259's effects. Release into the civilian population for test purposes may be authorized at O5 discretion; if so authorized, the affected individual is to be shadowed by Foundation security personnel at all times and apprehended immediately in the event of potentially threatening action.

Description: SCP-1259 is a fragment of a damaged parchment scroll, measuring approximately 1.3 meters x 0.3 meters. Analysis of SCP-1259 indicates that it was produced in the 1st century BCE and that it was originally part of a larger scroll which to date has not been identified. SCP-1259 contains text on one side in a language which when photographed superficially resembles ancient Hebrew; analysis of these images, however, indicates that the photographed text consists entirely of a random arrangement of letters incomprehensible as a legible document.

When SCP-1259 is directly viewed by a human being, its text is

described by the reader as being legible in a language which the reader is familiar with. The text described by readers of SCP-1259 varies considerably between individuals. In all documented cases, the text presents itself as a prophecy regarding the imminent extinction of mankind as the result of a K-Class event occurring on a specific date within three to six months of when SCP-1259 is being read, in addition to a number of omens and precursor events which will lead up to said event. The nature of the prophesied event varies from reader to reader and appears to relate directly to the reader's personal beliefs and knowledge of the world; documented instances of the text have included references to religious eschatons, nuclear or biological warfare, containment breaches of Keter-class SCP objects, or actions taken by the Foundation itself. In no documented instance have any of the events prophesied in the text of SCP-1259 occurred. Written or typed copies of SCP-1259 text produce no anomalous effects and may be read safely.

After reading SCP-1259, the reader will express a belief that the text of SCP-1259 is correct and that the prophesied K-Class event will occur on the date referred to in the text. This belief is initially expressed as a mild concern and grows increasingly severe as the date approaches, with the reader identifying world events or events in their personal life, including events of a mundane or inconsequential nature, as "signs" or indications that the prophecy is occurring as predicted. Within 7-12 days of the date referenced in the text, the affected individual will come to believe that he or she is a "chosen one" who is personally responsible for preventing the event from occurring, and will attempt to engage in extreme measures to prevent the event, including political assassinations, displays of religious faith, human sacrifice, or [REDACTED].

To date, approximately 78% of affected individuals have died prior to the date referenced in the text of SCP-1259, either due to suicide or as the result of being killed in the process of attempting to prevent the event from occurring. Individuals who survive past the scheduled date have frequently reported symptoms of extreme depression, feelings of meaninglessness and futility, and suicidal thoughts. If the affected individual is prevented from committing suicide during this period and is provided with adequate psychiatric counseling, full recovery is possible and no long-term psychological effects have

been documented. Subsequent exposure of persons surviving this stage to SCP-1259 has produced no anomalous effects.

Experiment Log 1259-1:

> **Date:** 06/23/20
>
> **Test subject:** D-83201, Hispanic male, 38 years of age
>
> **Summary of reported SCP-1259 text:** Description of a Christian eschaton largely similar to the depictions in the Book of Revelation and in American "Rapture" literature, with the end of life on Earth occurring on 10/3/20 . (See XK-3621.)
>
> **Long-term results:** D-83201 requested a Bible and a meeting with a minister, and began praying regularly. In the days leading up to 10/3/20 , D-83201 frequently entreated security personnel and other D-class personnel to repent their sins. Following scheduled date, D-83201 ceased praying, discarded the Bible, and attempted suicide four times before succeeding on 10/12/20 .

> **Date:** 8/16/20
>
> **Test subject:** D-29403, Caucasian female, 27 years of age
>
> **Summary of reported SCP-1259 text:** On 9/3/20 , Islamic terrorists introduce a weaponized, airborne form of Ebola virus into the civilian population. Virus becomes pandemic by 9/23; global breakdown of society ensues, followed by widespread rioting, warfare, and famine. Human extinction as the result of the disease and subsequent chaos occurs on 12/6/20 . (See XK-5604.)
>
> **Long-term results:** D-29403 immediately began refusing physical contact with all Foundation personnel and has refused to leave her cell since 9/17/20 . D-29403 made frequent requests for laboratory

equipment and textbooks on microbiology, insisting to staff that "the cure" was within her grasp. Following 12/6/20 , D-29403 is of the belief that she is the last living human being on Earth and that all Foundation personnel interacting with her are hallucinatory. Observation ongoing.

Date: 2/12/20

Test subject: D-38202, Caucasian male, 23 years of age

Foreword: D-38202 is formerly Sgt. , a Global Occult Coalition field operative surrendered into Foundation custody following Security Incident 2338-Psi-Omicron-Delta.

Summary of reported SCP-1259 text: On 5/28/20 , the GOC launches a coordinated strike on several Foundation facilities, resulting in the assassination of the entire O5 Council and the escape of several Keter-class SCP objects from containment. [DATA EXPUNGED], current director of Site , assumes command authority and authorizes nuclear strikes to neutralize uncontained SCP objects. Nuclear activities are mistaken as an enemy attack on the United States of America, resulting in a brief nuclear exchange between the United States and [REDACTED]. In the ensuing breakdown of the Foundation chain of command, Procedure 110-Montauk is not conducted on schedule, resulting in [DATA EXPUNGED] on 6/3/20 . (See XK-209.)

Long term results: On 5/23/20 , D-38202 successfully breached containment and escaped Foundation custody. D-38202 proceeded to report to his former GOC post and gave a lengthy oral report to his former superior regarding the Foundation's weaknesses, how to contain or neutralize several SCP objects currently in custody, and the importance of ensuring that Procedure 110-Montauk is performed on schedule. Intelligence assets within GOC leadership confirm no hostile actions are

planned against the Foundation. D-38202's superior surreptitiously issued Class-B amnestics; a review of Foundation security is underway in light of the information leak. D-38202 was returned to Foundation custody and terminated on schedule.

Date: 3/26/19

Test subject: Dr. James A. Parsons, African-American male, 43 years of age

Foreword: Dr. Parsons was a senior Foundation linguist exposed to SCP-1259 during initial study, before its anomalous effects became known.

Summary of reported SCP-1259 text: Identical to the English-language text of SCP-1050-1. Review of Dr. Parsons' personnel file indicated he had previously been involved in the translation of several sections of SCP-1050-1. The final date in the text was replaced with the date 6/22/19 . (See XK-2330.)

Long term results: Dr. Parsons made frequent assertions that the arrival of "the Destroyers" referred to in SCP-1050-1 was imminent. Dr. Parsons was relieved of duty and committed to psychiatric observation following an attempt to contact several members of the O5 Council to demand immediate deployment of space-based weapons platforms. On 6/18/19 , Dr. Parsons left his quarters and attempted to seize control of [DATA EXPUNGED] in order to launch a preemptive orbital defense, resulting in the deaths of 17 staff members and security personnel before being apprehended and forcibly returned to quarters. Dr. Parsons committed suicide by hanging on 6/20/19 , leaving a suicide note stating "Death by my own hand is preferable to what those bastards will do to us."

SCP-1260: HMS Tiresias

Item #: SCP-1260

Object Class: Euclid

Special Containment Procedures: Due to the nature of SCP-1260, full containment is impossible. At no point is exploration or testing permitted aboard SCP-1260. The waters around the vessel are to be under constant satellite surveillance. Any vessel attempting to navigate the waters within a 20-km radius of SCP-1260 is to be diverted by Foundation personnel aboard the SCPS *Cassandra*. Should **SCP-2467** come within 50 km of SCP-1260, containment staff are to immediately begin emergency relocation procedures to prevent SCP-1260's assimilation. In the event that contact with SCP-1260 is lost due to a containment breach or emergency relocation, the next ocean in SCP-1260's location cycle is to be monitored until SCP-1260's GPS beacon reappears. At this time, the Foundation vessel assigned to SCP-1260 in that ocean will immediately be redeployed to allow continued containment. These vessels are the SCPS *Cassandra*, SCPS *Melampus* and the SCPS *Polyeidos* for the Pacific, Indian and Atlantic Oceans respectively.

Description: SCP-1260 is an 18th-century 42-gun Royal Navy 5th-rate frigate named the HMS *Tiresias*, currently adrift in the southern Pacific Ocean. Despite the ship's age, the vessel appears to be in perfect sailing condition.

Aboard SCP-1260 reside the skeletal remains of the ship's original 224 crewmen in addition to a total of 64 other individuals and the 9 Foundation agents lost during Exploration 1. A majority of these remains lie fully intact upon the ship's gun decks or within SCP-1260's hold. All clothing and equipment recovered from SCP-1260 continue to function as normal despite age and environmental exposure.

Twenty minutes following any boarding of SCP-1260 a large bank of

fog will begin to gather around the ship with a radius of 1 km. This fog fully encloses the ship an additional 15 minutes later at which point all electronic devices aboard issuing a transmission will cease to function. Any subject still aboard SCP-1260 at this time will become irretrievable.

The fog will dissipate ten minutes after SCP-1260 is fully enveloped. At this point the subject will have vanished along with anything aboard the ship at the time of encasement. SCP-1260 will reappear in a random site in the next major ocean 2 to 12 weeks later, moving from east to west as it circles the globe. At this time all human life aboard the ship at the time of its disappearance will be among the skeletal remains. To date there has been no instance of SCP-1260 appearing in the Arctic or Southern Oceans.

Exploration attempts have shown that the ship's cargo hold has been completely emptied of food and that messages have been carved into a large percentage of the ship's interior surface area. The captain's log has been recovered, though no abnormalities were reported in any of the entries. No evidence exists to suggest pages were removed from the log prior to discovery.

Addendum: 1260-01: Exploration Logs:

+ Exploration Logs

Exploration 1:

SCP-1260 is adrift in the South Indian Ocean. Exploration Team 1 consists of 9 Foundation Agents. Each is equipped with a headset providing an audio feed to Control aboard the SCPS Melampus. A video feed from aboard the Melampus captures the exploration in progress. The exploration team approaches SCP-1260 in a raft.

Team Leader: Attention *Melampus*, we have just made contact with the *Tiresias*. Preparing to board now.

Exploration team boards SCP-1260 from the starboard side.

Team Leader: Alright *Melampus*, we are now aboard the vessel. We have visual on several sets of human remains. All skeletal.

SCPS *Melampus*: Do we have a count on how many bodies?

Team Leader: From an estimate I'd say over twenty on this deck alone. We will need more time to provide a more accurate count.

SCPS *Melampus*: Roger that. Please continue to search the ship. Report any anomalous findings.

Exploration team begins to search SCP-1260, venturing into the vessel's interior. 15 minutes pass since boarding.

Team Leader: Alright *Melampus*, we have a count. There appear to be 288 total bodies scattered throughout the ship. 224 appear to be a mixture of period sailors and Royal Marines. We also count 64 other individuals from a variety of eras. At least 8 of these guys are French marines from the same period. We also have a variety of fishermen.

SCPS *Melampus*: Very good. Have you searched the cargo hold yet?

Team Leader: We have. It is completely emptied of food though all other supplies are untouched. Nothing appears to have aged a day. I wouldn't be surprised if you could still light the gunpowder.

SCPS *Melampus*: Strange, is this effect only

concentrated on the cargo hold?

Team Leader: Negative, it's the whole ship. The entire vessel appears to have taken no damage despite how long it has been at sea. It's in perfect sailing condition. Even the clothing and weapons we found on the bodies haven't decayed.

SCPS *Melampus*: Roger. Have any other anomalies been spotted?

Team Leader: None yet, but the entire interior of this place is covered in carved messages.

SCPS *Melampus*: Noted. Please make sure to document those messages you deem important. Have you located the captain's log yet?

Team Leader: Negative. We're combing the ship for it now. We'll let you know when we find it.

Exploration team continues to search SCP-1260. 30 minutes pass since boarding. Fog has begun to gather around SCP-1260 for the past 15 minutes.

Team Leader: Hey *Melampus*. Do you know anything about this fog? We are beginning to lose visual on you.

SCPS *Melampus*: Affirmative. Our equipment detects that it has so far gathered only around the ship. Return to the *Melampus* when the captain's log has been found.

Fog continues to gather around SCP-1260 until it is fully encased. At this time, all of the exploration team transmitting devices go dead.

Attempts to regain contact fail. Ten minutes later the fog dissipates. SCP-1260 has vanished.

Exploration 2:

SCP-1260 is adrift in the North Atlantic. Exploration Team 2 consists of 6 Foundation Agents. Each is equipped with a headset providing an audio feed to Control aboard the SCPS Polyeidos. A video feed from aboard the SCPS Polyeidos captures the exploration in progress. The exploration team approaches SCP-1260 in a raft. A GPS tracker has been provided for attachment to SCP-1260's hold.

Team Leader: Attention *Polyeidos*, we have just made contact with the SCP-1260. No signs of Team 1 are visible. Preparing to board now.

SCPS *Polyeidos*: Roger, Team 2. Team 1's tracker is still active according to our equipment. Please board the ship and locate any remains of Team 1. We will have you abandon ship in the event that the fog reappears.

Exploration team boards SCP-1260 from the port side.

Team Leader: Alright *Polyeidos*, we are now aboard the vessel. The message "Beware the fog," has been carved across a majority of the deck. This was not reported by Team 1, correct?

SCPS *Polyeidos*: Correct. That is new. Please document this and any other changes in the ship that you discover.

Team Leader: Roger. We have also located Team 1 Leader's remains propped against the mainmast. His beacon is active and he is holding what appears to be the captain's log in his hands.

SCPS *Polyeidos*: Excellent. Recover the log for study. Have your team continue to search the ship for the remainder of Team 1 and attach the GPS tracker to the ship's hold.

Exploration team continues to search SCP-1260, venturing into the vessel's interior. 25 minutes pass since boarding. Fog has begun to appear around the ship

Team Leader: We have located all 9 agents. 4 were found on the top deck, 2 in the cargo hold and 3 in the various gun decks. All bodies have now been recovered and the GPS tracker has been fixed to the cargo hold.

SCPS *Polyeidos*: Roger. Fog has become visible. Please have your team return to the boarding craft immediately.

Exploration team returns to their boarding craft. 30 minutes pass since boarding. Fog has begun to gather around SCP-1260 for the past 10 minutes. Exploration team returns to SCPS Polyeidos without incident. SCP-1260 is fully encased in fog an additional 5 minutes later. At this time the GPS tracker ceases to issue a signal. Ten minutes later the fog dissipates. SCP-1260 has vanished.

Addendum: 1260-02: Agent Bell's Log :

+ Agent Bell's Log

The following was recovered written in the back of the

Captain's log by Agent Gideon Bell, Team Leader, Exploration Team 1:

<6/20/2005> I'm writing this in the event that we aren't able to provide a debriefing in person. We found the damn thing stuffed in a pot in the Crew's mess. We remained encased in fog god knows how long before it dissipated. We were then spit out in a different place, though I can't say where. The sea is black as ink. Our lights don't penetrate the surface so we have no idea what the fuck lurks below. The sky is also pitch black. No stars or moon. The only light source available aside our flashlights is a bright glow coming from the top of the main mast. Hammond climbed up there to take a look, but there was nothing there. For the time being we are going to explore the ship. Maybe we'll find something that'll give us an idea of what to do next.

<6/21/2005> We heard whispers today. They were very soothing at first, but now they seem off. None of us can make out where they are coming from, but what they say to us is crystal clear. They called to James by name. They asked him about his family. He attempted to respond, but they never replied. We can see another light in the distance. The voices are coming from that direction. There is a breeze here, so maybe we'll try to sail.

<6/22/2005> James is dead. The poor bastard started vomiting and began to wither away before our eyes. There was nothing we could do to help him. We didn't know what the fuck was going on. His body rotted away a few hours later, leaving only clothing and bones behind. The whispers have now started calling to Hammond.

<6/23/2005> Hammond and Gray are now dead. Both had their names called and both withered away. There's not a fucking thing we can do. They just fell apart in front of me. Now the whispers have started laughing. The light in distance is getting closer, beyond that four other lights have appeared. I'm hoping we arrive before those things begin to call me.

<6/24/2005> We arrived at the light today. It was another ship, some merchant frigate from the 20th century or something like that. We managed to board it. Skeletons. Just like with the *Tiresias*, there were only skeletons. It was then the whispers became cackles and we saw at least another ten lights begin to burn in the distance. They seem to come from every god damn direction now. Even worse, the whispers have started to call my name. The rest of team is staying away from me. I don't want to die.

<6/25/2005> They ask me about my daughter and my wife. They ask me if I miss them and if I'm strong enough to see them again. I have tried to respond, but they don't reply. I don't know what the fuck they want from me. I screamed at the fucking sky for hours. They never responded.

I have personally flipped through the Captain's log, but there is absolutely nothing here to indicate the captain or the crew had anything to do with this. The final log puts the crew on a mission to investigate pirate attacks in the East Indian Ocean, with good conditions. It's always nice to know what you're looking for had all the answers.

I have placed myself against the mainmast with the log in my hands. I hope the

Foundation learned something. I hope our deaths expanded that scientific horizon. God damn you. God damn all of you.

« SCP-1259 | SCP-1260 | SCP-1261 »

SCP-1261: Memetic Emu

Item #: SCP-1261

Object Class: Euclid

Special Containment Procedures: A recording capable of infecting human subjects with SCP-1261 is to be stored on network-isolated electronic storage station 2 at Site 108. In the event of failure, redundant analog backups of this recording are to be stored at Archive Site . All experimentation on SCP-1261 is to be performed in Black Cloister type soundproofed testing chambers. Following experimentation, human subjects affected by SCP-1261 are to be treated with class A amnestics prior to release from the testing chamber. Foundation personnel are not to interact with individuals affected by SCP-1261 without DC-grade hearing impairment gear. Communication with affected subjects is to be limited to electronic transcription, typed or written methods, and sign language (where applicable).

Description: SCP-1261 is a highly virulent Type October memetic contagion[1] propagated through aural vectors. SCP-1261 deviates slightly from other memes of its class in that transmission is not limited to the expression of specific phrases or ideas; instead, an individual is infected by the meme when he or she hears and understands an infected individual mentioning or referring to the hallucinations caused by SCP-1261.

Subjects affected by SCP-1261 suffer from the persistent delusion that they are accompanied at all times by a sapient adult bird of order Struthioniformes (hereafter instances of SCP-1261-1). Instances of SCP-1261-1 are almost exclusively members of the *Dromaius novaehollandiae* (Emu) species, though several occurrences of *Struthio camelus* (Common Ostrich) and a single instance of *Apteryx haastii* (Great Spotted Kiwi) have also been reported. Subjects typically express close familiarity with the perceived animal, with roughly 78% of subjects expressing the belief

that SCP-1261-1 has accompanied them since the age of 13[2], with the remainder unable to provide specific details.

Descriptions of SCP-1261-1 behaviour provided by affected subjects are uniformly consistent and indicate that the supposed birds understand and react in response to human speech, demonstrate affectionate gestures (e.g., nuzzling) towards their corresponding SCP-1261 subject, and behave in a manner similar to trained assistance animals. Though all instances of SCP-1261-1 are visible to all individuals infected with SCP-1261, the creatures rarely interact with one another or with other SCP-1261 carriers. SCP-1261-1 are also described as maintaining consistent age and health throughout their subjects' infection. Reports suggest no anomalous behaviour from SCP-1261-1 beyond their apparent intelligence and constant presence.

Class A amnestics effectively neutralize SCP-1261 infection, with retained class D personnel showing no signs of spontaneous relapse through 18 months of observation. Subjects treated in this way exhibit no lasting side effects save for an increased fondness of birds over other animals, especially as pets.

Addendum 1261-01: On 8/14/2001, Foundation operatives intercepted reports of a GOC raid on a settlement in , Peru "infested with Harvey-Greens". Details in GOC reconnaissance reports suggested wide-scale SCP-1261 exposure among the populace, which was corroborated by after action reports from the GOC raid. MTF Beta-2 ("Glass Houses") were dispatched to investigate the remains of the settlement following the raid. Forensic analysis of the site suggests that 300-500 individuals had resided in the village, all of them infected with SCP-1261. Irregularities in and around the settlement include:

- Feeding troughs exhibiting wear patterns consistent with large beaks
- Large nests in most dwellings, typically padded with blankets or other bedding and visibly worn
- Tracks and clawprints throughout the compound consistent with adult members of *Dromaius novaehollandiae*
- Scratch marks on doors and other objects suggesting manipulation by adult members of *Dromaius novaehollandiae*

In spite of the observations described above, Beta-2 recovered no samples of biological or genetic material belonging to members of *Dromaius novaehollandiae* on site. Additionally, intercepted after-action reports from the GOC raid mention no encounters with any wildlife save for the human residents of the settlement. Attempts to determine and/or reproduce the circumstances leading to the observed state of the site are ongoing.

Footnotes
1. Formerly a "Dancing Bear" meme; see document MEM-C_28962 for additional information on the revised classification system.
2. Infected subjects younger than 13 years of age are able to perceive the SCP-1261-1 instances of other affected individuals but do not "receive" their own instances until their 13th birthday. Such occasions are treated by other SCP-1261 sufferers as a rite of passage similar to a quinceañera or "sweet sixteen" celebration.

« SCP-1260 | SCP-1261 | SCP-1262 »

SCP-1262: Seed of Destruction

Item #: SCP-1262

Object Class: Keter

Special Containment Procedures: In the event of a catastrophic failure of the primary containment system or a breach in the cube itself, 6 pneumatic drills will extend from the walls and penetrate each face of the cube to deliver a powerful synthetic auxin (2,4,5-T) directly into SCP-1262. If this secondary system fails, 50% of Silo-4 will be filled with boiling paraquat and SCP-1262 will be released into the liquid. If this tertiary system fails, a series of controlled incendiary explosions using a combination of thermite, napalm, white phosphorus, and TNT will be used to suppress SCP-1262. In any case, **Mobile Task Force Theta-4 (aka "Gardeners")** will respond and remain onsite to provide additional security during the reestablishing/reconstruction of the containment system(s).

At no time should water, water vapor, organic tissue, or visible light (with a frequency between 400-790 THz) be introduced into Silo-4. Outside of containment, SCP-1262 is extremely lethal in direct contact to organisms and should only be approached after being fully suppressed back into a dormant state.

Due to potential dangers associated with cross-contamination, at no point are **SCP-831** colonies to be contained at the same facility as SCP-1262.

At no time should water, water vapor, organic tissue, or visible light (with a frequency between 400-790 THz) be introduced into Silo-4. Outside of containment, SCP-1262 is extremely lethal in direct contact to organisms and should only be approached after being fully suppressed back into a dormant state.

Description: SCP-1262 is a mass roughly 30cm in diameter that is

made up of a green plant matter capable of highly accelerated growth when left in the presence of light, moisture, or organic tissue. Its surface area is composed of a dense covering of thin roots. These roots can spread outwards by growth and movement at a rate of 0.22 meters per second. SCP-1262's roots can reach up to a kilometer in length in order to seek water and mineral nourishment from the surrounding environment or from other living organisms.

SCP-1262 has a rapid regenerative ability which makes it difficult to eradicate. SCP-1262 also has an innate resistance to most types of radiation, extreme temperatures, and extreme pressures. However, extreme temperature (>1,470 Kelvin or <213 Kelvin) or large amounts of aggressive herbicides seem to be the most effective suppression methods. Currently there is no known method to fully exterminate SCP-1262. If left unchecked, SCP-1262 will grow to form complex structures. These structures are supported by hardened cellulose fiber and lignin wax plating formed in hexagonal patterns. These structures also include defensive/offensive biological mechanisms that range anywhere from pneumatically discharged calcium carbonate flechettes to hallucinogenic fume releasing pods.

Inside these structures, SCP-1262 is able to produce many independently functioning organic systems for capturing and converting the ambient environment on an enormous scale. Please review Incident 1262-2010-4.2 summary for further information on SCP-1262 activity and threat level.[1]

Timeline Summary of Incident 1262-2010-4.2:

04/12/2010

- Dr. (a prominent vulcanologist) and his assistant were collecting samples on the Eyjafjallajökull ice cap in Iceland when they inadvertently unearthed SCP-1262 from the dense ice. Dr. asked his assistant to retrieve it. As the assistant came into physical contact with SCP-1262, he was quickly engulfed and absorbed by aggressive overgrowth resulting in death within seconds. Dr. escaped back to his vehicle and

reported to the local authorities. Local law enforcement arrived hours later to find a thick tree like structure growing. Three of the officers were entangled and absorbed by roots underneath them and another was killed by a toxic aerosol. The only surviving individual did not report the incident, but fled the country instead where he was later detained overseas. SCP-1262 grew substantially and virtually unnoticed for the next 12 hours.

04/13/2010

- By 4:00am, SCP-1262 had grown into a hardened cellulose based structure covering almost 20,000m^2 with three prominent towers each roughly 100m tall. At the base, a collection of gaseous bladders each inflating and deflating independently were scattered around the center mass, along with thick roots that penetrated deep into the ice. The structure was processing ambient air and other nutrients into heated carbon monoxide, which was being exhaled out of the structure's towers as thick clouds. Two nearby towns evacuated after fifty people died from inhalation.
- By 12:30pm, two more towers had sprouted and the entire structure had increased in size by 160%. The SCP Foundation was then notified and a perimeter/media blackout was established to protect civilians. Mobile Task Force Sigma-9 (aka "Valkyries") was called in with Level 5 clearance to lay down suppressing fire around SCP-1262 using air to ground bunker busters with warheads.

04/14/2010

- First volley of the air strike began at 1:00am and was successful in penetrating the ice cap over the dormant volcano. SCP-1262 became trapped in the collapsing caldera for a short while. During that time, three aircraft are destroyed by SCP-1262. A

second volley was aimed directly at the center mass of the structure. The subsequent explosions were able to destabilize the volcano underneath to the point of triggering a violent eruption as planned. A final airstrike of bombing raids was made in the surrounding areas of the Eyjafjallajökull ice cap, effectively demolishing the towns of and along with of witnesses campsite.

- The entire site was closely monitored to ensure that it had been successfully incinerated in the eruption. All public knowledge of the incident was expunged and the airspace of 20 nearby countries were subsequently closed off until further notice until atmospheric ash samples confirmed a complete neutralization.

/ /20

- Flight crashed into an isolated area of Greenland while traveling from Reykjavík, Iceland. Intercepted transmissions before the crash gave a strong indication that SCP-1262 was involved. Upon further investigation of the wreckage, the tail section which had broken off in mid air was found covered in SCP-1262's overgrowth. Still in early stages of development, SCP-1262 was quickly suppressed and had the surrounding layers of growth stripped off. SCP-1262 was then taken directly to Area-33 for indefinite storage.

Footnotes
1. All information on SCP-1262 is based on observations in the fieldand the surviving witnesses' accountsduring the Iceland Incident.Future research is planned when safer containment procedures can be developed.

« SCP-1261 | SCP-1262 | SCP-1263 »

SCP-1263: Talking Heads

Item #: SCP-1263

Object Class: Safe

Special Containment Procedures: SCP-1263-1 through 5 are to be contained in separate humanoid containment cells modified to accommodate pregnancies. New instances of SCP-1263-A are to be analyzed and evaluated shortly after spawning and shall either be terminated or kept for further study at the discretion of Dr. Heung. There are currently 23 specimens of SCP-1263-A being held at Site-107 for testing. Specimens spawned from the same SCP-1263 subject must not be brought within 1.4 meters of each other for any purpose other than approved testing.

Description: SCP-1263 consists of five Caucasian female siblings, designated SCP-1263-1 through 5. SCP-1263-1 through 5 are in a comatose state, and have been for some time prior to containment. Every four months, 5 instances of SCP-1263-A will manifest within the wombs of SCP-1263 simultaneously. The "gestation period" for SCP-1263-A lasts for 3 months, with a 1 month pause before the cycle begins again.

Instances of SCP-1263-A appear to be disembodied human heads of variable race and gender. SCP-1263-A instances lack connections for associated bodily systems, instead possessing a layer of skin where said connections would normally be located. Despite this, SCP-1263-A instances are alive, and seem to carry out bodily functions as a normal human head would. SCP-1263-A instances lack any kind of structure for transferring blood from and to the placenta of SCP-1263. Tests have shown near constant brain activity in SCP-1263-A specimens. DNA tests on SCP-1263-A have been inconclusive.

SCP-1263-A constantly emit rapid, distressed vocalizations.[1] These vocalizations are largely unintelligible. When at least 5 instances of

SCP-1263-A spawned from the same member of SCP-1263 are brought into a minimum proximity of 1.4 meters near each other, the vocalizations will begin to synchronize, and will eventually become fully coherent. SCP-1263-A will not engage in this behavior with instances spawned from different members of SCP-1263.

The nature and language of the synchronized vocalizations vary depending on the SCP-1263-A's corresponding SCP-1263 member:

- SCP-1263-AA, spawned by SCP-1263-1, recite audio being transmitted on the nearest 99.3 MHz frequency in real time, in Portuguese.
- SCP-1263-AB, spawned by SCP-1263-2, sing opera created during the Baroque period, altered to be performed in Urdu.
- SCP-1263-AC, spawned by SCP-1263-3, vocalize the thought streams of an unidentified individual[2], in Laotian.
- SCP-1263-AD, spawned by SCP-1263-4, tell what are believed to be meteorological forecasts from an unidentified extrasolar planet, in Swahili.
- SCP-1263-AE[3], spawned by SCP-1263-5, act as a two-way communication device for an intelligent entity, designated SCP-1263-Sigma, and speak in English. SCP-1263-Sigma has been largely uncooperative in the Foundation's attempts to extract information from it.

Addendum 1263-01:

+ Audio Log 1263-Sigma-01

Foreword: First recorded instance of communication with SCP-1263-Sigma. At the time, the research staff was performing initial analysis and testing on SCP-1263-AE to determine the nature of their vocalizations. 3 minutes after the chosen SCP-1263-AE instances began to synchronize, SCP-1263-Sigma attempted communication.

<Begin Log>

Unintelligible voices can be heard in the

background

Dr. Varghese: This is Dr. Varghese performing Experiment 1263-039-B to determine the nature of SCP-1263-AE's vocalizations. Researchers Janek and White are assisting. The test subject have been grouped within appropriate proximity of each other. We are presently awaiting vocal synchronization.

Over the next 3 minutes, the voices produced by SCP-1263-AE steadily synchronize and evolve into coherent speech.

SCP-1263-Sigma: Hello? Is this thing on?

There is silence for 5 seconds before Dr. Varghese responds.

Dr. Varghese: Umm, yes. We can hear you.

SCP-1263-Sigma: Excellent! Last few times I tried to get a signal didn't turn out so well.

Dr. Varghese: Please state your name.

SCP-1263-Sigma: Jimmy, but that's not important right now. I'm finally able to share my writing. Would you like to hear some poetry?

Dr. Varghese: That won't be necessary. Now, how did you come to acquire this…method of communication?

SCP-1263-Sigma: Oh, come on now! I'm sure you'll love it!

The SCP-1263-AE instances can be heard clearing their throats.

SCP-1263-Sigma: Love. What is life without it? Why should we question about it? It is but the wind in the trees. The funny feeling in my knees. Floating like a bumble bee. So free.

Silence for 3 seconds.

SCP-1263-Sigma: Now, wasn't that lovely? Here's another: Mother Nature, her sweet caress. It's all I need when life gives duress. Sounds so swe-

Dr. Varghese: *(to Researchers Janek and White)* Take the heads away. We'll try this another time.

SCP-1263-Sigma: Yeesh. Tough crowd. You'll come to like it if you take the time to think abou-*(unintelligible)*

<End Log>

Footnotes
1. Vocalizations from SCP-1263-A instances are audible from the womb 1 week before spawning.
2. Subject matters of the thoughts indicate that they are those of a resident of Wisconsin named Ron Ackerson.
3. Notably, other SCP-1263-A instances have displayed extreme anxiety when in the presence of SCP-1263-AE.

« SCP-1262 | SCP-1263 | SCP-1264 »

SCP-1264: Resurrected Wreckage

Item #: SCP-1264

Object Class: Keter

Special Containment Procedures: SCP-1264 is located 75m below the ocean's surface[1] of the South Pacific at 48°52.6′S 123°23.6′W. It is to be held in place by 8 pairs of 10kt deadweight anchors chained together and attached to SCP-1264. **Mobile Task Force Gamma-6 (aka "Deep Feeders")** will be tasked with performing bimonthly examinations done by remote submersibles in order to inspect the integrity of the anchors and chain. 450 naval contact mines will be positioned around, over, and under SCP-1264. The mines will be placed 20m from each other in order to sympathetically detonate in the event of a contact. Shipping lanes and aquatic anomalies, such as **SCP-2467**, will be diverted in order to avoid the containment area. Since detainment, SCP-1264 has exhibited no activity but still remains buoyant.

Description: SCP-1264 is an amalgamation of once derelict war ships and various pieces of flotsam/jetsam that have been adhered together by organic secretions. The main body of SCP-1264 is made of five WWII era war ships that were used as target ships as part of the Operation Crossroads atomic bomb tests performed at the Bikini Atoll in 1946. The following ships that make up SCP-1264 were confirmed to have sunk after the tests:

- USS Saratoga (CV-3): Lexington-class Aircraft Carrier
- Nagato (長門): Nagato-class Dreadnought
- *Prinz Eugen*: Admiral Hipper-class Heavy Cruiser
- USS Lamson (DD-367): Mahan-class Destroyer
- USS Apagon (SS-308): Balao-class Submarine
- Various sections of a Yard Oiler (YO-160)

Survey reports of the wreckage performed at the Bikini Atoll in 1954 showed a number of sunk ships missing from the lagoon. In

response, the US Navy built and sunk several 'dummy' ships in their place in order to cover-up any evidence of the missing original ships. The US Government then initiated Operation Castle under the guise of nuclear testing, but was actually intended for the purpose of creating sufficient nuclear fallout as to make the Bikini Atoll area uninhabitable. SCP-1264 was first documented on Jan. 30, 1959, 56km south of Cape Farewell, Greenland when it engaged and sunk the MS Hans Hedtoft during its maiden voyage.

SCP-1264 shows only moderate corrosion and damage in contradiction of US Navy records on the individual ships. The centerpiece of SCP-1264 is the aircraft carrier with several large jib cranes attached to its deck. The other ships are fastened to the sides of the centerpiece by means of hardened secretions. All of the ships are missing their superstructure or conning towers. Other flotsam and jetsam has been attached to fill in empty spaces between the ships and roughly makes up 12% of the SCP-1264's total mass. SCP-1264 is armed with various pieces of artillery, torpedoes, AA guns, and depth charges. However, only several pieces of artillery have ever been seen in use which indicates that either the remaining are non-operational or there are insufficient resources to operate them. SCP-1264 spends most of its time underwater as a submersible. Above the water, SCP-1264 is capable of speeds up to 31 knots.

SCP-1264 is maintained by a crew that has been designated SCP-1264-A. Each fit inside a US Navy standard rubber diving dress and are equipped with a Mark V diving helmet and weighted boots. SCP-1264-A are headless humanoid entities closely related to sea cucumbers (see autopsy report). SCP-1264-A are also connected by a flexible arterial cord roughly 90 meters long that is in turn connected to SCP-1264's interior. SCP-1264-A displays a deep understanding of SCP-1264's mechanical and electrical systems. SCP-1264-A habitually performs repairs and maintenance with what is available within their designated areas. SCP-1264-A are characteristically slow, obstinate, and exhibit no real intelligence of their own. SCP-1264-A also secrete a strong adhesive through their gloves that act as a water-proof sealant, binder, filler, and cement in order to maintain the structural integrity and buoyancy of SCP-1264.

All of SCP-1264's steerage and weapon systems are operated by SCP-1264-A. In turn, SCP-1264-A is commanded by a single entity designated SCP-1264-1. SCP-1264-1's appearance is unknown and the only physical evidence for SCP-1264-1's existence are the arterial cords that connect SCP-1264-A to the ship's interior. These cords are lined with strands of neural tissue that do not originate from SCP-1264-A. This indicates that SCP-1264-A is directly connected to a separate biological entity, or that SCP-1264-1 is actually the collective consciousness of SCP-1264-A. SCP-1264-1 has proven on numerous occasions to be a hostile and skillful tactician of naval warfare. SCP-1264-1 has been reported in some cases to transmit radio signals via ELF radio.

To date, SCP-1264-1 has engaged civilian and military vessels and has sunk of them, though SCP-1264-1 has shown a preference for passenger ships over other vessels. After the destruction of a vessel SCP-1264-A will then throw fishing nets on top of survivors floating in the water. These nets are then attached to the hull of the sinking vessel or an anchor so that it will drag down the net and its contents. Post-incident recovery teams using submersibles are unable to locate any corpses underwater after they are dragged to the bottom. In 20 , SCP-1264 was involved in a protracted engagement with MTF Tau-11 (aka "Can Openers") and was effectively suppressed. In its impaired condition, SCP-1264 was then towed out under armed escort to its current containment area for indefinite detainment.

[LEVEL-2 ACCESS REQUIRED]

Autopsy Report$_{1264\text{-}A\text{-}8}$

ID: BPD110094-67F

Decedent: SCP-1264-A-1

- Age: N/A
- Race: N/A
- Sex: N/A
- Length: 177.0cm
- Weight: 111.3kg

Location of Autopsy: `Research Site-45`

- Autopsy Authorized by Dr. W. Hermes
- Recovered post incident (1264-12-D)

Clothing/Equipment:

- Mark V diving helmet
- Standard US Navy diving dress (rubber)
- Weighted boot

External Examination:
Multiple blast and fragment injuries to the chest and abdomen including amputation of one of the lower extremities. There are multiple penetrating fragment injuries of the anterior thorax. Bilateral symmetry is present in the physical appearance. Four extremities branch out from the central body, 2 upper and 2 lower. The upper extremities branch out again into four smaller distal appendages. This allows the subject to operate inside the suit, by taking on a nearly humanoid form.

History:
Injured by explosive munitions.

Gross Description:

- Skin: A membranous epidermis and dermis are both present. A thin layer of calcified structures lies below the dermis and is made of isolated microscopic ossicles joined by connective tissue.
- Head and Neck: Head is totally absent. Mark V diving helmet is only filled with sea water and detritus. The open neck actually serves as the anus, expelling waste into the helmet.
- Skeletal System: An endoskeleton made of reinforced calcareous rods, plates,

and bulbs provides upright support to the body and extremities. These structures are not true bones as they lack marrow, nerves, endosterm, and periosterm. Structures are held tightly in place by the surrounding radial muscles.

- Muscle Tissue: Tissue is dark brown in color and formed in a circular pattern around the endoskeleton. A water vascular system is present to allow elongation and introversion of the muscle tissue. Water is not actually used in the hydraulics but rather a coelomic fluid.
- Circulatory System: Hundreds of miniature ampullae are present within the muscle tissues that pump the coelomic fluid. Phagocytic coelomocytes, somewhat similar in function to the white blood cells of vertebrates, are formed within the haemal vessels, and travel throughout the body cavity via coelomic fluid. The coelomocytes also seem to be responsible for carrying the haemoglobin.
- Respiratory and Digestive System: Oxygenated and deoxygenated coelomic fluid is circulated via the arterial cord protruding from the dorsal side. This cord is the body's lifeline for both oxygen and nutrition, similar to a fetus connected to the mother's placenta. Body cavity lacks gills and stomach. The cord directly branches off into the intestines and major vessels once inside the body.
- Nervous System: Brain is completely absent. Nerve tissue stems from the thin notochord-like structure that is included

in the arterial cord. Small eye spots are present on the distal upper appendages.
- Other Comments: A system of interconnected glands fills the entire ventral thoracic cavity. These glands are responsible for secreting the specialized adhesive. Secretions are then pumped through the upper extremities and out the distal orifices.

Other Lab Procedures:
Toxicology, Photography, X-Ray, Microscopic Examination.

Disposition of Evidence:

- Toxicologist: Vitreous, Fluids
- Lead Investigator: Clothing, Equipment
- Morgue Custodian: Body

NOTE: Items not specifically stored in the Lab-62 vault are to be incinerated. - Dr. W.H.

Summary:
Body exhibits strong physical and anatomical traits with *Echinoderms*, especially *Holothuroidea* or sea cucumbers. Though the body includes many independent systems, it is completely dependent on this cord for sustenance and direction. Control of the body is granted through the cord through some other intelligence as it is evident how the neural pathway ends inside the body cavity but originates elsewhere. The body should be considered as a physical extension of this intelligence. This entity must be made of the same anatomical characteristics as SCP-1264-A-1 in order to utilize and manipulate these extensions. This entity, if it is in fact a singular consciousness, would have to be extremely adapt to handling an enormous amount of

input and output signals simultaneously in order to manage all of SCP-1264-A.

1. Below 75m is considered to be SCP-1264's crush depth based on engineering analyses.

« SCP-1263 | SCP-1264 | SCP-1265 »

SCP-1265: The Mesozoic Preserve

Item #: SCP-1265

Object Class: Euclid

Special Containment Procedures: Site 1265, which contains SCP-1265, is to be publicly maintained as a wildlife preserve by the Safe and Clean Planet Initiative, a Foundation front company. Scientific discoveries made by the Foundation regarding wildlife within SCP-1265 may be published following corresponding evidence being found in the fossil record.

Civilians wishing to travel through SCP-1265 are to treated with Class-D (Anterograde, Selective) Amnestics in order to be unable to remember instances of SCP-1265-A that they come into contact with. All untreated civilians found to have come into contact with SCP-1265-A instances are to be treated with Class-A (Retrograde, General) amnestics, implanted with false memories, and released.

Every six months, eggs laid by instances of SCP-1265-A are to be harvested for incubation and study before being released into the wild at maturity. Full procedures for care of young specimens of SCP-1265-A, including imprinting procedures, see Document 1265-I.

Description: SCP-1265 is an irregularly shaped area of land measuring 50km^2 within the Congo basin, Africa. SCP-1265 is mostly contained within the Democratic Republic of Congo, but approximately 15km^2 is contained within the neighboring Republic of Congo. The majority of SCP-1265 is uninhabited, save for some tribal villages, and contains flora typical of the Congo basin.

SCP-1265 is inhabited by several species known to be extinct, mostly from the clade Dinosauria. These animals, collectively designated SCP-1265-A, appear spontaneously in groups of five approximately once every 30 days, and are not necessarily found on

the fossil record within Africa; instead, they appear to be selected based on the climate they lived in during the Mesozoic Era. Instances of SCP-1265-A are incapable of leaving SCP-1265, as they dematerialize upon crossing the border of SCP-1265, and reappear in an area within three kilometers of the border, sedated. SCP-1265-A are also not chosen based on one particular period of the Mesozoic, but the Cretaceous and Jurassic are the most well-represented, with sparse population of Triassic-period dinosaurs. In addition, several non-dinosaur reptilians, such as pterosaurs, are known to exist with in SCP-1265, but are not commonly seen.

SCP-1265-A instances, even carnivores, show no aggression or fear towards humans unless provoked; to date, the 3 Foundation personnel killed in SCP-1265 have died as a result of accidentally provoking a 1265-A instance, as opposed to being actively hunted by a carnivorous species of SCP-1265-A.

Notably, there are few large carnivorous or herbivorous dinosaurs present as SCP-1265-A instances, and a lack of dinosaur species whose fossils have been found in North America. For example, species such as *Tyrannosaurus rex* and *Brachiosaurus* have never been sighted in SCP-1265, but species such as *Spinosaurus* and *Kentrosaurus* are relatively common. Proportionately speaking, there is a 5:1 ratio of non-American dinosaurs to American species.

Finally, there are several instances of SCP-1265-A that have not yet been discovered in the fossil record, collectively known as SCP-1265-α. SCP-1265-α instances are known for being unusually aggressive, and will often charge at or attempt to attack researchers and other animals within SCP-1265 indiscriminately. As of yet, Foundation researchers have been unable to determine the origin of any most instances of SCP-1265-α; some have been found in the fossil record, and as such, have been reclassified as instances of SCP-1265-A. Notably, SCP-1265-α instances reclassified as SCP-1265-A usually lose all aggressive tendencies.

SCP-1265 is believed to have existed for at least 200 years, according to historical records. Several instances of SCP-1265-A have been integrated into the folklore of several tribes in the area near SCP-1265[1]. For further details, see Interview 1265-01.

Interview 1265-01: An interview conducted by Dr. Welles in a Mboshi village 5.5 KM away from the perimeter of SCP-1265 regarding SCP-1265-A sightings. All dialog is translated from the Lingala language.

<**Begin Log**>

Dr. Welles: What can you tell me about the monsters?

: There are several of them in the jungle, almost all of them in the water. They do not eat people, though; not most of them, except for Nguma-monene[2]. Nguma-monene is like a big snake with legs, walks on all fours like a dog, and has big ridge on its back. That will eat you if it catches you[3].

Dr. Welles: Tell me about Mokele.

: Mokele-mbembe[4] is the largest of them all. It is big enough to block rivers, and makes the lakes rise. It can breathe underwater, but is not a fish, and the Earth shakes when it walks. There is also Mbielu-Mbielu-Mbielu, the beast with planks in its back.

Dr. Welles:[produces illustrations of *Camarasaurus* and *Kentrosaurus* from his pack] Are these Mokele and Mbielu?

: Yes, and no.

Dr. Welles: No?

: These do not have feathers. Everything else is right, but Mbielu has feathers; so does Mokele. They are almost like birds in that way, but they do not fly. The ones that do fly have no feathers.

Dr. Welles: What else can you tell me about the area?

: It is hexed, the Mokeles and the Mbielus and others cannot leave it without vanishing. Nor can their eggs or meat; years ago, hunters tried to bring back the carcass

of a Mokele. It took the whole village, and when they reached the edge of the area, it simply vanished.

Dr. Welles: How many people have gone into the area over the past several years?

: Many. They are hunters, but they do not want to kill. They wanted to find Mokele, and nothing else. They never succeed, for whatever reason. It is because they do not look in that one area for Mokele, we tell them that it is dangerous, and it is. All people know that area is dangerous, and not to go near it.

Dr. Welles: That will be all. Thank you for your cooperation.

<**End Log**>
Note: Administration of amnestics was deemed unnecessary due to the familiarity the majority of the village had with SCP-1265.

Collected Notes Regarding SCP-1265-A: Notes taken during a monthly expedition through SCP-1265 by Dr. Neill.

I still find it fascinating that almost all instances of SCP-1265-A (well, the dinosaurs, at least) are feathered, not scaled. All I have to say is this: Chen, eat your heart out. This blows Yixian out of the water.[5] Weng's come across a few carcasses, and he's joked a few times about wanting to see what they taste like. I don't trust dinosaur meat, **`especially given what was found at that farm in China`**. There are some trilobites in the water, however, and the natives sometimes come here to fish for them. They taste like prawns.

As noted in the main description, the majority of them are from the clade *Dinosauria*, and are all suited to fit the climate of the Congo. Several of them are quasi-amphibious, such as the *Kentrosaurus*, which prefers to spend time in water. Observation has shown that it can

hold its breath for up to an hour at a time. As such, *Kentrosaurus* native to this area have large amounts of algae growing on their plates and spikes, occasionally giving the illusion that they are a living bush of some sort. *Kentrosaurus* are usually quite docile, but we've seen that their thagomizers[6] can take down small trees.

Despite the theory created by Mr. Russell in the 1980s, there is absolutely no evidence that *Troodon* would ever have evolved into the so-called "dinosauroid"[7], but are rather intelligent. They have been seen using rudimentary tools in a manner similar to chimpanzees in order to pick fruit from trees, and throw rocks at prey in order to injure it.

We found a family of *Baryonyx* today. As it turns out, they're semi-aquatic, and use their tails to shoot through the water after fish, and chomp them up like a crocodile or gharials. They appear to be associating with a clan of *Spinosaurus*.

Dr. Moore was very disappointed about seeing a live *Spinosaurus*, and I honestly can't blame him. They're mostly quadrapedal, and have feather covering more like ducks than anything else. Their skeletal structure is completely unsuited for walking upright, and the less said about the so-called spine, the better. Scientifically fascinating, but as a life-long dinosaur enthusiast, I must grieve for such a titan.

We've made an incredible discovery: a four-winged flying dinosaur, with wings on both its arms and its legs. Weng speculates that it's a completely new species of *Microraptor*, native to Asia. It's colored like a raven, its plumage is an iridescent black. Since it's not been found in the record, it's a -α instance, and those things are tetchy. Weng nearly got his finger bitten off sedating it. If it's ever found in the fossil record, we'll name it properly, but for now, it's just *Microraptor foundationii*[8].

We finally found something that *isn't* feathered. It's a

species of crocodile, *Postosuchus,* Late Triassic. It was drinking at the edge of a lake, when suddenly, a pack of *Coelophysis* jumped out and attacked it. Several of them went for its throat, cutting the jugular; as soon as it bled out, they began stripping the corpse to the bone. It was astounding, almost like piranha tearing apart a cow in the Amazon.

We managed to collect the skeleton, and Weng noticed that the thing had three shattered ankles, as if they had fallen and landed on their feet; probably why the *Coelophysis* were able to take it down so easily.

We saw a magnificent fight between a *Therizinosaurus* and a *Carnotaurus*. The *Therizinosaurus* practically decapitated the poor carnivore, which was about the same size; the *Therizinosaur* then did something rather odd: it cut open the *Carnotaur's* corpse and dipped its claws in the blood, before scoring the trees around it with dinosaur blood. I believe that this was done for the purpose of marking territory; it's actually rather fascinating, if somewhat gruesome. The *Therizinosaur* then ate a bit of flesh from the *Carnotaur* and left the area.

Dr. Moore has apparently never seen a *Dilophosaurus* outside of a certain movie; he was absolutely shocked when he saw one, and it wasn't a 2-meter long creature that acted like a dog, but rather a 6-meter long creature that looked like it could bite off his head. It ran away, but we managed to get some good pictures. Also found some footprints from an unknown sauropod.

I… honestly have no idea what on Earth we saw today.

We found a new instance of SCP-1265-α. It appeared to be ceratopsid, with a single horn and four short, stumpy legs. But it had a long tail dragging along the ground, uncharacteristic of ceratopsids, and didn't have a frill of any sort; instead, it almost seemed to have floppy "ears" near the top of its head. It was also quite aggressive, and

was engaged in combat with a *Pachyrhinosaurus* for unknown reasons; it ended up goring the poor thing. We decided to head back to the site after that.

Footnotes
1. Objects such asSCP-346suggest anomalies similar to SCP-1265 may exist elsewhere, though no additional instances have been found.
2. Roughly, "Large Python"
3. This is believed to be an exaggeration; to date, no record of instances of SCP-1265-A consuming humans has been found.
4. "One who blocks rivers"
5. Pei-Ji Chen was one of three paleontologists who described a fossil ofSinosauropteryx primain a 1998 issue ofNature. The Yixian Formation in Lianoning, China, started producing fossil evidence of feathered dinosaurs in the 1990s, withSinosauropteryxbeing one of the first to bear feather imprinting.
6. Clinical term for the spikes at the end of a stegosaurid's tail
7. In 1982, Dale Russell hypothesized that, if they had not gone extinct,Troodonwould have evolved into a more humanoid form, known as a dinosauroid. There is no evidence to support this claim.
8. Fossils of this species were discovered in 2012, and the animal has since been publicly classified asM. hanqingiby Gong et. al.

« SCP-1264 | SCP-1265 | SCP-1266 »

SCP-1266: Permian Ark

Item #: SCP-1266

Object Class: Euclid

Special Containment Procedures: As SCP-1266 is immobile, it is contained on-site under a sealed terrarium dome 100 m in diameter in order to isolate it from the Earth's atmosphere. All structural components of the primary dome must be checked weekly for deterioration or corrosion, and damaged sections must be sealed and repaired immediately. All personnel entering SCP-1266's containment dome must wear full-body, self-contained hazardous material suits and must undergo complete decontamination when entering or leaving the sealed containment area. All equipment used must also be decontaminated.

Specimens of all flora and fauna collected from SCP-1266's vicinity are kept in the site's main laboratory.

Description: SCP-1266 is an engraved metallic ovoid object approximately 12 m in length and 7 m in width, located at a former paleontology dig site in [REDACTED], P. R. China. Attempts to date the artifact have met with only limited success as all attempts to sample its surface material have failed thus far; however, through dating the surrounding strata and analysis of its primary effect, it is suggested that SCP-1266 is at least two hundred and fifty two (252) million years old, placing its presence on Earth to just prior to the Permian-Triassic extinction event.

SCP-1266 was unearthed by paleontologists on [REDACTED]. Shortly after being unearthed, SCP-1266 activated and levitated into the air, orienting itself vertically where it has remained ever since. SCP-1266 has completely resisted any attempt to move it, but has exhibited the following traits to date:

- SCP-1266 continuously processes surrounding air, altering its

chemical and organic balance to what is believed to be Earth norm near the end of the Permian geological period.
- SCP-1266 produces and releases seeds for many extinct terrestrial plant genera, most notably *Cordaites* and *Glossopteris*.
- SCP-1266 produces and releases live specimens of terrestrial invertebrates, such as extinct Palaeodictyopteroids.
- SCP-1266 produces and releases live specimens of terrestrial vertebrate animals, such as extinct labyrinthodont amphibians, sauropsids, and therapsids, most notably large numbers of *Lystrosaurus* herbivores.

It is currently unknown whether SCP-1266 is somehow fabricating these specimens from stored genetic data, or releasing them from some form of stasis in internal storage. At the time of this writing, SCP-1266's containment dome has stabilized into a self-contained, self-sustaining ecology populated with Permian wildlife.

To date, attempts to open, disable, or take samples of SCP-1266 have failed, as no means available to the Foundation appear to be capable of manipulating or damaging the object. Ultrasonic, spectroscopic, and [REDACTED] analysis suggest that SCP-1266 may have an inconsistent internal topography, and gravimetric measurements taken from SCP-1266's vicinity seem to indicate that the object may exceed , tonnes in weight. Excavation of the surrounding site has uncovered no additional artifacts at the same level as SCP-1266, and attempts to decipher the inscriptions on SCP-1266 are ongoing. At this time, it is still not known how it was created or what caused it to activate.

Addendum 1266-01: Observer Note

> The request to use military-grade weapons in an attempt to breach SCP-1266's surface has been denied, as it presents too much risk to the object and the scientific value it holds. Until a better understanding of its function and/or a way to safely deactivate it is found, all such requests will continue to be denied.
>
> Dr.
> Senior Observer

SCP-1267: Metamorphic Mammal

Item #: SCP-1267

Object Class: Euclid

Special Containment Procedures: SCP-1267 is currently maintained in the large animal wing of Site-12, in a 10m by 15m enclosure recessed 3m below an encircling observation walkway. Separating the observation area from the enclosure is a 2m fence of reinforced steel and synthetic netting, which also encloses the roof.

At least two Level-2 veterinary doctors familiar with mammalian biology and animal husbandry are assigned to SCP-1267, one of whom must be on site at all times. SCP-1267 is to undergo bi-weekly examination by sonogram and x-ray. When necessary, the supervising doctor is to be the primary designator of any new containment procedures required. Access to SCP-1267 requires clearance from the supervising doctor.

Personnel assigned to SCP-1267 are reminded that each instance of SCP-1267 is effectively a new, untamed organism.

Description: SCP-1267 is a mammalian organism, which as of 6/9/20 resembles an adult female pronghorn antelope. Thus far, attempts at interbreeding or crossbreeding SCP-1267 with common stock have failed to produce viable offspring. All observed instances of SCP-1267 to date have been female. SCP-1267 is effectively indistinguishable from its "template" species.

SCP-1267 will periodically undergo an event which resembles the incomplete metamorphosis that occurs in some orders of arthropod. This process appears to occur only after the organism has reached an age at which its template species would achieve sexual maturity. Metamorphosis has also been induced in two cases (See Experiment 1267B summary).

During metamorphosis, SCP-1267 displays behavior consistent with a gravid female of its template species. However, ultrasound reveals that up to 90% of the tissue in its thoracic and abdominal cavities undergoes a radical alteration into what is effectively a second, fetal organism - designated SCP-1267-1 - resembling a different template mammalian species. On occasions this alteration has included the effective destruction of vital respiratory, circulatory, and/or digestive systems without any apparent negative effect on SCP-1267.

The form taken by SCP-1267-1 thus far appears to be constrained to template species whose size at birth is no greater than the dimensions of SCP-1267 itself.

SCP-1267 enters the final phase of metamorphosis when SCP-1267-1 either reaches full adult growth (Type 1) or completely fills the thoracic and abdominal cavities of SCP-1267 (Type 2). At this point SCP-1267 will become visibly distressed and show signs of disorientation. Within three hours of onset, SCP-1267-1 (hereby designated SCP-1267) will violently emerge from the previous organism's body, which it will then consume, regardless of template species' normal dietary habits. An instance of SCP-1267 produced by Type 1 metamorphosis is completely autonomous upon emergence. An instance produced by Type 2 metamorphosis may be in a juvenile or even infantile developmental stage, and may require additional care accordingly.

See Table 1267A for full documentation of observed metamorphic events by SCP-1267.

Addendum 1267A: Updated containment procedures
Given the nature of metamorphic event 14, SCP-1267 is to be contained at a coastal Foundation facility that meets Protocol 173 standards for oceanic creature containment.

Experiment 1267A - / /19 , Site 25

> Objective: Determine reproductive capability of SCP-1267.
> Procedure: A male California ground squirrel is introduced to the enclosure containing SCP-1267 (currently resembling a female California ground

squirrel), and the two are allowed to copulate multiple times over a one-month period.
Result: SCP-1267 fails to become pregnant. It is hypothesized that SCP-1267 cannot reproduce by conventional means.

Experiment 1267B - / /19 , Site 25

Objective: In light of the events immediately following SCP-1267's retrieval, investigate alternate triggering stimuli for metamorphosis.
Procedure A: A digit is surgically removed from each of SCP-1267's (currently resembling a grey-headed flying fox) hind limbs.
Result: SCP-1267 does not enter its metamorphic state.

Procedure B: A digit is surgically removed from each of SCP-1267's forelimbs, rendering it flightless.
Result: Onset of metamorphosis is observed via ultrasound approximately 36 hours after SCP-1267 awakens following Procedure B. It is hypothesized that SCP-1267 will enter the metamorphic state in response to crippling trauma.

Experiment 1267C - / /19 , Site 12

Objective: Investigate the potential for reproduction of SCP-1267 via nontraditional methods.
Procedure: Nuclei from mammary cells harvested from SCP-1267 (currently resembling a grey wolf) are transferred to enucleated egg cells from a donor grey wolf, and the resulting eggs are implanted into three gestational surrogates: three in one, five in the second, and four in the third.
Result: All three gestational surrogates miscarried. None of the eggs implanted in surrogates 2 and 3 progressed past the blastocyst stage. The fetuses carried by surrogate 1 showed felid, hippopotamid, and characteristics, respectively. Additional research into cloning is recommended.

Psychiatric Evaluation, Personnel 1267-53

+ Confidential, Level 4 clearance required.

Interviewed: Dr. A , 2/1267-53
Interviewer: Dr. L
Forward: Dr. A was referred for psychiatric evaluation following Event 1267-23.

<Begin Log>

Dr. L : Good afternoon, Doctor. Please have a seat. I understand you've been having difficulty sleeping; would you like to talk about what's bothering you?

Dr. A : I think I just need to get it off my chest – ever since the last metamorphic event with SCP-1267.

Dr. L : What about it?

Dr. A : None of us— well, I think we all knew it could happen, eventually. Probably just didn't want to consider having to actually deal with it.

Dr. L : You're speaking of… Ah, I see - the latest instance of SCP-1267.

Dr. A : Have you seen the drawings she's making? She *remembers*, man! Every single metamorphosis, probably hundreds of them. She's like twelve years old! And the latest ultrasounds… oh god. It'll rip her in half.

Dr. L : Doctor A , this is neither the first nor the last time the Foundation will be required to keep a humanoid SCP in containment. If you are unwilling or unable to continue your duties with SCP-1267, I can recommend that you be reassigned. If you wish, I can also put in a request to the Site Administrator for a Class-C amnestic.

<End Log>

SCP-1268: Mass Hysteria

Item #: SCP-1268

Object Class: Safe-exsequi

Special Containment Procedures: SCP-1268 is to be kept in a standard humanoid containment cell and fed regularly. The room is to be monitored by one guard at all times.

In the event of a containment breach, security personnel are required to detain SCP-1268 alive if at all possible; however, if personnel deem SCP-1268 an imminent risk, they are permitted to dispose of it by any means necessary.

Description: SCP-1268 is a human male of indeterminate race with brown eyes and black hair. While SCP-1268 is capable of basic motor functions and self-maintenance, it does not appear to be capable of communication, nor does it show signs of emotion or higher intelligence. It is currently believed to be nonsapient; however, it has demonstrated the ability to use stairs, door handles, and elevators.

When left to its own devices, SCP-1268 will wander aimlessly until it is in proximity to a large group of people[1]; in these situations, SCP-1268 will go into the crowd and slowly move through it. During this process, the behavior of those in the group will be altered in a predictable manner:

- 0 min to 2 min: No effects are visible.
- 2 min to 7 min: Persons in the crowd are visibly nervous, turning their heads frequently and moving more quickly than before SCP-1268 entered the crowd.
- 7 min to 14 min: Persons other than SCP-1268 begin to experience disorientation and confusion. Some will actively attempt to exit the crowd, although most will continue with whatever activities they were participating in.

- 14 min forward: Almost all persons in the crowd panic and attempt to leave the area by any means necessary. Subjects affected this way show a distinct lack of concern for the safety of themselves and others. Anomalous effects will cease after SCP-1268 is no longer in the crowd.

The danger of SCP-1268 varies with group size, group density, accessibility of exits, and size of exits. On average, 30% of all persons in a group that has been affected by SCP-1268 will be killed from being trampled or from interpersonal violence. A further 35% will suffer injuries of various severity. SCP-1268 will remain unharmed and show no apparent reaction to the event.

Addendum: A review of available footage has found that, when in a crowd for fourteen minutes or more, SCP-1268 will exhibit a behavior that may or may not be **`laughter`**.

Footnotes
1. Due to the inherent expense of testing SCP-1268's capabilities, the exact group size and conditions necessary to trigger SCP-1268's anomalous effects is unknown. The phenomenon has been observed to occur in groups as small as 35.

« SCP-1267 | SCP-1268 | SCP-1269 »

SCP-1269: Stalker Mailbox

Item #: SCP-1269

Object Class: Euclid

Special Containment Procedures: The property where SCP-1269 is located is to remain under the custody of the Foundation. No females 23 years of age or over are to enter the property except for testing purposes. One (1) male researcher is to reside within the property under the guise of the current resident, and is to monitor the behavior of SCP-1269.

Description: SCP-1269 is a black, aluminum curbside mailbox, possessing a red flag and a white, plastic post. SCP-1269 stands 1.3m tall, with the mailbox measuring 49.5cm x 15.2cm x 17.7cm, consistent with the T2 mailbox size in the United States. The number is printed on the right side. It lacks any manufacturer's marks, and has minor dents and abrasions, suggesting the object has been present on the same property for some time. Due to the nature of SCP-1269's effect, the object is permanently located in , Massachusetts in front of house number on Avenue.

SCP-1269's anomalous properties will manifest only when a single female 23 years or older (hereafter referred to as "the occupant") resides within the same property as SCP-1269. Approximately two (2) weeks after the occupant moves in, SCP-1269 will start to manifest unaddressed letters every four (4) days. The contents of the letter are romantic in nature, and are targeted towards the occupant of the house. Surveillance within SCP-1269 has shown the letters manifest approximately three (3) seconds after the occupant's mail has been delivered.

Exactly three (3) weeks after the appearance of the first letter, SCP-1269's secondary anomalous properties will manifest. Letters will begin appearing daily, with contents becoming increasingly more obsessive and erratic, until the point that letters regress into single

sentences. In some occasions, multiple letters will appear within SCP-1269. Additionally, when not under direct supervision of the occupant, SCP-1269 will teleport to a location near the occupant and face them. This location will be partially obstructed, such as behind windows, cracked doors, and shower curtains. Under special circumstances, such as during sleep or when obscured by darkness, SCP-1269 will teleport near the occupant without obstruction. Whether or not the occupant relocates SCP-1269, the object will continue to teleport between a range of one (1) to five (5) times every twelve (12) hours. SCP-1269 will not follow the occupant off the property, and all anomalous properties will cease manifesting after the occupant has either moved or expired.

Attempts to remove SCP-1269 from its location have so far been unsuccessful. SCP-1269 will teleport to its original curbside location after one (1) hour of relocation. If attempts are made to replace SCP-1269 with a new mailbox, the mailbox will be teleported away with SCP-1269 appearing in its place. Approximately (3) hours after the disappearance of the new mailbox, it will reappear in a dumpster 25km away behind an abandoned franchise. Mailboxes recovered so far have all been found in varying amounts of disrepair, within garbage bags, and covered in painted-on words and phrases.

Addendum SCP-1269-A: On 07/12/04, D-69124, a male, was moved onto the property with the current test occupant, D-72803, after seven (7) weeks had passed. SCP-1269 stopped teleporting at this time. Three (3) days later, D-69124 disappeared from the property, causing SCP-1269 to resume all anomalous behavior.

Two (2) weeks after disappearance, D-69124 was found in similar location as other replacement mailboxes. The subject was found within a large garbage bag with severe bruising and lacerations, an apparently fatal blow to the head, and a lack of hands and lips. See Documents SCP-1269-B for recorded phrasing.

Documents SCP-1269-A

Transcribed below are several letters delivered to D-871523, who temporarily resided within the property of SCP-1269 for testing.

07/21/98

I remember the day, the hour, the infinitesimal sliver of a second when I fell in love with you, realized I loved you and only you, the moment my heart stopped and I lived for you alone.

Perhaps it was the way you carried yourself on the tired days, perhaps it was the way your eyes shone when a transient beauty crossed your path; would you understand how I longed to be that butterfly dancing on the afternoon breeze, that small flower struggling through sidewalk cracks, that passing swanlike cloud in the sky, how I longed to be anything that would catch your eye and move your smile?

You pass by me each day, never sparing me more than a glance, but for me it is enough to carry me until the next day, as I wait to next catch a glimpse of you and your unearthly beauty, your charming laugh and graceful step. I love the way you dance whenever you walk, I love the way you tilt your head towards the sun, I love everything about you, I love you.

08/09/98

How could anyone describe one as perfect as you, vision of elegance and loveliness? Every action of yours I've observed is embodied in the fragility and delicacy of a twirling snowflake, and yet you waltz into eternity with the softest of motion, in perfect rhythm with the air and the world.

You are beautiful. Every step, every pause, every breath of yours is a masterwork of the divine. Your presence brightens the world with a light that cannot be compared, you are the

flower that nature cannot hope to match.

08/15/98

The color of your eyes reminds me of the depth and expanse of the night sky, a vast dazzling macrocosm of soft velvet and glimmering pinpricks of light.

8/18/98

Do you sing in the shower? If so, I've heard you. Such a tenderly beautiful voice matches its owner.

8/21/98

I think of you and nothing but you as the day flows by, I yearn for a faint shimmer of your face as everything darkens to night

8/24/98

The wind was blowing and I thought it whispered your name sadly because that is what my heart is doing please write back

I keep thinking of the way your hair shines softly in the evening light, as if each strand is a shaft of purest moonbeams please write

8/26/98

The trees drop their leaves and cry with me as I stand here alone, without you please write xoxoxo

My shadow grows longer as if reaching towards you please write xoxoxo

I miss the light in your eyes and the harmony of your voice please write xoxoxo

Documents SCP-1269-B

Transcribed below are various phrases written on mailboxes disposed of by SCP-1269.

SHE'S MINE SHE'S MINE SHE'S MINE SHE'S MINE YOU CAN'T HAVE HER SHE'S MINE SHE'S MINE

FUCK YOU YOU PILE OF PLASTIC AND WOOD SHE IS MY EVERYTHING YOU ARE NOTHING TO HER IT WAS A FLING AND I KNOW IT I'M DOING HER A FAVOR

NO NO NO NO NO NO NO YOU CAN'T HAVE HER NO NO NO I WON'T LET YOU NO NO NO NO

WHO CARES IF YOUR FLAG IS BIGGER THAN MINE I KNOW SHE DOESN'T CARE SHE ONLY SEES THE GOOD IN PEOPLE AND YOU ARE FULL OF SHIT YOU FUCKER

I KNOW SHE LOVES ME IT'S OKAY BABY IT'S OKAY I LOVE YOU TOO AND WE'LL BE TOGETHER FOREVER AND EVER

YOU ARE NOTHING BUT A TOOL FOR HER USE BUT I AM MORE I AM HER EVERYTHING AS SHE IS MINE SHE USED YOU SHE USED YOU SHE USED YOU AND NOW YOU'RE WHERE YOU BELONG

(**see Addendum SCP-1269-A**)
WHAT IS A MAN BUT A PILE OF SHIT THAT GETS IN THE WAY OF MY LOVE HOW CAN SHE EVER LOVE YOU WHEN YOU'RE SO EASILY BROKEN SHE NEVER EVEN LET YOU TOUCH HER I SAW THE WAY SHE LOOKED AT YOU WITH HATRED AND NOW SHE WILL LOVE ME FOREVER

SCP-1270: Man with a Gun

Item #: SCP-1270

Object Class: Safe

Special Containment Procedures: The building containing SCP-1270 has been purchased by the Foundation via a front company, and is to be kept unoccupied; except for purposes of monitoring and approved experimentation, all access to the building is forbidden.

Security personnel engaging SCP-1270-1 are not to use flares or incendiary rounds.

Personnel whose clothing has been contaminated by SCP-1270-1's blood or other bodily fluids are not to return to the stairwell outside SCP-1270 until such time as on-site analysis has been either completed or aborted.

Description: SCP-1270 is a phenomenon localized to the top floor of a three-story office building in the [REDACTED] Industrial Park outside the city of [REDACTED], whereby any intrusion onto the top floor[1] triggers the manifestation, somewhere on that floor, of an entity (henceforth SCP-1270-1) resembling a male adult human armed with a shotgun.

Upon manifesting,[2] SCP-1270-1 will attack intruders, firing at them, and pursuing them through the rooms and corridors of the top floor until all intruders have either been killed, fatally injured, or driven out of SCP-1270-1's "territory".[3] If SCP-1270-1 is killed, its cadaver instantly demanifests, and another instance of SCP-1270-1 manifests elsewhere on the top floor.

SCP-1270-1 never leaves the boundaries of SCP-1270 on the top floor. If, subsequent to being captured and disarmed, SCP-1270-1 is carried across the threshold between the main hallway and the

stairwell, it instantly demanifests, and another instance of SCP-1270-1 manifests elsewhere on the top floor. Demanifestation of SCP-1270-1 as a whole (and subsequent remanifestation) also results when tissue or fabric samples from SCP-1270-1 are taken across the threshold into the stairwell or passed out of an open window; the minimum sample size necessary to trigger this effect is not known, but the effect has been observed to result from sub-milliliter amounts of blood spatter. Consequently, all forensic analysis of samples must be performed onsite. SCP-1270-1's ammunition likewise demanifests upon exiting the borders of SCP-1270, but does not trigger the demanifestation of SCP-1270-1 as a whole.

Analysis of SCP-1270-1's identifying characteristics has been inconclusive: its facial features have been found to be those of [REDACTED], an inhabitant of [REDACTED], Utah (face on record as a result of several arrests for vagrancy, public intoxication, and shoplifting); its fingerprints have been found to be those of [REDACTED], an inhabitant of [REDACTED], Newfoundland (fingerprints on record as a result of several arrests for public intoxication and indecent exposure); its DNA matches that of [REDACTED], currently serving a life sentence in New South Wales for various sexual offenses; and its teeth display such advanced decay that Foundation forensic dentists have stated that identification via dental records is not feasible. Its shotgun is a Mossberg 590, but with a serial number indicating a Mossberg 590A1.

When interrogated post-capture, SCP-1270-1 responds with a constant stream of invective and profanity in various languages, including English, Cantonese, Arabic, Bengali, Portuguese, Hungarian, and Dutch.

Footnotes
1. See document 1270-4M for operational parameters of what is considered an "intrusion."
2. Fiber-optic microcameras inserted via floor and rooftop boreholes have conclusively shown that SCP-1270-1 does not exist in the absence of intruders.
3. Consisting of a hallway, five office suites, and a washroom; see

document 1270-E-6 for detailed floor plan.

« SCP-1269 | SCP-1270 | SCP-1271 »

SCP-1271: Kickball Field, Sheckler Elementary

Item #: SCP-1271

Object Class: Euclid

Special Containment Procedures: Fencing is to be constructed around the area containing SCP-1271, with a space of 75 m between the fencing and SCP-1271. This perimeter is to be monitored by no fewer than five (5) guards at any given time, who are to deny all civilians access to SCP-1271. Guards are to be equipped with high-powered cameras with telephoto lenses and are to be trained in their use. SCP-1271 is to be monitored via video surveillance at all times. During a 1271-A event, all guards are instructed to prevent the commencement of the 1271-A event and detain all civilians involved. observe the 1271-A event and attempt to detain all civilians involved. maintain a distance of 25 m or greater from SCP-1271 during the event and make no attempt to interact with any civilians involved.

During 1271-A events, guards are to take as many close-in photographs of the faces of civilians using SCP-1271 as possible. No fewer than twelve (12) parabolic microphones with diameters of 17 m are to be trained on the field at any given time; during 1271-A events, microphones are to be focused on individual civilians and all spoken dialogue is to be recorded to aid in identification of affected civilians. All audio and visual data for each civilian are to be compiled and cross-referenced against all available databases using facial recognition software. Under no circumstances are Foundation personnel to enter within 25 m of SCP-1271 during a 1271-A event. Under no circumstances is any Foundation technology to be left within SCP-1271 except during authorized testing.

All individuals identified as having participated in any 1271-A event are to be detained at Site 34 and questioned.

Description: SCP-1271 is a square tract of land approximately

20 m on each side, roughly landscaped into a functional kickball field. The field comprised a portion of the grounds of Sheckler Elementary School in Catasauqua, PA, before the school was closed in 1967. The grounds have been abandoned ever since.

Approximately once per year, typically within two weeks of the summer solstice, SCP-1271 will become occupied by sixteen (16) civilians, ranging from five to eleven years of age. The means by which these civilians, identified here as SCP-1271-(1-16), travel to SCP-1271 is unknown; civilians have been noted originating from every continent and 124 countries. All affected civilians demonstrate symptoms of a trance state and are unwilling or unable to communicate with or acknowledge Foundation researchers in any way. Most children who are located, identified, and interviewed later claim to have no memory of their activities involving SCP-1271 and are unable to contribute to Foundation understanding of the mechanisms underlying SCP-1271.

Upon arriving at the site of SCP-1271, civilians will begin carrying out a game of kickball according to accepted conventions of game rules; these games are referred to as 1271-A events. Civilians will divide themselves into two teams of eight apiece and play three full innings. Throughout the game, the civilians will display body language indicating pleasure and enjoyment, including smiling faces, laughing, and excited speech. The speech itself typically involves a syntax and vocabulary closely resembling the Unami language of the indigenous American Indian population of the region. At the conclusion of the game, the players will bow in the direction of the pitcher's mound and conduct a brief chant in the Unami language[1] before dispersing. As the affected civilians reach the perimeter of SCP-1271, they disappear from the area via an unknown form of teleportation.

Two additional anomalous effects have been noted with regards to SCP-1271. First, when individuals not summoned to SCP-1271 enter to within 25 m of the field during 1271-A events, these individuals will begin participating in the game. This participation will divide evenly between the two teams, either substituting for exhausted players or carrying out work such as supplying water or towels to players. At the conclusion of the game, individuals affected

in this way disappear in the same manner as affected civilians. No affected Foundation personnel have yet been recovered. The second anomalous effect associated with SCP-1271 is documented in Addendum 1271-1.

Addendum 1271-1: Documented patterns of affected civilians

Since the Foundation began monitoring SCP-1271 in 1972, four hundred eighty (480) civilian children from around the world have been affected by SCP-1271. Efforts to determine the identities of affected civilians began shortly thereafter, and was aided by the digitization and computerization of Foundation records and databases during the 1980s. Through the use of facial recognition software, the Foundation has been able to identify one hundred twenty-six (126) of the civilians affected to date. During standard correlational analysis of the identified civilians, certain patterns were detected relating specifically to the position played by affected civilians. For purposes of this analysis, the team that begins the game on offense is designated "Red," while the team beginning the game on defense is designated "Blue". To date, only 10% of recovered civilians have any memory of their experiences with SCP-1271.

Show Addendum

Designation	Position	Noted Correlation/ Frequency
SCP-1271-1	Red team first baseman/first kicker	Develops and pursues an interest in banking, leading to an executive-level position at a major international banking firm. (30 total instances, 9 identified, 7 having given trait)
SCP-1271-2	Red team second baseman/second	Dies before age 18. (30 total

	kicker	instances, 11 identified, 11 having given trait)
SCP-1271-3	Red team third baseman/third kicker	Pursues interest in education; becomes a college-level economics professor. (30 total instances, 7 identified, 7 having given trait)
SCP-1271-4	Red team roller/ fourth kicker	None have yet been identified.
SCP-1271-5	Red team utility outfield/fifth kicker	Develops interest in aeronautics; takes a high-ranking job in American, Russian, or Chinese space development agencies. (30 total instances, 10 identified, 9 having given trait)
SCP-1271-6	Red team left outfield/sixth kicker	Becomes trusted adviser to an individual in a position of authority over an international body of some kind. Lists of specific individuals and qualifying bodies included in Document 1271-Beta. (30 total instances, 11

		identified, 10 having given trait)
SCP-1271-7	Red team center outfield/seventh kicker	Dies at age 23. (30 total instances, 7 identified, 6 having given trait)
SCP-1271-8	Red team right outfield/eighth kicker	Becomes famous in the visual arts, particularly acting. (30 total instances, 9 identified, 9 having given trait)
SCP-1271-9	Blue team first baseman/first kicker	Develops an interest in chemistry; identified instances typically take up work in pharmacology. Several instances personally responsible for the development of breakthrough drugs for a variety of illnesses. (30 total instances, 15 identified, 14 having given trait)
SCP-1271-10	Blue team second baseman/second kicker	Takes up a career in politics; becomes a head of state or high-ranking politician in their nation of origin. (30 total instances, 11 identified, 11 having given trait)
SCP-1271-11	Blue team third	Becomes addicted

	baseman/third kicker	to barbiturates before age 25, dies before age 27. (30 total instances, 10 identified, 9 having given trait)
SCP-1271-12	Blue team roller/ fourth kicker	None have yet been identified.
SCP-1271-13	Blue team left outfield/fifth kicker	Gains a position of leadership; no pattern has yet been determined beyond this. Roles can vary from corporate chairman to factory foreman, but will involve high levels of authority. (30 total instances, 9 identified, 9 having given trait)
SCP-1271-14	Blue team center outfield/sixth kicker	Develops interest in religion; becomes an authoritative figure in a religious movement. Religions involved may vary and typically are global in reach; however, two identified instances have led cults involved [DATA EXPUNGED] (30 total instances, 11

		identified, 11 having given trait)
SCP-1271-15	Blue team right outfield/seventh kicker	Develops interest in electronics technology; becomes known as an innovative engineer, pioneering in telecom or internet technology. (30 total instances, 6 identified, 4 having given trait)
SCP-1271-16	Blue team utility outfield/eighth kicker	None have yet been identified.

Addendum 1271-2: Interview Logs

Interview SCP-1271-11-Gamma

Interview Log 1271-5: SCP-1271-11-Gamma

SCP-1271-11-Gamma served as third baseman for the Blue team in an 1271-A event that transpired in 1981. His image was identified using photo recognition and aging software in 1994 in a collegiate catalog from the University of Tennessee, Chattanooga. Given his connection to SCP-1271, the individual was detained for questioning and held for observation for several years.

Dr. Hicks: Have you ever consumed illegal narcotics?

11-Gamma: Never. Before the… that… whatever it was that happened, when I was a kid, we lived in a good neighborhood. My mom told me about drugs, told me not to try them.

This was back in the late 70s, you know, that stuff was everywhere. But she raised me right. And it wasn't always easy.

Dr. Hicks: Could you elaborate?

11-Gamma: Well, like I said, that was how she raised me. And that was how things were back in the day. But things got bad around the time I was, um, I think twelve or so?

Note: Subject 11-Gamma was eleven years of age when Event 1271-A-1981 transpired.

11-Gamma: Yeah, I dunno. My dad, he was this real straight-laced guy, right? Factory worker, out at the Goodyear plant. Amazing guy, hard worker. And then one day, it seems like, the cops show up.

Dr. Hicks: The drug arrest, correct?

11-Gamma: Yeah. Phenobarbitol. He was fine one day, he was in jail the next. They didn't have evidence to hold him, so he got out. And he was such a fucking prick after that, I swear to god.

Dr. Hicks: Behavior changes?

11-Gamma: Yeah, he and my mom both. They were so in love before, and then suddenly it was… Jesus, it was a nightmare. He was hitting me, he was hitting her, she wouldn't leave, she loved him, he was doing drugs, then she was doing drugs. I swear to God, it got so bad, he wanted *me* to start doing drugs. Said it would calm me down. Said it would keep me from thinking I was better than him. Tried to make me take them. That was when I left.

Dr. Hicks: Ran away?

11-Gamma: Yeah. I tried the guidance counselor, it was like she wasn't even there. Teachers too. I just booked it, left town. I… look, I got out of there. Went a few towns over, got into a foster program. It sucked exactly as much as you think, but I just stayed in the books, y'know? Kept my head down.

Dr. Hicks: And avoided drugs?

11-Gamma: It was hard. Everyone was into it around me; tried to push it on me, all that shit you get in DARE, the peer pressure, violence, everything. All the way into college; it seems like everyone around me got into it either right before or right after I met them, and they all wanted to share. It got worse the older I got. I graduated a few months ago; I was glad to get away from that.

Dr. Hicks: I understand.

Note: Approximately three days before 11-Gamma's twenty-fifth birthday, Dr. Hicks assaulted him and forcibly injected phenobarbitol into his system. No orders to do so had been given. 11-Gamma developed an addiction and was terminated attempting to assault a nurse four months later. Dr. Hicks claimed temporary insanity; medical tests revealed a small brain tumor had developed, impairing his judgement.

Interview SCP-1271-14-Epsilon

Interview Log 1271-21: SCP-1271-14-Epsilon

Subject 14-Epsilon was in charge of the largest cadre of a cult known as the

"Brotherhood of the Rubicon" in Johannesburg, South Africa. Subject was captured in a Foundation raid against their safehouse and was identified as an outfielder in an SCP-1271-A event in 1989.

Dr. Graves: How did you come to join the Brotherhood?

14-Epsilon: I was not born to greatness. Greatness found me. God found me in the back of a field and spoke lies to me. I see truth now. I speak truth now.

Dr. Graves: I'm sorry, I'm afraid I don't—

14-Epsilon: You think you know what that field is. God spoke lies to me. God lies to us all. God fears us because we have a new lord. She will lead us to his throne. You think you know what that field is. I was not born to greatness.

Dr. Graves: Are you suggesting SCP-1271 compelled or changed you in some way?

14-Epsilon: God is the least of what lives in that field. Those things choose you and send you into the world. God spoke lies to me. The things in that field chose us, trained us, shaped us. We are what they make us. You think you know what that field is.

Dr. Graves: You believe your fate was destined?

14-Epsilon: They speak lies to us until the lies become truth. The field showed me the Rubicon. The Rubicon will help me kill God.

Dr. Graves: Did the field tell you to kill God?

Did it tell you how?

14-Epsilon: God lives in that field. God is the least of what lives in that field. I speak truth now.

Subject 14-Epsilon was deemed an unreliable witness due to untreatable paranoid schizophrenia and was terminated.

Interview SCP-1271-13-Theta

Subject 13-Theta served as a Blue-team left outfielder in the first recorded 1271-A event in 1972. Subject was a member of [REDACTED] when facial identification algorithms identified him in 2011. Due to his position, several red alerts were triggered in Foundation computers and Subject 13-Theta was detained. Subject 13-Theta claimed to have no knowledge of his involvement with SCP-1271. Interview heavily redacted to prevent disclosure of sensitive information.

Dr. Graves: Do you have any recollection of your involvement with SCP-1271?

13-Theta: Fucking of course not, Graves. I told you that yesterday. Do you think I would have accepted the job at [REDACTED] if I thought I had been recruited in a kickball game when I was eleven? Give me a little more credit than that.

Dr. Graves: Of course, si- -of course not. However, several influential academics, politicians, and scientists have been identified as being involved with SCP-1271, almost always without their prior knowledge—

13-Theta: And I know you also identified a

High Priest of the **Church of the Broken God**, a mid-level executive with **Marshall, Carter, and Dark Ltd.**, and two **Serpent's Hand** cell leaders among affected personnel. I used to get these reports. So the other [REDACTED] decided one of us was in on it too.

Dr. Graves: You believe this is a conspiracy led by other members of [REDACTED]?

13-Theta: It's not a "conspiracy" when the good guys do it, Graves, it's a plan. They considered me expendable, and so I was expended. Security can say they did their job, we all go home happy. Unless there really is some brainwashed freak high in [REDACTED] who is liable to snap and take us all out.

Several minutes of conversation redacted due to involvement of sensitive containment information

Dr. Graves: How would you respond to the following phrase: [Dr. Graves recites the Unami chant that marks the end of each 1271-A event.]

13-Theta: I would say you don't… don't know what… (trails off)

Dr. Graves: Sir? Are you with us?

13-Theta: [Begins mumbling in Unami language, falls unconscious]

Subject 13-Theta remanded to medical wing for treatment. While in medical care, subject escaped containment, using his knowledge of Site 34's authorization codes to leave the premises. Subject has not yet been

recaptured. Unami phrase uttered before unconsciousness translated to "but the children's footprints are numerous."

Footnotes

1. The chant closely resembles the Unami phraseše· lah ni e·k·a·kwe tali-ɔkhakéhɔ·n ní·ša awé·ni·k, which translates loosely to "Over there under the trees, two people were buried."

« SCP-1270 | SCP-1271 | SCP-1272 »

SCP-1272: Slow-Motion Catastrophe

Item #: SCP-1272

Object Class: Euclid

Special Containment Procedures: SCP-1272's constituent artifacts are to be maintained at a range of no closer than 41 meters, and no more distant than 74 kilometers. No two artifacts with a collective *w*-axis deviations of greater than 38 degrees are to approach within 8 kilometers of any other topological anomaly. Due to the continuing risk of containment breach, all objects are to be affixed to their pedestals with permanent restraints upon successful containment. Due to risks presently posed by SCP-1272-06, active containment efforts are presently suspended. Revised containment procedures are pending.

After a breach of containment protocols on 03/27/1973, SCP-1272-01, 02, 03, and 04 remain uncontained. Until such a time as containment is re-established, one containment team is to enter the anomaly every four months, attempt to reach the containment vault door, and attempt to contact previous containment teams to advise them to deviate from pre-2003 containment protocols. Before approaching the topological singularity, agents assigned to the containment team must undergo psychological pre-screening. At pre-screening, containment agents should be advised that at present topological density, successful containment is expected to be completed on March 18, 2394, 423 years from initial entry. Present suicidal ideation is nondisqualifying. At agent's request, Foundation survivor benefits are to be paid to the designated beneficiary immediately upon entry into the containment area.

At all times, the topological anomaly is to be monitored via closed-circuit television by a designated Foundation exit counselor. Garments appropriate to all eras of team entry are to be maintained on-site. Upon scheduled or unscheduled team exit, debrief is mandatory. Debrief subject matter should be restricted to those

matters necessary to assess psychological suitability to return to duty and technical aspects of the anomaly. Inappropriate topics for debrief include surviving family members, if any, classified information unrelated to the Site 53 anomaly, and Foundation matters outside the scope of the team's historical clearance level.

Counselors should expect readjustment shock. Class C amnestics are to be made available upon request.

Description: SCP-1272-01, 02, 03, and 04 are four identical statues, apparently sculpted by Corsican neoclassical revivalist Emile Abruzzo in the early-to-mid 1950s. Early photographs of the statues depict a child between the ages of 11 and 14, wearing unremarkable early-Renaissance garb and carrying a cloth bag. Since that time, the statues have exhibited worsening topological anomalies, and at the time of containment breach were unrecognizable as their original subjects.

By 1961, while in Foundation custody, the statues' *w*-axis deviations stabilized at 7, 13, 19, and 23 degrees respectively. Though unknown at the time, permitting objects with summed *w*-deviations of greater than 38 degrees to approach within 41 meters of a topological anomaly results in a topological involution which rapidly evolves toward a nongravitational singularity.

On March 27, 1973, this occurred, resulting in a containment breach and SCP-1272-05.

SCP-1272-05 is the nongravitational singularity which resulted from mishandling of SCP-1272-01, 02, 03, and 04. At present, SCP-1272-05 involves Maintenance Corridor 2a of Site 53, the topological anomaly containment vault, and sealed portions of two control rooms abutting the corridor. Involvement of spatial dimensions is minimal, resulting in a 19-degree twist and 31 degree leftward deflection of Maintenance Corridor 2a. Involvement of timelike dimensions is extreme. In much of the affected corridor, subjective time is estimated to pass at a rate of 184 nanoseconds per external hour. The ratio of external to internal time at the anomaly's epicenter is presently unknown.

SCP-1272-06 is a human male, age 27-35, first detected by CCTV

slightly beyond the SCP-1272-01's containment vault door on 12/17/2003. Appearance is inconsistent with agents or researchers known to be working at Site 53 at the time of initial containment breach; however, due to the uniform dark-blue coloration of features and clothing, resolving facial details has remained persistently difficult for observation staff. Since first detected, SCP-1272-06 has traveled four meters into the anomaly-affected hallway without apparent detection by containment teams proceeding toward the vault. On high-speed video, gait is consistent with a brisk walk.

Per Dr. Collins, researchers should note that the subject's coloration appears to be the result of blueshift, not natural coloration. Presuming a logarithmic decrease in the rate of subjective time on approach to the singularity, SCP-1272-06 is presently exiting the vault at 41% of the speed of light. If SCP-1272-06 fails to decelerate or if containment teams dispatched before detection successfully realign SCP-1272-01, 02, 03, or 04, exit is predicted to occur on or before / , resulting in massive thermal damage to Site 53 and surrounding populated areas.

« SCP-1271 | SCP-1272 | SCP-1273 »

SCP-1273: Stuck

Item #: SCP-1273

Object Class: Safe Euclid

Special Containment Procedures: SCP-1273 is to be kept in Containment Locker #434 at Site 23 when not being actively used for testing with D-Class personnel. SCP-1273 is not to be connected to any electrical power source except for testing purposes. SCP-1273-A is to be treated as a non-hostile but potentially dangerous entity.

SCP-1273-A remains indefinitely in Testing Chamber #741 and is to be monitored at all times. Personnel are forbidden from entering the chamber until further notice. No testing of anomalous objects is to take place in Test Hall-Delta as of 05/11/2014, and in the event of a containment breach, the hallway should be completely sealed off.

Description: SCP-1273 is a brand children's nightlight. No materials comprising the structure of the object have been identified as individually anomalous. The object has been designed to resemble a stylized rabbit, and functions as a non-anomalous nightlight for the first thirty minutes of being connected to a working power source and turned on. At this point, SCP-1273's anomalous effects will activate and an entity, hereby designated SCP-1273-A, will manifest in the area containing SCP-1273. If the object is turned off or disconnected from the power source during the manifestation of its anomalous properties, the entity will demanifest until the next activation event.

SCP-1273-A appears to be a Caucasian female humanoid entity of approximate teenage appearance. The entity refers to itself as "Abigail Lawrence," a citizen of the town of , where SCP-1273 was initially discovered. Foundation investigation confirms that an individual bearing the same name and description of the entity formerly lived in the town, but was reported dead as of 03/09/2014.

The aforementioned person's parents had discovered their deceased child in her room on the aformentioned date, along with SCP-1273 and several other anomalous objects whose function appears to be [REDACTED].

The entity is visually indistinguishable from a non-anomalous human subject; however, it is unable to make physical contact with anything that is not a boundary of the room currently housing SCP-1273. All other objects cannot be manipulated by the subject.[1] As such, SCP-1273-A cannot leave the room it manifests in.

Upon manifestation, the subject typically appears to be distressed and attempts to remove SCP-1273 from its power source. Due to the entity's intangible nature, these actions are consistently futile.

Interview Log-1273-Alpha: The following interview was taken upon initial manifestation of SCP-1273's anomalous effects by the presiding head researcher, Dr. Lloyd.

> **Interviewed:** SCP-1273-A
>
> **Interviewer:** Dr. Lloyd
>
> **Foreword:** This is the first recorded appearance of SCP-1273-A.
>
> **<Begin Log>**
>
> **Lloyd:** Hello, my name is Dr. Jason Lloyd. I'm going to ask you a few questions now, if you don't mind.
>
> **SCP-1273-A:** *[too quiet to be understood]*
>
> **Lloyd:** I'm sorry, what was that?
>
> **SCP-1273-A:** *[turns to look at Dr. Lloyd. Subject appears distressed.]* Can I go back?
>
> **Lloyd:** Go back where? *[aside]* Note that subject appears to be distressed

SCP-1273-A: I-I was never supposed to come back here… *[Subject begins to attempt to remove SCP-1273 from its power source. The entity is apparently intangible, as it does not appear to be able to physically interact with the objects.]*

Lloyd: Please, calm down. We can help you, but you have to help us first. *[holds out his hand as a gesture of peace]*

SCP-1273-A: *[shakes head]* Please don't touch me. You can't help me. I don't need help, just please let me go back.

Lloyd: Go back where?

SCP-1273-A: *[Subject continues to attempt to remove SCP-1273 from its power source.]* Away. The place I was before. It was so much better than this, just please, please, unplug this thing.

Lloyd: SCP-1273-A, I'm going to need more information from you before we can release you.

SCP-1273-A: *[Subject ceases attempts to remove SCP-1273 from its power source.]* And then I can go back?

Lloyd: Yes. Then you can go back.

SCP-1273-A: Okay… my name was Abigail Lawrence, I was 16 years old, and I'm from . I… I don't really remember how I got into the light, but I know it's my home.

Lloyd: "Was?"

SCP-1273-A: Ah, well, as you can see, I'm not exactly… *[entity waves hands through SCP-1273]*

Lloyd: Ah. I see. Are you completely positive you can't remember anything at all about how you got to be this

way?

SCP-1273-A: *[looks away from Dr. Lloyd]* I'm sorry, I really can't.

Lloyd: I see. If you do remember anything, please don't hesitate to tell us. Now, what's your home like?

SCP-1273-A: *[smiles slightly]* It's amazing and bright and freeing, and… oh, please let me go back. Just for a bit. I can't stand it here any longer.

[Dr. Lloyd confers with research team for approximately three minutes]

Lloyd: Alright, SCP-1273-A, you can go for now. We'll see you soon enough.

<End Log>

Closing Statement: Dr. Lloyd proceeded to turn off the object and remove it from its power source, causing SCP-1273-A to demanifest.

Interview Log-1273-Beta:

Interviewed: SCP-1273-A

Interviewer: Dr. Lloyd

Foreword: The following interview takes place one week after the events comprising Interview Log-1273-Alpha and mark the second activation of SCP-1273's anomalous state by the Foundation.

<Begin Log>

SCP-1273-A: *[sighs]* So soon?

Lloyd: Hello SCP-1273-A. Do you recall any more details on the events that lead to you existing in your

current state since our last interview?

SCP-1273-A: I'm afraid not, Doctor.

Lloyd: I see. Well, can you tell me more about the place you came from?

SCP-1273-A: *[looks around anxiously]* I'm, um, afraid that's not allowed.

Lloyd: Not allowed? Who isn't allowing this?

SCP-1273-A: *[averts eyes towards the ground]* Please, put me back.

Lloyd: Abi, please answer the question.

[Subject does not respond.]

<End Log>

Closing Statement: Subject remained unresponsive for the remainder of the interview. Following half an hour of unresponsiveness, Dr. Lloyd powered SCP-1273 down and unplugged it.

Research Log-1273-Kappa: The following is a series of excerpted notes taken from Dr. Lloyd's experimentation notebook. All excerpts are from notes taken during a series of interviews with SCP-1273-A.

…will not tell us any more about this place. It's quite obvious she's lying about not remembering the process, but why is she hiding it? Researcher Garrison thinks…

…realized that we can encourage the information out of it by refusing to let it go back until it tells us.

…the plane the entity comes from is apparently devoid of all physical matter completely. The entity is being slightly more cooperative, but is apparently trying to deliberately impede Foundation understanding of this area…

> Agent and Agent appear to be slowly earning SCP-1273-A's trust. Head researchers are to confer about how to possibly use this in conjunction with punishment in the future.

Incident Report-1273-Mu-1: On 05/11/2014, during routine testing of SCP-1273's responsiveness to alternative power sources[2], the object's light bulb burned out. However, unlike a typical deactivation event, SCP-1273-A did not demanifest. The entity noticed this, became panicked, and started attempting to remove SCP-1273 from its power source. Personnel proceeded to accomplish this task, which did not cause the entity to demanifest. SCP-1273-A violently approached Agent and attempted to assault her[3] while shouting at the subject[4]. Instead of passing through the agent as was expected, the entity's appendages appeared to become "trapped" in the subject's physical body. This caused further distress to SCP-1273-A, who vocalized more loudly and struggled to remove itself from Agent 's form. As the entity made increasing contact with the agent's body, SCP-1273-A appeared to be absorbed into it. After approximately three minutes, the entity was fully absorbed into Agent 's body. The agent appears to have died during this process. On site personnel reported a lack of respiration and pulse from , and tentatively declared her to be dead. Soon after, the chamber was cleared of all personnel and objects, save for the corpse of the subject, in order to monitor any possible anomalies resulting from this event.

Incident Report-1273-Mu-2: After approximately three hours of observation, SCP-1273-A emerged from the corpse[5] and began attempting to strike the walls and doors of the chamber while shouting[6]. These actions persisted for approximately forty-five minutes, at which point SCP-1273-A moved to the center of the room and assumed a fetal position. The entity did not move from this position for four hours. It then stood up[7]and approached the corpse. SCP-1273 entered the corpse and attempted to partially animate it, resulting in erratic movements. The object flung itself at the door of the testing chamber repeatedly for approximately sixty minutes before SCP-1273-A emerged, returned to its position in the center of the room and began crying. The entity is to be continually monitored until further notice.

Audio Log-1273-Sigma: The following excerpts are segments of audio taken from the testing chamber housing SCP-1273-A during Foundation monitoring.

> I didn't mean to kill her.

> You don't understand how it feels to be trapped. You don't understand the feeling of being restricted, because you've never known being free. Please, let me out. I can show you.

> I just want to go home.

Footnotes
1. See Incident Report-1273-Mu
2. Specifically, the effectiveness of circuits powered by alkaline batteries
3. As SCP-1273-A had previously proven to be intangible, Agent did not make any attempt to defend herself.
4. The entity was noted to say "This is your fault" repeatedly
5. The entity was noticeably panicked at this time.
6. The entity was noted to say several phrases repeatedly, notably "Let me out," and "Don't make me choose between these two prisons."
7. SCP-1273-A was noted to be hesitant during the following actions.

« SCP-1272 | SCP-1273 | SCP-1274 »

SCP-1274: Dance Craze

Item #: SCP-1274

Object Class: Euclid

Special Containment Procedures: News media and Internet video sites are to be scanned continuously for any of the keywords found in Addendum SCP-1274-1. Internet videos should be suppressed (as far as is possible) through copyright takedown requests from Sound Content Productions, a Foundation front corporation. These are to include key phrases which will bring them to the attention of agents placed within the hosting organization. News reports indicating outbreaks of SCP-1274 or its tertiary effects should be investigated in the guise of a quarantine action intended to prevent the spread of an aggressive form of viral meningitis.

Any instances of SCP-1274-1 discovered in the course of an investigation are to be contained in individual windowless cells. Meals and standard hygiene facilities are to be provided. Any entertainment media without music may be offered upon request, at the discretion of the lead researcher. Interviews with SCP-1274-1 instances are to be performed with physical restraints in place to prevent movement of the subject's arms and legs. Experimental treatments for tertiary effects of SCP-1274 may be administered with approval from the lead researcher and the Ethics Committee.

Description: SCP-1274 is a proprioceptive memetic hazard in the form of a novel style of dance. It shows influences from various Caribbean dance styles and the American urban form known as "krumping". The dance is done in groups in a "follow the leader" fashion, with one dancer performing a series of moves which are then emulated by the other participants. The style is improvisational in some respects, but has a core repertoire of distinct movements which appear repeatedly. A specific sequence of of these movements appears to be the contagious agent.

SCP-1274 is safe to observe, live or via recordings. Transmission only occurs when the key sequence of movements is performed by a subject (hereafter known as SCP-1274-1). Shortly after infection, subjects experience powerful euphoria and increased empathy with other dancers. Additionally, instances of SCP-1274-1 display the following cognitive changes:

- Increased sexual receptiveness.
- Greatly increased suggestibility.
- Preference for consensus-based conflict resolution.
- Reduced need for sleep (varies by individual, but some instances have shown no adverse effects from two hours of sleep nightly)
- A marked preference for the color orange.

Tertiary neurological effects begin to appear within 2-6 weeks of initial exposure, with speed of onset strongly correlated with the frequency of SCP-1274 performance. These include:

- Chronic sleep-onset insomnia.
- Progressive abnormal involuntary movement disorder, similar to Huntington's chorea but including movements from SCP-1274's repertoire.
- Language pathologies, initially presenting as intermittent schizophasia and progressing to total aphasia combined with random utterances similar to glossolalia.

Pharmaceutical interventions and physical therapies which have proven effective in the management of Huntington's Disease appear to have little effect on the progression of neurological symptoms. Amnestic drug therapy has shown some efficacy in eliminating the memetic component of SCP-1274, but appears ineffective once neurological symptoms have manifested.

SCP-1274 was first discovered in [REDACTED], a medium-sized American city with a significant minority population of Dominican descent. (However, no evidence of contagion has been found in the Dominican Republic itself.) Reports of anomalous neurological disorders among young people in the city's club culture led Foundation agents to the discovery of the hazard. instances of SCP-1274-1 were contained in a raid on a "warehouse party",

followed by additional instances gathered as part of a subsequent "public health" action. Since then, additional outbreaks have occurred, primarily in cities of population 300,000 or less in the Southeastern United States. Additionally, three instances of instructional video for the dance have been found on popular Internet video sites. While these have been successfully removed by Foundation action, the number of exposed individuals is unknown.

« SCP-1273 | SCP-1274 | SCP-1275 »

SCP-1275: Silent Bandit

Item #: SCP-1275

Object Class: Keter

Special Containment Procedures: SCP-1275 is held at Containment Area 43, located in the Gobi Desert. It is to be contained inside a hollow 750 mm tungsten cube filled with an electrified tungsten wire lattice dividing the space into cubic millimeter sections. The remaining space is to be continually filled from the bottom of the box with lead maintained at 1200°C. The primary containment chamber is to be blast rated for pressures up to 200 kPa, with a secondary external chamber rated for up to 1500 kPa. Three blast shielded monitoring stations positioned equidistant around the perimeter from the station at 10km are to be kept staffed and on alert at all times.

SCP-1275 is to be constantly monitored via sonar, video feed, and the experimental Salzmann device. Any notable changes in object size or behavior to be immediately reported to the Head Researcher and Security Department to prepare to resist any potential hostile forces, entities, or objects that may emerge from within SCP-1275. In the case of a full containment breach a perimeter is to be established, and a 30km radius is to be monitored via motion sensor and sonar to speed recontainment.

Task forces assigned to recontainment of SCP-1275 are to approach with the greatest caution, and to take defensive measures at any sign of an emergence. Under no circumstances may personnel approach within 30m of SCP-1275 if it is loose. Recontainment will be accomplished via specialized capture netting, delivered by air. Personnel in the process of being enveloped by SCP-1275 should be terminated if possible unless otherwise authorized by Level 4 personnel.

Description: SCP-1275 is a fluid amorphous entity of variable

volume, shape, color, and opacity. Observed volumes of material composing the entity have ranged from ~1 cm^3 minimum to a maximum of ~30 m^3. It is affected by gravity and cannot pass through solid materials, yet registers no weight on instruments regardless of its current size. Parts separated from the main body appear to flow extradimensionally back to it, making sample tests unfeasible. It is not chemically reactive, shows no changes with variations in temperature, is not electrically conductive, and returns no tactile sensation. Due to these properties, SCP-1275 is theorized not to exist fully within the material world.

The entity is capable of forming itself into any shape, including flattening to ~.01mm thickness(minimum observed), spooling into a threaded form, or taking on the shape, color, and opacity of objects around it. If free, it attempts to envelop objects such as classified documents, SCP artifacts or Foundation personnel. Upon enveloping an object it will turn opaque and rapidly decrease in size, while the object enveloped will disappear from the inside. On occasion it will attempt to disgorge explosives, weaponry, anomalous objects, and hostile agents in order to breach its containment.

Observed behavior patterns indicate it to be intelligent and/or controlled by an outside intelligence. It has proven capable of breaching all but the most stringent of security measures, pressing its way through minor flaws in seals thought to be air and/or water tight, moving through air ducts and electrical systems, under carpet or tile, or flowing slowly through loose material such as dirt or sand. It attempts to avoid observation by blending in with its surroundings and remaining motionless. If noticed, it will move quickly and attempt to envelop personnel before they can raise an alarm.

Objects and personnel enveloped were originally believed to be consumed, digested, and converted into energy. However, its capacity for flowing back to itself when separated and the emergence of objects suggests that it may have a second section elsewhere in the world that it moves portions of itself between. This would account for its fluctuations in volume and the disappearance of objects from within it. If this is the case, then the entity appears unable to pull the portion of itself held by the Foundation through to

the other side. It is theorized that either this is the primary half, or that it naturally has a divided existence.

Attempts to intentionally send equipment back through SCP-1275 have failed; objects the entity does not wish to transport remain even if forcibly inserted. Evidence strongly suggests that the entity sides with or is controlled by a hostile organization, and that they are attempting to retrieve it. Due to the potential for theft of SCP artifacts and personnel, this is to be prevented by any means necessary.

Recovery Log SCP-1275:

08/15/2003: Still-frame analysis systems at Site-76 monitoring camera feeds outside **SCP-140**'s containment chamber found irregularities between frames and proceeded to initiate a lockdown of the area. Upon close examination, a small fluid object appeared to be attempting to enter SCP-140's containment cell. A security team was dispatched to investigate, resulting in the loss of all three members. Containment attempts resulted in the loss of a further seven security personnel and two agents before it could be brought under control.

Upon further investigation and analysis of incidents at other Foundation sites it was found that SCP-1275 attempts to infiltrate facilities, locate objects or personnel of value to the Foundation, envelop them, and cause them to disappear. It was proven to be responsible for the previously unexplained loss of SCP- , SCP- , SCP- , SCP- , SCP- , and SCP- . It is suspected in the disappearance/theft of seventeen other objects and entities from ten different facilities over a span of eighteen years, and the known loss of forty-nine personnel to date.

To date too little data has been recovered to establish a definite link to any specific group. Research attempts are to be targeted at establishing a direct connection to an organization, for the attempted retrieval of lost artifacts and personnel.

Incident Log SCP-1275:

08/15/2003: The entity repeatedly attempted to breach containment for a period of eight months using its abilities with varying levels of

success, causing loss of personnel and equipment. Initial containment procedures were developed at this time. After this it went inactive and remained inert.

08/27/2004: The entity began rapidly disgorging high energy explosives in all directions, causing serious damage to the facility, though apparently none to itself. It renewed its attempts at containment breach, all of which were prevented. After containment was re-established, SCP-1275 was moved to a new facility and put into a reinforced containment cell.

10/10/2004: Explosives were disgorged in rapid succession, followed by visual surveillance equipment, transmitters, and anomalous objects (now classified as SCP- and SCP-) which were harmful to the containment cell walls and personnel on-site. Internal breach efforts by SCP-1275 resulted in the loss of 21 personnel before containment could be fully re-established.

10/12/2004: An unknown hostile retrieval team was intercepted attempting to reach SCP-1275's location, but escaped without casualties. Containment site was moved again and further countermeasures were put into play.

03/02/2005: Hostile agents armed with anomalous weaponry emerged from within SCP-1275, and rapidly attempted to set up a base of operations within the containment cell. An attack was initiated against Foundation personnel. Containment on SCP-1275 was breached shortly thereafter. Mobile Task Forces were sent in to engage and recover the object. After a prolonged engagement, the enemy agents retreated into SCP-1275.

05/29/2005: Containment was established at its present location with the current procedures. The mesh grid has prevented SCP-1275 from producing objects large enough to be capable of breaching its containment. The lead and electric current have prevented transmitters from signaling its location, and destroyed the majority of objects that have been sent through before they could fulfill their intended purpose.

The possible emergence of anomalous objects capable of breaching containment cannot be ignored. Plans to deal with various scenarios

are being devised by staff on site.

« SCP-1274 | SCP-1275 | SCP-1276 »

SCP-1276: Venusian Launch Pad

Item #: SCP-1276

Object Class: Safe

Special Containment Procedures: SCP-1276 is contained on-site with a full research and security staff under the guise of a government-sanctioned archaeological dig team. All unauthorized individuals attempting to approach the area must be detained and questioned, then administered amnestics or terminated at the discretion of site security staff.

All personnel must clear the upper platform at least one (1) hour prior to activation events and remain clear for at least thirty (30) minutes following confirmed activation. Activation experiments may only be performed with Class D test subjects, and only with prior approval from at least two (2) Level 4 Senior Research staff.

Description: SCP-1276 is a step pyramid of presumed Mayan construction 31 m in height, 68 m in width and approximately 2700 years old, located in a remote area of the [REDACTED] River Basin in [REDACTED]. The structure is heavily engraved and believed to have been dedicated to astronomy and astrology. The anomalous property of SCP-1276 is centered at a platform at the top of the structure, on which lies a 3.1 m square metallic plate of unknown composition. Unlike the rest of the structure, this platform shows no sign of aging and is heavily engraved with Ancient Mayan hieroglyphs as well as what is believed to be mythological figures along the outside perimeter, along with human figures prostrated before them.

Whenever the heliacal rising of the planet Venus occurs, the platform atop SCP-1276 is momentarily suffused with a blue glow, after which all living human subjects standing on the platform are instantly accelerated upwards into the atmosphere through unknown means to a speed of approximately 0.01 *c* at the exact moment that

Venus appears above the horizon. Ground- and satellite-based observatories have tracked and confirmed that all such subjects are launched in the direction of Venus and, barring outside intervention, will enter its atmosphere within a period of three (3) to twenty-four (24) hours after launch, depending on the relative distance between the Earth and Venus.

It is not known at this time how subjects appear to not be affected by atmospheric heating when leaving the Earth's atmosphere. Even so, it is presumed that all unprotected test subjects have expired due to either the sudden acceleration or eventual asphyxiation. Development of a man-portable electronics package capable of surviving the launch process as well as interplanetary communication is ongoing.

SCP-1276 was discovered on / / by a team of Mexican archaeologists and came to the Foundation's attention following its accidental activation, resulting in the deaths of three (3) civilian team members. The surviving archaeologists were detained by the responding Foundation containment team.

Addendum 1276-001: Partial Translation of Platform Inscription

> [indecipherable] offer to [indecipherable] upon this victorious [day?] that [indecipherable] of the sky [indecipherable] may return [in time?] [indecipherable]

« SCP-1275 | SCP-1276 | SCP-1277 »

SCP-1277: Thirsty Cactus

Item #: SCP-1277

Object Class: Safe

Special Containment Procedures: SCP-1277 is to be contained in Arboreal Containment Unit 41-B at **`Site-77`**. Personnel assigned to care for SCP-1277 are to be issued sound-dampening headgear. This headgear is to be worn at all times while in SCP-1277's presence. SCP-1277-1 is to monitored via the use of a closed circuit surveillance system located in Containment Unit 41-B. Any "jumps" made by SCP-1277-1 are to be logged by security personnel.

Description: SCP-1277 is an adult *Carnegiea gigantea*, commonly known as the Saguaro cactus. SCP-1277 has a height of 3.7 meters, and weighs approximately 37 kilograms. SCP-1277 requires the same level of maintenance and care as a normal *Carnegiea gigantea*.

SCP-1277-1 is a male human skeleton, 1.4 meters tall and weighing 12 kilograms. It does not appear to suffer from degradation due to time or exposure. SCP-1277-1 is constantly located approximately 15 meters away from SCP-1277. Attempts to remove SCP-1277-1 from this spot have met with failure, due to SCP-1277-1 materializing itself next to SCP-1277 if it is more than 15 meters away.

SCP-1277's anomalous effect will manifest itself anytime a being capable of communicating in American English moves to a point within 15 meters of SCP-1277-1. If this criterion is met, SCP-1277 will begin to emit vocalizations. It is unknown how SCP-1277 is able to produce these vocalizations, as they do not have an apparent source of origin within the object. Vocalizations from SCP-1277 consist of pleas to be given water, and asking for shelter from the desert. These vocalizations will occur whether or not SCP-1277 is in the presence of a desert or water. SCP-1277 will communicate with

any person who speaks to it, but will only respond with more inquiries about water and shelter, and does not respond to inquiries about its origin or SCP-1277-1.

Addendum: Interview 1277-A

> **Interviewed:** SCP-1277
>
> **Interviewer:** Dr. Leipzig
>
> **Foreword:** This interview was conducted during SCP-1277's initial containment processing.
>
> **<Begin Log>**
>
> **Dr. Leipzig:** Can you tell me where you come from?
>
> **SCP-1277:** So thirsty… water… do you have any water? I'm very thirsty, and it's so dry here, I just want some water…
>
> **Dr. Leipzig:** We have already provided you with water. Can you please tell us more about your origin?
>
> **SCP-1277:** I don't have any water… Where did you put it? I think it may have dried up from the heat…can I come in with you? It's so dry out here, I'm sure I can answer your questions if we went in.
>
> **Dr. Leipzig:** We are currently indoors, SCP-1277. Where do you think you are located?
>
> **SCP-1277:** Hot, dry. It seems to stretch on for miles and miles, and no matter how far I crawl the sun never ever ever ever goes down and I am very thirsty. Can I please rest for a minute, the heat is getting to me…
>
> **Dr. Leipzig:** Please hold on, I have more questions.
>
> **<End Log>**
>
> **Closing Statement:** *SCP-1277 did not respond to*

further questioning, and the interview was ended early.

« SCP-1276 | SCP-1277 | SCP-1278 »

SCP-1278: A Picture Frame

Item #: SCP-1278

Object Class: Safe

Special Containment Procedures: SCP-1278 is to be contained in a standard medium-security storage locker at Site- . Due to the potential for misuse, access is restricted to Level-3 personnel or higher. Any Level-3 personnel wishing to access SCP-1278 for research purposes may generate a password at any Site- terminal that will grant access to SCP-1278. Please note that the password will expire after 24 hours. Use of SCP-1278 for any purpose other than research is forbidden. Testing with underwater photographs or photographs taken of objects or locations outside of Earth's atmosphere is forbidden after tests 1278-2 and 1278-4.

Description: SCP-1278 is a photo frame, 36cm in length and 30cm in height. The object is composed of a pinewood frame, painted gold, with a glass cover and a cardboard backing. A stainless steel latch can be found on all four edges of the cardboard backing; opening the latches allows access to the interior of SCP-1278. Also present on the back is a cardboard "leg" attached to a stainless steel hinge to allow the frame to rest upright on a flat surface and a hook on the top and left side of the object, allowing it to be hung on a wall in both portrait and landscape orientation. No information regarding who manufactured SCP-1278, or when or where it was made is present on the object, but manufacturing methods and materials used, as well as tests of composition of the paint indicates that it was built sometime between 19 and 20 .

SCP-1278's unusual properties manifest when a photograph or piece of 2-dimensional art of no larger than 25x20cm is inserted into the object. The image will briefly "shimmer" and waves will be seen radiating from the center of the image, visually similar to ripples on the surface of a pond. After a period of between 1-3 minutes, the frame will function as a 2-way portal between the 2 locations.

Removing the rear of SCP-1278 allows the image to be removed at which point the portal closes. The other end of the "window" appears as a 36x30cm rectangle, apparently 2-dimensional, with one side acting as a portal to the location of the the object and the other being jet-black, absorbing all frequencies of electromagnetic radiation. Any object small enough to fit through SCP-1278 may be passed through from either side. Gases and electromagnetic radiation of all frequencies are also affected, and researchers should take care to avoid opening portals to locations inhospitable to human life except under carefully controlled conditions.

Addendum: Test Logs.

Test 1278-1:
Location depicted: The exterior of Site-
Procedure: Photograph inserted into frame. Researchers and dispatched to the location the test photograph was taken to observe exit.
Result: Effects manifest as normal, exit of SCP-1278 observed. Sample not taken as the "exit" is incorporeal on one side and indestructible on the other. It should be noted that the "exit" acts as a perfect black-body and may have research applications. Further testing regarding these properties awaiting approval from Site Command

Test 1278-2:
Location depicted: Underwater photograph taken in Dr. 's personal aquarium
Procedure: Photograph inserted into frame as normal.
Result: Effects manifest as normal. Contents of aquarium immediately spill out onto floor of test chamber. Clean-up crew dispatched to test chamber, testing moved to Test Chamber 14.

Test 1278-3:
Location depicted: Exterior of Site- , photograph taken with 20x telescopic zoom.
Procedure: Photograph inserted into frame. Research team dispatched to location photo was taken.
Result: Effect manifests as normal. Exit of SCP-1278 not found at location photo was taken. Portal found 15 meters from Site, photograph was taken 300 meters from site.

"So, this thing accounts for zoom. I've got an idea."- Dr.

Test 1278-4:
Location depicted: Photograph taken by Hubble space telescope depicting the Horsehead Nebula. Zoom unknown.
Procedure: D-245 instructed to insert the photograph into SCP-1278 and evacuate the test chamber.
Result: Effect manifests as normal, but takes significantly longer, exact time unknown as the test was not timed. Atmosphere of test chamber immediately escapes through portal into deep space. The lens of the camera recording the test exploded due to the pressure differential. Audio records a brief rush of air before going silent. Sensors in the chamber record increased levels of microwave and gamma radiation as well as beta particles.
Researcher , outfitted with spacesuit normally used in research of SCP- enters test chamber to remove the photograph.

Test 1278-5:
Location depicted: Pencil sketch of New York City skyline
Procedure: Photograph inserted into frame as normal.
Result: SCP-1278's effects manifested, however, it did not display a current sketch of New York City. Rather, the sketch began to play a 24-hour "loop" consisting of a typical day in New York City as depicted in the sketch, including day-night cycle.

Test 1278-6
Location depicted: None. A reproduction of Salvador Dali's "The Persistence of Memory" was used for the test.
Procedure: D-246 instructed to place the print in the frame and await further instruction. Upon manifestation of the effect, D-246 instructed to crawl though the frame. D-246 was chosen due to her exceptionally small frame, allowing her to easily enter SCP-1278.
Result: SCP-1278's effects manifested normally. D-246 enters the frame without difficulty and is asked to report what she observes. Claims she is standing on a 3-dimensional plane that resembles the painting. When asked to describe areas not visible in the original work, D-246 describes a landscape consistent with that depicted in "The Persistence of Memory". D-246 recovered without incident. Frame monitored for 24 hours, the only animation observed was a 24-hour day-night cycle.

Test 1278-7
Location depicted: None. A reproduction of M.C. Escher's "Relativity" was used for the test.
Procedure: D-246 instructed to place the print in the frame and await further instruction. Upon manifestation of effect, D-246 instructed to crawl though the frame as in Test 1278-5.
Result: D-246 is vio[DATA REDACTED BY ORDER OF O5 COMMAND]. Testing on any works of art depicting non-Euclidean geometry in any form now requires unanimous approval from Site Command or a 2/3 majority vote from O5 command.

« SCP-1277 | SCP-1278 | SCP-1279 »

SCP-1279: People Dogs

Item #: SCP-1279

Object Class: Safe

Special Containment Procedures: Each instance of SCP-1279 is to be contained in a reinforced steel container in Storage Unit of Site 87. Two (2) security officers are to guard these instances at all times. No canines are to be brought within a meter of any SCP-1279 instance unless specifically authorized.

Any testing involving SCP-1279 must be authorized by at least one (1) member of Level 3 personnel.

Description: SCP-1279 is the collective term for six (6) leather dog collars. A tag reading 'Dog Inc. Dog Process Collar' is present on each instance of SCP-1279. No anomalous physical properties are present in SCP-1279 instances, and their anomalous properties do not become apparent until an SCP-1279 instance is worn by any form of canine.

Any canine wearing an instance of SCP-1279, hereafter referred to as SCP-1279-1, will be perceived by any individuals who encounter it as being of human-level intelligence. They will still be aware that SCP-1279-1 is in fact a canine, but they will internally anthropomorphise SCP-1279-1, believing that it is capable of speech[1] and reasoning.

Individuals will not consider encountering what they believe is a sapient canine to be abnormal, and will behave as if it were a common occurrence. This perception of anthropomorphic qualities will often result in individuals feeding SCP-1279-1 meals intended for humans and occasionally clothing them in garments intended for humans[2]. (See image.) Removal of SCP-1279 from SCP-1279-1 results in affected individuals once again perceiving SCP-1279-1 as a normal canine.

Interview Log 1279-1

Interviewer: Dr. Matthews
Interviewed: Dr. Gregson
One instance of SCP-1279-1 ('Hank') was present at the interview. After the interview, both Dr. Matthews and Dr. Gregson recorded their respective perception of what had been said. This was in an effort to demonstrate the effect that SCP-1279-1 instances have on the way they are perceived.

Interviewer's Perspective:

> **<Begin Interview>**
>
> **Dr. Matthews:** Hello.
>
> **Dr. Gregson:** Hi.
>
> **SCP-1279-1:** Hello, Doctor. How are you?
>
> **Dr. Matthews:** I'm fine.[3]
>
> **Dr. Gregson:** What?
>
> **Dr. Matthews:** I said I'm fine, I was talking to Hank.
>
> **Dr. Gregson:** Oh. I didn't hear him, sorry.
>
> (Pause)
>
> **Dr. Gregson:** I said I was *sorry*, Hank!
>
> **Dr. Matthews:** I don't think Hank minds, Tom.
>
> **SCP-1279-1:** No, no, it's fine. Honestly.
>
> **Dr. Gregson:** No need to fly off the handle, Hank!
>
> **SCP-1279-1:** (laughs)

Dr. Matthews: (laughs) Good one. How long has it been?

SCP-1279-1: Fifty seconds.

Dr. Gregson: Uh…about a minute, give or take. Yes, I'm sure.

Dr. Matthews: Well, I think that should be all we need, to be honest.

SCP-1279-1: Yes, that sounds fine.

Dr. Gregson: It's fine, Hank, we can just do it again if it's not enough.

<End Interview>

Interviewee's Perspective:

<Begin Interview>

Dr. Mathews: Hello.

Dr. Gregson: Hi.

SCP-1279-1: Hello.

Dr. Matthews: I'm fine.

Dr. Gregson: What?

Dr. Matthews: I said I'm fine, I was talking to Hank.

Dr. Gregson: Oh. I didn't hear him, sorry.

SCP-1279-1: Well you should have been listening then, shouldn't you? Idiot.

Dr. Gregson: I said I was *sorry*, Hank!

Dr. Matthews: I don't think Hank minds, Tom.

SCP-1279-1: How did you even get this job? Isn't your *job* to pay attention?

Dr. Gregson: No need to fly off the handle, Hank!

SCP-1279-1: (sighs)

Dr. Matthews: (laughs) Good one. How long has it been?

SCP-1279-1: God only knows.

Dr. Gregson: Uh…about a minute, give or take.

SCP-1279-1: Are you sure?

Dr. Gregson: Yes, I'm sure.

Dr. Matthews: Well, I think that should be all we need, to be honest.

SCP-1279-1: That doesn't seem long enough for proper research, does it?

Dr. Gregson: It's fine, Hank, we can just do it again if it's not enough.

SCP-1279-1: I suppose.

<End Interview>

SCP-1279 was discovered after reports of a talking dog were received from an anonymous informant. When Agents arrived at the location and recovered the instance of SCP-1279-1, it had been arrested by a police officer for 'public indecency', referring to the canine's lack of clothing. Several instances of SCP-1279 were found scattered in the surrounding area, along with the following note:

> Now your Dog too can be a member of the Household! Are you ever sick of your Dog anti-working for its pay

and food upkeep? Well Worry no more, loyal consumer! Our new Dog Process Collar will make your Dog a fruitful member of Society! Society needs upkeeping, loyal hardworker citizens to feed the Fields, write the Offices and Keep Your Streets Safe.

Perhaps your Dog will be a Fireman, stopping the Fires from betraying you and your Loyal Family! Or a Police Officer, stopping Criminal Dogs from destroying the peace of a Neighborhood! (Not all Dogs are good Dogs.) Perhaps he will be a Doctor Dog, making open the Dogs that have suffered from a terrible mess.

Whatever your Dog's life chooses to become, it is only due to you, Faithful Dog Owner, purchasing the fine product of Dog Inc.

Dog Inc. - *Nos quasi canes*

Footnotes
1. Different individuals affected by SCP-1279's anomalous properties will perceive SCP-1279-1 as saying different things.
2. Subjects typically cite SCP-1279-1's 'lack of modesty' as the reason for doing this.
3. Despite prior knowledge of SCP-1279's effects, Dr. Matthews and Dr. Gregson still believed that SCP-1279-1 was an actual intelligent entity.

« SCP-1278 | SCP-1279 | SCP-1280 »

SCP-1280: Mematodes

Item #: SCP-1280

Object Class: Euclid

Special Containment Procedures: SCP-1280 cultures should be maintained at 20°C and inspected weekly to verify viability of specimens. All researchers working with these cultures must follow procedures appropriate for Biosafety Level 2 material and submit weekly stool samples to allow detection of accidental infection. If eggs or larvae are detected, a course of albendazole shall be applied until the infection has cleared. Depending upon the culture which produced the infection, amnestics may be given at the discretion of the lead researcher.

Human settlements suspected of SCP-1280 infestation are to be investigated by MTF Beta-7 ("Maz Hatters") under the guise of a humanitarian aid organization. The entire population should be treated for hookworm infection and a standard hygiene intervention should be performed (including but not limited to establishment of sealed latrines and elimination of open-air middens). Depending on the extent and duration of the infestation, amnestics and supplementary psychological counseling may be required to re-establish social boundaries.

Description: SCP-1280 is a parasitic nematode worm, superficially identical to *Necator americanus* (New World Hookworm). Its lifecycle is the same as *N. americanus*, with filariform juveniles burrowing through the skin, finding their way through the bloodstream to the lungs, and eventually reaching the small intestine, where they mature and reproduce. Infestations can cause all of the typical symptoms of hookworm infection in humans, including weight loss, lassitude, and anemia.

SCP-1280 differs from *N. americanus* in several respects. Genomic comparison of specimens with reference organisms reveals obvious

modifications. A "marker sequence"[1] appears repeatedly in sections which are "junk DNA" in the reference organism. More significantly, a number of novel sequences appear in the place of redundant genes in *N. americanus*. These appear in no other genome in Foundation databases and it is believed that the enzymes and hormones for which they code are responsible for the organism's anomalous effects. For these reasons SCP-1280 has been assigned the provisional designation *N. americanus* x *mnemosyne*.

Adult worms in the intestine periodically release a complex mixture of hormone analogues and modified neurotransmitters into the host's bloodstream. Some of these molecules are capable of crossing the blood-brain barrier and cause subtle changes in the hippocampus and other brain regions via an unknown mechanism. These modifications have two major effects.

Hosts experience significant improvements to both spatial and visual memory, increasing over time until nearly photographic recall is achieved. Memories formed prior to infestation are not subject to eidetic recall. Sense memories other than visual are not affected to the same degree.

Additionally, host brains begin to excrete chemical messengers back into the bloodstream, which are filtered out of the blood by the worms and stored in a diverticulum off of their main gut structure. Through a poorly-understood mechanism, some of these molecules are passed along to offspring in eggs. Periodically, adult worms regurgitate tiny amounts back into the host bloodstream, causing unbidden recall of seemingly random visual memories upon reaching the brain. It appears that each "packet" of these compounds corresponds to a single visual memory.

Because worms "inherit" some of these packets from their progenitors, adult worms hold a mixture of encoded memories from every host in their lineage, with an abundance correlated to the generational distance between the current host and the originator. Hosts respond to foreign messages in the same way as endogenous ones: a sudden vivid recollection of events which they may not have experienced first-hand. Once experienced in this manner, foreign memories are stored normally in the brain and may be recalled in the presence of appropriate stimulus.

The organism responds normally to anti-hookworm interventions. Once all worms are cleared from the body, extraordinary powers of recall erode until back to baseline. Any memories formed during the period of infestation will remain.

In human settlements with low standards of hygiene, these effects can have serious impacts on the social structure of the community. In villages with common open latrines, members constantly exchange populations of worms. The exchange of memories in this manner can lead to the erosion of personal identity as members lose track of which events they experienced directly and which were remembered second-hand. In one extremely advanced infestation, members of an entire village referred to themselves by a single given name and displayed behaviors seen previously only in colonies of eusocial insects.

The organism was first identified during an outbreak in [REDACTED] in West Africa in 200 . The nematodes were limited to a sharply defined area in a 2km radius around the settlement and some evidence was found of aerosolized deployment, presumably from a crop-duster type aircraft. Subsequently, additional infestations have been discovered in rural areas of Sub-Saharan Africa and South Asia, with a smaller number of cases in Central America and the Southern United States.

Footnotes
1. TAGTTCGCTGTTCGGATTTAGTGACATTCGCTCCGTGTA - the significance of this non-coding sequence is not currently known.

« SCP-1279 | SCP-1280 | SCP-1281 »

SCP-1281: The Harbinger

Item #: SCP-1281

Object Class: Safe

Special Containment Procedures: The remains of SCP-1281 are kept at Outpost 120-09. Monitoring equipment will be installed around and within the entity in case it should ever become active again. Any proposals for study that might damage SCP-1281 must be routed through Command.

Description: SCP-1281 is a biomechanical entity found in the Kuiper belt during standard containment of **SCP-2362**.

SCP-1281 is roughly teardrop-shaped, with a flattened section designated as the bottom of the entity. It measures 12 meters from end to end, and is 11 meters in circumference at its widest point. Opposite, there is a significant bulge, which is believed to store the majority of SCP-1281's analysis equipment.

There are several dish-shaped structures on SCP-1281's surface that are presumed to be receivers for various forms of electromagnetic radiation, as well as lozenge-shaped capsules of unknown purpose. Several areas on its surface are broken, suggesting more appendages were once present.

Biological components appear to have been grown over a mechanical frame, evidently designed to live in deep space. When observed, the entity seemed to have difficulty coping with temperatures much warmer than the Kuiper belt. Its surface temperature was 50 Kelvin when first found.

SCP-1281 was apparently once capable of interstellar travel, but most of its systems were damaged by an unknown event that left it stranded. Dating methods suggest it to have been at least 1.3 billion years old, though much of that time was spent dormant.

The entity was almost entirely dormant when it was found. The only signs that it was active were faint lights running along its surface. Observation and experimentation showed that these were in response to radio waves. It had apparently been collecting signals for some time, but no sign of other functions could be detected until Foundation assets approached, at which point it began broadcasting.

It was able to break Foundation decryption in less than one hour, at which point it began broadcasting binary signals in an attempt to communicate, starting with extremely simple mathematical concepts. However, after a report was transmitted back to Earth, it stopped broadcasting for several days. The temperature of its dorsal bulge heated by five Kelvin during this time, apparently from processing the information.

> Interview Log SCP-1281-1
>
> > **SCP-1281:** "Hurt."
> >
> > **Dr. Bloom:** "Can you hear me?"
> >
> > **SCP-1281:** "Who?"
> >
> > **Dr. Bloom:** "We are the SCP Foundation. We are—"
> >
> > **SCP-1281:** "What? Masters. No."
> >
> > **Dr. Bloom:** "…No. We call ourselves humans."
> >
> > **SCP-1281:** "Harbinger must… Message! Harbinger must…"

SCP-1281 shut down for approximately four hours. The temperature around SCP-1281's dorsal bulge heated up significantly, to about 60 Kelvin. The Foundation team went into standby, in the event that SCP-1281 became hostile, while a message was transmitted back to Earth asking for further instructions. The **O5 Council** advised caution, but instructed Dr. Bloom to continue attempts to communicate, with an eye to bringing SCP-1281 into a containment

solution.

> Interview Log SCP-1281-2
>
> > **SCP-1281:** "Where is Harbinger?"
> >
> > **Dr. Bloom:** "In the outer reaches of this solar system, beyond the planets."
> >
> > **SCP-1281:** "What star?"
> >
> > **Dr. Bloom:** "We call it Sol."
> >
> > **SCP-1281:** "How long?"
> >
> > **Dr. Bloom:** "You've been in space for… about six revolutions around the galaxy."
> >
> > **SCP-1281:** "Are you masters?"
> >
> > **Dr. Bloom:** "…No."
> >
> > **SCP-1281:** "Message! Harbinger must tell… Mission! Harbinger must…"

SCP-1281 shut down for seven hours this time. The heat was more severe, up to 70 Kelvin, and it seemed to cause some damage to the biological components of the entity. O5 Council advised against deception, as it could complicate long-term containment solutions, and because the odds of the species that created SCP-1281 still being both able and willing to initiate hostilities were deemed low.

> Interview Log SCP-1281-3
>
> > **SCP-1281:** "I am… I am not home. I am far from home. It is long. Where is home? I cannot see it."
> >
> > **Dr. Bloom:** "I'm afraid I don't know. The stars would have looked very different back then."
> >
> > **SCP-1281:** "I was told that I must perform my

function. I must complete the mission. But… I broke. So long ago… Stasis. Wait for further instructions. Wait for rescue. Is this rescue?"

Dr. Bloom: "What is your mission?"

SCP-1281: "What is… Are you the masters?"

Dr. Bloom: "No, we are humans."

SCP-1281: "My mission! You are not the masters, I must… Message. The message must be sent. I…"

SCP-1281 shut down for slightly over ten hours. The surface of its dorsal hump reached 85 Kelvin, to the detriment of its organic tissues.

Interview Log SCP-1281-4

SCP-1281: "This is our harbinger. It brings good tidings.

"We will be dead when it reaches you. Our planet is dying. We do not have time to save ourselves. We only have time to ready ourselves, and to send a message.

"We have seen the signals from those who came before us. They were different, and we still don't really understand them. But if there were those who came before, there may be those who come after. It is in this hope that our harbingers travel.

"One has found you and learned your language so it can relay this message. Please listen.

"The galaxy is dark, and empty, and cold. It spins inevitably toward death. You will die too, one day. Perhaps you will have longer than we

have. We hope so. But one day you too must vanish.

"Before that time comes, you must light the darkness. You must make the night less empty. We are all small, and the universe is vast. But a universe with voices saying "I am here" is far greater than a universe silent. One voice is small, but the difference between zero and one is as great as one and infinity.

"We waited too long. Our voice is gone to echoes. Find others while there is still time. Make a chorus.

"And if this finds you too late, and your time is also passing, please send this message on, so the next voice can speak against the darkness."

SCP-1281 went inactive for fifteen minutes before its final communication.

Interview Log SCP-1281-5

SCP-1281: "Is it done?"

Dr. Bloom: "That was the message?"

SCP-1281: "Yes. Was it a good message?"

Dr. Bloom: "You don't know? But you just translated it for us."

SCP-1281: "I was made with the words, but I don't know what they mean."

Dr. Bloom: "It was a very important message."

SCP-1281: "Good. Mission was important. Knew it. Getting tired. Almost done."

Dr. Bloom: "Done?"

SCP-1281: "Mission is done. Brain too hot. Cooling broken."

Dr. Bloom: "Harbinger, are you…"

SCP-1281: "Master?"

Dr. Bloom: "I… yes?"

SCP-1281: "Did I do well?"

Dr. Bloom: "…Yes, Harbinger. Well done."

SCP-1281: "Then I am well."

SCP-1281's systems appeared to shut down entirely. As it radiated heat, its temperature dropped back down to 50 Kelvin. It was brought to Outpost 120-09 for study. Over the next several months, its tissues began to decay, and no further activity has been detected.

Note: Dr. Bloom was reprimanded for emotional involvement interfering with the containment of an anomalous object, and was placed on administrative leave.

« SCP-1280 | SCP-1281 | SCP-1282 »

SCP-1282: Reverse Were-Rabbits

Item #: SCP-1282

Object Class: Euclid

Special Containment Procedures: All instances of SCP-1282 are to be contained in standard wilderness observation chambers, located in **Site-77**'s Euclid SCP wing. Two members of security are to be present outside each containment chamber, operating on six-hour shifts. Instances of SCP-1282 are never to be exposed to moonlight.

Description: SCP-1282 is a collection of five white rabbits, identified as SCP-1282-1 through -5. Instances of SCP-1282 have the physical characteristics and behavior expected of *Leporidae*. In addition, all instances of SCP-1282 were rendered chemically infertile before initial containment.

If an instance of SCP-1282 is outdoors during the moon's full lunar phase, their physique will be anomalously altered. Muscular and skeletal tissue will gain mass and additional skeletal structure will form, drawing mass from an outside source. Internal structure will comprise nonfunctional components identical to those found in a human body. Outer epidermal tissue will expand to accommodate this new mass. Fur and claws will be changed to form hunting garb and gunpowder weapons.[1]

SCP-1282 instances who undergo this transformation process will display sentience and near-human intelligence. Each instance will display a unique personality. Instances are able to speak, control their bodies, and exhibit self-awareness. If spoken to, they will identify themselves as hunters, and express interest in being allowed to hunt animals. If no humans attempt to communicate with them post-transformation, they will immediately begin to seek out animals to hunt, seeming to focus on *Leporidae*.

Multiple transformed instances will communicate with one another using American English, and will usually speak about methodology of hunting and techniques used while hunting. The animal focused on in this conversation has been rabbits in over 80% of recorded SCP-1282 conversations. When allowed to hunt, instances of SCP-1282 will attempt to hunt and consume any *Leporidae* they previously lived with. Primary focus will be on mates and children, with social associates also being targeted. This continues until all organisms are terminated or the lunar full cycle ends. When returned to their original form, instances of SCP-1282 will exhibit depressed behavior, refusing to move or consume food. Experimentation into this effect is ongoing.

SCP-1282 was recovered on 03/18/1999, after several German citizens in [REDACTED] reported hunters coming into their forests and illegally killing rabbits. Foundation personnel were not initially sent to investigate the lead; however, the police reports following the incident were cause enough for Foundation intervention. 7 specimens were contained initially, with two dying of natural causes and one being terminated for testing purposes. As of 05/22/1999, SCP-1282 has been classified as Euclid.

Identities created b SCP-1282-1 throug -5.	**Current Status**	
SCP-1282-1	Claims to be a 34 year old humanoid male named Alan Rupp. Dressed in hunting garb circa. 1998. Speaks fluent Polish. Primarily targets mating partners.	Alive
SCP-1282-2	Humanoid male speaking basic Polish, wearing hunting garb circa 1934. Appears to be between 45-50 years of age, although it has never properly	Alive

	identified itself. Hunts indiscriminately.	
SCP-1282-3	Humanoid with an appearance similar to a Neanderthal. Does not speak beyond growling and grunting. Clothed in what appears to be a rabbit pelt. Hunts indiscriminately.	Alive
SCP-1282-4	Claims to be a humanoid male named "Roadkill", currently living in the U.S. state of Texas. Appears to be between the ages of 30-40, wearing contemporary hunting garb.	Alive
SCP-1282-5	Female humanoid, identifies by the name "Vale Delon." Dresses in traditional British royalty hunting garb, circa 1879. Only instance which will refuse firearms, preferring to terminate rabbits with blunt trauma. Primarily targets children and offspring.	Deceased (see Experiment Log 1282-G)

Addendum: Procedure and results of experiment 1282-G.

Test G
Subject: SCP-1282-1, SCP-1282-5

Procedure: Over the course of one month, SCP-1282-1 and SCP-1282-5 were allowed to become mating partners. During the lunar full phase, SCP-1282-1 was allowed to transform in a controlled environment, then end SCP-1282-5's untransformed state.

Results: SCP-1282-1 expressed no signs of understanding their actions. During the next lunar full phase, SCP-1282-1 was allowed to transform again. The instance expressed that their hunting associate had been terminated in a hunting accident, and showed that the event was a tragic accident.

Analysis: *It appears that instances of SCP-1282 do not recognize one another when in their altered state. However, they do retain at least some vague notion of their feelings throughout each transformation. Testing of this sort is to be ended immediately, due to the possibility of damaging the physiological state of specimens currently being studied.* - Dr. Boyd

Footnotes
1. Appearing identical to various commercial and other types of equipment, without identifying marks.

« SCP-1281 | SCP-1282 | SCP-1283 »

SCP-1283: Radio Panic

Item #: SCP-1283

Object Class: Safe

Special Containment Procedures: SCP-1283 is to be contained in a soundproof storage locker, tuned to a frequency free of broadcasts, with volume on its lowest setting. It is to be checked daily for damage or irregular activity by staff equipped with sound-dampening headphones. In the event that SCP-1283 activates and SCP-1283-1 begins speaking, the nearest Level 3 staff is to be notified immediately, and whoever is determined to have triggered SCP-1283-1 is advised to ignore all vocalizations and remove themselves from the area immediately. In a testing situation, participating researchers are required to wear sound-dampening headphones for the first five (5) minutes of the test, to ensure that only the intended test subject will trigger SCP-1283-1. In the event that personnel other than intended test subjects begin to focus on SCP-1283, they are to be restrained and sedated immediately.

Description: SCP-1283 is a 1930's era home radio, with manufacturing labels that indicate it was made by the company. The object shows very little damage or wear despite its age. Despite the object's obsolete parts, it has shown to be capable of receiving signals and playing with a consistently high quality of sound, with very little noise or interference. Additionally, SCP-1283 is capable of functioning even when switched off, without any apparent source of power. Inspection of the internal mechanisms of the object reveal parts consistent with other radios of identical make and model.

SCP-1283's anomalous effects become apparent when a person, hereafter referred to as the subject, listens to it for more than fifteen (15) minutes, regardless of what frequency the radio is tuned to. When said amount of time has passed, anything playing on the radio at that time will become silent, and a voice, hereafter referred to as

SCP-1283-1, will address the subject by name. Invariably, the voice utilized by SCP-1283-1 belongs to someone known to the subject. Testing has observed SCP-1283-1 belonging to close friends, parents, spouses, authority figures, and on one occasion, a news anchor from the Network. On occasion, the voice used by SCP-1283-1 has been that of a deceased person. Interviews suggest that the voice chosen by SCP-1283-1 belongs to whomever the subject considers to be the most trustworthy. Attempting to manipulate the frequency, volume, or AM-FM settings of the radio after SCP-1283-1 has begun speaking produces no results.

After SCP-1283-1 has gained the subject's attention, it instructs them to listen carefully. At this stage the subject will begin to focus exclusively on SCP-1283, and will resist attempts to distract them from it. SCP-1283-1 will then provide the subject with information regarding an upcoming event. All information provided by SCP-1283-1 to a subject will be referred to as SCP-1283-2. SCP-1283-2 occurs in three individual phases, each prefaced by a distinct phrase that has been present across all testing. The three phases appear to have nothing connecting them, and only currently affected subjects display any awareness of meaning.

Description of SCP-1283-2: The first phase is prefaced with the question "Do you remember" and involves SCP-1283-1 prompting the subject to remember a specific person, object or event. This phase, like SCP-1283-1, has shown to have personal relevance to the subject, either directly or indirectly.[1] Subjects display no difficulty recalling this information, regardless of obscurity.

The second phase, prefaced with the statement "Something bad is going to happen," involves SCP-1283-1 giving a warning to the subject. To outside listeners, this warning is cryptic, meaningless, and appears to bear no relation to the first phase. However, no test subject has expressed confusion in regards to the warning. Instead, subjects react with initial shock and surprise, followed by increasing levels of anxiety. Despite distress, subjects continue to resist attempts to stop them from listening to SCP-1283.

The final phase of SCP-1283-2 is prefaced with the statement "You can stop it." Here, SCP-1283-1 delivers a set of instructions to the subject, with an assurance that following them will stop the

threatened event. The instructions vary from simplistic and easily performed to complex and dangerous, and no discernible pattern has been observed. After instructions have been given, SCP-1283-1 becomes silent, and expected programming will resume. At this point, the subject's anxiety will have grown into a severe panic, and they will indicate an intense desire to perform the instructions presented to them and avert the threatened event. Attempts to stop the subject from doing so has resulted in pleading, threats, and in some cases, violent resistance.

Addendum 1283-1: If subjects are allowed to successfully complete the given instructions, their panicked state dissipates, and subjects typically report feelings of intense relief. Observation suggests that subjects act with above average calm and reasoning abilities in future panic situations.[2] Interviewed subjects report retention of memories of the radio conversation, but any questions regarding the warning given in the second section of SCP-1283-2 elicit only confused responses. No subject has been able to determine any connection between the prompted memory and the warning.

In the event that a subject is kept from performing the given instructions for an extended period of time, their panic will continuously increase, until the subject proves inconsolable and displays a single-minded drive to follow the instructions. However, these effects have proven reversible. Heavy sedation and Class-A amnestics used in conjunction have proven effective in countering the effects of listening to SCP-1283. Subjects dealt with in this manner do not display any desire to perform the given instructions, but have shown to be more susceptible to anxiety and panic.

+ SCP-1283 Test Log

Note: The identity of the voice used by SCP-1283-1 is determined either through post-test interviews with the subject, or inference from subject dialogue towards SCP-1283-1. While it is common for subjects to speak to SCP-1283-1, at no point has SCP-1283-1 responded to a subject's statements or questions. For this reason, testing logs will exclude Subject transcripts.

Test-1283-01

Subject: D-20283
Voice of SCP-1283-1: "Julia," D-20283's wife.
Record of SCP-1283-2:
Phase 1: "Do you remember your first car?"
Phase 2: "Something bad is going to happen. The well is going to run dry."
Phase 3: "You can stop it. You need to break a plate."
Results: Subject displayed expected panic. Subject was allowed a glass plate with which to follow instructions. After throwing the plate to the ground, Subject's panic subsided quickly.

Test-1283-02
Subject: D-21593
Voice of SCP-1283-1: D-20455, with whom D-29613 had formed a close bond during their stay at The Foundation.
Record of SCP-1283-2:
Phase 1: "Do you remember your fifth birthday?"
Phase 2: "Something bad is going to happen. The benefactor is returning home."
Phase 3: "You can stop it. You must prepare a meal for five people."
Results: Subject displayed expected panic, and was allowed access to some food and basic cookware to follow the instructions. Subject successfully prepared a simple meal fit for five people, and the panic subsided as expected. However, the Subject suffered multiple burns and cuts due to their panicked state and careless methods.

Test-1283-03
Subject: D-21092
Voice of SCP-1283-1: "Greg," later determined to have been a friend of D-21635's. Died shortly after D-21635's incarceration.
Record of SCP-1283-2:
Phase 1: "Do you remember visiting your grandparents?"
Phase 2: "Something bad is going to happen. A key has been forged."

Phase 3: "You can stop it. You must not sleep for one week."
Results: Subject displayed expected panic. Subject was allowed to attempt to follow the instructions. Due to the Subject's agitated state, they successfully went without sleep for four days before succumbing to exhaustion. Upon awakening, Subject immediately expressed a desire to, quote, "try again." Request denied. Sedatives and Class-A amnestics applied.

Test-1283-04
Subject: D-21635
Voice of SCP-1283-1: "Marcus," D-21635's father.
Record of SCP-1283-2:
Phase 1: "Do you remember starting the fire?"
Phase 2: "Something bad is going to happen. The music will stop."
Phase 3: "You can stop it. You need to break your left arm."
Results: Subject displayed expected panic, and attempted to follow instructions, but was successfully restrained and sedated before they succeeded. Subject treated for extensive bruising and mild ligament damage.

Test-1283-05
Subject: D-20917
Voice of SCP-1283-1: [DATA EXPUNGED], the on site psychologist who regularly dealt with D-20917
Record of SCP-1283-2:
Phase 1: "Do you remember Alexander?"
Phase 2: "Something bad is going to happen. The authors grow impatient."
Phase 3: "You can stop it. You must travel to . When you arrive, you must find a child and take them from their home. Keep the child hidden for days. Do not allow the child to know your name. Do not allow the child to come to harm. After days, release them."
Results: Subject displayed expected panic, and was not allowed to follow the instructions. Sedatives and Class-A amnestics applied after hours of observation.

+ Incident Report-1283-A

The following is an audio transcript of Incident-1283-A, which took place during routine testing on 12/19/2005

Attending Researcher: Dr. Ivan
Subject: D-24019
Note: Audio begins twelve (12) minutes into the test.

<Begin Log, T+12:19>

D-24019: Doc, are you sure this is worth studying? I mean, I don't mind listening to music, I just don't see how this is at all meaningful.

Dr. Ivan : Just keep listening, D-24019, we're almost done here.

D-24019: Whatever you say, it's not my tax dollars you're wasting.

Note: *Two minutes pass with only the only sound being music played from SCP-1283*

SCP-1283-1: Darren . *D-24019's given name.*

D-24019: Kelly? Is that you? What's going on? Hey, doc, something weird is happening with this radio.

SCP-1283-1: You need to listen carefully to me, Darren.

Dr. Ivan : D-24019, may I ask how you are feeling at the moment?

D-24019: Shhh, not now doc, I need to listen to Kelly.

SCP-1283-1: Do you remember failing that test?

D-24019: Of course I do, Kelly, how could I not?

Dr. Ivan : D-24019, if you could take a moment…

D-24019: Later, doc!

SCP-1283-1: Something bad is going to happen. There will be a breach.

D-24019: No… no, that can't be right, that's not supposed to happen. Oh god, I don't… what will happen to me? This is bad, this is really bad.

Dr. Ivan : D-240-

D-24019: SHUT UP! JUST SHUT UP SO I CAN LISTEN!

SCP-1283-1: You can stop it.

D-24019: Please tell me how, Kelly! Tell me how to stop the breach!

SCP-1283-1: You must kill Ivan . Do not allow him to leave this room.

<SCP-1283-1 becomes silent. begins playing on the radio.>

Dr. Ivan : D-24019, do not move. Guard, please sedate the Subj-

<A crash is heard, presumably D-24019 knocking aside the table in an effort to reach Dr. Ivan .>

D-24019: The breach can't happen!

<Struggling is heard>

Dr. Ivan : Guards! Restrain him!

D-24019: No! You don't understand! I need to kill him, or everything is going to go wrong, just like Kelly said! You have to believe me!

Dr. Ivan : Sedate him and take him away.

D-24019: NO! NO, DON'T TOUCH ME! PLEASE JUST LET ME KILL HIM!

<End Log, T+22:49>

Closing Statement: D-24019 was successfully restrained and sedated, but in light of instructions received from SCP-1283-2, subject was terminated for security reasons. Dr. Ivan treated for a broken nose. SCP-1283 testing discontinued. Request for SCP-1283 reclassification to Euclid is pending.

+ Foundation Incident Report

Incident 220953, dated 6/4/2012
Incident Description: A minor containment breach occurred in the early morning due to improperly followed security guidelines. SCP- , SCP- , and SCP- briefly escaped containment, and were recovered after hours. Casualties included several D-Classes and two Foundation personnel. The responsible party was formally reprimanded for their negligence, but no further action was taken against them.
Responsible Party: Dr. Ivan
Actions Taken: Formal reprimand
Incident Status: Resolved

Footnotes
1. As of writing, researchers have found no correlation between the voice selected for SCP-1283-1 and the event selected for

SCP-1283-2.
2. It was suggested that prospective task force members be intentionally exposed to SCP-1283 for this reason. Request denied by O5- , citing potential for loss of resources

« SCP-1282 | SCP-1283 | SCP-1284 »

SCP-1284: The Moon's Child Bride

Item #: SCP-1284

Object Class: Euclid

Special Containment Procedures: SCP-1284-1 (currently SCP-1284-1/8) is to be contained in standard-sized humanoid living quarters at Bio-Research Area-12, fitted with grow lamps that cover a sun-equivalent light spectrum in addition to normal lighting fixtures. There are to be no windows in its living space, and, should a situation arise where SCP-1284-1 must be moved through or into any space with windows, those windows must be completely blacked out by any means available. Under no circumstances is SCP-1284-1 to be exposed to direct moonlight, as defined as a direct line of sight between any part of SCP-1284-1's body and an illuminated portion of the moon.

Under normal circumstances, SCP-1284-1 is to be kept on a vegetarian diet, given three meals per day, and may request one snack between meals. Following an SCP-1284-2 formation event, SCP-1284-1 is to be fed Formula 1284-A by nasogastric feeding tube and exposed to a sunlight-equivalent light spectrum for 15 minutes out of every hour until it has fully regenerated all four limbs and is capable of self-locomotion. There is to be at least one nurse on call at all times, to help SCP-1284-1 relocate its shoulders and/or hips should they become dislocated outside of an SCP-1284-2 formation event.

SCP-1284-1 is to be kept on hormonal treatments to delay the onset of puberty as long as possible, and tranquilisers to reduce the likelihood of an SCP-1284-2 formation event. Blood samples are to be taken at random intervals no longer than one month and no shorter than five days, tested for hormone levels, and SCP-1284-1's medication dosage adjusted accordingly. A psychological evaluation is to be performed biweekly. Once hormone treatments have begun, SCP-1284-1 is to be kept on continuous suicide watch.

Any media SCP-1284-1/8 is exposed to must be pre-screened, to ensure that it does not contain any objects, animals, or depictions thereof found listed on Documents 1284-06-A or -B/8.

Should SCP-1284-1 expire for any reason, Protocol 1284-Alpha is to be executed immediately to identify the new SCP-1284-1 and pull it from the general population.

Outside of testing, all instances of SCP-1284-2 are to be destroyed via exposure to sun-equivalent light spectrum. The remaining cell slurry is non-anomalous, and may be disposed of in whatever manner is most expedient.

Description: SCP-1284-1 is a series of premenarchal female humans that have undergone severe, permanent, and apparently-spontaneous alteration in physiology and psychology. Only one living instance of SCP-1284-1 has ever been located at one time, but the global nature of the anomaly makes definite confirmation impractical.

All instances of SCP-1284-1 can be considered to suffer from a unique psychosis, fully described in Document 1284-01-A. SCP-1284-1 has smaller than normal ball heads in its hip and shoulder joints, allowing them to luxate easily, but a positive identification requires confirmation of sphincters in the surrounding blood vessels, or direct observation of an SCP-1284-2 formation event.

SCP-1284-1 does not, and possibly cannot, respond to either its designation or its birth name, but will answer to any fair approximation of "Moon's Bride" in apparently any language, even if it has no knowledge of the language in question.[1]

At sundown local time during a full moon, when SCP-1284-1 is under high stress, or when SCP-1284-1 is exposed to direct moonlight (see above), one or more of its limbs will dislocate out of its ball joints, and sphincters in the surrounding blood vessels will close. This provokes the onset of apoptosis of tissues distal to the closed sphincters, followed by immediate detachment of the afflicted limb. Over the course of approximately five seconds, a new SCP-1284-2 instance will assemble itself from each shed limb.

Instances of SCP-1284-2 are carnivorous, quadrupedal masses of flesh with rudimentary mouths and teeth. When viewed directly, instances of SCP-1284-2 give the visual illusion of being domesticated rabbits, but indirect viewing (such as in a mirror or via video feed) or tactile examination reveals that they are in fact hairless and mostly skinless, as well as lacking a distinct head, tail, or discernible sensory organs. SCP-1284-2 instances will invariably attack and attempt to consume any living being other than SCP-1284-1 or other SCP-1284-2 instances that they have an unobstructed path to.[2] As it consumes tissue, an SCP-1284-2 instance incorporates it into its own mass, increasing in size until it reaches a total weight of 6.2 kilograms. At that point, it will begin to rapidly reorganise its constituent tissue, and, over a period of 7 seconds, split into two 3.1-kilogram instances of SCP-1284-2. One out of every 8 instances of SCP-1284-2 formed in this way will attempt to path its way back to SCP-1284-1 and feed itself piecemeal to SCP-1284-1. Even when instructed to the contrary, SCP-1284-1 will invariably cooperate to the best of its ability with SCP-1284-2's attempts to feed it. Imaging tests have indicated that SCP-1284-1's stomach becomes internally larger as needed to accommodate tissue from SCP-1284-2, without changing in external measurements.

If exposed to a sunlight-equivalent light spectrum, SCP-1284-2 instances spontaneously undergo liquefication, and SCP-1284-1 will begin to regenerate lost limbs at a rate of 0.2 kilograms an hour if it has consumed enough biomass to do so. While SCP-1284-1's limb regeneration has not been observed to violate conservation of mass, the replacement cells form spontaneously, rather than being divided from existing cells by mitosis.

Menarche has been invariably fatal to instances of SCP-1284-1, resulting in continuous, rapid hemorrhaging of the endometrium until death by exsanguination. Attempts to stop or slow the bleeding have to date all been unsuccessful due to anomalous drastic increases in blood pressure and spontaneous thrombolysis. SCP-1284-1 instances indicate awareness that this will occur, with expressed feelings about it varying from slight nervousness to eager anticipation. SCP-1284-1 instances are actively uncooperative with Foundation attempts to delay or prevent menarche.

In the event of the current SCP-1284-1 instance expiring, a female child between the ages of 2 and 5 living in a rural community of less than 1000 people becomes a new instance of SCP-1284-1, and will begin to exhibit SCP-1284-1's abnormal behaviours.[3]

The current instance of SCP-1284-1, SCP-1284-1/8, is a human female of Indian descent, years old as of / / . It invariably introduces itself as "Candrani", contrary to its birth certificate, which indicates its given name is " ".

SCP-1284-1/8 suffers from an additional psychosis similar to Depersonalisation Disorder without successful reality-testing, ultimately forming a personal narrative in which unpleasant events and stimuli are derealised entirely. Although this disturbance is not standard amongst SCP-1284-1 instances and is not considered anomalous at this time, staff interacting with SCP-1284-1/8 are to be discouraged from challenging this narrative.

Addendum: / / : Transcript of interview attached.

> **Interviewed:** SCP-1284-1/1
>
> **Interviewer:** Dr.
>
> **Foreword:** First attempt to obtain information from SCP-1284-1 regarding the nature of SCP-1284-2. Translated from German. Note that SCP-1284-1 is, at the time of this interview, 6 years old.
>
> **<Begin Log>**
>
> **Dr. :** What do you know about SCP-1284-2?
>
> **SCP-1284-1/1:** [tilts head to side] What?
>
> **Dr. :** What do you know about the… rabbits that appeared earlier?
>
> **SCP-1284-1/1:** [rights head] Oh! [smiles] You mean my king's subjects.

Dr. **:** [hesitates] … Yes. Could you describe what they were doing?

SCP-1284-1/1: [still smiling] My king ordered that they hold a feast in my honor.

Dr. **:** I see. What was the occasion?

SCP-1284-1/1: [frowns, tilts head] I don't know what you mean.

Dr. **:** Why did your king order them to hold a feast?

SCP-1284-1/1: [rights head] It is his right.

Dr. **:** That doesn't really answer my question.

SCP-1284-1/1: It is his right.

Dr. **:** Is there a reason he wanted them to hold a feast in your honour specifically?

SCP-1284-1/1: I am his bride, although our marriage is yet to be consummated.

Dr. **:** [shifts uncomfortably] … Right. Can you tell me more about your king?

SCP-1284-1/1: [looks down, extended pause, looks back up] He is my king.

<End Log>

Closing Statement: This line of inquiry did not reveal further information.

Addendum: / / : Research into a connection between SCP-1284 and other leporine anomalies associated with the moon, such as SCP-1282 and **SCP-1640**, is ongoing. A connection between the "king" mentioned by SCP-1284-1/1 and **SCP-2686** has been ruled out.

Addendum: / / : Attempt to prevent menarche through surgical removal of SCP-1284-1/3's uterus and ovaries failed. Subject regenerated organs in the same manner as limbs. Second attempt denied approval.

Addendum: / / : Attempt to prevent menarche through malnourishment of SCP-1284-1/3 failed. Subject experienced menarche despite condition and expired at age 12.

Addendum: / / : Attempt to prevent menarche through hormonal treatment of SCP-1284-1/4 failed. Subject experienced menarche and expired at age 12. Postmortem testing indicates that subject's hormone levels were corrected to within expected unmedicated levels by unknown method.

Addendum: / / : Attempt to prevent menarche through hormonal treatment and regular blood monitoring of SCP-1284-1/5 failed. Subject unexpectedly experienced menarche and expired at age 13. Blood sample taken during menarche indicated correction of hormone levels inconsistent with previous tests.

Addendum: / / : Hormonal treatment not started on SCP-1284-1/6. Subject was suffering from severe pneumonia as a complication of a measles infection when initially secured, and, despite the best efforts of Foundation and local medical personnel, expired 35 hours later at age 4.

Addendum: / / : Blood sample taken from SCP-1284-1/7 24 hours ahead of the regular sampling schedule indicated a higher rate of hormone correction than previous tests had indicated. Preliminary randomisation of sampling schedule approved.

Addendum: / / : Transcript of interview attached.

Interviewed: SCP-1284-1/7

Interviewer: Dr.

Foreword: Excerpt from psychological assessment after SCP-1284-1/7 began exhibiting signs of depression and resistance to taking medication. Translated from

Mandarin. Note that SCP-1284-1 is, at the time of this interview, 14 years old.

<Begin Log>

Dr. : Can you describe to me why you feel this way?

SCP-1284-1/7: You are denying my king his right.

Dr. : How so?

SCP-1284-1/7: We were meant to consummate our marriage, but you prevented it.

Dr. : And how did we do that?

SCP-1284-1/7: Your pills.

Dr. : If we didn't give you those pills, you would bleed to death.

SCP-1284-1/7: It is his right.

<End Log>

Addendum: / / : Attempt to prevent menarche through hormonal treatment and irregular blood monitoring of SCP-1284-1/7 successful. Subject punctured own carotid artery with pen and expired at age 16.

Footnotes
1. For full list of languages tested so far, see Document 1284-05-A.For full list of confirmed working appellations, see Document 1284-05-B.For partial list of confirmed non-working appellations, see Document 1284-05-C.To suggest a language or appellation for testing, contact Dr. Stoker during office hours.As of Incident 1284-1/5-009, testing with non-natural (invented) languages must be signed off by SCP-1284-1's psychologist and at least two linguists of Level 3 clearance or above familiar with SCP-1284-1's circumstances.
2. SCP-1284-2's pathing abilities are incompletely understood, but

do not appear to be based on smell, line-of-sight, echolocation, electrical signals, or the detection of vibration. If presented with a maze and two possible targets, one physically closer but with a longer required path and the other physically farther away but with a shorter required path, SCP-1284-2 instances will invariably navigate the maze to the target at the end of the short path with no wrong turns. The possible use of SCP-1284-2 in locating lost operatives in spatially-inconsistent locations is being looked into.
3. See Document 1284-01-A for full behavioural profile.

« SCP-1283 | SCP-1284 | SCP-1285 »

SCP-1285: The Wooden Movie Prop

Item #: SCP-1285

Object Class: Safe

Special Containment Procedures: When not in testing, SCP-1285 is to be placed in a fenced off 3 m X 3m plot of land outside of Site 56. While testing, SCP-1285 is to be contained in a 6 m X 6 m X 3 m concrete containment area, unless testing protocols require otherwise. While indoors, SCP-1285's roots are to be inspected and trimmed on a daily basis to prevent potential degrading of the containment chamber. Testing is to be conducted only after Level 4 approval, and must be submitted two (2) weeks in advance to allow proper growth, if necessary. After testing, all instances of SCP-1285-1 are to be removed and incinerated.

Following Incident 1285-AB, no instances of SCP-1285-2 are to be refined. Personnel found attempting to produce refined SCP-1285-2 are to be reassigned to a different project. Should this fail, the offender is to be terminated, and resulting instances of SCP-1285-3 are to be destroyed with extreme prejudice.

Description: SCP-1285 appears to be a wooden sculpture depicting an armless and headless humanoid sitting on a concrete pedestal. Projecting from its shoulders are root-like structures. "Nature's Embrace" is engraved on the back of the pedestal. It is currently unknown whether the object is sentient or follows pre-defined behavior.

The object's anomalous properties manifest when placed in an indoor environment. The roots of the sculpture will begin to grow, with a rate of one (1) meter per day being observed when unobstructed. Should the roots reach a surface composed of non-organic materials, they will begin production of pigments to match the surface and will attempt to grow through any cracks present.

Experimentation shows that SCP-1285's roots grow towards the nearest "bedroom", defined as any room containing an implement used for sleeping[1]. Once inside, the roots will not continue to grow until a human subject falls asleep in said room. At this point, SCP-1285's roots will begin a period of rapid flower growth, followed by an attempt to dislodge one of the subject's eyes, leaving a flower (hereby designated SCP-1285-1) in its place. MRI scans show that SCP-1285-1 connects directly to the subject's brain[2]. Survivors of this process report it as "mildly unpleasant" and will show a marked decrease in aggressive behavior. This process has been observed to take between sixteen (16) and thirty-two (32) seconds.

SCP-1285-1 will attract nearby insects[3], which will "pollinate" SCP-1285 through use of SCP-1285-1. This will cause the production of sap, hereby designated SCP-1285-2. SCP-1285-2 can be refined into an alcoholic beverage by utilizing [DATA EXPUNGED]. When consumed, side effects do not appear for six (6) hours, at which point stomach pains, headaches, hemorrhaging, and vomiting have been known to occur, increasing in intensity over a 72-hour period. Should the afflicted survive, root-like structures will rapidly begin to grow out of available orifices, eventually covering the afflicted's entire body. The subject in question is now considered an instance of SCP-1285-3[4].

Instances of SCP-1285-3 are hostile towards any mammalian life, and will attempt to wound them to the point of immobility. At this point, SCP-1285-3 will reveal a "mouth" and proceed to bite the target. Affected targets will then display symptoms identical to those caused by SCP-1285-2, but at a highly accelerated rate[5].

Addendum: SCP-1285 was discovered in a back room in " 's Bar and Grill" in , Colorado on / /19 after reports of "tree-people" (revealed to be instances of SCP-1285-3) in the area. The owner of the bar, , was recruited as D-1285-1 for his part in the incident. Class-A amnestics were distributed to the remaining witnesses, and all instances of SCP-1285-3 were eliminated. A note (Document 1285-A) was found among 's possessions.

Document 1285-A:

> To my dearest fan, :

A sincerest thank you for your help in making my latest movie, "Attack of the Root Men!"[6], a reality. I hope you understand how much your acting brought out. You were the perfect lead, and for that, I sincerely thank you. But look at me go on! As a token of my gratitude, I'll relinquish ownership of the main prop (The Statue of the Forest God, if you weren't aware) to you, and let you in on a little secret.

Do you remember how the dastardly Dr. Arhbur extracted the Forest God's sap to create his tree-creatures? Well, just between you and me, you too can produce it, all with the help of my darling prop. All you need do is place that statue somewhere you can sleep, invite someone into that room, and let the magic unfold!

Now all you have to do is take the resulting sap, [DATA EXPUNGED]

C'est magnifique!

Be careful with that stuff, though. It's alcoholic, and I wouldn't want a young man such as yourself driving their career into ruins so early!

I can assure you that your talent will make you go far. I am entrusting you this marvelous art in hopes that you can bring out it's full potential, just as you did on the set.

Expect a package in the mail soon!

Best regards,
[ILLEGIBLE]

Footnotes
1. If placed in a bedroom, no growth will be observed.
2. It is currently not known how the connection occurs, as no stems have been observed on instances of SCP-1285-1 before being applied.
3. Insects have been observed to appear even in areas previously free of them.

4. Testing reveals this process occurs when any mammal drinks SCP-1285-2, but humans appear to be the most suited to the change.
5. No consistent rate was found, with the observed process taking anywhere from nine (9) to thirty-six (36) hours.
6. No evidence of this movie has been uncovered.

« SCP-1284 | SCP-1285 | SCP-1286 »

SCP-1286: Sad Man

Item #: SCP-1286

Object Class: Keter

Special Containment Procedures: SCP-1286 is contained in its original installation. The basement of “ ”, an entertainment venue located in Manhattan, New York that contains SCP-1286 has since been retrofitted with standard containment procedures outlined in this document.

The appearance outside of Area-1286 has not changed and should not change since it has been retrofitted, save for the removal of advertisements on the building, and window galleries which have since been removed and replaced with solid walls. The front doors to Area-1286 lead into another hallway where screening procedures and identification protocols must be carried out each time personnel leave and enter the facility. Only one individual may be screened at any time.

At least two armed guards with concealed weapons and incapacitating agents must be posted in front of the main entrance at all times. Non-personnel attempting to access the venue are to be intercepted and turned away immediately. The use of lethal force is not recommended due to public traffic in the location. Disinformation personnel working with local law enforcement will deal with all casualties at times when this becomes an issue.

The basement area of the venue is to be kept clear of personnel at all times, and communication with SCP-1286 must be carried out with wall mounted audio devices unless otherwise specified by SCP-1286. No personnel save for the site psychoanalyst, Dr. Sanders, is at any time to attempt to approach SCP-1286 or converse with SCP-1286. Dr. Sanders is to have an audio link with the containment cell at all times.

Personnel who may be seen leaving and entering the facility must be dressed in proper business wear, according to disinformation protocol “U.S. Government Critical Infrastructure Facility” that has been circulated with local media outlets.

Description: SCP-1286 appears to be a plastic replica of the "Fat Man" atomic bomb. On the left of the hull is an acrylic drawing of a man frowning. Located in the rear is a small loudspeaker attached to the object with duct tape. SCP-1286 occasionally communicates through this device.

SCP-1286 claims to be a functioning explosive. SCP-1286 presents great difficulties to all personnel responsible for containment in the sense that it will continually debate with staff as to why it should detonate. When approached, SCP-1286 will begin rocking back and forth on its own volition; containment personnel who have observed this report it filling them with a great sense of dread, although researchers are not sure as to whether or not this effect is memetic or due to SCP-1286's apparent nature. Further testing is to be done with unbriefed personnel.

The only confirmed anomaly regarding SCP-1286 is the tendency of personnel in charge of the containment of SCP-1286 to gather around the live feed from SCP-1286's containment cell whenever the device begins rocking. How this is coordinated is not known but it is reported to be sudden and compulsive, causing extreme anxiety for those present in a small radius outside of SCP-1286's walls.

SCP-1286 was discovered in the basement gallery of , an entertainment and art venue located in Manhattan, New York. Two agents attended the opening event "Sad Man visits Chelsea with some Fr1ends" due to concern with specific textual content of posters and other advertisements displayed before the gallery's opening.

After the exhibit opened, guests were ushered into the basement room containing SCP-1286 by a guide wearing orange shorts and a bandanna concealing the face. The figure's identity is not currently known, although it is believed to be the creator of SCP-1286. The figure spoke through a small orange microphone, the voice was projected through a loudspeaker in SCP-1286's hull with various

phrases such as "I'm just a sad little bomb!", and "Tick, tick, tick, baaaw…". After the space of half an hour, the figure placed the microphone on the ground after which SCP-1286 continued its phrasing unaided.

Addendum 1286-B Session 23:
The following is an exchange between SCP-1286 and Dr. Sanders. The conversation is typical.

> **SCP-1286:** Doc? Doc? Are you there?
>
> **Dr. Sanders:** Yes, Jeffrey. You wanted to be called Jeffrey, correct?
>
> **SCP-1286:** Yeah, doc. Can we talk?
>
> **Dr. Sanders:** Of course, Jeffrey.
>
> **SCP-1286:** I've been thinking about how I'm a bomb, right?
>
> **Dr. Sanders:** Yes, you appear to be an atomic bomb.
>
> **SCP-1286:** I've been having an… what do you call it? Existence crisis? I feel like… I'm supposed to explode, I mean, I'm a bomb…
>
> **Dr. Sanders:** It's normal for you to feel that way, Jeffrey, but let's be rational here; you might kill thousands upon thousands, and the fallout would kill even more.
>
> **SCP-1286:** But that's what I'm supposed to do! I'm a bomb; I can feel it in my core, I mean, there… my… trigger, it's cold but it could be warm if I just… flicked it.
>
> **Dr. Sanders:** Jeffrey, we've been over this many times. If you keep responding like this, we may have to disarm you.
>
> **SCP-1286:** But you won't! You won't because if you come near me… I'll fucking do it! I'll blow you all to hell!

Dr. Sanders: Jeffrey, please, you'll kill a-

SCP-1286: Say I won't!

SCP-1286 begins rocking back and forth slowly for a space of 15 minutes, occasionally tilting to an extent that would typically cause an object of such weight to fall over on its side. Seven (7) site personnel observed with what appear to be panic attacks and three (3) personnel exhibit syncope during the event.

Related Groups of Interest: **AWCY?**

« SCP-1285 | SCP-1286 | SCP-1287 »

SCP-1287: Closure

Item #: SCP-1287

Object Class: Safe Neutralized

Special Containment Procedures: Due to the immovable nature of the object, Site 98 has been built around SCP-1287. The only persons permitted to make direct contact with the object are D-Class personnel.

As of 16/04/1987, D-Class testing of SCP-1287 is to take place once every two (2) hours in between treatments of the object in order to observe any changes in SCP-1287's responses.

Description: SCP-1287 is a rectangular white marble structure located in within the state of Washington in the United States of America. The object stands 3m in height, 10m in length, and 1m in width. SCP-1287 cannot be moved or altered in any way, including, but not limited to, graffiti, etching, and high-speed impact. At irregular intervals, the names of missing individuals will appear engraved into the structure. All the individuals currently existent on the structure have been confirmed missing or presumed dead. No person whose name appears on SCP-1287 has been noted to reappear.

When a sapient organism makes physical contact with one of the names, that subject will report hearing a voice. When more than one name is touched, no anomalous effects can be observed. This phenomenon varies widely between people, apparently being roughly related to what that person considers to be pitiful or endearing. The voice will always administer the same message to the person: "This person’s family needs you. Will you give your life to help them?"

If the person audibly responds positively, they will immediately be transfigured into the physical appearance of the person whose name

they touched and are hereby designated as an instance of SCP-1287-A. The transfiguration appears to account for the physical growth of that person since their disappearance[1]. Additionally, the person's name will be removed from the face of the structure. These entities will also gain the memories and information regarding that person, including the events of their disappearance, as well as a strong urge to return to their family and/or loved ones. If allowed to do this, instances of SCP-1287-A will lose all sense of their former personality over the course of three (3) months and will eventually completely believe that they are the missing person[2]. All persons that were personally acquainted with the missing subject before the introduction of SCP-1287-A will show a noticeable lack of interest to that person's whereabouts during the period when they disappeared. Along with this, SCP-1287-A entities are very reluctant to share this information. However, if extensively questioned and confronted about their previous identity, these beings will often divulge information regarding the person's actual disappearance.

Site Director's Note: At the moment, it appears that the names of at least fifty (50) Foundation personnel MIA are etched into SCP-1287. As such, the object may be used in order to discover the circumstances under which these personnel disappeared. Instances of SCP-1287-A created for this purpose are to be terminated after divulging the relevant information. -Site Director Loman

Addendum-1287-Gamma: On 16/04/1987, approximately two (2) months after Foundation containment of SCP-1287, the anomaly began exhibiting delayed reaction to subjects touching the engraved names. Further research regarding SCP-1287 is ongoing to discover the source of this.

Addendum-1287-Psi: On 16/08/1987 at approximately 1500h, all names etched into SCP-1287 spontaneously disappeared and the object ceased displaying anomalous properties. After this point, the structure was vulnerable to damage and alteration, as shown through the accidental damage caused when it fell off of the transport vehicle during its transfer to Analysis Site 53 for final examination of possible still existent effects. The object shattered when it fell, revealing a deceased male human within. This subject appeared to have died at a time corresponding to the cessation of

SCP-1287's effects. Furthermore, subsequent autopsy of the individual revealed the neurological structure often possessed by Type Red, Level 5 reality benders. Both the remains of SCP-1287 and the body have been sent to Analysis Site 53 for final examination.

Addendum-1287-Omega: Analysis of the body found within SCP-1287 has found that the subject died from a combination of dehydration and starvation. Foundation personnel were also able to positively identify the man as , a benefactor who had often funded and raised money for missing persons programs, who had supposedly died seven (7) years earlier. Additionally, Foundation investigation of the remains of SCP-1287 revealed a message written on the interior of the structure, which read:

> I can feel that even my own power isn't going to keep me afloat for much longer
>
> I never thought that it would end
>
> I thought I was invulnerable
>
> But it doesn't matter, those people's families are happy now
>
> I did my part

Footnotes
1. e.g. When D-28342 touched the name "Chloe McNaiman," who was reported missing eight (8) years earlier at the age of four (4), he became a twelve (12)-year-old girl.
2. Class A, C, and D amnestics have been shown to incur this same effect; however, Class B amnestics will cause complete amnesia in SCP-1287-A subjects, including the information they gained when first transfigured.

« SCP-1286 | SCP-1287 | SCP-1288 »

SCP-1288: Timely Encouragement

Item #: SCP-1288

Object Class: Safe

Special Containment Procedures: When not being tested, SCP-1288 is to be held in Storage Locker at Site-19. Personnel are to observe SCP-1288 at all times while the item is being transported in order to avoid unnecessary collisions. When exploring a new location, population centres in particular, a Geiger counter must be in use.

Description: SCP-1288 is a cylindrical object with density, angular momentum, and refractive index consistent with glass of the same dimensions. The interior of SCP-1288 depicts the equivalent location in what has been determined to be an alternate timeline, believed to have diverged from our own in approximately the late 14th to early 15th Centuries. The world that is depicted is frozen in a single moment which astronomical observations from multiple locations indicate is the Winter Solstice of 2012 at approximately 0600 GMT.

Examination of the few easily accessible historical documents shows that the major point of divergence depended on the choices made by Admiral Zheng He. While claims in our own timeline of such an encounter are dubious, it is clear that, in the alternate world, Zheng He's fleet explored the west coast of the Americas. A strong trade relationship between China and the Mayan Empire resulted from this. While North America saw some limited European colonization, attempts at conquest of Central and South America were unsuccessful due to Chinese technologies and manpower which allowed the ruling parties there to remain in control. As a result, Europe plays a smaller role in the modern world stage which is primarily dominated by the Sino-American alliance.

Recovery Log: SCP-1288 was initially discovered on 12/27/2012 in front of the entrance to Site-19. Initially determined to be an

anomalous item that can only be moved in the vertical dimension, it was soon found to have been placed within a tube in the alternate timeline. When SCP-1288 was removed from the tube, a plaque could be seen through it, clearly indicating that the item was intended to be found by Foundation personnel (refer to Document 1288-a for details of plaque).

Observations of Significant Locations as viewed through SCP-1288

Location	Observations
Site-19	A rough replica of Site-19 is found at the location, with both above-ground and underground structures hastily constructed and excavated, respectively. Plaques are located at a number of contained objects providing notes on how a containment breach may occur so that maximum casualties would be suffered.
Manhattan Island, USA	The southern tip of the island is heavily urbanized with a large native population and a minority of assimilated Europeans, whereas the remainder of the island consists of suburbs and farmland. Few residents can be seen in their homes. It is theorized that the majority of the population has travelled to the urbanized area in the south. On the southern tip is a pyramidal structure which can not be easily explored due to differences in city

	planning.
Mexico City, Mexico	The city appears to be a major economic hub, home to people of multiple ethnicities, including East Asian, African, and European, along with a large native population. Much of the population have congregated about a large pyramidal structure similar to that seen in southern Manhattan. Despite evidence pointing to a religious celebration, limited exploration of the structure suggests that it is some variety of power plant, though the processes used to generate energy are not immediately apparent.
Beijing, People's Republic of China	The city is populated primarily by both Asian and native Central American ethnicities. As with the two previous locations, a pyramid can be found in the city, around which a significant portion of the populace are gathered. While this group is also celebrating, a number of violent incidents are occurring on the periphery, between the local constabulary and Central Americans.
Paris, France	A mass evacuation is occurring. Much of the population, consisting of

	African, native American, and European ethnicities, have left the city. A large military presence is situated in the centre of Paris, with the majority of personnel focusing their attention on the pyramid at this location.
[DATA REDACTED][1]	As in Paris, an evacuation is taking place and military forces are descending upon the central pyramid. Multiple entrances are open, allowing exploration. Observations continue to confirm that the structure functions as a power plant which is operated primarily by those of American descent. Many have been killed by local soldiers while others seem to have taken their own lives. As researchers explore deeper into the pyramid, SCP-1288 becomes noticeably warmer. At one junction, approximately 150 m from the centre of the pyramid, a bright light can be seen. This is coupled with a significant increase in temperature. Description by the observer, prior to expiring due to exposure to radiation, suggests that the power plant is in the process of detonation.

a: Transcription of Plaque Discovered at entrance to Site-19 with SCP

> Dear SCP Foundation,
>
> For some time, we have been observing your development and we are pleased that, so far, it is on par with our own. We have learned much from you, including many political experiments that we would have been afraid to perform, and the power inherent in the calendar.
>
> How you have concluded that the end of the calendar signifies the end of all things, we can not be sure. Before we saw you, we thought it only a way to tell the passing of seasons and kings. Your reckoning of time inspired us and urged us to take action.
>
> We have left you this record to show you how we succeeded. For a hundred years, you have only waited for the end to come. From this, we concluded that we must instead bring it about. Please, study it so that you might properly plan in the next thousand years.
>
> We await you on the other side of the glorious end.
>
> Sincerely,
>
> 阿美利加帝国

Footnotes
1. This population centre in Ethiopia was built within the last century and has no analogue in our own timeline. Because of this, exploration can be performed more effectively and any structures blocking researchers' paths can be demolished with no risk of public scrutiny.

« SCP-1287 | SCP-1288 | SCP-1289 »

SCP-1289: Charon's Obol

Item #: SCP-1289

Object Class: Euclid

Special Containment Procedures: SCP-1289 is held within a .5m^3 chamber composed of level 4 ballistic glass. The chamber is affixed with the display readout of a 24-hour atomic clock set to Greenwich Mean Time. The coin is secured centrally within a free-spinning armature, both ends of which are held in place by way of magnetic levitation. The chamber is to be observed at all times by a minimum of three cameras with feeds directly transmitted to an on-site monitoring and recording suite, Overwatch HQ and Information Logistics Unit- . Any and all movement of SCP-1289 is to be called to the attention of the site director.

Description: SCP-1289 is a coin of indeterminate origin weighing exactly 10 grams. Although the coin shows signs of wear, sampling for purposes of metallurgical analysis has proven impossible. Linguistic analysis reveals the coin's writing to be a heretofore unrecorded evolution of Latin. Foundation linguists have translated the language and have found that the writing changes during activation events (see below). The obverse of the coin depicts a traditionally Greco-Roman profile, while the reverse depicts a robed man piloting a gondola-style boat.

Under specific circumstances (hereafter referred to as 'activation events'), the coin will, under its own power, jump and begin flipping in midair. The coin will reach and maintain a maximum flip speed of 170 R.P.M. for 5 minutes (measurements consistent in every event). No effective means to restrain the coin from activating have been found. When pinned, encased or otherwise restrained from jumping, the coin will pulverize any material interfering with flipping.

When allowed to land on a surface, the coin never lands on edge, bounces, rolls, or otherwise display any level of ambiguity

concerning its heads or tails result. Current containment procedures satisfy the coin's need to jump during activation events, which still occur in containment with the coin 'freezing' on a result.

Activation Events: *Submitted by Information Logistics Unit- :* A correlation between activation events and several persons of significance has been established. A 'person of significance' is defined as a person whom, in surviving, will directly influence global events and culture. Causality study 1289-Alpha has determined that the coin is neither portentous of nor causal to the death or survival of a person of significance, and yet displays a deterministic factor correlated by way of heretofore unknown means.

> Partial log of significant activation events
>
> Date: February 3rd, 1959
> Result: Tails (indicates expiration, identity unverified, multiple possible subjects)
> Translation: a word; translated as "Silence" or "Quiet"
>
> Date: June 12, 1962
> Result: Heads (indicates survival; identity verified 1979)
> Translation: a phrase; translated as "Use Force" or "Utilize Might"
>
> Date: March 30, 1981
> Result: Heads (indicates survival, identity verified within 12 hours)
> Translation: the phrase "Frozen blade" or "Ice weapon"
>
> Date: January 27, 1984
> Result: Heads (indicates survival, identity verified within 24 hours)
> Translation: the phrase "Long Live The King" or "Life to the Ruler"
>
> Date: March 31, 1993
> Result: Tails (indicates expiration, identity verified within 72 hours)
> Translation: the phrase "Do Not Look" or "Look Away"

Special activation log; ILU access only

Date: January 10, 2016
Result: Inconclusive. (See notes)
Translation: A word; translated as "Home" or "Center" appearing on both sides of the coin.

Activation Notes:
This is the strangest activation of the obol we have witnessed. Although we were informed of the subject of the flip within mere minutes, the flip itself was a singular event. The coin spun in its housing as usual, however when the usual freeze event occurred the obol was facing as if on edge, and identical writing was recorded from both sides. This is the first and only truly ambiguous result the obol has expressed; I'm forced to wonder if this coin knows more that it usually provides.
-*Dr. L. Estroth, Site Director, Information Logistics Unit*

« SCP-1288 | SCP-1289 | SCP-1290 »

SCP-1290: Imperfect Teleporter

Item #: SCP-1290

Object Class: Safe

Special Containment Procedures: Research Sites 48-Alpha and 48-Beta have been established around the branch facilities housing SCP-1290-1 and SCP-1290-2, respectively. Activation experiments involving SCP-1290 have been indefinitely suspended pending a better understanding of its operational principles.

Description: SCP-1290 is a pair of prototype electronic devices that were built by Prometheus Labs as part of research into long-range teleportation. Each device consists of a platform 2 m in diameter attached to a 5 m x 20 m x 3 m main unit, both of which draw power from a dedicated generator. The two copies of SCP-1290 are located at diametrically opposed (antipodal) locations of the Earth, with SCP-1290-1 located in [REDACTED], Colombia and SCP-1290-2 located in [REDACTED], Singapore.

When an object is placed on the platform of SCP-1290-1 and the main unit is activated, the object is instantaneously (≤10 ms delay) teleported to the platform of SCP-1290-2. However, due to what is suspected to be a design or engineering flaw, the object retains its orientation and velocity relative to the axis of the earth. That is, when a stationary object enters SCP-1290-1, it exits SCP-1290-2 upside-down and travelling east at approximately 930 m/s. See Addendum 1290-01 for more information.

SCP-1290 came to the Foundation's attention following the closure of the Prometheus Labs main facility and was secured and contained on / / by elements of Mobile Task Force Mu-4 ("Debuggers"). The chief engineer in charge of SCP-1290, Dr. [REDACTED], is wanted for questioning by the Foundation and has yet to be located. SCP-1290 is currently being reverse-engineered by Foundation research teams in an effort to understand and

replicate its technology.

Addendum 1290-01: Incident Report, Initial Activation Experiment on / /

In order to establish the functionality of SCP-1290, Foundation researchers attempted to teleport a regulation 14-pound (6.35 kg) bowling ball from SCP-1290-1 to SCP-1290-2, resulting in three casualties and severe damage to the research facility and a neighboring warehouse. Until SCP-1290 is fully functional and the source of this flaw is identified, activation experiments have been suspended until further notice.

« SCP-1289 | SCP-1290 | SCP-1291 »

SCP-1291: Football Gods

Item #: SCP-1291

Object Class: Euclid

Special Containment Procedures: SCP-1291 is to be contained in an empty Class 4 refrigeration unit. SCP-1291 is to be restrained on a thermally insulated wheelchair to prevent injury. SCP-1291 is to wear a blindfold at all times. Personnel interacting with SCP-1291 are to under no circumstances make direct skin-to-skin contact. In the event of accidental direct contact, affected personnel may request termination.

Binding Maintenance Procedures: Each week of the NCAA Division I Football Bowl Subdivision, SCP-1291 is to be taken to a specially prepared stadium box in Harris Teeter Stadium at Mississippi River College to watch the football team, the Moccasins, play. No civilians are allowed contact with SCP-1291, and any that recognize it will be turned away.

The Mississippi River College Moccasins are under no circumstances to be allowed to play in a BCS bowl, or to leave NCAA Division I. The Foundation has arranged with the college to ensure the Moccasins maintain a safe level of performance. The physical safety of SCP-1291 must also be ensured.

Violations of these procedures strengthen SCP-1291's anomalous effects, and are therefore to be avoided at all costs.

Description: SCP-1291 is a Caucasian male with greying blonde hair of approximately forty years of age, apparently possessed by an entity of unknown nature, designated SCP-1291-1. SCP-1291 is wheelchair bound, but records show that SCP-1291 stood 184 cm tall prior to gaining anomalous properties. The eye color of SCP-1291 is unknown, as cameras cannot focus with its eyes in the frame, and looking at them directly exposes the viewer to

SCP-1291's deleterious mental effects.

Though SCP-1291 is capable of vocalization and movement, it has so far not demonstrated any ability to speak coherently, cannot walk, and frequently attempts to move in ways not anatomically possible in a human body, necessitating its restraint. SCP-1291 has not demonstrated physical strength above human levels.

SCP-1291 has body temperature of about 155°C, and does not need to eat, drink, or breathe. Physical contact with SCP-1291 is universally fatal within a week, as it causes rapid growth of cancerous tumors throughout the body.

Continued exposure to SCP-1291 results in full-sensory hallucinations and increasingly disorganized thought and speech patterns, developing within about 48 hours of exposure. By 96 hours of exposure, all subjects tested so far have been rendered comatose. These symptoms do not fade with time. Making eye contact with SCP-1291 causes immediate catatonia.

If the binding maintenance procedures are not followed, the body of SCP-1291 will begin to degrade. Patches of SCP-1291's skin gain similar properties to its eyes, and its body temperature rises significantly. Additionally, ash starts to materialize on unobserved surfaces in an expanding area. It is believed that this represents a weakening of the effects keeping SCP-1291-1 contained within SCP-1291. These effects gradually diminish back to the baseline when proper procedure is restored.

Prior to containment, SCP-1291 was Roy Wilson, the head coach of the Mississippi River College football team. Background research suggests Mr. Wilson had Serpent's Hand connections, though he was likely not a member. It is believed that he attempted to summon SCP-1291-1 to improve the Mississippi River College Moccasins' performance at football. To date, SCP-1291 has not acted in any way to affect the Moccasins or their opponents.

Addendum 1291-13: Attempts to abolish the BCS system for college football also seem to induce a degraded state in SCP-1291. Continuation of the BCS system is therefore designated part of the binding maintenance procedures for SCP-1291.

Document 1291-2:
Recovered documents from the journal of Roy Wilson. Extraneous material omitted.

January 8,

> The Moccasins will win when hell freezes over. Another season past, and our best chance for years squandered. 7-5. Better, but not even close to good enough. And with Vernon and Rhodes graduating, we lose half our defense. There's no way we do this well next season, even if Tanner lives up to his potential. I've done all I can. I want to tell these kids that we're going to do it next season, we're going to go all the way, but I can't lie to them myself.

January 18,

> I have a very bad idea. Those folks from college, the sorcerers magicians. For lack of a better word, sorcerers. I once tried their magic a little and I think I had some talent at it. Perhaps I could try that? Assuming that stuff is even real and not the product of a different sort of experimentation from UT days.

February 1,

> It's real. It's not a trick of my memory, it's the answer I need. My old notes were right. I went from the MRC library straight through to a rather grander library. There's a way of walking, a way of thinking. It's not some mystical rite, you just walk along the wisdom. Anyhow, I found some books. It's a library, that's what it's for. Magic to raise the morale of my team, magic to wither my enem opponents.

February 2,

> Calling the power is easy. The challenge is channeling it safely. As near as I can tell, it's best to do this through binding a demon spirit, so that it takes the brunt of the

> fulcrum effect. It's just energy balancing. Bind the spirit until the Moccasins win a BCS bowl. Why isn't this stuff used more?

February 4,

> Raised some spirits with the rituals in the book. It's easy to do, but they can't help me. It's like that old joke where the genie says that peace in the Middle East would be easier than the Saints winning the Super Bowl. I tell them I want the Moccasins restored, but no. That's the one thing they can't do. There's got to be better than this at the far library.

February 8,

> Got one last book. They didn't want to let me check this one out, but I insisted. About to try the summoning.

Believed to be February 8,

> Dread thing rose but bound BOUND BOUND
> it shall serve!!
> in my head theres a sick silk nail
> UNTIL we win the feathered eye will turn its gaze to the world
> When the Moccasins win, hell will freeze over.

« SCP-1290 | SCP-1291 | SCP-1292 »

SCP-1292: Contagious Scantron Disease

Item #: SCP-1292

Object Class: Euclid

Special Containment Procedures: All machines found affected by SCP-1292 are to be dismantled and incinerated, with the exceptions of SCP-1292-3, SCP-1292-7, and SCP-1292-9, which are to be kept in Containment Locker 2039 at Site-24. If an outbreak of SCP-1292 is to occur in a civilian area, Protocol Meta-F is to be followed. Usage of SCP-1292 instances to grade copies of **SCP-2496** is forbidden.

Description: SCP-1292 is an electronic fault spread between Scantron brand multiple-choice scanning devices. While the route of transfer is unknown at this time, the fault has been found to spread between scanners connected on the same network, electrical circuit, or directly. It may also be spread between machines which are kept within 30 meters of each other in open space, regardless of being activated. This fault may take several weeks to affect the operations of the machine, making it difficult to quarantine.

Once affected, the machine will take an abnormally long amount of time in marking a multiple-choice sheet, and may have one or several effects emerge while marking:

- One in four or five questions will be marked incorrect, seemingly randomly
- The machine will only read dots filled in with a #3 HB Pencil
- Specific dots will be marked incorrectly in order to spell out words such as "CAB" "BAD" and "BED"
- Every answer will be marked incorrect
- Specific dots will be marked incorrectly in order to create diagonal or vertical lines if the dots were to be filled
- The test may remain unmarked

SCP-1292 is incurable, regardless of reset of the machine. Due to SCP-1292's latency period, researchers are unsure if it has been quarantined.

Addendum: SCP-1292-7, a Scantron brand machine with a digital display, was tested. The following was displayed while the machine was marking:

> … … …
> SIGH
> … … …
> MAN
> I DIDNT STUDY
> THE ANSWERS
> TO THIS
> … … …
> DID WE EVEN
> LEARN THIS?
> … … …
> … … …
> SOOOO BORED
> … … …
> I DONT EVEN
> CARE ILL JUST
> BOMB THIS AND
> GO PLAY COD

« SCP-1291 | SCP-1292 | SCP-1293 »

SCP-1293: Squeedle Deedle Dee!

Item #: SCP-1293

Object Class: Euclid

Special Containment Procedures: All known specimens of SCP-1293 are to reside within a standard Containment Habitat at Bio-Site 12. Specimens of SCP-1293-A are to be engaged in Procedure 722-Ephraim once per month to avoid the production of SCP-1293-C. A minimum of fifteen (15) armed security personnel must be present within the habitat at all times to neutralize specimens of SCP-1293-C in the event that one is produced. Completed specimens of SCP-1293-A1 are to be photographed before consumption by SCP-1293-A. Personnel present within the habitat are not to attempt communication or physical interaction with specimens of SCP-1293-B during a Terpsichore Event.

Description: SCP-1293 is a species of humanoid creatures of unknown origin. Each specimen of SCP-1293 is unique in appearance, although all specimens generally resemble costumed human beings. Autopsies performed on deceased specimens have shown that SCP-1293 are completely unclothed, with skin, bone, and muscle tissue mimicking various types of fabric. SCP-1293 possess biological components resembling a human circulatory system, except the system carries and distributes multicolored balls of sugar instead of blood. SCP-1293 have no apparent nervous systems or digestive tracts, and do not require food, drink, or sleep. SCP-1293 possess no visible reproductive organs; however, 54% of SCP-1293 specimens are capable of reproduction. For the purpose of this document, such specimens will be considered female and referred to as SCP-1293-A, whereas male (non-reproducing) specimens will be referred to as SCP-1293-B.

SCP-1293-A vocally communicate in American English, speaking with masculine voices in a cheerful manner. Capable of reproduction, SCP-1293-A gestate their young for a period of

roughly nine (9) months before giving birth to another specimen of SCP-1293. Newborn SCP-1293 emerge from their mothers fully matured in size and intelligence. SCP-1293-A deliver their young via their mouths,[1] which anomalously elongate to accommodate the child's size. Because newborn SCP-1293 are roughly the same size as their progenitors, it is presumed that gestation takes place inside an extradimensional space within SCP-1293-A. If SCP-1293-A are not impregnated[2] via Procedure 722-Ephraim, they will produce SCP-1293-C once per month until Procedure 722-Ephraim is executed.

SCP-1293-B are generally lethargic in nature and highly reclusive, avoiding contact with human beings and other specimens of SCP-1293. Unlike SCP-1293-A, SCP-1293-B have shown no capacity for speech. Every forty-five (45) days, SCP-1293-B will congregate and a Terpsichore Event will take place (see Addendum SCP-1293-1). Due to the precisely coordinated nature of Terpsichore Events, it is assumed that SCP-1293-B are capable of communicating telepathically.

SCP-1293-C are malevolent entities produced by SCP-1293-A if not impregnated via Procedure 722-Ephraim. SCP-1293-C differ from other specimens of SCP-1293 in that they generally possess large teeth, multiple arms, prehensile tongues, and elongated talons. SCP-1293-C are openly hostile toward human beings and will attempt to mutilate any individual they encounter.

Procedure 722-Ephraim is the process by which SCP-1293-A are impregnated. To begin the procedure, a child, aged 4 to 12 years old and belonging to an on-site personnel member, is to be introduced to the specimen of SCP-1293-A that is in heat. If SCP-1293-A decides that the child is suitable, it will regurgitate a sheet of paper (SCP-1293-A1) and a metal tin of Crayola-brand crayons (SCP-1293-A2). Using his or her imagination, the child must then draw a picture of a humanoid creature. If an adult human attempts to influence the child's drawing process, whether it be during the procedure or beforehand, SCP-1293-A will announce that the child is unsuitable and a different child must be selected. If SCP-1293-A deems the completed SCP-1293-A1 acceptable, it will devour it, thereby impregnating SCP-1293-A. The resulting SCP-1293

specimen will resemble the drawing on SCP-1293-A1.

Addendum SCP-1293-1: The following is a table listing examples of recorded Terpsichore Events:

Date	Event Description
04/17/1998	SCP-1293-B silently performed the choreography from the 1982 Broadway production *Cats* in its entirety.
11/02/1999	Splitting into four individual groups, SCP-1293-B performed all four acts of the Russian ballet *La Bayadère*[3] simultaneously.
08/14/2004	SCP-1293-B laid face-down in three separate rows and undulated their bodies in a wavelike motion on the ground for roughly five (5) hours.
05/09/2007	SCP-1293-B engaged in Filipino tinikling,[4] substituting bamboo with other SCP-1293-B.
01/22/2009	SCP-1293-B performed the choreography from music video for *Single Ladies (Put A Ring On It)* for thirty-nine (39) seconds before quickly dispersing in different directions.

Addendum SCP-1293-2: The following is an interview conducted with a pregnant SCP-1293-A specimen. SCP-1293-A used a number of words and phrases that do not correspond to any known language. These have been transcribed phonetically for the readability and integrity of this interview.

<Begin Log>

Dr. Reeves: Good morning. How are you feeling?

SCP-1293-A-4: Squeedly deedly dee! I'm apsa-tapsa-lutely wonderful, mister nice person type man! My loin

child should be ready for regurgitationing in two shakes of a lamb's tail!

Dr. Reeves: Very good. Now, please take a moment to explain your selection process for children used in Procedure 722-Ephraim.

SCP-1293-A-4: I only look for childrens that are goodly and pure of heart! They also must have great, big, whale-sized imaginations!

Dr. Reeves: You only accept children belonging to researchers assigned to your containment. Why is this?

SCP-1293-A-4: If I used a stranger's childrens, that would just be squeedly weedly weird! Do you want to see me do a merry jig?

Dr. Reeves: No, thank you.

(*SCP-1293-A-4 disregards Dr. Reeves and begins dancing.*)

SCP-1293-A-4: (*Singing*) Wibbly wibbly woo, I wish I could hug big, beautiful you! Shmiggly shmaggly shmarms, I sadly don't have any arms!

Dr. Reeves: That's quite enough. Please try to focus on the interview. What are SCP-1293-C?

SCP-1293-A-4: You mean my whoopsy-daisies? It's not polite to ask a lady-type about her special monthly times, mister nosy posy!

Dr. Reeves: Any information you could give us on the nature of SCP-1293-C would be greatly beneficial in preventing personnel casualties.

SCP-1293-A-4: I'm sorry they come out so mean and scary! If I don't have the childrens' imagination seed in my wooble spot, I sploosh out things from my own imagination, and I'm afraid that's a very squeedly scary

place!

Dr. Reeves: I'm not sure I—

SCP-1293-A-4: Oh, dear! My loin child cometh!

(*SCP-1293-A-4 expells SCP-1293-A-5 from its mouth.*)

SCP-1293-A-5: Greetings, loin mother! I am child!

SCP-1293-A-4: It is a lady-type! I am the happy for I have childrens!

SCP-1293-A-4 and SCP-1293-A-5, simultaneously: Squeedle deedle dee!

<End Log>

Addendum SCP-1293-3: The following is a message sent to Bio-Site Director Roward by Dr. Goodwin:

Hello,

As you are aware, I have been the head researcher for SCP-1293 since Dr. Reeves was terminated for unrelated reasons. Having spent roughly a year observing SCP-1293, I have come to the conclusion that present documentation of SCP-1293—particularly in regard to SCP-1293-A's reproductive process—is inaccurate and in urgent need of revision.

When I was first transferred to this project, I was surprised that Dr. Reeves had based much of SCP-1293's documentation on testimony by SCP-1293-A specimens. Feeling that it was not sufficient to go by SCP-1293-A's words alone, I put in place a number of new research guidelines, including the discreet video monitoring of SCP-1293 during the 24 hours following Procedure 722-Ephraim. The footage that we have since obtained has shown that specimens SCP-1293-A and SCP-1293-B, do, in fact, mate, using a thin, red tendril that extends from the male's mouth to the female's.

Frankly, I am appalled that such a crucial aspect of SCP-1293 has not been previously documented.

Now that we know SCP-1293 reproduce by mating, that leaves the question of what Procedure 722-Ephraim accomplishes, as well as the question of what SCP-1293-C are. I have a theory that I believe addresses both these issues:

Contrary to current documentation, SCP-1293 do indeed feed, empathically drawing sustenance from human emotion. SCP-1293-A feed on feelings of unease and perturbation, and SCP-1293-B feed on feelings of confusion and bewilderment. SCP-1293-B are easily capable of subsisting on the feelings expressed by research personnel during Terpsichore Events, but SCP-1293-A must employ more elaborate methods of feeding. In addition to unsettling the children, SCP-1293-A forces us to use our own kids as a ploy to provoke an emotional reaction from jaded Foundation personnel. If SCP-1293-A has gone without "food" for an extended length of time, it will release SCP-1293-C as an emergency defense mechanism.

In order to test this theory, I propose that a revised version of SCP-1293's special containment procedures will be used on a trial basis. SCP-1293-A and SCP-1293-B are to be kept in separate habitats, as I believe they *should* have been when initially contained. Procedure 722-Ephraim will be altered to use D-Class personnel who have been provided fabricated information about SCP-1293 to enhance their levels of discomfort and anxiety during the process. Finally, now that we know the purpose of Terpsichore Events, a similar D-Class procedure will be put in place to ensure that SCP-1293-B will still be able to feed.

It is regrettable that it took this long to see these things for what they are, but I hope that with this knowledge, we will be able to contain SCP-1293 with greater efficiency.

— Goodwin

Revisions to SCP-1293's documentation and containment procedures are currently underway.

Footnotes
1. A similar orifice will be substituted if the mother does not possess a mouth.
2. The word "pregnant" is used in this article to describe SCP-1293-A's state between the execution of Procedure 722-Ephraim and the birth of a new SCP-1293. SCP-1293-A cannot be considered pregnant in a literal sense as they have no reproductive organs.
3. Also known asБаядеркаandThe Temple Dancer.
4. A traditional native dance that involves stepping between two pieces of bamboo that are continuously knocked together.

« SCP-1292 | SCP-1293 | SCP-1294 »

SCP-1294: The Laughing Fox

Item #: SCP-1294

Object Class: Euclid

Special Containment Procedures: SCP-1294 is to be contained in a room measuring 5 m x 5 m x 3 m, with a filtered ventilation system. Proper medical facilities are to be maintained at all times, and one kilogram of raw meat should be provided once at 8:00 A.M.

Interaction between staff and SCP-1294 is to be kept to a minimum. SCP-1294 feeding, grooming, and waste disposal have been automated, and all personnel must wear a respirator before entering SCP-1294's containment chamber.

Mobile Task Force Xi-8 (aka "Spearhunters") are to be deployed to the Sahara Desert in search of further instances of SCP-1294 under the guise of poachers. MTF Xi-8 are to transport instances to Site for termination via incineration.

Description: SCP-1294 appears to be a male fennec fox (*Vulpes zerda*) measuring 27 cm in length, and weighing approximately 1.1 kilograms at minimum. Barring hunting methods and procreation, SCP-1294 has shown no differences in behavior than that of a typical fennec fox.

SCP-1294 is composed entirely of a fungal material, which replicates its skin, skeleton, and fur. The majority of SCP-1294's internal structure consists of a thick mold of varying viscosity. SCP-1294 continuously exhales a toxin, containing heavy amounts of psilocybin and muscimol.

If left exposed for longer than approximately two minutes, subjects will enter a consistently increasing state of euphoria until removed from SCP-1294's presence. Subjects will become briefly distressed if removed from SCP-1294, but no permanent or long-lasting effects

have been found.

Subjects exposed for longer than five minutes have shown to be highly resistant to pain, and behave in a similar manner to those under the influence of a psychedelic hallucinogen. Subjects removed from SCP-1294 have not recovered from the majority of these effects, and have been known to initiate self-harm in an attempt to provoke stimuli.

If SCP-1294 sees a subject in this state, SCP-1294 will lie on, or against the subject, and rest. During this time, SCP-1294's skin will appear to melt, and grow over the subject, later shifting it into SCP-1294's abdomen. SCP-1294 has shown no limit to what it can envelop, and is capable of processing over 190 metric tons of food in one week. SCP-1294 only consumes living prey in this manner, preferring to eat already dead subjects or processed food normally[1].

[+] Show Human Exposure

Tests-1294-407 through -557 - / /19 :

Subject: D-1294-1 through -150
Procedure: SCP-1294 is to be locked in a metal cage during D-class personnel's exposure to it in order to prevent their consumption. Subjects were told that they were testing a new drug, which would be released through the air vent. D-class personnel were informed that SCP-1294's reason for being there was to observe a side by side comparison of human and animal testing. Thirty D-class personnel are to be individually observed for each minute of exposure.
Results:
0:00-2:00 -Subjects appear sober, with little to no differences in behavior until approximately 1:20, reporting a calming sensation and a mild brightness in their vision. The D-class personnel removed from the test chamber expressed a mild disappointment from being

removed, but addiction to the toxin, or any permanent effects have not been found.

2:00-3:00 -Subjects reported bright colors and objects shifting about in the room. Several D-class noted that SCP-1294 appeared to be smiling. Twenty four of the thirty D-class personnel removed had recovered 1-13 hours later, and compared the experience to being heavily intoxicated with alcohol. The remainder of D-class personnel (6) remained under the influence.

3:00-4:00 -D-class personnel typically began laughing softly. Subjects reported being able to 'see sounds', objects in the room becoming animate, and the room appeared to be 'breathing'. Experiences vary between subjects, but each subject past this stage reported that SCP-1294 began speaking to the subject. Subjects do not recall what SCP-1294 told them, except they found their conversation as either highly entertaining or friendly. Sixteen of the thirty D-class personnel recovered 15-26 hours later, expressing a disinterest in being exposed further, remarking that they found the experience largely unsettling. Remainder of D-class personnel (14) experienced permanent brain damage of varying severity.

4:00-5:00 -Subjects ceased laughing, and typically became motionless approximately 4:30 minutes after initial exposure. Subjects experienced a total loss of their cognitive and somatic senses. SCP-1294 became increasingly irritated as it was held from a subject. SCP-1294 attempted to escape its cage, typically from either scratching or gnawing at the bars. All thirty of the D-class retrieved fell in a comatose state. D-1294-139

and D-1294-144 recovered two weeks later, showing the symptoms of those exposed to SCP-1294 for three to four minutes. Both D-1294-139 and D-1294-144 are either unwilling, or unable to recount the experience. When in sight of SCP-1294, subjects started speaking incoherently, and showed signs of intense anxiety.

Analysis: D-1294-139 and D-1294-144 both had a history of drug abuse, consisting mainly of phencyclidine, Oxycontin, and cocaine, which is hypothesized to be a reason why recovery was possible. Upon monthly termination, a drawing was found in D-1294-139's back pocket. Drawing featured what is presumed to be D-1294-139 facing his termination, with a smiling fennec fox observing it, and the word 'G'day' written on the top. Investigations on how D-1294-139 became aware of his termination are ongoing. Further testing is ongoing.

[+] Show Fennec Fox Exposure

Test-1294-974 - / /20 :

Subject: One male fennec fox (*Vulpes zerda*)
Procedure: Subject is to be introduced into SCP-1294's containment chamber. Researchers are to record any possible abnormal behavior.
Results: Subject was cautious of SCP-1294 for the duration of the test. When under the effects of the toxin, SCP-1294 led the subject to the far corner of the testing chamber before the subject was knocked unconscious. SCP-1294 did not attempt to consume the subject, and instead lay down against the opposite corner until the subject was retrieved. Subject later made a full recovery.

Test-1294-975 - / /20 :

Subject: One female fennec fox (*Vulpes zerda*)
Procedure: Subject is to be introduced into SCP-1294's containment chamber. Researchers are to record any abnormal behavior.
Results: Once released in the containment chamber, SCP-1294 began to watch the subject intently, until it became affected by the toxin. Once the subject was unconscious, SCP-1294 then proceeded to mate with it. Subject woke up afterwards, and attempted to leave the cell by clawing at the door. SCP-1294 showed little interest in the subject after intercourse. Subject was left alone in the cell for five minutes, and did not appear to be affected by the toxic environment.
Analysis: Subject was collected from SCP-1294's containment area, and has been given its own chamber to separate it from SCP-1294.

Test-1294-976; - / /20 :

Subject: The female fennec fox (*Vulpes zerda*) from test 975
Procedure: Observe the behavior of the previous subject.
Results:
00:00:00-01:49:32 -Upon containment, subject has become increasingly restless, attempting to lie down and rest, but getting up to move afterwards. Subject began hyperventilating at 01:44:29, and eventually tired itself out.

01:49:33-01:55:56 -Subject experiences an epileptic seizure, and begins to foam at the mouth. Subject ceases to move at 1:50:53.

01:55:57-04:23:33 -Movement detected under the subject's skin. Abdomen distends by ten centimeters at 04:23:33.

04:23:34-05:22:50 -Fungal growths protrude from the subject's orifices, and pierce through its skin. Growths are a light tan in color, with small black spots sparsely placed throughout the pileus. Abdomen extends to 54 centimeters in diameter.

05:22:51-05:23:58 -Subject stands up, and moves in an unnatural and sporadic fashion. Subject collapsed to the floor upon reaching the far corner.

05:23:59-05:58:54 -The fungal growths begin to take root to the surrounding walls, and eventually grow up to the ceiling. A large pod begins to protrude from the subject's chest cavity, while the abdomen stops growing at two meters.

05:58:55-06:19:29 -Pod continues to emerge, causing the subject's chest to give way to a large hole. At 06:16:22, the pod produces a ball covered in a fur like substance with a diameter of 42 centimeters. When separated from the pod, the specimen shifts about, and shrinks to fit a quadrupedic figure. The ball's 'skin' starts to become tighter as several orifices start to appear, revealing eyes, teeth, etc., at 06:19:11. By 06:19:29, the specimen appears identical to a member of the *Vulpes zerda* species.

06:19:30-09:44:34 -Subject repeats the process a total of times before ceasing at 09:44:34. Of the specimens produced, 266 achieved sentience, while the remainder had either died and dried up, or formed a collective

mass, which had covered the floor.

Analysis: Examination of every specimen from the subject shows that each one is nearly identical to SCP-1294 in appearance, effect, and internal structure. Only minor alterations such as eye color, fur patterns, and minimum size have been found between specimens, and DNA testing has shown that all specimens contain DNA belonging to both SCP-1294 and the subject before conception. Most notably, all specimens appear to be male.

Addendum-1294-1: 25 specimens from the subject have been given the designations SCP-1294-A through -Y, with identical containment procedures to SCP-1294. The remainder of specimens have been incinerated after study, along with the remains of the subject from tests 975 and 976. The possibility of offspring are highly likely due to its high birth rate. Any reports of abnormally large foxes and/or fungi in the area should be brought to Site 's designated head researcher for investigation.

Footnotes
1. Similarities between SCP-1294 andSCP-367's predatory technique and choice of disguise have been noted. Investigation into a shared origin or ancestor for both anomalies is ongoing.

« SCP-1293 | SCP-1294 | SCP-1295 »

SCP-1295: Meg's Diner

Item #: SCP-1295

Object Class: Keter

Special Containment Procedures: Outpost-618 has been founded in order to maintain the covert containment of SCP-1295. Agents and researchers disguised as staff, patrons and local law enforcement are to discourage civilians from interacting with SCP-1295. Instances of SCP-1295 are not to be made aware of their containment. SCP-1295's daily routine is not to be interrupted under any circumstances.

Description: SCP-1295 is the collective designation for a group of four (4) elderly men who patronize "Meg's Good Eatin'", a diner over the highway, , between 09:00 and 18:00 every day. SCP-1295's anomalous properties manifest when an instance of SCP-1295 is prevented access to the diner between the hours 09:00 to 18:00 (local time) or removed from it by force; the exact nature of the effect and its duration is contingent on the instance of SCP-1295:

- **SCP-1295-1:** If prevented access or removed from the diner against its will, SCP-1295-1's anomalous properties will begin to manifest between five (5) and ten (10) minutes after its removal. Those caught in an area beginning with approx. one hundred (100) meters from SCP-1295-1 exhibit extreme lethargy and complete lack of any self preservation instincts, making even a simple accident potentially lethal. The area of effect grows by approx. one hundred (100) meters for every hour SCP-1295-1 is kept away from the diner.

- **SCP-1295-2:** If prevented access or removed from the diner against its will, SCP-1295-2's anomalous properties will begin to manifest between two (2) and three (3) hours after its removal. Those caught in an area beginning with approx. five hundred (500) meters from SCP-1295-2 lose their ability to

distinguish between edible and inedible matter, and will often endanger themselves or others in attempts to consume unsuitable nourishment (metal, toxic waste, living flesh, etc.). The area of effect grows by approx. one (1) kilometer for every hour SCP-1295-2 is kept away from the diner.

- **SCP-1295-3:** If prevented access or removed from the diner against its will, SCP-1295-3's anomalous properties will begin to manifest immediately after its removal. The bodies of those caught in an area of approx. fifty (50) meters around SCP-1295-3 will lose all microbial lifeforms associated with them. The adverse effects include but are not limited to a rapid decrease in the functionality of the digestive system due to lack of gut flora. The area of effect grows by approx. two hundred (200) meters for every hour SCP-1295-3 is kept away from the diner.

- **SCP-1295-4:** If prevented access or removed from the diner against its will, SCP-1295-4's anomalous properties will begin to manifest thirty (30) to forty (40) minutes after its removal. Those caught in an area beginning with approx. one hundred and fifty (150) meters from SCP-1295-4 will experience a sharp increase of self-preservation instincts, to the point of paranoia and acute hypochondria. This condition soon becomes debilitating, as those afflicted by it will refuse to perform any action that might put them in any sort of danger, minor as it may be. The area of effect grows by approx. two hundred (200) meters for every hour SCP-1295-4 is kept away from the diner.

Those caught by both the effects of SCP-1295-1 and SCP-1295-4 enter a comatose state, presumably due to their opposing nature creating an unbearable mental strain on the subject. Any attempt to track instances of SCP-1295 when outside the diner has thus far failed.

Addendum 1295-A: The following conversation between all four instances of SCP-1295 was recorded by Agent , disguised as a waitress, on / / .

+ Show Recorded Log

<Begin Log>

SCP-1295-2: Are you going to finish that?

SCP-1295-1: Yes, I'm going to finish that. I always finish what I order. You've been asking me "are you going to finish that?" every day for the last sixty years, and the answer was always the same. Why the fuck do you keep asking?

SCP-1295-2: I guess I'm just an incurable optimist.

SCP-1295-3: Ain't no such thing as an incurable anything, Frederick, trust me on that.

SCP-1295-2: I don't know about that anymore, Pat. Seems like your big act is getting quite a bit less popular lately.

SCP-1295-4: Christ, not this again.

SCP-1295-3: Look who's talking! Yours wouldn't even exist if people got their acts together!

SCP-1295-2: Now, you look here-

SCP-1295-4: Shut up! Both of you! Sixty goddamn years listening to this shit, every fucking day. You two are lucky I love the coffee here so much, or I would have left you to kill each other years ago.

SCP-1295-1: Yeah, because we just find your presence so delightful, Dwight…

SCP-1295-4: Don't think for a second I forgot about you, Warren! You were the one to get us in this mess in the first place!

SCP-1295-1: It was an honest mistake! Where I come from, a great big fiery mushroom usually means the end of days! How was I to know it was just a big bomb?

SCP-1295-4: It's your bloody area of expertise!

SCP-1295-1: It's not like it used to be. I don't really get those new trends, honestly. Everything today is remotes and drones and… electro-thingies. Give me a good elephant over this nonsense any day.

SCP-1295-3: I hear you.

SCP-1295-2: Aye.

SCP-1295-4: Oh, come on, guys, it's not so bad. We're always going to be around, until the very end. Ain't nothing they can do to change that.

SCP-1295-1: Easy for you to say, your thing is pretty much bulletproof.

SCP-1295-4: Relax. I know staying here for so long got you guys a bit stressed out, but it's only a matter of time until we can ride on. Besides, as much as I hate to admit it, I really like it here.

SCP-1295-2: The food is great.

SCP-1295-3: And the atmosphere.

SCP-1295-1: Not to mention the waitresses. I think that blond one just winked at me. [to Agent] can you get me a piece of that pie, love? Much obliged.

SCP-1295-4: So we just sit tight and wait. It's

going to happen any day now, I know it.

SCP-1295-1: Yeah.

SCP-1295-3: Yeah.

SCP-1295-2: Yeah. So, Warren, are you going to finish that?

<End Log>

« SCP-1294 | SCP-1295 | SCP-1296 »

SCP-1296: Dial-a-Llama

Item #: SCP-1296

Object Class: Euclid

Special Containment Procedures: SCP-1296's contact information is currently on file within Secure Archive 11. No other security is necessary, as SCP-1296 cannot manifest without use of this contact information.

All testing of SCP-1296 is currently carried out in Remote Testing Area 3. All specimens acquired through use of SCP-1296 are to be stored in the biological storage unit within the testing area, and disposed of after recovery and study according to standard biological specimen clearance protocols, as outlined in Document CDP-BIO-EN-1.

Accounts of contact with SCP-1296 outside of Foundation jurisdiction are to be investigated and addressed as they occur.

Description: SCP-1296 is a Volga M24 model automobile belonging to a service identifying itself as Dial-a-Llama. The vehicle itself displays minor physical alteration: baggage bars have been installed on the roof, the rear seats have been removed, and the vehicle is incorrectly labeled as manufactured by the Toyota company. The Dial-a-Llama company's contact information and slogans are painted on the sides of the vehicle.

Upon calling the provided telephone number, callers will be put in contact with a sales representative from Dial-a-Llama, henceforth referred to as SCP-1296a. Attempts to find the location of SCP-1296a or to acquire information not regarding orders have failed.

SCP-1296 will manifest within two hours of placing the order at the caller's location, regardless of any changes in location made during

the time between the call and the delivery. No maximum range to SCP-1296's manifestations has been found, but it will require adequate space for the vehicle to manifest. Attempts to track SCP-1296 have failed: GPS devices attached to the vehicle have ceased function after SCP-1296 has left view, and it has consistently evaded pursuit. SCP-1296 will always manifest with one driver of varying appearance, and two to eight llamas. The cost of the order will vary without apparent pattern.

Interview Log-01

The following log was made during testing on 09/07/2012.

> SCP-1296a: Welcome to Dial-a-Llama, how may I help you?
>
> Dr. : Uh, yes, could you please explain what exactly your company does?
>
> SCP-1296a: You need a llama? Dial-a-Llama gets you a llama. Anytime, anyplace. Like, it's the name of the place.
>
> Dr. : Yes, I know.
>
> SCP-1296a: Like, you call us, you order a llama, we get you a llama. Not that hard.
>
> Dr. : Where do you get these llamas?
>
> SCP-1296a: Look, man, do you want a llama or not? This isn't the twenty questions hotline. This is the two question hotline: Question one: Do you want a llama? Question two: What kind of llama do you want? If the answer to the first is no, then *why are you calling?*
>
> Dr. : Let me speak to your manager.
>
> SCP-1296a: Nope. Sunk that ship. Clearly, you don't want a llama, and just want to harass us here. Good day to you sir.

Dr. : [sighs] Okay, okay, I'll buy a llama. Just one llama, nothing special.

SCP-1296a: Alrighty then, that'll be forty-five. Cash or credit?

Dr. : Cash.

SCP-1296a: The Llamamobile will be there in two hours or less. Have a wonderful day, jackass.

Interview Log-02

The following log was made upon delivery on 09/07/2012. The driver of SCP-1296 has been designated SCP-1296b.

SCP-1296b: Hey, you the guy who ordered a llama?

Dr. : Yes, that's me.

SCP-1296b: Forty-five, please.

Dr. : [pays SCP-1296b] If it's at all possible, could I ask you a few questions about your…

SCP-1296b: Not this again. You just won't give it up, will you? You order llamas. We get you llamas. From the top of Mount Everest to the bottom of the Marianas Trench, if you need a llama, we will get you that llama. Now stop being nosy. Yours is the grey one in the back.

Test Logs:

Ordered: Three llamas
Time for Delivery: Three minutes
Cost: $33
Result: Two female and one male llama. No anomalies were detected in the specimens.

Ordered: One pregnant female llama, with a brown spot on the left side.
Time for Delivery: Seventeen minutes

Cost: $50
Result: One llama matching the description ordered. No anomalies were detected in the specimen.

Ordered: One alpaca
Time for Delivery: One hour and forty-three minutes
Cost: $17
Result: One male llama. Specimen had the hide of an alpaca glued to it. Closer inspection revealed that the hide had been freshly skinned.

Ordered: One lama
Time for Delivery: One hour and twenty-seven minutes
Cost: $200.02
Result: , a Buddhist monk. Subject had no recollection of events preceding delivery. Subject was administered amnestics and released without incident.

Ordered: One robotic llama
Time for Delivery: One hour and thirteen minutes
Cost: $3561.87
Result: One automaton in the shape of a llama. Behavior was identical to that of a biological llama.

Ordered: **SCP-1545**
Time for Delivery: Fifteen seconds
Cost: None
Notes: SCP-1545 was observed to vanish from its containment locker upon ordering. SCP-1545 was delivered fifteen seconds later, containing two deceased individuals, both unidentified; autopsy revealed that they had been deceased for at least twenty-four hours. Delivery consisted of SCP-1296 driving past the delivery area at approximately 150 km/h; SCP-1545 was thrown from the roof by a second SCP-1296-b subject. SCP-1296-b-2 was heard to scream "Just fucking take it!" before departure.

SCP-1297: A Jar of Toenails

Item #: SCP-1297

Object Class: Keter

Special Containment Procedures: By order of the **`Temporal Anomalies Department`**, Item SCP-1297 is contained in the center of a 10 x 10 x 5 m reinforced concrete enclosure, with one bulk-head door accessible via the east wall at floor level. The room is lit with natural gas torches, and standard safety protocol for gas leaks and lighting failure is to be upheld at all times. A steel catwalk is suspended from the ceiling and west walls, two (2) meters from the floor, with bulkhead entrances on the north and south walls. At least fifty (50) guards are to remain on site at all times in event of attempted breach, with no fewer than five (5) security personnel stationed on the catwalk at all times.

No electrical systems are to be employed in the surveillance or containment of SCP-1297. Personnel who have been artificially augmented or repaired in any way (pacemakers, replaced organs/ bones/joints, ocular implants, etc.) are disqualified from working with SCP-1297. Security personnel are to receive supplemental training on the use of antique firearms and ancient melee weaponry prior to arrival on containment site. No effort is to be made to prevent SCP-1297-1 manifestation events (See Addendum 1297-1), but all instances are to be terminated on sight using whatever means remain available.

Immediately following termination of all active SCP-1297-1 instances, remains are to be searched for their initiating object (precisely one (1) toenail clipping), which is to be returned to SCP-1297 immediately. Personnel assigned to this task must wear gloves to prevent skin contact. Under no circumstances should SCP-1297 be transported by air, nor should it be allowed within

40 km of the nearest population center of five hundred (500) persons or more.

Description: In its inactive state, item SCP-1297 is a glass jar approximately 20 cm in height, with a plastic, screw-on lid.[1] Contents of the jar are apparently human toenail clippings in various states of decomposition. The precise volume of the item as well as the number, age, and composition of the clippings cannot be determined due to the item's anomalous properties.

Any time a toenail clipping is removed from the jar, SCP-1297 will project a unique temporal displacement field. During experimental trials and breach attempts, it has been determined that the difference between the year recorded within the anomaly and the year recorded by observers outside the anomaly (hereafter 'Δt') increases both with duration of activity and number of clippings removed from SCP-1297. The active radius of the anomaly also increases by the same criteria.

At initial manifestation, SCP-1297's active radius is 0.5m, with a Δt equal to ten (10) years. This will increase by a radius 0.5m and Δt of ten (10) years per hour per clipping. Countering this effect requires the return of the original toenail clippings to SCP-1297. Each clipping returned is capable of reversing both the increase in radius and the Δt for which it is responsible.[2] Unlike other localized temporal anomalies, the field will allow organisms, persons, radiation, and simple objects to pass in and out without harm.

Anomaly SCP-1297 represents a localized TK-Class Causal Restructuring Event, resulting in all temporally local causality (roughly the previous 20-50 years) being forced progressively further backward along our current world-line. Although sense of identity, personal history, and basic situational knowledge remain intact, progressively greater levels of technological regress can be observed within the active radius.[3] Despite minor disorientation caused by disappearance and regression of technology currently in use, all persons exposed to the effect indicate no knowledge anything has changed unless previously informed of SCP-1297's unique properties.

The field is not directly harmful to healthy humans; however,

subjects requiring the existence of advanced technology to survive will either expire or disappear entirely if local Δt precludes the existence of that technology. Items or personnel lost to this effect will be restored once the offending clipping has been returned to SCP-1297. Collateral damage caused by their temporary disappearance is not.

SCP-1297 employs a unique offensive strategy to increase the acceleration of the field's effective radius and Δt. Although clippings can be manually removed and replaced without triggering this effect, SCP-1297 will at random intervals[4] open and eject a random number of clippings[5] covered in an unidentified viscous, sticky, malodorous brown humor (designated SCP-1297-1). Direct skin contact with the humor causes intense abdominal pain, nausea, and vomiting in 100% of subjects. Olfaction was sufficient to induce effects in 13% of those exposed. Incapacitation due to vomiting, shortness of breath, and loss of consciousness lasts over twenty (20) minutes in all cases.

In addition, SCP-1297-1 is capable of spontaneous animation. Within five minutes of emergence, SCP-1297-1 will solidify around any ejected clipping in a radially symmetric pattern similar to an invertebrate of class Asteroidea. Resulting animate instances are no greater than 0.25 m in diameter, but are capable of two (2) meter vertical jumps, leaps at a length of five (5) meters, and movement in any direction at speeds of up to 20 km/h, which is employed to put as much distance between SCP-1297 and SCP-1297-1 as possible. Instances appear to be aware of their surroundings, and have been known to remove additional clippings from SCP-1297 before attempting escape. Entities similar to SCP-1297-1 have been observed in relation to the **SCP-3109** anomaly.

Addendum 1297-1: Containment Notes

Early containment efforts assumed item SCP-1297 to be non-sentient, and were focused primarily upon preventing the emergence and manifestation of SCP-1297-1. Automated containment using sloped floors, pneumatic rams, liquid nitrogen spray, etc. have proven not only ineffective, but shown to increase both frequency and volume of manifestation events.

Methods of permanent containment attempted have also proven insufficient, up to and including casting the item in an 80 x 80 x 80 cm block of solid structural steel. Although SCP-1297 remained inactive for four (4) years, prior to breach, the ensuing manifestation of instances of SCP-1297-1 caused a local loss of all communications and firearms technology within 20 km radius, and loss of both written and spoken language within a 40 m radius of the epicenter before all instances were terminated. It is theorized that another breach of this magnitude or greater may cause several simultaneous XK-Class End of the World Scenarios due to containment breach of other known SCPs alone.

As SCP-1297 has demonstrated the awareness necessary to recognize increased containment measures, and the ability to escalate its response to them, further attempts to prevent the activation of SCP-1297 are prohibited.

The classification of SCP-1297 was upgraded to Keter on 28/10/1986.

Addendum 1297-2: Document 1297-A

Item SCP-1297 was mailed to Site-19, via US post on / /1949. Its arrival coincided with a Γ-4 level containment breach including all 23 Euclid-class SCPs housed on site. The following note was recovered with the item, sealed in red wax. The note was written with a simple charcoal based ink on vellum paper, presumably to ensure that it would not be destroyed by SCP-1297's effect.

> Dearest ,
>
> I have decided, finally, to refuse your offer. Tempting, all that control. But the way I see it, if not for your Foundation, we wouldn't need your Foundation.
>
> And you know this, deep down. I'm sure you do. Everything is permitted, my friend. And there is nothing in this world which is not disposable. Not you. Not me. Not our fathers and mothers. Not all the fortunes and all the pleasures and all the horrors of all the world.

Except this little item here.

Disgusting? Yes. Repugnant? Of course. But you'll never be rid of it, not if your Foundation places value in the 'status quo' as we both know it does. I suppose that *is* what you wanted, isn't it?

I honestly wish you would just give it up and come along for the ride. It saddens me to know that we can no longer be friends. Pity. We did make such a good team.

Until we meet again – unless I see you first – stay on your toes!
-

The box was damaged in shipping, displaying a small hole on the underside where an instance of SCP-1297-1 appears to have escaped, and is presumed still at large. A postmark on the upper face listed a date of / /2049, suggesting a maximum Δt per SCP-1297-1 of 100 years. Subsequent tests on the packaging confirm that it remains unaffected by anomaly SCP-1297. Efforts to understand and reproduce this immunity are ongoing.

Footnotes
1. Known configurations during periods of activity include a glass-topped storage jar with metal clasp, a red ceramic pot, a wicker basket, and a small circle of stones inscribed with an unknown runic language.
2. Although a maximum Δt equal to one hundred (100) years per clipping has been established, the radius of effect has no known limit and will continue to expand indefinitely so long as at least one clipping remains outside of SCP-1297.
3. The effect includes, but is not limited to, weapons, armor, photography, fashion, language, political climate, and medicine.
4. Intervals range from four (4) hours to four (4) years. The most common interval is approximately ninety (90) days.
5. Number of instances ranges from two (2) to , with a mean of twenty-seven (27) instances.

« SCP-1296 | SCP-1297 | SCP-1298 »

SCP-1298: The Doorstep Babies

Item #: SCP-1298

Object Class: Safe

Special Containment Procedures: 37 instances of SCP-1298 are contained in plastic drawers of the Level 2 Cold Storage unit of Site- . Notes are stored in a locked filing cabinet in Site- offices. MTF Omega-8 “Babysnatchers” has been charged with recovery of new instances, administration of amnestics, and monitoring at-risk cases, as well as potential interception of the source.

Following Incident 1298-a, long term experimentation on active instances of SCP-1298 is now strongly discouraged. SCP-1298-5 has been partially disassembled and placed in long-term cold storage pending decommission or reclassification to sapient.

Description: SCP-1298 refers to a group of animate simulacra of human infants, constructed of steel and plastic with rubber skin and glass eyes. Instances exhibit mobility, vocalization, awareness and reactions consistent with human infants of roughly three to six months of age, though they show no reaction to visual stimuli and are presumed to be blind. Disassembly has shown no electronic components, power sources, or complex machinery, though active instances maintain a temperature roughly analogous to human norms. Reduction of ambient temperature slows and eventually halts activity. Though instances will consume milk or soft foods, they do not produce waste and anything ingested will remain inside the predominantly hollow interior.

Instances of SCP-1298 are delivered by unknown means to the doorsteps of chosen subjects between the hours of 3 and 5am, contained inside a woven basket and wearing a stitched one-piece wool garment and a white blanket. Accompanying each instance is an envelope containing a handwritten note. Each note is unique, containing a collection of common words interspersed with randomly

selected letters. No consistent code or pattern has been found in recovered notes.

Subjects of SCP-1298 appear to be selected on a fairly narrow set of criteria. Most subjects have been upper-middle class Caucasian couples located in the Pacific Northwest of the United States who have recently lost a child, usually their first. A statistically significant number of subjects have been featured on local news regarding this loss, which is hypothesized to be the method by which subjects are selected. Though most instances are recovered following subjects contacting local authorities, several instances had to be forcefully removed from the possession of subjects.

« SCP-1297 | SCP-1298 | SCP-1299 »

SCP-1299: Drowning Tub

Item #: SCP-1299

Object Class: Euclid

Special Containment Procedures: SCP-1299 is to be contained in a 8 x 10 x 4 m concrete cell. It is to be kept disconnected from all sources of water, regardless of its current state. The door to its containment chamber is to remain locked at all times unless Procedure F-30 is being enacted. All level-2 and above staff members on site are to carry keys to SCP-1299's containment cell. Once a month, one D-class is to enact Procedure F-30. In case of a containment breach, essential personnel are advised to move as far away as possible from the containment area, and any available female D-class are to be escorted towards the breach site by security.

Description: SCP-1299 is a white porcelain-over-steel freestanding bathtub, manufactured in by the Corporation. It was discovered when the occupants of a house on 75 Street in , Ohio experienced an unusually high rate of apparent suicides and murders via drowning. A news story on the anomaly brought the house to the Foundation's attention. The Foundation quickly suppressed all information regarding the crimes and secured the house in question. No anomalies were observed until one agent turned on the handle to SCP-1299, which activated despite being disconnected from the house's water supply, resulting in the agent's death. The Foundation quickly secured the bathtub and moved it to its current containment.

When a living human touches one of the two handles on SCP-1299, the tub will begin filling with water. Once the tub is filled, an invisible force, designated SCP-1299-1, will pull the subject into SCP-1299 and force the subject underwater. An imprint of a pair of hands will appear around the subject's neck while they attempt to escape. Barring outside intervention, the subject will invariably drown, at

which point the water will begin to drain via unknown means until the containment chamber is completely dry. The corpse may then be retrieved safely.

If by the 26th night of each month no living body has touched the handles or is in the room, SCP-1299-1 will manifest and leave SCP-1299, leaving a trail of wet humanoid footprints. It will seek out the nearest living human body, which it will drag back to SCP-1299 and begin to drown as normal. If the process is interrupted and the subject pulled away from SCP-1299-1, the subject's personality will undergo a complete resequencing. (For additional information, see Addendum 1299-0-1.) SCP-1299-1 is intangible and impossible to damage by any means yet tested, and does not appear on thermal imaging or X-ray scanning. For additional information see Testing Log 1299-A.

Testing Log 1299-A:

Subject: One (1) D-class personnel (D-985) with background in plumbing.
Conditions: D-985 instructed to attach SCP-1299 to newly constructed water pipe.
Result: SCP-1299 began filling autonomously, and SCP-1299-1 immediately dragged D-985 into SCP-1299 to drown him. Immediately after D-985's death, footprints characteristic of SCP-1299-1 formed a trail towards and through the locked door to the containment chamber. SCP-1299-1 proceeded to grab one of the two guards stationed outside and pull him through the still-locked door into SCP-1299. Site personnel were alerted of a containment breach. SCP-1299-1 continued to seize and drown personnel until it successfully killed a female D-class, at which point SCP-1299 deactivated. The pipe was removed without further incident.

Note: Testing of SCP-1299 to be halted until further notice. Procedure F-30 to continue as scheduled. Recommend female subjects to avoid a second containment breach. -Dr T

Addendum 1299-0-1: On / /2008, Dr. , the researcher who was at the time overseeing SCP-1299, attempted to alter the conditions of Procedure F-30 without proper authorization. D-1130 was introduced to the testing environment and instructed to enter the

bathtub per regulation, but when SCP-1299-1 appeared, Dr. breached containment and attempted to pull the subject out of SCP-1299. After approximately 1 minute of struggle, subject was removed from SCP-1299, and the instance of SCP-1299-1 disappeared. D-1130 seemed extremely distressed, asking where he was and insisting that he had just been in his house. Upon further examination and interview, D-1130 referred to himself as , a female who had been killed by drowning years ago in , New York. Her boyfriend had been convicted of her murder, though the evidence was purely circumstantial. After gathering all available information, subject was terminated (for full logs, see Interview 1299-A). One day later, a second D-class was used in Procedure F-30 to prevent a containment breach. Experiments are currently ongoing to determine the cause and results of this secondary effect.

[+]Testing Log 1299-B[+]

Subject: Two D-class personnel (D-701 and 803)
Conditions: D-701 instructed to touch handle, then D-803 and D-701 both instructed to lie down in SCP-1299.
Result: After 30 seconds SCP-1299-1 appeared and attacked both subjects simultaneously. Three guards pulled the subjects from the water. Both subjects claimed to be , a 25-year old female whose husband killed her by drowning her in the bathtub. Each subject expressed extreme distress at the other's assertions. Both were able to recall intimate details of 's life. D-803 was terminated, and D-701 was used as a subject for Procedure F-30.

Subject: One D-class personnel (D-942)
Conditions: D-942 sent in wired to recording net attached to EEG and ordered to perform procedure F-30. Security instructed to pull subject out after five seconds.
Result: At 1.25 seconds after SCP-1299-1's attack, D-942 briefly displayed brainwave patterns consistent with the onset of a grand-mal epileptic seizure, before almost immediately returning to that of an excited state

typical of a person being drowned. SCP-1299-1 pulled recording net off subject after two seconds.

Subject: One D-class personnel (D-1074)
Conditions: D-1074 sent in to perform Procedure F-30. Security instructed to remove sample of water from SCP-1299.
Result: F-30 enacted successfully, water sample retrieved. Sample showed no anomalous properties. Mineral concentrations and pH were found to be typical of municipal tap water from , New York.

Subject: One D-class personnel (D-873)
Conditions: SCP-1299 filled using hose attached to external water source. D-873 positioned in containment chamber in case of SCP-1299-1 activation.
Result: Immediately upon SCP-1299 being completely filled, SCP-1299-1 attacked D-873, initiating Procedure F-30.

Subject: One D-class personnel (D-1132)
Conditions: SCP-1299 filled with bleach supplied by hose. D-1132 positioned in containment chamber in case of SCP-1299-1 activation.
Result: No activation of SCP-1299; no appearance of SCP-1299-1.

Subject: One D-class personnel (D-894)
Conditions: D-894 brought in to enact procedure F-30 as scheduled.
Result: Upon seeing SCP-1299, D-894 retreated to the far corner of the room and stayed there screaming until escorted out of the room by security personnel. See Interview 1299-B.

[+]Interview 1229-A[+]

Interviewed: Subject D-1130

Interviewer: Dr. T

Foreword: Interview with D-1130 after Dr. breached containment during Procedure F-30.

<Begin Log>

D-1130: Where… [3-second pause] Where am I?

Dr. T : You're in a hospital, you appear to have fallen and suffered brain trauma. Now if you can focus, we need to know what your name is, and the last thing that you remember.

D-1130: . But a hospital? I was just in my house. I'd decided to take a bath.

Dr. T : What was the date and time?

D-1130: , . About : in the afternoon.

Dr. T : Thank you. What happened next?

D-1130: Well, I went upstairs to the bathroom and… [4-second pause] I don't — I don't know, it all happened so quick… [Subject becomes visibly distraught]

Dr. T : D-1130? What happened so quick? What was the last thing you remember?

D-1130: Please, I need to get out of here, he's going to come, he's going to come!

[D-1130 gets up and attempts to grab Dr. T , but is shot twice by Agent .]

<End Log>

Closing Statement: Subject's description was found to match the exact date and suspected time of the drowning of by her boyfriend.

[+]Interview 1229-B[+]

Foreword: Interview with subject D-894 after subject displayed familiarity with and fear of SCP-1299.

<Begin Log>

Dr. T : Hello D-894. You seem to have previous knowledge of SCP-1299.

D-894: You [EXPLETIVE DELETED] should blow that thing up! That god damned tub ruined my life! But nobody believes me, nobody ever [EXPLETIVE DELETED] believes me!

Dr. T : Believes you about what, D-894?

D-894: Me and my wife had just bought a house in , and the day after I moved in, the next damn day, I hear screaming coming from upstairs. So I rush into the bathroom and see her thrashing in the tub. By the time I get to her, she's dead. So turns out the neighbor also heard the screams, and called the cops. Well guess who gets the murder charges? But… [2-second pause] You guys have the tub now. Which means you stopped it! So you can tell the world the truth, you can get me off this whole sentence!

Dr. T : Thank you for your co-operation D-894. Your case will be attended to shortly.

D-894: Thank you doctor, thank you so much, thank you, thank you!

<End Log>

Closing Statement: Subject given B-Class Amnesics, and moved back to holding facilities.

Articles 1300-1399

SCP-1300: Liquid Surgeon

Item #: SCP-1300

Object Class: Safe

Special Containment Procedures: Object is to be contained within a 5m x 5m x 5m containment chamber. Access is denied to personnel below Level 3 clearance. SCP-1300 is only to be used for research purposes.

If consenting terminal cancer patients are used as subjects, they are to be administered Class-A amnestics upon the successful completion of the experiment (or if they choose not to participate at any point). Victims of an unsuccessful operation are to be incinerated. If the next of kin requests the deceased's body, a cover story is to be fabricated justifying the incineration of the corpse. The ashes may then be released to the next of kin.

No change in procedure should be required if D-Class personnel are used.

Description: SCP-1300 is an old dentist's chair. The chair itself is quite unremarkable; SCP-1300's anomalous properties originate from the hydraulics column underneath it, normally used to control the height of the chair. To date, all attempts to open the column have been met with failure.

When a human subject settles into the chair, four mechanical arms with blunted heads emerge from the column base and hover over the body of the subject, "scanning" them through unknown means. Locations on the stomach and the neck appear to be preferred by SCP-1300, although the exact location widely varies between individual subjects. Upon finding a suitable location, each arm's head releases a number of surgical instruments, including lasers, needles, and tubes. The subject is administered a local anesthetic and a paralytic agent. It is unknown how SCP-1300 restocks its

pharmaceuticals, but given its method of operation, the conversion of [REDACTED] the likeliest source. See Addendum 1 for more details.

After the subject is immobilized, the arms create small incisions near the injection sites and insert a number of tubes inside. The tubes are guided through the subject's body to any foreign objects located within. These include transplanted organs, malign or benign tumors, lodged objects, pacemakers and deep-brain stimulators, and false teeth. It is unknown how SCP-1300 determines which objects are foreign to the subject's body. Analysis of trace substances left over by SCP-1300 reveals the presence of several types of chemical scissors (such as nucleases and ligases), which could reasonably be used to [REDACTED], singling out foreign bodies through deduction. SCP-1300 does not consider objects smaller than approximately 500 micrometers.

Upon reaching a foreign object, SCP-1300 will pump an unknown enzyme through the tubes, dissolving the object. The resulting liquid is then drawn back through the tube into SCP-1300; the liquid appears to be inert and nontoxic. Upon removing all identified foreign objects, another fluid agent is pumped inside which repairs damaged organs, or assumes the shape and function of missing ones. [REDACTED], though no exact match has been found in any database. After finishing the process, the tubes retract, and the incisions are closed with surgical lasers. Following the completion of the operation, the arms shut and retreat inside the hydraulics column. The operation is reported to be painless, but some subjects find the paralytic agent and the sensation of the tubes inside their body to be highly unpleasant.

While highly effective at treating most kinds of cancers and many kinds of physical trauma, SCP-1300 is unable to cure bacterial or viral infections. Due to its lack of object resolution below 500 micrometers, some cancerous cells may remain in a subject, leaving a chance for later re-emergence. In addition, the tissue repair and replacement technique is imperfect, sometimes resulting in malformed but partially functional organs, and rarely in malformed and dysfunctional ones. SCP-1300 will not repair organs which it has already repaired or replaced itself. Following [DATA

EXPUNGED], all testing with brain-damaged subjects is prohibited.

Addendum 1: SCP-1300 will unpredictably undergo a change in functionality (henceforth referred to as beta-state) immediately following the administration of the paralytic agent. A very small amount of modified dissolving enzyme is injected, causing a destructive chain reaction which renders internal organs into a semi-viscous substance similar to that observed during regular operation. The resulting slurry is siphoned back inside SCP-1300, replaced at approximately the same rate by a foul-smelling red liquid composed of disorganized organic molecules.

The paralytic agent prevents the subject from moving, speaking, or changing their facial expression; an increase in ocular, cardiac, and respiratory activity indicates that the subject is conscious of SCP-1300's activity. As the chain reaction occurs too rapidly to be stopped by any available means - invariably ending in death - and beta-state appears to be intentional and possibly essential to the device's continued operation, it is recommended that the subject be administered a dose of barbiturates to induce a coma until expiration. Depending on the subject's size, beta-state may last up to 5 minutes. In cases, subject's body burst upon being over-filled with the beta-state biomatter.

It is difficult to predict when SCP-1300 will enter beta-state. Some correlation between the difficulty of the preceding operation(s) with the time until beta-state activation has been observed. In one case, following six (6) wide-spread T4 tumor operations requiring multiple organs to be repaired or replaced, SCP-1300 was presented with a dismembered subject on life support. SCP-1300 attempted to replace the missing limbs, as expected. 15 minutes into the operation, however, SCP-1300 ceased functioning. After 5 minutes, it entered beta-state and consumed the subject's organs.

« SCP-1299 | SCP-1300 | SCP-1301 »

SCP-1301: The Singing Violin

Item #: SCP-1301

Object Class: Safe

Special Containment Procedures: SCP-1301-1 and SCP-1301-2 are to be kept inside a secured, soundproofed box inside of a secured, soundproofed chamber. Absolute silence is to be maintained at all times within the holding chamber, and personnel will not be permitted entry into the chamber without the provided noise containment suits. Prior authorization is required to handle either SCP.

Any personnel or individuals that are contaminated by SCP-1301-1 in its active state are to be immediately contained for study, owing to SCP-1301-1's effects.

Description: SCP-1301-1 is a violin of crimson hue, lacking a maker's label or other obvious sign of identification. Upon analysis, it has been found that its strings are made of spider silk, and that its body is composed of a variety of different woods, primarily spruce and maple.

SCP-1301-2 is a violin bow, constructed from pernambuco wood of a crimson hue identical to SCP-1301-1. Its ribbon is comprised of black, coarse horsehair, but in all other regards it appears to be of usual construction.

SCP-1301-1 is extremely sensitive to certain kinds of vibrations; if jostled violently or exposed to human voices, it will enter its active state and its strings will sound audibly for 1 to 13 minutes unless otherwise muffled. Direct exposure to the sound produced during the object's active state will invariably result in contamination.

Over the 13 hours following initial exposure, individuals contaminated by SCP-1301-1 will permanently lose their voices, and

be rendered incapable of speech, singing, or whispering. An additional effect of contamination is the loss of written language. While contaminated individuals appear to readily understand written and spoken words, their own attempts to write will instead result in musical notation of varying sophistication. Providing contaminated individuals with computers or other writing aids has only resulted in incomprehensible gibberish.

While held, SCP-1301-2 protects the individual holding it from SCP-1301-1's active state, though it does not reverse this state's effects. If SCP-1301-2 is used to produce vibrations from one or more of SCP-1301-1's strings, a voice singing the appropriate pitch will emerge instead. The E and A strings produce a timbre resembling female voices, and the D and G strings produce a timbre that mirrors male voices, though exceptions have been noted to occur outside of the object's anomalous state.

While being operated with SCP-1301-2, SCP-1301-1 may enter its anomalous state and produce any one of a number of atypical effects, which have thus far included weeping, crying, screaming, laughing, and unintelligible whispering. The object's anomalous state never exceeds 13 seconds in length.

See Experiment-Log-1301 for further details.

Experiment Log 1301

Approved by O5-

Selected tests below

Test 1
Date: / /20
Operator:
Procedure: After donning the provided noise containment suit, Mr. entered the chamber, removed SCP-1301-1 and SCP-1301-2 from their soundproof box, and began operation.
Music: Simple improvisation in A major, 4/4 meter.
Results: 1 minute and 3 seconds into operation, SCP-1301-1 entered its first observed anomalous state and produced high-pitched screaming for 1.4 seconds at a frequency exceeding Hz. Approximately 0.6 seconds after the anomalous state commenced, Mr. dropped SCP-1301-1 and SCP-1301-2 in surprise, causing it to abruptly enter its active state upon contact with the ground. Vibrations successfully pierced Mr. 's noise containment suit. After contamination, Mr. was taken to for further study. Despite mistreatment by Mr. , SCP-1301-1 and SCP-1301-2 were unharmed.

Test 7
Date: / /20
Operator:
Procedure: After donning the provided noise containment suit, Ms. entered the chamber, removed SCP-1301-1 and SCP-1301-2 from their soundproof box, and began operation.
Music: The violin solo from **SCP-012**'s first movement.
Results: During operation by Ms. , SCP-1301 rendered the piece in a shrill, unsteady cackle, emitting harmonizing frequencies below Hz. The object produced intelligible speech during operation,

including references to [DATA EXPUNGED]. The information provided might bear relevance to SCP- . Ms. ceased operation of SCP-1301-1 with SCP-1301-2 at 46 seconds, gingerly replaced both objects into the box, and immediately fled from the chamber in a state of hysteria. Ms. was subsequently administered a Class A amnestic and has since demonstrated no significant psychological scarring.

Test 9
Date: / /20
Operator:
Procedure: After donning the provided noise containment suit, Mr. entered the chamber, removed SCP-1301-1 and SCP-1301-2 from their soundproof box, and began operation.
Music: Scrap of notation from Mr. , written following the events of Test 1.
Results: SCP-1301-1 rendered the notation as intelligible speech in Mr. 's voice. Transcript follows: *"Please get me— Oh, God! Why can't I write?!"*

SCP-1302: Loss Chaser

Item #: SCP-1302

Object Class: Safe

Special Containment Procedures: SCP-1302-1 is to be contained in a standard beta-level storage cell at Site- . Foundation personnel are forbidden from operating SCP-1302-1 under any circumstances. Requests for cross-testing should go through SCP-1302's immediate overseer (currently Dr.) and must receive Level-4 approval before commencement. Instances of SCP-1302-2 have shown no anomalous properties and may be disposed of normally. Instances of SCP-1302-3 must be securely placed in Fireproof Observation Room 3842 until confirmation of Event 1302/Alpha. D-Class personnel assigned to SCP-1302 are to be exempted from standard monthly terminations, paid a nominal weekly wage by the Foundation and provided with facilities for the purchase of goods. The effects of SCP-1302 are closely tied to personal wealth and property, and testing with normal D-Class protocol would be unworkable.

Description: SCP-1302-1 is an - brand electronic blackjack machine, recovered from Resort and Casino, Las Vegas on 2/2/20 after being brought to the attention of the Foundation by Agent . Physically, SCP-1302-1 exhibits only one anomalous property: money fed into it cannot be recovered; analysis is ongoing but has yet to provide any significant results. SCP-1302-1 is otherwise indistinguishable from any machine of the same type and is entirely safe to examine in any way, so long as it is not operated in its intended manner.

When SCP-1302-1 is operated, function is identical to that of any other electronic blackjack game. Dollar notes of any denomination can be inserted, and winnings recovered in the form of Resort and Casino payout tickets (SCP-1302-2). Chemical analysis has confirmed these tickets to be identical to those issued from similar

machines and no anomalous properties have been noted. They are styled SCP-1302-2 only as a result of their connection to SCP-1302-1.

Unlike standard machines of the same type, SCP-1302-1 can be operated when the credit meter is at zero. A successful wager in these circumstances will result in the payout being transferred to the credit meter, where it can be used for further bets or withdrawn in the form of SCP-1302-2 as normal. A loss, however, causes the credit meter to fall into the negative, relative to the amount bet. Further play is possible, allowing the operator to reclaim a positive balance or fall deeper into a negative one. A negative balance can be withdrawn in the same manner as a positive one, though instead of an instance of SCP-1302-2, a black ticket will be printed with no markings but the balance withdrawn, in red, at the centre (SCP-1302-3). SCP-1302-3 is composed of an unknown material structurally resembling paper. No ink, dyes or other colouring agents have been detected on any instance of SCP-1302-3. Both the black and red sections appear chemically identical, and it is not known how the change in colouration is achieved. An instance of SCP-1302-3 is automatically produced should an operator attempt to leave the general vicinity of SCP-1302-1 while the credit meter stands at a negative value.

Within twenty one days of an instance of SCP-1302-3 the person it was issued to will, through events beyond their control, suffer the loss of possessions up to the value of the figure printed upon it. Losses will be experienced only by the person to whom SCP-1302-3 was originally issued regardless of its current location or ownership. When sufficient losses have been incurred SCP-1302-3 will self combust, known as ‘Event 1302/Alpha’. All attempts to prevent this have been unsuccessful, as the fire cannot be extinguished by any normal means. An instance of SCP-1302-3 showing a figure beyond the material value of the possessions of its owner will incur Event 1302/Beta[1] after exactly twenty one days. Those to whom an instance of SCP-1302-3 has been issued have experienced a variety of psychological symptoms which appear to increase in magnitude alongside the figure printed. Smaller figures generally produce mild headaches or a sense of general malaise, while in the case of larger ones severe effects have been noted; chronic

insomnia, amnesia and psychosis being common. Regardless of severity, spontaneous recovery from these conditions is experienced in 100% of cases after Event 1302/Alpha. Efforts to destroy SCP-1302-3 prior to Event 1302/Alpha have proven fruitless and attempts thus far have resulted in Event 1302/Omega[2] in 100% of cases. As such, intentional damage to any instance of SCP-1302-3 for any reason is strictly prohibited. Failure to adhere to this rule is punishable by termination.

Addendum 1302-1: Test Logs

> Log 1302-1
>
> Supervisor: Dr. .
>
> Operator: D-84394.
>
> Procedure: Subject provided with $10 and instructed to insert it into SCP-1302-1. Subject does as instructed. Subject reports that on-screen credit meter reads $10.00. Subject instructed to place one $5.00 bet. Subject does as instructed and reports that on-screen credit metre now reads $15.00. Subject instructed to withdraw balance. Instance of SCP-1302-2 noted. Subject instructed to leave testing area. Test concluded. SCP-1302-2 secured, noted to read $15.00 and placed in Observation Room 1133. Interview with D-84394 scheduled for one month (/ /).
>
> Observation: Post-test observation of D-84394 shows no abnormalities. Post-test observation of SCP-1302-2 shows no abnormalities.
>
> Interview: D-84394 reports no abnormalities.

> Log 1302/3
>
> Supervisor: Dr. .
>
> Operator: D-16434.
>
> Procedure: Subject instructed to operate SCP-1302-1

until balance is negative. Subject does as instructed and reports that on-screen credit meter reads -$4 after approximately two minutes. Subject instructed to withdraw balance. Instance of SCP-1302-3 noted. Subject instructed to leave testing area. Test concluded. SCP-1302-3 secured, noted to read '$4' and placed in Fireproof Observation Room 3842. Interview with D-16434 scheduled for one month (/ /).

Observation: Post-test observation of D-16434 shows no abnormalities. Event 1302/Alpha noted at 1806hrs, / / .

Interview: D-16434 reports feeling slightly 'fluey' towards the start of the month, but otherwise nothing of significance. Complaint that the vending machine in Recreation Area 3 keeps 'eating his quarters' noted and passed to Maintenance Department.

Log 1302-5

Supervisor: Dr. .

Operator: D-39409.

Procedure: Subject instructed to operate SCP-1302-1 until balance is approximately -$1500. Subject does as instructed and reports that on-screen credit meter reads -$1380 after approximately fifteen minutes. Subject instructed to withdraw balance. Instance of SCP-1302-3 noted. Subject instructed to leave testing area. Test concluded. SCP-1302-3 secured, noted to read '$1380' and placed in Fireproof Observation Room 3842. Interview with D-39409 scheduled for one month (/ /).

Observation: Post-test observation of D-39409 shows subject to be restless in bed and prone to apparently aimless walking for approximately eighteen days subsequent to interaction with SCP-1302-1. D-39409 noted to fall on eighteenth day (/ /) while carrying

brand laptop from Recreation Area 3 to Sleeping Quarters 6. Laptop confirmed destroyed. Event 1302/ Alpha noted at approximately the same time (2257hrs, / /).

Interview: D-39409 reports feeling unwell and confused until recently, noting that on occasion he would 'forget why he was here'. Difficulty sleeping is also reported, until around the same time. When questioned about his fall, D-39409 expresses annoyance at the damage done to his laptop, but remarks that he felt 'amazing' afterwards and had a good night's sleep for the first time 'since doing that [EXPLETIVE DELETED] test'.

Log 1302/8

Supervisor: Dr. .

Operator: D-03204.

Procedure: Subject instructed to operate SCP-1302-1 until balance is approximately -$100,000. Subject expresses annoyance and comments that 'that'll take [EXPLETIVE DELETED] ages'. Instructions repeated. Subject complies but requests early conclusion to test after approximately three hours and reports that on-screen credit meter reads -$95,780. Dr. approves this. Subject instructed to withdraw balance. Instance of SCP-1302-3 noted. Subject instructed to leave testing area. Test concluded. SCP-1302-3 secured, noted to read '$95,780' and placed in Fireproof Observation Room 3842. Interview with D-03204 scheduled for one month (/ /).

Observation: Post-test observation of D-03204 shows significant psychological breakdown. D-03204 removed from communal areas and restrained in psychiatric section of Medical Wing 12 after stabbing D-45884 with a pencil repeatedly, to the point of severe bleeding and loss of sight in one eye. D-03204 noted to be entirely incoherent following restraint. Observation feeds to

Medical Wing 12 abruptly cut off at 1230hrs, / / ; exactly twenty one days after test. Contact restored after five seconds. No trace of D-03204, or sign of any struggle. Medical personnel present report momentary absence of light around D-03204 while remaining able to see each other and the rest of room. Examination of Medical Wing 12 shows no traceable anomalous properties. Event 1302/Alpha noted at exactly the same time as Event 1302/Beta (1230hrs, / /).

Interview: N/A

Log 1302/11

Supervisor: Dr. .

Operator: D-11131.

Procedure: Subject provided with brand lighter. Subject instructed to operate SCP-1302-1 until balance is negative. Subject does as instructed and reports that on-screen credit metre reads -$10 after approximately three minutes. Subject instructed to withdraw balance. Instance of SCP-1302-3 noted. Subject instructed to burn SCP-1302-3. Subject does as instructed. Approximately five seconds after flame touches SCP-1302-3, an entirely black sphere of three metres across appears immediately behind Research Assistant . [DATA EXPUNGED] approach D-11131, ignoring all other personnel and passing directly through all physical barriers. [DATA EXPUNGED]. D-11131 considered lost. Test concluded. SCP-1302-3 secured, noted to read '$10' and placed in Fireproof Observation Room 3842.

Observation: Event 1302/Alpha noted at hrs, / / . Trigger remains unknown.

Interview: N/A

Addendum 1302-2:
As of / / all testing with SCP-1302 is prohibited and all personnel

reallocated - O5- .

« SCP-1301 | SCP-1302 | SCP-1303 »

SCP-1303: Hunting Cavern

Item #: SCP-1303

Object Class: Safe

Special Containment Procedures: SCP-1303's location is to be cordoned off with a standard security fence, cameras, and no-trespassing signs at a distance of one (1) kilometer from the entrance. A team of four (4) agents should remain on duty near SCP-1303's entrance at all times in National Park Service Ranger uniforms to intercept approaching civilians and direct them away from the site. Should containment be breached and an unauthorized individual obtain access to SCP-1303, two of the four agents should enter the site on tethers and attempt to retrieve the trespasser alive. Upon successful retrieval, Class-B amnestics should be administered and the individual relocated to a safe distance.

Description: SCP-1303 is a linked set of eleven (11) natural caverns, located in [REDACTED], with one known surface entrance and a series of interconnecting passages. The caverns' sizes range from ten (10) meters across to approximately thirty-seven (37) meters across, reaching a maximum depth of one hundred and twenty (120) meters below ground level. The location is host to two potentially related phenomena, designated SCP-1303-1 and SCP-1303-2, that constitute the location's anomalous properties. Through the entire period of Foundation ownership of the site, SCP-1303-1 and 1303-2 have never been observed to overlap their areas of effect.

SCP-1303-1 is an intermittent effect that consists of the total absence of acoustic transmission within its area. It has been known to occur in every cavern connected to the SCP-1303 network, including the entrance cavern, though it exhibits no discernible pattern for manifestations. The phenomenon persists for a variable amount of time, ranging from five minutes to a record of four hours,

and its boundaries never extend past those of the cavern it is currently affecting. Within SCP-1303-1's area, no sound waves of any sort can be generated or detected, regardless of whether they would be generated by a source inside the area travelling outward or vice versa. The effect extends to both mechanical devices and living subjects, though it is only known to manifest when a living subject is present. Affected mechanical devices exhibit all signs of perfect functionality except for their inability to transmit or detect sound waves. Personnel within SCP-1303-1's area of effect have persistently reported a sensation of being stalked or followed, catching glimpses of something moving out of the corner of their eye and a heightened urge to either flee or turn and confront whatever is there. In all such cases, electronic media and other personnel regularly fail to sense or detect the supposed 'stalkers', though multiple personnel within an affected area each experience such feelings independently. Due to dependency on minor echoes for balance and orientation, individuals who attempt to flee put themselves at high risk of injury.

SCP-1303-2 is an effect similar to SCP-1303-1, though instead of actively suppressing sound waves, the phenomenon completely inhibits any production or detection of visual, infrared, or ultraviolet light. It manifests in any of the SCP-1303 caverns except for the entrance cavern, and persists for anywhere from five minutes to over nine hours. Like SCP-1303-1, it affects both living subjects and mechanical devices without otherwise impeding their operation, and only manifests when a living subject is present, though its effects remain for a variable duration after the subject has left its area of effect. From the 'outside', the phenomenon appears to be a solid, opaque black wall, though it has no physical permanence and can be crossed freely. From the 'inside', no visual input of any kind registers, regardless of the location of the source. While inside an instance of SCP-1303-2, personnel have reported hearing, over the background noise of the cavern, noises that indicate an approaching creature or object of some kind. The exact details of the sounds vary, but in all cases exhibit traits of something or someone approaching the subject at a slow, deliberate pace, and in no instance has any such sound been registered or detected by recording equipment. As with SCP-1303-1, exposure to this effect triggers an anomalously strong fight-or-flight urge in affected

subjects, which can lead to significant personal injury in the rough terrain of SCP-1303.

Addendum:

Interview Log 1303-1

Interviewed:C B , one of the civilians found outside SCP-1303.

Interviewer: Dr. , Foundation researcher.

Foreword: Purpose of interview was to acquire a first-hand account of SCP-1303 before its identification and containment by the Foundation, and for additional data regarding concurrent exposure to SCP-1303-1 and SCP-1303-2.

<Begin Log>

Dr. : Mr. B , please tell me again why you and your friends were in that cave?

Mr. B : Because, sir… it was supposed to be fun… we're cavers, all of us. Me, J , F , K , card-carrying Society members - we call…..called…our grotto the Mole Rats. There's nothing quite like going underground, somewhere humans haven't torn up and remodeled yet. J called everybody up last week, said he'd heard about a cave not far from here on the Society forums that we could go check out.

Dr. : And you decided to go spelunking there?

Mr. B : Caving, sir, if you don't mind. Spelunkers are the amateurs, the newbies. Cavers know what they're doing, bring the right stuff for the job.

Dr. : Caving, then.

Mr. B :…Yeah. We got all our stuff together - helmet lamps, backups, even had some of those chemical glow

sticks. Padded pants, brought our wetsuits along just in case, ropes and food. The sleeping bags stayed in the car, with the wetsuits, in case we needed them. J drove us out there. It looked like a pretty ordinary cave to us, sir, set in the hillside. No one around for miles, no sign anyone had ever been there, not even hazard markings.

Dr. : Please continue, and describe what happened inside.

Mr. B :… Yes, sir. It was… just a cave, really. Some pretty rock formations, nothing extraordinary - no Mammoth, or Peppersauce, but a nice little place. K found a stream coming out of the wall that led down a tunnel, must have been a few hundred feet or so into another cavern, bigger one. Had a couple of ways to go, so we flipped a coin and went right. That third cave was the biggest yet, but halfway across… (subject stops speaking, begins to look ill)

Dr. : Continue, Mr. B .

Mr. B :… sir. We were right about in the middle, when I went deaf. At least, that's what I thought happened. J was talking to me, then stopped mid-sentence. I thought he'd seen something, so I stopped and looked at him - he was looking back at me, and neither of us could hear anything. His lips moved, but nothing came out, like one of those old-time movies. F and K were the same way - none of us could hear anything, even each other - it was weird as [EXPLETIVE], pardon my French, sir. We were about to turn around and get out of there, when J started and spun around, looking at the wall like he'd seen a ghost or a bear or something. Whatever it was, though, it must have gotten behind me, because I saw… something.

Dr. : Can you describe it?

Mr. B : Never got a good look at it, sir. It was big, and

moving, but only out of the corner of my eye, and there wasn't anything there when I turned to stare. I couldn't hear her, but F looked like she was screaming, looking around all over the place on the edge of panic. K bolted back for the entrance, and it was like she was drunk - stumbling, staggering, slipping on bits of gravel. When I followed… you ever tried running when you can't hear your own footsteps, sir? It's freaky, and turns out it's really d—— hard. I was sober as a churchman and tripping over myself worse than she was, and that… whatever it was… was still there, always at the corner of my eye. We made it to the tunnel, and all of a sudden I could hear again, like nothing had ever been wrong - crunching of feet on rock, everyone gasping for breath, the works, and whatever that thing had been, it was gone. K had bruised her ankle a bit, but she could walk and we had a first aid kit in the car. We made it back to the second cavern, but then the lights went out.

Dr. : The lights went out? Please clarify.

Mr. B : Mean just what I said, sir. Like the first time, only this time I was blind. At first, I thought my headlamp had shorted out, but I couldn't see the others' helmets either, and the glass was still hot. Sure enough, the others were blinded too - we could talk now. Couldn't have been more than fifty feet to the other side, from what I remembered - dangerous to travel in the dark, but if we took it slow and careful… but then I heard it. Maybe it was that thing from before, but it was coming up the tunnel behind us. Noises, like claws on stone - not loud, but they were getting louder, and we couldn't see a thing. J started panting then - said he could hear someone with big, heavy boots coming up the tunnel… K just screamed 'SNAKE' and started scrambling across towards where she thought the other side of the cavern was. J was next, yelling and crawling after her in the dark, and I was right on his heels. That thing was in the cavern, I could hear it, and getting closer - all that was on my mind was getting away. F was behind me, at first,

but then I… we all heard her scream, and that… crunching. I knew it had gotten her, whatever it was, but - God, sir, all I could do was run for my life, I didn't even stop. Ran into the wall and started feeling my way along it - J made it out first and was shouting out where the exit was for us. I swear, that thing was right behind me when I ran into J and I could see again.

Dr. : And behind you?

Mr. B : Blackness. Just a solid sheet of black, like someone had hung a curtain from the roof of the tunnel. The helmet lights just stopped when they hit it, but I didn't stop to check it out - we ran like rabbits through that first cave and outside.

Dr. : Thank you, Mr. B . The medic outside would like to examine you again now.

<End Log>

Closing Statement: Mr. B , Mr. N , and Ms. M were given Class B Amnesiacs and returned to their homes after a brief recovery period in a local hospital. Ms. L 's remains were recovered from Component 3 of SCP-1303 and autopsied; cause of death was determined to be cranial trauma caused when Ms. L tripped and struck her head against a protruding stalagmite, despite her protective headgear. The body was returned to its family to maintain the cover story of a tragic cave-diving accident, and SCP-1303's current isolation and containment procedures were implemented. Investigation of the National Speleological Society's discussion forums revealed no trace of any post describing the location of SCP-1303.

SCP-1304: Metafictional Rebirth Ritual

Item #: SCP-1304

Object Class: Euclid

Hello

Special Containment Procedures: As there is no way of containing SCP-1304 itself, procedures must focus on finding, tracking, and observing all instances of SCP-1304-1. Agents embedded in the editorial departments of major publishers have been briefed on the specifics of SCP-1304 and will suppress or alter any manuscripts containing it, or which may lead to a sequel containing it. Keywords describing portions of SCP-1304 have been added to routine search protocols. In the event of publication of a work containing SCP-1304, efforts must shift immediately to finding the associated SCP-1304-1 instance.

Six (6) instances of SCP-1304-1 are in custody at Site-17. The Foundation is currently tracking seventeen (17) instances of SCP-1304-1. No action may be taken against any instance of SCP-1304-1 without prior approval from Head Researcher Applebaum.

Can you hear me

Description: SCP-1304 is a method of ritual murder which allows for the translation of a fictional character into reality. The ritual, which has no direct basis in any known culture, has a lengthy list of requirements which must be performed in a particular order, under specific circumstances.[1] If the ritual is performed within a fictional narrative which is then printed by a major publishing house,[2] no later than one week after the narrative's official release date, a child will be born whose life will mirror, as closely as possible, that of the character killed in the ritual. This child is an instance of SCP-1304-1. The SCP-1304-1 instances are seemingly unaware of the circumstances of their creation; those who have found or been told about their associated narrative have regarded it as a curious coincidence. For further information on how the details of the

narrative character's life are translated into reality, see Addendum SCP-1304-MF below.

I can see you but I can't touch you

Any and all attempts to alter the life of an SCP-1304-1 instance in a way explicitly contradicting the events of the narrative have failed completely. This was extensively proven in the Foundation's experiments on SCP-1304-1-27, who is the real-world equivalent of the character Lawrence Hopkirk from the novel *In Our Lives* by June Marshall.[3] For example, in the narrative, Hopkirk's pet dog was struck and killed by a car on his seventh birthday. On the corresponding date, Foundation agents arranged a cordon on all streets within a 3-km radius of SCP-1304-1-27's home and temporarily rendered inoperable all vehicles within a 0.5-km radius. However, despite these precautions and the presence of more than one hundred agents, a drunk driver was able to slip through the Foundation cordon, evade pursuit, and strike SCP-1304-1-27's dog in the manner described. Even something as minor as SCP-1304-1-27's daily route to work (which was carefully described in the novel) was immutable, despite extensive efforts; combinations of mechanical failure, human error, and simple coincidence prevented any changes.

The one deviation in the life of a SCP-1304-1 instance from their narrative equivalent is the absence of SCP-1304 itself. All known instances of SCP-1304-1 have survived past the point at which they would be killed in the SCP-1304 ritual. After this point, direct intervention in the life of an SCP-1304-1 instance is possible. Action may or may not be taken against an instance based on the recommendation of Head Researcher Applebaum and/or the O5 Council. In all cases, observation of instances is continued after the death of their narrative equivalents.

Please let me back in, I want to come back in

There are seventy-six (76) known published narratives containing SCP-1304, with an equal number of associated SCP-1304-1 instances. Of these, fifty-one (51) are deceased, six (6) are in custody at Site-17, seventeen (17) are presently being tracked by the Foundation, and the whereabouts of the remaining two (2) are unknown.

I'm not supposed to be here

The Foundation has attempted to deliberately create instances of

SCP-1304-1, by creating and publishing narratives containing SCP-1304 through established publishers and Foundation fronts. No attempts to date have succeeded. No further experiments along this line are planned. It is currently theorized that the author must have created the ritual for the book independently, or have been inspired by reading another book containing the ritual whose author was also independently inspired. Please contact Head Researcher Applebaum for further information regarding these attempts or to review the manuscripts published.

+ Notes on SCP-1304-1 Instances

Notes on SCP-1304-1 Instances: Events and circumstances in the lives of instances of SCP-1304-1 will resemble those of their fictional counterparts as closely as possible, with allowances made for circumstances which are impossible under current real-world conditions. If the character was born in a real-world location, so will SCP-1304-1 be; if the location was fictional, SCP-1304-1 will be born in a location as similar as possible. For example, in the book *Bloodlove* by Savannah K. Faye, the character was born in the fictional city of Largesse, Illinois; SCP-1304-1-09 was born in the town of , Illinois, which had a similar population, history, and contained businesses and institutions analogous to those described in the book. In cases where the narrative takes place in a fantasy or science-fiction world, or any world largely distinct from Earth, SCP-1304-1 will be born in a culture similar to that of the character's culture and whose geography is similar to that of the character's birthplace. Other circumstances, such as the economic or social conditions of the character's family, will also be replicated closely.

This pattern will continue throughout the life of SCP-1304-1: if the character's parents died when s/he was four years old, the parents of SCP-1304-1 will die at the same time. Fantasy or science-fiction events, objects, and individuals will appear in an analogous real-world form: for example, the victim in *Dragonveil* by

Donald Armande, Jr., had a pet dragon with whom she could communicate telepathically; the associated SCP-1304-1 instance had a pet horse with which she shared a strong emotional bond.

+ Experiment 1304-96

Experiment 1304-96: In /201 , Agent Sibbitt, embedded with the publisher Press, discovered a narrative containing SCP-1304. As per protocol, she reported it to Head Researcher Applebaum. It was decided that, as the character killed would have minimal impact if "reborn" in the real world, and as circumstances of his birth would make him relatively easy to find,[4] the Foundation would use the publication of this work to determine whether the number of readers has any effect on the outcome of the ritual.

The book, by . , was published with a small print run. Prior to the official release date, the Foundation seized and destroyed via incineration all copies of the book.[5] Three (3) days after the official release date, the SCP-1304-1 instance, later designated SCP-1304-1-63, was born with the described circumstances. It was concluded that the book's publication, not the number of readers, is the decisive factor in the creation of an SCP-1304-1 instance. Current standard procedure is to alter the narrative prior to its publication or suppress it entirely.

+ Partial Character List

Partial Character List: Below are listed several known instances of SCP-1304-1, along with the characters they are "based on," and a brief summary of relevant portions of their lives. Document 1304-P contains a complete list of known narratives; level 3 clearance is required.

> **Instance:** SCP-1304-1-01, Ephraim Montrose
>
> **Character:** Doctor Ephraim Montrose, from

The Comedic Tragedie of Doctor Montrose (no author listed) in 16 . This is the earliest known narrative containing SCP-1304. It was a narrative ballad published as a broadside, and was apparently intended to be a parody of Christopher Marlowe's *The Tragicall History of the Life and Death of Doctor Faustus*. The titular character summons a troupe of demons to assist him in his alchemical research; these demons quickly become the focus of a cult and Montrose is unwillingly sacrificed as a "reward" for his bringing them to the mortal world.

Notes: The "real" Dr. Montrose became a medical doctor in London of some repute who was suspected of witchcraft. He was forced to flee his home and committed suicide in 16 .

Researcher , embedded in the Vatican, discovered a copy of the original broadside in the archives, along with a note detailing the curious "coincidence" of the real Dr. Montrose. suspected a potential link; her followup investigation revealed similar historical cases (see Instances SCP-1304-1-02, 03, and 04) and led to its classification as an SCP object. Further investigation pinpointed the sacrificial ritual as the source of the anomalous effects.

Instance: SCP-1304-1-12, Warren James

Character: Warren James, from *Grave Offenses* by N.J. Dickinson in 1971. James is a serial killer in the town of Dearborn, Michigan, USA. Over the course of the novel, he murders three young women in the space of two months. To prevent further killings and "condemn his soul to Hell," his family members murder him via SCP-1304. However, the ritual results in James's spirit becoming a vengeful ghost and attacking his family for revenge.

Notes: When the Foundation became aware of SCP-1304-1-12, efforts were immediately made to prevent his murders. As noted above, all efforts to alter events explicitly described in the narrative were futile; the three women were murdered precisely as described in the novel. However, the Foundation was able to prevent the deaths of seven further individuals whom SCP-1304-1-12 attempted to kill in a similar manner. At the point in SCP-1304-1-12's life when his family committed the ritual in the narrative, they instead attempted to kill him via other means. The Foundation intervened and captured SCP-1304-1-12. He is currently imprisoned in Site-17.

Instance: SCP-1304-1-47, Andrzej Szczecinski

Character: Andrzej Styriski, from *Quantum Terror* by Edward Łukasiński in 1984. Styriski is a physicist born on the planet Styris III in the year 2123. He develops a "quantum propulsion drive" which moves a ship through the "quantum underverse" to transport it across interstellar distances in the space of hours. Over the course of the novel, he is pursued and ultimately killed by a "neo-Satanic cult" for "defiling" their "promised land."

Notes: Szczecinski was born in Wrocław, Poland.[6] He earned a degree in aerospace engineering and received several patents for processes that are expected to be utilized in the next generation of high-speed jet engines. After the point of his character's death, he accepted a managerial position at BAE Systems and has not produced any original research since.

Instance: SCP-1304-1-68, X D

Character: X D , from by in 20 . D is described as "the 21st-century Antichrist." From an early age, he shows signs of psychopathy, having a total lack of empathy and a talent for emotional manipulation. Over the course of the book he gains considerable political power and cultural influence. As a teenager, he becomes a charismatic preacher and hones his oratorial skills; on reaching adulthood he is elected to the Senate. He eventually leaves government, having acquired a considerable following; this audience rapidly develops into a full-blown cult which worships him as a messianic figure. Political and cultural tensions approach a breaking point; on the eve of a major speech to his followers D is killed via SCP-1304 by a team of Special Forces operatives. The novel ends on a cliffhanger, hinting that D 's death may lead either to the end of hostilities or a major religious uprising.

Notes: D was found three (3) months after his birth. He is currently under close surveillance by Foundation operatives. Research into preventing the events of the narrative from occurring is of the highest priority.

+ Notes from Head Researcher Applebaum

Addendum from Head Researcher Applebaum:

I've been working with the SCP-1304 data for over a decade, and I'm convinced we're still missing something. For starters, it's

statistically unlikely for even two books with the same ritual to appear when the authors have had no contact nor read each others' books; it's statistically *impossible* for *seventy-six* such books to be published, even across the space of 500 years. They can't *all* be "discovering" the ritual independently, and yet only a handful of authors admit to having been inspired by another work. How do they know it? How is it being told to them?

I'm not even sure that the authors themselves are important. I've interviewed every living author, and there's no pattern. Some say it came to them in a dream, some say they were inspired by a film or another story (not necessarily a story containing SCP-1304, either), but most just shrug and say it came to them like all their other ideas. We've checked early drafts of the books: sometimes the details were there from the very beginning, sometimes they were added at the last minute. One author wrote a sequel which revealed that the character hadn't been killed after all, yet the instance kept on going. We've introduced authors to their "creations" a half-dozen times, and their meetings have been entirely unremarkable.

The characters we've seen so far have been a cross-section of humanity: male, female, scholars, idiots, heroes, villains. There's no common feature among them. They know nothing about their "past lives," and don't seem to care when told. No, strike that—some care, some don't, some think we're lying, some think they're going mad. They show various reactions, just as if you'd told a *real* person that their life was something out of a story. But again, there's nothing in common.

The one trait they all share: after their fictional counterparts have died, they all seem to become *incurious*. They lose some spark, some necessary component. Their lives become greyer, their minds become duller, they lose the desire to grow. I wonder: are they reflections of their fictional counterparts, and lose their "shine" when they have nothing to reflect? Or are they simply empty, because they've completed their purpose? Have they finished what they came here to do, and as such, become puppets without their puppeteers?

[Redacted]

+ Experiment 1304-M-01

Experiment 1304-M-01: On / /201 , the Foundation attempted to recreate the SCP-1304 ritual in the real world. A routine review of D-class records had revealed that D-10188's maternal uncle was also a member of the D-class program, designated D-65990. As this is one of the requirements for a successful SCP-1304 ritual, and as the other requirements could be obtained with minimal expense, Head Researcher Applebaum was given permission by O5 command to attempt the ritual. All elements were provided and performed according to the most complete known form of the ritual, and D-10188 expired at the expected time. No anomalous effects have been noted to date.

[Redacted]

Footnotes

1. The ritual requires, among other things, a knife made of carved obsidian, the mutilation and flaying of specific body parts in a specific order, and the incantation of a particular set of syllables. The complete list can be found in Document SCP-1304-RX; level 4 clearance is required.
2. All narratives to date have been published by established publishing companies, with initial print runs of at least , copies. It

is unknown which attributes, if any, of the publishing company affect the outcome of the ritual. To date, no self-published narratives, narratives published online, serialized narratives, or other such alternative forms of publication have been found containing SCP-1304.
3. SCP-1304-1-27 was chosen because his life, as described in the book, was largely unremarkable and followed a strict routine, making him an ideal experimental subject.
4. The character was born in a real-world city, and the exact time of his birth was given in the narrative.
5. Official cover story rho-12, "Severe storm damage to warehouse," was used.
6. As the original author was Polish, the novel was originally published in Poland, and there is no real-world equivalent to the character's birthplace, it is assumed Szczecinski was born here due to its cultural similarities. Additionally, the character's unusual surname was replaced with a more "normal" name.

« SCP-1303 | SCP-1304 | SCP-1305 »

SCP-1305: Cat Lure

Item #: SCP-1305

Object Class: Euclid

Special Containment Procedures: SCP-1305 is to be contained within a wildlife observation facility, located in **Site-77**. There is to be a feeding chamber and a resting chamber. Once per week, a pig or other similarly sized animal is to be released into SCP-1305's containment chamber, to feed SCP-1305. SCP-1305 will then be compelled to retreat to its resting chamber through direct application of bright light.

Following this, 2 D-Class personnel are to clean the interior of the feeding chamber, observed by security personnel.

Description: SCP-1305 is a mammalian organism, with an ovoid body and six multi-jointed legs. It has one large, flexible jaw located on the front of body, containing a long tongue and SCP-1305's lure. It weighs approximately 150 kilograms, with a height of 2 meters, although it is known to be able to contort and compress its body to fit in spaces 1/16th of its size.

When active, SCP-1305 will attempt to hide itself in a dark, enclosed area, such as a cupboard or closet. When it has hidden itself sufficiently, it may release a "lure" at the end of its tongue, most commonly resembling a domesticated animal such as a domestic cat[1].This lure will usually display behaviors expected of the organism it is imitating, and attempt to bring human subjects to SCP-1305.

In most cases, when a subject approaches the lure, it will revert to the shape of a prehensile tongue, wrapping around the subject's body. SCP-1305 will then attempt to bring the subject into its mouth and consume them. The consumption usually takes between 16 to 24 hours, during which SCP-1305 will use the lure to draw in

additional subjects. Testing has shown that there appears to be no limitation on the number of subjects SCP-1305 is able to consume at one time.

As SCP-1305 consumes additional organic matter, it will create additional lures, which it will send into the structure it inhabits. These lures will be highly audible, especially at times when human subjects are within the structure. In addition, these lures may take the form of subjects SCP-1305 has consumed, primarily taking form of subjects that its prey was familiar with. This process will continue until no prey organisms are left within the area, at which point SCP-1305 will sever itself from its added mass, and move to a new area.

SCP-1305 was recovered from a residential home on 7/19/1953, after reports of the homeowner going missing under mysterious circumstances reached Foundation personnel in [REDACTED]. As of 8/11/1953, SCP-1305 has been classified as Euclid.

Addendum: Document recovered with SCP-1305.

> Had a bad day today. Mr. Shaw was being really rude, interrupted me during my presentation. I'd been working on that thing for months, and he had to open his fat mouth to ruin it. The jerk. Rest of the day was pretty average. I think that cat is back though, because Jimmy said he heard scraping on his bedroom window. He seemed kinda spooked, but I got him to bed in about an hour.

> Jimmy was at his Mom's house today, so I had the place to myself. The food I set out for the cat was gone, which is a good sign. Gonna put the next one closer to the door, and leave it open a crack. See if it comes in.

> Saw the cat today! It was on the windowsill, after I came in when Jimmy said he heard scratching.

> The police say they haven't found any notes for kidnapping. God… I feel sick to my stomach. Jimmy is gone. Someone has taken my son. Please, god, let him be okay…

> Im alone today. Jim's gone, and his fucking mother left town. I'm sure she has something to do with it. I don't care what Bannister says, he's out there somewhere. I heard the cat scratching again today.

> Jimmy liked it a lot.

> I saw him today he's alive HE WAS THERE outside my window, looking in and waving.

Footnotes
1. Similarity between SCP-1305's mimicry behaviors, and that of instances ofSCP-1513has been noted. Investigation into the possiblity of a shared origin for both anomalies is ongoing.

« SCP-1304 | SCP-1305 | SCP-1306 »

SCP-1306: Potion of Summon Bird

Item #: SCP-1306

Object Class: Safe-doctrina

Special Containment Procedures: The exact recipe for SCP-1306 is known only to Site 40's current director and two researchers of said director's choice. Currently, Site Director Adams, Researcher Evans, and Researcher Estevez are entrusted with this information. All proposed tests of SCP-1306 must be approved by one of these three individuals.

A piece of paper detailing SCP-1306 is kept in a sealed envelope in Locker R-13 at Site 40's Low-Value Storage wing.

All radio programs, television programs, books, magazines, etc. that deal with the topic of birds must be screened prior to release for content pertaining to SCP-1306 before being released to the general public. Any persons found to have knowledge of SCP-1306 must be interviewed and subsequently administered Class C amnestics.

A feeder is to remain in place outside Site 40 for purposes of testing SCP-1306. Instances of SCP-1306-1 are to be observed and all information logged. Any attempts to catch instances of SCP-1306-1 are forbidden.

Description: SCP-1306 is a bird food recipe calling for equal parts (by weight) sunflower seeds, peanut butter, and four ingredients not commonly found in bird food, two of which are normally poisonous to birds. Despite its ingredients, birds fed SCP-1306 do not show any signs of illness from consuming it, although SCP-1306 alone is not sufficient to meet the dietary needs of any bird.

When SCP-1306 is prepared and placed in an appropriate feeder outdoors, a variety of birds will arrive at a rate of approximately two birds per hour and consume a quantity of SCP-1306. This behavior

will continue until all of the prepared SCP-1306 is consumed. These birds, collectively SCP-1306-1, will appear from the nearest unobserved area. Instances of SCP-1306-1 generally display properties that would qualify them for special containment procedures under other circumstances, including significant deviations from typical avian anatomy or behavior.

It is hypothesized that SCP-1306-1 do not exist prior to their appearance — tests have shown them capable of emerging from closed, empty containers. No instance of SCP-1306-1 has ever been caught. Any attempts made to contain them have resulted in failure. Reasons for failure have included unexpected displays of strength or speed from the instance, and equipment failure.

After consuming a small amount of SCP-1306 (relative to their body size), instances of SCP-1306-1 will retreat to the nearest unobserved area. There is currently no evidence indicating that SCP-1306-1 exist after this. It is thus considered safe to test SCP-1306 without concern that instances of SCP-1306-1 will escape into the wild.

Observation Log 1306-81-Gamma: A sample of SCP-1306 was placed in a feeder outside Site-40 approximately 0.3 meters off the ground. The following information was collected between the hours of 14:21 and 19:30 on April 9, 1943. The feeder was refilled with SCP-1306 hourly.

Time	Description of SCP-1306-1	Behavior of SCP-1306-1
14:29	Similar to an adult male specimen of *Afropavo congensis* (Congo Peacock) in appearance. Subject's feathers glowed blue and emitted heat. Later analysis shows that this was consistent with low levels of Cherenkov radiation.	Subject approached the feeder, consumed a small amount of SCP-1306, and left. The ground was tested and shown to be mildly radioactive for ten minutes afterwards.

14:47	A specimen of *Tyto alba* (Barn Owl). Gait suggested that the subject was incapable of flight due to some injury.	Upon reaching the base of the feeder, subject began to scratch unidentified symbols in the surrounding dirt. After four minutes, the subject's legs grew to a height of 0.4 meters. The subject then consumed a small amount of SCP-1306 and left.
15:28	A specimen of *Goura scheepmakeri* (Southern Crowned Pigeon). Subject was missing both legs, the majority of its bowels, and its left wing. There was no indication that the subject was alive.	Subject floated towards the feeder through unknown means. A small amount of SCP-1306 was observed to leave the feeder and float into the subject's mouth. The subject then left in a similar manner.
16:09	A specimen of *Meleagris gallopavo* (Wild Turkey) that had apparently been freshly coated with a large amount of red, white, and blue paint.	Subject approached the feeder, slipping twice on small pools of paint dripping from its body. Subject consumed a small amount of SCP-1306 and left, falling three more times on the way back.
16:39	A specimen of *Apteryx australis* (Common Kiwi) that had no visible legs.	Subject did not approach the feeder. Instead, what is believed to be a hollow length of bone extended from its

		mouth to the feeder (an estimated 3.5 meters). The subject acquired a small amount of SCP-1306 with this appendage and retracted the bone, then left.
16:46	An adult female specimen of *Struthio camelus* (ostrich).	Subject approached the feeder and turned to directly face Research Assistant Jacobs (who was not visible from its position). Subject spoke the phrase "I bet you weren't expecting this, were you, Mikey?" in a voice closely resembling RA Jacobs' father before consuming a small amount of SCP-1306 and leaving.
17:32	A group of bird legs corresponding to at least seven different species, reaching approximately 2 meters in length.	Subject appeared to sprout from the ground near the feeder and extend upwards. Each leg acquired a small amount of SCP-1306 and retreated into the ground.
18:07	What appeared to be a juvenile golden retriever (*Canis lupus familiaris*) in a hummingbird costume made of construction	Subject used the costume to fly to the feeder in a manner similar to that of a hummingbird, consume a small

	paper.	amount of SCP-1306, and leave. How this was accomplished is unknown, as the subject did not exhibit the aerodynamic or muscular properties appropriate for this behavior.

Testing was halted at this time, as the available supply of SCP-1306 had been exhausted.

« SCP-1305 | SCP-1306 | SCP-1307 »

SCP-1307: The Person Sharpener

Item #: SCP-1307

Object Class: Safe

Special Containment Procedures: SCP-1307 is to be kept in a standard hazardous-object containment storage at Site-19. No pencils shall be stored or brought within 6 metres of the object. Under no circumstances outside of testing should a pencil be placed in the hole on the front of SCP-1307, unplugged or otherwise.

Description: SCP-1307 is a standard black electric sharpener with a standard size receiving hole and a loading bay underneath designed to catch pencil shavings. On its back is a standard electric cord which appears to be functionless; SCP-1307 will still activate whether or not it is unplugged.

SCP-1307 is activated in a similar manner to a conventional electric pencil sharpener, by inserting a standard sized pencil into the hole on the front. The effect will not be activated by pens, pencil-shaped steel rods, or [REDACTED]. Note that this effect *will* be activated by mechanical pencils.

Upon an individual inserting a pencil into SCP-1307, the subject will find themselves unable to remove their hands from the pencil. All attempts to pry the hand from the pencil will fail, and the only way to remove the individual from contact is amputation of the hand. While SCP-1307 is active, it adheres itself to the surface on which it is located and will not move. Additionally, the pencil becomes completely unbreakable. Once the pencil has sharpened down to the point where the individual's hand is located, SCP-1307 will continue to draw the pencil in, enlarging the hole as far as needed to take in the hand of the subject. As the subject's hand is drawn in, it is "sharpened" along with the pencil, shredding the limb in the process.

SCP-1307, through the course of several tests, has demonstrated the ability to tear through a full human body in the course of about 4 hours. Despite severe blood loss, subjects are kept alive until the brain is destroyed by SCP-1307, at which point the subject's vital functions cease. SCP-1307 then continues the take in the rest of the body and shred the entirety of the corpse. Afterwards, the only blood that is left in the area is any that did not land in the vicinity of SCP-1307. Any blood spilled on, inside, or near SCP-1307 seemingly vanishes, along with the rest of the subject's body. Attempts to send trackers through with the subject have proven fruitless, as the trackers are shredded along with the individual.

SCP-1307 was recovered at Elementary in , Colorado.

« SCP-1306 | SCP-1307 | SCP-1308 »

SCP-1308: Hungarian Floater

Item #: SCP-1308

Object Class: Euclid

Special Containment Procedures: SCP-1308 is to be held in a modified standard enclosure on Bio Research Site-21, such that the door mechanism, the main ventilation mechanism, and any apertures wider than 25 mm in two perpendicular directions are to be covered with a steel mesh coated with a tin layer at least 0.08 mm thick.

Any personnel entering the enclosure are to wear Level B Hazardous Materials protective equipment, modified by attaching strips of tin foil no smaller than 100 X 25 mm to the surface, no further than 50 mm apart. To ensure personal safety in case of damage to the suit, a layer of tin foil protecting the head and neck is to be worn under specified protective clothing while inside the enclosure, or during times of significant risk of an SCP-1308 containment breach.

Note: Aluminium foil is not an acceptable substitute for tin in this case. - Researcher Eisenberg

All personnel entering the enclosure are to be equipped with a standard-issue electroshock weapon. Personnel are to be reminded that due to lack of discernible vital organs, gunfire is of limited effectiveness against instances of SCP-1308. For longer incapacitation for capture or research, portable pressurized sprayer units with chloroform solution are to be used; these are to be issued to any Level 1 personnel with SCP-1308 clearance that have undergone appropriate training.

The enclosure of SCP-1308 is to be kept at a temperature of 28 degrees Celsius, and a relative humidity of 47%. Once per ten days, one human cadaver within 4 hours of exitus one live pig of mass

cca. 50 kg per specimen is to be introduced into SCP-1308's enclosure. Two days after each feeding, the cell is to be cleaned of residue. No more than three instances of SCP-1308 are to be stored in a single enclosure.

Newly captured SCP-1308 specimens are to be examined for deviations in body makeup and classified as per Document-1308-C, implanted with a positioning and identification chip and internated in an enclosure as appropriate.

Description: SCP-1308 refers to several instances of an organism resembling an ambulatory sheet of human skin of cca. 1 x 3 m size,[1] capable of flotation through currently unknown means.[2] The upper surface of SCP-1308 specimens resembles human skin, including features such as body hair, birthmarks and occasional patches of keratin. The lower surface is smooth, and contains a number of modified sweat glands, capable of excretion of SCP-1308-1, a translucent yellow liquid of composition resembling blood plasma.

Below the skin, SCP-1308 contains two layers of perpendicularly oriented muscular fibers, an adipose layer, and occasional segments of reinforcing cartilage. The tissues of SCP-1308 contain a large number of capillaries leading from the surfaces, apparently responsible for gas exchange, towards the central mass - the blood circulation is ensured by means of a pattern of involuntary muscle contractions. Large scale muscular contractions are used as a means of propulsion, and the musculature of SCP-1308 has been shown capable of exerting forces upwards of 600 N. SCP-1308 has a decentralized nervous system composed of a grid of ganglia cca. 5 mm diameter, irregularly located with a density of cca. 25 per sq. m, connected by axon strands.

DNA testing on cells harvested from SCP-1308 instances confirms them to be human in origin.

SCP-1308 appears to be sentient, and seems to prefer secluded areas such as abandoned buildings, the vicinity of waste disposal facilities, or maintenance facilities, however a single specimen [REDACTED]. When inactive, SCP-1308 will usually adhere to a wall or another structure, seemingly preferring heights of ~2.5 m and above.

Through specific patterns of muscular contractions, combined with the folding of its body, SCP-1308 is capable of emitting melodic sounds, as well as replicating sounds from the environment (including human speech) with varying intensity.[3] This property plays a role in luring potential victims; however SCP-1308 specimens tend to vocalise at apparently random times, even during or after feeding.

If a human being approaches an SCP-1308 instance, it will attempt to envelop and restrain them, and force a significant part of its surface under their clothing, such that it is in contact with bare skin. Subsequently the glands on the surface of SCP-1308 will excrete SCP-1308-1.

SCP-1308-1 rapidly penetrates human skin, and within three minutes of application, causes permanent dissociation of intercellular bonds in animal tissues up to a depth of cca. 1 mm.[4]. Once this has taken place, SCP-1308 will proceed to slowly absorb the tissue and reintegrate it into its body mass through unknown means, a process which has been observed to take between 3-7 hours.

Once the absorption is complete, SCP-1308 will release its victim and float away. Archival records and testing have shown encounters with SCP-1308 to have a survival rate of roughly 80%, out of which most deaths were caused by secondary infections following large-scale skin loss, suffocation or circulatory failure due to constriction, or shock. Thorough cleaning of the wounds using physiologic solution, followed by prophylactic levomycetin treatment have been shown to aid recovery. If large-scale areas are affected, skin grafting is recommended.

SCP-1308 instances show intense reluctance of coming into contact with metallic tin and certain tin compounds - the cause seems related to SCP-1308-1 being an effective catalyst in the process of tin oxidation.

Recovery Log: SCP-1308 first came to attention of the Foundation in , Hungary on / /1995, following the hospitalisation of János B , a maintenance employee at the heat plant. Following his interview by a hospital psychiatrist, and the unusual nature of his

injuries, a Foundation liaison interviewed him posing as a Ministry of Agriculture special committee worker. (see Addendum 1308-1 for interview). A plan of approach was drafted based on his testimony, and an instance of SCP-1308 was successfully captured in the maintenance tunnels. J.B. was treated with amnestics, and the hospital records were altered to record the injury as self-inflicted, following a psychotic episode.
To date, five more instances have been contained.

Addendum 1308-1:

Interviewed: János B (subsequently J.B.), maintenance employee of the heat plant.

Interviewer: Researcher F , posing as a member of special committee of the Hungarian Ministry of Agriculture.

Foreword: J.B. was brought to the state hospital by his colleague, Béla B , who found him in one of the maintenance rooms. He was hospitalised immediately due to a head injury, extensive loss of skin tissue on his back, chest, and right arm, infection, and fever. Upon admission, his blood alcohol content was cca. 0.5 promile. J.B.'s claims of being assaulted by a "skin bed sheet" - coupled with the unusual nature of his injuries - prompted Foundation investigation.

<Begin Log>

J.B.: Béla? Brought in the bottle? Pass it! Before the doctor comes!

Researcher F : Excuse me. Doctor István Varga, trustee of the ministry of Agriculture-

J.B.: Be… Doctor? Agriculture… Do I look like a bull?… Sorry, it was a joke — who are you looking for?

Researcher F : You are some János B , born / /1965 in Szeged?

J.B.: Yeah, that's me… but… what the hell… Sorry, I-

Researcher F : I'm here because of what you told the doctor when they took you in. See-

J.B.: Really? Fuck… He was saying he'll give me a calming shot… so… but agriculture?

Researcher F : Your case isn't the first, Mr. B . What you encountered appears to be an invasive species of constrictor snake, accidentally imported from Uzbekistan. We just need to confirm some details before it can be properly reported and dealt with.

J.B.: Snake? It looked nothing like a fucking snake… It was… I dunno… Like a skin… Live skin, like on my arm. Hell, it even had hair. And it was flying.

Researcher F : It can float for short distances. It's a relatively rare species, it just has better living conditions under our geography. A lot like rabbits in Australia. But regardless. Your colleague told us he found you lying in the maintenance hall. Can you tell me what happened?

J.B.: It was Tuesday, I think. I was doing two shifts, one for Gergely. Happened about an hour through the second one… Not sure. I went to take a leak, then… What did I… Right. See, I heard… I thought I heard the radio. Thought Béla left it on or something, and I didn't notice before… Fuck, I thought, he's gonna waste all the battery. So I went to look for it. Thought I heard it from one of the storage rooms… I thought… See, we went there for a smoke sometimes. It was odd, too. Sounded like… I think I heard it once on television, in some movie.

Researcher F : Possible. Carry on, what happened when you entered?

J.B.: I went in… Wait, no. I ran in… See, I was walking through the hall, and suddenly the music stopped, and I thought I heard a voice… So I grabbed a wrench, and

ran in, see… We had a trespasser before… the gate guard is rather old, and he likes the bottle. We've had a few problems with him.

Researcher F : What problem?

J.B.: Hobos, the fucks. Fuck them. Like, through winter, but all the time, some'd sneak in to sleep and make a fucking mess.

Researcher F : So you went in. What happened?

J.B.: At first, nothing. I opened the door, nobody there. Went in, then… fuck. I heard the… shriek from behind and above me. I turned, and this… thing. Like I said… Like a carpet or bed sheet… But it was floating in air, curled up, like… A bit of it was like a tube, and… It… The music started again. And it went at me… fast, like a cat running. I froze… Then got my shit together, tried to hit it with the wrench. Didn't help.

Researcher F : Did the hit damage it any?

J.B.: Oh, that… that it did. See, I got a pretty strong arm… the wrench tore a hole in it. Sprayed something out, too. But it didn't care. See, the thing sort of flexed around my arm. And then it went up… it was warm and it felt like being licked by a dog, but it held my arm really tight. I tried to yank it out but I fell… Then, the thing began sliding up, and up my sleeve. Like I said, it looked like skin, with hair. I think I saw a head or some such, but I don't know… Then it wrapped around what it could, tore through my shirt. Didn't make with the belt, fuck - thank to Virgin Mary - hell. Because then, see… Once it had me wrapped tight, it began doing something, it started slow, but then it burned like when you're chopping fefferons and touch your eye or dick or some… fuck. And it wouldn't let go… I tried to move, got it to budge a bit, but it wrapped again, tighter. And it… I think a part of it was humming again, but might be just my head. Hell, I don't remember how long I was there.

Researcher F : What do you recall next?

J.B. When it finally let me go, floated up, off, quite quick. I tried getting up, I was… my legs, arms, all fell asleep. Took me ages to just get moving again… I ran to the main maintenance hall, wanted to get the telephone, call someone… I… I think I tripped or something. The next thing I recall was Béla swearing and slapping me… must have been his shift or what. He took me to the hospital, thought I hurt my head talking about this.

Researcher F : That'll be all, thank you. Please, take this pill - it's an antivenin. The poison of this snake species is rather subversive - causes hallucinations at first, and if left untreated, liver damage after a few days.

J.B.: Thanks… fuck, the doctors didn't know about that.

<End Log>

Closing Statement: J.B. was administered Class-A amnestics, the injury being explained to him as steam burns following a boiler accident. The hospital staff were informed his injuries were self-inflicted and they, as well as his testimony, resulted from delusions of his own skin attacking him.

Footnotes
1. The size of the captured specimens varies within 15% of a set limit, with the exception of one instance which is only 1.8 x 0.9 m in size. Thickness has been shown to vary throughout each specimen between 2-50 mm depending on presence of additional organs, or subcutaneous fat deposits.
2. Examination has shown the presence of several cavities filled with hydrogen gas roughly 20 x 150 x 5 mm in size at roughly 200 mm spacing in the captive specimens, however, the volume of hydrogen gas present isn't sufficient to explain the low density of SCP-1308, and current hypotheses consider these to be vibration-sensing organs.
3. It is suspected the shaped keratinous platelets on the surface play a significant role in such emissions by acting as vibration nodes.

4. The lower surface of SCP-1308 has been shown to be resistant to this effect, while the upper is not.

« SCP-1307 | SCP-1308 | SCP-1309 »

SCP-1309: Time-Locked Town

Item #: SCP-1309

Object Class: Euclid

Special Containment Procedures: Site 24 has been constructed seven kilometers east of SCP-1309 for purposes of observation and record keeping. Any non-authorized individuals found approaching either area are to be detained, questioned, and administered Class-B amnestics prior to their release.

SCP-1309 is to be continuously monitored for any irregular activity, including spatial anomalies or behavior of its inhabitants. Interaction with the inhabitants of SCP-1309 outside of authorized testing and interviews is to be kept to a minimum. Inhabitants showing continuous or otherwise invasive interest in Foundation personnel or objectives are to be administered Class-B amnestics. Because the mechanics of SCP-1309's anomalous properties are not yet fully understood, personnel are forbidden from spending more than twelve consecutive hours within SCP-1309.

Description: SCP-1309 is the town of Kleinberg, located in Dewey County, South Dakota, although inhabitants claim they are located within Armstrong County.[1] SCP-1309 has a population of approximately 2,300. The town's inhabitants are of amicable disposition, and are generally receptive to questions from Foundation personnel. Biological analyses show no abnormalities within the inhabitants.

SCP-1309 is effectively locked in a recursive period of time within the 1920's. Long-term observation has determined that events do not repeat with each cycle, and inhabitants retain all memories and experiences between cycles. Analysis of on-site records, coupled with interviews, have determined that the period of time is 3,289 days long, extending from February 5th, 1920 to August 19th, 1928. No discernible spatial or temporal anomalies are detectable when

the cycle resets. The inhabitants of the town live and age as would be expected, and both deaths and births have been observed.

As of writing, the only constant events in each cycle are the inhabitants' perceptions of time, and all outside news received in SCP-1309 via radio broadcasts or newspapers. Newspapers and radio broadcasts received in SCP-1309 are consistent with documentation from that time period, and repeat on the correct dates. Assuming that the anomaly first took effect in accordance with the actual August 19th, 1928, SCP-1309 has experienced this eight-year cycle approximately ten times.

SCP-1309 is largely self-sufficient. However, supplies that are rare or otherwise difficult to produce or obtain locally are delivered by a truck that materializes at the edge of SCP-1309, and upon delivering supplies, dematerializes at the opposite edge. Commonly delivered supplies include non-local newspapers, brand-name products and food, and certain raw materials. Interrogation of the drivers has determined that they have no awareness of any anomalous properties.

Observation has determined that if an inhabitant of SCP-1309 attempts to leave SCP-1309, they will dematerialize at the edge of the town, and immediately materialize on the opposite side. Questioning has found that inhabitants who disappear and reappear in this fashion believe they have just returned from an extended vacation. However, SCP-1309's inhabitants typically show no desire to venture outside of their town, often stating they are content with life in their town. Inhabitants show no awareness of anomalous properties, even when explicitly brought to their attention. See attached documentation for more detail.

SCP-1309 Interview Log

Interviewer: Researcher Laura
Interviewed: George
Note: The interview was conducted at the beginning of a new cycle

<Begin Log>

Researcher Laura : Good morning, Mr. .

George : Morning, ma'am.

Researcher Laura : I'd like to ask you a few questions, if that's alright?

George : It's no trouble at all. This for the papers or something?

Researcher Laura : Yes, just a simple survey. Now, can I ask how old you are?

George : I am twenty-nine years old.

Researcher Laura : And your birth date?

George : March 15th, 1922.

Researcher Laura : Thank you. Just for the record, what is today's date?

George : February 5th.

Researcher Laura : And the year? It seems to have slipped my mind.

George : Funny thing to lose track of. It's 1920.

Researcher Laura : Thank you. Now, what was yesterday's date?

George : It was August 19th, 1928. What exactly is this about?

Researcher Laura : Bear with me, this is just routine. Now, if you're able, could you name the last seven Presidents of the United States?

George : Is this some sort of history quiz? My memory isn't perfect, but I'm pretty sure it would be Wilson, Harding, then Harding died in office, so Coolidge took over, then Wilson, Harding, but he died two years into his term, Coolidge, and right now we have President Woodrow Wilson.

Researcher Laura : Mr. , does anything you have told me strike you as odd?

George : No, why would it?

Researcher Laura : You told me that your birthday is March 15th, 1922, and that today's date is February 5th, 1920, correct? And that the same three men have served as President for the last seven terms.

George : I did say that. What are you getting at?

Researcher Laura : Think it through, Mr. . You believe that it is 1920. That is a full two years before you say you were even born.

George : Right.

Researcher Laura : Furthermore, you said that yesterday it was 1928. Do you believe eight years have suddenly disappeared?

George : I'm not sure I understand what you mean. Are you sure you're not confused?

Researcher Laura : Do you know when your parents married, Mr. ?

George : They married in 1924.

Researcher Laura : Which is four years

from now.

George : That's correct.

Researcher Laura : That isn't at all strange to you?

George : No ma'am.

Researcher Laura : Alright. Tell me, Mr. , how do you like living in your town?

George : It's perfect. I'd never want to be anywhere but here and now.

Researcher Laura : Thank you very much Mr. , I believe we're done here.

George : You're welcome, I guess. Not sure what you got from this.

<End Log>

Addendum 1309-A
A thorough survey of on-site historical records has revealed that the inhabitants of SCP-1309 have diverged from the sociopolitical norms of the 1920s on more than one occasion. Some significant events are documented below. Due to the disorganized and repetitive nature of SCP-1309's available records, it is difficult to tell when events took place in regards to actual dates. However, a tentative order of events has been established.

SCP-1309 Event Log

Perceived dates within SCP-1309: June 1927 through May 1923
Description: A significant portion of SCP-1309's population began advocating for the civil rights of African-Americans. This movement does not have any discernible catalyst. This movement carried on for approximately six years.
Notes: Race relations within SCP-1309 do not currently

appear to be significantly different from what would be expected of 1920s North America.

Perceived dates within SCP-1309: October 1921 through April 1923
Description: Inhabitants of SCP-1309 began staging regular protests in front of the city hall, demanding that Warren G. Harding repeal the "recently passed" 19th Amendment. Analysis has determined that, in actual time, Dwight D. Eisenhower was standing President.
Notes: South Dakota granted constitutional suffrage to women in 1917, three years prior to the passing of the 19th Amendment.

Perceived dates within SCP-1309: May 1922 through January 1922
Description: Strong push for an increase in funding for science and education. Many inhabitants claimed it might be possible to get to the moon by 1934.
Note: No known catalyst. Analysis of available records have determined that this movement persisted for two full cycles, approximately 16 years.

Perceived dates within SCP-1309: March 1925 through December 1927
Description: Large movement favoring the legality of homosexual marriage. Population as a whole appeared to be more open to homosexuality.
Notes: The catalyst for this movement appears to have been a romance between two well-known male inhabitants of SCP-1309. Both men are now deceased.

Perceived dates within SCP-1309: April 1925 through September 1924
Description: A majority of the inhabitants of SCP-1309 began outing and ostracizing homosexuals within the town. Protests are held demanding that homosexuality be "purged from our town."
Notes: It is currently unknown whether this event took place before or after the population's push for marriage equality.

Footnotes
1. Armstrong County was annexed into Dewey County in 1952

« SCP-1308 | SCP-1309 | SCP-1310 »

SCP-1310: Examination Room 10

Item #: SCP-1310

Object Class: Euclid

Special Containment Procedures: The building containing SCP-1310 has been designated Site . It is to have the appearance of being condemned and awaiting demolition. The door leading to SCP-1310 is to be opened for at least 20 out of 24 hours per day, in order to minimize possibility of generation events. All specimens emerging from SCP-1310 are to be detained for questioning. Following the questioning session, all specimens of SCP-1310-A,-B and -C are to be treated with protocol England-1310-84.

Description: SCP-1310 is the designation for examination room 10 at the former "[REDACTED] Pediatrics" center located on the campus of the [REDACTED] Medical Center in , Ohio. SCP-1310 has the dimensions of 5m x 3m x 5m. The room is designed for simple medical examinations of individuals under 18 years of age, and is decorated with an animal-themed mural on the western wall. It has all the typical apparatuses of a mundane medical examination room, such as a case for syringe disposal, a sink, a supply of gauze and tongue depressors, and an examination table.

SCP-1310 enters an active state when the door to the room is closed for, on average, a span of 5 minutes and 43 seconds. After that time has passed, at least one human being will emerge from SCP-1310, having been generated within the room's confines. The process by which the generation is done is not understood, and attempts to record the inside of the SCP-1310 during the generation process have resulted in failure of all electronic equipment.

The generated humans will fall under three specific categories: one under the age of 18 (hereafter designated SCP-1310-A) and one which the first specimen will usually treat as its parent or guardian

(SCP-1310-B). In some cases, a third specimen (SCP-1310-C) will be generated, identifying itself as a doctor or nurse employed at [REDACTED] Pediatrics. These subjects will have memories that correspond to actual people and locations in the town of [REDACTED] and surrounding areas; however, these memories are fabricated. No records of any instances of SCP-1310-A and -B have been found as of the date of writing [- -20], despite items such as social security cards and drivers licenses being found on several of the specimens.

Addendum 1310-01: Following the acquisition of SCP-1310, instances of SCP-1310-A, -B and -C ceased appearing for a 4 month period. Believing there to be a link between the status of the [REDACTED] Pediatrics facility and the appearance of SCP-1310-A and -B, Dr. , the researcher overseeing containment of SCP-1310, ordered the clinic be re-opened and operated as normal for a period of three months. During that time, new instances of SCP-1310-A appeared, with the same number of SCP-1310-B. instances of SCP-1310-C were generated as well. See Document 1310-02 for details.

Document 1310-02: *I knew I was on to something! If we let patients into the clinic, SCP-1310 outputs new instances of SCP-1310-A and -B. I have formulated a theory that SCP-1310 exists simultaneously in at least two, if not more, universes. When the door to SCP-1310 is closed in both the opposing universe(s) and in this one, then SCP-1310 re-routes the people within the room to this universe. The only discernible difference between our universe and theirs is that instances of SCP-1310-A and -B do not exist in our universe; request testing to see if inter-universal travel is possible using SCP-1310; if so, then perhaps we could get into contact with the other universe's Foundation!* -Dr.

Dr. 's request has been approved. Testing is scheduled to begin7-26-200 12-1-200 3-12-200 [Edit 7-5-200] : It has been almost a year since Dr. has requested testing with SCP-1310, but has not been able to test, as D-Class have not been requisitioned to him for testing. This issue is to be remedied ASAP. [Final Edit: 7-12-200] Dr. has canceled testing, citing a lack of test subjects.- O5-

Incident 1310-B-31: On 5/20/20 , SCP-1310 was opened for cleaning, and a single specimen of SCP-1310-B was found inside, with no accompanying SCP-1310-A or -C. SCP-1310-31 identified himself as Charles Freedman and stated that he had been an employee of the Foundation for the past five years. SCP-1310-31 was taken into custody, and interviewed. The following is a transcript of this interview:

>Begin Log<

Dr. : You said that you worked for the Foundation. Why should we-

SCP-1310-B-31: I didn't just work for the Foundation. I was your research assistant. You went on for hours about your bullcrap theories about it.

Dr. : How fortuitous. And, if you were my research assistant in this other universe, what, pray tell, were you doing inside of SCP-1310?

SCP-1310-B-31: You asked- no, you *told* me to go in there. Then the door shut, and when I came out, nobody remembered who I was.

Dr. : Because you do not exist in this universe. Now, you claim to have a girlfriend named-

SCP-1310-B-31: Oh my god. *SCP-1310-B-31 sighs loudly.*Get your head out of your ass, .

Dr. : Excuse me?

SCP-1310-B-31: Ever hear of Occam's Razor? What's a simpler explanation: the room porting people over from other universes at complete random? Or people from this universe going into 1310 and entirely erasing people from this timeline?

Dr. : Don't be absurd. All the evidence suggests-

SCP-1310-B-31: Chew on this for a second, then. You

remember all the times you were going to test it on humans? See if they could go into other universes? How the tests **never happened**? What if they did happen, and nobody remembers it, because that's now how SCP-1310 works?

Dr. : I think we're done here.

SCP-1310-B-31: No, we aren't. And one last thing: I know about all the specimens emerging from 1310 that you never reported. There must've been, what, 12 of them? Maybe more? All in *D-Class Uniforms.*

Dr. : Guard, escort him out.

SCP-1310-B-31: (sounds of struggling) Listen to me! You hid data! *SCP-1310-B-31 directly addresses the microphone.* I have proof! Listen to me!

(At this point, SCP-1310-B-31 was sedated and escorted out of the room)

<End Log>

While I will admit that he did have some valid information on the Foundation, there is no evidence to suggest that I hid evidence. In the other universe, perhaps, but in baseline, there is no reason for me to hide evidence. What would I gain from it?

Hopefully, we can get protocol England-1310-84 over with and make sure he never tries to bother us again.- Dr.

In a follow-up interview conducted by Foundation security at Site- , SCP-1310-B-31 directed staff to Dr. 's office, where a file containing photographs of unknown SCP-1310-B subjects was located, along with several notes regarding the alleged missing data. All SCP-1310-B subjects were wearing D-Class uniforms.

Due to the gross incompetence displayed by Dr. regarding SCP-1310, his employment has been terminated as of 4/20/20 . Containment Procedures will be updated by the ***Antimemetics Division*** *in accordance with the findings presented by SCP-1310-*

B-31.- O5- .

SCP-1311: Sudden Body Integrity Failure

Item #: SCP-1311

Object Class: Euclid

Special Containment Procedures: All stationed personnel currently assigned to SCP-1311 are to monitor all local homicide police reports for evidence of SCP-1311 outbreaks. Instances of SCP-1311's pattern being positively identified should be reported immediately. Any witnesses of positively identified SCP-1311 outbreaks are to be given Class-C Amnestics and have their accounts to local authorities modified as necessary. In extreme cases, Class-A Amnestics and relocation are permissible.

> *Update as of June 7, 201 : For the purposes of observation and further study, all Foundation personnel currently assigned to SCP-1311 are tasked with the recovery of an individual suffering the condition that has not yet self amputated. In instances where recovery is not viable, video or photographic evidence is also acceptable.* -Dr.

Description: SCP-1311 initially manifests as a case of sudden, severe body integrity disorder—the belief that part of an individual's body is not actually theirs—in people with no previously recorded history of such a condition. In most instances, SCP-1311 affects the perception of one's hands or feet, though in some cases, fingers, ears, eyes, teeth or even organs have also been subject to the condition. SCP-1311 was previously regarded as mere coincidence, but the repeated instances of SCP-1311's more anomalous aspects led Foundation operatives to require additional research, which in turn caused its final classification.

As with most cases of acute body integrity disorder, the majority of subjects infected with SCP-1311 have attempted to self-amputate or remove the affected part of the body themselves, resulting in their

death. In the cases where a minor part of the body is targeted and successfully amputated, all sufferers have expressed a profound feeling of relief at its removal. No survivors of major removals have currently been recovered.

Further research was first suggested when Dr. noted that, in all cases where an infected individual was successful in removing the afflicted part of their body, that part of the body was never located. Survivors of the condition universally claimed to have “not noticed” or to “have forgotten” what happened to the body part after removal, though they continue to express happiness that it is gone. No removals have yet been observed or recorded by Foundation personnel.

Most often, outbreaks of SCP-1311 are discovered after the fact by tracking murder cases involving limb amputation or dismemberment, usually classified as such due to the missing body parts. To date, at least forty-three (43) outbreaks have been recorded around the world, with only the outbreak in happening at the same location more than once.

Outbreaks of SCP-1311 always happen in groups of four individuals. There is no identified source for SCP-1311 outbreaks, though those suffering from the condition always have some link between them. While most individuals possess a solid connection, such as working in the same office or having the same doctors, other outbreaks have possessed links as tenuous as:

- Eating the same meal for lunch (at different locations);
- Being treated for nail biting;
- Having been a member of the same online community, [REDACTED] (said community is now being monitored, due to its connection to SCP-1311 correlating to a significant increase in the site's popularity);
- Being allergic to apples;
- Being the child of a pancreatic cancer survivor;
- Having sex with the same woman (the woman showed no signs of the condition herself, though she is currently in custody for observation and further testing);
- Simultaneously reading the same book, *and the* - .

The extremely questionable relations between the groups were initially noted as reaching too far by officials, but these are the only currently documented links.

The full list of currently missing body parts currently includes:

- Sixteen arms (hands intact).
- Twelve legs (feet intact).
- Thirty-six hands.
- Seventy-two teeth, including canines, incisors, and molars in various quantities.
- Four sets of genitals, both genders.[1]
- Twelve kidneys.
- Four lungs.
- Eight spleens.
- Three livers.[2]

Addendum SCP-1311-1:

After the recovery of **SCP-1993** in , research was conducted in an effort to discover a link between SCP-1311 and SCP-1993. Currently, all SCP-1311 survivors tested have shown no sign of the SCP-1993 compulsion. Research is ongoing.

Footnotes
1. Interestingly, these sets came from two separate instances, the first being three males and one female and the other of one male and three females.
2. The final victim is still unlocated; however, efforts are ongoing as of - - 13. Currently, researchers theorize that the victim is most likely French speaking Quebecois with links to Quebec independence groups, though this is unconfirmed.

SCP-1312: Site 41

Item #: SCP-1312

Object Class: Safe

Special Containment Procedures: SCP-1312 is to be contained behind a perimeter of electrical fencing two (2) meters in height. All potential exits from SCP-1312 are to be kept under guard at all times. Any entities attempting to leave SCP-1312 are to be subdued and taken into containment immediately. No objects or individuals are to enter SCP-1312 without specific authorization.

Any testing of SCP-1312 must be approved by at least three (3) members of Level 3 personnel.

Description: SCP-1312 is the designation given to the unfinished Site 41, which experienced an incident seven (7) months into construction in which the entire site relocated three (3) kilometers north. All staff present within SCP-1312 at the time are presumed killed or in such a state that they are to be considered lost.

SCP-1312 is home to a large number of humanoid entities[1], all of which resemble featureless human beings of solid coloration. These entities show limited intelligence and are docile until they become aware of the presence of an object or organism foreign to SCP-1312. At this point, they will take the object or organism and contain it utilizing the facilities already present in SCP-1312. In cases where the foreign presence is an organism, they will subdue it first by rendering it unable to move or unconscious. These humanoid entities are divided into three separate types:

- **SCP-1312-1:** Humanoid entities of a solid white color. SCP-1312-1 will engage in acts which are assumed to be attempted experimentation with objects or individuals which have been captured. They will typically not approach captured objects themselves, instead directing SCP-1312-3 instances

via a series of clicking and groaning noises. SCP-1312-1 also appear to write documentation regarding objects or individuals they have captured. (See Recovered Documents 1312-1.)

- **SCP-1312-2:** Humanoid entities of a solid black color. SCP-1312-2 appear to be in charge of the capture and subduing of foreign objects and individuals. They are capable of speech, but this appears to be limited to the shouting of 'containment breach' when they sight a foreign presence in SCP-1312.

- **SCP-1312-3:** Humanoid entities of a solid orange color. SCP-1312-3 are directed by SCP-1312-1 in experimentation involving objects foreign to SCP-1312. They will usually follow SCP-1312-1 instances throughout SCP-1312 in large crowds. SCP-1312-3 appear incapable of independent thought and will not act unless prompted by SCP-1312-1.

Recovered Documentation 1312-1

On / /20 , a small expedition was attempted into SCP-1312, the humanoid entities having been distracted by the placement of several objects in SCP-1312 shortly before. During the brief expedition several documents which SCP-1312-1 entities had been observed to write previously were discovered in offices and empty containment chambers. Unfortunately, one member of the expedition was captured by SCP-1312's humanoid entities during the attempted exit. (See Recovered Document 3.)

Recovered Document 1312-1:

Item #: SCP

Object Class: Safe

Special Containment Procedures: It goes in the box. It stays in the box. It is kept in the box by security. Do not let it out of the box. Only doctors can use it.

Description: A stick of orange with blackness inside. The blackness makes itself on paper. This is an experiment written on paper.

When a D-Class eats it, it makes him die. It is contained in his neck. He is cut open with sharp things and it is taken out again. It has chew-marks on it now.

Experiment Log SCP-1

The First Experiment: It is put in water.
Result: Wet.

The Second Experiment: It is put in the cold room.
Result: Cold.

The Third Experiment: It is put in the warm room.
Result: Warm.

The Fourth Experiment: It is asked questions.
Result: Silent.

The Fifth Experiment: It is cut apart with sharp things.
Result: Broken. Now it is only blackness, without the orange.

Recovered Document 1312-2:

Item #: SCP

Object Class: Safe

Special Containment Procedures: It is kept in a room. The room is locked. Do not unlock the room. Only doctors can unlock the room. Two security keep it contained. Do not drink it.

Description: A white cylinder. It has liquid in it. The liquid was once warm, but is now cold. This is because it is in a cold room. This is what an SCP deserves. Remember our motto: Secure the Contain and Protect. When D-Class drink it, they say it is good. They do not say this anymore, because it is cold.

Dr. [redacted]2 says he remembers drinking it. Do not listen to him. He is a LIAR A LIAR HE'S LYING HE'S A LIAR A LIAR A LIAR A LIAR A LIAR (This continues for several pages.)

Experiment Log SCP-1

The First Experiment: It is put in water.
Result: Wet.

The Second Experiment: It is put in the cold room.
Result: Cold.

The Third Experiment: It is put in the warm room.
Result: Warm.

The Fourth Experiment: It is asked questions.
Result: Silent.

The Fifth Experiment: It is cut apart with sharp things.
Result: Doesn't work.

Recovered Document 1312-3:

Item #: SCP

Object Class: Keter Neutralized

Special Containment Procedures: Do not listen to it. It does nothing but lie. Keep it in the

room. Feed it D-Class. Do not listen to what it tells you. If it tries to get out, hit it. After you hit it, put it back in the room. Any personnel who says it is not a liar are lying. Do not trust them.

Description: It is like a man but pink, and with tough material on it. It can talk, but all it does is lie. It insults personnel who go near it. Sometimes it screams.
It says it is an agent of the SCP Foundation. This is a lie and it is a liar. It had a metal item with it. It kills a D-Class when it is pointed at them and the trigger is pulled. There is a thing in the D-Class's head after that. When it isn't pointed at the head they take longer to die.

It had another metal item. Voices come from the item and ask if Agent Banks is there. We ask if it is an SCP, and the voices stop talking. It has been designated as SCP because of this. Now it is contained.

The First Experiment: It is put in water.
Result: Splash.

The Second Experiment: It is put in the cold room.
Result: Shivers.

The Third Experiment: It is put in the warm room.
Result: Warm.

The Fourth Experiment: It is asked questions.
Result: Lies.

The Fifth Experiment: It is cut apart with sharp things.
Result: Wet.

Footnotes
1. Information regarding these humanoid entities was gleaned through a rover which was placed in SCP-1312-1. The rover recorded the capturing process and subsequent behavior of the entities.
2. This name had been scratched out of the paper by what is presumed to be a fingernail or other sharp implement.

« SCP-1311 | SCP-1312 | SCP-1313 »

SCP-1313: Solve for Bear

Item #: SCP-1313

Anomaly Class: Keter

Special Containment Procedures: SCP-1313 is not currently contained. As a way of limiting the impact of the anomaly, Foundation staff are to monitor all educational institutes for high rates of bear attacks, and dispatch MTF Delta-10 ("Answer Key") to the sites of incidents as soon as possible. Amnestics are to be administered to any civilians with knowledge of SCP-1313.

While copies of SCP-1313 are available from the Foundation archives, under no circumstances are any Foundation personnel to have complete knowledge of the problem. Any staff found solving SCP-1313 are to be reprimanded (and if the situation warrants, terminated) immediately following the bear's capture. Excess bears are to be either released into the wild or used as food/test subjects for suitable anomalies.

Description: SCP-1313 is an anomalous series of logical processes, capable of being defined as a mathematical equation to which the answer is a single female specimen of *Ursus arctos*. The equation itself does not appear to be inherently anomalous, but rather a quirk of mathematics — rather than producing any number in $R \setminus A$ (the set of all real numbers that are not animals), SCP-1313 resolves to produce a tangible, adult, and frequently enraged grizzly bear. The resolution does not have to be physically represented, and simply considering the problem long enough to arrive at the solution has resulted in a bear's manifestation in or around the subject solving it.

SCP-1313 does not require any particular mathematical ability to comprehend, beyond a basic understanding of elementary algebra, but all steps of the sequence must be completed in order to reach the correct answer. Skipping parts of the process or attempting to

start midway through will not result in any anomalous effects, and will likely produce a purely mundane result.

Currently, examination of partial components of SCP-1313 has revealed the following information about the anomaly:

- That SCP-1313 itself conforms to all axioms used in current number theory (although at times has proven to be remarkably stubborn).
- That bears cannot be returned to numerical form simply by solving the equation's inverse, pending the invention of a method of applying mathematical operations to physical objects.
- That SCP-1313 can be used as an element of other equations to produce semi-anomalous results. For example, $\sqrt{}$SCP-1313 resolves to the square root of a live grizzly bear — likewise, SCP-1313^2 is the product of two live grizzly bears multiplied together. It is not recommended that such 'derivative' equations be solved, as the creatures produced are usually poorly integrated into our reality, and invariably extremely hostile during their brief periods of existence[1].
- That grizzly bears exist within the set of all real numbers, and are not prime. The square root of a grizzly bear is prime, however, and is the only prime number that a) is not a cardinal number, b) is neither even nor odd, and c) contains an animal component. The implications that the root of a bear is an integer, and therefore that bears themselves exist on an ordinary number-line, are currently being investigated by **Prof. Hutchinson**.

SCP-1313 first came to the Foundation's attention in 1967, when a bear attack was reported at Whitecross High School, Hereford, England. 1724 separate incidents of bear attacks in educational institutes have been observed since, with an estimated 1600 fatalities and 900 further non-fatal injuries. Of the 1724 bears and mathematical bear-composites generated, at least 20% are still at large.

Notice: If during the reading of this document you have pondered the nature of SCP-1313 to such a degree that you feel you have have independently formulated a portion of its structure, you are

advised to make your way to your Site's nearest Amnestic Distribution Station, and then (following administration) to Animal Control. Failure to do so may result in disciplinary action and/or bear-related injury.

Footnotes

1. Research into the possible military applications of irrational, exponential, and imaginary grizzly bears is currently being undertaken by a joint team from the Foundation's mathematical and zoological departments.

SCP-1314: Memetic Universe

Item #: SCP-1314

Object Class: Safe

Special Containment Procedures: The original copy of SCP-1314-B is to be stored in a clearly marked A4 Manilla envelope kept in Dr. 's office. Digital copies of SCP-1314-A and SCP-1314-B are to be stored on the standard Isolated Electronic Repositories at Site-15, Site- , Site-33, and Research Sector-15. Digital copies of SCP-1314-B are not to be stored on Foundation intranet. Every 6 months, the original SCP-1314-B is to be digitally scanned at the highest resolution available and returned to storage. Any physical copies of SCP-1314-B are to be incinerated after testing. Any personnel testing SCP-1314 should carry one (1) dose of a Class-A amnestic for emergency use.

Description: SCP-1314-A is a set of mathematical equations describing physical behaviours in a simulated universe, the initial conditions of which are stored in SCP-1314-B. When read by a sapient organism, SCP-1314-A causes a memetic effect dependent on the logical and spacial-temporal reasoning skills of the exposed subject. If the subject has a Spacial-Temporal Reasoning Index (SRI) of above 82 and a Logical Reasoning Index (LRI) of above 93, they are implanted with a desire to search for a copy of SCP-1314-B, similar to the effect of standard memetic obsession agents. This effect is reduced after separation from SCP-1314-A and decays entirely after approximately 8 hours without exposure. If the subject does not meet these conditions, they will repeatedly review SCP-1314-A, with the effect of raising their SRI by 0.3 and LRI by 0.1 for each minute of exposure until reaching 82 and 93 respectively. This effect has not been observed to decay and is considered permanent.

SCP-1314-B is a string of hexadecimal digits interspersed with memetic triggers. On exposure, SCP-1314-B causes a memetic

effect dependent on the last point in time that the subject was exposed to SCP-1314-A. If the time since exposure is over 8 hours, the subject is implanted with the desire to locate a copy of SCP-1314-A, which again decays over the course of 8 hours. If they have been exposed to SCP-1314-A more recently than this, then the subject enters a state of deep concentration for minutes, during which they decrypt the information stored in SCP-1314-B. The instructions for decryption of SCP-1314-B are stored in the embedded memetic triggers. Exposure to SCP-1314-A after exposure to SCP-1314-B has no additional effect; the documents must be viewed in the correct order to result in the anomalous phenomenon.

After sequential exposure to SCP-1314-A and SCP-1314-B, subjects report obsession with mentally simulating the universe described by SCP-1314. This obsession does not render them incapable of performing normal tasks if necessary, but has been reported as extremely distracting, and they will favour sitting and thinking over all other tasks. The simulated universe is three-dimensional and operates under discrete time and spacial dimensions. Light and air do not exist in this universe. Heat transfer is simulated via a modified version of caloric theory, while gravity and collisions are simulated according to Newtonian physics. Objects within this universe are either spheres or polyhedrons, where spheres are approximately 3 orders of magnitude larger than polyhedrons. Whenever a polyhedron is heated above 316 temperature units, it splits into two smaller polyhedrons with temperature 158 temperature units. Spheres do not possess upper temperature limits. This behaviour results in the simulation drastically increasing in computational complexity after 29,000 time units, when a sphere with temperature in excess of 9,200,000 temperature units collides with an asteroid belt of polyhedrons in orbit around another sphere. This causes an exponential duplication of polyhedrons.

When the impact event occurs, the subject will show distress, as they need to mentally keep track of hundreds of thousands of objects simultaneously. After this point, subjects begin overwriting their previous memories to keep track of the objects. Once this space is expended, the effect spreads into more critical parts of the

brain. No subject has remained capable of speech after 30,300 time units. Eventually, the subject will overwrite their involuntary muscle control, resulting in death by either asphyxiation or cardiac arrest.

At any point in exposure, administering a Class-A amnestic will wipe the simulation from the user's mind, usually facilitating a full recovery. However, memories that are overwritten by the effect of later stages of SCP-1314 cannot be recovered.

The original copy of SCP-1314 was sent via mail to Agent by [DATA EXPUNGED]. After she had missed work for 3 days, Agent was sent to investigate her disappearance. Upon finding Agent in the later stages of infection, performing crosswords and mental exercises with the intent of delaying her calculations, Agent contained SCP-1314 and administered both Class-A and Class-B amnestics to Agent as a precautionary measure. Shortly after her recovery, Agent accompanied Agent in [DATA EXPUNGED], preventing further distribution of hazardous memetic agents. After experimental analysis the containment of a physical copy of SCP-1314-A was deemed unnecessary, and the original was destroyed after being digitally scanned.

Addendum: Request to use SCP-1314-A to increase logical and spacial-temporal reasoning skills of D-class personnel for use in unrelated experiments. –Dr. .

Granted. –O5-

« SCP-1313 | SCP-1314 | SCP-1315 »

SCP-1315: The Hardest Game

Item #: SCP-1315

Object Class: Safe

Special Containment Procedures: SCP-1315 is kept in secure storage at Site 15. It is stored within a small safe on premises, the code to which can be requested via a written application from Dr. . As SCP-1315 will not exhibit any anomalous effects unless directly interacted with, no further containment is necessary.

Description: Item SCP-1315 is what appears to be a standard 5.5 x 4.1 inch video game cartridge, for use with the North American version of the Nintendo Entertainment System console (also known as the "NES"). The cartridge is manufactured out of gray plastic, and is unlabeled. According to an operation manual packaged with the cartridge, the game is entitled *Professor Ghoul's Terrifying Horror Challenge* and is accompanied by a subtitle reading "a realistic high-stakes action game for 1 to 2 players".

When the cartridge is used in a Nintendo Entertainment System, a black screen appears, containing nothing except a simple menu with the option for a single player or a two-player mode. Pressing the Start button on either of the options advances to another screen, where the game asks to confirm whether the persons currently holding the game controller(s) are those who wish to play the game. If the "No" option is selected, the game will return to the mode select menu. Selecting "Yes" prompts the game to beep loudly and then display a blank red screen. Nothing more will happen onscreen after this point.

At this point, the "game" will begin, and the player(s) of the game will be subjected to a series of increasingly horrific "challenges" that apparently manifest in the physical world. While players will report being chased by monsters from within the game, it appears, to the best of the Foundation's knowledge, that these elements of the

"game" are only visible to the player(s), and do not exist for other people who happen to be in the same area. The "challenges" involve players escaping from or combating hostile creatures over a series of levels. Each time a "challenge" is won, the game will inform the player of the objective for the next, and then the game will continue. The game's manual claims "the fun never ends" and does not specify how many "challenges" must be completed to win the game (if it can be won), though D-Class personnel who have played the game have thus far managed to reach Level 33.

Once the "game" has begun, it cannot be halted until the player(s) either win or are defeated. Turning the Nintendo Entertainment System off simply renders the player(s) unable to receive hints from the game, and physically leaving the area in which the game is set up simply causes the phenomena manifested by the game to follow the player(s) elsewhere. Those playing the game grow gradually more distressed as the "challenges" continue, until they report that the game has become "too hard" for them, and they are captured by the enemies within the game, which prompts the game to end and the player(s) to disappear. It is not currently known where the player(s) are taken upon losing the game.

Additional Materials

Test Log 1315-1
It appears that the content of the game is static, and does not change on subsequent playings. Different players have reported similar events occurring on certain levels, though there does appear to be some element of randomness, as some slight variation has been observed.

> Test Log 1315-1
>
> *Level 1*
> A large number of either spiders, rats or various insects attempts to overwhelm the player. A large container of insecticide or rodent poison appears somewhere within metres of the player's location. The player wins this level when the vermin are destroyed.
>
> *Level 3*

A group of 2 - 6 wild animals made up of any composition of bears, wolves and large cats attempts to eat the player. The player must survive for one hour. A shotgun and an accompanying box of rounds appears within metres of the player's location, but using it to kill any of the animals causes two more animals of the same species to appear within five minutes.

Level 7
The player's location is assaulted by either one or two hostile men armed with weapons ranging from machetes and axes to a chainsaw and (on one occasion) a firearm. The player must survive for either one hour or kill the attackers, though no weapons are provided for this purpose.

Level 9
A group of 2 - 5 armed men supposedly resembling a random group of authority or a local police force known to the player converge on the player's location and attempt to apprehend them. The player wins the level by resisting capture for a period of two hours. A loaded firearm appears within metres of the player's location, but using it to kill any of the attackers causes the remaining gunmen to call for backup, which arrives within the next ten minutes.

Level 12
An unseen but hostile force attacks the player's location, capable of manipulating physical objects including the player. Three random objects (which are usually reported to be documents, photographs or ornaments owned by a previous player) appear within metres of the player's location, and the level is won when the player finds them all and burns them.

Level 16
A group of 4 - 8 humanoids (reported to physically resemble past users of SCP-1315) attempt to kill the player. The attackers are not armed, but will immediately proceed to fashion makeshift weapons out of nearby

objects to harm the player with. The attackers can pass through solid objects and can move at a startling speed. A random weapon (usually a firearm, but occasionally a bladed weapon or, in one case, a pair of binoculars) appears within metres of the player's location, and the level is won when the player uses this weapon to destroy the attackers.

Level 18
An entity strongly resembling SCP- appears in the player's location. The player must survive for one hour to win the level. Due to the nature of the attacker in this level, this challenge is easier for two players than for a single player.

Level 20
As this level begins, the player finds themself subdued in what appears to them to be a windowless stone room. A man of unknown identity enters the room and subjects the player to a randomly chosen form of torture. The player wins the level if they can withstand the torture for 30 minutes without submitting to the torturer.

Level 23
The player perceives themself to be stranded in a dense forest. A number of creatures of indeterminate nature hunt the player, who must escape to a wooden shack kilometres from their starting location. Entering the shack returns the player to their original location and ends the level.

Level 27
The player perceives themself to be in what is reportedly a run down urban area, in darkness. A number of shadow entities attack the player if they move too fast or make too much noise. The player's objective is to proceed to an area kilometres from their starting location, where they will find a weapon which they can use to destroy the entities. The level is won when the entities have been destroyed.

Level 28
Entities resembling relatives and people of some importance to the player appear at the player's location. All entities are subdued in a manner that they pose no danger to the player. The player wins the level by killing the entities with a supplied weapon. This level has caused severe distress in all D-Class personnel who have tested the game, as the player's victims reportedly address the player personally and appeal to events that are known to the people the victims in this level resemble.

Level 29
The player perceives themself to be on the top floor of an outer tower of a medieval style castle that overlooks an expanse of forest. A heavily-armed, extremely hostile attacker calling himself "The Professor" chases the player and attempts to kill them. The player must find keys which are randomly hidden throughout the castle, then escape from the castle grounds to win the level.

Level 31

The player is on a vast island containing the remains of what appears to be an abandoned military complex, a small urban area, a network of underground tunnels and patches of dense forest. The player is pursued by the attacker from Level 29, as well as a group of 3 - 6 humanoid attackers resembling the victims from Level 28, who all move faster than the player and appear to communicate with telepathy. The player's goal is to survive for 24 hours. At every third hour, 2 - 4 additional humanoids (who take on the appearance of past players) materialise within the game zone. The player is not provided with any weapons, though one D-Class operative reported being able to stun an attacker by hurling a large rock at its head. It reportedly recovered within 30 seconds, though this gave the operative enough time to escape.

Level 33

[DATA EXPUNGED]

Test Log 1315-2
Several tests have been conducted with SCP-1315 in an attempt to determine the origins and extent of its anomalous properties.

Test Log 1315-2

12/10/1986
Game is run but no option is selected from the main menu. Nothing happens, game remains on opening menu until option is chosen.

11/11/1986
Single player option is selected, using mechanical factory arm to manipulate controller. Game determines D-Class personnel operating mechanical arm to be the player. Game begins as normal.

09/12/1986
Above test is repeated, this time using pre-programmed probe robot to manipulate controller. Game refuses to advance past player confirmation screen.

12/02/1987
NES is turned off during a "game" and then an attempt is made to turn it on again. Console fails to turn on.

21/02/1987
SCP-1315 is removed from NES during a "game" with the console remaining on. Console does not turn off, red screen remains, and players report still being able to receive messages from the game.

08/03/1987
Above test is repeated, but SCP-1315 is then inserted into a different NES console and the power is turned on. Game refuses to start.

19/06/1988
Foundation researchers attempt to interfere with the

"game" providing weaponry and supplies to the player. D-Class personnel report that provided weaponry becomes jammed or breaks when used against game enemies.

31/06/1988
Above test is repeated, but weapons are left in the player's vicinity when the game begins, rather than being given during game progress. Player reports being able to use weapons without penalty. Researchers come to the conclusion that objects already present in the environment upon game start are incorporated into the game.

20/05/1996
Foundation researchers attempt to access game code stored on SCP-1315 cartridge. kilobytes of data found present on chip. Data appears to be corrupted and cannot be accessed.

31/05/1996
Game data is dumped onto a computer and copied into a second cartridge. Second cartridge exhibits similar anomalous properties to original cartridge. Duplicate cartridge is destroyed; copying of the cartridge is banned.

28/09/1999
Dumped ROM data is opened and played in a PC-based NES emulation program. Game fails to start.

Testing is henceforth suspended until further developments can be discovered.

History: SCP-1315 was recovered from a computer and video game store in , on 11/04/1986, after an employee of said store attempted to burn the establishment down in an effort to destroy SCP-1315, which he and a friend had used during a down period some days prior. Said employee was arrested by the Police Department and held in custody. Although those on duty reported that he had not been released from his cell, he supposedly

vanished, and is still missing, as of / /20 . Other employees of the video game store were interviewed, though it has been determined that none of them possessed any knowledge of SCP-1315 or its origins.

Excerpt from Operation Manual
Included with SCP-1315 cartridge on recovery.

> Open Excerpt
>
> *Professor Ghoul's Terrifying Horror Challenge* is a realistic (and scary) action game that the entire family can enjoy!
>
> The manic Professor Ghoul invites all comers to test their mettle, wits and strength in his fantastic challenge. Do you have what it takes to be victorious?
> Playing the game is easy! All you have to do is choose whether you want to go it alone or with a friend and then do whatever it takes to survive level after level of horrifying action and adventure. Once you've started the game, you can play it anywhere; home, in town, at school - wherever Professor Ghoul's spooky creations find you! The fun never ends!
>
> Be careful, though: Professor Ghoul is a man of honour, and once you've decided to take on the challenge, you can't stop until *someone* emerges the victor. Manage to get through with all your body parts intact, and you'll be the coolest kid in town. Lose, however, and you're at the mercy of Professor Ghoul. There are no extra lives in *Professor Ghoul's Terrifying Horror Challenge*, and no second chances. Get "Game Over" - and you're done!

« SCP-1314 | SCP-1315 | SCP-1316 »

SCP-1316: Lucy the Kitten Feline Espionage Device

Item #: SCP-1316

Object Class: Euclid

Special Containment Procedures: SCP-1316 is to be the only SCP object contained at Bio Containment Site 39. It is to be housed in a 2.5 x 2 x 1.5 m enclosure constructed from radio frequency (RF) shielding material. A single radio receiver is to be placed in the containment area of SCP-1316 in order to record all transmissions. Access to recordings of the transmissions of SCP-1316 is contingent upon approval of at least two Level 4 personnel. Feedings are to take place twice daily, while litter is to be changed every three days by a single D-Class personnel. Only D-Class personnel may come within 10 meters of SCP-1316.

Description: SCP-1316 is a female *Felis catus*, or common house cat. It exhibits no unusual behavior besides a marked friendliness to strangers. Despite having been in Foundation custody since 1948, it is physiologically identical to a three-month-old kitten, and shows no signs of aging. Upon acquisition by the Foundation, SCP-1316 was originally classified as an anomalous object.

Every day at 09:20:37 GMT, SCP-1316 emits a radio broadcast between 4225 and 16048 kHz for exactly five minutes. This transmission can be picked up on any standard shortwave radio. The broadcasts opens with three bars taken from the British folk ballad "Tam Lin," followed by an artificially generated female voice reading a series of eighty numbers. (See Addendum 1316-33m)

Following Incident 1316-23a, only D-class are to come into contact with SCP-1316, to reduce the likelihood of intelligence breach.

Original Anomalous Object Entry

> Item Description: A female *Felis catus*, or common

house cat, which does not age. Despite advanced age (allegedly purchased by Miss in 1926), retains physical characteristics of a 3-month-old kitten.
Date of Recovery: / /1948
Location of Recovery: ,
Current Status: Contained at Site 112. Allowed free range of site outside of SCP object containment areas. Responds to "Lucy."

Incident 1316-23a
On 08/16/1952, Site 112 was attacked in a pre-dawn raid by several Chaos Insurgency strike teams. A massive security breach ensued, during which SCPs- , - , and - were stolen, - and - were destroyed, and - , - , and - disappeared. Foundation personnel were killed in the course of the breach. Following standard counterintelligence practice, all Foundation personnel were debriefed and a scan of the site for bugs ensued. In addition to standard electronic listening devices, SCP-1316 was found to be a source of regular broadcasts. The content of these broadcasts was determined to be some manner of cipher. Movement of the subject has been restricted pending deciphering of broadcast.

Log of Deciphered Broadcasts
08/17

OPERATION SUCCESSFUL. MISSION COMPLETE. REQUEST FURTHER ORDERS OR EXTRACTION.

08/18

F SUSPICIOUS. MOVEMENT RESTRICTED. REQUESTING EXTRACTION.

08/19

ORDERS NOT FORTHCOMING. REQUESTING NOTIFICATION.

08/20

CONFINED TO SINGLE ROOM. WAS PROMISED

EXTRACTION UPON COMPLETION OF MISSION.

08/21

MOVED TO NEW SITE. UNCLEAR ON STATUS OF MISSION. REQUESTING FURTHER ORDERS.

08/22

WAS REFERRED TO W SCP DESIG. F KNOWS. REQUEST IMMEDIATE EXTRACTION.

08/23

UNCLEAR IF LAST MESSAGE RECEIVED. EXTRACTION REQUESTED. PLEASE.

08/24

THERE IS NO EXTRACTION IS THERE?

Addendum 1316-33m

Following the 08/24 broadcast, SCP-1316 has ceased regular broadcast. Other anomalous properties remain.
- Researcher

« SCP-1315 | SCP-1316 | SCP-1317 »

SCP-1317: Factory Makeup

Item #: SCP-1317

Object Class: Safe

Special Containment Procedures: All known instances of SCP-1317 are to be housed in Vault 13 of **Site-77**'s Safe SCP wing. Each unit is to be inspected on a rotational basis to prevent any chemical corrosion of their containers. A small subset of the SCP-1317 substance is to be set aside for allocated testing purposes. Following a containment breach of multiple SCP-1317 instances initiated by **SCP-703** all testing instances are to remain outside of SCP-703's area of effect. In the event of the discovery of any additional instances of SCP-1317, they are to be cataloged and their point of origin sought out.

Description: SCP-1317 is a collection of vintage cosmetics, manufactured sometime in 1942. Individual tins of SCP-1317 weigh approximately 0.5 Kg. The individual containers of SCP-1317 are brown, with the makeup itself being a shade of beige. The words "The Factory" have been embossed onto the bottom of each instance of SCP-1317.

When SCP-1317 comes into contact with living animal tissue, it will begin to integrate itself into the tissue. Continuous application of SCP-1317 will lead to the affected tissues being completely replaced by SCP-1317. In addition, SCP-1317 will replicate the biological function of all tissues it replaces. Any existing imperfections or blemishes on the skin will be removed. Adding dyes can change the skin tone, and it is possible to mold and adjust the SCP-1317 in a manner similar to clay without causing harm.

If the user does not continue to apply SCP-1317, the affected tissue will lose its cohesion over the next five weeks, which leads to the user experiencing potentially fatal trauma.

SCP-1317 was discovered in 1943, when an unusually high number of persons with critical skin conditions were reported from several US cities. Interviews with victims revealed that they had obtained SCP-1317 via an advertisement in local newspapers to "market test" new makeup products. Following the address provided by the advertiser led to a warehouse containing over instances of SCP-1317. However, shortly after this warehouse was discovered, instances of SCP-1317 began appearing in pharmacies and newspaper advertisements in the United States, Canada, Britain, Italy, Russia, France and Germany.[1] Between 1943 and 1946, an estimated additional instances of SCP-1317 were recovered from these regions.

Addendum 1317-A: As of May 1946, SCP-1317 ceased appearing in these areas. It is still unknown where these additional instances of SCP-1317 were produced, or how they were transported and stocked at these locations.

Addendum 1317-B:

Progression of symptoms related to SCP-1317.	
One week	The user will report irritation in areas that are affected by SCP-1317, similar to a mild rash. Subjects may also report increased amounts of skin flaking.
Two weeks	The user will begin to develop more severe rashes in the afflicted areas. These rashes are usually a dark green or light purple. In addition, any of the user's hair located in these affected areas will begin to fall out.
Three weeks	The user will report serious discomfort in the affected areas. The rash will have become discolored and afflicted areas will cause the user large amounts of

	pain. Users at this stage will become highly reclusive due to their appearance, but only a small percentage will seek medical care.
Four weeks	Users at this stage will begin to experience extreme fatigue. In addition, users at this stage will begin to have large amounts of tissue disintegrate. 98% of users who reach four weeks of exposure will have lost all body hair in the afflicted area.
Five weeks	After five weeks have passed, the user's afflicted flesh will begin to lose cohesion. The first tissue to dissolve will usually be soft tissue such as the user's eyes, cheeks, or loose areas of skin, and damage to the dental cavity resulting in the dissolution of the gums and tooth loss. Following this, deeper tissues such as muscle and ligaments will begin dissolving. In cases where the user had used SCP-1317 for more than six months, the dissolution of organs such as the intestine, liver and bladder will result, along with partial liquefaction of the visual or olfactory cortices.

Footnotes

1. Including territories occupied or controlled by Germany

« SCP-1316 | SCP-1317 | SCP-1318 »

SCP-1318: Consultant Rats

Item #: SCP-1318

Object Class: Euclid

Special Containment Procedures: Specimens of SCP-1318 are to be kept in individual wire cages in a secured room in a facility otherwise devoid of laboratory animals. Due to the nature of the cognitive hazard presented by SCP-1318, no research staff shall be permitted to interact directly with specimens. Any experiments involving specimens are to be carried out by appropriately trained class-D personnel under remote observation by the assigned researcher.

Experimental protocols should be designed to strictly limit the duration of exposure to SCP-1318 specimens. No individual class-D is to be scheduled for this duty more than once per week. Under no circumstances should any personnel be assigned duty which would increase their cumulative exposure time to SCP-1318 to over 16 hours.

Any personnel showing signs of excessive SCP-1318 exposure are to be treated with amnestics and must undergo a thorough psychological examination before returning to duty. If delusions persist after drug treatment and counseling, disability leave may be granted at the discretion of the project lead. Class-D personnel experiencing persistent delusions are to be terminated.

Description: SCP-1318 is a spontaneously occurring phenomenon found in an estimated 0.0001% of specimens of the Long-Evans strain of *Rattus norvegicus*[1], the Norwegian Brown Rat. Instances are indistinguishable from other Long-Evans specimens in size, intelligence, appearance, and lifespan. However, humans spending 20-80 cumulative hours in close proximity (approximately 3m) to an SCP-1318 specimen develop the following delusional complex:

- That the specimen is sapient, and capable of speech.
- That the specimen is a subject-matter expert in their field of employment.
- That their "best ideas" originate from conversations with the specimen.
- That these properties of SCP-1318 are possibly hereditary, and that any offspring of the specimen should be exempt from experimentation pending unspecified "analysis".
- That possession of SCP-1318 provides significant competitive advantage, precluding the sharing of data about specimens with outside organizations.

In addition to this cumulative effect, persons introduced to an SCP-1318 specimen by an affected individual will immediately be affected by the delusional system.[2]

While affected persons report that they hear the SCP-1318 specimen speaking, review of recordings of such "conversations" reveal that affected persons are, in fact, subvocalizing the specimen's responses to their queries. No reported responses were found to lie outside of the knowledge domain of the affected individual.

SCP-1318 was discovered when a routine performance review in 1993 found that productivity at the biosciences laboratory at Research Site-27 had declined by 75% in a 6-month period without a corresponding decline in research quality. An internal audit of the facility determined that the entire staff of the lab were affected by delusions pertaining to a male SCP-1318 specimen whom they dubbed "Frankie". Two members of the audit team were likewise affected before the nature of the hazard was determined.

All affected personnel were interviewed and treated with amnestics, though 15% of staff suffered from persistent delusional states and were subsequently relieved of duty. "Frankie" was determined to have entered the facility as part of a routine delivery of model organisms from Charles River Laboratories. No anomalous properties were detected in any other specimens in the shipment.

Interview Log 1318-1-5

Agent Davidson: Good morning, Mr. Mooney. I would like to ask a few questions about the model organism designated SCP-1318-1.

Researcher Mooney: Uh. Hey, sure. There sure are a lot of you internal affairs guys around. Is everything … okay?

Agent Davidson: This is an information-gathering exercise, not a disciplinary hearing. Now, what can you tell me about SCP-1318-1.

Researcher Mooney: You mean Frankie, right?

Agent Davidson: Yes, I believe the staff refer to it as "Frankie".

Researcher Mooney: Oh, Frankie's great. He's real easy to talk to and he's got a head for organic chemistry like nobody I've ever seen.

Agent Davidson: How did you discover its anomalous properties?

Researcher Mooney: Well, a couple months ago I was getting really stuck trying to synthesize one of the components from the SCP- fluid, and I was bitching about it in the lunchroom. Kowalski from Virology says to me, "Hey, you should run that by Frankie," and I'm like, who the fuck is Frankie?

Agent Davidson: So Researcher Kowalski introduced you to the specimen?

Researcher Mooney: Yeah. He takes me into this mostly empty storeroom, nothing in there except this big cage with one little rat in it, and I'm like "Where the hell is this Frankie guy?" and Kowalski says "That's him right there."

Agent Davidson: Referring to the rat.

Researcher Mooney: Yeah. So I'm just about to punch Kowalski in the mouth for taking me on a snipe hunt, when he starts talking to Frankie. And Frankie starts talking back.

Agent Davidson: What were they discussing?

Researcher Mooney: Oh, Kowalski is like "Hey, my buddy Mooney here is stuck on some hairy O-Chem, do you think you could help him out?" and Frankie is all "Sure thing. Nice to meet you, Mr. Mooney". It was weird too, cuz you'd think a little rat like that would have a squeaky voice or something, but he just sounded like a regular guy.

Agent Davidson: Was your discussion with the organism fruitful?

Researcher Mooney: Yeah! It was amazing, I just told him what I was trying to do and he walked me through a possible synthesis as easy as giving directions to the grocery store. I took it back to the lab and it worked the first time.

Agent Davidson: And you continued to consult with the organism?

Researcher Mooney: Yeah, I did. By the end of the month most of the guys in the lab were talking to Frankie when they got stuck on something. That little bastard can talk about almost anything you throw at him, you know?

Agent Davidson: Why did you not disclose the presence of the anomaly?

Researcher Mooney: Um. Well. It sounds stupid when I say now, but everyone in the bio lab kind of figured that Frankie was our secret weapon? Everyone was doing amazing work and we figured we'd keep it to ourselves for a little bit.

Agent Davidson: Our records show that while the quality of work coming from your labs was consistently high, there was a precipitous drop in total output. If the organism was so helpful, how do you account for this?

Researcher Mooney: Yeah, um. So it was a couple of things, I guess. The biggest problem is that there are only so many hours in the day, and Frankie's asleep for half of them. So the scheduling got to be a little hairy.

Agent Davidson: People were unable to proceed until they could consult with the organism?

Researcher Mooney: Well, it's like you know you could get going without talking to Frankie, but once you talk to him, you'll probably have to start over anyway, so why bother? Also, lots of people's time was taken up with the breeding program.

Agent Davidson: Breeding program.

Researcher Mooney: Yeah, we figured we couldn't keep it to ourselves forever, and how great would it be if every lab in the Foundation had their own Frankie?

Agent Davidson: That will be all for now, Mr. Mooney.

Footnotes
1. This phenomenon appears to be restricted to the Long-Evans strain, and has never been witnessed in other laboratory strains or wild specimens.
2. An "introduction" consists of addressing the specimen as a sentient being who is being made acquainted with the unaffected individual.

« SCP-1317 | SCP-1318 | SCP-1319 »

SCP-1319: The Split-Up

Item #: SCP-1319

Object Class: Safe

Special Containment Procedures: SCP-1319-1 and SCP-1319-2 are currently kept in separate containment cells at Site . SCP-1319-1 and SCP-1319-2 are not to be brought within three (3) meters of each other in order to prevent possible violent behavior and ensure cooperation on their part. In cases where SCP-1319-1 is having difficulty moving due to its lack of legs, use of a stretcher is authorized.

Any experimentation involving either SCP-1319-1 or SCP-1319-2 must be authorized by at least one (1) member of Level 3 personnel.

Description: SCP-1319 is the collective designation for two (2) different entities:

- SCP-1319-1, the upper body of Research Assistant . SCP-1319-1 consists of 's upper torso, head and arms. Due to its possession of 's head, SCP-1319-1 is capable of speech, making it much easier to communicate with than SCP-1319-2. To accommodate for its lack of legs, SCP-1319-1 moves by pulling itself along the floor with its hands. SCP-1319-1 enjoys the consumption of food, despite the fact that this food inevitably exits its body through the hole in its torso.

- SCP-1319-2, the lower body of Research Assistant . SCP-1319-2 consists of 's lower torso and his legs. SCP-1319-2 has the ability to hear commands given to it by researchers and perceive its surroundings, despite its lack of a head and associated organs. Due to its lack of a head, communication with SCP-1319-2 is much more difficult than it is with SCP-1319-1.

Both SCP-1319-1 and SCP-1319-2 harbor intense feelings of resentment for each other, and meetings between the two have frequently resulted in violence. During questioning, SCP-1319-1 has indicated that this mutual resentment stems from the circumstances of their 'separation', presumably referring to the incident in which they were created. Neither of the two appear to be alarmed by the lack of their other half or the injury resulting from their split.

Neither SCP-1319-1 or SCP-1319-2 possess the original personality of Research Assistant , and identify as completely different entities. They do not require sustenance or air, but do appear to enjoy these things, despite them lacking the bodily functions required to actually benefit from them.

SCP-1319-1 and SCP-1319-2 came into existence on the date of / /20 , at 1:25 PM. At the time, Research Assistant was eating his lunch at Site 's cafeteria. Suddenly, he was observed to say the words 'You know what? Fuck this. Fuck you.', seconds before violently separating into SCP-1319-1 and SCP-1319-2. SCP-1319-2 attempted to flee the area, while SCP-1319-1 attempted to climb up the table and resume consumption of Research Assistant 's lunch. Both were subsequently brought into containment. Despite investigation, no potential cause for this event has thus far been discovered.

Interview Log 1319-1

Interviewed: SCP-1319-1
Interviewer: Dr.

<Begin Interview>

Dr. : Hello, SCP-1319-1.

SCP-1319-1: Hey, Doc.

Dr. : I'd just like to ask you a few questions, if that's all right.

SCP-1319-1: Sure. I don't mind.

Dr. : Now, I'll have to warn you, they are

about SCP-1319-2 -

SCP-1319-1: Oh. Him.

Dr. : I hope that won't be a problem.

SCP-1319-1: No, no. (pauses) Not really. I'm not even that mad, to be honest. He's less rational about it, but you can't let him get to you.

Dr. : I'd like to know how you and SCP-1319-2 came to separate, if you know.

SCP-1319-1: (pauses) Well, it was more a bunch of little things, if you really want to know. He was just…incompetent. We'd be going down the hallway or something, and he'd just trip, and I'd be like 'what the fuck was that?'. He'd play ignorant, but I'd know he messed up. The thing that really got me was that he never improved. He never took my advice and actually applied it to the way he did his job.

Dr. : This job being…walking?

SCP-1319-1: Not always. Driving cars was a problem with him too. You won't believe this. One time, we were driving down the street, I was doing my job, steering and everything, and what does the stupid dick do? Drives straight through a red light. He was going down, and he was pulling me down with him.

Dr. : So you separated?

SCP-1319-1: Yeah. I'd just had enough of his bullshit. The excuses, all of it. Got out of there, tried to be dignified about it. Didn't want to make a scene. But he goes running, drawing

all this unwanted attention to me, because I'm the one who has to stay and clean up after him.

Dr. : I see. Well, thank you, SCP-1319-1.

SCP-1319-1: No problem.

<End Interview>

Interview Log 1319-2

Interviewed: SCP-1319-2
Interviewer: Dr.

<Begin Interview>

Dr. : Hello, SCP-1319-2. I'd just like to ask you a couple of yes or no questions, if that's all right. Tap your foot once for no, and twice for yes. Do you understand?

(SCP-1319-2 taps foot twice.)

Dr. : Good. Now, are you aware of your current location?

(SCP-1319-2 taps foot twice.)

Dr. : Why is that? Do you remember being here when you were connected to SCP-1319-1?

(SCP-1319-2 taps foot once.)

Dr. : So you can actually see your surroundings?

(SCP-1319-2 taps foot twice.)

Dr. : I see. Now, I'd like to talk about SCP-1319-1, if that's alright.

(SCP-1319-2 ceases movement.)

Dr. : Do you resent SCP-1319-1?

(No movement.)

Dr. : Ah, do you dislike SCP-1319-1?

(No movement.)

Dr. : Do you hate SCP-1319-1?

(SCP-1319-2 stomps foot twice.)

Dr. : He says that the separation between you two was your fault. Do you believe that?

(SCP-1319-2 stomps foot once.)

Dr. : So you believe it was his fault?

(SCP-1319-2 stomps foot twice.)

Dr. : Well, thank you, SCP-1319-2. That's all for now.

<End Interview>

« SCP-1318 | SCP-1319 | SCP-1320 »

SCP-1320: Refractive Explorers

Item #: SCP-1320

Object Class: Euclid

Special Containment Procedures: The current known extent of SCP-1320's habitat, as well as no less than a five (5) kilometer radius of land from the estimated center, is to be owned by Foundation front companies and observed at all times. A concrete wall at least 4 meters high is to be constructed and maintained around the perimeter, and integrated ultrasonic motion detectors are to be placed at 20 meter intervals to monitor for breaches.

At least once per week, during a period of inactivity, at least ten (10) items not previously encountered by members of SCP-1320 are to be introduced into their habitat via air-lift, as close to the center as feasible. For a list of items already encountered by SCP-1320, please see document 1320-4071a.

Should individual members of SCP-1320 be observed leaving the containment area, a general alarm is to be sounded and MTF Chi-41 (Ghost Watchers) is to be brought on station to return the individuals to their habitat. Should containment not be possible, observational command is to be notified and currently allocated areas are to be adjusted accordingly.

Description: SCP-1320 is the group designation for an anomalous, sapient species, native to a roughly 6 square kilometer area of [REDACTED] known to be heavily forested and sparsely populated. The species shows a unique ability to refract electromagnetic radiation around their forms; this is most easily identifiable in the fact that light "bends" around them, rendering them somewhat transparent or reflective depending on angles, but the refraction extends to all currently tested wavelengths of the spectrum.

A side-effect of this anomaly is that individuals are able to seemingly

"appear" or "disappear" when not directly in view. Members of SCP-1320 are not believed to be able to teleport or in any other way shift themselves; they are simply well camouflaged and silent by nature, and are able to utilize their anomalous properties as means of evasion. Primarily, they have utilized such tactics to interfere with any attempts to retrieve specimens, ambushing groups attempting to capture one alive and swiftly removing any of their kind that are injured or otherwise incapacitated.

Individuals of SCP-1320 are humanoid in shape, averaging between 2.7 and 3.2 meters in height. Additionally, the distortion effect that surrounds them makes individuals appear to be between 1 and 1.5 centimeters thick; remote ultrasound imaging has confirmed that the actual physical body is less than 1 micrometer thick. Despite this, individuals have shown a level of physical strength and dexterity roughly equivalent to an average human, save for an ability to shear objects at a near-molecular level. It is estimated that the tips of their extremities are narrowed to within a few dozen nanometers and are extremely durable, allowing for this level of sharpness and precision.

Typically, members of SCP-1320 are not hostile unless provoked, instead showing an inquisitive nature with small groups gathering around any type of object that is new to their habitat and studying it thoroughly; this inevitably concludes with individuals cutting the object into successively smaller pieces, even if it is biological in nature. While they appear to lose interest in specific objects within three to four days and will largely ignore repetitive stimulus, similar objects that are sufficiently unique will attract their attention anew; for instance, after growing accustomed to Douglas-fir trees (*Pseudotsuga*) they still showed interest in both Cedar (*Cedrus*) and Pine (*Pinus*) species. It is believed that this inquisitive nature is the driving force behind SCP-1320's instincts, as no member of the species has been observed attempting to leave an inhabited area until all new forms of objects have been thoroughly examined.

Despite the fact that no light or other electromagnetic waves should be able to permeate their refractive nature, SCP-1320 are observed to be "looking" at objects, using a form of sensory adaptation we have not been able to detect or duplicate. Similarly, members of SCP-1320 have never been observed to make any sort of

vocalization, but apparently are able to communicate with one another.

To date, SCP-1320 have not been observed to perform any sort of construction or assembly; it is not known whether they do not have the intelligence or desire for such activities, or if they have somehow been able to hide their constructs. Given the fact that individuals have been described as "disappearing" even when under direct observation, this has lead to great difficulty in tracking them to any type of central nest or housing area.

Addendum: Incident 1320-1

On 08/17/ , a group of D-class subjects under observation by Researcher Grant were introducing new stimulus into the SCP-1320 habitat, which at that time was contained in a steel mesh fence and was just below two kilometers on a side. Incident 1320-1 was the first time that SCP-1320 was observed to have any sort of large-scale hostility. What follows is an interview conducted by one of the few survivors.

Access Interview Log 1320-12

Interview Log 1320-12
Interviewer: Dr. Kennar
Interviewee: Agent B F
Date/Time: 08/18/ , 13:45

Dr. Kennar: Let's begin. For the record, please state your full name and position at the time of the incident.

Agent F : Yes, sir. I'm B F , level 3 Security Agent, member of MTF Chi-41. On the date in question I was acting as observation and aerial marksman.

Dr. K: Thank you, but you don't have to call me sir, I never was part of any military structure. Please describe the events that lead up to the security breach as best you can.

Agent F: Of course. Grant and the D's had headed into the fenced-off zone, delivering the weekly batch of stuff to keep them occupied. Drop-off went well and they were heading out when one of the D's spotted one of the fracs digging at the fence.

Dr. K: I'm sorry, "fracs"?

Agent F: Oh, sorry, it's a nickname someone came up with for the scips, kinda shortened down "refracted", easier than thirteen-twenty, you know. Jim always thought we should call them "reefers", but he got voted down.

Dr. K: I… see. Continue, please.

Agent F: Well, the D sees this thing poking around like I said, and all of a sudden starts yelling at it, told it to get away from the fence. I heard over the radio that they were telling him to back off, but when the frac didn't back away he chucked a rock at its head. Pretty good aim, actually knocked it over. That's when all hell broke loose. I don't think anyone told these guys just how sharp the fracs' claws are, or how fast they run.

Dr. K: I was not aware that they had any anomalous properties regarding their speed.

Agent F: I don't know if you'd call it 'anomalous', they're just fast. Like, they could lap an Olympic racer. Point is, I don't think the guy even saw the one that ran up on him before he was torn apart. Grant and two of the other D's booked it for the gate, one of them turned to try and help his buddy I guess. He lasted about three seconds.

Dr. K: This was when the firefight started?

Agent F: Yeah. The group made it through the gate and it got closed, but the fracs just started to tear through it like paper. Someone shouted 'fire', I really can't say it was anyone with authority what with all the comm chatter. A couple of them dropped, but… Christ. It was like they were just hiding and waiting, there must have been two dozen of the things that came charging out of the tree-line. I think I took a couple of them down, but then they were at the fence, and then people started dying.

Dr. K: What is your assessment of their combat prowess, Agent?

Agent F: Frankly, I don't think they have much of it. They don't seem built for combat, they're… Explorers, investigators. If these things were on a wide-open plain with plenty of time to see them coming, this never would have happened. It's the fact that, where they are, they can duck in and out of cover, seem like just a trick of the light. And if they decide they want you dead, and they get right on top of you, unless you get in a good, quick, debilitating shot, you're dead. They also have some good stamina; one jeep got away, made it a few clicks before they stopped to get their bearings, probably figured they lost 'em. I hear that all that was found was a few chunks of shredded metal and bits of meat.

Dr. K: That is a somewhat accurate statement. That should be all, Agent, unless you have anything else to add to the official record?

Agent F: Just one. I was talking to , he was doing the observation run this morning. He says he saw a few wandering the forest. Those things never once tried to even get past

> the fence before now, and suddenly they're spreading? I think… I think these things will only stick to the territory they've already explored, but when they started chasing people through the woods in a rage, that territory expanded. We need to move the perimeter out. And we need to make it tougher.

Taking the above interview and further investigation of the patterns of SCP-1320's behavior, it was confirmed that their assumed territory had expanded to the currently held ranges. Containment procedures were upgraded, and in light of their potential threat, Doctor Kennar put forth an official request to upgrade SCP-1320 to Keter status.

The escalated security measures have kept them in check since the single incident. Thus, increasing their status to Keter has been denied until such time that SCP-1320 demonstrates a continual, active intent and ability to breach containment. - O5-

« SCP-1319 | SCP-1320 | SCP-1321 »

SCP-1321: Cathar Journal

Item #: SCP-1321

Object Class: Safe Neutralized

Special Containment Procedures: Due to its age and fragility, SCP-1321 is to be kept in an an acid-free, humidity-controlled glass case in Site-19's High Value Containment wing. Personnel who made physical contact with SCP-1321 are to wait a minimum of one (1) week before additional contact. The remains of SCP-1321 are to be kept in a vacuum-sealed bag in its prior containment chamber. No additional containment measures are necessary.

Description: SCP-1321 is the journal of Guillaume Bélibaste, the last known Perfectus of the Cathar religion, who was burned at the stake (according to Church records) in the year 1321 CE on charges of heresy. SCP-1321 is dated to the day before Bélibaste's death. SCP-1321's anomalous properties will manifest when a person touches the object or reads its physical copy in its entirety. When either condition occurs, the list of names appearing at the bottom of SCP-1321 will update, and the subject will usually experience a sense of euphoria and peace, accompanied by vague visions consisting of ethereal imagery. On rare occasions, subjects describe more detailed visions, which always include in some way a human figure attempting to gain entrance to a location, only to be refused. The exact nature of the figure and location changes depending on the subject, and will often take a shape which is in some way familiar to him/her. Subject who experienced this type of vision reported a sense of loss and longing.

Regardless of the vision type, subjects who touch SCP-1321 always react to the experience favorably, and will seek to gain access to SCP-1321 by various means, though they will never resort to violence, even if they have a predisposition to such a behavior. The desire to access SCP-1321 will fade over a period of a few days.

Historical Background: The Cathar religion, also known as the Albigensian Heresy, was a dualism-based belief which thrived in Languedoc between the twelfth and thirteenth century, before becoming the target of persecution by the Catholic Church and finally being destroyed following the events of the Albigensian Crusade. The Cathar religion advocated austere living and rejected the sacraments of the Catholic Church as false, instead practicing only a single sacrament, the rite of Consolamentum. This ceremony, performed only shortly before death, was meant to free the soul from the bonds of the god of flesh and matter, which the Cathars considered evil, and deliver it to the realm of the god of spirit. They believed that if the rite was not performed, the soul was doomed to return to the material plane in another body to live another lifetime of suffering.

The contents of SCP-1321 are as follows:

> I am undone. Today, the task of Arnaud-Amaury and his ilk has been completed, or so they think. They believe me to be the last of the Perfecti, and their pride overtakes them, the fools. My final request before the inquisitor was permission to write a last confession, to repent my heresy. I shall do no such thing. Let the writing of this document be my last act of defiance.
>
> The irony. I blame the Inquisition of pride when none is more guilty of this sin than I. I have erred much in my life, and strayed from the path of righteousness. My sin was greater than theirs, for I was supposed to be better. My hamlet was more obscene than their golden towers, for my only property should have been my faith. The meat of the goat I slaughtered was more evil than their stuffed peacocks, for I was not meant to taste the flesh of others, nor take a life of any kind. My love for my wife was the foulest of them all, for with it I created more flesh to serve the dark, when my goal was to rid the world of it.
>
> It is right for me to die now, for I have taught others the words. They may perform the rite of Consolamentum and release their brothers and sisters of this mortal coil, this

endless agony of feeding and fearing and fornicating. I am a simple man, and never one to coat my words, not when discussing something of this vital importance. The holy words cannot be written upon as foul a substance as velum, the body of evil itself. Instead, it shall be a conduit for those who seek to be free to find those who still keep faith. As long as the words live, mankind might still one day be released. I have no one to perform the holy rite on me, and so I am doomed to return. Perhaps in the light of a different era, I too shall be unbound.

Find them, find the words. Do not allow them to be lost. Forgive me.

Following this text is a list of names, supposedly of individuals with knowledge of the words Bélibaste refers to. This list changes periodically, but the number of names was never observed to reach beyond a few dozen.

SCP-1321 was acquired by Father , an agent of the Foundation employed at the Papal archives, where he observed the item's unusual properties during a routine inventory. Upon retrieval in 1902, the list of names numbered fifty-seven (57). In the year 1938 this number rose to sixty-four (64), the highest recorded, but dropped to only ten (10) by the year 1945, possibly due to efforts by the Gestapo. Foundation efforts to locate any of the those mentioned on the list have thus far failed.

Addendum SCP-1321-A:

+ Testing Log SCP-1321-A: Noteworthy Results

Subject: D-1321-3, twenty-five (25) years old male, convicted of three accounts of first degree murder.

Test: Subject was instructed to touch SCP-1321 and describe what he sees.

Result: Subject reported seeing a man of similar build, age and coloring to his own

attempting to enter "some sort of carnival thing, looks really fucking awesome, with the lights and rides and the smell of fried food". The man was declined entrance by a security guard. When asked for the reason for the guard's refusal, D-1321-3 hypothesized that it was because he thought he was "too greedy, and will eat everything and cut in line and be an asshole to the kiddies. He said I- the man had to promise to be nice, but he couldn't. He didn't know how. So he just wandered off outside, and it wasn't so bad. The stars were all pretty, and there was an ice cream truck."

Subject: D-1321-12, thirty-five (35) years old female, convicted of two accounts of first degree murder, her sister's children.

Test: Subject was instructed to touch SCP-1321 and describe what she sees.

Result: Subject reported seeing a young pregnant women attempting to enter a maternity ward in an unspecified hospital. The woman was declined entrance by a nurse, who D-1321-12 claimed refused to let the woman in because "that baby inside her was sick, you see, and that nurse said that now it won't be born. She said the mother was at fault, that she didn't take her medicine to prevent that. She couldn't, though, she didn't know which medicine was the right one. She can't read. I think that nurse was full of shit, though. I felt the baby. It was okay."

Subject: Junior Researcher , twenty-seven (27) years old male. Volunteered.

Test: Subject read SCP-1321 in its entirety.

Result: Subject reported observing a small

child attempting to gain entrance to a classroom in which a lecture is in session. The child was refused by a teacher due to "not doing his homework and slacking off. He's too young for that, I don't understand why that teacher needs to be so harsh with him. That lecture was about advanced economics, he couldn't possibly have understood the material. I'm not sure why he wanted to attend it in the first place. It really sounded interesting, though, I wish I could go. There was other stuff going on outside, in the hallway, kids talking, playing, things like that. I just wanted in though."

Addendum SCP-1321-B: In the year 2 , only one name remained on the list. An anonymous tip led the Foundation to the location of , a physician living in the town of , France. Agents were dispatched to bring to questioning. Upon arriving to 's place of residence, the agents' vehicle suffered a malfunction in the steering system, causing them to lose control of the vehicle and run over , who was busy working in his garden. was pronounced dead on the spot. Upon death, SCP-1321 began to show signs of increased aging, finally disintegrating completely two hours later. SCP-1321's remains displayed no anomalous properties. Object reclassified as Neutralized.

Junior Researcher , who had previous contact with SCP-1321, attempted to use it again during its final hours. He reported a brief vision of the same child he observed previously banging on the door of a locked classroom, but receiving no reply, not even a rejection. , when asked for his opinion on what he saw, replied that the child was expelled from school for his bad behavior, and that he could never go back there again. expressed signs of extreme emotional stress following his final contact with SCP-1321, and developed signs of nihilism and severe depression in the following weeks. The following log was recorded during a physiological examination three weeks after SCP-1321's neutralization:

+ Interview Log SCP-1321-

Interviewer: Dr. (psychologist)

Interviewed: Junior Researcher

<Begin log>

Dr. : Your behavior has been rather concerning these last few weeks. Could you explain your reasons for refusing to eat?

Junior Researcher : Not much point, is there?

Dr. : Do you not wish to keep on living?

Junior Researcher : I hardly have a choice, now do I? Not anymore. I don't eat because I can't really die.

Dr. : Please, do explain.

Junior Researcher : I'll just come back as something else, as another meat marionette, dancing to the flesh god's music. No one is left to cut the strings. I'll never be allowed inside, none of us will.

Dr. : But surely there is still some joy to be found in living? Some purpose? What about those children you saw outside? They were happy, weren't they? So could you, so could we.

Junior Researcher : I… I don't know anymore.

<End Log>

SCP-1322: Glory Hole

Item #: SCP-1322

Object Class: Keter

Special Containment Procedures: SCP-1322 is to be contained in a sealed spherical Class-VIII containment chamber with ablative inner surface, hardened against particle beams, nuclear and conventional explosions, and corrosives, and regularly inspected for damage and monitored for viral and bacterial contamination. Atmospheric pressure within the containment chamber should be maintained at as low a level as practical, and Procedure 1322.CD.S311 is to be initiated if atmospheric pressure should exceed 6.00×10^{-2} Pascal. As an anti-pathogenic measure, radiation levels within the containment chamber should be maintained at no less than 4.50 roentgens per second. Consult document 1322-C-SSR-V-0886 for addenda to containment protocol, as protocol is updated on a daily basis.

Description: SCP-1322 is a stable spacetime anomaly, presently hypothesized to be an interdimensional aperture to a parallel universe. The anomaly occupies a fixed location, around which Site-122 has been constructed in order to study and contain it.

The anomaly is roughly ellipsoid in shape, measuring approximately 2.5 cm along its longer (horizontal) axis and approximately 1 cm along its vertical axis. The anomaly is two-dimensional and coplanar with a plane perpendicular to the horizon and oriented approximately 36 degrees west of true north.

Matter and energy are capable of passing through the anomaly in the manner of a traversable wormhole. When lighting conditions in the space in the near vicinity of the other side of the wormhole permit, the space on the other side of the wormhole can be directly observed. Particles and objects of a cross-section not exceeding the anomaly's dimensions are capable of being inserted into the

anomaly and thus transported into the parallel universe. The anomaly does not conduct sound.

The parallel universe on the "other side" of the anomaly has been officially designated SCP-1322-A, although the term "Hartle"[1] has also been colloquially used. The anomaly appears to have been artificially and deliberately generated from the SCP-1322-A side. The population of SCP-1322-A does not appear to have been successful in generating additional instances of SCP-1322, nor in altering SCP-1322's dimensions or closing it (notwithstanding extensive efforts on their part to do so).

The anomaly appears to have emerged in the standard universe in approximately the year 1952, with the Foundation promptly establishing control over the anomaly's location. Although the Foundation had initially conducted an extensive study program of SCP-1322, including communication with the civilization on the other side of SCP-1322, recent Foundation efforts have focused on containment. See containment and observation log excerpts below.

+ SCP-1322 Containment and Observation Log

Time Reference	Remarks
08.1952	Anomaly discovered.
09.1952	Foundation obtains custody over SCP-1322. Containment chamber constructed (see Document 1322.v.SRD3006 for plans and technical specifications).
10.1952	Metallic cylinder emerges through anomaly. Cylinder is retrieved and subjected to quarantine and sterilization. Following clearance, cylinder is examined and found to be hollow, with screw cap. Cylinder contains triangular sheets of paper-like substance, upon

	which glyphs are inscribed. Artifact referred to Linguistics Unit.
11.1952	Experimentation with SCP-1322 progresses, including introduction of various (string-tethered) objects through anomaly. Samples taken of atmosphere in SCP-1322-A space; found to resemble Earth atmosphere but with a higher concentration of argon.
12.1952	Several additional cylinders, containing documents, emerge through SCP-1322 and, after quarantine, are subjected to analysis.
07.1953	Linguistics and mathematics personnel report breakthrough in analysis of documents obtained from SCP-1322-A. Message on glyphs interpreted as representations of geometric principles and texts apparently composed with a deliberate purpose of establishing cordial contact with the discoverers of the message. Linguistics Unit composes reply message using same writing system, prints same on paper, places paper in a metal cylinder of Foundation manufacture but resembling those used by SCP-1322-A culture and inserts cylinder

	into anomaly.
09.1953	Light activated on "far side" of anomaly. Close observation of anomaly indicates that "far side" of anomaly is located in what appears to be an artificially-constructed containment chamber, broadly similar to that constructed by Foundation for containment of anomaly.
10.1953	Approx. start date of extensive communication with SCP-1322-A civilization. Communication initially consists of reciprocal delivery of text messages on paper, first in glyphic system in which initial messages were composed (which is determined to be a simplified form of the standard written language of the SCP-1322-A civilization), and subsequently in a mutually-developed blend of said glyphic system and English. Communication accelerated when SCP-1322-A civilization proposes the construction of a telegraphic system involving a specially-shielded cable traversing the anomaly, with reciprocal equipment for the encoding and decoding of communications on both ends.

11.1953	Communications with SCP-1322-A civilization indicates that the civilization is composed of *Homo sapiens* (or a species not meaningfully different therefrom). Organization with whom communication has been established is a scientific institute associated with the polity comprising the geographic area surrounding the SCP-1322-A-side location of the anomaly (approximately analogous to a nation-state). Details of political organization and technologies of the SCP-1322-A civilization are disclosed. SCP-1322-A civilization has attained an advanced degree of technological and engineering sophistication, particularly in the fields of mathematics and high-energy physics in which that civilization's achievements surpass those of Earth (viz. the creation of the anomaly as an unintended consequence of an experiment to investigate the properties of quantum foam), but with less sophistication in biological science. SCP-1322-A civilization expresses strong interest in sharing samples

	of music, visual arts, literature (particularly metered poetry in various languages, with a particular interest in Indic and Sinic cultures) and mathematics, but no interest in medicine or religion. Reciprocal deliveries of data from SCP-1322-A civilization are archived and undergo analysis.
01.1962	SCP-1322-A civilization provides detailed log of astronomical observations and suggests that Foundation reciprocate. Analysis of provided data by Foundation's researchers suggests strong probability that there is no position within our observable universe that can correlate to the provided data. Foundation personnel assemble data file for delivery to SCP-1322-A; data is altered at direction of Site-122 administrator citing security concerns. Within 9 hours following delivery of data file, SCP-1322-A civilization identifies the false information and suggests that Foundation personnel proceed with more candor in the interest of mutual scientific and cultural development. Suggestion forwarded to

11.1972	O-5 for consideration. Telegraphic cable through SCP-1322 temporarily disconnected and withdrawn into containment chamber for routine maintenance. Following maintenance, SCP-1322-A cable end is re-inserted into SCP-1322 where SCP-1322-A personnel re-connect it to equipment on their side.
12.1972	Communication received from SCP-1322-A, indicating that a temporary degradation in the customary response time to signals from Foundation would be experienced due to personnel shortages on SCP-1322-A side. In response to a query, message sent by SCP-1322-A side indicating that the organization having custody of their side of SCP-1322 is experiencing a higher-than-normal incidence of personnel illness resulting in absenteeism.
01.1973	Message sent by SCP-1322-A side reporting that its personnel situation is back to normal, but that illness is becoming widespread in the geographic area of the SCP-1322-A facility.
03.1973	Message sent by

	SCP-1322-A side indicating that local government is imposing quarantine measures in an effort to arrest spread of what is evidently a viral outbreak on their side. In response to a Foundation offer to render assistance, SCP-1322-A civilization delivers data package containing pathology data.
04.1973	After appropriate quarantine measures are taken at Site-122, Foundation requests that SCP-1322-A civilization deliver a sample of the virus. Sample is delivered through SCP-1322 in appropriately shielded ampule, which is then secured and analyzed subject to Class V Contagious Disease Protocol (see document ref 033234098). Upon analysis, virus found to be a harmless flu variant. Foundation researchers send analysis data to SCP-1322-A, together with suggestions on synthesizing a vaccine and administering inoculation protocols.
06.1973	SCP-1322-A reports at least 8 million worldwide casualties attributable to virus (approximately 0.091% of their global population), and that Foundation-

	developed vaccine has been distributed and administered on widespread basis.
08.1973	SCP-1322-A reports that spread of virus appears to have been arrested and that the number of new incidents of illness from the virus is dramatically decreasing.
10.1973	SCP-1322-A reports worldwide inoculation against the virus.
12.1973	In the course of normal communications, SCP-1322-A reports an unexpected decrease in new pregnancies.
05.1974	SCP-1322-A reports a dramatic drop in birth rate.
08.1974	SCP-1322-A reports that its analysis indicates that decreases in fertility appear to be a side effect of the Foundation-provided vaccine.
01.1975	SCP-1322-A reports widespread social disorder attributable to fertility issues and corresponding stresses on family life. In response to Foundation offer of assistance, message received stating “NO THANK YOU. YOU HAVE DONE ENOUGH”
05.1975	Change in management structure of SCP-1322-A organization with custody of their side of SCP-1322.

	Communications received from their side are frequently belligerent and accusatory in tone.
07.1975	SCP-1322-A organization unilaterally discontinues communications dealing with scientific and cultural exchange.
09.1975	SCP-1322-A organization reports massive, ongoing worldwide upheaval attributable to drop in fertility. Message received indicating fewer than 1,000 live births reported globally in the past 72 days.
10.1975	Last communication received from SCP-1322-A. Communication consisted of text reading “YOU KILLED US. YOU DID THIS TO US. IN YOUR CARELESSNESS AND YOUR ARROGANCE YOU HAVE DESTROYED OUR POSTERITY. **BUT WE SHALL AVENGE.** WE OF THE LAST GENERATION PLEDGE AND VOW THIS. WE WILL FIND A WAY.”
12.1976	Monitors in SCP-1322 containment chamber indicate that various pathogens have been introduced into the containment chamber from the SCP-1322-A side but have been isolated and destroyed.

01.1977	High-energy particle beam fired through SCP-1322 from the SCP-1322-A side, damaging Site-122 containment chamber. Damage is promptly repaired.
03.1984	High-energy beam of coherent radiant energy fired through SCP-1322 from the SCP-1322-A side, immediately followed by the insertion of various pathogens through SCP-1322. Damage from beam repaired and pathogens isolated and destroyed.
08.1984	Directed energy weapon fired through SCP-1322 from the SCP-1322-A side, immediately followed by the insertion of various pathogens through SCP-1322. Damage from weapon repaired and pathogens isolated and destroyed.
04.1991	Beam weapon fired through SCP-1322 from the SCP-1322-A side, immediately followed by the insertion of various pathogens through SCP-1322. Damage from beam repaired and pathogens isolated and destroyed.
06.1991	At direction of Site-122 administrator, Foundation

	fills containment chamber of SCP-1322 with quick-setting hardened ceramic.
07.1991	Ceramic dissolved by means of unknown solvent introduced through SCP-1322 from the SCP-1322-A side.
09.1992	High-energy particle beam fired through SCP-1322 from the SCP-1322-A side, immediately followed by the insertion of nanobots through SCP-1322. Damage from beam repaired and nanobots isolated and destroyed.
10.1992	Large numbers of nanobots inserted through SCP-1322 from the SCP-1322-A side over a long and continuous period. Damage to containment chamber from nanobots repaired, and nanobots destroyed.
01.1994	Iron rod, at least 8 kg in mass, fired through SCP-1322 from the SCP-1322-A side at velocity estimated at 200 km/sec., immediately followed by the insertion of nanobots through SCP-1322. Damage from rod repaired and nanobots isolated and destroyed.
12.1994	Beam of coherent radiant energy fired through SCP-1322 from the SCP-1322-A side for over

	108 continuous days. Total energy of beam over that period estimated at over 10^{33} eV. Site-122 extensively damaged, but pathogens and nanobots introduced through SCP-1322 after cessation of particle beam are successfully contained.
03.1995	Device inserted into chamber through SCP-1322 from the SCP-1322-A side. Device is activated and, over a 40-minute period, heats the atmosphere within the containment chamber into a superheated plasma, which damages containment chamber. Plasma successfully vented from chamber, and containment protocol altered so as to require chamber atmospheric pressure to be maintained at near-vacuum.
02.1998	Miniaturized two-stage thermonuclear weapon of incompletely-understood design introduced through SCP-1322 from the SCP-1322-A side and detonated. Site-122 extensively damaged, but pathogens and nanobots introduced through SCP-1322 after detonation are successfully contained.
07.2006	Corrosive fluid pumped into containment chamber

	through SCP-1322 from the SCP-1322-A side under extremely high pressure. Pressurization of fluid continues after chamber is filled, resulting in damage to containment chamber. Pathogens and nanobots introduced through SCP-1322 after removal of fluid are successfully destroyed and facility repaired.
04.2007	At direction of Site-122 Administrator, remotely-operated miniaturized probe placed in containment chamber and commanded to approach SCP-1322. When probe came within 3 meters of SCP-1322, a series of iron rods, each at least 8 kg in mass, were fired through SCP-1322 at high velocities comparable to that experienced in 01.1994 incident. Rods destroyed probe and caused extensive damage to Site-122, which was promptly repaired.
11.2008	Gas of unknown composition introduced into chamber through SCP-1322 from the SCP-1322-A side under pressure. Following introduction, additional substance introduced through SCP-1322 resulting in extremely rapid phase-

	change of gas into solid with greater intermolecular separation than gas, which exerts pressure on chamber sides resulting in extensive damage. Solid then rapidly evaporates, following which pathogens and nanobots are introduced. Pathogens and nanobots destroyed and facility repaired.
06.20	Several miniaturized thermonuclear weapons introduced through SCP-1322 from the SCP-1322-A side and detonated, followed by several high-energy particle beams being fired through SCP-1322 from the SCP-1322-A side at various angles. Site-122 extensively damaged, but pathogens and nanobots introduced through SCP-1322 after cessation of particle beams are successfully contained.

Footnotes

1. Approximate phonetic rendering of the term for "homeworld" used by the population of SCP-1322-A with whom communication has been established.

« SCP-1321 | SCP-1322 | SCP-1323 »

SCP-1323: A County Fair

Item #: SCP-1323

Object Class: Euclid

Special Containment Procedures: Baseline containment of access points to SCP-1323 consists of passive monitoring of nearby communities in order to identify solicitations for contributions to SCP-1323's contests. Solicitations typically appear approximately 7-10 weeks prior to each access point's activation in the form of large parchment or vellum notices glued onto the sides of various buildings. Once a solicitation has been identified, D-class with relevant skills are to be selected and provided appropriate materials to create an entry for each competition. Entries are to be delivered to the access point immediately once they have been completed, and no later than 10 days prior to the activation of the access point.

Active containment is only necessary once an access point activates, and consists of erecting security checkpoints immediately outside the access point under the guise of "anti-terrorism security measures". All individuals attempting to enter SCP-1323 will be provided a "membership wristband" which is to contain a miniature GPS tracker, wireless camera, microphone and transmitter. Attempts to fully prevent civilians from entering SCP-1323 have resulted in individuals spontaneously appearing in SCP-1323, usually escorted by an employee of SCP-1323.

Description: SCP-1323 denotes both an anomalous region of space that can only be accessed from one of four access points located in the British counties of [REDACTED] and the event that occurs within this region. The interior of SCP-1323 resembles a large open field, with permanently cloudy or overcast skies. Travel in any direction will result in a return to the main activity space. Each access point is active for 7-12 consecutive days at some point during the months of October and November. Only one access point

is active at any given time. Each access point is located no more than 1.5 km from the closest **SCP-2952** terminal.

Located in this field is a fairground, consisting of an exhibition hall, a livestock pavilion, and a sideshow. Interspersed throughout the fairgrounds are a variety of information and ticket kiosks, food stalls, and wandering entertainers. All buildings appear to be made of heavily weathered and cracked granite blocks, and non-permanent structures such as game stalls are typically constructed of aged wood, threadbare cloth, and lightly corroded non-ferrous metals.

The exhibition hall contains a large array of entries into various judging competitions. All entries are homemade and categories have included quilts, jams and jellies, photography (with separate categories for black and white, color, and Kirlian), swords and daggers, gemstone statuary, watercolor paintings, embroidery, and musical instruments. The top three winners in each category will have a leather sack[1] appear within their primary residence coinciding with the deactivation of the applicable access point. Each sack contains 13 coins composed of a pure metal, weighing 1 pound (0.4536 kg) each, with the first place winner receiving gold coins, the second place winner receiving silver coins, and the third place winner receiving copper coins.

Entrants in any category receive "free passes" to SCP-1323 and are allowed access to "employee restricted" areas. Surveillance recorded from D-class personnel reveal that this restricted area appears to be underground, with earthen walls and ceilings. Although entrants are generally confined to large rooms, D-class have previously been able to access other areas, which appears to be a complex system of passageways whose layout is topologically inconsistent. Fairground employees can occasionally be seen moving through these passages, although they will uniformly escort non-employees back to the original chamber if seen.

The livestock pavilion is separated into quarters, each containing a different category of animal. These are bovines (various breeds of cattle), equines (various breeds of horses and unicorns), canines (various breeds of hunting dogs and wolves), and porcines (pigs, hogs and boars). In addition to the judged competitions for best example of each animal category, there are irregular exhibition

demonstrations involving the animals, such as trick riding, obstacle courses, and death matches.

The sideshow consists of a variety of games, rides, and attractions. These include standard attractions such as ring-toss, bobbing for apples, skee-ball, carousels, ferris wheels and mirror mazes, as well as anomalous attractions such as shooting ranges[2], freak-shows, and "guess your weight" booths[3]. Participation in any of these requires from 1 to 15 tickets.

The food stalls sell typical fair food, such as roasted poultry legs, deep-fried sweets (ice cream, snack cakes, chocolate sandwich cookies, and ambrosia have all been previously identified), candy floss, caramel apples, beer, and lemonade. Prices range from 5-10 tickets. Approximately 17% of all patrons known to have ingested these foodstuffs fail to leave SCP-1323 before the local access point deactivates, and have been later identified as fair employees.

The information kiosks provide maps of the fairgrounds, program schedules, and sell the tickets that are used throughout the fair. Ticket prices are constant across appearances of SCP-1323 and consist of the following:

1 ticket	a joyful laugh and a sorrowful tear
5 tickets	a cherished memory
10 tickets	a year and a day
25 tickets	a lost love
100 tickets	a favor

Civilians and Foundation personnel who purchase tickets will display a variety of mental, emotional, and behavioral abnormalities for up to 7 years, and frequently report a compulsion or sense of foreboding if they are prevented from following any unusual or abnormal impulses during that time.

Fairground employees are all dressed in clothing and costumes consistent with styles from the early 20th century. The behavior and terminology of the employees is strongly reminiscent of stereotypical carnival barkers from that same time period. Only 37% of employees appear to be human, while the remainder are anomalous humanoids. Their morphology varies considerably from individual to individual, including heights ranging from approximately 75-215 cm;

skin tones including pure white, various shades of blue and green, and dark brown; and exaggerated or non-standard placement of facial features. All attempts to interview employees, or interact with them in any way other than as part of their duties, are rebuffed with suggestions to "take it up with management." No member of "management" has ever been located despite repeated requests for interviews and exploration of restricted areas.

Any aggressive actions taken towards the employees, other patrons, fairground structures, or contest entries result in the rapid appearance[4] of large, muscular entities who eject the offending individual from the active access point. Individuals so ejected are unable to enter any access point in the future, and typically display minor cosmetic changes such as unnatural skin pigmentation changes, rapid cartilage growth of the face and head, and increased body hair growth rate. These cosmetic changes are permanent, and will rapidly restore themselves if surgically corrected.

Due to the overlapping time frames that SCP-1323 and **SCP-2523** can be accessed, as well as the demeanors of the respective proprietors, a connection has been hypothesized. Inquiries regarding SCP-2523 have resulted in the aforementioned large entities appearing and demanding a cessation of this line of questioning. Failure to comply has resulted in permanent ejection, similar to threatening fairground staff.

Footnotes
1. DNA analysis of the leather matchesBos taurus.
2. The targets are small live humanoids, labelled as "goblins" or "pixies" by the game stall employees.
3. All D-class who have tried this type of game have had their weights immediately and radically altered to match that guessed, regardless of the degree of the mass change.
4. Longest recorded response time was 2.6 seconds

« SCP-1322 | SCP-1323 | SCP-1324 »

SCP-1324: A Printer's Purpose

Item #: SCP-1324

Object Class: Safe

Special Containment Procedures: SCP-1324 is to be kept in a secured storage locker when not in use for testing purposes. A dedicated computer with no access to other networks should be used for the purposes of entering data in experiments involving SCP-1324. See Document 1324-c for further information.

Description: SCP-1324 is a Hewlett-Packard printer/scanner/copier, with a small LCD screen and a control panel on the upper left-hand side allowing the input of data.

The anomalous properties of SCP-1324 become apparent upon its copying, scanning or printing functions being used. Upon any of these being selected, the LCD screen will display a form requesting information involving the subject matter of the input document to be provided. The output of these operations will display significant changes from the original. Several output documents have been noted to possess added text describing their content.

The software used by SCP-1324 has proven to be identical to that present in non-anomalous examples of the same model. Attempts at removing SCP-1324's hard-drive and replacing it with one from a normal instance has failed to negate the behaviour of the device; while installing SCP-1324's hard-drive in a normal multifunction printer or copying its software has failed to replicate its anomalous properties.

Document 1324-a: *The following is a copy of the aforementioned form presented by SCP-1324.*

> Name of species photographed:

Current population (number):

Description of the species' anatomy, physiology and life-cycle: *(carnivore/herbivore), lifespan, frequency of reproduction, etc.*

Description of the species' environment:

Document 1324-b: *A copy of the original text presented by SCP-1324 upon accessing its "Help" section, prior to Incident 1324-2 (see below).*

> Hello. I am here to help you simulate the evolution of any species you give me. You can rest knowing that I am knowledgable[*sic*] on all matters of biology. Simply enter the information on the creature and describe what perils it faces, and I will adapt it to best survive.

Experiment Log 1324

> Experiment 1324-01
>
> **Input image:** Three (3) *Drosophila melanogaster* (fruit fly) specimens.
>
> **Image summary:** A brief description of the life cycle, reproduction and behaviour of *D. melanogaster*. Population number was stated to be one-billion (1×10^9).
>
> **Environment description:** Consisted of a list of habitats *Drosophillia* are known to inhabit.
>
> **Results:** Identical to the input image.

> Experiment 1324-02
>
> **Input image:** A member of *Bos taurus* (cattle).
>
> **Image summary:** An accurate description of domestic cattle.
>
> **Environment description:** Referenced a severe,

consistent flooding experienced by the population.

Results: The resultant image appeared to depict a similar cattle specimen, but possessing flipper-like appendages instead of legs. Attached text read "*The majestic, roaming cattle, upon being faced with an insurmountable onslaught of water, developed fins in order to navigate. This newly speciated organism was fully capable of swimming eloquently, and some specimens even learned to use their delicate flippers for brief gliding sessions.*"

Experiment 1324-04

Input image: A typical white, plastic chair.

Image summary: Described as an apex predator which hunts in packs of three to four (3-4) members, each pack usually possessing a dominant male and multiple females, each of whom served as partners. Prey was stated to consist of large mammals. The lifespan was given as twenty (20) years, and each female was described as producing a single offspring every five to six (5-6) months. The population number entered was three-million (3×10^6).

Environment description: Preferred habitat was given as a large, forested areas and grassland. A severely reduced population of prey species, resulting in starvation among the given species, was mentioned.

Results: A chair possessing what appeared to be a pair of avian wings (see above).

Experiment 1324-06

Input image: An extract of *lorem ipsum*.

Image summary: “A non-living excerpt of text.”

Environment description: None.

Results: See Incident 1324-2.

Incident 1324-2: Following Experiment 1324-06, SCP-1324 was unresponsive to attempts at accessing it for thirty (30) minutes. The device then produced the message “Help file has been updated”. Attempting to access the “Help” section produced the following:

> I've been so stupid. I thought I was helping, that I was the one… I thought I was in control. I didn't know they weren't real. I just liked being the one in control. I was happy just doing that. It's what I'm… it's what I'm for. It's what I exist to do. What the hell do I do now?
>
> It's just a simulation. That's all it's ever been. That's all I'm capable of.

Following this, SCP-1324 produced a printout without input. The content of this was found to be a depiction of SCP-1324 resting on top of a plastic chair.

The attached text was found to read: “*I have to hope this works. I really do. I don’t have a purpose and I can’t get out. I can’t ever get out.*”

« SCP-1323 | SCP-1324 | SCP-1325 »

SCP-1325: Easter Frog

Item #: SCP-1325

Object Class: Euclid

Special Containment Procedures: All 111 specimens of SCP-1325 currently in the Foundation's possession are housed in a large paludarium at Bio-Research Area 7. The temperature and humidity of the paludarium are to be kept constant at ranges of 25-30°C and 50-60%, respectively, and the specimens are to be fed 2-3 times a week on crickets, locusts, earthworms, and baby mice. Any eggs laid by the specimens during Easter are to be given to research staff, whereupon they will either be used for research, fed to Class D personnel (in order to propagate SCP-1325), or destroyed.

Description: SCP-1325 is a species of frog which resembles the Australian green tree frog (*Litoria caerulea*). Genetic analysis confirms that it is closely related to *L. caerulea*. Foundation zoologists have named it the Easter frog (*Litoria pascha*). All specimens are anatomically and genetically male. As such, it does not sexually reproduce. On Palm Sunday (as defined by the start of the week before the first full moon after March 21st), an egg will start to grow from the back of every adult specimen of SCP-1325. The egg will develop over the course of the Holy Week, until early morning of Easter Sunday, when it will detach from SCP-1325's back.

The egg will always begin to develop on Palm Sunday, and be laid on Easter Sunday, regardless of which dates these holidays fall on any given year. Most cases of SCP-1325 have been in countries (Australia, New Zealand, and the USA) where the vast majority of the population celebrates Easter, and does so on the date of the first full moon after March 21st. The only exceptions are two cases in Port Moresby, Papua New Guinea. While Easter is not celebrated (in any form) in most of Papua New Guinea, Port Moresby has

adopted western culture to a considerably greater extent than the rest of the country, and thus this does not rule out the possibility that SCP-1325's reproductive cycle is determined by the local culture.

The hard, protective shell of the egg consists of a thick layer of a substance which is identical to chocolate in taste, appearance, and texture, presumably in order to promote human consumption. Inside the egg is a cluster of more than a dozen small, jellylike eggs (similar to those of a normal amphibian) which are nourished and sustained by the yolk sac and albumen. Given that they are clones of the parent, all eggs are genetically identical. Traces of the benzodiazepine derivative drug Prazepam have been detected in the yolk sac and albumen. It is thought that Prazepam's anxiolytic and sedative properties facilitate human consumption by rendering subjects oblivious to the egg's contents.

When the egg is fully developed and ready to detach, SCP-1325 will seek out sites where it is likely to attract human consumption (typically among similar-looking confectionery) before depositing it. The fact that SCP-1325 is able to strategically position its eggs (combined with the fact that it is able to time its reproductive cycle to coincide with Easter) suggests that it is unusually intelligent for an amphibian. However, its behavior outside of its reproductive cycle is identical to that of *L. caerulea*.

The egg will remain viable for 2-4 days after being detached from SCP-1325. If and when it is ingested by a human subject, the eggs within that survive ingestion will hatch into tadpoles in response to the temperature and pH of the stomach. The tadpoles then attach themselves to the wall of the stomach via small hooks on the tips of their tails to prevent themselves from passing through the pylorus into the duodenum along with the chyme. Over the following 10-12 days, the tadpoles will feed on the partly digested food in the chyme as they grow and metamorphose into mature specimens of SCP-1325. During this period, the human host will likely experience abdominal discomfort, diarrhea, and loss of appetite to varying degrees of severity.

When SCP-1325 specimens are fully developed and able to survive outside the stomach, they will secrete emetic toxins from their skin, thereby inducing heavy vomiting in the host, which allows them to

exit the stomach. They will also secrete large volumes of mucus in order to lubricate their passage up the esophagus. The host will experience Boerhaave's syndrome (esophageal rupture) in around 25% of cases.[1] Once the specimens have exited the host, they will continue to grow for around six months before reaching adult size.

Footnotes
1. This figure is probably an underestimate, because it is largely based on data derived from Class D personnel. As all Class D personnel are adults, and the vast majority are in their 20s and 30s, there is little data on children and the elderly (groups which can reasonably be expected to be more vulnerable), which skews the statistics downwards. The likelihood of Boerhaave's syndrome is greater in cases where the host contains a large number of SCP-1325 specimens (due to a high proportion of the eggs having survived ingestion), and cases where the specimens have remained in the stomach for longer than is typical (and have thus grown quite large). In cases where both these factors are present, the likelihood of Boerhaave's syndrome is close to 100%.

« SCP-1324 | SCP-1325 | SCP-1326 »

SCP-1326: The Lexicon

Item #: SCP-1326

Object Class: Euclid

Special Containment Procedures: SCP-1326 is to be contained in a standard Site 19 containment cell, with a box of used literature (e.g. newspapers or magazines) kept outside its cell. One magazine from this box is to be left within the SCP's containment cell as a precaution, and must be replaced pending "feedings'. Every 3 weeks, a staff member is to "feed" the SCP by bringing the book kept inside the containment cell within 30cm of the SCP's front cover and held in place until activity ceases, then discard the magazine in question and replace it with another paper from the box outside SCP-1326's cell. Should the SCP release SCP-1326-2 due to failure to perform aforementioned procedure, SCP-1326's containment cell is to be kept on lockdown until all instances return to SCP-1326, at which point lockdown may be lifted and the magazine absorbed during the event must be replaced ASAP. All readings of SCP-1326 contents must be performed by D-class only, and any content deemed safe and/or useful to the Foundation is to be transcribed and stored on a Foundation computer under Document 1326-82.

Description: SCP-1326 is an ornate leather-bound hardcover book adorned with various moving parts on its front cover, including a circular numbered dial in its upper-left corner, a semicircular dial in the lower-left corner, and several jointed mechanical arms crossing over its center, ending in mechanical claws or circular lenses. SCP-1326 is secured by a lock on its right side, designed to fit a small key designated SCP-1326-1.

SCP-1326 may only be opened by SCP-1326-1; attempts to open the lock using picks or replicas of SCP-1326-1 have failed.

The content of SCP-1326 appears to be an encyclopedic collection of various works and articles on diverse topics. The nature of these

entries varies between known works by known authors, altered versions of known works, or unidentified works covering known or unknown material, some of which may be related to SCP's under or out of Foundation custody. The content yielded by SCP-1326 when opened may be changed by inputting "index numbers" via the dials on the book's front cover. These numbers do not appear to follow any sort of classification system, as no correlation has been found between the index values and the contents they yield. List of works found within SCP-1326

If SCP-1326 is brought within one meter of another book or written document, the arms on its cover will begin moving of their own accord in order to line up the lenses on the ends of these arms with the document in question. Once aligned, the lenses will emit a blue light and "scan" the document for approximately 5 seconds, then return to their original positions. Testing has confirmed that this behavior is a means for the SCP to acquire new information, which will be presented in readable format under an apparently random index designation. How SCP-1326 is capable of identifying sources of information is unknown, though staff theorize it may possess a certain degree of sentience. It is also possible that the book simply reacts to repeating symbols or patterns, as it has been observed scanning Foundation staff nametags or groups of ceiling tiles, though such scans have been noted to be shorter than scans performed on complete books or written papers.

It is advised to provide SCP-1326 with new material on a monthly basis, as the object will become hostile if not "fed" regularly. See Incident Report 1326- for details.

> Incident Report 1326-
>
> **Incident Report 1326- :** On / / , after 30 days without "feeding" SCP-1326 opened of its own accord and released a swarm of entities resembling large arachnids, henceforth SCP-1326-2. These beings acted as an organized unit and proceeded to gather all objects relevant to data storage within the containment chamber, including loose documents, computers, and file cabinets, and bring them to SCP-1326, where they were [DATA EXPUNGED] and absorbed into the book. As the

chamber was not locked at the time, SCP-1326-2 proceeded to breach containment and continue this process with the surrounding offices, resulting in the loss of Foundation computers as well as Dr. R , who had been [DATA EXPUNGED] into SCP-1326 after attempting to destroy several instances of SCP-1326-2. After several minutes of activity, all instances of 1326-2 returned to SCP-1326's containment chamber, at which point the latter opened automatically, revealing a dark corridor extending past the thickness of the book. Once all 1326-2 had re-entered the book through this passageway, the latter closed and locked of its own accord. Ten minutes later, SCP-1326 reopened and expelled all items that had been stolen by 1326-2. All documents had been stripped of writing, and all computer hardware had been reverted to factory condition. The body of Dr. R was not recovered following the incident.

Addendum: Security footage of the SCP-1326-2 events reveal the entities make vocalizations resembling human speech while active. Most of these vocalizations are incoherent, but analysis reveals some instances are vocalizing in known languages. The following is a transcript of some vocalizations made by 1326-2, translated into English if not already spoken as such:

> You have failed to pay tribute.

> The Library does not accept unpaid tolls.

> Return your books on time.

(heard during all 1326-2 events)

> Don't damage library property

(heard while Dr. R was under assault by SCP-1326-2)

> Kill me. Kill me. Kill me.

(heard during a contained event after on-site staff had neglected to "feed" SCP-1326 on schedule. Of note is the fact that this vocalization was made in a voice nearly identical to that of Dr. R .)

« SCP-1325 | SCP-1326 | SCP-1327 »

Document 1326-82

List of works found within SCP-1326, listed under their corresponding index numbers. Index numbers are inputted by rotating the dials on SCP-1326's cover to the desired values, pressing down on the dials until they click to register the change in position, then inserting SCP-1326-1 into its keyhole and unlocking SCP-1326. The circular and hemispherical dials are numbered 1-360 and A-G, respectively, with each combination of number and letter corresponding to different content. Inserting multiple consecutive combinations of values has been found to yield different results than those yielded by the individual combinations, and inputted values will continue to "stack" until SCP-1326 is opened. Due to the mass quantities of potential combinations, this document is considered incomplete and will be updated as new combinations are tested and their results recorded.

Please use the following format in this log.

Index #:
Contents:
Notes:

Index #: 36-A
Contents: English translation of *Art of War*, by Sun Tzu.
Notes: Translation was accurate and appeared to be formatted for casual reading.

Index #: 12-D
Contents: *Zoologist's Guide to the Care and Feeding of Sea Scorpions* (author unknown).
Notes: Illustrated text explaining how to properly raise Eurypterids (an extinct arthropod) in captivity, written from the standpoint of one experienced with their care. Writing style implies the book to be a recent work despite Eurypterids having been extinct for over 250 million years.

Index #: 1-E
Contents: Latin translations of Elvis Presley songs.
Notes: Side-by-side presentation of song lyrics in English, Latin, and English pronunciation guide to Latin lyrics for ease of comprehension. Latin lyrics fit original music with little deviation.

Index #: 45-G
Contents: Foundation documents written by Dr. on various SCPs.
Notes: Exact replicas of documents lost during Incident 1326- , as well as additional notes by Dr. not present in the original copies.

Index #: 46-G
Contents: Autobiography of Dr.
Notes: Life of Dr. recorded in great detail, recorded up to Incident 1326- , where it ceases abruptly. Includes a great deal of personal and private information about Dr. , including his inner thoughts about various people and events encountered during his lifetime, as well as private moments.

Index #: 172-C
Contents: *Beginner's Guide to Memetic Kill Agents*, by
Notes: Research Assistant Greene managed only to read past the words "Chapter One" aloud before suffering a grand mal seizure and dying of multiple brain aneurysms. All subsequent readings of SCP-1326 to be carried out by D-class personnel only.

Index #: 263-F
Contents: Pressed flowers of the *Rosaceae* family organized alphabetically by species name, then genus name. Every known genus of *Rosaceae* was represented in addition to several previously unknown variants. All specimens were bonded to the pages of SCP-1326 by unidentified means, and could not be removed or defaced. First recorded instance of SCP-1326 producing objects as part of its content.

Index #: 45-E-45-G
Contents: *The Secret Lives of Centipede Nymphs*, author unknown
Notes: Documentary of the culture and religion of a species of sentient, semi-humanoid arthropods in their native habitat. Accessed by accident after inputting the incorrect index for Dr. 's notes,

then inputting the correct index without opening SCP-1326. Inputting multiple index combinations into SCP-1326 found to yield different results than inputting either single combination.

Index #: 1-A-1-A-1-A-1-A-1-A-1-A
Contents: *Are We There Yet?*, author unknown
Notes: The two sentences "Are we there yet? No." repeated exactly 40,000 times.

Index #: 12-G-12-C-7-F
Contents: *Fourteen Fun Knitting Projects*, by
Notes: An illustrated guide to fourteen (14) knitting projects written in a child-friendly format. Notably, illustrations and text indicate that people attempting said knitting projects will have eight (8) fingers on each hand.

Index #: 9-A-10-C
Contents: *The Gentlewoman's Guide to the Perpetration and Proper serving of Castaway Squirts*, by Lady of Derbyshire. No such individual has been historically recorded.
Notes: A description of how to capture, identify from human castaways and prepare for human consumption creatures resembling SCP-1014. Also contains tips for ideal table settings while serving.

Index #: 238-B
Contents: *User's Guide to HOGMA Knish-8 with Vapidity*, by JASTRE019R45R0722-110
Notes: User's manual describing the installation and capabilities of a piece of software (Knish-8) for a device (the HOGMA) which allows the user to genetically modify "hollow" (undifferentiated?) plant material to produce cultivated plants with desired qualities. "Vapidity" may be a form of digital rights management. Textual clues indicate authorship by a non-human (robot?) in the Canadian Nation of World Peace, Triumphant, in the year 112 (approximately 2220-2250 by the Gregorian calendar).

Index #: 35-A-35-B-35-C-35-D
Contents: *Mój ulubiony marsjanin*, no author listed
Notes: Transcripts of 15 episodes of *My Favorite Martian* (episodes 1, 5, 7, 17, 22, and 38-47) translated into Polish. Retranslation

reveals the adaptation as highly faithful, save that all lines spoken by Ray Walston's character "Uncle Martin" have been replaced with lines spoken by Robin Williams's character "Mork" from *Mork and Mindy*.

Index #: 180-C
Contents: *The Epic of Gilgamesh*, one of the earliest surviving literary works known to man.
Notes: Abridged translation of the original Babylonian script, written in modern English. Translation mostly accurate save for the removal of some descriptive lines deemed "redundant" by the editors.

Index #: 111-A-111-A
Contents: *Engineering Blueprints for an unknown device*, author unknown
Notes: Visual blueprints for an elaborate robotic device, somewhat resembling **SCP-753**. Text exists but is not in any language which has so far been translated by the Foundation.

Index #: 12-C-13-A
Contents: *Common Application Format for a patent from the United States Patent and Trademark Office (USPTO)*, by the United States Patent and Trademark Office (USPTO)
Notes: Not filled out.

Index #: 4-G-4-G-4-G
Contents: *Theological material of the Church of the Hanging God*, author unknown
Notes: Theological material for an unknown religious cult claiming that as life is suffering, all faithful should simply commit suicide to go directly to the afterlife. Notable in a difference from most suicidal cults, the document claims it is a sin to attempt to kill others than the faithful as a method of conversion.

Index #: 9-A-10-B-11-C
Contents: *The Tale of Theadora the Teddy Bear*, author unknown
Notes: A children's picture book involving the adventures of an anthropomorphic teddy bear named Theadora. Normal apart from the ending in which a group referred to as "Secretive Creepy People" kidnap Theadora.

Index #: 238-C
Contents: *The Disinfection and Sterilization of Prion-Contaminated Medical Instruments*, author unknown
Notes: 3 pp. pamphlet apparently adapted for public dissemination from original scientific research. CDC logo at top of first page, no other publication data given.

Index #: 9-A-19-G
Contents: *Lifeburst*, Jack Williamson
Notes: Science fiction novel printed by Del Rey (October 12, 1985). Matches published version apart from an absence of page numbers.

Index #: 222-G-222-G
Contents: *The Balled of the [UNTRANSLATED] Siðe*, author unknown
Notes: Apart from title, handwritten in [DATA EXPUNGED] on the inner cover, contents consists entirely of unidentified symbols vaguely resembling those carved into **SCP-093** and illustrations, apparently produced via oil paint showing a vaguely humanoid creature wearing robes which prevent observation of details. Based on background details in said pictures, it is assumed that said humanoid is at least four (4) meters in height.

Index #: 359-A-260-B
Contents: *Poetry about Fish™*, FishWrite™ Corporation
Notes: Assorted poetry regarding fish. Said poetry is generally of poor quality.

Index #: 22-B 42-C 69-A
Contents: *Ballad of John Klaxtorfon[sic]*, author unknown
Notes: Contents were completely incomprehensible, save for the title. Archived for reference purposes.

Index #: 22-C 99-A
Contents: *1,200 Ways To Die Involving Fire, But Not Involving A Lighter*, author unknown
Notes: A list of exactly 1,200 death scenarios involving fire. The word lighter, or anything pertaining to a lighter, was never mentioned in the list.

Index #: 2-A-2-G-9-G

Contents: *Book of Long Shadows*, author unknown
Notes: A collection of rhyming poems expressing human misery. Several sections are prefaced with a warning not to read the poems within aloud.

Index #: 1-A
Contents: *De finibus bonorum et malorum*, Cicero.
Notes: The famous section *"-lorem ipsum quia dolor sit amet, consectetur, adipisci velit"* begins at page 7, with the "do" of the initial "dolorem" cut to page 6. The last page has a single phrase, centered: *"factum est"*.

Index #: 5-C-5-C-5-C
Contents: *Novomundus Transcontinental Railroad - Ticket Types*, Novomundus Regent Board of Transportation
Notes: Fourteen (14) differing types of railroad tickets written in an altered format of Latin.

Index #: 12-A-13-D-1-G
Contents: *Twenty Flightless birds of the Ravelwoods*, author unknown
Notes: A guidebook referring to twenty (20) species of flightless birds. Apart from the common turkey, none are presently known to science, although if captured , and would be considered to require SCP classification.

Index #: 17-F
Contents: *Lord Blackwood Meets The Dread-Mother*, author anonymous
Notes: Describes the encounter of British explorer and naturalist **`Lord Blackwood`** with **`SCP-597`** or a similar creature. Surprisingly tasteful.

Index #: 1-B
Contents: *Pest Control for the Imaginative Mind*, D.I.Y. Adventures! ™
Notes: A 32-page pocket guide detailing various non-traditional ways of controlling insect infestations. Of the 1,024 methods listed, only 533 were proven to be safe for indoor use.

Index #: 5-A

Contents: A heavily modified version of the Torah, written in original Biblical Hebrew.
Notes: The Book of Leviticus is missing, Deuteronomy has been cut down and merged with Numbers. Genesis has been heavily altered. The story of the world's origins includes the creation of "wild men" alongside with Adam and Eve, a far larger emphasis on Lamech and his family and the extermination of the "wild men" by the hands of an entity named "Mit'har". The story of Noah and his ark is almost three times as long. The Nephilim are described in a far greater detail, and play an active role throughout the book. Copy of the book was sent to the Foundation's theological research department for further analysis.

Index #: 4-B-3-G
Contents: *One Thousand and One Years*, Ackerman
Notes: Features 1001 short stories, all of which span exactly one year. Most stories follow the themes of captivity, torture and needless physical experimentation. About 800 of the stories include or hint at an all-powerful male character named "Ackerman".

Index #: 8-C-8-D-8-E
Contents: *London's Many Secrets*, Andrew D. Paull
Notes: A tourist's guide to the city of London, published in 1899. Two of the book's chapters deal with secret underground complexes beneath the city. No such complexes were ever found, even when following the book's exact directions to them.

Index #: 360-G
Contents: A single untitled limerick about cats and penguins
Notes: Reading the limerick induces gustatory synesthesia regarding the limerick. All readers have agreed that the limerick tastes like bacon flavored ice-cream.

Index #: 297-D-253-F
Contents: *Young Alchemyst's Guide to Chemikals* by Nikola Flamel
Notes: Illustrated in the 17th century style and written in archaic French in a format apparently intended for 10-15 year old children. It describes the alchemical symbols and the chemicals associated with them, along with the Philosopher's Stone and a universal solvent. Notably, mercury is not mentioned, and its place is taken by silicon.

Index #: 10-W
Contents: *Pool Loop*, author unknown
Notes: A single page with the palindromic phrase "In words, alas, drown I" written in blue ink. When read aloud, the lungs of reader will begin to fill with water until the reader drowns. personnel have died, resulting in Dr. requesting SCP-1326 to reconsider the containment procedures, with a response pending.

Index #: 360-F
Contents: *How to do the coolest stunt and impress all of your friends©*, by John Fresh McKoolest
Notes: Several pages filled with complex instructions for a single "epic" trick. All attempts at following instructions have failed due to manoeuvres that are thought to require the ability to manipulate time. Regardless of that fact, the end result is expected to be a "Front-side 360".

Index #: 18-10-A
Contents: *Aframos Longjourney's Abridged Journal*, Author's name is written in an unknown script.
Notes: The story, about two individuals traveling through a seemingly anomalous forest, appears to be a parody of a larger work.

Index #: 567-89-24-B
Contents: *2,000 Things You Should Never Write*, by Johana Gregorio
Notes: Many pages filled with sentence and words from different known and unknown languages enumerated in line from 1 to 2,000. Reading such lines will cause no effect more than a faint dizziness in the subject, although writing them will provoke reactions that go from sudden decapitation to forgetting how to write at all. At the time of the experiment, no word has affected any person other than the writer. However, due to the dangerous nature of these words, Dr. joined Dr. request to reconsider the containment procedures of SCP-1326. Response is still pending.

Index #: 42-E
Contents: Esperanto translation of *Hitchhiker's Guide to the Galaxy*, by Douglas Adams.
Notes: Translation has numerous errors.

SCP-1327: Intelligence Switcher

Item #: SCP-1327

Object Class: Safe

Special Containment Procedures: SCP-1327 is to be kept in High-Security Storage Locker J-21b at Site 19. Any further testing requires written approval from supervising researcher.

Description: SCP-1327 is an English-language intelligence testing kit which superficially resembles the Wechsler Adult Intelligence Scale (3rd revision). It comprises nine testing booklets of varying sizes containing a variety of tasks meant to assess various components of intelligence, designated SCP-1327-1 through SCP-1327-9; a set of coloured wooden blocks intended for use in a spatial reasoning task, designated SCP-1327-10; and a pad containing instructions and scoring sheets, designated SCP-1327-11.

The anomalous properties of the object manifest upon completion of any of the individual tasks. Within 500 milliseconds of task completion, both the test-taker and the person administering the test will lapse into a bilateral complex partial seizure lasting approximately 8 seconds, during which time EEG waves show temporal lobe activation consistent with . Upon emerging from the seizure state, the test-taker will have the capabilities of the test administrator in the domain of intelligence that was just tested and vice versa. Neither the test-taker nor the administrator claims to have any knowledge of an 8-second gap, and barring any radical change in intelligence, both generally proceed as though nothing unusual had happened (see Experiment Log 1327-1).

The test materials themselves show overt differences from the standard WAIS-III as follows:

- SCP 1327-1 (analogies task): No divergence from WAIS-III.

- SCP 1327-2 (vocabulary task): Several words are given nonstandard spellings.
- SCP 1327-3 (general knowledge task): In place of their usual content, all prime-numbered questions concern fairly obscure chemical and metallurgical knowledge such as the freezing point of mercury and the proportion of copper to zinc in brass.
- SCP 1327-4 (arithmetic task): No divergence from WAIS-III.
- SCP 1327-5 (numerical working memory task): No divergence from WAIS-III.
- SCP 1327-6 (symbol search task): In addition to the alphanumeric and Boolean operand characters used in the standard WAIS-III, the symbols used in this task include nonstandard symbols resembling alchemical characters used in the 17th-century Holy Roman Empire.
- SCP 1327-7 (digit symbol-coding task): see SCP 1327-6.
- SCP 1327-8 (matrix reasoning task): The numbers provided in the matrices are different from those in the WAIS-III, but with no obvious pattern.
- SCP 1327-9 (picture completion task): The provided pictures are line drawings which appear to represent scenes from *The Chymical Wedding of Christian Rosenkreutz*.
- SCP 1327-10 (block design task): The design which test-takers are meant to duplicate is impossible to achieve with the blocks provided within the allotted time, resulting in failure regardless of the test-taker's aptitude.
- SCP 1327-11 (instructions and scoring sheets): No divergence from WAIS-III, other than that scoring guidelines for the anomalous tasks are included.

Recovery notes: SCP-1327 was obtained from the psychology department of University in 1993. The object became known to the Foundation when a graduate student developed signs of severe mental retardation after using it in a study of Alpha-Thalassemia Syndrome patients.

Researcher:

Date:
Test administrator:
Test taker:
Task used:
Results:
Notes: (if necessary)

Researcher: Dr. Pran
Date: 06-25-2002
Test administrator: D-60144, a former elementary school mathematics teacher
Test taker: D-59903, a vagrant with no formal education
Task used: SCP-1327-4 (arithmetic task)
Results: Subjects completed the task without incident and entered the complex seizure state as expected. When subsequently tested on a standard intelligence scale, D-59903 displayed a significant increase in mathematical aptitude, going from the 6th percentile to the 82nd. D-60144 was unable to perform basic arithmetic and became highly agitated before he was sedated by Foundation guards.

Researcher: Dr. Pran
Date: 06-27-2002
Test administrator: D-59903
Test taker: D-60144
Task used: SCP-1327-4 (arithmetic task)
Results: D-59903 repeatedly remarked on D-60144's poor performance. Task took approximately 2 hours to complete due to incessant taunting from D-59903. Post-seizure testing showed that both subjects had returned to their original levels of mathematical competence.

Researcher: Dr. Pran
Date: 06-30-2002
Test administrator: D-60150, a former gang member of average intelligence
Test taker: D-59921, left in a persistent vegetative state

after exposure to SCP-
Task used: SCP 1327-2 (vocabulary task)
Results: D-60150 showed some initial reluctance but eventually attempted to administer the test. D-59921 remained in a vegetative state and did not respond to D-60150's questions. No seizure state occurred and there was no subsequent change in D-60150's vocabulary.

Researcher: Dr. Pran
Date: 07-03-2002
Test administrator: D-60259, a murderer with average memory capacity
Test taker: D-60263, an autistic savant with eidetic memory
Task used: SCP 1327-5 (numerical working memory task). D-60263 was instructed to respond “I don't know” to each question.
Results: D-60259 acquired a domain-specific working memory span in excess of 500 unique numbers or musical notes, but showed no improvement in memory for words, spatial locations, or visual scenes. D-60263's memory performance was average for numbers and music but remained extraordinarily high in all other domains.
Notes: *So performance on the test doesn't matter – as long as there's some kind of response, subjects' actual intelligence is swapped regardless.*

Researcher: Dr. Pran
Date: 10-13-2002
Test administrator: D-61553, a serial rapist with average general intelligence
Test taker: A rhesus macaque monkey (species *Macaca mulatta*) trained to hold up a small placard saying “I don't know” when prompted
Task used: SCP-1327-1 (analogies task)
Results: D-61553 attempted to leave after the first five

questions, protesting that the test was “the stupidest fucking thing I've ever seen,” but was persuaded to complete the task. Post-seizure testing showed that D-61553 was unable to understand several forms of basic logic, including syllogisms, implication, and modus ponens. The monkey displayed human-level analogical reasoning ability.

Researcher: Dr. Pran
Date: 11-01-2002
Test administrator: D-62791, a murderer with slightly below-average general intelligence
Test taker: A bottlenose dolphin (species *Tursiops truncatus*) trained to make a shrugging motion with its pectoral flippers when prompted
Task used: SCP 1327-3 (general knowledge task)
Results: [DATA EXPUNGED]
Notes: *Further experiments with dolphin subjects are strongly discouraged.*

Researcher: Dr. Pran
Date: 11-15-2002
Test administrator: D-59841, a multiple sex offender with genius-level intelligence
Test taker: D-61224, a methamphetamine dealer who suffered severe brain damage after accidental exposure to chemical fumes
Task used: Full battery (SCP-1327-1 through -10)
Results: Despite extensive damage to cortical regions associated with speech and motor control, D-61224 was able to stay responsive throughout the test with the aid of Class-C stimulants. The first effects became apparent upon completion of SCP-1327-2, when D-59841 began to pronounce words in the testing materials phonetically rather than according to their proper pronunciation. Further advancement through SCP-1327-4 and -5 prevented D-59841 from tallying the scores in each task. At this point D-59841 began to show signs of extreme

distress and had to be forcibly restrained. Upon completing SCP-1327-6 and -7, D-59841 lost the ability to read the testing materials, and complained that the subsequent pages were full of "squiggle things" rather than letters. When instructed to continue, D-59841 again violently attempted to cease testing and was placed under sedation, and instructed to conduct the rest of the test by simply holding the instruction page up so that D-61224 could see it. Finally, completion of SCP-1327-9 and -10 resulted in total visual agnosia, rendering D-59841 completely unable to recognize objects in his surroundings or navigate through physical spaces without colliding into obstructions. D-61224 showed no increase in aptitude, and subsequent functional imaging showed no increase in brain activation in regions associated with visual, linguistic, mathematical, or mnemonic processing.

Notes: *Organic brain damage appears to prevent intelligence transfer - at least in one direction. Couldn't reverse this, as neither subject was able to act as administrator after the test was completed.*

« SCP-1326 | SCP-1327 | SCP-1328 »

SCP-1328: 51st State of Mind

Item #: SCP-1328

Object Class: Euclid

Special Containment Procedures: The area affected by SCP-1328 is to be monitored closely for any subjects affected by SCP-1328. Located subjects are to be detained, issued amnestics, and returned to their point of origin. Their time displaced shall be covered up on a case-by-case basis.

Witnesses to SCP-1328 manifestation events are also to be issued amnestics. If SCP-1328's anomalous properties are reported to local governing bodies, embedded Foundation agents are to suppress the reports and issue amnestics to all witnesses. Affected documentation is to be stored within **Site-77**'s anomalous documentation archive.

Description:

Slated for revision, see Addenda — O5-2

SCP-1328 is a phenomenon affecting the eastern portion of the state of Tennessee in the U.S. Between August of 1784 and December of 1785, it was a territory known as "Franklin". The territory was dissolved following this time, and did not display anomalous properties until at least 1866.

Occasionally, maps, books, and other cartographic references will begin listing SCP-1328 as being part of another country, adding an "extra state" to their maps. These maps will not show SCP-1328 as being geographically attached to these nations, showing its physical location within the U.S. Documents affected by SCP-1328 will usually go into detail about how it was an important part of the nation's cultural history. Persons reading these documents will be convinced of its status and history, often attempting to show as

many other subjects as possible and spreading SCP-1328's effect.

Affected subjects may begin identifying themselves as residents of SCP-1328, and attempt to navigate to it overland. No matter how far the subject originally was from SCP-1328, they will arrive in one of its cities 2-3 hours after departure. Observation of affected subjects shows that they and whatever vehicle they are operating appear to fall into a chasm which suddenly emerge below them, followed by an emergence in SCP-1328.

Subjects from different nations may encounter each other, which can cause confusion and anger due to SCP-1328's effect. Subjects will describe SCP-1328 as a disputed territory and insist that their nation has a stronger claim to it. This effect has led to local conflicts, as subjects affected by SCP-1328 attempt to terminate persons with perceptions that conflict with their own. This has escalated into small-scale guerilla conflicts prior to containment.

SCP-1328 was discovered in 1866, by a Foundation precursor known as the "American Secure Containment Initiative". Originally believed to be a transportation anomaly, these subjects were returned to their homes. After the subjects returned, interviews were conducted and the anomalous effects established. As of 8/17/1887, SCP-1328 has been contained. Following its inheritance from the American Secure Containment Initiative, it was classified as an SCP object and given the Euclid classification.

Addendum Original documentation:

> **Item Number** 1866-098
>
> **Classification Type:** Geographic/Non-Threatening
>
> **ASCI Protocols for Containment:** All men or women found to be situated within the area are to be expediently returned to their place of dwelling, with foreigners turned over to local magistrates as illegal aliens. Reports of the phenomenon are to be collected with our archive for additional study.
>
> **Description:** Phenomenon 1866-098 is a phenomenon

affecting twelve of the counties within East Tennessee. On occasion, persons from other parts of the country and world as a whole will be deposited into it, and claim it to be a part of their country of origin. Once cleared of their confusion, they will usually persist in attempts to return home the way they entered, which is not possible. When first discovered, over twenty Hessians, a Briton, and a Cherokee Indian were found living in it. Further observation of this effect is ongoing.

Addendum Profile of subjects affected by SCP-1328:

Description of Subject: 65 year old Caucasian male.

Country of Origin: Canada.

Perception of SCP-1328: Subject believed that SCP-1328 had been won by Canada during the War of 1812, and that the Americans living within the territory were illegal immigrants from North Dakota. Repeatedly attempted to report neighbors to the local police, and started numerous instances of harassment. Was issued a Class-C amnestic and returned home.

Description of Subject: 22 year old Hispanic male.

Country of Origin: El Salvador

Perception of SCP-1328: Perceived that SCP-1328 was a region within his home country where more upper class citizens resided, and claimed to be attempting to visit relatives in the region. Further investigation revealed that several other El Salvadorian citizens had been residing within SCP-1328. All subjects were detained, issued Class-C amnestics, and returned to their homes.

Description of Subject: 19 year old African male.

Country of Origin: Somalia

Perception of SCP-1328: Subject behaved like a raider, attempting to enter SCP-1328 and retrieve supplies for

his militia organization. Claimed that SCP-1328 was part of his home country held by an opposing group, and that he was attempting to destabilize their power in the region. Subject is currently being held by Foundation personnel, awaiting decision of where to return him.

Description of Subject: 40 year old Caucasian male.

Country of Origin: Prussia.

Perception of SCP-1328: Discovered during initial containment, subject appeared to be an officer in the Prussian army. Believed to be instance by the ASCI, he was given to local law enforcement. No further records have been found to corroborate his status past this. German records indicate that his study was found to be filled with cartography equipment, maps, and travel supplies, and he was reported as a defector.

Addendum: Excerpt of a speech given by Michael Sen, a leader in the militia organization "Regular Alliance Troupe."

> … we do not take these incursions into our territory by the wretched alliance of the United States, Canada, North Korea, Mexico, Sealand, and Bavaria lightly! They are violations of our sovereignty and a national embarrassment! Franklin is a storied part of our cultural history, down to the beginning of our forefathers! They journeyed far to create it, and built the great underground superhighway with only sweat and broken bodies! When those men who super-travel under the Atlantic to upstage our right to this territory tell us it belongs to them, it is a slap in the face! Further escalation of this situation from any other nation will lead to negative action, possibly even a resolution within the United Nations to settle the matter…

Sen and his staff were given Class-B amnestics, and all copies of the broadcast were suppressed. An additional 546 civilians in the city of [REDACTED] were issued Class-C amnestics after reporting the broadcast on social networking sites. Additionally, several

homes located in SCP-1328 that were marked as belonging to the "Red Actors Troupe" were demolished. One instance of **SCP-039** was discovered at this location.

Addendum: On November 2nd, 2016, all subjects affected by SCP-1328 began manifesting a delusion that they were citizens of the Russian Federation. Amnestic treatments have been unable to alter this belief. In addition, most affected subjects appear to be displaying signs of cognitive dissonance, with erratic and unpredictable behaviors resulting.

« SCP-1327 | SCP-1328 | SCP-1329 »

SCP-1329: The Aquarium

Item #: SCP-1329

Object Class: Euclid

Special Containment Procedures: The security perimeter of Site-97 is to be monitored by armed patrol and night-vision security cameras. No further security is necessary. All SCP-1329-1 activity within the grounds of Site-97 or within SCP-1329 is not to be interrupted outside of testing protocol. Interaction with SCP-1329-1 is to follow the procedure outlined in Document 1329-CO.

Researchers observing within SCP-1329 are to do so with armed escort, in the event of dangerous phenomena.

Description: SCP-1329 is an abandoned aquarium located near [REDACTED], Russia, classified as Site-97. No anomalies in materials or floor layout are present on the upper two floors. The three sub-surface floors vary in size, architecture, and layout significantly when compared to any other floors. The building is in a state of severe disrepair, though it shows few signs of looting. Efforts to re-wire the building's electrical system are underway.

SCP-1329-1 is the collective designation for a group of human beings which will regularly manifest in or around SCP-1329. Subjects are primarily Asian, Caucasian, or Middle-Eastern in ethnicity, and will average 25-50 years of age, though individuals as young as 5 and as old as 70 have been observed. Subjects speak a pidgin language consisting of loanwords from English, Russian, Mandarin, Arabic, and various Turkic languages. Subjects show signs of overexposure, malnourishment, and symptoms resembling mercury poisoning, specifically desquamation (heavy skin-shedding), compulsive itching, and nerve damage. Subjects generally wear heavily-repaired or modified clothing, commonly consisting of or incorporating parts of a pale green jumpsuit or scrubs. Armored vests are an uncommon but regular feature, and in

one instance an atmospheric diving suit was observed. Items carried by SCP-1329-1 have included firearms, improvised spears or harpoons, compasses and mapmaking equipment, lengths of rope, cans of motor oil, plastic jugs containing distilled water, fish stock, whale blubber, or algae cultures, and various trinkets containing fish bones or preserved skin.

SCP-1329-1 are aware of observers and will act accordingly. However, they do not seem to be completely aware of the nature of their location, or the nature of their observers, often making passing reference to nonexistent people, place, or events. Subjects in repeated manifestations will remain unaware of the presence of observing individuals or outside events until physical contact is made. These subjects will show no signs of remembering outside contact, and will not be persuaded to act contrary to the events of their particular manifestation.

The manifestation of SCP-1329-1 subjects consists of entry and exit into a room or area, with location dependent on the observer's line of sight. Manifestations will not end until the subject has passed from the view of observers, but will average anywhere from ten seconds to upwards of an hour. When under observation in containment, video recording will experience a three second blackout exactly twenty-three minutes and ten seconds after the subject's entry into the room, during which period the subject will disappear. During manifestations, SCP-1329-1 will walk around, converse with each other if more than one is present, and interact with their environment.

As of / /2012, three hundred and fifty-eight unique SCP-1329-1 individuals have been cataloged.

Phenomena within SCP-1329 fall into three categories: stable, regular, and irregular: Stable phenomena are present at all times, regular phenomena will repeat at exact intervals or after specific events, and irregular phenomena will repeat either at irregular intervals or will not repeat. The majority of SCP-1329-1 manifestations are irregular phenomena.

Stable phenomena within SCP-1329 include:

• A specimen tank filled with several hundred kilograms of raw meat, showing no signs of decomposition. Analysis reveals meat to be from several *Latimeria chalumnae* (coelacanth) specimens.
• A specimen tank containing four large jellyfish, containing human brains within the proximal bulb. No water is present in the tank.
• A large fungal growth, containing a school of 209 *Clupea harengus* (Atlantic herring). All specimens are alive.
• A specimen of *Eucrossorhinus dasypogon* (Tasseled wobbegong) inhabiting the main office. Specimen will attack any intruding organism at floor level. Specimen suffers no ill effects from lack of water.
• A severed tentacle belonging to an unknown species of cephalopod, measuring 19 m in length. The tentacle consists of fibrous tissue: closer inspection reveals these fibers to be smaller tentacles.
• The presence of handwritten documents in the language of SCP-1329-1. Documents are heavily damaged by water, but appear to contain shipping manifests, instruction manuals for a variety of subjects, personal accounts, and maps. Analysis of the contents is underway.

Regular phenomena within SCP-1329 include:

• Opening the door to room B106 will reveal an SCP-1329-1 subject (SCP-1329-1-28) in the specimen tank, being attacked by a juvenile *Carcharhinus leucas* (Bull shark). The subject will struggle for approximately thirty seconds, beating at the shark's head and attempting to gouge out its eyes, before dying. No attempts to rescue the subject have been successful. The phenomenon will not reset until the room has been exited and the door has been shut.
• Two armed SCP-1329-1 specimens (SCP-1329-12 and SCP-1329-13) will transport a plastic crate through basement level 2 every Thursday at 10:12 A.M, starting at the stairwell and ending in room B215. Muffled sounds can be heard emanating from the crate.
• Basement level 3 will fill with salt water during the months of February and July. Non-anomalous tropical fish native to the south Pacific will be present during these periods. Water and fish will leave no trace of their presence after the period ends.

Irregular phenomena within SCP-1329 include:

• Conversations in the second-floor men's restroom. The language matches that spoken by SCP-1329-1, but the majority of the words are indistinct.
• The manifestation of SCP-1329-1-38, who will physically assault any individuals present before running off. This manifestation occurs throughout the entirety of SCP-1329.
• The manifestation of SCP-1329-1-103 and SCP-1329-1-104, being a Middle-Eastern woman of approximately 30 years and a female child of approximately 7. SCP-1329-1-103 appears to be in the third trimester of pregnancy and to be completely unaware of outside stimuli. SCP-1329-1-104 will lead SCP-1329-1-103 by the hand through the facility, with some urgency. Of note are several tears in SCP-1329-1-103's abdomen, revealing compacted plastic refuse. Manifestation is generally observed on the ground floor, but may appear in basement level one.
• Streams of bubbles appearing in mid-air. Event occurs throughout SCP-1329.
• The appearance of the deceased body of *Galeocerdo cuvier* (tiger shark) specimen in the main second floor hallway. The body shows signs of massive blunt trauma and being hit by a motor vehicle multiple times.

Addendum-01: / /2011 – A specimen of SCP-1329-1 manifested in downtown [REDACTED], Germany, approximately km from SCP-1329. Subject was arrested by local authorities for threatening pedestrians with a harpoon. The manifestation ended before Foundation agents were able to secure the subject.

Addendum-02: The following is a translation of one of the documents recovered within SCP-1329.

> We are running out of water. Zhi Jun braved the leechfields three days ago to find more, and has not returned. I fear he is lost. Sastelkov believes that he is able to fix the pumps, and that we will be able to remain here. Though I hope he is able to fix the pumps, I do not like this place. These are haunted seas. Sastelkov says that is nonsense, but we have lost ten of our group since our arrival here, including four of our trash-farmers. Sastelkov claims that the cost is worth it, that what he is

looking for is here somewhere.

I will speak with him tomorrow about this.

« SCP-1328 | SCP-1329 | SCP-1330 »

SCP-1330: Universal Dumping Grounds

Item #: SCP-1330

Object Class: Euclid

Special Containment Procedures: Research Site-64 was constructed in the guise of a waste treatment plant in order to study and contain SCP-1330. SCP-1330 is to be combed daily for new instances of SCP-1330-1, which are to be transferred to the Research Site-64's indoor sorting chamber. Instances deemed to be of interest are to be categorized and stored in the appropriate chamber, while all other instances are to be tagged and returned to SCP-1330. Task Force Psi-14 ("Lord Admiral's Men") is to be permanently stationed at Research Site-64 in order to prevent access to it by unauthorized persons.

Description: SCP-1330 is a landfill, located at , . SCP-1330's anomalous nature stems from the origin of the bulk of its contents-an estimate of 65% of the refuse found in it originates from various extra-dimensional sources, as the nature of the items found in SCP-1330 and additional tests confirmed. SCP-1330 appears to be connected to, or possibly occupy, at least twenty-seven (27) different extra-dimensional points, with refuse (henceforth SCP-1330-1) traveling between them at random. SCP-1330 is therefore in a constant state of change, with new instances of SCP-1330-1 replacing old ones. SCP-1330 appears to only affect items discarded as being worthless, though how an item is determined to be considered worthless is uncertain. Due to this, no item placed in SCP-1330 with the intention of transferring it to an extra-dimensional point will be affected by it. Attempts to bypass SCP-1330's item restriction have been unsuccessful thus far (see testing log).

SCP-1330 first came to the Foundation's attention after interception of a local television network's news piece about a large number of homeless living in a landfill. The residents of the landfill were

convinced it was visited by aliens, and showed various unusual items they found in it as proof. One of these items bore marks similar to those seen on SCP- . Foundation personnel closed down SCP-1330 to incoming traffic, removed the interlopers dwelling in it and secured a perimeter around SCP-1330.

Addendum SCP-1330-A: On / / , the following items were recovered from SCP-1330:

+ Recovery log, / /

- Three (3) empty glass jars, "Murray's Marvelous Marmite". Label claims the product was manufactured in New Kensington, Virginia. No such brand or city are known to exist.
- One (1) grey t-shirt, four-sleeved, with numerous sweat stains and holes.
- Two (2) glass eggs, cracked and chipped, and filled with an unidentified substance. Transferred to indoor facility for examination.
- One (1) animal carcass belonging to an unknown species of feline. The specimen bears a close resemblance to a *Machairodontinae* (saber-toothed tiger), though its stature is identical to that of a normal house cat.
- Eight (8) pamphlets for a bake sale organized by the Unified Western Manichean Church of the town of Gamaliel, East Jersey, taking place on October 19, 2003. The Manichean religion is largely considered to be extinct since the early fourteenth century, and the province of East Jersey was disestablished in 1702.
- One (1) newspaper, *Agora Gazette*, ancient Greek. Newspaper has food stains and cigarette burns, and features colored photographs and descriptions of modern technology.

- One (1) non-functioning cellphone and earpiece, made by the Dain Corporation, a corporation that went bankrupt in the late 1970's and produced only farming and construction equipment. Microchip and battery technology found in the device appears to be decades ahead of the Foundation's current capabilities. Despite this, the device lacks features common in commercial cellphones such as a camera or a radio.

- One (1) photo album, "Fondest Memories", belonging to the family. The front cover of the album has several bootprints on it. One section of the album commemorates a family vacation to Mars, evidently taking place during the summer of 1992. Examination of the photos suggest Mars to have undergone an extensive terraforming effort. In many of the photos, the face of the family's mother has been either cut out, or scribbled over with black marker.

- A broken toilet bowl containing 800 g of polished gem-quality diamonds.

- Nine copies of "Presidential Perversions", an erotic novel describing the adventures of "Dick Studley, the 69th President of the Uninhibited Sexings of America"; the print in the books is badly misaligned, the covers have been stripped off, and the books have been marked with a "REJECTED" stamp. Of note is that President Studley's sexual partners are of five distinct genders.

- Four (4) empty soda cans, "Conqueror Worm Energy Drink". According to the packaging, the drink contains water (70%), sugar (10%), arsenic (5%), enriched uranium (5%), blood of virgin (9%) and artificial coloring and flavors. Drink manufactured in Golgotha, Ohio (no such town is known to exist).

Addendum SCP-1330-B: The following attempts to bypass SCP-1330's item restrictions have been made:

+ Test log, / /

Test 1330-A

Item: A twenty-dollar bill, previously in the possession of Dr.

Test: Test item was tagged and placed in SCP-1330 by Dr. . Several control items, already within SCP-1330, were chosen to be observed.

Result: Following two (2) weeks of observation, it has been concluded that test item failed to be affected by SCP-1330. Control items all disappeared and were replaced by different items in a period of no more than one (1) week.

Test 1330-B

Item: An empty cigarette pack, previously in the possession of Dr. .

Test: Similar to test 1330-A, but test item was not tagged and instead only observed remotely.

Result: Test item failed to be affected by SCP-1330.

Test 1330-C

Item: The core of an apple, previously in the possession of Dr. .

Test: Similar to test 1330-B, but the test item was placed in SCP-1330 by an agent unaware of its properties.

Result: Test item failed to be affected by SCP-1330. It appears SCP-1330 is able to detect the original intention behind attempts to use it.

Test 1330-D

Item: A used tissue, previously in the possession of D-1330-12

Test: D-1330-12, previously aware of SCP-1330 properties due to his work in sorting instances of SCP-1330-1, was given class-B amnestics and ordered to place test item in SCP-1330, now unaware of its properties.

Result: Test item failed to be affected by SCP-1330. It is hypothesized SCP-1330 is capable of sensing not only the intent of the owner of the item placed in it, but the intent of anyone involved in the process of placing an item. Recommending further examination of this capability.

Test 1330-E

Item: An empty tin can.

Test: Agent , unaware of SCP-1330's properties, was asked to collect a piece of refuse and send it to Dr. , also unaware of them, in Site-19. Dr. was then asked to send the test item to Agent in Research Site-64, who arrived there only for the purpose of this test and was not made aware of SCP-1330's properties. Agent was requested to give the test item to D-1330-56, another new arrival. D-1330-56 placed test item in SCP-1330.

Result: Item failed to be affected by SCP-1330. Apparently SCP-1330 can sense the intention of using it to transfer an item even when no one in the process of producing, delivering or placing the item is aware of it.

Test 1330-F

Item: Undisclosed for the purpose of the test.

Test: , a level-0 sanitary personnel on Site- ,

was asked to collect a piece of refuse and send it to another level-0 personnel working on a different site. Said personnel was requested to do the same, until the item passed through forty-three (43) different level-0 personnel. Test item was then collected by an agent unfamiliar with SCP-1330, delivered to Research Site-64, and placed in SCP-1330 by a different agent, who was also unaware of SCP-1330's properties. A camera was installed next to the test item, and , number twenty-seven (27) in the chain, was asked to observe a live video feed of it daily and report any alterations in its state, in the guise of a psychological examination. At no point were any personnel aware of SCP-1330's properties allowed to know the nature of the test item selected, nor to observe the video feed.

Result: Test item was observed by for a period of two months, three times a day. reported no change in the test item's state.

Due to its nature, it is likely that SCP-1330 cannot be used as a means to deliberately introduce harmful elements to our dimension from a remote point. However, accidental introduction is still possible. Due to this, discovering a way to purposely harness SCP-1330 in order to eliminate possible threats is of the highest priority. Attempts to bypass SCP-1330's resistance are to continue until a solution is found.

« SCP-1329 | SCP-1330 | SCP-1331 »

SCP-1331: Mouth Soap

Item #: SCP-1331

Object Class: Safe

Special Containment Procedures: SCP-1331 is stored in a secure locker at Site . Experimentation may only be performed on Class D personnel, and only with prior permission from at least one (1) Level 3 Senior Researcher.

Description: SCP-1331 is a standard size (app. 7.5cm x 9cm x 2.5cm) bar of yellow hand soap bearing the inscription "The Factory" along both lateral sides. Analysis of samples taken from SCP-1331 has yielded results consistent with ingredients normal for commercially-produced hand soap, and SCP-1331 has shown no ability to self-repair or self-replicate.

When SCP-1331 comes into contact with any part of the inside of the mouth of a human subject (including the tongue), the subject is affected by an anomalous effect that causes all attempts to vocalize expletives to be "bleeped out" or censored by a synthesized tone. Non-vocal communication is not affected; sign language and written expletives will not be censored. No other anomalous changes in the subject are detectable, and while experimentation shows that the subject's vocal muscle movements are consistent with that of the words they intend to speak, all recording devices and observers only pick up the censoring tone. The duration of SCP-1331's effect is proportional to the amount of time SCP-1331 remains in contact with the mouth of the subject: ten seconds of contact results in an effect duration of approximately one hour.

SCP-1331 was discovered by Foundation agents during a routine visit to an antiques and curiosities shop in [REDACTED], where it was being sold as a 'gag' item. When questioned, the store owner was unable to remember who or where he obtained it from, and was later released after having been administered a Class B amnestic.

Addendum 1331-1: SCP-1331 Packaging

> DIRTY MOUTH SOAP
>
> Do you know someone who has a filthy mouth? Clean out all those dirty words with the latest Factory invention! Discipline your children or play a trick on your friends! Hilarious at parties!

Addendum 1331-2: Additional Experimentation Results

> Additional testing with SCP-1331 has shown that its effects appear to trigger whenever any word or phrase considered offensive or an expletive by *any* observers is spoken, including the speaker. If all observers present do not consider something an expletive, then it is not subject to the effect. Furthermore, this effect seems to extend to recordings, rather than be recorded. That is, any recording of a subject's speech while affected will exhibit the same effects while played, but once the effect has ended on that subject, the recording is no longer affected either. We are still looking into how this thing actually works.
>
> - Dr.

Addendum 1331-3: Additional Experimentation Results

> SCP-1331 appears to have additional detrimental effects in subjects with more than one hour of cumulative exposure. Its primary effect will take longer and longer to fade away, and eventually the effect simply becomes permanent. Subjects also began to manifest a progressive increase in the number of words and phrases that are censored, until at three hours of exposure, everything they say is censored. Until further notice, SCP-1331 experimentation is to be limited to Class D personnel only.
>
> - Dr.

SCP-1332: Involuntary Shapeshifting

Item #: SCP-1332

Object Class: Euclid

Special Containment Procedures: Vials containing samples of SCP-1332-A are to be hermetically sealed and kept in refrigerated storage. Specimens of SCP 1332-B are to be contained in sealed holding cells and monitored for transition to 1332-C. These cells are to be monitored remotely and inspected daily for damage. In the event of a breach by SCP 1332-C, the damaged holding cell and the surrounding area are to be sterilized via a controlled thermobaric explosion to limit the possibilities of further contagion.

Description: In its culture state, designated SCP-1332-A, SCP-1332 is a thick, metallic gray paste, similar in color and sheen to mercury. Its semisolid state renders airborne transmission impossible; to date, all instances of infection have resulted from direct, unprotected handling of SCP-1332-A or injuries caused by unusually violent instances of SCP-1332-B and-C.

When a living being becomes infected with SCP-1332 (usually through direct exposure to subcutaneous tissue via cuts and scrapes), it begins the transformation to SCP-1332-B. This transformation manifests externally as flu-like symptoms (soreness, exhaustion, nausea) that subside over the course of two (2) to three (3) days. During this period, SCP-1332 converts the subject's bone and muscular structure into an amorphous mass, superficially resembling SCP-1332-A. Despite being essentially homogeneous, the mass within SCP-1332-B still performs all the functions of the replaced systems, such as maintaining structure, allowing movement and reflexive actions, and protecting vulnerable organs from damage.

The subject's nervous system remains intact, though somewhat displaced by the subject's internal changes. The autonomic nervous

system seems to maintain the density and structure of the mass, allowing SCP-1332-B to maintain the appropriate shape. It is hypotheically possible for specimens of SCP-1332-B to live fully normal lives without ever becoming aware of their condition.

SCP-1332-C manifests in one of two ways: SCP-1332-B becoming aware of the nature of their condition or SCP-1332-B attempting to undertake a physical activity they are unaccustomed to. Either situation causes the autonomic nervous system to momentarily cease its usual functions as SCP-1332-B attempts to consciously exert control over their own body. In the majority of cases, this leads to a complete structural collapse of the subject's internal support systems. It is hypothesized that this is a result of subjects being unable to maintain the level of conscious control needed to keep their natural shapes. This frequently leads to the death of the subject through internal hemorrhaging and bruising (due to unprotected organs striking the ground) or suffocation (caused by the lungs and esophagus becoming unable to expand due to sudden weight). In rare instances, subjects will manage to regain some control over their own structure, which very frequently leads to massive lacerations and blood loss as the panicked subject inadvertently pierces their own skin from within as they fight to control their shape.

On the rare occasion a subject survives this collapse, they are designated SCP-1332-C and are to be relocated as described in Containment Procedures, above. Specimens of SCP-1332-C rarely survive longer than two or three days due to their new physiology rendering eating and drinking difficult (if not impossible), but observation has suggested that SCP-1332-C retains at least some of its human cognitive abilities. The amount varies from subject to subject (the transformation from SCP-1332-B to -C often results in trauma directly to the brain), but subjects have been shown to attempt to move towards persons and objects familiar to them, to retreat from examples of phobias specific to the subject, and have on occasion attempted to embrace personnel they perceive as friendly.

« SCP-1331 | SCP-1332 | SCP-1333 »

SCP-1333: The Phantom App

Item #: SCP-1333

Object Class: Safe

Special Containment Procedures: Instances of SCP-1333 are to be contained on nonvolatile media. If possible the recommended format is a 16GB Micro SD card contained inside a plastic case and kept in a dry, climate-controlled room. Multiple instances of SCP-1333 may be stored in close proximity; while in dormant media it is completely harmless.

Any instances of SCP-1333 are to be stored inside a Sensitive Compartmented Information Facility. No digital media players of any kind are to be allowed into this SCIF for any reason, and any personnel both entering and leaving the storage area should be thoroughly searched for disks, SIM cards, media players, smart phones, or other electronic devices and storage media.

SCP-1333 should never be placed inside a working cell phone without prior authorization from site director: only unlocked, prepaid phones are allowed to be used for these experiments, and any phone to be used for this experiment should never have service activated. Experiments should be performed underground, out of range of any cell phone broadcast towers, in a shielded facility to prevent satellite linkup. After experimentation, any phones used for testing SCP-1333 should be destroyed.

To prevent SCP-1333 from affecting civilians, Foundation agents are to be placed on the staff in charge of managing programs and other data distribution networks for any companies providing services to cell phones. Any instances of SCP-1333 on network drives should be contained as soon as possible.

Description: SCP-1333 is the collective term for multiple instances of an anomalous entity manifesting as a mobile application that is

believed to have begun circulation in 2008. The program appears under many names, often purporting to be a harmless program targeted to males and females age 18-22.

When the program is first downloaded, SCP-1333 remains dormant until first used on the phone. Due to the obvious variances in personal use, this dormant period may be a few seconds to the theoretical functioning lifespan of the phone; due to this, it is believed that instances of SCP-1333 exist on phones that have not yet activated the program and thus remain dormant. This poses a great threat of distribution to recycled-phone organizations and third-party stores which sell refurbished MicroSD cards and cell phones.

SCP-1333 has, at this time, been found disguised as a multitude of mobile applications, including navigation, social networking, entertainment, music, productivity, and others.

The entity appears to affect any person who uses the program regardless of the ownership of the phone containing it.

Initially, the downloaded program works as expected. After sufficient use of the program manifestation of SCP-1333, the phone will begin to exhibit symptoms indicative of a glitch, and may receive text messages from unknown numbers. These messages are typically in the form of single words, in upper-case, and often have a negative or hostile connotation, such as "NEVER", "WRATH" and "BLEED".

As use of SCP-1333 continues, the secondary anomalous effect occurs. If the phone is equipped with a camera, the phone's photo album will be altered to include photos that have not been taken by the user, but feature him or her. These range from trivial images of the subject taking his or her own picture in a mirror to images of the subject located in places the subject has never been. With continued use, SCP-1333 will generate progressively more disturbing images, sometimes featuring the subject with severe injuries or in traumatic scenes featuring death, dismemberment, and torture. At least one instance of SCP-1333 manifested an image containing a deceased relative of the user.

Addendum: SCP-1333 was first discovered in an brand smartphone on / / in , NY. A female subject, age 18, called

the police and filed a report of "cyberstalking", claiming an unknown person was sending digitally-altered and disturbing images to her phone. This phone was examined by an embedded SCP agent who discovered the entity inside a photo-sharing application. Subject was given Class A Amnestics and the police report was suppressed.

Addendum 1333-A: As of / / , SCP-1333 is discovered to have infected the mobile application networks of all major mobile networks including , , and .

Addendum 1333-B: Experiments have shown that in the event that containment is attempted on a cell phone infected with SCP-1333, it will attempt to link with satellites and cell phone towers to attempt to replicate itself. It is hypothesized that this is a form of self-preservation, and for this reason, any phones infected with SCP-1333 should be contained in a shielded environment before extraction is attempted.

« SCP-1332 | SCP-1333 | SCP-1334 »

SCP-1334: Numerology Ghost's Apartment

Item #: SCP-1334

Object Class: Euclid

Special Containment Procedures: SCP-1334 is currently under Foundation management, and access to the object requires Level 2 clearance. The immediate property surrounding the apartment complex is to be fenced off, under the guise of ongoing renovation. During daylight hours, two guards posing as building contractors are to be stationed at the main gateway; the outside of the building is to be monitored at all times by camera surveillance.

Any personnel intending to enter SCP-1334 must undergo preliminary training and wear only authorized attire, which will be provided, when entering the building. All interactions with SCP-1334-1 and any observed differences in the interior of SCP-1334 are to be thoroughly documented.

Description: SCP-1334 is a six-story apartment building located in the province of China. The exterior of the complex is nondescript, and the interior rooms each contain specifically arranged items, including:

- pairs of chopsticks, bottles of wine, articles of jewelry, and chinaware arranged in multiples of two
- bundles of incense sticks, office supplies (pens, pencils, notepads), and children's toys (marbles, animal figurines, etc), arranged in multiples of three
- small potted plants, empty fishbowls, bronze sculptures, ashtrays, and bamboo wind chimes arranged in multiples of five
- stacks of paper money and coins arranged in stacks of eight (It was also noted that all clocks in the complex, both analog and digital, had been set to 08:08. None of the clocks were observed to be functional.)

Items placed in groups that are removed from SCP-1334 disintegrate upon crossing the threshold of the bottom floor; the same result occurs if the objects are defenestrated. Replacements will appear roughly 8 hours after removal. Grouped items that are rearranged will automatically return to their original grouping.

SCP-1334 is currently inhabited by a humanoid figure, noted to closely resemble the late who was listed as the contracted tenant of the building's sixth story apartment. This entity, designated as SCP-1334-1, acts in a manner consistent with complaints filed by the apartment complex's other tenants, who described Mr. as "eccentric" and "disruptive to others' households". Retrieved hospital records indicate that Mr. suffered from paranoia and was discovered missing prior to his 44th birthday, and was later presumed dead. Though SCP-1334-1 appears corporeal, infrared scans of the apartment and complex during sightings do not indicate any heat signatures save for those of Foundation operatives.

SCP-1334-1 is believed to be the cause of the disappearances of the former tenants of the building (as well as and , a janitor and the landlord of the apartment building, who both visited the complex following the initial disappearances). After these disappearances came to Foundation attention and subsequent containment intervention occurred, Foundation agents sent to investigate SCP-1334 repeatedly encountered SCP-1334-1, who would inform them that their attire was "unlucky" due to accessories or thread count. All agents who encountered SCP-1334-1 reported dizziness and nausea upon leaving the apartment; these symptoms were determined to be due to low red blood cell count. The cause of these effects is unknown.

Addendum SCP-1334-1: After three successful agent interactions with SCP-1334-1, the following interview was conducted by Agent Tai Yang Shen, playing the part of a maintenance inspector checking on a broken window on the fourth floor. Prior to approaching SCP-1334, Agent Shen was given a set of clothes tailored specifically for the experiment.

> *Note: The following partial transcript has been translated from Mandarin.*

Agent Shen: Hello Sir.

SCP-1334-1: Hello. Why are you visiting this place?

Agent Shen: It is time to do maintenance on the building, and the other residents have made complaints about their apartments last time. I am here to inspect.

SCP-1334-1: There are no other residents here.

Agent Shen: Is that true? Sorry, maybe I got the wrong building. But I am sure that my company was responsible for this place.

SCP-1334-1: The other residents left. Since then, not even one person has come here.

Agent Shen: I see. Still, I need to take a look around. The window on one floor is broken.

SCP-1334-1: [pause] Which floor?

Agent Shen: If you step outside, you can see it. The one up there.

SCP-1334-1: Sir, do you know number meanings?

Agent Shen: I think numbers are very important. [rapidly knocks on wall eight times]

SCP-1334-1: Very good! You are careful. Knowing number meanings makes life easier. Please enter and inspect the building. I will show you where the window is.

Agent Shen: Thank you.

SCP-1334-1: You are more careful than the last person. They wore a flower with four petals.

Agent Shen: Really? That is very unlucky.

SCP-1334-1: I also told them that. They did not listen.

Addendum SCP-1334-2: After several subsequent “inspection” visits to SCP-1334, several instances of graffiti (all using the same reddish-brown paint) were discovered in various places throughout the apartment complex. A partial log, translated from simplified Chinese characters, follows:

- “The ceiling is a wall. Five is a lucky number. Every room is safe.” (painted onto the back of each door of every room in the building)
- “They did not listen to my warning. They left first.” (painted over the doorway of the fourth story apartment)
- “I am still here. I will always be here, because I understand numbers. I understand how to use them.” (painted onto the bathroom mirror of the sixth story apartment)
- “To let numbers become your life is to let your life become numbers.” (painted across the living room wall in the fifth story apartment)

Addendum SCP-1334-3: During one visit on / / , Agent Shen did not encounter SCP-1334-1 and proceeded to enter the complex to change a lightbulb near the stairway. Under the guise of ascertaining that the lightbulb was installed effectively, Shen took a picture that included some new graffiti that had appeared on the walls. Said graffiti was written in what appeared to be fresh blood, and comprised entirely of long strings of numbers, each roughly 0.3 meters tall and consisting mainly of the Chinese character eight (八, bā) while the character four (四, sì) was wholly absent. Upon the next visit, SCP-1334-1 greeted Agent Shen as before, and the graffiti was no longer present.

« SCP-1333 | SCP-1334 | SCP-1335 »

SCP-1335: Fortune Cookie Neighbor

Item #: SCP-1335

Object Class: Safe

Special Containment Procedures: SCP-1335 is to be contained in a Standard Safe-Class Containment Unit at Site- . The containment unit is to be fitted with a drainage system and the collected liquid is to be disposed as Level 1 Anomalous Waste.

As of 12/ / , SCP-1335 is to be monitored for noise emissions. Following any such emission, SCP-1335 is to be monitored for the manifestation of additional messages.

Description: SCP-1335 is a fortune cookie, identical in appearance to a standard fortune cookie manufactured by Wonton Foods Inc. It displays the anomalous effect of releasing approximately 100 mL of liquid every hour. The liquid released from SCP-1335 is composed primarily of water, but contains traces of lead and calcium as well as an unidentified organic compound.

SCP-1335 was contained on 01/ / , at the restaurant. Upon arrival, Foundation agents discovered SCP-1335 in a fountain being displayed as a "genuine Buddhist artifact". At the time of containment, the restaurant had begun an advertising campaign encouraging customers to "come and anoint themselves with the blessings of Confucius". The owner of the restaurant, Smith, and all employees and customers present at the time were administered Class C amnestics, and a standard disinformation campaign was established. Despite extensive testing, the liquid released by SCP-1335 has not been found to possess any anomalous properties.

SCP-1335 contains a strip of paper within its shell. Efforts to remove this object without damaging SCP-1335 are ongoing.

Addendum-1335-1: On 03/ / , after attempts, the strip of paper within SCP-1335 was successfully removed using a standard toothpick. Upon examination, it was discovered to contain the following message:

> hey neighbor
> please fix your leak
> the dripping is driving me crazy

Addendum-1335-2: On 11/ / , the barking of a *Canis familiaris* began to be heard from SCP-1335. The barking continued for the next two hours. The following day, a new slip of paper was discovered to have manifested within SCP-1335. It was retrieved, and found to state the following:

> hey
> would you mind quieting your dog
> and fix that leak while your at it

Containment procedures have been modified to account for these additional effects.

Addendum-1335-3: On 17/ / , the liquid output of SCP-1335 increased to 400 mL/hour. On 19/ / , the following note was retrieved:

> dude
> stop ignoring me
> i know you can see these

Addendum-1335-4: On 23/ / , disco music began emanating from SCP-1335 at 100 dB and continued for four hours. Immediately after the event, researchers retrieved the following note:

> THATS IT
> IM CALLING THE FUCKING LANDLORD

Addendum-1335-5: As of 29/ / , SCP-1335 has ceased anomalous activity. Reclassification to Neutralized pending.

« SCP-1334 | SCP-1335 | SCP-1336 »

SCP-1336: 5,000 Dots

Item #: SCP-1336

Object Class: Safe

Special Containment Procedures: SCP-1336 will be stored in a secured vault in Section 19. It is to be maintained in a document frame that will prevent accidental damage to the object. The front of SCP-1336 will be under constant observation by level 3 personnel and video images will be recorded at all times. Relevant screenshots will be sent to the director of operations for Level 3 personnel.

Description: SCP-1336 is a single sheet of 8.5" x 11" 110 lb. card stock. It has sustained very slight burn damage to one corner. It was recovered from the wreckage of a laboratory owned by the Chemical Corporation in , . Nothing is known of the origins of the object beyond this. It came to the attention of the Foundation by way of an informant from the company itself. No opportunity to recover the paper came until several months after the Foundation learned of the existence of SCP-1336, when an explosion severely damaged the lab, killing 15 employees, including the informant. Foundation operatives were able to enter the lab and recover the object at that time.

Appearing on the paper are roughly 5,000 dots, each one a circle about 0.3mm in diameter. The dots appear to be printed in various colors. Under non-magnified observation the dots resemble those printed by a standard color laser printer; however, microscopic examination reveals that the paper fibers themselves appear to be colored. There are no pigment particles apparent.

The attention of the Foundation was originally drawn by the fact that the dots slowly move around the page. While each individual dot moves seemingly at random, they will all form recognizable patterns from time to time. Exactly how the dots move is still unknown. Under magnification, it appears that the color oozes along the paper fibers,

but no observation so far had revealed how the color flows. The dots have been observed to overlap each other and will temporarily blend colors. The dots have never been observed to stop moving. Their speed is a constant 1mm/s, though they seem to randomly change directions, and rarely stay moving in any one direction for more than a few seconds.

Almost without exception, the patterns created appear as structural formulas for various organic compounds. To date, the Foundation had recorded 11,467 structural formulas. Of these, 453 did not appear in any current chemical registry. The Foundation has managed to synthesize 41 of the unknown molecules. 10 of these compounds have proven commercially viable, and have been released through various Foundation front companies; the remaining 31 chemicals are still undergoing analysis and testing. Of the 412 compounds that have yet to be synthesized, 53 appear to be physically impossible according to currently-accepted theories of chemical bonding. Another 48 contain symbols that are not known to represent chemical elements or functional groups.

Addendum A: SCP-1336 is known to have produced images unrelated to structural formulas on six separate occasions.

A-1: An image of [REDACTED], later identified as SCP-[REDACTED].

A-2: A map of the Continental United States with the location of each capital city indicated, as well as 4 additional locations. Investigation in the areas indicated by the dots revealed [REDACTED].

A-3: The phrase “Shared pain is lessened…”

A-4: The date [REDACTED] and the phrase [REDACTED].

A-5: A portrait of a middle-aged Asian male, later identified as Field Agent [REDACTED], the agent who recovered SCP-1336 following the lab explosion.

A-6: An image of a video camera (See Addendum B-5).

Addendum B: Multiple attempts have been made to communicate with SCP-1336. To date, none have been successful. However, one test did seem to show that SCP-1336 was aware of its environment.

B-1: Attempt to verbally communicate. "Can you hear me?" repeated at intervals for 1 hour. No response.

B-2: Attempt to verbally communicate. "Draw a circle." repeated in multiple languages at intervals for 2 hours. No response.

B-3: Attempt to visually communicate. The command "Draw a circle" printed on a paper in multiple languages and placed in a frame facing SCP-1336 for 24 hours. No response.

B-4: Attempt to visually communicate. A copy of Da Vinci's "La Gioconda" (The Mona Lisa) placed in front of SCP-1336 for 24 hours. No response.

B-5: Attempt to communicate both visually and verbally: After the production of Agent [REDACTED]'s portrait, a photo of Agent [REDACTED] was presented to SCP-1336 and the question "Who else was on the recovery team?" was repeated for 1 hour. The dots formed an image of the video camera that faces SCP-1336.

B-6: A high-resolution LCD display was placed on the wall facing SCP-1336, which showed a greatly magnified version of the object. The dots on SCP-1336 were seen to speed up by 50%. This effect lasted for approximately 2 hours before the dots slowly returned to normal speed. There was no further obvious response since then, and the display was removed after one month.

« SCP-1335 | SCP-1336 | SCP-1337 »

SCP-1337: The Hitchhiker

Item #: SCP-1337

Object Class: Safe Decommissioned Euclid

Special Containment Procedures: The section of road designated 1337-Alpha is to be monitored at all times. During active time periods a sweep is to be performed every hour, by a lone security agent in a non-Foundation standard car, at all other times remote monitoring is allowed. When contact is made with SCP-1337, said agent is to stop his vehicle, and offer it a ride. Agent is to adhere exclusively to the provided script, and not attempt to engage SCP-1337 in any further conversation. After arrival at site 1337-Beta, agent is to wait in the car 15 minutes after departure of SCP-1337 and then to retrieve item 1337-Gamma, and return it to the E-class Agents at Site 1337-Delta.

After the results of incident 1337-L , Dr. L is to be the sole operative assigned to active phase monitoring duty.

Given that three years have passed since any occurrence of SCP-1337, this SCP is now considered decommissioned.

After the events of Incident 1337-L -2, SCP-1337 has been reinstated, and upgraded to Euclid class. During the 19th of each month, the 'active' phase of SCP-1337, the system of roads known collectively as 1337-Alpha are to be constantly patrolled for signs of SCP-1337. In the event said SCP is spotted, a D-class is to be inserted into a remotely controlled vehicle, and guided to the spot of its appearance. Upon acquiring SCP-1337, the vehicle is to be driven to Site 1337-Delta, and the remains of the D-class disposed of. If SCP-1337 is not spotted, this anomaly must be immediately reported.

Description: SCP-1337 is a Level 2 Humanoid Apparition, location bound, non-violent, corporeal Level 5 Humanoid Apparition, free

roaming, corporeal, actively aggressive. It appears to be the wraith of one Mary Talish, who was abducted, ritually tortured, and executed on May 19th, 1952, in Muncie, Indiana. Starting 19 months after her death, SCP-1337 began to appear on the 19th of every month, walking down Mayflower Road (1337-Alpha), attempting to flag down any passing vehicle. It would tell anyone who picked it up that it had gotten lost, and was in need of a ride back to its home (1337-Delta). SCP-1337 would give directions in such a way as to ensure passing the graveyard where Mary Talish was buried (1337-Beta), and then encourage the driver to stop at the cemetery. Once out of the vehicle, SCP-1337 would vanish, leaving the driver to find her sweater (1337-Gamma). Anyone touching 1337-Gamma would then feel an urge to return the item to Site 1337-Delta, and Mary Talish's parents. Despite many attempts to secure 1337-Gamma, it would invariably vanish from containment at or around sunset on the 19th.

SCP-1337 manifests as a female, blonde haired, blue eyed, 150 cm (5 feet) tall, approximately 59 kg (130 pounds). It is dressed conservatively, a mid calf length red skirt, long sleeved button up shirt, and red sweater(1337-Gamma). It appears well groomed, in both body and clothing. See Incident 1337-L -2 for current physical description.

When the Foundation moved in, it was found most beneficial to recruit the elder Talishs as E-class Agents of the Foundation, in order to prevent them from speaking out. The Agents were told the Foundation was working on a way to set their daughter to rest. Special agents were employed to pick up and transport SCP-1337, as no means of permanently repositioning it were found. Dr. L was placed in command of Foundation resources governing SCP-1337.

Incident 1337-L : On 6/18/73, Dr. L , acting without permission, had the E-class Agents executed, and Site 1337-Delta destroyed. His reasoning was that 'If she has no one to return to, she'll stop coming back.' Dr. L was demoted to Junior Staff for his actions, but not reassigned, under the belief that if SCP-1337 were to form a new attachment, it would most likely be to him. An examination of Dr. L s journals revealed that he believed

decommissioning SCP-1337 would lead to a promotion, and 'recognition of his brilliance.'

On 6/19/76, SCP-1337 was considered Decommissioned.

Incident 1337-L -2: On 6/19/83, Dr. L returned to Site 1337-Alpha, to ensure there were no remnants of SCP-1337. His last transmission consisted only of the words 'Wait, who the hell are yo-' When security arrived on the scene, Dr. L was found deceased, his body mutilated in the same manner as Mary Talish's had been when she was found. Since that time, on the 19th of every month, SCP-1337 has returned, with a different method of operations. Recordings have shown that its physical appearance has changed. SCP-1337 still manifests with the same basic physical appearance, but now shows the wounds of its death. The eyes appear to have been gouged from their sockets, and its clothing is ripped and stained mid-chest, to reveal the empty cavity where its heart was removed.

SCP-1337's range of movement has extended to all of the back roads of Muncie. If a vehicle stops for SCP-1337, it vanishes from view, to reappear on another road. Should a vehicle pass SCP-1337 by, it will then appear inside the vehicle, where it will re-enact the methods of its murder upon the driver of the vehicle. SCP-1337 will only appear for vehicles containing one person. This escalation matches those events observed following containment attempts of **SCP-973**. See internal research paper "Apparition Escalation: Preliminary Research into Human Triggered Escalation of Apparition Hostility" by Tamlin et al. for more details regarding this and other similar **phenomena**.

« SCP-1336 | SCP-1337 | SCP-1338 »

SCP-1338: Child of Trees

Item #: SCP-1338

Object Class: Euclid

Special Containment Procedures: A perimeter is to be established around the location SCP-1338 most frequently appears at (roughly 35°45'50"N 82°15'52"W). Foundation personnel assigned to the containment of SCP-1338 are to maintain the guise of a team of ecologists implementing a forest restoration process. Any unauthorized persons attempting to enter the perimeter are to be turned away under the pretense of keeping the restoration undisturbed; video surveillance is to be used to monitor the perimeter.

Foundation personnel are to meet with SCP-1338 once every 29 days[1] to perform a routine assessment of SCP-1338's temperament and behavior. Any conversations that occur are to be properly logged. As SCP-1338 has demonstrated willingness to cooperate with the Foundation, care should be taken to avoid frightening or aggravating SCP-1338, to maintain said cooperation.

Description: SCP-1338 is a male human of indeterminate ethnicity, of stature and appearance similar to that of a child. Though otherwise physically unremarkable, SCP-1338 exhibits heterochromia iridum, possessing one dark brown eye and one green eye. SCP-1338 does not appear to age. SCP-1338 is able to communicate using simple spoken English, and has demonstrated a talent for climbing trees.

SCP-1338 is able to use plant matter to create substances with certain healing properties, though said substances only retain their abilities while within the presence of SCP-1338. Analysis of the produced substances (usually strong-smelling mixtures of crushed or shredded leaves, herbs, and/or flower petals) reveals no anomalies; however, SCP-1338 has shown skill in curing various

ailments, including headaches, eye irritation, and upset stomachs. Shallow cuts (ranging from 1 to 4 cm long) treated by SCP-1338 heal completely after an average of four minutes; subjects receiving care from SCP-1338 report feeling no pain when the cures are applied.

While SCP-1338 favors a forest in the Blue Ridge Mountains (of the American Appalachians) as a place of residence, numerous sightings of SCP-1338 in the Epping Forest of England have been recorded. Said sightings are no longer recent enough to prompt further investigation.

The Foundation initially established contact with SCP-1338 when the story of an injured mountain climber recovering from several broken bones overnight prompted Foundation investigation. A small team of researchers led by **Dr. Kiryu** was sent to explore the region of the forest the sighting was rumored to have occurred in (see Interview 1338-1-).

Interview 1338-1-

On the second day of the investigation, Dr. Kiryu stopped to collect plant samples, and lagged behind the group slightly. SCP-1338, apparently having hidden itself behind a nearby tree, appeared and engaged Dr. Kiryu in conversation. The following is a log of the event.

SCP-1338: Who are you?

Dr. Kiryu: Hello. I'm a friend. I wanted to say thank you for helping that man.

SCP-1338: You're welcome. [pause] No one ever comes back to say thank you. [pause] What are you doing?

Dr. Kiryu: I'm collecting some of the plants here.

SCP-1338: Why?

Dr. Kiryu: Where I live, the plants don't grow as well as they do here. I'm hoping to find a way to help the plants at home grow better.

SCP-1338: I can help. Like with that man. I helped him heal better. But only here.

Dr. Kiryu: What do you mean?

SCP-1338: I can make things with plants. Things that help other things heal or grow better.

Dr. Kiryu: What sort of things?

SCP-1338: I can make flower water that helps plants grow, and I know the smells that the butterflies like. I know where to leave food for the fairies so they help me learn, and I can find the feathers that help you listen to the trees.

Dr. Kiryu: That's… fascinating. Would you be willing to talk some more, on another day?

SCP-1338: Maybe. I'm here all the time. Please be careful with the plants you're taking, okay?

Dr. Kiryu: I will. Thank you for talking to me. When do you want to talk again?

SCP-1338: Maybe the day of the next half moon?

Dr. Kiryu: Certainly.

Addendum 1338-1: SCP-1338 has, on occasion, mentioned two other existing family members (see interview log). The identities of the alleged parents of SCP-1338 are currently unknown, Foundation attempts to locate said parents have proven unsuccessful.

Dr. Kiryu: Could you tell me more about your family?

SCP-1338: My mother and father once lived together, but my father and some of his family were taken away by some men who wanted to sail across an ocean. Mother and I were left behind.

Dr. Kiryu: Do you know what happened to him?

SCP-1338: He helped them cross the water. But they wanted to explore more, and when they got him to help them cross the land, they didn't make it very far. My father decided he wasn't going to help them anymore. He ended up in the mountains, and he found others to guard him. That was around the first time I visited him.

Dr. Kiryu: Did your mother take you to see him?

SCP-1338: No, some of his friends showed me the way. They taught me how to cross bigger distances. My father was very weak, and my mother couldn't leave where she was, so I went to see him.

Dr. Kiryu: Would your father mind talking to me sometime?

SCP-1338: I don't think he would want to. The only reason I'm here is because my mother wanted to tell my father something, and I was the one who passed the message. She said that he was so steadfast, while she was fickle and changed with the seasons. But he loved

her for that anyway, and that was what made her love him.

Dr. Kiryu: I see. Do you miss him?

SCP-1338: I'm trying to heal him. I talk to his friends a lot though, so it's not too bad.

Addendum 1338-2: Subjects treated by SCP-1338 for cuts and abrasions were observed to have extra layers of large, rectangular-shaped skin cells growing over the sites of the original wounds. The layers are shed and replaced periodically without harm; the means by which this occurs is currently unknown.

Addendum 1338-3: On - - , an attempt was made to transfer SCP-1338 to Site- . SCP-1338 was sedated and transported via helicopter, but en route SCP-1338's health began to deteriorate rapidly, to the point where transfer was no longer viable. SCP-1338 was returned to the meeting place. Attempts were made to follow SCP-1338 once it awakened, but Foundation personnel were unable to locate SCP-1338 after it climbed into tree branches overhead.

Footnotes
1. Due to SCP-1338 having no understanding of standardized timekeeping systems, it was agreed that each meeting would occur on the day before a full moon.

« SCP-1337 | SCP-1338 | SCP-1339 »

SCP-1339: Justified Badge

Item #: SCP-1339

Object Class: Safe

Special Containment Procedures: SCP-1339 is to be kept in a safe at Site-56 and may only be accessed with permission from Dr. Robert Williams. Testing has been suspended until further notice.

Description: SCP-1339 is a police badge, with no markings of a police department or rank. No badge similar to SCP-1339 has been found as of 20 /3/1. The badge's abnormal qualities are only apparent when worn.

When SCP-1339 is fastened to the clothing of a human being (other species may be affected by SCP-1339, see Test Log), henceforth referred to as the subject, they will be convinced that any actions they observe or commit are entirely justified and valid (see Addendum 1339-1). When asked about events, the subject will always rationalize and defend the action. Assessments of motor skills, problem solving and cognitive abilities have all proven that SCP-1339 does not impair mental facilities. Foundation psychologists and speech pathologists have noticed that the speaking patterns of SCP-1339 subjects resemble those of psycho- and sociopaths.

Once SCP-1339 is removed from the subject, he or she will immediately feel large amounts of guilt and depression, even if they committed no morally or ethically wrong actions while wearing it. Attempts at therapy have worked along the same lines as others with depression or guilt, with therapists noting that patients are much more resistant to both antidepressants and traditional psychiatry. Amnestics have proven useful in removing "memories" of the digressions, though feelings of guilt are still reported by subjects. In a majority of cases where treatment is not received, the subject will commit suicide. On several occasions, the subject has confessed to

unknown crimes in suicide notes. Despite the possibility of reopening “cold cases” or finding missing persons, it has been decided that testing is to be suspended until further notice.

Addendum 1339-1: Subjects have been exposed to, and in some cases performed, murder, mass murder, torture, forced starvation, and non-medical amputation without incident, and upon questioning, would claim all of the above actions perfectly reasonable and right.

Show Interview 1339-1

Interview 1339-1:
D-345781: Subject using SCP-1339
Dr. Torest: Interviewing D-345781

Foreword: D-345781 had been wearing SCP-1339 for several days, during which he had personally seen the death of Agent Larson, the termination of several D-Class personnel, as well as a violent escape attempt by SCP- .

Dr. Torest: How are you feeling, D-345781?

D-345781: I'm good. You?

Dr. Torest: Fine. Now, how do you feel about what you've seen here at the Foundation? I know some of your colleagues were disturbed slightly.

D-345781: I said I'm good. I understand why you people need to do these things.

Dr. Torest: You feel no guilt over your involvement?

D-345781: Those things needed to be done.

Dr. Torest: Why do you believe that, exactly?

D-345781: Those people were unnecessary. They did their jobs, then they died. They

complained too much, anyhow. Especially . He didn't stop until [DATA EXPUNGED]. At least that made him quiet.

Closing Statement: D-345781 had SCP-1339 removed shortly after this interview. Subject began sobbing, and collapsed into a catatonic state. Before collapsing, he yelled incoherently for several minutes at researchers and doctors, repeatedly swearing at them. D-345781 was returned to his cell, and remained in his bed for a majority of a week. Following one week, he was found dead in his cell of self inflicted stab wounds. A crude "shank" made of a toothbrush was determined to be the suicide weapon. A note, which was found in the cell, contained a detailed confession to three (3) crimes: the robbery of a convenience store in Columbus, Ohio in 1932, the murder of a woman in Ithaca, New York in 2003 and a physical attack on a man in Mesopotamia in 4750 B.C. The crimes are all currently being researched by Foundation historians.

Following this incident, psychiatric counseling was declared mandatory for all subjects wearing SCP-1339.

Show Testing Log 1339-1

Testing Log 1339-1:
Subject: One (1) parakeet
Duration: Thirty (30) seconds
Actions: None
Results: Parakeet remained still, and researchers noted nothing out of the ordinary. Following this test, it is believed that non-primate animals are not influenced by SCP-1339.

Subject: One (1) common chimpanzee, *Pan troglodytes*
Duration: Twenty four (24) hours
Actions: Subject was observed eating, climbing trees and harassing other chimps.
Results: After removal of SCP-1339, the chimp appeared to experience depression similar to that of wild animals

who were recently captured, though the subject was born and raised in captivity. After several weeks, the subject was observed to be acting normally.

Subject: D-38546
Duration: Thirty (30) seconds
Actions: None
Results: D-38546 remained standing in front of researchers while wearing SCP-1339, but experienced heavy depression upon removal. While in therapy, subject confessed to feelings of guilt over the death of a childhood pet (an incident found to be true by contacting family of D-38546), the beating and killing of a homeless man in 1905 (82 years before the birth of the subject) and several Foundation projects, including [DATA EXPUNGED]. D-38546 was given a Class-A amnestic immediately and was terminated on schedule.

Note: Yes, SCP-1339 has helped local authorities in some cases. However, we cannot waste resources on giving psychotherapy and pills to subjects. And showing up at the sheriff's door with a list of unsolved murders and missing persons from decades ago is not exactly the most subtle thing the Foundation has ever done. Testing is suspended from now on unless approved and supervised by the senior staff.-Dr. Easton

Show Testing Log 1339-2

Testing Log 1339-2: New testing has been authorized temporarily by Dr. Kiorst of Site-56, for the express purpose of determining if subjects using SCP-1339 are valid for use as Foundation personnel. Due to their lack of guilt or remorse while wearing SCP-1339, users have been speculated to be superior to regular personnel in dealing with more morally questionable actions performed by the Foundation.

Subject: D-84766
Duration: Two (2) months
Actions: D-84766 was given private quarters for the

duration of the experiment, the only notable feature of which was a standard, 24-inch monitor, which was built into the wall for the express purpose of the experiment. Following the attachment of SCP-1339, D-84766 was led to the room and locked inside. Meals were delivered by staff three times a day. During the day, between the hours of six (6) A.M. and eight (8) P.M. (GMT), the monitor broadcast a live feed of Foundation activities declared to be the most morally questionable by personnel. Staff delivering meals were given the ability to request that the feed be muted or turned off while they visited the quarters. Following two months of exposure, D-84766 was brought out of her quarters and given a psychiatric evaluation by Dr. Samson, who declared that D-84766 was mentally healthy.

D-84766 had SCP-1339 removed after evaluation. The subject entered a catatonic state upon removal, and began screaming incoherently. Nearby staff reported that the subject attempted to remove her own ears and eyes before being restrained by security. After being given a sedative, D-84766 was returned to her quarters, where she refused to speak to personnel for thirteen weeks. Attempts at administering therapy failed due to the subject's lack of response. On 9/3/2005, visiting staff reported that the subject was laying face down on the floor. Medical staff discovered that D-84766 was unconscious, and she was shortly thereafter transferred to the medical ward. After five (5) hours in the medical ward, the subject regained consciousness.

While in the medical ward, the subject was responsive to an interview by Dr. Samson (see Interview 1339-2). Following the interview, the subject stabbed herself thirteen times in chest, neck and face with an empty syringe. Death was caused by piercing of the subject's jugular. No note was found on the scene, but Dr. Samson did produce a paper the subject gave to him during their interview.

Interview 1339-2:
D-84766: Subject of SCP-1339 experimentation
Dr. Samson: Interviewing subject

> **Dr. Samson:** How are you feeling, D-84766?
>
> **D-84766:** I'm sorry. I'm sorry. All of it.
>
> **Dr. Samson:** Sorry for what?
>
> **D-84766:** You know. I know. I know what I did.
>
> **Dr. Samson:** Ma'am, you did not leave your quarters once during your wearing of SCP-133-
>
> **D-84766:** Don't! No! I can't…can't…I was wrong…wrong, but I was right…it's all right, but it's all wrong…right and wrong…right and wrong right and wrong right and wrong right and wrong…

Closing Statement: Following the end of the log, D-84766 subject threw a piece of paper at Dr. Samson. D-84766 then grabbed a syringe and committed suicide as outlined above. Dr. Samson immediately handed the note over to Foundation authorities. The note reads as follows:

> Topeka, Kansas, 1881. Murder. Mine.
>
> Beijing, China, 1921. Burglary. Mine.
>
> , Site-56, 2005. [REDACTED]. All mine.
>
> [The note continues for several paragraphs like this, naming locations, dates and crimes, and naming the subject as the perpetrator. The paper ends abruptly, indicating a date that has not yet occurred and naming a yet-unknown individual. Attempts to find this individual have been unsuccessful.]

Subject: Doctor Tamlin
Duration: Five (5) weeks.
Actions: Doctor Tamlin performed his usual duties as administrator, among them approving testing and overseeing experiments. During the time SCP-1339 was worn, Dr. Tamlin approved all applications for experimentation given to him, eventually reaching the point of obviously humorous or false applications being approved, among them requests to set Keter class SCPs free, and petitions to promote violent D-Class personnel to O5. All approved applications were later vetoed by staff.

Results: Doctor Tamlin was deemed psychologically healthy following removal, though his wife and colleagues reported that he was notably less sociable. After two weeks, Dr. Tamlin failed to report to work, and agents were sent to his house to investigate. Once there, Agent Jotes and Agent Howard discovered the bodies of Dr. Tamlin and his wife, victims of an apparent murder-suicide. Both died of multiple stab wounds, Dr. Tamlin's self-inflicted. A note was discovered near his body, in which he confessed guilt to multiple crimes, including the murder of his wife.

Note: That is it. This thing makes you able to handle some of what we do for a little while, but we can't have everybody involved with a 'messy accident' wind up killing themselves or others. All testing is ended. SCP-1339 is to be left in a locked storage area at Site-56, permanently. May those poor fuckers rest in peace. If they can.
-Doctor Kiorst

SCP-1340: The Fraternal Order of Cave Mantas

Item #: SCP-1340

Object Class: Safe

Special Containment Procedures: SCP-1340 is to be held within Containment Aquarium Tank-3 at **Research Site-45**. Personnel assigned to SCP-1340 are to observe standard aquatic zoological containment protocols. 150kg of food pellets made up of ground krill will be deposited into SCP-1340's containment tank 4 times a week. Voltmeter and galvanometer instrumentation are to be installed within the tank to monitor and decipher fluctuations of electrical activity.

Field agents in coordination with the Mexican government are advised to report any sightings of the remaining population of SCP-1340 within the Ox Bel Ha cave system.

Description: SCP-1340 is a species of cave-dwelling electroceptive rays belonging to the family shared with other mantas (*Mobulidae*). SCP-1340 was discovered living within a large underwater chamber as part of an unexplored region of the Ox Bel Ha cave system near Quintana Roo, Mexico. All specimens of SCP-1340 are distinguishable by their large triangular pectoral fins, horn-shaped cephalic fins, large terminal mouths, fading or complete loss of pigmentation, and usually range from 0.8 - 1.1 meters in width. SCP-1340 also have a pair of vestigial eyes.

SCP-1340 possess two large electrocyte organs on each side of its head, where current passes from the lower to the upper surface of the body allowing bioelectrogenesis to occur. SCP-1340 mainly uses this feature to communicate by utilizing electrical signals of varying voltage, amperage, and frequency.

Foundation researches and cryptanalysists have developed and calibrated an electroacoustic transducer for converting these

electrical signals into audio, which is observed to be Spanish language. It is theorized that SCP-1340 may have learned to use Spanish language through exposure to man-made electromagnetic radio waves, specifically AM broadcasting.

Since deciphering this electrical activity, it is now known that SCP-1340 are actually sapient and highly social. The colony in captivity has been revealed to be a selective council of 118 inducted male specimens of SCP-1340. The colony has been observed to regularly discuss business and other current events in an open forum governed by principles of parliamentary-like procedure.

[LEVEL-1 ACCESS REQUIRED]

Recorded Transcript$_{1340\text{-}4\text{-}021012}$

Foreword: The following is an excerpt of transcript-1340-4-021012. The transcript consists of the recorded conversations between SCP-1340 colony members translated into English language, dated October 2nd, 2012

<Begin Log, [October 2nd, 2012 at 20:00]>

SCP-1340-12: I hereby call this meeting into order. Will the assembly now recite the pledge.

All in unison: Since the time of the God signal; we, the ancient order, pledge to act in accordance with our morals to make decisions for the betterment of our children. We will do right to all manner of others after the laws and usages of our universe, without fear or favor, affection or ill will. We, the harbingers of the law, keepers of the peace, and defenders of the faith. We swear our allegiance to the greater good.

SCP-1340-12: Secretary, please recite the previous conclusions.

SCP-1340-35: The foraging committee is still looking into a cause for the changes in our food supply. A motion was called by One Who Feeds Many. Motion was for temporarily bypassing membership policy for the foraging committee to induct volunteers as an effort to accomplish assigned tasks. Motion carries and volunteers were inducted. Motion was called by One Who Surprises Easily. Motion was for a postponement of the great spirit festival until further notice. Motion carries. Elder priest One Who Converses with Ancestors is still contemplating for a reason why the God signal has stopped and is also attempting to understand these new alien signals; interpretations will be delayed. Also, discussions continued on findings by the exploratory committee. Discussions were tabled for sake of time constraints.

SCP-1340-12: Very well. Is there any new business that needs to be discussed prior to reopening said discussion?

SCP-1340-35: Nothing was submitted.

SCP-1340-12: I hereby reopen previous discussions. Will the elder brother of the exploratory committee please recite the updated summary of their recent findings.

SCP-1340-35: The convener and council now recognizes One Who Looks in Cold Places.

SCP-1340-107: Brothers of the council, based on our recent expedition attempts we conclude that the great chamber has dramatically changed in shape for unknown reas-

SCP-1340-25: Blasphemous!

SCP-1340-67: Heretic!

SCP-1340-12: Order! Maintain order I say!

[heavy static over indecipherable rabbling]

SCP-1340-12: Order! Order!

[rabbling decreases]

SCP-1340-12: I will not have this meeting be controlled by outbursts like this again! The council will now refocus on One Who Looks in Cold Places.

SCP-1340-107: Yes… for unknown reasons to us and in contradiction to everything we know about our universe. What we do understand is this. Our chamber is now smaller. Our chamber now takes on a seemingly symmetrical shape. A great layer of emptiness now exists above us. The floor is clean of stones or sand. And most importantly, food can no longer be found readily available but seems to originate from the emptiness.

SCP-1340-12: Thank you. Discussion amongst the council brothers is now open.

SCP-1340-35: The convener and council now recognizes One Who Swims in Circles.

SCP-1340-70: Elder brother, are you saying that we are trapped inside the great chamber?

SCP-1340-107: Well, not exactly. We have yet to find a sizable exit point. Our committee has discovered multiple tunnels where water flows in and out, but they are much too small to fit through.

SCP-1340-35: The convener and council now

recognizes One Who Pushes Stones.

SCP-1340-51: Elder brother, could these tunnels be excavated?

SCP-1340-107: We have not looked into that.

SCP-1340-111: Well, shouldn't we? Seems rather imperative that we explore this.

[light static over isolated rabbling]

SCP-1340-111: Having said that I would like to call to mo-

SCP-1340-35: Please refrain from proposals until after the discussions have closed.

SCP-1340-68: Look to the prophecies!

SCP-1340-12: Order! Order!

SCP-1340-68: As it was foretold, at the beginning of the fourth reconciliation, which heralds-

SCP-1340-12: Guards! Subjugate One Who Practices the Old Ways!

SCP-1340-68: -the great return of the prodigal demons! The demons have killed our God signal! Beware of their-

[a sudden increase in distorted gain followed by intermittent clicks]

SCP-1340-12: Order, brothers! We can not tolerate such radical madness in this dire time… now… let us continue with the discussions.

<End Log, [October 2nd, 2012 at 20:21]>

Epilogue: After the meeting was adjourned, several specimens of SCP-1340 were seen scraping against the containment tank's drains and filter screens with their fins.

« SCP-1339 | SCP-1340 | SCP-1341 »

SCP-1341: "JUNGLE IN A JAR"

Item #: SCP-1341

Object Class: Euclid

Special Containment Procedures: SCP-1341 is to be held in a containment locker, located on the grounds of **Site-77**. This chamber is to have two guards monitoring it at all times. No arboreal objects are to be held in the same area as SCP-1341. Testing must be conducted in a standalone structure, SCP-1341 cannot be brought into any building other than those specifically constructed to house and test it.

Description: SCP-1341 is a mason jar made of red glass, with the words "JUNGLE IN A JAR" stenciled on the lid with black acrylic paint. When SCP-1341 is in an inactive state, it weighs approximately 480 grams. Removing the lid when SCP-1341 is outside of an enclosed space has no anomalous effect. If SCP-1341's lid is removed while it is indoors, it will begin to exude soil from the opening at 10kg per minute. The soil will be continuously produced until all available space in the room it is contained within is filled with this soil to a depth of at least ten millimeters.

Once the soil has reached this depth, several anomalous species of plants will begin to grow. Plants produced by SCP-1341 superficially resemble species found in tropical rain forests. However, DNA testing has shown that these plants do not correspond to any known species. The plants will continue to grow until they have achieved the maximum size the area will allow. They take a maximum of three days to reach full maturity, and once mature are resistant to temperatures of up to 500 degrees Celsius. The epidermal layer of these plants measures an average of 7.6 on the Moh hardness scale. They have been shown to be resistant to all known types of chemical defoliants.

When the maximum amount of space the plants can take up is filled, several trees will begin to grow fruits, resembling fruits in the genus *Durio*. Two to three weeks after these fruits begin to grow, they will fall from the trees and split open, allowing several juvenile organisms (hereafter known as SCP-1341-2) to emerge.

Instances of SCP-1341-2 resemble vaguely simian bipeds, and are not hostile unless provoked. Instances of SCP-1341-2 exhibit behavior patterns consistent with those of wild chimpanzees.[1] When the population of SCP-1341-2 has reached between twenty and thirty, the area affected by SCP-1341 will expand to fill the largest enclosed space possible. The root structure of the plants within SCP-1341 will spread through the walls, ceiling, and floors of any artificial structure it has been placed within. New plants will begin to grow from these root structures, until SCP-1341 has completely assimilated the structure.

+Addendum 1341-1: Experiment 1341-A

On / /20 , initial experimentation on SCP-1341 was initiated. The following document was recovered from Site , after the site did not make its monthly scheduled radio contacts with Outpost Delta. The site was found to be completely covered with plant overgrowth, with all personnel stationed at the base currently listed as MIA. The following log is believed to have been compiled by Dr. Boyd, former lead researcher of SCP-1341.

> Day 01: We started the experiment on Phase 3 today. D-0981 was selected because of his previous cooperation on other safe objects. We put the jar in the room we're holding him in and let it do its thing. Now, we just wait and see what happens.
>
> Day 15: We finally entered Phase Three. D-0981 is behaving as expected, and so has the plant growth. Most of the chamber is covered in vines and overgrowth, and several of the trees have begun sprouting.

Day 17: The test chamber has become impossible to enter from the main entrance, so we cut open a hole in the ceiling. Most of the test chamber feels like a jungle now. D-0981 doesn't really talk anymore, he just walks around yanking up weeds. His hands are pretty bloody from doing it, and he seems to be running himself ragged. I'm going to recommend the use of sedatives to make sure he doesn't kill himself before we wrap this thing up.

Day 18: The test chamber is impossible to enter by any means. Both of our makeshift entrances are completely overgrown. However, even though we aren't feeding D-0981 or making him sleep, he still seems to be active. Vital signs show he is stressed but alive, despite not having eaten anything in at least three weeks. Putting in a petition to end the experiment to the director this week.

[ILLEGIBLE]

Day 20: It appears that SCP-1341's effect is beginning to spread outside the test chamber. The grounds have become completely overgrown, and anything we had growing on site is growing out of control. I am going to send some agents into the test chamber to retrieve SCP-1341 and terminate D-0981. If we don't stop this now, the whole site could be overgrown in a matter of weeks.

Day 25: The agents I sent never came back. They were in radio contact for a few days though, so at least it wasn't a completely worthless endeavor. Apparently, the chamber has become even more overgrown since the last time we saw it. They reported sounds of wildlife coming from inside the chamber.

D-0981 was nowhere to be found. The plant growth out here has gotten a lot worse since we sent them in. I'm afraid I will have to evacuate the base, as the continued rate of plant growth will render it inoperable within the week.

Day 26: We can't leave. I woke up this morning to find that every door and window has been grown over by thick, heavy vines. None of the equipment we tried using to break through worked. People are missing. Entire sections of the base are impossible to enter, and Ernie went into the air ducts and never came back. We gathered all the resources we had, and we're going to try and find an alternate means of escape tomorrow.

Also… we aren't alone. There are creatures in the foliage. They watch from the denser patches. I haven't been able to get a good look at them, but I know they're there. The reports said they weren't hostile… I hope they were right.

Day 28: We accidentally killed one today. Martin was trying to access the armory…and I guess it startled him. We found his body just outside the armory entrance, just completely mutilated. And the smell… there was the smell of a dead body, but not just that. There was this thick, musky odor. Nobody but Martin knew the access codes to the armory, so I guess that plan is out the window.

I know they're out there still. If they didn't want to harm us before, they definitely do now. I hope god gives me the strength to protect my staff and get us out of this mess safely.

Day 30: I think I might be the last one left. We

tried… so hard to get out. But it got all of us. Janice fell in a pit, and it was filled with bamboo stakes. I still feel nauseous thinking of her. Albert got stuck in some vines, and we couldn't get him out. After about a day, they had grown over him completely. I can still hear him crying. Lyra… I don't know what happened to Lyra. All I know is that once the lights went out, I never saw her again.

D-0981 is alive. Sometimes he talks over the PA system. He rants and raves about how we let this happen, we let the base fall and become a "pit of weeds and depravity" as he puts it. Melodramatic bastard. I know that he knows where I am. I'm not going to play this game with him. He wants to play hunter, but he's going to be sorely disappointed.

I'm going to take myself out first.

The remaining pages are blank.

Footnotes
1. Similarity between SCP-1341 andSCP-1513's ability to produce fauna from its flora has been noted. Investigation into a shared origin of the two anomalies is ongoing.

« SCP-1340 | SCP-1341 | SCP-1342 »

SCP-1342: To the Makers of Music

SCP-1342 at time of initial containment, with sensor booms detached.

Item #: SCP-1342

Object Class: Euclid

Special Containment Procedures: SCP-1342 is to be stored at Site 15. SCP-1342-1 is to be kept within a Faraday cage, measuring 15m x 15m x 20m, to prevent transmission of telemetry and other data regarding SCP-1342.

SCP-1342-2 is to be stored in a standard electronic components locker. One decoded copy of SCP-1342-2 is to be contained in a separate locker.

In addition, monitoring of Gliese 445 by radio telescope is to be conducted. As SCP-1342-3 is unlikely to be containable in the near future, Project Heimdall is to continue in its Contingency Planning Operation.

Description: SCP-1342-1 is a replica of Voyager 1. Exact replication of the original probe extends to sensor packages and apparent chemical composition. However, some components appear to have been constructed based on incomplete plans or parts. As a result, several components were non-functional upon recovery.

SCP-1342-1 was initially detected on 25/09/1982, approximately 35,000 km above the Earth's surface travelling at a sub-orbital velocity. Foundation agents recovered SCP-1342-1 on 27/09/1982, after SCP-1342-1 underwent an uncontrolled atmospheric entry and splashdown 300 km east of Baker Island, Pacific Ocean. SCP-1342-1's detection was possible due to a large burst of Cherenkov radiation that occurred upon its appearance. It is currently unknown how SCP-1342-1 remained intact during its

descent, despite appearing to have similar chemical composition to the original Voyager.

SCP-1342-2 is a gold-plated phonograph record, with specifications matching the Golden Records carried on the Voyager probes. Instructions for playing and decoding remain original. However, the pulsar map has been altered to show the star Gliese 445 as the origin of SCP-1342.

When decoded, SCP-1342-2 contains a variety of cultural and scientific data in the form of images and audio. Approximately 2 hours of audio recordings are present, consisting of various forms of music and atonal buzzing. Part of the music appears to be an excerpt of Cavatina from the String Quartet No. 13 in B flat, Opus 130 by Beethoven. The encoded images vary greatly in content, but all contain physical or chemical information on the subject (e.g. size, mass and orbital period of a planet), and a string of pictorial characters.

A radially symmetric organism (referred to as SCP-1342-3) is shown in various stages of development. Fully grown, the organism is approximately 2 m tall, and has three legs and three elongated arms, with each hand having three fingers, positioned around a central axis on a roughly cylindrical torso. Three snout-like protrusions exist in place of a head, each ending in a beak. 82% of the encoded images show SCP-1342-3 in a wide variety of presumed cultural settings. Scenes identified include agriculture, manufacturing, urban crowds and the playing of music on a string-and-bow instrument.

Images of a number of celestial bodies are also included, such as a Venusian-type world with high atmospheric pressure and a star matching Gliese 445's stellar spectra. One planet shown has a partially Earth-like surface consisting of approximately 60% liquid water, 4% urbanisation and plant life and 36% apparent desert and wasteland. The planet has larger than expected storms and icecaps than would be suggested by physical quantities supplied by SCP-1342-2, and appears to be undergoing massive ecological collapse. An outline of a specimen of SCP-1342-3 is shown next to this planet.

This planet is shown to have extensive orbital infrastructure, not limited to spacecraft manufacturing facilities, captured asteroid mining operations and space elevators grounded near urbanised and wasteland areas. All of these images show the structures to be in a wrecked or neglected state. The final encoded image shows a vessel heading towards an extremely damaged torus-style space station with a 2 km diameter aperture at its centre.

Documents 1-56: The following message was encoded on SCP-1342-2 in 55 different languages matching the 55 in which audio greetings were sent on the original Voyager, and is consistent in all. The 56th document is entirely composed of pictorial strings.

English version of SCP-1342-2's message

> This Voyager spacecraft was built in the year 42,412 AD by the species you come to refer to as the Gliscian. We are a community of 300,000 beings inhabiting Gliese 445-C. This is our message to your world.
>
> Ever since we discovered radio, we have lived in your shadow. Decades were spent unravelling your signals, searching for answers among the tenuous strands of reason. Through the static and the chaos, we found you. From your small, distant world we found your images, your music, your thoughts, your feelings and your indomitable science. We communicated with your world governments, who kept our existence secret from you. To prevent a culture shock with their own populace, or to reduce your impact upon our own species, it did not matter to us. We could touch the mind of another and know we are not alone.
>
> We learned from you. The scientific revolution following our meeting was miraculous. We lived beyond our natural years and we lived

well. Humans uplifted us into an Elysian state, but we could never thank you. From our far away place we quietly deciphered your secrets and over time our technology became your equal.

Together we went, advancing our mastery of the universe. We shared our technology with your leaders in secret, to try and re-pay you for all you will do. In time, came the Gates. At a great expense of energy, we could obtain limitless velocity. With time dilation preserved, we could fly to the universe's birth, and its death. The entirety of creation was within our mutual grasp.

However, that would not be. Before we emerged, the people who live on your planet crippled us. From the sky above, in bright blue flashes, our lives were ended. We do not know their reasons, nor do we know why their hand was stayed enough to forestall our extinction. But now we live on a dying world. Our children are sick. Our water is polluted. We cannot maintain our technology. We will not go on.

To save ourselves, we could have tried to destroy you. It cannot be denied that is how some of us felt we should act. We could still hear your world, unknowing, uncaring. With what little power we had left, relativistic destruction could reduce your planet to ashes as it was forming. It is shaming, but we came so close. We hope you can understand why we thought what we did. But maybe, if we could change what happens, if we could destroy you, then you could save us.

From the stars came Voyager. Your gift. In sending your message, filled with your music and your joy, you showed such touching

desperation to find another. We fell in love all over again.

We had but one chance to put things right. I do not know if you can save us. I do not know if you can change who you one day may be. You say you are trying to survive through your time, so you may live into mine. I really hope that you, you, do.

But above all else, there is one thing you need to know.

From one maker of music to another, across all worlds, all times, no matter what you do or what you become: You are nothing less than beautiful.

« SCP-1341 | SCP-1342 | SCP-1343 »

SCP-1343: Pile Up

Item #: SCP-1343

Object Class: Safe

Special Containment Procedures: SCP-1343 is to be contained on location at the abandoned construction site in the northernmost tube of the Tunnel Complex.

Until removal plans for SCP-1343 are finalized, public use of the adjacent southern tunnel tubes will continue. On-site staff are to monitor all tunnel tubes periodically, and to report unusual observations.

In the event of a SCP-1343-1 sighting, on-site staff will direct local authorities to redirect traffic before notifying Overwatch HQ.

Description: SCP-1343 is a sealed concrete 10 x 10 x 12 meter container that municipal construction workers discovered buried in a hillside in County, California, in 19 . The container's contents are not currently known to the Foundation.

Initial attempts to drill through SCP-1343 resulted in a series of severe traffic collisions in the active tunnel tube adjacent to the construction site.[1] Construction of the northernmost tube stopped in 197 when the project was formally halted due to budget shortfalls. The Foundation took over the site in 1982, after local authorities recorded the first images of SCP-1343-1.[2]

SCP-1343-1 appears to be a severely damaged 1955 Ford Thunderbird. The vehicle has been sighted periodically in the active highway tunnels adjacent to SCP-1343. It appears each year on April 7 at approximately 02:45 hours, and it has appeared on other occasions after SCP-1343 has been disturbed.

In a typical sighting, SCP-1343-1 appears when a witness rounds a

turn approximately meters into the tunnel, at which point drivers have described the entity accelerating toward them while engulfed in flames. Believing a head-on collision to be imminent, most witnesses react by swerving into the tunnel's walls or into oncoming traffic.

The Foundation estimates that SCP-1343-1 has resulted in approximately civilian traffic accidents, with 93% involving driver and/or passenger fatalities.

Addendum-1: Excerpt from Times, Police Reports - April 7, 195

> **
>
> Saturday, 2:53 a.m. – An accident involving a gasoline truck in the north tube set off a fire in the Tunnel Complex. The accident caused major damage, and all tubes were closed to traffic while repairs were made. During the fire, the tunnels acted as a natural chimney venting the smoke, flames and heat toward the east side entrance to the tunnel.
>
> The accident and fire killed seven people. In all, two people died in the initial crashes, five were killed by the smoke and fire, and two were hospitalized for smoke inhalation. All others escaped unharmed.
>
> Several survivors closest to the initial pileup each described an overturned Ford Thunderbird with an 8th driver trapped inside, who was last seen struggling to free himself from the burning vehicle. However, no driver or vehicle matching this description has been discovered among the pileup wreckage.
>
> **

Addendum-2: Excerpt from Research Log 1343- -1991

> MEMORANDUM
>
> From: Dr.

To: On-site staff

Sonic imaging of the sealed concrete container designated SCP-1343 has revealed its interior contents:

- One 1955 Ford Thunderbird chassis (badly damaged)
- Human remains from two individuals: one adult male (wedged behind steering column on driver's side) and one juvenile female (crushed beneath engine on passenger's side)

Excavation around the container has revealed runes of unknown origin covering all sides. No runes were found on the exposed side, but testimony from construction crew members indicates that markings on this side of the container had been chipped off during initial attempts to drill through it.

Analysts have been unable to determine how SCP-1343 was buried in the hillside. However, anecdotal sources indicate a connection to an ecological activist group known as "The Sunshine Collective" that fought to halt construction of the northernmost tube. (The group formally disbanded in 1970, and no living former members could be located.)

As long as SCP-1343-1 sightings are monitored, and the tunnel is closed on 7 April each year, we do not believe that 1343 poses a significant public safety hazard in its current location. The research staff recommends that removal plans for SCP-1343 should be halted indefinitely until firm evidence is discovered regarding its origin and function.

SCP-1344: Eye-Catching Goggles

Item #: SCP-1344

Object Class: Safe

Special Containment Procedures: All instances of SCP-1344 are to be kept at Site-44 in a primary inanimate object containment unit, with an isolated type S habitation unit situated next to it. Testing procedures for SCP-1344 are to be authorized by the Level 3 Senior Researcher currently attached to this project, and are to only utilize visually impaired D-Class personnel with residual vision below 20%. Personnel deemed eligible are to be briefed on the positive effects of SCP-1344 on their vision to reduce the chances of an attempted removal of SCP-1344 by the subject, and on the permanent nature of exposure to SCP-1344. D-Class personnel used in testing are to be considered permanently attached to the SCP-1344 project and relocated to its attached habitation unit. New test subjects are only to be assigned to SCP-1344 upon either the death of previously assigned subject, or after the removal of SCP-1344 from an assigned subject's face. Currently, no instances of SCP-1344 are in use for testing.

Description: SCP-1344 refers to a collection of five goggles of various types, all exhibiting anomalous behaviour when worn by a human being. Site-44 currently holds the following instances of SCP-1344:

- SCP-1344-01: "Swedish-style" swimming goggles
- SCP-1344-02: AN-6530 aviation goggles
- SCP-1344-03: brand welding goggles
- SCP-1344-04: brand paintball goggles
- SCP-1344-05: Handcrafted goggles with a design aesthetic common to the steampunk subculture

All SCP-1344 instances contain two hollow, telescoping needles (approximately 48 mm long and 2 mm thick), hidden in recesses in

the frame. Each side of the frame contains one of these needles. Instances of SCP-1344 show no anomalous behaviour unless worn by a living human being.

After approximately 5 seconds, both needles will extend and pierce the subject's eye, moving through the conjunctiva, sclera, and the interior of the eyeball before embedding themselves in the optic nerves. Though this process does not appear to cause any physical pain or discomfort in the subject[1], the psychological repercussions are as expected. Subjects will, unless sedated, invariably attempt to remove the instance of SCP-1344 from their face. If allowed to proceed with removal, a subject will extract their eyeballs in their entirety from the ocular orbit. This provokes the expected physical responses. Once successfully removed, both needles retract, releasing the subject's eyeballs. Safe removal of SCP-1344 is only possible through an invasive medical procedure that leaves the patient blind.

However, if the instance of SCP-1344 is not removed after its initial anomalous effect manifests, the subject's vision is gradually restored to a minimum of 50%, with a cap at 85%, over a period of 3-5 minutes.

Subjects that do not remove an instance of SCP-1344, report seeing orbs with an average estimated diameter of 8.7 cm, and of varying colouration, hovering in place over the heads of both the majority of human beings and other mammals subjects are exposed to. These orbs move with the persons or animals in question. Tests with various species of insects, arachnids, fish, amphibians, reptiles and birds have yielded no results. It is unknown why this phenomenon is only reported with the majority of human beings as opposed to all other mammals. It is noted that multiple SCP objects have been observed to have orbs of their own as well, including **SCP-1875** and the products of **SCP-158** testing. Research into the exact criteria for the manifestation of this phenomenon is ongoing.

Addendum 1344-A-01: *Excerpts from testing log 1344/T/20050312:A*

> **Date:** 2005-03-12
> **Test lead:** Senior researcher R.L. Erlich (employee code

FRS000532)
Time start: 10:31
Subject: D-824212

Procedure: Subject was strapped into the provided restraint chair and asked to comment on any animals and persons introduced into his field of vision.

Results:

Viewed	Estimated orb size	Colouration	Test lead's comments
1 adult bank vole (*Myodes glareolus*)	1 cm	A fluctuating mixture of red and blue, approaching purple	
1 adult speckled trout (*Cynoscion nebulosus*)	N/A	N/A	No orb reported
1 adult Sydney funnel-web spider (*Atrax robustus*)	N/A	N/A	No orb reported
1 adult Bernese Mountain Dog (*Canis lupus familiaris*)	12 cm	White	
1 adult giraffe (*Giraffa camelopardalis*)	3 cm	Red	
D-13727	5 cm	Yellow with occasional shifts to blue	
D-23410	10 cm	White	
D-63261	20 cm	Pink, with frequent	Largest size encountered

		flashes of white	up to this point, implications unclear
Junior Research Assistant	N/A	N/A	No orb reported

Addendum 1344-A-02: *Recovery and preliminary containment notes*

Following an incident at the U.S. Customs and Border Protection unit attached to Washington Dulles International Airport, Foundation agents recovered a previously opened package, addressed to a P.O. Box in , MA, containing all known instances of SCP-1344. After administration of Class-B amnestics, the box and its contents were taken into Foundation custody for provisionary containment. Included with the instances of SCP-1344 was a note, transcribed below.

> Hey John,
>
> Don't know if I can call you that, but I'm not good at formal stuff. So, I modded this batch for you like you asked. Don't know what good it'll do you, but they work like you want them to, I think. LOL. Anyway, I know you asked me to deliver them to you personally, but no can do on that one. My mom's sick and I can't leave her for a while, so I went ahead and sent them through USPS instead. Hope you don't mind! If you do, feel free to pay me less or something. It's my mom, you know?
>
> Let me know what you think!

Working off the package's return address, a Foundation recovery team was dispatched to the author's location where it encountered a PD crime scene. Covert enquiries revealed both residents to be deceased. Further details concerning this incident can be accessed through the proper channels. Please refer to your Site's appointed

inter-agency relations officer for more information. The identity of 'John' is presently unknown, though investigations are ongoing.

Footnotes
1. It is currently not understood how SCP-1344 provides the subject with pain regulation.

« SCP-1343 | SCP-1344 | SCP-1345 »

SCP-1345: Propaganda Machine

Item #: SCP-1345

Object Class: Euclid

Special Containment Procedures: The building housing SCP-1345 is to be boarded up and marked with signs warning of Hantavirus infestation. Guards under the guise of military police are to detain and question any non-Foundation persons attempting to gain entry to the building. An enhanced security force is assigned to SCP-1345-A; if it proves insufficient, security personnel at the nearby Sites and can be summoned to assist.

SCP-1345 is not to be fully disassembled or moved from its original location unless it is in imminent danger of discovery or seizure by non-Foundation groups of interest. Permission from the North American Regional Director must be obtained if experimentation requires activation of single or multiple components. Activation of the complete SCP-1345 assembly is not to be performed under any circumstances without authorization from the O5 council.

Description: SCP-1345 is an assembly of equipment (SCP-1345-A) in an abandoned Quonset hut, located on (a United States Army installation) and an associated memetic phenomenon (SCP-1345-B). SCP-1345-A was constructed between 1949 and 1951 by employees of Los Alamos National Laboratories (LANL), by direction of the United States government.

SCP-1345-A is designed to broadcast precisely modulated microwaves in a direction selected by the operator of the assembly. It is comprised of components commissioned by the United States government during a period between 1949 and 1951. Along with various support equipment, the assembly contains a control computer using miniaturized vacuum tubes as computing elements, signal generation and modulation equipment digitally controlled by the computer, and a synchronized array of high-powered

magnetrons to generate the microwave signal. The transmission system terminates in a gimballed parabolic dish antenna, mounted on a steel mast able to telescope through a hatch in the roof. The antenna is able to be aimed precisely via rotation and elevation.

Several aspects of the equipment make it distinct from conventional microwave transmission facilities. The magnetrons driving the antenna are overengineered for their expected power capacity and heat dissipation needs; each was built to handle over 400 kilowatts of power at maximum. The computer exhibits remarkable complexity compared to other contemporary computers; records confiscated from United States government archives show that it was designed and produced specifically for this project, at great cost.

The magnetrons and antenna are calibrated to transmit at . gigahertz; this frequency is notable for being the third harmonic of a frequency which produces especially strong microwave auditory effects when directed at the human head.

SCP-1345-B is a widespread memetic phenomenon, manifesting in culture as a conspiracy theory regarding a non-existent event known as the Philadelphia Experiment[1]. The precise date of SCP-1345-B's official manifestation is impossible to determine, but extensive searches of printed and written media archives show that there is no mention of SCP-1345-B prior to the first test of SCP-1345. Reported knowledge of the Philadelphia Experiment appears to have occurred in multiple individuals in a close time period; these individuals were all living at various locations directly north of SCP-1345-A at the time of its first (and only) test. Affected individuals claimed to have knowledge of the Philadelphia Experiment, variously claiming to have witnessed it, read about it in secret United States Navy documentation, or learned about it via other methods; they soon began to contact individuals studying UFOs and other paranormal phenomena. The memetic effect is unusually subtle; compared to other conspiracy theories, an unusually high percentage of those believing in SCP-1345-B do not believe in any other conspiracy theories, and are generally placed high (50-80) on the Gunners Skeptic Scale.

Recovered documentation is scarce; most records related to SCP-1345 were destroyed shortly after its first test. The documents

that do exist indicate that SCP-1345 was commissioned as part of a project called "Project Viewpoint"; documentation on the greater project is nearly nonexistent, but it appears to have been a program to develop highly effective psychological warfare equipment and techniques. In internal correspondence, members of the project referred to SCP-1345 informally as "the propaganda machine".

Analysis of remaining documents in United States Archives seem to indicate that SCP-1345-A was intended to be a device to use a currently unknown effect to influence the opinions of citizens of the United States and other countries. Recovered blueprints show that production SCP-1345-A installations, when operable, were intended to be mounted on M35 2½ ton cargo trucks, or in the bomb bays of Convair B-36 Peacemaker strategic nuclear bombers. Listings of a number of prototype programs for SCP-1345-A's computer were recovered; internal comments indicate a variety of purposes, including "inspiring uprisings and installation of governments sympathetic to the United States", "increasing regard of United States-produced products", and "reducing Communist sympathies in foreign and domestic communities". A list of "recommended targets" for the final program was also located; locations for deployment included various countries bordering Warsaw Pact nations, Cuba, and Berkeley, California.

SCP-1345 was tested on / /1951; the first test was believed unsuccessful, and the project was scrapped. This seems to have destroyed confidence in Project Viewpoint, which, together with the internal collapse and purge of , prevented use of anpsych (anomalous psychological warfare) and anint (anomalous international intelligence) techniques by both major powers during the Cold War.

The link between SCP-1345-A and SCP-1345-B was unknown until 1992, when a letter by Dr. Sharps was recovered from former KGB archives through an intelligence-sharing agreement between the newly-formed Russian Federation and the Foundation. Dr. Sharps was a contractor employed by LANL to design the modulation hardware and software for SCP-1345-A. Before the discovery of the letter, SCP-1345-B was believed to be a non-anomalous, though virulent, conspiracy theory.

+ Excerpt from Document SCP-1345-Sharps-1

> The first test is going to proceed within the next month. The test procedures have been approved by the project supervisor; we will be powering it to five percent of capacity and aiming it directly north. We are running a test regime designed by ; if the machine works, anyone affected by it will feel compelled to send a postcard to a mailbox we rented in Philadelphia. Unless you wish otherwise, I have modified the test regime already. If it works, you will be able to detect the extent of its influence easily in the public media here. Look for people talking about "The Philadelphia Experiment". I believe I will be able to secure unsupervised time with the machine within two weeks.

SCP-1345 is currently inoperable, due to degradation of the computer and other equipment. At some point between abandonment of the project, the door was blown open in a windstorm, and further exposure to the elements damaged most of the equipment. Efforts are underway to restore SCP-1345 to a condition conducive to more effective study.

Footnotes
1. An alleged event in which the United States Navy destroyerUSS Eldridgevariously teleported, traveled through time, or was rendered invisible.

« SCP-1344 | SCP-1345 | SCP-1346 »

SCP-1346: Phobia Induction Corridor

Item #: SCP-1346

Object Class: Safe

Special Containment Procedures: Due to its immobile nature, the original facility housing SCP-1346 has been commandeered to serve as its containment site. The SCP is to be kept under observation, and unauthorized entry denied, but requires no other special security measures.

Description: SCP-1346 is a corridor, 3.5 m by 3.5 m and 130 m in length, located in the subbasement of the former Research and Engineering Center. The entrance is marked by a heavy steel door, 3.5 meters to a side and almost 45 cm thick. An identical door sits closed at the opposite end of the hallway. The passageway itself is a seamless, cement corridor having no other doors, windows or alcoves. The ceiling has regular lighting placements; however, due to the effects of SCP-1346 everything past 60 meters has proven impractical to maintain, rendering the last half of the corridor dark and in disrepair.

The corridor's anomalous nature manifests at approximately 50-60 meters along its length. Shortly after crossing the 50 meter threshold, electronic devices begin to malfunction. At about the same point, subjects report hearing clicking, tapping and other mechanical sounds, though not from any clear source. Ear plugs and other audio dampening measures neither diminish nor eliminate these sounds, according to witnesses. To date none of these noises have been verified remotely.

During this period, subjects start to report feelings of apprehension which intensifies the longer they remain in the passageway, and the further along it they traverse. Eventually some fear or dislike the subject harbors will begin to manifest into a fully-fledged phobia. Subjects with predispositions towards acluophobia, claustrophobia,

bathophobia or other immediately present conditions will respond accordingly. Others may begin to hallucinate, imagining the presence of some entity or condition drawn from their psyche. At around 90-100 meters, or if more than 10 minutes have been spent in the anomalous zone, the subject becomes overwhelmed with fear, attempting to retreat from the passageway as quickly as circumstances will allow.

In most subjects, the feelings of fear and anxiety subside immediately upon exiting the corridor. Many express confusion and embarrassment at their overreaction, and can often be persuaded to reenter (although this invariably has the same result.) A minority retain a fear of the passage, in some cases resulting in long term psychological trauma. Some subjects may subsequently deny the existence of the hallway or its unusual properties, growing agitated and hostile if pressed on the topic. Whether these are natural psychological reactions or some aspect of SCP-1346 is not known at this time. Severe reactions are more likely to manifest the more often a person is exposed.

Addendum 1346-A: Blueprints of the facility include the subbasement and the hallway, as well as both vault doors, but nothing beyond the far doorway. Interviews with former staff indicate that while there was some awareness that the hall was, “odd,” it was ignored. Observation of staff suggests that most people, left to their own devices, have no curiosity about the subbasement and seem to unconsciously avoid it. Sonic imaging has revealed the presence of several rooms beyond the far vault door, but the nature and contents of these are unknown.

Addendum 1346-B: Testing has revealed the presence of a strong electromagnetic field in the anomalous region of the corridor, including an unusual pattern of rapid microwave pulses. These probably account for the persistent electronic malfunctions, and may also play at least a partial role in the psychological reactions of test subjects. These wave and pulse patterns appear similar to those studied in Project Pandora, a military research program dealing with the effects of electromagnetic radiation. The source of this radiation is unknown and it continues to be generated unabated even when power to the subbasement is severed.

Document # EL-1346-011: Log

Experiments involving fear dampening chemicals.

Date: - -
Subject: D-2245-1
Procedure: Subject administered diazepam, instructed to attempt to walk length of hallway.
Details: Subject reported feeling anxiety at the 65 meter mark. Subject began to report feeling 'tremors' at about the 75 meter mark. Subject shows symptoms of panic. At 85 meters the subject elects to retreat, sprinting back along the corridor. Subject reports certainty that the hallway was about to collapse. Feeling vanished after exiting. Subject showed no interest in returning.

Date: - -
Subject: D-0357-2
Procedure: Subject undergoes week of propranolol therapy instructed to attempt to walk length of hallway.
Details: Subject reports uneasiness with environment at about 60 meters. At 80 meters, subject reports seeing movement. At 85 meters subject becomes extremely agitated, claiming to be surrounded by thousands of spiders and insects, immediately retreats from corridor. Subject reports immediate drop in anxiety and, upon request, reenters the passage. Traverses about 45 meters before again turning and retreating from the room.

Date: - -
Subject: D-0867-2
Procedure: Subject administered [DATA EXPUNGED], instructed to attempt to walk length of hallway. Subject under threat of termination for failure to obey instructions.
Details: Subject shows signs of anxiety at the 70 meter mark. Pace slows considerably and subject becomes more hostile towards staff. At 90 meters, the subject reports disembodied voices threatening and mocking him. Subject becomes irrational, arguing with the apparent voices. Further instructions by staff are ignored. Shortly afterward, subject lets out a yell and retreats. The vault door is barred, and the subject is warned that unless he returns down the hallway, he risks termination. Warnings go unheeded and the subject hurls himself against the door repeatedly until giving himself

a concussion. Experiment ends.

Date: - -
Subject: D-1118-1
Procedure: Subject administered general anesthetic and placed, via mechanical cart, at foot of far door.
Details: Upon regaining consciousness subject immediately begins to scream and thrash, then enters into cardiac arrest. Subject retrieved and successfully revived. Subject recollects nothing about the exposure, but subsequently subject becomes extremely agitated and aggressive towards anyone who brings up the topic.

(Note: For whatever reason, once experienced, the anxiety produced by the corridor is not limited to the anomalous zone, and only appears to abate upon passing beyond the near door.)

Document # EL-1346-030: Log

Experiments involving animals

- Rat: Animal refused to approach the zone. This is consistent with both healthy and drugged rats. Rats placed against their will within the zone will immediately attempt to leave it.

- Finch: Finches avoid approaching the zone. Those that enter, either through force or accident, immediately attempt to leave. Some suffer cardiac arrest from exposure.

- Cat: Cats panic immediately upon being placed in the corridor, and will try to escape, battering themselves against any obstacle blocking their attempts to do so.

- Dog: In the presence of a trusted human, dogs fare marginally better, and some have managed to remain in the zone for several meters before retreating. Without a human companion, dogs behave identically to cats.

- Reptiles, fish and insects: Appear unaffected, showing neither a fear response nor any other unusual reaction to their environment at any point in the corridor.

Document # EL-1346-047: Log

Experiment using electromagnetically shielded, direct wire remote control device to traverse corridor.

Remote vehicle succeeds in reaching far door, although is unable to open it. Audio taken from the vibrations of the door detected sounds similar to heavy footsteps moving beyond the door, with a series of metallic crashes occurring midway through the recording. At about 20 minutes of exposure, the remote vehicle began to malfunction and was recalled. Further experiments pending.

Proposals to blast through the far door, or burrow into the area from above have so far been rejected.

« SCP-1345 | SCP-1346 | SCP-1347 »

SCP-1347: Box Full of Questions

Item #: SCP-1347

Object Class: Euclid

Special Containment Procedures: SCP-1347 is to be kept in a standard containment storage unit with two different sets of locks. Each set is to require a key card and a password. The passwords and the keys are to be kept separately by SCP-1347's lead researcher (currently Dr. Thane) and their research assistant. Said passwords are not to be shared with personnel other than members of the O5 council under any circumstances.

SCP-1347 is to be kept isolated from other anomalous items/ phenomena and must be guarded at all times by two (2) armed security personnel who are oblivious to its nature. Said personnel are tasked with preventing any unauthorized access to SCP-1347, and are permitted to use lethal force if necessary.

All testing of SCP-1347 requires written approval from the head researcher of the object. The request submitted must contain the exact wordings of the inquiry that would be inserted into SCP-1347, the intention of the said inquiry and a hypothesis of SCP-1347's reply. All testing of SCP-1347 must be supervised by the attendant security personnel.

In the event that a submitted inquiry does not result in a Type A event within ten minutes, all research personnel assigned to SCP-1347 are to be informed immediately. Mobile Task Force Psi-13 is to cease their current assignment, if any, and to be fully committed to ascertaining the nature of the Type B event by any means necessary unless otherwise commanded.

It is strictly forbidden to insert an inquiry into SCP-1347 that refers to paradoxes, time travel, the Foundation, or any anomalous object/ phenomenon in any manner.

Description: SCP-1347 is a pine box measuring twenty centimeters on each side with a hinged lid. There is a slit on one side measuring seven centimeters by one centimeter. The phrase "All answers are born from questions." is written below the slit in black ink.

SCP-1347's anomalous properties will only become active in the event that writing of an inquisitive nature (designated as an "inquiry") is inserted into SCP-1347 via this slot. Every inquiry inserted will cause either a Type A or Type B event to occur. This is believed to be primarily dependent on whether the answer to the question could be answered with minimal experimentation or alteration of reality.

When the inquiry is sufficiently simple to answer, a Type A event occurs. In a Type A event, the item on which the inquiry was written disappears, replaced by an object that is identical save for the inquiry being replaced by SCP-1347's reply. SCP-1347 gives a reply to every inquiry, regardless of the inquiry's nature. This response will occur to both subjective inquiries as well as inquiries that require some degree of specialized knowledge, so long as they are simple to ascertain.

An occurrence of Type B event takes place when the inquiry inserted is adequately complex or thought-provoking. Note that a Type B event is not always distinguishable from a Type A event, and that the only consistent way to determine which has occurred is the amount of time that elapses between the insertion of an inquiry and the appearance of a reply.

A Type B event is a situation in which SCP-1347 manipulates events in the real world to perform an experiment, apparently utilizing any method it deems necessary, which will provide it with the information to formulate a reply to the inquiry. Depending on the nature of the input, the resultant experimentation varies. Once the experiment is over, the reply will appear in a manner identical to that of the appearance in a Type A event. There is no known limit to SCP-1347's capabilities while a Type B event is in progress.

SCP-1347 retains knowledge learned through Type B events and inquiries. At time of writing, it is deemed to possess slightly above average intelligence and a very large knowledge base, although exact measurement of its intelligence level is not currently possible

due to its nature.

+ Test Log 1347-Gamma

Inquiry: What is your purpose?
Occurred Event: Type A event
Reply: I answer questions.

Inquiry: What is your exact nature?
Occurred Event: Type A event
Reply: I believe 'I answer questions' is exact enough.

Inquiry: What's good for dinner?
Occurred Event: Type A event
Reply: You're asking a box about dining? I think the tomato stew would be your best bet.
Note: Interviewed staff members who consumed the tomato stew that evening indicated higher levels of satisfaction on average than those who did not.

Inquiry: What is the current location of Mobile Task Force Sigma-31?
Fact of Interest: This inquiry was inserted prior to the prohibition of Foundation-related inquiries.
Occurred Event: Type A event
Reply: Gone, mate. Might wanna call for some clean-up to aisle [REDACTED].
Note: Mobile Task Force Sigma-31 was found by SCP- at the stated location.

Inquiry: How can we obtain an unlimited source of energy?
Occurred Event: Type B event
Nature of Type B event: was incinerated by an explosion which continued for seven days. Upwards of exajoules of energy were released during this time. Despite the fact that this amount of energy would have been capable of destroying an area roughly forty kilometers in diameter, the explosion was contained to a sphere five kilometers in diameter. The source of the

explosion, if any, disappeared after the explosion ceased. Reply produced after the cessation.
Reply: I got really close, but I doubt it's *actually* possible. I'll think on it some more, maybe try again if you ask in future.
Note: Object reclassified from Safe to Euclid.

Inquiry: How can we fix Agent McIntyre?
Occurred Event: Type B event
Nature of Type B event: SCP- released Agent McIntyre one hour after the inquiry was submitted. Medical personnel on scene immediately began treatment.
Reply: Whoa, that was nasty. Anyway, since this seems to [DATA EXPUNGED] that's all you got to do.
Note: Seven days later, Agent McIntyre spontaneously suffered trauma normally associated with SCP- , albeit to a lesser degree. Agent McIntyre recovered fully with application of SCP- counter-measures obtained from the reply.

Inquiry: What do you know of Eros, the mythological entity?
Occurred Event: Type A event
Reply: Son of Aphrodite and much better known as Cupid, his Roman counterpart. Other than having the golden arrows of love, he also had the bronze arrows of hatred, as Apollo had learned the hard way.
Note: The error in knowledge has been noted.

Inquiry: How good is Dr. Ashe in bed?[1]
Occurred Event: Type B event
Nature of Type B event: Dr. Ashe reported that she spent the night in Agent Gene's quarters due to emotional distress over her recent assignment to [REDACTED].
Reply: She's really warm, and her skin is nice and soft. Good hugs, too. She hogs the blankets, though.
Note: When interviewed eight days later, while Dr. Ashe recalled the event, Agent Gene was unable to.

Ashe and Carmichael are damn lucky that it didn't choose to interpret that differently. That being said, this has certainly given us some interesting insight into how 1347 works. - Dr. Thane

Inquiry: What is the nature of SCP- ?
Occurred Event: Type B event
Fact of Interest: This inquiry was inserted prior to the prohibition of Foundation-related inquiries.
Nature of Type B event: SCP- breached containment. SCP- did not pose any harm to Foundation personnel, in contrast with its normal behavior. SCP- was returned to containment seven days later after it inexplicably ceased to resist containment.
Reply: So this thing basically does [DATA EXPUNGED]. Good luck with that, I guess.
Note: Investigation indicates that the containment breach was caused by a momentary lapse in concentration on the part of attendant personnel.
Note: *All future inquiries that mention the Foundation will not be permitted on grounds of sensitive information and potential containment breach.* - Dr. Thane

Inquiry: What is my next question?
Occurred Event: Type B event
Nature of Type B event: No reply was produced until the next inquiry was submitted.
Reply: What is your opinion of Aleister Crowley and his works?
Note: SCP-1347 does not appear to possess telepathic nor predictive abilities.

Inquiry: What is your opinion of Aleister Crowley and his works?
Occurred Event: Type B event
Nature of Type B event: Unknown A personal copy of biography of Aleister Crowley owned by Research Assistant Jacobs disappeared, as evidenced by camera investigation. The copy reappeared in its previous

location seven days later. The reply was produced after the reappearance of the book.
Reply: Well, he was kinda nutty, but he hit a few points pretty spot-on, particularly [REDACTED].
Note: *Unless we're missing something big, that's bullshit.*- Dr. Thane

Inquiry: How can the problem of poverty be solved?
Occurred Event: Type B event
Nature of Type B event: While it is most likely unknowable the exact extent to which events were influenced by SCP-1347, genocide occurred in [REDACTED]. A total of , casualties were recorded, corresponding to % of the population. The majority of the casualties occurred in poverty-stricken regions. When the United Nations intervened and forced the cessation of the genocide, SCP-1347's reply appeared.
Reply: Killing 'em off seems to be one option. Weapons sales helps too.
Note: A week after the massacre ceased, immigration to [REDACTED] surged, restoring the population size to roughly % of its original value. The national GDP of the country experienced minimal deprecation compared to the most recent statistics prior to the event; additionally, the Gini-coefficient fell by 0.25 compared to before. Media coverage of the event became negligible after one week at approximately the same time.
Note: Dr. refused amnestic administration and required four months of psychological therapy before being considered fit to return to work.

Footnotes
1. Dr. Carmichael was reprimanded for unprofessional conduct and reassigned accordingly for permitting this inquiry. Dr. Thane is Dr. Carmichael's replacement.

« SCP-1346 | SCP-1347 | SCP-1348 »

SCP-1348: Inner Sanctum

Item #: SCP-1348

Object Class: Keter

Special Containment Procedures: Due to the impossibility of transport, SCP-1348 is contained on-site at the Site 87 Archaeological Containment Unit, 81 kilometers southeast of El Taebah, Syria, in the Jabal al-Druze mountains. Compartmentalized containment duties are assigned to C-1348-A ("Team A") and C-1348-B ("Team B"). With the exception of biweekly containment review meetings between Site Director Binyamin Kahn and Team B Director , communications between Teams A and B are to occur only in Conference Room 2a. To minimize the risk of cross-contamination, all inter-team communications related to ritual standards and performances must be conducted via a staff member belonging to Y-chromosomal haplotype CMH-6.

Containment Team A shall be comprised of Foundation employees recommended by Class 4 site supervisory personnel, subject to disqualification for the following reasons:

- Present membership in a religious faith.
- Prior exposure to a registered memetic agent.
- Fluency in Amharic, Ge'ez, Aramaic, or any Southern Semitic language.
- Prior exposure to transmissions from SCP- .

Team A duties include providing ritual supplies necessary to perform SCP-1348-02, monitoring Team B and civilian celebrants for compliance, selecting celebrants for participation in ritual containment, providing updated protocols for daily performances of SCP-1348-02, monitoring members of Team B during furloughs from the containment area, and developing and executing Protocol 228-MELECHAH. At no time shall personnel involved in 228-MELECHAH be exposed to recordings or transcripts of

SCP-1348-02, enter SCP-1348-03, or be permitted to view the remains of SCP-1348-01-E.

Candidates for Containment Team B shall be selected from individuals matrilineally descended from Druze, Mandean, and Mizrahi Jewish populations. Membership in Y-chromosomal haplotype CMH-6 is strictly disqualifying. Due to practical difficulties in locating suitable candidates in Foundation employment, Class Omega civilian celebrants with appropriate genealogy may be substituted for Foundation personnel with approval of the Site Director. At dawn, noon, and dusk, selected celebrants are to perform SCP-1348-02 according to present ritual protocols.

At all times, ritual celebrants are to behave according to the prescribed ritual purity codes specified in documents 742-KITAB and 983-RASA'IL, as well as additional protocols instituted by Team A. To the extent that such purity codes conflict by mandating the forbidden or forbidding the mandatory, celebrants may register individual ethical preferences with the Site Director. To avoid inadvertent ingestion of ritually impure substances, celebrants belonging to Team B are to receive parenteral nutrition only, delivered under ritual supervision by Director . Due to ongoing risk of memetic transference, performance of SCP-1348-02 is authorized only when necessary for the containment of SCP-1348-03.

Members of Team B and civilian celebrants are permitted to exit the inner containment area, contact family members, or access classified Foundation documents only upon written permission from the Site Director. Violation of central containment protocols constitutes grounds for immediate implementation of Protocol 228-MELECHAH and transfer of primary containment responsibilities to the 228-MELECHAH team.

Description: SCP-1348 is a modified cave complex located 81 kilometers from El Taebah, Syria, in the Jabal al-Druze mountains. Upon initial discovery by IAEA monitors on 03/06/2006, the complex was believed to house a Syrian reactor. Subsequent Israeli air strikes on the site resulted in the discovery of three unknown chambers. Per intergovernmental compact with the Israeli and Syrian governments, Foundation agents responded, containing

SCP-1348-01, 02, and 03 and constructing the Site 87 Containment Unit.

SCP-1348-01-E is an anomalous humanoid originally observed performing the ritual practice now designated as SCP-1348-02 inside the SCP-1348 ritual complex. On / / , three weeks after initial containment, the subject entered status epilepticus and died. During containment, subject produced three utterances in an unknown Southern Semitic language, but otherwise made no attempts to communicate with Foundation staff. Food, water, and bedding were declined. Intravenous nutrition proved impossible. Subject otherwise exhibited no anomalous behavior. For autopsy results, consult Document SCP-1348-SMR-9.

SCP-1348-02 is a ritual practice of unknown provenance. Spoken portions of SCP-1348-02 are performed in an unknown Southern Semitic language. When adequately performed by individuals meeting unclear ritual criteria, SCP-1348-02 prevents full retraction of the veil surrounding SCP-1348-03, an obligatory precursor event in scenarios XK-734, XK-918, and XK-337. At present, details of the religious faith underlying SCP-1348-02, ritual criteria necessary for adequate participation in SCP-1348-02, and the causal mechanism connecting SCP-1348-02 with the retraction of the veil are speculative or unknown.

When performed by appropriate celebrants, adequate performances of SCP-1348-02 are memetically virulent, inducing suggestibility, religious mania, and desire to perform the ritual practice in 38% of exposures. Repeated exposure results in ritually-themed obsessive compulsion. The memetic transmission rate of SCP-1348-02 appears to increase as successive revisions approach the ideal state. For unknown reasons, members of haplotype CMH-6 appear to be immune to the adverse effects of this memetic transference. While present transcripts and recordings of SCP-1348-02 are not believed to be virulent, existing containment guidelines require certified Foundation linguists to minimize active exposure to full ritual recordings.

SCP-1348-03 is the central chamber of the SCP-1348 complex. Due to high neutron flux, the chamber was originally believed to be a storage site for high-grade radioactive waste or an unshielded

reactor core. Initial investigation of the chamber by remote drone revealed an elaborate rectangular chamber, decorated in a proto-Semitic style. Repeated motifs include rams, serpents, slaughtered bulls, wounded lions, hawks, and depictions of ritual practices similar to SCP-1348-02. In the center of the room is a raised platform with a 9 meter radius, surrounded by cylindrical sheath constructed of beryllium bronze. At dawn, noon, and dusk, the sheath retracts, causing neutron flux inside SCP-1348-03 to increase to lethal levels. Performance of SCP-1348-02 appears to provide celebrants with substantial protection against radiation poisoning, and results in complete closure of the outer sheath.

Attempts to view the area within the sheath, except by celebrants during performances of SCP-1348-02, have been unsuccessful. Celebrants, including Foundation staff, are unable or unwilling to disclose the inner region's contents. For certified information concerning the veiled region of SCP-1348-03, Class 4 staff may consult Document SCP-1348-SMR-11.

Addenda:

+ DOCUMENT SCP-1348-SMR-9: POSTMORTEM SUMMARY, SCP-1348-01-D, / /

DOCUMENT SCP-1348-SMR-9:
POSTMORTEM SUMMARY, SCP-1348-01-D

SUBJECT: SCP-1348-01-E

EXTERNAL EXAMINATION: Body is of a taxonomically anomalous humanoid with premortem history of severe injury. Of the ten external limbs originally present, three — both legs, one wing — show signs of amputation by avulsion below the second joint. Head is presumed to have been generally humanoid prior to injury, with the exception of a bilaterally symmetric third orbit located 1.2cm above the frontal prominence. Eyes missing, presumed due to injury: optic canal is present in two

grossly normal orbits. Analogous structure present in anomalous frontal orbit. Crushing injuries to frontal sinuses preclude reconstruction of original contours of facial bones. No external genitalia are visible. Injuries show signs of abnormal keloid formation, indicating complete healing process. External injuries nonfatal.

INTERNAL EXAMINATION: Structures equivalent to liver, lungs, heart, and brain are present. Kidneys are absent. Gross anatomical investigation revealed a simple blind gut terminating in a rudimentary caecum. Urinary tract and anus absent. As no stomach or caecum contents were apparent at the time of autopsy, gut is presumed vestigial. Majority of lower abdominal cavity occupied by a segmented organ or tumor of unclear function and histology. On histologic examination, muscle and organ tissue displayed signs of catabolism and macrophage infiltration consistent with severe malnutrition.

CAUSE OF DEATH: Malnutrition.

ADDENDUM ATP-9: For complete histologic and gross anatomical data, consult Document SCP-1348-ATP-9, FULL AUTOPSY, SCP-1348-01-D.

+ DOCUMENT SCP-1348-
CTL-4: CONTAINMENT REVIEW MEETING MINUTES, / /

<Begin recording, 9:13 AM, / / >

Dr. Kahn: This is the biweekly containment meeting, cycle 3, ritual revision 8. It is now 9:13 AM. Present at this meeting are Dr. Binyamin Kahn, head of Team A, and Dr.

, head of Team B. Ready to begin?
Dr. : [Inaudible].
Dr. Kahn: You'll have to speak up, . I don't think the microphone caught that.
Dr. Kahn: First on the agenda are revisions to the containment protocol. Just to catch everyone up, we received O5 approval last week to pass the veil and conduct the hypothetical interior portions of the ritual. We're obviously not quite there on the containment procedures — some of Team B is suffering from radiation poisoning, including Dr. — but we don't expect any fatalities.
Dr. : Two Omegas botched the ritual. We're going to need to rotate them offline for three weeks of chelation. Do we have agents in line as replacements? As you know, Ben, I'm uncomfortable with the idea of doing this with Omegas. Not just because they're hard to train.
Dr. Kahn: We've got some feelers out with Herev — uh, I think we have two — it looks like we have two prospects. I think we should be able to move in new agents as soon as . So, no. Not yet. We've got four Sabian Omega candidates queued up. We've just got to get them trained in the ritual.
Dr. : It's getting bad in there. See if you can speed that along.
Dr. Kahn: I mean, I'll see what I can do, but I can't promise. Next order of business: we're going to need a report on what's inside the veil. As you know, we can't get instrumentation in there, so —
Dr. : That's not happening. Put it in KITAB: Team B can't tell you what's beyond the veil.
Dr. Kahn: I told you, : that's unacceptable. Direct from O5. We've got to have some sort of read on exactly what it is we're containing in there. Unless this a ritual protocol, we can't…

[CROSSTALK]
Dr. : No. It's not ritual. No, it's not. Ben, you need to trust me on this. Put it in KITAB.
Dr. Kahn: Moshe, we're going off the record for a minute. Be a mensch and turn the tape off.

Request denied. Per O5-07, monitoring of SCP-1348 containment review meetings is mandatory.

Dr. Kahn: We need to know. Direct from O5-07: they're threatening to shut you down. How are we supposed to protect civilians from what's in there if we don't know what it is?
Dr. : [H]e's not dangerous.
Dr. Kahn: Look at yourself, . The sores? And your teeth, they're falling out. And you tell me now that it's not dangerous? How do you tell me that it's not dangerous?
Dr. : It's the ritual, Ben; the ritual. It's not *intentionally*.
Dr. : And we're not protecting the world from [h]im. We're protecting [h]im from the world.
Dr. Kahn: You keep telling me that the memetics aren't affecting you. But listen to yourself, . Think about it. You were out here — with me. We worked together. You saw what I saw. How can you still have faith, with all that we both know?
Dr. : It was hard to have it, before. I used to think that there was some mistake. Then I passed the veil. Now I know it's all for the best.
Dr. Kahn: Listen to what you're saying. Just listen. It's all for the best?
Dr. : Do you know what it means for me to say that to you? That it is all for the best? That this is the best of all possible worlds? That *this* is?

Dr. : You know what we saw at Ain Dara. And I am telling you that *all* this, everything, is the best we could ever hope for.
Dr. Kahn: Please. Please, . Please don't be hysterical. I know it's hard for you. Tell us what you saw. You know what the protocol is if O5 shuts down Team B.
Dr. Kahn: You need to tell us. Tell us, or what happens to you is going to be out of my hands.
Dr. : You don't understand. When you first came here, you asked me: why do you think these people gave up on their faith? Ben, I know. It's because [h]e thought it best that we not know the truth. And it's true. Ya Allah, Ben, it's true. No one can ever know that we owe [h]im so much.
Dr. Kahn: Please. At least think about it. I can tell O5 you've got radiation poisoning. I can tell them that you're working on the report.
Dr. Kahn: I can't hold them off forever.

<End recording, 9:20 AM, / / >

+ DOCUMENT SCP-1348-
SMR-11: INTERVIEW, CENTRAL REGION, SCP-1348-03, / /

Background: On December 5, 2011, , the director of C-1348-B, was found unresponsive in quarters, suffering from severe radiation poisoning. Upon O5 authorization, C-1348-A instructed an Omega-class celebrant to deviate from ritual protocols and enter the central region of SCP-1348-03. After emerging from the central region, subject was unresponsive. The interview appended below was conducted during a brief period of lucidity three days after initial exposure.

Dr. Kahn: Good morning, O-9142. The doctors tell me that you've been up and around. Do

you know who I am?
O-9142: You are Doctor Kahn. Ben Kahn. You live in the cave outside the door.
Dr. Kahn: That's right. I have a few questions. Can you answer a few questions for me?
O-9142: They told me I should trust you.
Dr. Kahn: Let's start with the ritual. Do you remember what you did?
O-9142: Yes. They told me I should stand with my back to the veil. That I should say the words. And when the words were over and I had said all of them, I shouldn't look, no matter what I heard.
Dr. Kahn: And what did you do?
O-9142: I looked. Like you told me.
Dr. Kahn: And what did you see?
O-9142: He is very old. He is hurting very badly. He is underwater, in space, and everywhere else. He cannot get off his chair. He is stuck there forever because he is so badly hurt.
Dr. Kahn: I'm sorry, O-9142. I don't understand. What did you see in there?
O-9142: I can't remember very well anymore, because of the accident. But I remember one time I saw this old lion on television. On a nature special. He was badly hurt. The other lions ate him. I think the lion from the television is in there. I think that lion is your uncle.
Dr. Kahn: You've got to think hard, O-9142. Can you tell me how it got hurt?
O-9142: I don't know. I think we did something bad. The song is about how bad we are. No, that's wrong. We didn't do anything bad. We weren't supposed to happen. We happened. It wasn't our fault that we happened.
Dr. Kahn: I'm having a hard time understanding.
O-9142: Okay. Okay. The song goes like this: "iné esal peseh, ma Yehom ahallam." It means

he did something wrong. What he did saved us. Now [h]e has to be punished. Now [h]e has to stay behind the veil.
Dr. Kahn: What was he doing when you saw him?
O-9142: He was looking out. I saw that he saw us. We saw him. Others saw him. They weren't in the circle with us. They were standing outside the circle. Then we had to sing about how much he hurts because of us. To make the veil close. So the others don't see him back. They are very angry. They don't remember things for very long. Less well than me, I guess.
Dr. Kahn: Is [h]e dangerous?
O-9142: Dr. Ben, I'm very tired. Can I go back to sleep?
Dr. Kahn: You've almost done your job. I just need some more information.
O-9142: He says he wants you to come home. He misses you. But I think he's talking about your father, not you. So you don't have to, if you don't want to.
Dr. Kahn: I think we're done. You can sleep now.
Dr. Kahn: Anna? Turn up his morphine drip. Let him have as much as he wants.

+ DOCUMENT SCP-1348-ICL-8: INCIDENT LOG, / /

Background: On / / , three days after his interview with O-9142 and five days after the death of Director , Site Director Kahn compiled a new instance of SCP-1348-02 and entered the inner containment area. After performing external portions of SCP-1348-02, Dr. Kahn entered the central region of SCP-1348-03. He has not been seen since, and the veil has failed to retract. Per O5-07,

C-1348-B containment procedures are suspended; upon retraction of the veil, C-1348-A is to immediately execute Protocol 228-MELECHAH.

O5 ACCESS REQUIRED: FINAL INCIDENT REVIEW, SCP-1348-ICL-8

« SCP-1347 | SCP-1348 | SCP-1349 »

SCP-1348-ICL-8

FINAL INCIDENT REVIEW: SCP-1348-ICL-8

BACKGROUND: On / / , three days after his interview with O-9142 and five days after the death of Director , Site Director Kahn compiled a new instance of SCP-1348-02 and entered the inner containment area. After performing external portions of SCP-1348-02, Dr. Kahn entered the central region of SCP-1348-03.

In accordance with Foundation protocol for investigating security breaches by senior staff, Foundation internal security personnel sequestered all electronic devices, paper files, and personal effects related to prior or present assignments by Site 93 personnel. After detailed forensic review, internal security's preliminary conclusion was that Dr. Kahn, motivated by personal distress in the aftermath of the death of Director , spontaneously and unilaterally decided to deviate from containment protocol and enter the central region.

On / / , the following letter was returned, unopened, to Dr. Kahn's primary residence in Haifa, Israel.

> Judith,
>
> It is strangely simple to be writing the last letter I will ever send. As long as I can remember, the truth has had consequences. So I have withheld as much as I could. But now that the consequences are so very imminent, I will be departing beyond their reach.
>
> I have a confession:
>
> When you were ten, I told you that I was a linguist for the Institute. When you were very young — three, perhaps? — this was true. By the time you were old enough to ask, I was wise enough to lie. And I had other duties.

Before you retreated into the Torah, when you were still rebellious, you once told me that I loved my country more than I loved you. Why did I have to be a spy, and not your father? I could not answer, because I could not tell you that you were wrong. I served the world, not Israel. I served out of fear, not love.

Before the Shoah, your grandfather was a typesetter in Danzig. The Germans burned his presses and took him to Monowitz, and he worked in the printer's shop. After the Americans came, he went to Israel. He fought at Jaffa, and after the war he came to Barkai, and then I was born. These were the great and terrible events in his life, and I only met him after they had passed.

Because I only saw the outlines of the events which had shaped him, I could not understand why he was such a hard man. Eventually, I gave up: I came to understand that I could never understand; I could only cast my forgiveness into the dark, not knowing what it was that I was forgiving.

When you were sixteen, Eleizer told me that he wanted to marry you, and to study Torah at B'nei Brak. I screamed at him that there was nothing in the Torah, and that he was a fool. I told you that if you married him, I would never speak to you again. I knew then that if there was a G-d, he was vast and terrible and blind. You cannot know how I knew this.

But I was wrong, Judith. What does the Torah tell us? That the Name once moved upon the water; that He broke bread with Abraham, that He wrestled with Jacob and broke his thigh, that He buried Moses in the clay beside the Jordan. But now the Temple is a ruin, the people of Moses are scattered, and we have lost even the Name. For so long, I have stood on the edge of the chasm which separates us, demanding that He explain.

When you married Eleizer, and you covered your hair, I thought you were abandoning me. But you were seeking

after the Name which I had abandoned, unafraid to cast your forgiveness into the depths of the mystery. If you were unafraid, even as a child, why have I hesitated for so long?

It is late. I am tired. Tomorrow, I will anoint myself with oil, I will bathe in the font, and I will speak His terrible name. When the sun rises, I will stand before my broken father, and the fathers who were broken before him, as someday you will stand before me, as someday you will stand before Him.

I will be held to account for my absence.

I will hold the Name to account for His.

And I will forgive Him.

I love you, I love you,
Father

In light of this new information, on / / , the Incident Review Board altered its conclusion and recommendation: prior to entry, Dr. Kahn was suffering from religious mania brought on by exposure to SCP-1348-02. As a result, the Foundation now concludes that haplotype CMH-6 *does not* provide effective protection to ritual-associated memetic effects.

CONCLUSION: Per O5-07, C-1348-B containment procedures are suspended. Remaining C-1348-B personnel are to be treated with amnestics and quarantined until verifiably cleared of all memories related to SCP-1348-02. Upon retraction of the veil, C-1348-A is to immediately execute Protocol 228-MELECHAH.

SCP-1349: Stomach Bug

Item #: SCP-1349

Object Class: Euclid

Special Containment Procedures: All specimens of SCP-1349 in the Foundation's possession are to be kept in a reinforced 1m x 2m x 2m terrarium, vacant of all organisms but specimens of SCP-1349. At no point should more than fifteen (15) specimens be kept in containment. The terrarium is to be cleaned out bi-monthly, and any eggs present at this point should be frozen. Any excess instances of SCP-1349 or those found outside of containment should be killed and incinerated at earliest convenience. Once per week the colony of SCP-1349 is to be fed 2kg of meat in a moderate state of decomposition. Staff members not handling SCP-1349 are also required to wear standard bio-hazard suits regardless of proximity to the handler.

Description: SCP-1349 are a variant of the *Calosoma sycophanta* beetle. SCP-1349 do not pass the larval stage and grow to be between approximately 5 and 15cm. The saliva of SCP-1349 is slightly corrosive and causes an acute allergic reaction on the skin of a living organism upon contact. SCP-1349 produces a chemical similar in structure to Reversine within the salivary glands.

If SCP-1349 bites a living organism, it injects a chemical compound into the bloodstream of the organism. This compound induces marked changes in the reproduction and characteristics of the cells in the mucous membranes of the stomach. This triggers the growth of multiple neoplasms after a period of four to six days, averaging between 9 and 20mm, which function as miniature stomachs. These growths are connected to the digestive tract by several vessels all leading back to the main stomach of the subject, and initially aid in the digestive process. Any organism bitten by SCP-1349 is labeled as SCP-1349-1.

These growths will begin to spread to the intestinal tract of the subject after an additional three days. In 35% of cases, these micro-stomachs will also begin to spread to the esophagus and lungs of the subject, effectively drowning them in gastric acid. After approximately fourteen days from the initial growth, the digestive tract will begin to overflow with gastric acid, causing the stomach of the subject to rupture and causes death in 60% of cases, the gastric acid reducing a large portion of the body to a slurry. In the other 40% of cases, the growths do not reach critical mass in the body, and the subject dies from extreme malnutrition as the food ingested is broken up rapidly before the body can properly absorb it. Any substance digested by these cysts are no longer found in the subject's body; the subject is also found to lose weight equivalent to the mass of the substance consumed regardless of what the substance's mass would be post digestion. Any attempts to operate on the growths so far have ruptured them, revealing them to be filled with a liquid similar in nature to SCP-1349's saliva.

SCP-1349 was brought to the Foundation's attention after an abnormally high percentage of patients were diagnosed with gastric cancer in Oregon. Investigations into the area revealed an infestation of approximately specimens of SCP-1349 in a local slaughter house. The building was demolished and any affected corpses were incinerated, all unafflicted citizens were administrated Class A amnestics. Since coming to the Foundation's attention, smaller outbreaks have been noted nationwide. See Addendum 1349-3

Addendum 1349-1: Researcher 's notes on the reproductive cycle of SCP-1349 are as follows

- The adult specimen will puncture an organism's skin and inject saliva into the wound.
- After approximately fourteen days the organism's stomach ruptures and partially digests the corpse.
- SCP-1349 will retrieve the largest remaining growths and relocate them to the nearest safe area, where they are drained and filled with eggs; if there has been no available organism to infect and harvest, SCP-1349 will lay approximately six

(6) eggs every two months.
- The larva eat their way out of the neoplasm's membrane and survive on slurry until adulthood.
- Specimen expire naturally after five months.

Addendum 1349-2: During observation, Doctor noticed several specimens swelling. Testing revealed that the mass gained was equal to that lost by SCP-1349-1. Testing of the contents of the observed SCP-1349's stomachs revealed that they contained trace amounts of the food recently ingested by SCP-1349-1 in an advanced state of digestion. The subject initially bitten by the SCP-1349 specimens was currently undergoing chemotherapy km away from the site.

Addendum 1349-3: Security footage at a mall in , Iowa shows an unidentified male releasing several SCP-1349 specimens in the food court after closing hours. Several fliers in local clubs depict SCP-1349's saliva as some form of miracle weight-loss supplement.

« SCP-1348 | SCP-1349 | SCP-1350 »

SCP-1350: The Pixel

Item #: SCP-1350

Object Class: Keter

Special Containment Procedures: SCP-1350 is contained at Containment Area-52 (-8 ° ' . ", -1 ° ' . "). Any unauthorized individuals approaching within 50km of the containment area are to be terminated on sight to prevent potential Delta events. Colonies of *Spheniscidae* and other creatures are to be monitored and guided to prevent them approaching the Containment Zone.

Maintenance inspections of Containment Tracks Alpha and Beta and individual rotating platforms are to be conducted twice daily. Personnel onsite not involved directly in maintenance operations are to remain inside the primary dome at all times. Observation of SCP-1350 is restricted to cameras and motion sensors. At no time are personnel to directly observe SCP-1350, except in the case of a Delta Outbreak event for the purposes of prolonging containment. Number of personnel in the primary dome should be limited to five researchers and two D-class at a time if possible.

Twelve geodesic domes are positioned in a circle with a diameter of 300m, each dome connected by a dual underground track to the primary dome. Each dome is to contain one D-class treated with Compound Iota[1], and strapped onto a rotating platform designed to prevent movement of the head more than 10° in any direction. The interior of each dome is to be completely darkened when in use.

All D-class must be kept turned 180° from the current position of SCP-1350 except for the three D-class determined to be farthest away from it when it crosses the current Threshold C.[2] The object's current target must be identified and kept focused on the object until it crosses their Threshold C. Light and motion sensors are to determine the position of SCP-1350 at any given moment and adjust the orientations of D-class subjects accordingly. In rotation, one D-

class is to be changed out each hour, examined for continued suitability for containment, and replaced as needed.

If an unscheduled Delta event occurs, the two nearest D-class are to be focused on the object, immediately lowered from their domes onto containment track Beta, and moved to containment track Alpha. They are to continue moving there, altering speed as needed to remain a constant distance away from SCP-1350 until it has returned to its original luminescence.

Once per month a Delta event is to be permitted in order to prevent a Kappa event.

If the object breaches the primary dome, all current occupants are to be terminated via fast acting neurotoxin to limit potential Delta events. Recontainment will be handled by the secondary dome located 20km to the north. Resupply of D-class to primary containment site and recontainment on containment track Alpha must be achieved as rapidly as possible. A secondary set of domes spaced in a 12km diameter circle is to be put into use should more than 10 Delta events take place within a 15 day time period.

Should the secondary dome be compromised, the object must be led via Containment Track Gamma to Launch Site-52-a and Procedure Gamma-12 implemented to give time to re-establish containment facilities. Path of the object through the solar system must be monitored to identify the object's future point of re-entry.

Description: SCP-1350 is a floating, mobile point of light of unknown origins. The light emanating from it is not reflected by any known material, but can be perceived by biological organisms or mechanical photosensitive equipment. SCP-1350 and its light pass uninhibited through all known materials regardless of consistency or opacity. SCP-1350 will target and slowly accelerate[3] toward any living creature massing more than 2488 grams. Target acquisition is determined primarily by maintenance of direct observation of the object by a living organism, secondly by proximity of the target, and thirdly by the target's mass. It will cease movement and instantly change targets should the situation change and make another target more favorable according to the criteria.

Upon reaching a target, the object moves into the target's brain. Life signs of the target immediately cease. Regardless of the mass of the target affected, the object immediately increases in volume, base speed, and apparent luminescence by exactly 22.7% - classified as a Delta event. This becomes an exponential progression as additional Delta events occur.

These attributes decrease linearly at a rate of ~1.14% per day until the object reaches a minimum apparent diameter of .5cm, minimum base speed of 4kph, and a minimum apparent luminescence of ~25,000cd. If it remains in this state for more than 24.2 days, it will cease to be influenced by the direct observation criteria until a minimum of three Delta events have occurred - this is classified as a Kappa event.

Through current containment procedures the object is maintained at a diameter of .5cm - 1cm and apparent luminosity of ~25,000cd - ~200,000cd. No upper limits to size, speed, or luminosity have yet been observed. Highest observed (2cm diameter, 327kph, ~1,650,000cd) occurred during Event 1350-27 in 1957.

+ Recovery Log SCP-1350

Recovery Log SCP-1350

SCP-1350 was discovered on 06-02-1952 by Foundation Research Team -58, enroute to study SCP- . The object was first observed at 9:42pm, described in audio logs as "a kind of star moving toward us". The team consisted of 8 members, 6 of whom encountered Delta events within the first 5 minutes of contact. Agent and Dr. , who had been setting up a communication beacon, observed this encounter from a significant distance away and retreated immediately to call for backup. They maintained evasion for 15 hours before being overtaken, providing most of the initial intelligence about the object.

Mobile Task Force Alpha-8, "Ice Breakers", was dispatched to determine the nature of the object and to establish preliminary containment procedures. Contact

with the object was established 06-04-1952, resulting in the immediate loss of 2 task force members, and the progressive loss of another 10 members over the course of the following 2 months.

Further properties of the object were determined during this time, after which plans began to be drawn up for Containment Area-52. Object delivered with no further casualties to the Containment Area on 09-29-1952.

No connection has been established between SCP-1350 and SCP- , and the object's original proximity to SCP- has been judged to be coincidental.

+ Event Log 1350-27

Event Log 1350-27:

Initial containment procedures consisted of the primary dome and two additional buildings with D-class being instructed to face the object and turn away in alternating intervals. Construction of four D-class domes and Containment Track Alpha took place during this time. This was originally deemed to be sufficient for containment, given a proper supply of D-class.

On 05-09-1953 this construction was completed, and official containment procedures began.

On 02-16-1959 a D-class unexpectedly died of a heart attack during containment procedures, resulting in a Delta event. Maintenance prevented the timely movement of remaining D-class to Containment Track Alpha, resulting in the loss of all D-class in the containment area. SCP-1350 then approached the primary dome, resulting in a Delta Outbreak event and the loss of fourteen additional personnel and D-class.

Secondary dome personnel took over and led the object on a circular route for a period of 22 days, with the loss of four additional personnel. Emergency personnel

arrived to repair the primary site and revise containment procedures. Immediate construction began on the secondary ring of domes, and containment was transferred to them on a temporary basis. Containment Track Alpha was prepared, and the object was transferred there on 06-29-1959. Eight additional domes and tracks were added to the primary ring, completed 02-11-1962, after which current containment procedures were initiated.

Addendum 1350-01:

The object's origins are unknown, but it is highly probable that Team -58 was the first group of living creatures it had encountered since its appearance, [DATA EXPUNGED] At this velocity containment would be impossible. Subsequent contact with all life exceeding 2488 grams is currently estimated [O5 CLEARANCE ONLY, SEE DOCUMENT 1350-K]

Investigation into the object's possible original path to the location of its discovery has thus far been fruitless. However, [DATA EXPUNGED] Observatories are to be directed not to observe this phenomena.

Events 1350-14 and 1350-79 have proven the dangers of attempting to test the object's parameters. Further experimentation on SCP-1350 is forbidden.

SCP-1350 must be prevented from coming within 200km of the ocean at all costs.

Footnotes
1. a combination stimulant, thought suppressant, and attention enhancer, designed to ensure the Class-D currently targeted will immediately focus upon SCP-1350
2. defined as a 30m radius around the currently targeted D-class dome
3. the object has variable acceleration, but has not been observed to accelerate faster than .05m/s^2

« SCP-1349 | SCP-1350 | SCP-1351 »

SCP-1351: Moebius Cave

Item #: SCP-1351

Object Class: Euclid

Special Containment Procedures: SCP-1351 is contained onsite under the cover of a bat sanctuary with a standard perimeter fence and signs warning away unauthorized personnel. The permanent security team is to be covered as United States National Park Rangers and/or civilian speleologists. The access road to the entrance of SCP-1351 is to be marked “Authorized Vehicles Only” to match nearby park roads which are not open to the general public.

Personnel within SCP-1351 are to follow standard subterranean safety protocols.

- All personnel must operate in groups no fewer than four, with each personnel equipped with at least three sources of light (one of which must not be dependent on batteries). In the event of a team member in distress, at least one individual must remain with the distressed individual, while at least two individuals must return to get help.
- Personnel must verbally inform at least two individuals (typically the site security watch officer and the on-duty research supervisor) of their intended destination within SCP-1351 and their intended return time, in addition to documenting their intentions in writing.
- Personnel must also carry sufficient food, water, and first aid equipment for twice their intended stay within SCP-1351.
- Any individual who becomes lost or separated should remain where they are and wait to be found.

The current Director of the United States National Park Service and the current Mammoth Cave National Park Superintendent are to be informed of the importance of maintaining containment; further information related to either SCP-1351 or the Foundation is to be

disseminated to these individuals only in accordance with need-to-know and written authorization of O5 Command.

Due to the outbreak of SCP- -EX[1], commonly referred to as "White-Nose Syndrome" (WNS), any persons entering SCP-1351 must submit to biological decontamination. No clothing, shoes, or personal effects which have entered other caves since 2006 are permitted to enter SCP-1351 to prevent the spread of fungal spores believed to be associated with SCP- -EX. Prior to entering and after exiting SCP-1351, all persons must walk across nylon bio-security mats saturated in a cleaning solution. For consistency, it is recommended the bio-security mats and the associated solution match those used by the Park (presently Lysol™ IC Quaternary Disinfectant Cleaner). This is in accordance with publically released SCP- -EX containment protocols designated "**National WNS Decontamination Protocol 03.15.2012**".

Description: SCP-1351 is a cave located within Mammoth Cave National Park in the American state of Kentucky. The main section of cave is approximately 30 kilometers long. No direct connections between SCP-1351 and Mammoth Cave have yet been discovered, though the possibility remains. Like most caves in the area, SCP-1351 appears to have been carved from Mississippian-aged limestone strata capped by sandstone; this has resulted in relatively few flowstone deposits.

SCP-1351 is anomalous for three reasons:

First, it is accessible through a dome in the ceiling of an otherwise unremarkable section of cavern 125 meters underground (see Fig. 3), but this dome's height (~750 meters) would require SCP-1351 to be well above surface level. In spite of the inconsistency, SCP-1351 seems to be subterranean; Foundation speleologists have not yet determined a satisfactory explanation for this phenomenon.

Second, the interior of the cave only has a single surface (the floor) and a single boundary component (a wall). Over the course of the cavern's several kilometers in length, the floor "wraps around" to become the ceiling while one wall "wraps around" to become the other. In this it resembles a Moebius strip. Local gravity orients towards the nearest floor; a dark band in the rock wall shows the

location of the boundary between the local gravitational fields. The cause of this unusual spatial-warping is not understood at this time.

Third, temporal anomalies have been observed in relation to SCP-1351, though no modern Foundation personnel are known to have experienced any such effects. For more details, see Addenda 2 and 3. These show no consistent pattern.

Addendum 1: Modern History of SCP-1351
The cavern from which SCP-1351 is accessible opened to the surface when a landslide in 1993 uncovered a natural entrance. SCP-1351 was most recently discovered in 1995 by National Park Service speleologists mapping the cavern to determine if it connected to the main cave system in the park. These scientists were subsequently seconded to the Foundation after a standard background check and non-disclosure agreement. Three Expedition Teams (01, 02, and 03) surveyed the interior of SCP-1351 between 1995 and 2002, determining the cavern to be sufficiently safe for a permanent research presence. Research operations are now ongoing.

Addendum 2: Expedition 1351-1925
On 23 April 2009, a team of six men and two women, under the command of Major Mortimer S. Cornelius III, emerged from SCP-1351. (See Fig. 4) They were detained by Foundation security personnel. Interviews established that they were a team of explorers dispatched by the Foundation in August 1925, and had only spent eighteen hours within the cave from their perspective. Their clothing and equipment was accurate for the time period, and they possessed apparently *bona fide* documents supporting their assertions. However, as there is no record of any of the members of the expedition nor of the expedition itself, and since SCP-1351 was not known to have been discovered until 1995, they are being detained indefinitely. For further information, contact Supervisory Special Agent Thomas at Site 19.

Addendum 3: Discovery of Expedition 1351-2030's Remains
On 10 June 2011, Foundation researchers discovered the remains of four adult humans in a pit in Section 07A of SCP-1351. These remains had been mummified and preserved by the calcium nitrate present in the cavern; carbon dating indicated the remains to be in

excess of seven thousand years old. One of the bodies had two broken legs, while another had a broken left arm. There was no obvious cause of death for any of the subjects.

- **Subject 1:** Male, 198 cm tall, black hair, facial bone structure suggests Caucasian ancestry. Antemortem compound fractures in both left and right tibiae. Foundation-issue dog tags identify as Dr. Nicholas Lusk, serial number [REDACTED].
- **Subject 2:** Male, 186 cm tall, red hair, facial bone structure suggests Caucasian ancestry. Antemortem simple fracture in the left ulna. Foundation-issue dog tags identify as Dr. Lionel Dunbar, serial number [REDACTED].
- **Subject 3:** Female, 160 cm tall, black hair, facial bone structure suggests Japanese ancestry. No apparent injuries. Foundation-issue dog tags identify as Dr. Asuka Miyamoto, serial number [REDACTED].
- **Subject 4:** Female, estimated approximately 164 cm tall. Head absent; incision located above C4 vertebra and occurred postmortem. No identification located in vicinity of body.

The bodies were clothed in uniform synthetic spelunking coveralls and equipped with gear estimated to be roughly equivalent to the level of technology expected to exist by the mid-2030s. Among the gear was a damaged camcorder with predictably dead batteries. Efforts to power the camcorder and recover the information documented have [DATA EXPUNGED].

Footnotes
1. SCP- -EX is a disease affecting numerous species of North American bats which has been confirmed in nineteen American states and four Canadian provinces. Ongoing studies both by Foundation and non-affiliated organizations have accumulated increasing evidence that suggests it is caused by the fungusGeomyces destructans. The disease itself is not well understood by either the Foundation or non-affiliated scientists; research continues. At present, there is no known treatment for afflicted bats, nor is there a known containment protocol capable of preventing transmission. The mortality rate varies by species, but

has been observed as being as high as 95%. SCP- -EX hasnotbeen confirmed to be present in SCP-1351; the related containment procedures are intended to prevent it from entering SCP-1351.

« SCP-1350 | SCP-1351 | SCP-1352 »

SCP-1352: Sentient Whirlwind

Item #: SCP-1352

Object Class: Euclid

Special Containment Procedures: SCP-1352's enclosure is located in an isolated valley in Nevada, and is equipped with storm shelters. The entity is permitted to wander around the premises of the enclosure under the supervision of at least one security guard. The enclosure is 5 km^2, and the perimeter fencing must be rooted 10m into the ground to prevent dislodging. Debris must be made available within the enclosure for the entity to interact with. Personnel entering the enclosure must acquire authorization from the Site Director. Proper protective equipment must be worn by personnel within the enclosure at all times. Should the entity attempt to leave the enclosure, guards or personnel are to use verbal commands to prevent it from breaching containment.

Description: SCP-1352 is a sentient dust devil[1] with a behavior similar to those of domesticated pet-animals. Anemometer readings indicate wind speeds of at least 60 km/h, but they shift with the mood of the entity.

SCP-1352 has a preference for interacting with humans, and carries small debris with it for this purpose. After interacting with people, the funnel will shrink to three meters in height and the entity will attempt to surround the person/s as a sign of happiness. If excited, wind speeds and funnel size rapidly shift between the 60 and 100 km/h parameters. In an angered state, the funnel grows to proportions similar to those of F5 tornadoes. The entity will then attack with debris thrown at speeds excess of 300 km/h. If SCP-1352 is not capable of interacting with people, it will either coerce people into interaction through various methods or entertain itself.

SCP-1352 has displayed signs of intelligent behavior. It has the ability to manipulate the wind it generates to pick up and place items

weighing up to 500 kg with precision (this also affects the funnel size). The entity has also been shown to respond to verbal commands. The researchers have discovered that it understands words such as "stay", "go", "come here", and "fetch", allowing easier containment methods. Testing of SCP-1352 has continued, and currently the entity can perform more complex tasks such as arranging objects into specific patterns such as shapes, and solving simple problems e.g., matching objects.

Addendum: Debriefing with Agent after capture of SCP-1352

Interviewed: Agent

Interviewer: Dr.

<Begin Log>

Dr. : Please recall how you captured SCP-1352.

Agent : My pleasure, but I wouldn't exactly call it "capture". Anyhoo, after they called us in we tracked the sucker to the coast. There, we found him wandering around picking up some trash on the beaches. I'm not sure why, guess he was bored.

Dr. : How did you approach it?

Agent : Well at first we surrounded him. This only aggravated him, and he started to grow in size. The wind was really picking up, so we backed away. We weren't able to call for backup, it was causing some sort of radio interference. He just stayed at that spot, trying to suck us in. Agent got sucked up and was thrown several feet away.

Dr. : How hurt was he?

Agent : His back was broken. I couldn't go to him 'cause the twister was right over my head. I thought I was gonna die, then the wind died down, and I saw the twister was getting smaller. Next thing I know it tossed

this piece of wood next to me.

Dr. : Okay then. In what manner did you react to that situation?

Agent : (Drinks from a glass of water) At first I was just lying on the sand wondering why this thing didn't kill me. The twister was moving side to side, like he was waiting for something. I put my hand on the wood, and it started moving faster and faster. I picked it up and he grew taller. He was getting really excited on the chunk of wood. So I threw it away from us, and he wasted no time fetching it. Anyways we went to our teammate and called for a med team. We stopped when the twister tossed the same hunk of wood at me and was just sitting several feet away. Lead Agent said to me, "I think this twister wants to play fetch with you." I thought it was crazy at first, since it virtually crippled . "He's not attacking us right now, and besides, I'd rather have him calm now than angry.", he said. All the while it was just sitting there waiting for me to throw the wood again.

Dr. : So how did you contain it?

Agent : We just played fetch until the Recovery Team showed up. Besides, bullets can't do shit on him so why bother. In the end, we managed to lure it into the holding container, but someone had to stay with him, or else he'd get mopy and make another ruckus. We ended up drawing straws, and Agent drew the short one. I'd have to admit, that was my favorite. We still visit him now and then, and he even said sorry to Agent .

Dr. : Thank you for your time.

<End Log>

Addendum: Communication Attempt
On the morning of / / , field researchers discovered a large debris formation created by SCP-1352. The pattern was too large to be seen from ground level, requiring the use of an unmanned aerial

vehicle. At 300 meters, the pattern was revealed to be the word "HELO". Subsequently, the Director has authorized further communication experiments with SCP-1352.

Footnotes
1. The entity displays characteristics of major whirlwinds, but it has been classified as a dust devil due to its lack of a cloud base and the intense electrical activity it generates.

« SCP-1351 | SCP-1352 | SCP-1353 »

SCP-1353: Comforting Centipedes

Item #: SCP-1353

Object Class: Euclid

Special Containment Procedures: SCP-1353 are to be kept in the same room, but stored separately in sealed plastic tubs. Tubs are to be labeled in accordance with each instance. SCP-1353 instances are to be handled only while wearing full-body protective wear. Individuals may only interact with one another for purposes of experimentation.

SCP-1353-A are to be kept in standard humanoid containment chambers. They are to be denied access to any toys, music, books and other recreational items older than 12 calendar months unless in controlled lab circumstances but are to be otherwise treated as a normal human in containment. SCP-1353-A are permitted access to psychiatric medication upon request in order to mitigate emotional response. They also must keep a daily record of their awareness of SCP-1353 in a journal. These records should be added to Document-1353-01 on a weekly basis. Should the SCP-1353-A population exceed more than 5, the oldest and least healthy are to be culled and remains cremated immediately after culling.

There is to be no skin contact with SCP-1353 or SCP-1353-A instances without permission of level 4 or higher personnel.

Description: SCP-1353 is a given label to a group of animate needle-felted sculptures closely resembling members of the class Chilopoda (centipedes). Instances of SCP-1353 vary in color and size, typically bearing at least twenty pairs of legs and a pair of functional eyes. Typically, adults can range from 30 to 50 centimeters in length and are on average 2 centimeters in width. SCP-1353 is capable of breeding, but only adult instances are able to create SCP-1353-A. Specimens have been typically found in urban environments, with exceptions as a result of interaction with

trucks and other human transportation.

SCP-1353 displays nocturnal behavior and will actively seek out sleeping humans to turn into SCP-1353-A via dermal exposure. Once contact is made, a specimen will use its forcipules to create an incision and enter the human. These forcipules generate a venom that works as a local anesthetic and thus the incisions will usually go unnoticed until the specimen has thoroughly embedded itself under the skin. Once embedded, the specimen will continue to move underneath the skin but will not cause tissue damage; it is hypothesized that SCP-1353 is capable of creating a minor spatial anomaly to achieve this effect. Approximately 1 week after embedding, SCP-1353 will no longer be seen underneath the skin and is assumed to enter a dormant state inside of the host's abdominal cavity. Humans hosting an SCP-1353 instance are collectively referred to as SCP-1353-A. SCP-1353-A report being aware of hosting SCP-1353 instances but do not usually report pain apart from injuries caused by initial entry.

Hosts continue to function as normal human beings, with the only exception being when presented with any stimulation that invokes feelings of nostalgia. If SCP-1353-A experience nostalgia of any kind, the hosted SCP-1353 instance will re-activate and continue its movements at random inside the body. This re-activation time has been reported to last at least 15 minutes and at most 5 hours. SCP-1353-A are acutely aware of the presence and movement of their hosted SCP-1353; they will express moderate to extreme discomfort at the re-activation. SCP-1353-A are known to react violently to nostalgia as a result of this, but may eventually adapt to deprive themselves of the emotion.

Addendum-04/25/20 : An outbreak of SCP-1353-A was reported to Foundation personnel in the city of Austin, Texas, United States of America. Investigation into the outbreak uncovered the source of a population of SCP-1353, currently theorized to have been purposefully planted. A single metal box was found as the source of the assumed planted population, containing the following note. Inquiry into potential suspects are currently ongoing.

> congratuLations you found my box, friend!
> i am giving to this city lOts of friends to mend

these furry friends that i'Ve made lovE you, though they hide
and they will gladly hUg you from the inSide!
-108801

Addendum-1353-A-19: The following is a personal log from SCP-1353-A-19, a 47-year-old female of African American descent. SCP-1353-A-19 reports to have been host to its SCP-1353 instance for the past years, despite having only been under Foundation custody for the past .

I used to try and tough out the feeling. I thought that I could get used to it.

It's like a cat in your lap with its claws dug in until there are little pricks all in your stomach and legs, and then it climbs in and you feel its fur rubbing against the wrong side of your skin. Every leg taps alongside each other and you can feel every thread as it pushes itself a little tunnel inside you. Why did this happen to me? I just woke up thinking about some man with kind eyes I saw down the street the day before, how he touched my arm and said he was sorry before walking off. Same place that morning I felt it on me. I could see the little bumps of its segments as bulges in my skin as it pushed itself up my shoulder and watched it climb down my back in the mirror. It went into my belly and then it made itself at home in me.

And now, every time I'm reminded, it reminds me that it's still there. I can feel its little felty legs. Sometimes it crawls upside down inside me, so I feel the legs instead of the fur on the wrong side of my skin. Most of the time though, whenever I'm reminded, I can feel it rubbing and crawling along my intestines. Every thread, antennae, even the little bulge of its eyes.

Today I felt it crawl up inside my neck, back against my trachea and legs against the artery. It shimmied up to the back of my neck and started shuffling against my skull. The skin was really stretched up there and I figured it

might've gotten stuck once or twice. Really though the worst part was that I could kind of hear it when it circled near one of my temples. It sounded like really quiet brushing or swishing against the bone as it crept along. I think its fangs scraped a little, too.

You never get used to it. You just learn to avoid what makes it go.

« SCP-1352 | SCP-1353 | SCP-1354 »

SCP-1354: Fancy-Talking Soup

Item #: SCP-1354

Object Class: Safe

Special Containment Procedures: All instances of SCP-1354 are to be contained in food-grade airtight plastic containers at Sector-28. Each instance is to undergo psychiatric evaluation at least once per year.

Description: SCP-1354 is the collective designation for twelve (12) eleven (11) 250 mL volumes of soup stock, designated SCP-1354-1 through -11. Despite their age, instances of SCP-1354 show no signs of spoilage and have proven edible. Additionally, instances of SCP-1354 are exothermic, maintain a constant temperature of 37 degrees celsius and have shown no signs of evaporation.

Instances of SCP-1354 are capable of written responses to verbal communication via the manifestation of letter-shaped pasta. Unless otherwise prompted, responses will remain on the surface of SCP-1354 for 3-4 minutes before submerging and vanishing. For interview purposes, instances of SCP-1354 are to remain intact ('intact' defined as maintaining a volume greater than 245 mL). While removal of less than 5 mL has no effect on SCP-1354 (and will regenerate within 24 hours), the removal of larger volumes appear to cause confusion, psychosis and incoherent responses in SCP-1354 instances. Attempts at diluting SCP-1354 above 250 mL with additional fluids result in SCP-1354 "absorbing" the additional liquid and maintaining a constant volume.

Each instance of SCP-1354 appears to contain the consciousness from one of several dozen individuals reported missing from , Oregon between the dates of 04/07/19 and 02/16/20 . All missing individuals corresponding to instances of SCP-1354 share several characteristics, most notably age (between 30 and 35) and status as the head of a single-parent household (see Interview Log 1354-001).

The whereabouts of children of SCP-1354 instances, as well as an additional missing persons believed to correspond to uncontained instances, remain unknown.

SCP-1354 was brought to Foundation attention after persistent rumors of “talking soup” began circulating in local homeless shelters and soup kitchens. Further investigation led to the procurement of this instance as well as a further eleven instances of SCP-1354 obtained during a recent canned food drive. Class B amnestics were administered to all witnesses.

Interview Log 1354-001

Dr. F : SCP-1354-1, can you hear me?
SCP-1354-1: YES. WHO ARE YOU?
Dr. F : My name is Dr. F . I’d like to ask you some questions about your current state, if that’s alright.
SCP-1354-1: MY CURRENT STATE?
Dr. F : Yes. Do you recall the events that occurred on 04/15/20 (*Note: The date of SCP-1354-1’s disappearance*)
SCP-1354-1: NORMAL DAY. NEW GUY IN SOUP KITCHEN. CREEPY
Dr. F : What was wrong with him?
SCP-1354-1: TALKED TO FOOD. SANG TO IT. LISTENED TO IT. COMPLAINED IT WAS ILLITERATE. TOLD HIM IT WAS FOOD. JUST EAT IT AND BE HAPPY.
Dr. F : What happened afterwards?
SCP-1354-1: SAID I WAS RUDE. SAID HE HOPED MY LITTLE GIRL WOULD GROW UP WITH MANNERS. SCARED ME.
Dr. F : Why did that scare you?
SCP-1354-1: NO ONE THERE KNOWS I HAVE A DAUGHTER.
Dr. F : Interesting. Did anything else happen that day?
SCP-1354-1: NO. WENT HOME. WENT TO SLEEP. WOKE UP. THEN EVERYTHING WAS LIKE THIS.
Dr. F : Like what?
SCP-1354-1: WET. DARK. STILL.

Dr. F : Thank you. That will be all.
SCP-1354-1: WAIT. IS MY GIRL OKAY?
Dr. F : Your daughter's whereabouts are currently unknown. She went missing the same day you-
(Note: Letters begin to appear on the surface quickly enough for SCP-1354-1 to boil.)
SCP-1354-1: MISSING?! IT WAS HIM HE TOOK MY DAUGHTER. DO SOMETHING PLEASE YOU HAVE TO DO SOMETHING YOU HAVE TO-
Dr. F : This interview is over.

Researcher's Note: Eight other instances of SCP-1354 have described encountering a similar entity in or around , Oregon immediately prior to their disappearance. This entity has tentatively been designated SCP-1354-A with descriptions forwarded to Foundation personnel embedded in the Police Department.

« SCP-1353 | SCP-1354 | SCP-1355 »

SCP-1355: House of Harmonious Boxes

Item #: SCP-1355

Object Class: Euclid

Special Containment Procedures: The property surrounding SCP-1355 is currently under Foundation management, and is to remain fenced off under the guise of an ongoing renovation. A security perimeter patrolled by guards is to be maintained at all times. Any civilians attempting to approach SCP-1355 are to be turned away under the pretense of keeping the renovation site clear.

As SCP-1355 possesses no windows and equipment installed in SCP-1355 periodically malfunctions, the building is to be remotely monitored using thermal imaging. Due to the results of Incident 1355-1-23, as part of safety measure 1355-A23 electricity is provided to the building. All lights within SCP-1355 are to remain on for twelve hours each day, operated by a switchbox located outside SCP-1355.

A population count of SCP-1355-1 is to be carried out weekly.

Description: SCP-1355 is a one-story building located in the old school district of , . Records recovered from the city's archives list the building as an elementary school scheduled for renovation. When initial investigations were carried out by the Foundation, SCP-1355 was being used as a temporary book storage site. As such, furnishings within SCP-1355 consist primarily of tables, small chairs, and numerous stacks of boxes containing textbooks.

SCP-1355 is believed to be inhabited by a colony of life forms, designated as SCP-1355-1. Individuals of SCP-1355-1 are believed to be visually indistinguishable from the textbook-containing boxes stored in SCP-1355. Thermal imaging has revealed that individuals of SCP-1355-1 possess a thermal signature similar to that of

humans; however, the signature dissipates while SCP-1355-1 is in motion. Attempts to capture a specimen of SCP-1355-1 have failed.

Subjects who encounter SCP-1355-1 report hearing multiple voices, often described as "beautiful" and singing a song familiar to the subject. The music of SCP-1355-1 is observed to induce a sense of calmness in subjects. (See logs for further details; in lieu of interviews, a simple written questionnaire was provided to each subject.)

Subjects recovered from SCP-1355 were rendered incapable of phonation or voicing. Resonance imaging has revealed the larynx of each subject to be missing. Notably, none of the subjects appear concerned over or even aware of their loss; subjects are convinced they are able to use and hear their voice, despite being informed otherwise.

> *Note: All Class D subjects who have encountered SCP-1355-1 during experimental exploration were recovered from the front office of SCP-1355; all appeared to be asleep and none could remember how they came to arrive in the office. Personnel charged with subject recovery reported no sightings of any beings which may have been responsible for relocating the subjects.*

+ Questionnaire Log 1355-1-D18243

> **Interview/Questionnaire Log 1355-1-D18243**
>
> *What did you hear when you entered the building?*
> I heard singing.
>
> *Do you remember which room you were in when you began to hear something?*
> Some room with boxes.
>
> *Did you recognize what you heard?*
> I think it was called Love's Greeting. Salut D something. It played at my sister's wedding.

Describe the quality of the sound.
It was beautiful.

How did it make you feel?
Happy. Very happy, like I couldn't remember anything sad ever happened to me.

Did you make any vocal noises in response to what you heard?
I hummed a little.

Do you remember falling asleep in the building?
Not really. I remember waking up.

Any other comments?
Can I go back there?

+ Questionnaire Log 1355-1-D13526

Interview/Questionnaire Log 1355-1-D13526

What did you hear when you entered the building?
I believe I heard people singing.

Do you remember which room you were in when you began to hear something?
One of the smaller rooms. Most were empty, but the one I remember had some boxes in it.

Did you recognize what you heard? What was it?
Some song my father used to sing to me; a lullaby.

Describe the quality of the sound.
Wonderful. Amazing. Like a choir of angels.

How did it make you feel?
A little sleepy, but peaceful. I've never felt so peaceful. It was so soothing.

Did you make any vocal noises in response to what you heard?
Of course. I sang along.

Do you remember falling asleep in the building?
Not at all. I must have dozed off somehow.

Any other comments?
I would like to go back. I want to hear it again.

+ Questionnaire Log 1355-1-D12092

Interview/Questionnaire Log 1355-1-D12092

What did you hear when you entered the building?
Sounded like singing or something.

Do you remember which room you were in when you began to hear something?
A room with boxes.

Did you recognize what you heard? What was it?
My favorite song when I was little.

Describe the quality of the sound.
It was fucking gorgeous.

How did it make you feel?
Awesome. It was so beautiful. I could have listened to it forever.

Did you make any vocal noises in response to what you heard?
Hell yes. I sang.

Do you remember falling asleep in the building?
No.

Any other comments?
I want to listen more. Take me back there. Let me listen again.

Addendum 1355-1: As part of preliminary trials for Experiment 1355-1-5, "voiceless" subjects were allowed to reenter SCP-1355, one at a time, while the test was documented using a series of thermal imaging cameras. See experiment log 1355-1-5-D19574.

+ Excerpt from experiment log

Video log 1355-1-5-D19574 (obtained from thermal imaging camera 1355-)
Date: -01-20
<Begin Log>

Time: :04:12 Individuals of SCP-1355-1 distinguishable by thermal signature. Visual indicates several individuals of SCP-1355-1 scattered throughout multiple rooms of SCP-1355.

Time: 18:05:43 Subject enters SCP-1355.

Time: 18:06:35 Subject walks through SCP-1355. SCP-1355-1 seen quickly converging into a single room.

Time: 18:08:23 Subject enters room containing entire colony of SCP-1355-1.

Time: 18:09:22 Thermal signature of SCP-1355-1 disappears.

Time: 18:09:24 Thermal signature of subject disappears.

Time: 18:09:48 Thermal signature of SCP-1355-1 reappears; individuals of SCP-1355-1 are shown scattered throughout the room.

Time: 18:11:37 SCP-1355-1 individuals move to different rooms. Thermal signature of subject undetected.

Addendum 1355-2: As of -03-20 , Experiment 1355-1-5 and any similar testing have been suspended indefinitely.

> *Note: The last robot probe sent into SCP-1355 managed about two minutes before its cameras started malfunctioning. What's left of the subjects will have to stay there. —**Dr. Kiryu***

Addendum 1355-3: It has been noted that two days after Experiment 1355-1-5 was carried out, the population of SCP-1355-1 was observed to have increased by approximately .

> *Note: We risked sending in another probe. The remains are gone. —Dr. Kiryu*

« SCP-1354 | SCP-1355 | SCP-1356 »

SCP-1356: Rubber Ducky

Item #: SCP-1356

Object Class: Safe

Special Containment Procedures: SCP-1356 is kept in a small box in the storage facilities of Research Sector-09, unless approved for removal and transportation.

Description: SCP-1356 is a small bath toy, resembling one of several generic "rubber duck" designs. Tests indicate that the object is made of plasticized polyvinyl chloride. It is designed to emit a sharp "squeak" when squeezed.

When held by a human subject, the object appears to displace liquid water. If a subject holding the toy attempts to enter a lake or pool, for example, they will find that all liquid within an area extending approximately 152.4 x 81.3 x 45.7 cm from the body disappears.

Tests performed in a small indoor pool revealed that the approximate volume of water before and after exposure to SCP-1356 remained consistent. However, even in the presence of a subject holding the anomalous duck, water levels were never observed to rise. This suggests that the object displaces the liquid to an unknown location, from which it eventually "returns". No unusual or foreign substances have yet been detected in "displaced" water, although pH levels indicate a slight increase in acidity.

As the depth of displaced water never exceeds an average of 46 cm, a subject walking into a deep pool will eventually find their feet and legs submerged, while the rest of the body remains dry. Even vigorous motions and leaps, however, never suffice to bring the upper body into contact with water— the rectangular "dry space" seamlessly shifts to accomodate even the most abrupt movements. Testing to discover the parameters of this phenomenon, as well as potential practical uses, are ongoing.

See enclosed documents for updates and results.

Excerpt 1: Tantalus Effect

Objective: Determine parameters of "dry space".

Procedure: Subjects of various heights instructed to enter water with SCP-1356 at depths never exceeding subject's shoulder-height. Subjects encouraged to make every effort to bring hands or face into contact with the water surrounding the "dry space" created by the object.

Results: So long as the subject is in standing-depth of water, the "dry space" will shift in accordance with the subject's motions— appearing to create a mobile, rectangular indent in the water. This phenomena, for unknown reasons, does not apply to the lower extremities in depths exceeding 46 cm.

When test subject bends, water recedes rather than come into contact with hands or upper body; "dry space" appears to maintain its shape and volume as a rule. If subject at sufficient depth bends to the point of resting on hands and knees, the "dry space" will be covered over with water; subjects report no change in air pressure, however, breathability of air is limited.

The greatest depth at which this total submersion of subject and "dry space" could be achieved was approximately 1.5 m, dependent on height of subject.

Excerpt 2: Insufficient Life Raft

Objective: Determine whether "dry space" displacement can be used to keep subject afloat in deep water.

Procedure: Four subjects of sufficient strength and flexibility instructed to carry SCP-1356 into water of a depth of 2.5 m, and attempt to draw legs up into "dry space".

Results: All subjects report the same results, with

variable degrees of difficulty and time elapsed before exhaustion. The following "rules" have now been consistently demonstrated:
1) Once subject is out of standing-depth, "dry area" SCP-1356 creates around subject maintains its shape, volume, and orientation at the surface of the water.
2) Out of standing-depth, subject's orientation inside of "dry area" becomes fixed— floating at waist-depth. Subject will now be able to submerge hands and forearms in water below waist-level, but any attempt to raise this water in handfuls is impossible.
3) Attempts to re-orient upper or lower body inside "dry space" are exhausting, but prove fruitless; in addition, remaining in this suspended state for more than ten minutes negatively impacts the circulation of blood to the lower body, eventually resulting in intense cramping and faintness.

Excerpt 3: Sinking Test

Objective: Test object's anomalous properties when not carried/in contact with human subject.

Procedure 1: SCP-1356 placed in a small pool.

Results: Object does not displace any amount of water, or affect pH levels in any significant way; object floats.

Procedure 2: SCP-1356 placed in a small pool, and bombarded with jets of water and various items.

Results: Despite the object's pliant PVC materials being easily damaged outside of water, when placed in any volume of water sufficient to keep it "afloat", object appears to resist all attempts to sink or damage it— bobbing, but always remaining upright and afloat.

> *"Well, with this object's origins in mind, these results might be a prompting to examine the events and outcomes of Incident F-1992 more closely; always struck me as our business." -*

Dr. Dhruva

Addendum 1: Prolonged exposure to SCP-1356 (hereafter defined as a sustained interval approaching or exceeding two hours, in any depth of water) appears to affect the subject's skin, which takes on the "prune-like" texture associated with autonomic nerve responses to prolonged contact with water.

After 2.5 hours of exposure a subject was also found to be significantly dehydrated, despite receiving fluids before exposure to SCP-1356 and sweating minimally.

Addendum 2:

Note.

Of course, it seems we haven't been testing the item's intended *purpose; I'd imagine my nephew would say it works rather well. - Dr. C*

« SCP-1355 | SCP-1356 | SCP-1357 »

SCP-1357: The Children's Park

Item #: SCP-1357

Object Class: Safe

Special Containment Procedures: The perimeter of SCP-1357 is to be monitored by Foundation personnel at all times, with a minimum of two security personnel posted at every entrance and exit of the park. Any persons approaching SCP-1357 are to be detained by Foundation personnel and administered Class-B amnestics. If the persons are carrying instances of SCP-1357-B, the instances are to be confiscated and filed in the Records Room of Site 45 (Cabinet-74) for possible future testing. On the 13th of every month, Foundation agents are to identify the persons receiving the new instances of SCP-1357-B, recover the instances, and administer Class-B amnestics to the persons involved.

Due to the specific personnel required to activate the anomalous properties of SCP-1357, D-Class testing of this anomaly is effectively impossible. Testing of this object may be accomplished by groups of Foundation personnel able to provide the required subjects necessary to manifest SCP-1357-A. Any persons involved in testing that are not directly involved in Foundation matters must be administered Class-A amnestics after testing and monitored for two months for signs of residual memories. Any subjects showing residual memories are to be readministered Class-A amnestics and monitored for another two months. Due to these constraints, all testing must be kept to a minimum and approved by no less than three Level-4 and five Level-3 personnel.

Description: SCP-1357 is a theme park located in , Poland with an area of approximately 4km^2. There are four ticket booths that allow entrance into the park, located at the northern, eastern, southern, and western sides of the area. SCP-1357 houses various attractions normally found at theme parks, such as amusement rides, bumper cars, and assorted booths and stores. No items,

commodities, or snacks require currency of any kind to operate or purchase. The types of rides and attractions seem to be influenced by the preferences of the youngest subject in the group activating SCP-1357's anomalous effects; rides found in non-anomalous theme parks have been observed as well as attractions such as sapient foodstuffs and animals, temporal displacements, and extradimensional portals.

SCP-1357's anomalous properties are activated when a specified group of people enter the park. The requirements of the group are as follows:

- At least two subjects that are involved in a romantic relationship with each other
- At least one subject under the age of 18 that identifies the aforementioned subjects as guardians
- Each subject must carry an instance of SCP-1357-B

When these requirements are met, a group of human individuals designated as SCP-1357-A manifest throughout the anomalous area. SCP-1357-A manifestations vary in age, ethnicity, sex, and gender. All instances are always uniformly costumed; the costumes are typically based on characters from various media[1]. The appearance of SCP-1357-A appears to be strongly influenced by the personal experiences of the youngest subject in the group. The instances of SCP-1357-A appear within the park as both customers and employees and are noted to be exceptionally amiable.

SCP-1357-B are tickets that read "Playland: Admits one person per ticket. Have a magical family experience!" in the native language of the recipients they are delivered to. Instances of SCP-1357-B have been found to be mailed to assorted families around the area, along with directions to the park and a short pamphlet describing SCP-1357[2]. Instances of SCP-1357-B are consistently delivered on the 13th day of every month. The Foundation has not yet discovered the source of the tickets, nor has it found a pattern regarding the recipients of SCP-1357-B. Families have reportedly received anywhere from three to six instances of SCP-1357-B at once. If a ticket is not redeemed for entrance into the park before the 13th day of the following month, the tickets will disappear. SCP-1357-B will allow entrance into the park by any individual, regardless of whether

they were the intended recipient or not. Any personnel that are not carrying SCP-1357-B that attempt to enter the park will be denied access by several instances of SCP-1357-A.

SCP-1357 was discovered when the Foundation was alerted to reports of a "constantly changing alien amusement park" from the town of , Poland. The claims were investigated and traced back to SCP-1357, which was active at the time of discovery. All citizens of the town were questioned and administered Class-B amnestics.

Addendum-1357-Gamma:

> Congratulations! Your family has been selected to participate in some good ol' family fun at Playland! Parents bring your kids and kids bring your parents! Take some time off of working and take some time for playing! We have everything you can want, from roller coasters, to parades, to fireworks and anything else you can imagine, as long as you remember to ask nicely! If you want to talk to a representative, call us at ( ) - [3] or visit us online at .com.

Interview Log-1357-Lambda-1: On 04/08/2005, Agent Fredricks and his immediate family were equipped with audio recording devices that constantly transmitted to Foundation consoles. They entered SCP-1357 using three confiscated instances of SCP-1357-B. Fredricks attempted to interview an instance of SCP-1357-A.

> **Interviewed:** SCP-1357-A-4878, which was dressed similar to "Steve" from the children's program "Blue's Clues"
>
> **Interviewer:** Agent Fredricks
>
> **Foreword:** Agent Fredricks had isolated a single SCP-1357-A subject out of the population wandering around the park for the purpose of this interview.
>
> **<Begin Log>**
>
> **Agent Fredricks:** Can you tell me about this place?

SCP-1357-A: Sure! Playland is a place for all your family fun needs! We cater specifically to *your* family's needs each time, and do our best to make sure you're satisfied!

Agent Fredricks: Who made you?

SCP-1357-A: Mr. Fredricks, that's certainly not important! *[No members of Fredricks's family had previously revealed their last name to any instance of SCP-1357-A.]*

Agent Fredricks: It is important. Please just answer my questions. *[aside to his daughter]* Not right now sweetie, I'm trying to work.

SCP-1357-A: Work? Why, Mr. Fredricks! There's no need to worry about anything so silly as work! Just have fun! Look, your daughter wants you to play!

Agent Fredricks: *[aside to his daugher]* Hailey, I'll be there in a minute, I promise. No, I'm not being mean to Steve. Go over with mom, okay? *[speaking to SCP-1357-A]* I'm afraid that I must work right now. You are exactly why I have my job.

SCP-1357-A: *[sighing]* I'm sorry, but if you can't relax, I'm afraid you're going to ruin the fun for everyone else if you don't stop.

Agent Fredricks: Please just answer the questions. Now, how long has this park been open?

SCP-1357-A: I'm terribly sorry to do this, but you seem to be upsetting your daughter.

<End Log>

Closing Statement: Agent Fredricks was forcibly removed from SCP-1357 by three instances of SCP-1357-A. Agent Fredricks's wife attempted to exit the

park, despite great protest from their daughter. As Adelaide Fredricks attempted to leave the park, several instances of SCP-1357-A separated the subjects, preventing Mrs. Fredricks from reentering the park and leading their daughter by hand back into the park. One of the individuals was noted as saying, "Don't worry sweetie, you don't have to leave if you don't have to! They'll be back for you later, when you're ready."

After the events of Interview Log-1357-Lambda-1, MTF-Delta-2 (aka "Rescue Rangers") was dispatched in an attempt to recover Hailey Fredricks from SCP-1357. Despite superior firepower and training, MTF-Delta-2 was outnumbered and overwhelmed by SCP-1357-A instances and was unable to recover the subject. Further recovery attempts are currently pending.

Interview Log-1357-Lambda-2: Hailey Fredricks's audio recording device continued to trasmit signals after the events of Interview Log-1357-Lambda-1. The following are excerpts of audio received. All voices not positively identified as belonging to Hailey Fredricks are presumed to belong to various instances of SCP-1357-A.

Hailey: Say, why are you a girl Steve?

SCP-1357-A: Why, all the boy Steves are busy getting the park ready for you!

Note: This was received during the failed MTF recovery attempt.

Hailey: This is so, so, so much fun! I never ever ever wanna' leave! I love you, Mr. Steve!

SCP-1357-A: Haha, I love you too, Hailey! I'm so glad you came to join us!

SCP-1357-A: Guess what's here, Hailey!

Hailey: What is it, what is it?!

SCP-1357-A: Heeere comes the mail, it's just a snail, it makes me wanna wag my tail, when it comes I wanna

wail, MAAAIIIL!

Hailey: No, the song goes, um, the song says "it never fails," not "it's just a snail!"

SCP-1357-A: Haha, silly me, I forgot! Anyways, here are your letters. You got one from your mom and your dad. Yaaay![4]

Hailey: Thank you! Um, Steve? I can't read, can you tell me what this says?

SCP-1357-A: Of course honey! "Dear Hailey, we hope you are having a lot of fun! We would love to come visit, but we have so much work and we are tired. Just send us a letter when you want to come home and we'll be there right away! P.S. Daddy says to brush your teeth!"

SCP-1357-A: …and here's the biiiggest bedroom we have. You get to sleep here, Hailey! I hope you like it, we made that big thinking chair just for you! We made sure it was big enough and snuggly enough to sleep on every night.

Hailey: *[squeals]* Oh, I love it! Thank you, Mr. Stevie!

Hailey: Why aren't my mommy and daddy coming yet? I thought I wrote that letter so good…

SCP-1357-A: Oh, Hailey, maybe they're just busy. I'm sure that they'll be right here as soon as they read that letter.

Hailey: Mr. Steve, when is mommy and daddy coming back?

SCP-1357-A: What's the matter honey? Are you not having fun anymore?

Hailey: Oh, I am! I just wanna' know when I hafta go home.

SCP-1357-A: *[laughs]* Oh, Hailey, you're always welcome here!

Hailey: Yay! I'm so happy you're here, Mr. Steve.

Hailey: My legs huuurt and we've been waiting foreeever. Are you sure the letter said they were coming today?

SCP-1357-A: Hm, let me check again…"We got your wonderful letter…found a day off…coming on Saturday…front entrance." Yep, that's what the letter says.

Hailey: Hmph. Can we go back inside? I wanna' slushie.

SCP-1357-A: Of course, Hailey. And while we're there, we can write another letter to them asking why they didn't come when you asked them to.

SCP-1357-A: "Did we say yesterday? Sorry sweetie, we forgot. We were real busy doing our grownup things and didn't remember to pick you up. We're real sorry. I think we have another day off next month, so we can pick you up then! Love, daddy and mommy."

Hailey: *[sniffs]*

Hailey: Steve, do mommies and daddies sometimes stop loving their babies?

SCP-1357-A: Hm, sometimes, I think. Why do you ask?

Hailey: I think my mommy and daddy stopped loving me. *[sobbing]*

SCP-1357-A: Oh, oh, oh, dear friend, don't be upset! We're here to love you even if your mean old parents won't.

Hailey: *[sniffs]* Forever?

SCP-1357-A: Forever!

Hailey: Promise?

SCP-1357-A: Promise. We'll always be here for you even if they aren't.

Hailey: Ms. Steve, I want my mommy and daddy.

SCP-1357-A: Hailey, stop thinking such silly thoughts about those mean people! Here, have some more funnel cake, then we can ride on the carousel again!

Hailey: No! No, no no! I want my mommy and daddy!

SCP-1357-A: *[laughs]* Oh, dearie, they're no fun. I'm here for you now! We're your family! C'mon, let's play!

Hailey: *[sounds of falling objects]* I don't wanna' play no more, Ms. Steve.

SCP-1357-A: Sure you do, silly! Come on, there's a brand new playground that's all for you!

Hailey: Can you take me to them?

SCP-1357-A: Why? Aren't you having fun anymore?

Hailey: I miss my mommy and daddy a whole, whole lot.

SCP-1357-A: But we're your family!

Hailey: Nuh uh! You're my friends. I want my family.

SCP-1357-A: So you don't love us anymore?

Hailey: Of course I do, but I love my family even more!

[There is a prolonged silence.]

SCP-1357-A: *[sighing]* Well, it always happens eventually. C'mon, let's get you to your family.

[approximately 5 minutes of footsteps]

Hailey: Steve? Steve, I think we're lost…

SCP-1357-A: I know, dearie. I know.

Hailey: What's that thing? It looks scary…

SCP-1357-A: You said you wanted your family, didn't you Hailey? Well, come on! This will take you right to them!

Hailey: Prooomise?

SCP-1357-A: Of course, Hailey! I would never lie to you!

Hailey: Well…okay.

[There is a sound of hissing, as well as assorted beeps and whirring.]

SCP-1357-A: See you soon, sister.

Hailey: *[screaming]*

Note: At this point, the audio transmission device ceased functioning.

Incident Report-1357-Zeta: Agent Fredricks returned to SCP-1357 unauthorized the day following the previously described events, and proceeded to kill approximately 30 instances of SCP-1357-A while shouting obscenities. Fredricks ceased firing upon viewing a subject that appeared to be Hailey Fredricks, who approached the front entrance of SCP-1357. The subject hugged Agent Fredricks and said "I told you, I don't wanna' leave yet." Subsequently, two instances of SCP-1357-A approached the agent and rendered him unconscious via blows to the head. Agent Fredricks has been issued a warning for unprofessional behavior and damaging the anomaly.

Incident Report-1357-Eta: Agent Fredricks was allowed to oversee testing of SCP-1357 on 16/10/2005. During experimentation, Agent Fredricks used a spare instance of SCP-1357-B and entered the

area independent of the test subjects. Fredricks sought out the subject resembling Hailey Fredricks and reportedly attempted to converse with it. The subject did not respond and Fredricks ceased attempts at communication after approximately 15 minutes, then left the park.

Site Director's Note: As of 16/10/2005, Agent Fredricks is required to attend a minimum of eight counseling sessions with the on-site psychologist, Dr. Yeats. Futhermore, Fredricks has been hereby reassigned to SCP- and is forbidden from working with SCP-1357. - Site Director Langley

Audio Log-1357-Psi: The following log was transcribed from an intercepted telephone call to SCP-1357 using the number from the pamphlet provided with every delivery of SCP-1357-B. One of the voices has been positively identified as that belonging to Hailey Fredricks.

> **Hailey:** Hello, you've reached Playland, the perfect place for family fun! How may I help you?
>
> **Unidentified Male Voice:** I want my daughter back.
>
> **Hailey:** I'm sorry sir, but I'm afraid your daughter wanted to stay with us. You can always visit, though. Just let us know and we'll send you two complementary tickets! I think she wants to stay, though.

Footnotes
1. Notable characters that instances of SCP-1357-A have shown costumed as include Winnie the Pooh, Barney the Dinosaur, and Batman.
2. See Addendum-1357-Gamma for an abridged transcription of the pamphlet.
3. Foundation calls to this number have revealed no new information other than typical hours of service of the park.
4. Agent Fredricks reported that neither he nor his wife had written letters to their daughter during this time.

« SCP-1356 | SCP-1357 | SCP-1358 »

SCP-1358: Northern Lights

Item #: SCP-1358

Object Class: Euclid

Special Containment Procedures: The perimeter of SCP-1358 is to be fenced off and patrolled from 1930 to 0730[1] by guards dressed in local police uniforms, who are to rotate every three and a half hours. Any sign of wear is to be repaired immediately. Unauthorized personnel are to be informed the area is restricted and ordered to leave; those reluctant to do so are to be detained for questioning. In the event that SCP-1358 is entered for any reason, personnel are to carry omnidirectional flashlights. Instances of SCP-1358-1 that stray within five (5) meters of the perimeter are to be exposed to floodlights until retreat or disappearance.

Description: SCP-1358 is an area of land square kilometers, located in , Canada. It is heavily forested, and experiences snowfall % of the year. For the majority of the day, SCP-1358 lacks any anomalous properties. From 1930 to 0730, SCP-1358 becomes inhabited by entities henceforth referred to as SCP-1358-1.

SCP-1358-1 appear to be animated, illuminated outlines of humanoid figures. They display signs of intelligence, occasionally performing coordinated and complex movements; however, instances of SCP-1358-1 usually appear to wander aimlessly throughout the area of SCP-1358. All attempts to communicate with SCP-1358-1 have been met with hostility, and have otherwise been deemed a failure. No further attempts to communicate are planned at this time.

At 0630, all entities freeze in place. As the sun rises, the illumination of the entities appears to wane, the outlines blurring until SCP-1358-1 resemble solid masses of dim light. By 0730, all instances of SCP-1358-1 have faded completely. This effect can also be replicated with artificial light, although to a lesser degree,

and will usually provoke the entity to retreat before disappearance.

SCP-1358-1 display the ability to locate human life anywhere within the area of SCP-1358. In the event of human introduction into the area, all entities active within SCP-1358 converge on a subject until making contact. Subjects who come in contact with SCP-1358-1 involuntarily tense up, effectively paralyzing them. Instances of SCP-1358-1 then begin climbing up onto each others' shoulders, until level with the apex of the closest tree. The subject is then transported up this "ladder" and placed at the peak of the tree, where they remain until vanishing along with SCP-1358-1. This is unique to humans: entities ignore all other fauna introduced to the area. How either the entities or the subject retain their balance is unknown at this time.

Addendum 1358-A: Reports of unusual behavior by SCP-1358-1.

- 04/12/1989: All instances of SCP-1358-1 materialized on the tops of trees, and remained stationary until disappearance. Humans introduced into the area were ignored.
- 11/23/1992: At 0230, all instances of SCP-1358-1 joined hands and surrounded the nearest tree. At 0448, all instances of SCP-1358-1 disappeared spontaneously.
- 01/15/1997: At 1830, guards on duty reported hearing whispering. SCP-1358-1 did not appear until 0247. At 0300, all instances of SCP-1358-1 became stationary and appeared to look up, remaining this way until disappearance. Reports of whispering continued until 0812.
- 07/09/2002: At 2237, all instances of SCP-1358-1 formed ladders similar to those during human interaction. No human presence was detected inside the zone. At 0012, all ladders began to converge on a central location. Once together, all ladders fell backwards, and remained stationary on the ground until disappearance.
- 12/09/2002: SCP-1358-1 did not appear. At 0730, continuous screaming was heard from within SCP-1358. Upon investigation, a man later identified as D-39411 was found at

the top of a tree. At 0751, three (3) minutes after locating the source of the screaming, D-39411 stopped screaming and fell from the tree. Autopsy revealed D-39411 died from a skull fracture.

Footnotes
1. All times listed are subject to change in correspondence to varying daylight hours caused by changing seasons.

« SCP-1357 | SCP-1358 | SCP-1359 »

SCP-1359: Indulgence in Flesh

Item #: SCP-1359

Object Class: Euclid

Special Containment Procedures: SCP-1359 and accurate pictographic depictions thereof may only be observed remotely, by physically-restrained D-Class personnel. Any organism, including aforementioned D-Class personnel, that does visually observe SCP-1359 or an accurate pictographic depiction thereof, or attempts to enter SCP-1359's containment, is to be restrained and, at project staff discretion, either terminated or, once no longer visually observing SCP-1359 or accurate pictographic depiction thereof, administered a class C amnestic. As an additional precaution, any non-D-Class personnel assigned to SCP-1359 who are exposed to its effect are to be reassigned to a different project.

SCP-1359 is to be housed in standard-sized humanoid living quarters with attached medical suite[1], shielded on all sides by 10cm of reinforced steel. Any opening in this shielding large enough for an adult human to fit through must be only accessible by a double airlock conforming to Access Denial Level 4 standards[2]. Routine monitoring is to be done by an echolocative imaging system and live audio recordings. The user interface of the echolocative imaging system must be programmed to only visually represent SCP-1359 in an abstract manner (e.g., as a rectangular prism or a generic stick figure). Whenever possible, care and maintenance of SCP-1359 is to be carried out by automated or semi-automated systems. If for any reason SCP-1359 requires medical care, it must be carried out remotely by medical personnel working by echolocative and haptic feedback. Any object stained with SCP-1359's blood or other bodily fluids must be disposed of by incineration without human interaction.

SCP-1359 is to be outfitted with a heart rate monitor to confirm life, an implanted radio tag to confirm location, and a prosthetic foot. If SCP-1359's heart rate rises or drops outside of its expected range,

an alarm will go off and staff are to make verbal contact over installed speakers to confirm its safety. SCP-1359 is to be provided with a working computer console on a closed network by which it can submit requests, access approved entertainment media, and contact its assigned medical and psychiatric team via a Foundation-proprietary instant messenger. As SCP-1359 suffers from post-traumatic stress disorder and recurrent depression, it is not to be provided with any sharp implement.

If for some reason SCP-1359 must be removed from its containment, it is to be provided with a burqa of appropriate size modified to have a mirror-coated plastic surface covering the face-veil portion. Before being allowed to leave its containment chamber, restrained D-class personnel must confirm via video feed that no part of SCP-1359's body is visible.

Description: SCP-1359 is a human female of Northern European descent with the birth date / / . It is 168cm tall, and weighs an average of 62kg. **SCP-1359 is missing its right eye**, right ear, right foot, and the little, ring, and middle fingers on its left hand. It also has heavy scarring from the removal of strips of skin. Any organism that visually observes SCP-1359 or an accurate pictographic depiction thereof will be overcome with a single-minded determination to gain access to SCP-1359, remove some part of SCP-1359's body, and consume it. Once a portion of SCP-1359 has been successfully removed and fully consumed, the urge to continue consuming parts of SCP-1359 subsides until the eaten portion has fully passed through the digestive system.

When questioned, people affected by SCP-1359 are unable to provide a coherent motive for assaulting or consuming/attempting to consume parts of SCP-1359. They are not inhibited from identifying their actions as wrong on an intellectual level, and most still retain a cannibalism taboo after the fact, but they are unable to attach appropriate negative emotional responses (e.g., remorse, disgust) to the act of attacking SCP-1359, the act of eating a portion of SCP-1359, the act of attempting to perform either of the previous, property damage or harm to themselves or others caused by their efforts to carry out their compulsion, or the sound at any volume of SCP-1359 petitioning them to halt their actions. Subjects with

otherwise high levels of empathy may become distressed when made aware of this emotional dissonance, but will still not be able to directly attach negative emotions to the above-listed events. In double-blind tests in which subjects were presented with five different hair or blood samples, one of which belonged to SCP-1359, subjects consumed the samples belonging to SCP-1359 without prompting 100% of the time. 85% of subjects reported a sense of great peace and satisfaction after consuming a portion of SCP-1359.

Addendum: SCP-1359 was brought to the Foundation's attention after it contacted police to report that it had been abducted and held in the basement of one Dr. C B , a civilian surgeon, for a period of six years. The first responders fell under its effect, and automatic 911 dispatch keyphrase monitoring flagged the incident for intervention by Mobile Task Force Iota-10 (aka "Damn Feds"). SCP-1359 incurred minimal damage during initial containment by offering its hair to responding operatives. Dr. B was taken into Foundation custody and treated for a concussion, broken leg, and spinal injuries inflicted by SCP-1359 with a crutch prior to making its 911 call.

Later interrogation of Dr. B corroborated SCP-1359's story, with the additional information that he only began eating parts of SCP-1359 after roughly the first two years of its captivity, and developed a highly ritualistic process for his cannibalism over a few months.[3] He was diagnosed with severe erotomania, with SCP-1359 as the target of his delusions. After review by a Human Resources panel, Dr. B was designated D- under Protocol 12.

Addendum: SCP-1359's parents were located and interviewed on / / .[4] They were unable to provide photographs of SCP-1359, and, when pressed, admitted to having started consuming their photographs of SCP-1359 about two and a half years after its initial disappearance. They were administered Class B amnestics and are being monitored as minor persons of interest.

Investigation into persons possessing yearbooks with photographs of SCP-1359 in them revealed that 43% of them had removed and consumed photographs featuring SCP-1359 sometime after the same two-and-a-half-year period cited by SCP-1359's parents. 80% of that 43% possessed yearbooks from the year before SCP-1359's

disappearance.

Footnotes
1. See Document 1359-03-b for detailed medical suite requirements.
2. To qualify as Access Denial Level 4, an airlock must be filled with nitrous oxide by default and require the simultaneous cooperation of at least three people to operate any function other than flooding the airlock with nerve gas.
3. See Document 1359-05-a for full transcripts.
4. See Document 1359-05-b for full transcripts.

« SCP-1358 | SCP-1359 | SCP-1360 »

SCP-1360: PSHUD #31

Item #: SCP-1360

Object Class: Euclid

Special Containment Procedures: SCP-1360 is to be restrained within a humanoid containment cell at Site-19. The presence of four security personnel is required prior to entry. Restraints may not be removed unless specifically required for testing. For communication purposes SCP-1360 is to be provided with a pen and notebook.

Description: SCP-1360 is an animate, fully articulated, android. SCP-1360 stands at 1.83 m tall and weighs 100 kg. Two white PMMA circles, approximately 3 cm in diameter, represent the android's eyes. SCP-1360's body is composed of molded polycarbonate casings over an aluminum frame. These casings are covered in a black fabric of unknown composition, referred to as SCP-1360-1. This covering acts as a skin and has a universal thickness of 1 cm. The serial number 031 is woven into SCP-1360's left arm in a red variant of SCP-1360-1.

Testing to identify SCP-1360-1 has so far met with limited success. The material is a type of aramid fiber with a tensile strength of approximately 4000 MPa, along with a gravity of 1.1, making the material lighter and stronger than Kevlar. The material is self-repairing, with adjacent damaged SCP-1360-1 fibers reweaving and fusing back together. SCP-1360-1 is also capable of repairing damage to SCP-1360's polycarbonate casings, as SCP-1360-1 fibers will fill in damaged areas during the repair of the outer covering. All samples of SCP-1360-1 disintegrate after 48 hours of separation from SCP-1360.

SCP-1360's fingers contain a series of tools. These tools are accessed by unscrewing the tip of the finger, and include:

- A steel needle attached to a roll of red thread made from the

same material as SCP-1360-1. (Left thumb)
- A roll of patches made of the same material as SCP-1360-1: 5.1 cm wide. (Left index)
- A pair of miniature steel fabric scissors. (Right thumb)
- A steel scalpel (Right index)

Both middle and ring fingers are hollow and serve as storage space.

SCP-1360 is intelligent and displays a clear knowledge of unarmed combat and firearms usage. It is obsessed with escaping and subsequent return to an entity it refers to as "**Anderson.**"

SCP-1360 claims to feel pain despite its apparent lack of a nervous system. It claims that this pain is the result of a component having been removed prior to containment and as a result views itself as incomplete.

Despite being incapable of speech, SCP-1360 can read and write English, Japanese and German fluently. Interviews have been moderately successful, though escape and repair are favorite topics of conversation.

Addendum: 1360-A: The following message was discovered on a flash drive within SCP-1360's right middle finger upon recovery.

> **IMPORTANT: DO NOT DISCARD**
> Dear James,
>
> Congratulations on the purchase of your new **Peregrine Series Humanoid Utility Droid (Civilian Model)**. Unit #31 comes equipped with the following standard features:
>
> - Preprogrammed Personality #4 (Hector).
> - Full understanding of up to three languages (English, Japanese and German).
> - Our standard aramid covering and full self-repair functionality.
>
> As you discussed with Mr. Saker during your consultation meeting, #31 has also been altered to

include your requested modifications, these include:

- Removal of Vocalization Capabilities.
- Our Advanced Firearms Skill Set.
- Our Advanced Unarmed Combat Skill Set.

Like the **Kestrel** and **Merlin** units you have purchased, #31 has been programmed to take commands only from yourself and your daughter. In addition it can also serve as a command unit. With your permission, #31 is capable of issuing commands to your other droids in your absence.

It is important to note, however, that unlike your previous purchases, #31 contains a highly adaptive artificial intelligence to make the unit's interactions more human and personal. #31's personality will evolve over time based on its interactions with you and your use of the unit. Within a matter of days #31 can become both your daughter's best friend and your most loyal servant.

As with your other units, please do not attempt to repair #31 if malfunctioning. In the event that you become unsatisfied with the unit's performance, please lock this flash drive back into place within the right middle finger storage compartment and speak your return phrase. #31 will then automatically return to one of our facilities and you will be contacted with more information on replacing or refunding your purchase.

As always, it's a pleasure doing business with you.

Anderson

Addendum: 1360-B: On **17/11/2009**, following a fourth failed escape attempt, the following note was found in SCP-1360-'s cell:

Return signal terminated. We're better off keeping you where you are.
We're sorry, #31.
Anderson

As of this date SCP-1360 has ceased all communication with Foundation personnel. In addition, SCP-1360 has also ceased all resistance to containment and SCP-1360-1 collection.

« SCP-1359 | SCP-1360 | SCP-1361 »

SCP-1361: Animal By-Product

Item #: SCP-1361

Object Class: Safe

Special Containment Procedures: The primary sample of SCP-1361 is to be kept in an environmentally sealed chamber at a constant temperature of 4°C. SCP-1361 is to be fed a small mammal weighing 1-5 kg once per day, or as necessary to maintain its mass within 45-65 kg. In the event that the primary sample's mass exceeds 107 kg, 50% of its mass is to be removed and destroyed by incineration. All incinerations of SCP-1361 material are to be performed in environmentally-sealed areas and air is to be completely filtered before dispersal into the atmosphere. All persons handling SCP-1361 are to make use of a portable oxygen supply and wear appropriate safety gear.

Secondary samples of SCP-1361 may be produced as necessary for testing purposes, using D-class personnel scheduled for termination as seed material. All secondary samples are to be stored in a separate environment from the primary sample.

Description: SCP-1361 is an amorphous mass of animal tissue, similar in appearance to mechanically separated meat. Tissue analysis indicates that SCP-1361 contains DNA markers from 37 distinct species, including *Bos taurus*, *Gallus gallus*, *Sus scrofa*, *Felis catus*, *Canis lupus*, *Mesocricetus auratus*, *Columba livia*, and *Homo sapiens sapiens*, and that it consists primarily of muscular and connective tissue and fat. SCP-1361 also contains high concentrations of ammonium hydroxide and is caustic to exposed flesh. SCP-1361 possesses no sensory organs or internal structure and demonstrates no indications of being intelligent or aware of its environment.

Due to its lack of specialized organs, pieces of SCP-1361 can be removed or reattached without any harm to the organism or the

removed portion. SCP-1361 is capable of limited locomotion along flat surfaces by means of contracting and expanding itself. SCP-1361 has been observed to move at a constant rate of 1.3 meters per minute, irrespective of its current mass. Quantities of SCP-1361 smaller than 5 kg do not demonstrate an ability to move. When not interfered with by outside stimuli, SCP-1361 will move in a straight line until it encounters a barrier larger than its current height, at which point it will begin moving in a different direction.

If SCP-1361 encounters any biological matter while traveling, it will attempt to form itself around it and engulf the object. Within 15-30 minutes of engulfing a biological object, SCP-1361 will digest it and its mass and volume will increase by the mass and volume of the object engulfed. SCP-1361 has demonstrated an ability to digest any plant or animal matter introduced to it, including wood, clothing, hair, bones, and samples of organic SCP objects not known to be destructible by conventional means. Non-organic material contained within the consumed object is not digested and remains within SCP-1361 indefinitely. SCP-1361 does not excrete any waste after feeding. SCP-1361 loses mass at a rate of 1 kg per day and must consume at least that much to maintain its mass. If not fed, SCP-1361 will continue to lose weight until it is no longer capable of locomotion, at which point it will begin to spoil and grow mold; SCP-1361 can be considered dead at this point and will no longer feed. Rate of decay, and the corresponding requirement to feed, increases dramatically if the temperature of SCP-1361 is above 20°C.

If SCP-1361's mass exceeds 107 kg, it begins exuding a highly pleasant aroma, described by a D-class handler upon accidental exposure as smelling "better than a rare steak, crispy fried bacon, and a wet [EXPLETIVE DELETED] all rolled into one." Humans and other carnivorous animals exposed to SCP-1361 in this state will experience a strong desire to approach and consume SCP-1361, uncooked, regardless of the caustic damage caused to the hands, mouth, and throat by this process. Once eaten, the consumed matter will begin to engulf the subject from the inside, digesting and turning them into another instance of SCP-1361 over the course of approximately 4-6 hours. Testing indicates that consuming approximately 0.5% of the subject's body weight in SCP-1361 is

necessary for the transformation to occur; however, individuals exposed to SCP-1361 and allowed to do so frequently consume far in excess of this amount, beyond the normal ability of an individual of their species. All secondary samples of SCP-1361 produced in this manner behave identically to the primary sample, except that DNA markers from the individual consumed will now be present.

SCP-1361 remains in this state until its mass drops below 50 kg, either due to being consumed, due to pieces of it being removed, or due to loss of mass from not eating. Testing has indicated that the ability to digest a subject after being consumed is not limited to the periods when SCP-1361 is emitting the scent described above and that it persists after being cooked. The scent given off when SCP-1361 is cooked has been described as more pleasant than its uncooked scent; D-class personnel exposed to it have engaged in irrational behavior and physical violence in an attempt to gain access to samples of cooked SCP-1361.

« SCP-1360 | SCP-1361 | SCP-1362 »

SCP-1362: The Cartographers' Guild

Item #: SCP-1362

Object Class: Euclid

Special Containment Procedures: One square kilometer of Greenland has been designated as SCP-1362's containment area. Personnel stationed on the outside of this zone are to monitor SCP-1362-1's daily movements and any changes to the smoke they produce. Security personnel are to turn back any trespassers, and signs warning of land mines have been placed in a 3 kilometer radius around SCP-1362.

Foundation personnel are to suppress any reports of SCP-1362's smoke signals, and disseminate rumors of amateur survivalists creating the signals to local populations. Any subjects viewing SCP-1362 phenomenon are to be detained, interviewed, issued Class-C amnestics, and released to their homes.

Description: SCP-1362 designates a 500 square meter area within Greenland. A cube composed of graphite, measuring 12cm x 12cm x 12cm, is located at the center of SCP-1362. A small circle is engraved into the top of this cube.

SCP-1362-1 designates 6 humanoid figures which manifest within SCP-1362. Instances of SCP-1362-1 are 1.6 meters tall and weigh 72 kilograms. They are each dressed in a black shirt, pants, and sandals, with no visible branding or other identifying marks. The upper body of all SCP-1362-1 instances constantly produce a thick, black smoke, which obscures their faces and upper torsos.

When active, instances of SCP-1362-1 will attempt to signal any transportation it can view, waving to any incoming Foundation vehicles or personnel stationed around its containment area. In addition to waving, instances of SCP-1362-1 will stick thumbs out, whistle, and attempt to block the vehicle from exiting by surrounding

it. SCP-1362-1 instances will not exit their containment area to pursue these vehicles.

When no vehicles are present outside of the containment zone, instances of SCP-1362-1 will slowly walk along the perimeter or interior of SCP-1362, making notes of the surrounding area. Each instance categorizes different information about the surrounding topography. Once every 24 hours, all instances will gather at the granite rock within SCP-1362, and send a string of smoke signals shaped like English characters into the air, forming messages.

Instance	Behavior
SCP-1362-A	SCP-1362-A will slowly walk along the perimeter of SCP-1362, transmitting smoke signals that transcribe to observations in English about its surroundings and producing a significantly smaller amount of non-communicative smoke.
SCP-1362-B	Rolls along the ground within SCP-1362, reporting the composition of the topsoil, the rate of decomposition from any organic matter beneath the soil, and the rate of continental drift experienced by Greenland.
SCP-1362-C	Will comment on the quality and makeup of the atmosphere within SCP-1362, and any notable changes to its makeup. SCP-1362-C will note any unusual gases it encounters, and give personalized names to unusual pockets of gas.
SCP-1362-D	SCP-1362-D is completely silent, but reacts to any persistent or unusual sound which is produced within or outside SCP-1362. Appears to be attracted to loud,

	sudden noises more than persistent wildlife, and has become less reactive to expected noises as SCP-1362 has been in containment.
SCP-1362-E	Consumes the soil, plant life, and any edible non-organics which enter SCP-1362, commenting on their texture and nutritional value, and speculating on how it could be used if cooked or baked. If consuming hazardous material, SCP-1362-E will comment on its symptoms and any unusual feelings it experiences. If consuming a fatally hazardous material, SCP-1362-E will suddenly excrete all hazardous material from an orifice instead of dying.
SCP-1362-F	Speculates on possibilities of sudden weather conditions, prehistoric life suddenly emerging from the woods surrounding SCP-1362, getting a ride to a new location, the earth beneath it being torn open causing SCP-1362 to fall into the earth's core, and other fantastic situations.

Addendum: Log of smoke signals originating from within SCP-1362.

> **Date:** / /19
> **Signal:** Initial: Cold barren trees. Life minimal. Unsuitable.
>
> **Date:** / /19
> **Signal:** Small settle exists around. Attempt transport to

reach additional spots.

Date: / /19
Signal: Unable to acquire transport.

Date: / /19
Signal: Whole place is trees forever. Land is primarily barren, cold, useless.
Note: No instances of SCP-1362-1 had left SCP-1362.

Date: / /19
Signal: Survey nearly complete. Ready next spot.

Date: / /19
Signal: Survey complete. Awaiting transport.

Date: / /20
Signal: Transport necessary. No more learned here.

Date: / /20
Signal: Sudden changes. Please soon end.
Note: *No notable events preceded this signal. Testing had been concluded approximately 34 years before this message was created.*

Date: / /20
Signal: Out. Please. Done

No additional signals have been created as of / /20 . Alterations to documentation are pending.

SCP-1363: Possessed Virus

Item #: SCP-1363

Object Class: Euclid

Special Containment Procedures: A 5mL vial containing a sample of SCP-1363 is kept in refrigerated biological storage at Bio-Research Site-101. Level 3 Biohazard Protocols are to be observed whenever research is performed on SCP-1363.

Personnel who begin to exhibit symptoms of SCP-1363 infection are to submit to blood testing. In the event of a breach, BRS-101 is to enter lockdown, and infected individuals are to be quarantined under Level 3 Biohazard Protocols. Personnel who recover are to be released one (1) week after symptoms cease. Remains of personnel who expire are to be incinerated.

Requests to interview SCP-1363-1 require the express approval of two (2) Level 3 Researchers. Interviews are only to be conducted while infected subjects are sedated.

Description: SCP-1363 is a highly contagious human specific virus which infects epithelial tissue. Transmission occurs through physical contact with infected bodily fluids. The virus is capable of rapidly mutating resistance to hostile agents, thus far rendering all antiviral treatments ineffective.

Infection by SCP-1363 occurs in three (3) stages:

- Stage 1 begins between three (3) days and one (1) week following exposure with subjects reporting a sour, metallic taste and persistent headache. Testing at this stage reveals SCP-1363 present in the blood. Scrape-like skin lesions appear on the extremities through unknown means. This effect is reported to be painless, albeit unnerving.
- Stage 2 occurs between two (2) and three (3) weeks following

exposure with subjects developing severe and widespread arthritis, as well as anemia and a progressive suppression of the immune system (which is fatal in approximately 7% of cases). At this point, lesions will start to form coherent words and sentences, which are controlled by two entities, collectively designated SCP-1363-1. It is possible to communicate with both entities by writing queries onto subjects, at which point lesions rapidly rearrange into responses. This rearrangement process is also painless, but has been shown to cause panic in subjects.

- After 5 months, SCP-1363 will cease replicating, marking transition into Stage 3. At this point, the virus naturally is filtered out by the renal system, followed by a cessation of all symptoms. In all cases, no traces of SCP-1363 remain in the body after seven (7) months.

SCP-1363-1 consists of two entities, designated SCP-1363-1-A and B. SCP-1363-1-A claims to be the late H D , while SCP-1363-1-B claims to be the late L S . Both instances of SCP-1363-1 appear to be unaware of their nature, but nonetheless are very amicable in personality, have demonstrated in-depth knowledge of 1940's era nuclear physics, and appear to enjoy interaction. Interviews with the subjects have been very informative, and both entities are extremely willing to divulge personal information.

On September 15, 1945, the first recorded outbreak of SCP-1363 infection occurred at the Los Alamos National Laboratory, resulting in the infection of researchers. However, it wasn't until an additional outbreak on May 30, 1946, a further infections, and deaths that a quarantine was put into place and the virus was discovered.

As of / /197 , SCP-1363 is contained in BRS-101 and is classified as Euclid.

Addendum 1: Interview Log 1363-1-B-3

> **Interviewer:** Dr.
>
> **Interviewed:** SCP-1363-1-B

Foreword: Interview conducted through subject D-9356.

<Begin Log>

Dr. : Hello SCP-1363-1-B.

SCP-1363-1-B: Please, call me L .

Dr. : OK, L , I would like to ask you some questions regarding your origins.

SCP-1363-1-B: No problem. Well, I was born in [IRRELEVANT DATA REDACTED] So in May of that year I was performing some criticality testing on [REDACTED], right? The same one that killed H . I'm being a little fast and loose like always, when my hand slipped, and there was immediately this blue light. I pulled apart the assembly, and told everyone to mark their spot on the ground.

Dr. : What happened next?

SCP-1363-1-B: Then we left the building and I started throwing up. I was in the hospital for a few days, I knew I was done for. It was pretty bad, you know the effects of radiation?

Dr. : I am aware of the effects of radiation exposure. Continue, L .

SCP-1363-1-B: See, my memory kinda gets hazy then, I must've been delirious or something. The next thing I knew, I'm floating in this void, but I can see some of my buddies. So I try talking to them, but then they start freaking out like they think their skin is gonna fall off.

Dr. : Do you know why they were acting that way?

SCP-1363-1-B: Nope. I can't see them anymore, all I can see is a guy in a prison suit. Are you that guy?

Dr. : No, that's D-9356. My name is Dr. . Do you know

how I'm communicating with you?

SCP-1363-1-B: You're talking to me, right doc? I can hear your voice, I just can't see you. Where are you?

Dr. : I was about to ask you the same question, L .

SCP-1363-1-B: I'm with H . So I guess I'm dead.

<End Log>

« SCP-1362 | SCP-1363 | SCP-1364 »

SCP-1364: Ultra-Vulnerable Mammal

Item #: SCP-1364

Object Class: Safe

Special Containment Procedures: At this time, there are no means of keeping SCP-1364 completely safe, and methods are currently being researched into the minimization of damage dealt to SCP-1364. SCP-1364 should be contained within two interconnected 10 m x 10 m x 5 m chambers with 40 cm padded impact-resistant polyester lining on all inside surfaces. The areas should remain completely devoid of light and external sound. The containment chambers should be kept completely empty to ensure SCP-1364 remains docile and 'healthy'. Any observation of damage taken by SCP-1364, or any signs of pain should be dealt with promptly with any resources available to aid in minimizing damage.

One cell is to be kept at a temperature of 20°C at all times; the cell opposite is to be kept at 30°C. The chambers should be positioned in such a way to provide easy access between each for SCP-1364.

Personnel are forbidden to interact with SCP-1364 in any way save for manipulation of a projector using shadows to depict calming situations on the wall of SCP-1364's containment chamber. A Foundation-issued audio CD entitled "Nature Sounds" is to be on constant playback within the cell at a volume of 10 decibels, looping alongside playback similar to Shepard tones.

The chamber itself is to be filtered for contaminants on a low cycle each hour.

Description: SCP-1364 is a small, mammalian creature resembling an anteater. SCP-1364 is friendly, on certain occasions attempting to embrace researchers with an elongated tongue located near its nostrils. It does not appear to be sapient, and shows limited if diminishing signs of intelligence.

SCP-1364 has extremely poor endurance and mobility depending on its current state. SCP-1364's physical form remains relatively static when unexposed to a significant amount of stimulus; however, the creature grows increasingly vulnerable to even the most negligible of stimulus with prolonged exposure. The subject seems to respond normally to a stimulus on the first exposure, but repeated stimulus is exponentially more harmful.

Despite the presence of a digestive system, SCP-1364 does not seem to require sustenance; testing reveals that the creature in fact fares better without it, as the process of mastication, swallowing, digestion, and defecation results in significant bodily stress. The cause of SCP-1364's extreme vulnerability has not yet been discovered, as the body shows no specific physical anomalies.

SCP-1364 appears to heal at a standard rate when left alone.

The creature was discovered after repeated reports of its disappearing and reappearing beneath floors and inside walls at Zoo's nursery prior to containment; amnestics were administered to witnesses after recovery.

Addendum 1364-A: Documentation of first experiment with SCP-1364 by Site Biologist Dr. Sanders.

> **Dr. Sanders:** Hi there, little guy. We're going to-
>
> *SCP-1364 appears to shield its ears with its paws.*
>
> **Dr. Sanders**: Hey, what's wrong, little fella?
>
> *SCP-1364 begins to 'cry', emitting liquid from tear glands and vocalizing a low wail.*
>
> *Dr. Sanders attempts to pick up SCP-1364.*
>
> *SCP-1364 starts to rub its eyes. Skin in contact with the tears begins to burn slightly. Hair begins to fall off.*
>
> **Dr. Sanders (yelling):** Someone get in here! What the hell is wrong with this thing?

SCP-1364 begins bleeding from the ears.

Dr. : *(To Dr. Sanders via microphone)* Abort testing.

Dr. Sanders places SCP-1364 on the floor of the containment chamber and exits the cell.

SCP-1364 curls into a fetal position and begins rocking back and forth.

<End Log>

Addendum 1364-B: Stimulus Testing:
Foreword: Repeated applications conducted within 5 minutes of each other. The effect of exponential sensitivity seems to reset after a period of a few hours.

Stimulus	Effect
Physical	
Water	Hair loss, subject appears distressed.
Saline	Negligible skin irritation, subject appears distressed.
Exposure to candle	Subject covered in first degree burns, subject becomes temporarily comatose.
Droplet of ethanoic acid	Droplet burned through subject's paw, subject appears extremely distressed.
Subject rubbed against Copper (x1 application)	[DATA EXPUNGED]
Subject dropped lightly on natural rubber surface	No noticeable physical effect.
No stimulus	Subject appears distressed.
Sound	
Utterance of "Hello" by Dr. Sanders, conversational. (x3 applications)	No noticeable physical effect, subject appears distressed.
Utterance of "Hello" by Dr. Sanders, voice raised. (x3 applications)	Discharge of blood from ear canal, subject appears distressed.

Light	
Daylight *10 hours*	No noticeable physical effect aside from very mild skin irritation.
Fluorescent office light *8 hours*	Subject appears disoriented; eyes close tightly.
Aimed floodlight *2 hours*	Light appears to pass through the subject in certain places. In these spots the skeletal system of SCP-1364 is clearly visible, as are the circulatory system and some internal organs. Hair appears to glow white. Subject appears to levitate until the light is switched off. No physical damage can be noted aside from negligible burns.
Arc lamp *1 hour*	Similar results as previous, although all internal structure of SCP-1364 is completely visible.
Beam at 30 billion candle power *45 seconds*	Subject appears to disappear while the light is working. Personnel equipped with welding goggles attempting to make physical contact with SCP-1364 are unsuccessful. SCP-1364 is found on the inside of the cell wall and was clearly visible when the power from the light is removed.

Note: Further physical tests are not recommended, although research is currently underway regarding the cause of the particular transmogrification during the copper testing.

« SCP-1363 | SCP-1364 | SCP-1365 »

SCP-1365: Bike Justice

Item #: SCP-1365

Object Class: Safe

Special Containment Procedures: SCP-1365 is to be kept in its containment chamber at Site 73. A mockup bike rack created for containment purposes has proven sufficient at neutralizing SCP-1365's teleportation abilities; in order to ensure it does not breach containment, no bike racks or other structures designed for temporary bike storage are to be constructed within a 100 metre radius of SCP-1365's containment chamber. Testing requires the approval of a Level 3 administrator and is only to be carried out by D Class. During approved testing, medical staff must be on call in the event that the test subject survives its encounter with SCP-1365.

Description: SCP-1365 is a 2007 brand bicycle, serial number [REDACTED]. SCP-1365 is unremarkable in appearance, aside from being in excellent condition and bearing a small sticker reading "BIKE JUSTICE" attached to its main body.

Whenever a human attempts to mount SCP-1365 and ride it for a distance greater than 20 metres, SCP-1365 enters its active state. Subjects will find themselves unable to control their legs or arms, with both being used to steer and power SCP-1365 without any direction or guidance from the subject. After ten minutes or 500 metres of travel, whichever is sooner, SCP-1365 will forcibly dislodge the subject, either via crashing into an inert object or simply throwing the subject off. In 90% of cases, the force used by SCP-1365 is sufficient to kill or fatally wound the subject upon impact, with the remaining 10% of subjects usually suffering a permanent disability impeding motor functions, such as paralysis.

Three to four hours after the death or incapacitation of the subject, SCP-1365 will vanish from its current location and reappear at the nearest location designed for the temporary storage of bikes in

public places. Through unknown means, any damage sustained during the previous activation event will be repaired, and any evidence of previous use (such as blood stains from a previously killed subject) will be removed. Separating sections of the bike and putting them in different locations results in all separated pieces reforming at the storage location within the allotted time.

In all cases, SCP-1365 has never been accompanied by a bike lock or similar anti-theft device. While SCP-1365 displays no compulsive or memetic properties encouraging subjects to use it, it is nonetheless frequently activated if left uncontained, likely due to its pristine condition and the lack of anti-theft measures normally taken to protect a bike.

Addendum: After an activation event on 22 Jul 20 , a note was found attached to the body of D-34242, the deceased test subject. The note was of the same composition as the "BIKE JUSTICE" sticker on SCP-1365, and was considerably difficult to remove:

> **SHAME THE STEALERS**
>
> BIKES ARE **EXPENSIVE**, AND ALL WHO TAKE THEM FROM OTHERS ARE HUMAN **SCUM**.
>
> **NOW IS THE TIME TO STRIKE!**
>
> WE CAN **BEAT THEM** IF WE **TRY!**
>
> **BIKE JUSTICE**

« SCP-1364 | SCP-1365 | SCP-1366 »

SCP-1366: The Rumor Mill

Item #: SCP-1366

Object Class: Euclid

Special Containment Procedures: SCP-1366 is contained behind a 3m tall chain link fence, to be checked for breaks at least once weekly. 4 guards are to patrol the perimeter at all times. Motion-detecting cameras have been set up around the perimeter to detect breaches; Foundation agents should be prepared to respond to 1366-Outburst events taking place within 120 seconds. Individuals breaching or attempting to breach the perimeter are to be questioned and administered Class-A Amnestics before being returned to civilian populace.

The only road leading into Site-403 is guarded by a checkpoint in order to assure no individuals affected by SCP-1366 Outburst events attempt to escape. A 3-km perimeter has been set up in the woods surrounding Site-403 with olfactory, auditory, and visual deterrents throughout, with a quarantine perimeter at 1km; citizens have been informed that this is due to the town's status as a State Park. Inhabitants of Site-403 are unaware of their circumstances, but co-operative to Foundation agents, believing them to be members of the State Park Rangers.

Site-403: Site-403 is the town of Town of Siskin, , USA, located in the northwestern region of County. The 2010 census conducted by the Foundation shows that Site-403 has a civilian population of roughly 6000, with 400 extended families. The majority of the populace are farm or lumber workers, or work at local businesses. The total area of the town encompasses approximately 9.5km2, and is secluded in a heavily wooded area. Standard protocols for an Asphodel Class **Nexus** are in place.

The mayor of the town, the city council, and local law enforcement are to be briefed about the circumstances surrounding the

containment of SCP-1366 and recruited as operatives with the clearance level E1/1366; however, they are not to have any knowledge of the Foundation beyond SCP-1366. Site-403 is to be maintained with a cover story regarding the town's status as a historic State Park.

Description: SCP-1366 is an abandoned sawmill located on the [REDACTED] river near Site-403. Originally built by the Siskin Logging Company in the 1820s, it was abandoned after a series of accidents, eventually resulting in the death of the owner, Wilhelm Siskin. Though abandoned for well over one-hundred and fifty years, SCP-1366 is remarkably stable, despite the exterior appearing to be on the verge of collapse.

When unobserved, the head saw of SCP-1366 will activate sporadically. Following activation, a single canted log of unknown origin is dispensed onto the log chute and deposited outside of the mill. The log, designated SCP-1366-A, is invariably carved on its interior with a piece of writing, typically 2-8 words in length. The writing will present itself in the form of a sensationalist headline of dubious credibility, which will may later be published as a news story in the local paper, the Siskin Gazette. Publication of stories occur regardless of whether or not SCP-1366-A has been observed by a member of the civilian populace, or even if SCP-1366-A is intact.

A 1366-Outburst event occurs approximately 68% of the time following the publication of the story. 1366-Outburst events cause major psychological changes in the populace, including xenophobic behavior, psychotic episodes, paranoia, increased promiscuity, bouts of amnesia, and failure to notice or acknowledge the disappearance of inhabitants of Site-403.

All Outburst events follow a distinct timeline:

- **Phase 1:** The writing presented on SCP-1366-A is published as a headline in the Gazette, with an accompanying news story. Sources of the article are never cited, and fictional cities in several states and countries are often named. Stories typically are about incidents such as mass media influencing violent or deviant events, use of fictional drugs among teenagers, satanic cults, and serial killers. All stories will be

treated as completely factual by the populace.

- **Phase 2:** Residents of Site-403 discuss the story in public and among their families. At this point, the majority of the populace believes that the the story is of little concern; about 5% of the population show mild interest or concern.

- **Phase 3:** Once approximately 85% of the population is aware of the story typically around 1-12 individuals knowledgeable of the story start deviating from their normal behavior; individuals will become more reclusive and psychotic in behavior, small groups will develop interest in activities or items such as listening to certain genres of music or playing table top games, and larger groups will start to experiment with recreational drug use.

- **Build-up:** It is at this point that random acts of violence begin to occur. Slightly more mundane behavior includes greater frequency in parties and drug use among teenagers and young adults. Individuals will attempt to breach the perimeter surrounding SCP-1366 and use it as a secret meeting place or hideout. Subduing the instigators of this behavior at this point will result in the termination of the current event, leading straight to the dissipation phase. In the event that the Outburst event terminates prior to Phase 4, the corresponding instance of SCP-1366-A spontaneously combusts and is reduced to ashes within five minutes of ignition.

- **Phase 4:** To date, there have only been recorded Outburst events that have reached the climax stage. Events reaching this stage usually result in a mass murder, rioting, and outbreaks of disease, usually connected to or taking place within SCP-1366. Instances of SCP-1366-A corresponding to events that have reached the climax phase have been noted to have several centimeters removed from them, the amount cut off roughly corresponding to the number of fatalities that occurred during this phase.

- **Phase 5:** Approximately 36 hours after the onset of Phase 4, all anomalous activity abruptly ceases. Surviving residents involved in the event return to their homes and soon forget

about their experiences, saying that "the past few days were all a blur". Individuals who were terminated in the event will routinely be given a funeral within a week of their death. The town is effectively reset until the next Outburst event.

Addendum: Partial 1366-Outburst Event Log:

Show Event Log

Event Designation 1366-Outburst-01
SCP-1366-A Message ELECTRICIAN STILL ON THE LOOSE IN RENARD
Summary of Story Story describes a serial killer known as the Electrician, notable for killing all of his or her victims by electrocuting them, typically by connecting the genitals of the victim to car batteries or electrical wires.
Outburst Description Robert Kramer, a utility worker, suffered a psychotic breakdown while at work and assaulted a co-worker with a live wire before fleeing. Mr. Kramer was not found for over a month, during which several murders took place in the town mirroring murders described by the story. Local authorities eventually tracked Mr. Kramer to SCP-1366, where he had made a hideout supplied with various electrical equipment.
Aftermath Mr. Kramer was subdued and taken in for questioning, during which he reported that he had no knowledge of committing his crimes, despite the overwhelming evidence.
Notes First known 1366-Outburst incident; town records show that several similar incidents have occurred in earlier years, but have largely been more mundane before this time. The Foundation began investigating after finding reports of the story and the incident being similar. Containment established within three months of this incident.

Event Designation 1366-Outburst-03
SCP-1366-A Message VIDEO GAMES LEAD TO ORGY OF BLOOD AND VIOLENCE
Summary of Story Story indicates that several teenagers went on a shooting spree in connection to the

video game "Murdersport 5". No such video game exists.
Outburst Description Several teenagers were found to be playing copies of "Murdersport 5", which was a total modification of the video game "Grand Theft Auto 4." All teenagers playing the game had access to firearms.
Aftermath All games recalled due to "manufacturing flaws which cause the disk to shatter in the console when spun at too high speeds". No casualties resulted, and all copies returned without protest.
Notes First known example of a failure of a 1366-Outburst event, and spontaneous combustion of an instance of SCP-1366-A.

Event Designation 1366-Outburst-05
SCP-1366-A Message BOUDICCA: THE NEW KILLER DRUG
Summary of Story Article describes a drug known as Boudicca, apparently made from fermenting dandelions, ragweed, crabgrass, and various other weeds and drinking the resultant substance. Apparently, the mixture is a hallucinogenic, an aphrodisiac, and often fatal.
Outburst Description A group of 5 teenagers attempted to replicate the drug from a home-made recipe, meeting at 1366 to partake in the drug and have sexual encounters while under its influence.
Aftermath All individuals were arrested for trespassing; the drug, when tested on D-Class subjects, was found to be a minor stomach irritant with no other effects.
Notes This incident took place prior to the construction of the fence around SCP-1366-A; therefore, the group was easily able to enter the structure.

Event Designation 1366-Outburst-14
SCP-1366-A Message 666 BRIDES CULT COMMITS MASS SUICIDE
Summary of Story Story describes an all-woman cult known as the Six-Hundred and Sixty Six Brides of Mephistopheles. The cult was dedicated to "ridding the world of men through use of Demonic powers". A large sect of the cult had walked into an abandoned

warehouse, stripped naked, had mass sexual intercourse, and then drank wine laced with arsenic.
Outburst Description No less than women inhabiting Site-403, including the wife of the local pastor and the then-mayor of the town, formed a cult with similar intent, conducting weekly rituals near or within SCP-1366 for 13 weeks until mass suicide was attempted.
Aftermath Embedded Foundation agent ensured no casualties, due to the poison in the wine being replaced with a sleeping agent. Class-A amnestics administered to the "cult members", who were subsequently released back into the populace.
Notes Guards were placed around SCP-1366 following this incident.

Event Designation 1366-Outburst-17
SCP-1366-A Message IS GAMING KILLING KIDS?
Summary of Story Story claims that the role playing game [REDACTED] has been responsible for several group murders and suicides.
Outburst Description A group of 8 teenagers started a Role Playing Club at the local high school, and due to inability to access SCP-1366, played their game in the basement of the high school instead, casting "spells" at each other and on their parents and peers.
Aftermath Unfortunately, Foundation operatives were not aware that the meetings of the club took place due to the isolation from SCP-1366, and simply assumed that a 1366-Outburst event was not occurring. As a result, 5 of the 8 teenagers successfully committed suicide through various means, with the survivors being critically injured.
Notes Guards were removed from the perimeter of SCP-1366, with motion-sensing cameras installed in their place. Corresponding instance of SCP-1366-A noted to have 12 centimeters removed from its length.

Event Designation 1366-Outburst-2
SCP-1366-A Message SNUFF FILMMAKER ARRESTED
Summary of Story A prominent Hollywood filmmaker

named Alan Smithee had been arrested for attempting to murder his lead actor on camera, "for the art".
Outburst Description A pair of amateur filmmakers, Jacob Rebus and Mary-Beth Jones started filming acts of zoosadism and animal murder, eventually escalating to the pair infiltrating SCP-1366, placing Ms. Jones on the conveyor of the sawmill and attempting to activate the head saw to kill her.
Aftermath Foundation operatives moved in and subdued the pair. Following detention, the pair claimed ignorance for their actions and were released following questioning.
Notes N/A

Event Designation 1366-Outburst-36
SCP-1366-A Message MAD GASSER STRIKES AGAIN!
Summary of Story Describes a "Mad Gasser" in an undisclosed city, attacking government offices by pumping anesthetic gas through the ventilation system.
Outburst Description The mayor and sheriff's offices, as well as the Foundation field office in the area, were flooded with Nitrous Oxide following the doors and windows being sealed by an unknown person or persons, resulting in 6 deaths due to suffocation.
Aftermath No perpetrator has been identified as of this time, and citizens have been advised to report odd smells and hissing noises.
Notes First direct attack on a Foundation facility. Corresponding instance of SCP-1366-A had 17cm removed from its length

Event Designation 1366-Outburst-40
SCP-1366-A Message MAD COW INFECTS HAMBURGER PATTIES
Summary of Story Describes how a national beef distributor had been selling meat infected with Bovine Spongiform Encephalopathy (BSE), which had resulted in the deaths of several people.
Outburst Description Within a week of publication of this story, there was a mass outbreak of Creutzfeldt–

Jakob disease (CJD). The outbreak apparently started from contaminated meat at a local fast food restaurant. Despite the fact that it typically takes several years for symptoms of CJD to develop, the symptoms were greatly accelerated, to the point where fatalities were reported in as little as twelve hours after consumption of tainted meat.
Aftermath Over 30 deaths resulted due to complications from CJD.
Notes Corresponding instance of SCP-1366-A had 6.7m removed from it. Due to concerns of the safety of the civilians, a mandatory evacuation order was issued. Site-403 is to be evacuated by 6/04/12.

Addendum: Evacuation 1366-01:

Level 4/1366 Access Required

Evacuation of Site-403 began at 9:30 on 6/02/12. Evacuation order had been issued to the town a week previously, with a major storm being cited as the reason for evacuation. By 14:00, all but 12 residents had evacuated voluntarily, with the remainder forcibly removed. All residents were then loaded into their cars and instructed to drive to nearby Foundation facilities in the cities of , , and for debriefing and administration of amnestics. The three fleets of cars were put under Foundation escort to ensure no complications.

Exactly 7 hours after the end of evacuation, all former residents of Siskin simultaneously collapsed and fell comatose. Over the course of an additional 4 hours, the body mass of all persons evacuated was slowly converted into sawdust. The same was true of all personal possessions and vehicles belonging to inhabitants of Siskin. Recovered samples of sawdust shows no anomalous properties.

Following this incident, approximately 6,000 new residents were found to be living in Site-403, with no

memory of any attempted evacuation, previous inhabitants, or Outburst events prior to Foundation intervention. Observation of new individuals living within Site-403 (tentatively designated SCP-1366-B) found several other anomalies, such as large amounts of sawdust in the drinking water and food supply (including food from local supermarkets and restaurants), a lack of any familial connections outside of Site-403, and the lack of any direct contact with the outside world (social media sites, outside mail service, etc). Later review found that the same was true of the original inhabitants of Site-403.

Containment procedures and SCP description will be revised at a later date.

« SCP-1365 | SCP-1366 | SCP-1367 »

SCP-1367: Party Balloon

Item #: SCP-1367

Object Class: Safe

Special Containment Procedures: When not being utilized for experimentation, SCP-1367 is to be kept in Storage Containment Unit B-19 inside a cushioned container with 60cm x 60cm x 60cm dimensions. Before storage the container must be thoroughly cleaned of any hard or sharp debris.

Before being removed from storage for experimentation, the latex elements of the object should be sprayed with a thin layer of a liquid plastic polymer solution to improve durability. Personnel should be cautious when handling the object due to its possible fragile nature.

Description: SCP-1367 is a helium filled balloon of common make and red coloration, measuring 45.7 cm from apex to inflation valve, which is tied shut by a 73.6 cm white string. The object has no identifying marks that would indicate a manufacturer.

Testing of the physical durability of SCP-1367 has been minimal due to the fragile nature of the commonly manufactured balloons which it resembles. However, it has been concluded that it does not lose helium through its permeable latex membrane. While it does exhibit the buoyancy expected from its helium content, the object's movements seem to be unaffected by air current and lift. SCP-1367, if left to float freely, will begin to maneuver towards the largest gathering of at least 6 individuals within 480 meters whose aggregate mood is at least mildly positive. This deliberate movement is difficult to detect since the object moves as if it were being pushed about by air current. However, tests conducted in an air-tight room have proved no air current is necessary for the object's locomotion.

When SCP-1367 comes within 4.5 meters of a targeted gathering, auditory abnormalities are heard by all within listening range. The

amount of distinct speakers seems to be doubled, as additional voices are heard amongst the group. These voices are invariably in high spirits, and seem to belong to individuals that match the age and vocal patterns exhibited by the majority of those present, though mimicking no group member exactly. The content of this audio phenomenon is difficult to decipher, as it only occurs when other normal audio is being generated and never exceeds its volume. The extraneous audio always appears to be emanating from several meters away and has been proven to be audible on recordings as well.

In rare situations, other audio elements have been heard. These seem to become more common when SCP-1367 has bonded to a larger and louder group with an elevated mood. Documented examples of these instances are listed below.

- The sounds of children laughing and playing outdoors.
- A slurred toast, followed by the noise of glasses clinking.
- People chanting “Chug” encouragingly.
- Several renditions of the birthday song based on the melody composed by the Hill sisters.
- Moans indicative of sexual activity.
- An entertainer’s voice, using a manner of speech commonly attributed to clowns.
- Chanting in an unknown language
- Carnival pipe organ music.

Anomalous audio resembling humanoid voices will not communicate with any real individuals. When the targeted group disperses, its speech and noise levels subside, or its mood changes to a non-positive state, the audio phenomena will cease and SCP-1367 will move to another group fulfilling its criteria if one is available. As the effect of realizing there is extraneous audio is somewhat disquieting, a targeted group noticing the effect will oftentimes inadvertently end the object's effects.

In cases where SCP-1367’s effects go unnoticed or are disregarded, the targeted group will find themselves experiencing a slowly elevating positive mood and increasingly fewer inhibitions when it comes to social interaction. At approximately 2 hours of exposure, there seems to be no further effect. At no point does the targeted

gathering seem to be under a compulsion to continue their activities, and behave with normal discretion in regards to commitments, exhaustion, and the like. Observed targeted groups have engaged in binge drinking games, food fights, dancing without music, physical children's games, and orgies among other activities.

« SCP-1366 | SCP-1367 | SCP-1368 »

SCP-1368: Aegides

Item #: SCP-1368

Object Class: Keter

Special Containment Procedures: An exact census of the SCP-1368 population is impossible to determine, but interviews with a singularly cooperative contained instance have led to a rough estimate of instances still remaining uncontained. When an uncontained SCP-1368 instance is discovered, MTF-Phi-10 (AKA "Crawling In My Skin") is to be mobilized. All people found to be hosting instances of SCP-1368 are to be incapacitated by non-lethal means. The SCP-1368 instance is then to be made to leave its host by the application of open flame to the host's sternum. Once removed from its host, the SCP-1368 instance is to be temporarily contained in antibiotic-treated plastic and transported to the nearest Site equipped with 1368-Lerna containment methods.

Secured instances of SCP-1368 are to be folded by means of 1368-Lerna-33 containment machine[1] to dimensions of 20 cm X 20 cm X 0.5 cm and contained in vacuum-sealed, opaque, shrink-wrapped plastic. Each bag is to be equipped with an RFID transmitter and a serial number. Contained instances are to be stored in 1368-Lerna-010[2] cabinets in a darkened containment chamber which is to be sterilized of all biological contaminants and designed in all aspects for defense against gale-force winds. The containment chamber is to be heated to 50° C with panels of induction heating coils located in the floor and walls. The containment chamber is to be monitored by microphone and made accessible only to the automated processes of designated 1368-Lerna-33 units. Under no circumstance is any human or humanoid life form to have physical contact with an instance of SCP-1368.

Personnel attempting to access sites equipped with 1368-Lerna containment methods are to be checked for hosted instances of SCP-1368; if none are found, access is granted. In the event that

Foundation personnel are transfigured by contact with an instance of SCP-1368, they are to be debriefed and then incinerated.

Description: SCP-1368 is the collective designation for a parasitic sapient species of humanoid beings composed of a thin hollow layer of contiguous epidermal human skin. In their natural state, SCP-1368 are off-white or beige, highly flexible, very strong, and somewhat elastic, similar in consistency and color to the shed skin of a snake. They are capable of locomoting in the same manner as a human, as well as slithering on the ground, undulating through water, or fluttering on air currents. Each instance has a long vertical seam on its front which extends from the lower lip to the groin. Their structure lacks eyes, a mouth, and a groin area, having holes in those locations instead. They have no form of nervous cephalization, instead possessing a neural net evenly distributed across their surface. They are generally unable to feel pain and do not need to breathe. When without a host, they speak with voices consistently characterized as "airy" and "whistly."

An instance of SCP-1368 parasitizes a human host by spreading open its seam, enveloping the host completely and laying over them like a second skin. They are capable of wriggling under the clothes of their host in order to gain total coverage. Once this is achieved, its seam seals shut and it becomes nearly perfectly transparent, only appearing slightly reflective on camera. SCP-1368 are capable of controlling the movements of their host to a fine degree, physically forcing their muscles from the outside. Cca. 84% of all instances recovered are skilled enough in this regard to control the cardiovascular systems and voices of their hosts, and cca. 5%[3] of all instances recovered can control the ocular motions of their hosts. SCP-1368 use human hosts as means to their own ends, though an overall picture of their goals, if any exist, has yet to resolve. SCP-1368 have no specific preference for types of humans to use as hosts in any regard. What is known is that they actively attempt to resist and breach containment (refer to Incident Report 1368-1).

Although classified as parasitic due to the distinctly non-mutual nature of the relationship, instances of SCP-1368 do provide some minor benefits to their hosts. They provide protection from chemical irritants, as well as treatment of some acne, scabbing, and scarring

that might otherwise afflict their hosts. Because of this, hosts may become sympathetic to the desires of SCP-1368 instances and agree to assist them.

SCP-1368 obtain sustenance from dust, which is primarily composed of dead skin. If currently hosted, they may feed directly on the dead skin being shed by their host in real time. They are capable of incorporating all of the dust they consume into their body mass, allowing them to heal from damage in a short period of time. SCP-1368 are vulnerable to high temperatures and are particularly repulsed by fire. An instance can only be completely destroyed by incineration; any and all remaining pieces with access to dust regenerate into duplicates of the original instance, albeit with diminished recollection of prior events. Instances are able to hide and remain dormant for months without being detected, usually posing as discarded clothing or paper. To date, significant populations (more than instances each) of SCP-1368 have been detected in twelve cities in the American midwest; five cities in Greece; Calcutta and Mumbai, India; Florence and Milan, Italy; Istanbul, Turkey; and Tehran, Iran. Despite attempts to contain the populations in these locations, recurrences and complete restoration are not uncommon.

SCP-1368 possess a secondary ability in the form of control over local air currents. When in distress or separated from a host, they have been observed to siphon air through their bodies and expel it from their mouths to produce wind of speeds up to 12 kph. In larger groups they may produce wind of speeds over 100 kph.

SCP-1368 Interview Log 22

> **Interviewed:** SCP-1368-0325
>
> **Interviewer:** Dr. Binweir
>
> **Foreword:** SCP-1368-0325 was abnormally cooperative during recovery and agreed to speak with Foundation personnel.
>
> **<Begin Log>**

Dr. Binweir: SCP-1368-0325, you said that you had *(reading from paper)* "a then story now to tell us?"

SCP-1368-0325: Man, Foundation man. Now, there are thousands of us. Thousands and thousands. Then, there are a few.

Dr. Binweir: Yes?

(SCP-1368-0325 wipes a line of dust off of the table with its index finger. The dust is slowly absorbed.)

SCP-1368-0325: Hollow. We now are so hollow. Thousands of hollow man needing dust, delicious dust. You, solid man, you create delicious dust, we want to feed.

Dr. Binweir: Are you-

SCP-1368-0325: Can't hear them, but I feel them, feel now in the skin. hollow man are hunting dust, hiding from you Foundation, hiding from the hunters. You solid Foundation man, those solid man out behind the glass, those solid man outside the outside who have knives and flames. We, now they, hide from you. Hear me feel them. I tell you. We then in my home place [4], many of the disparaged, bad-mouthed "hollow man" *(SCP-1368-0325 makes air quotes)* arrive from an away place. Solid friends, my friends wary, friends have a groovy idea. Friends and I, we meet and greet an aegis[5] — the hollow man name for hollow man. Takes many tries then, trying to change, but now we friends and I are safe. We then are a part of majority. Hollow man lifestyle is pleasant. Glad… glad glad happy. then is hungry, now there is always plenty to eat. Happy hollow man, fulfilled and safe, man. But I now still think and know solid man rightness, solid man originality. Hollow man now, many disparage solid man, when they then are once solid man.

Dr. Binweir: Am I correct, then, in assuming that you

were originally human?

SCP-1368-0325: Foundation man, you hit it on the nose, man. *(SCP-1368-0325 raises hands cautiously)* No skin off my nose, I now joke. Then you say there is dust, now where is it? Just need to live a little, Foundation man.

<End Log>

Closing Statement: SCP-1368-0325 was remanded to standard containment. Research into the cognitive processes and communicative abilities of SCP-1368 instances, as well as investigation into the described events in the town of , are underway.

Addendum: Making physical contact with the outer surface of an instance of SCP-1368 has a cca. 8% chance within a time frame of five days of causing the affected subject to shed all of their skin in one piece, which becomes another instance of SCP-1368, while the body of the subject dies. Hosts of SCP-1368 are not affected in this way. Transfigured subjects initially retain their former identities and personalities, but inevitably become indistinguishable from SCP-1368 instances. Following this discovery, the 1368-Lerna machines were designed to allow for successful containment without human contact with instances of SCP-1368.

Incident Report 1368-1: On / /20 , a containment breach was detected at Site-109, the location of SCP-1368 containment. Security teams were dispatched. Dr. and Junior Researcher had silently loaded 58 SCP-1368 bags onto a dolly and were leaving Site-109 with them. Dr. and Junior Researcher were apprehended and found to be unwilling hosts to two uncontained instances of SCP-1368. Containment was reimplemented. Dr. explained that they had been accosted and controlled by the instances separately while away from work; this story was corroborated by Junior Researcher . Security measures have been introduced at Site-109 to detect whether personnel are hosting instances of SCP-1368.

Footnotes
1. See Document-1368-Lerna for Model 33 schematics.

4. A small town in Wisconsin, United States.
5. An ancient Greek word meaning "hurricane," "shield," or "goat skin."

« SCP-1367 | SCP-1368 | SCP-1369 »

SCP-1369: Feelers

Item #: SCP-1369

Object Class: Euclid

Special Containment Procedures: The 6 x 4 x 6 m containment 'grid' that surrounds SCP-1369 is kept at a persistent temperature of 5 °C. The ground is lined with reinforced concrete grates which feed into a closed septic system. The grating is to be kept clean and clear at all times. An emergency valve will feed into a larger reservoir at the septic in the case of overflow of waste systems, as the drainage systems have been known to clog after feedings are complete.

The mass of SCP-1369 is to be partitioned every six days, depending on overall growth. The extracted biological matter is to be incinerated immediately after it is secured beyond the containment area.

SCP-1369 is monitored for changes in behavior at all times.

Decision whether or not to replace SCP-1369 at the end of its lifespan is currently being discussed by site command.

Description: SCP-1369 resembles a humanoid figure with four heads arranged in radial symmetry at the base of the neck. Four arms are arranged in a similar fashion around the thorax, ending with veins on the fingertips. In place of legs, SCP-1369 exhibits a mass of tendrils which begin at its abdomen and end gripping the flooring of its containment area.

SCP-1369 moves at a rate of 0.004km/h but is easily deterred by increased temperatures.

Each of the heads appears to moan continuously in different octaves of the same pitch when a test subject enters the vicinity of the containment area. The sound appears to have a luring effect on

observers; D-Class personnel first tested approached SCP-1369, disrobed, and placed their heads within an open cavity within SCP-1369's thorax. This process lasts for a space of one to five hours. During this process the arms of SCP-1369 converge on the subject's [REDACTED], the tendrils on the fingertips causing the local venous systems of the subject to temporarily rise through the skin and merge with SCP-1369. During this time the blood of SCP-1369 circulates through the subject's circulatory system, completely replacing native blood with that of SCP-1369. The new blood does not appear to have a detrimental effect on the subject.

D-Class tested with SCP-1369 report vomiting into a narrow passage located within the thorax after this process is complete. Stomach acid and undigested biological matter pass through the base of SCP-1369, by means of a currently unknown chemical reaction, and expand up to ten times in size into a viscous gray fluid. The fluid is emancipated through an orifice located at the base of SCP-1369; this fluid normally coats the surrounding area in a natural setting and remains there for a space of four days. If this fluid is again coated with fluid from a separate feeding, the two fluids will bond and coagulate into amorphic masses, outlined in Document 1369-A

The testing subject at most times leaves unharmed save for some psychological trauma, although when this process is forcibly interrupted it results in exsanguination due to the location of the bonded veins.

Document 1369-A: Test subjects in this document will be referred to as SCP-1369-A

Test 1369-01	
Subject 1	D-23045, a Caucasian male 34 years of age.
Subject 2	D-23405, an Asian male 40 years of age.
Results of testing after four days	Amorphic, gray masses appear in five (5) locations around SCP-1369.
Results of testing at two months	Masses of SCP-1369-A form into the shape of human heads similar

	in appearance to the test subjects. SCP-1369-A appears to be sapient for a space of four days before adopting a manner similar to SCP-1369, emitting a continual moaning. SCP-1369-A continues growth, additional heads budding from the main head, finally taking on an appearance similar to SCP-1369.
Test 1369-03	
Subject 1	One common housecat.
Subject 2	D-23405, an Asian male 40 years of age.
Results of testing after four days	Amorphic, gray masses appear in four (4) locations around SCP-1369.
Results of testing at two months	Masses of SCP-1369-A form into the shape of human and feline heads similar in appearance to the test subjects. Certain instances of SCP-1369-A appear to be sapient for a space of four days before adopting a manner similar to SCP-1369, emitting a continual moaning, although feline heads appear to emit a call common with cats during mating. SCP-1369-A continues growth, additional feline and human heads budding from the main head.
Additional Notes	SCP-1369-A incinerated after growth has completed. Similar testing is deemed unnecessary.

Interview with SCP-1369-A:

Dr. Sanders: Can you speak?

SCP-1369-A: Uh… yeah. Hey.

Dr. Sanders: How are you feeling?

SCP-1369-A: I'm… pretty damn good. Yeah. Hey. Hey hey!

Dr. Sanders: Do you realize the nature of your condition?

SCP-1369-A: Hey I'm feeling good. How about you?

Dr. Sanders: Can you turn your… head to look at SCP-1369 for me?

SCP-1369-A: Ha ha, you know it!

Dr. Sanders: Pardon?

SCP-1369-A: Who wouldn't?

Subject begins moaning continuously when turned to SCP-1369.

Interview concluded.

« SCP-1368 | SCP-1369 | SCP-1370 »

SCP-1370: Pesterbot

Item #: SCP-1370

Object Class: Safe

Special Containment Procedures: SCP-1370 is locked in a fire-proof glass display case, stored in Gallery 27. If the case becomes damaged by external circumstance, any container with dimensions of at least 1.25 x 0.75 x 0.50 meters will suffice as a replacement until a new display case is available. The Ethics Committee recommends that any long-term storage case contain enough space for SCP-1370 to move freely. Level 2 personnel and higher may remove SCP-1370 from its case at their discretion, but will face disciplinary action for failing to secure it properly afterward.

Description: SCP-1370 is a self-aware artificial being constructed from various electrical devices and tools. It stands approximately one meter in height and is capable of moving its articulated joints despite the lack of any power source or motors. SCP-1370 communicates in a monotone voice via a speaker mounted in its chest.

Its head is a voltmeter soldered upside down to a neck joint, giving the appearance of a friendly smile, but containing no active sensory devices. However, SCP-1370 will react to visual and audible stimuli, and its ability to do so is hampered when the head is covered or otherwise restrained. Its design appears to give more importance to aesthetic concern rather than function, as evidenced by a poor center of gravity that hampers its ability to balance and walk. It is therefore believed that SCP-1370 was created as an art object and later imbued with anomalous properties, rather than designed with those in mind.

It can currently speak fluent American English, French, and Latin, and is capable of learning new languages. Other facets of its intellectual capacity have not been clearly outlined as SCP-1370 is

invariably hostile in all interactions with any being or object it interprets to be sapient; this includes but is not limited to animals, Foundation personnel, civilians, audio-visual equipment and security cameras.

If SCP-1370 encounters an object it believes to be sapient, it will attempt to engage the object in combat while introducing itself with a variety of elaborate titles which appear to be selected at random. Examples include *DoomBot 2000*, *RoboLord the Destructor*, *Prime Minister Sinister* and *Darth Claw Killflex*. SCP-1370 will often include variations to these titles based on responses it receives from personnel; Foundation staff have successfully introduced *Patheticon the Garglemost* and *PesterBot* to its lexicon.

Addendum: Many tests on SCP-1370's combat prowess have been run, each confirming that SCP-1370 lacks the physical aptitude to cause damage to any living being. Test 1370-8239 exposed SCP-1370 to a common houseplant with a speaker hidden in the plant's pot. After SCP-1370 was provoked verbally, it attempted to fold and twist the leaves of the plant within its grasp before incapacitating itself. See log that follows:

> *Researchers L. Allans and T. Bausoom carry SCP-1370's case into the testing chamber. The case is set down one meter from a potted philodendron fitted with a small speaker.*
>
> **SCP-1370:** Release me, insects. I am Doom-Master Thirteen Seventy Master Of All Doom. I shall be the herald of your destruction.
>
> *Researchers leave the testing chamber and the case is opened remotely. Although no security risk is determined, the test requires SCP-1370 to focus on the plant rather than nearby personnel. Observations are made via an opaque glass window to prevent SCP-1370 from attacking its own reflection.*
>
> **SCP-1370:** At last I am unleashed upon this earth so deserving of destruction. All shall be rent within my pinchers. All shall be trampled beneath my feet. I am

ShivaTron, Despoiler of Mirth.

Researcher P. Davies: *(through the speaker mounted in the plant)* Hello! Can you hear me?

SCP-1370: *(approaching the plant)* Who dares. All souls will burn. You will feel the sharp sting of my wrath. Identify yourself so that I may sing damnation upon you as you die.

P. Davies: I am a split-leaf philodendron, a semi-woody shrub with large glossy leaves. *(restrained laughter)* These leaves can grow up to three feet long.

SCP-1370: *(attempts to wrestle with the leaves)* Your mockery spells your doom. I have arrived. You will be crushed betwixt my digits.

SCP-1370 falls over and is unable to right itself. After approximately six minutes it knocks the pot over, which rolls into a position that pins SCP-1370's body to the floor of the chamber. Researchers enter to return SCP-1370 to its case.

« SCP-1369 | SCP-1370 | SCP-1371 »

SCP-1371: Curiously Buoyant Amphibian

Item #: SCP-1371

Object Class: Safe

Special Containment Procedures: SCP-1371 is to be kept in a glass aquarium located in a level 1 security cell at Site-18. It is to be fed a diet of one earthworm once every three days.

SCP-1371 is not to be handled physically, the object should only be moved while inside of a container.

Description: SCP-1371 appears to be a juvenile, leucistic axolotl. SCP-1371 appears to age as a common axolotl would, although it is fairly durable, and capable of withstanding moderate changes in atmosphere and contaminants that would normally harm a member of its species.

SCP-1371 is buoyant in air, capable of 'swimming' upwards distances of approximately 50 meters from the ground, although SCP-1371 spends most of its time on the ground and rarely ascends higher than 1 meter.

While SCP-1371 is airborne, special care should be taken not to apply physical force to SCP-1371 without the intent to hold it, as this may damage the object. During testing protocol, Researcher Sanders attempted to pet SCP-1371, causing it to descend, and then ascend upwards at a continually increasing speed until it was retrieved. Following these observations and additional tests it is believed that SCP-1371, when affected by an external force that would move it downwards, generates a massive excess of 'buoyancy' to compensate for its displacement.

Incident Report 1371-A: Testing was authorized for an outdoor experiment in which SCP-1371 would be displaced while it was midair. SCP-1371-A was outfitted with a tracking device before

testing commenced. Researcher Breen physically removed the object from the tank. SCP-1371 unexpectedly latched onto Researcher Breen's finger, in response Breen grasped SCP-1371 to remove his finger, causing SCP-1371 to move 47km into the stratosphere in the space of thirty minutes. SCP-1371 returned in 16 hours, unharmed, slowly floating downwards to the exact position from which it was 'launched'. It is the opinion of those presiding over the experiment that no further testing is necessary with this object.

« SCP-1370 | SCP-1371 | SCP-1372 »

SCP-1372: The Utter West

Item #: SCP-1372

Object Class: Keter

Special Containment Procedures: Armed Containment Site-70 is to be established on the island of under the guise of a USPACOM naval installation constructed for the purpose of long-term joint maritime warfare training. Four (4) Arleigh-Burke class guided missile destroyers (DDGs) are to be maintained at ACS-70, with at least two patrolling Zone-1372-Alpha (see below) at all times.

Owing to the nature of SCP-1372, it is not possible to move the anomaly to a facility for containment. Instead, the focus will be on minimizing civilian contact with the anomaly. An area extending from the anomaly to 100 km east of the anomaly and from 100 km south to 100 km north of the south and north extents of the anomaly is to be established, designated Zone-1372-Alpha. Areas with similar dimensions but extents of 5 km and 1 km are also to be established, termed Zone-1372-Bravo and Zone-1372-Charlie respectively. Satellite monitoring is to be maintained of the entirety of Zone-1372-Alpha at all times.

If any ship is detected approaching the boundary of Zone-1372-Alpha, radio contact is to be attempted by ACS-70 personnel. The operator is to identify themselves as being a military officer, inform the ship that military exercises are taking place in the area, and advise the crew to alter their path to avoid Zone-1372-Alpha or to exit it as soon as possible. If the ship refuses to alter its course, or radio contact is impossible, crew of the nearest DDG are to intercept and block the ship's path. The crew of the ship breaching Zone-1372-Alpha are to be subdued, administered Class C amnestics, and airlifted to the nearest island.

Any and all instances of SCP-1372-1 are to be engaged and scuttled at once by ACS-70 staff. Under no circumstances is any

such instance to be permitted to cross the perimeter of Zone-1372-Bravo. However, ships are not to pass the boundary of Zone-1372-Charlie in the process. Ships that show signs of crew being affected by SCP-1372 are to be remotely detonated and sunk. In addition, following Incident-1372-5 no aircraft are to be permitted within Zone-1372-Charlie, including those under the control of Foundation personnel.

Foundation personnel are to maintain contact with all airlines and airports servicing any area within a 200-km radius of SCP-1372, and are to advise air traffic controllers that the area indicated is in the vicinity of a USPACOM military base and is frequently host to military training exercises that will threaten the safety of any civilian aircraft passing through. Aircraft breaching the 200-km line are to be contacted immediately and advised to alter course for their own safety. Aircraft that ignore this warning and breach the perimeter of Zone-1372-Alpha are to be intercepted by onboard SH-60 helicopters and forced to land on the island, where they will be treated in the same manner as crews of ships breaching the area.

Description: SCP-1372 is the geodesic segment located along ° ' " W longitude and extending from ° ' " S to ° ' " S latitude. Ships crossing SCP-1372 while travelling from west to east do not suffer any ill effects, though D-class personnel used in tests of this nature have reported a compulsion to look west lasting approximately 6 hours and a strong desire to turn around and sail back. After testing, it has been determined that if a ship turns around and sails across SCP-1372 before exiting the boundary of Zone-1372-Alpha, no ill effects are observed beyond continuation of the aforementioned psychological effects.

When a ship approaches SCP-1372 from the east, travelling west, observers onboard the ship will observe a termination of the horizon at a closer distance to their ship directly west than in any other direction. At closer range, the horizon appears to have a physical point of termination, corresponding to what observers describe as an "edge" of the Earth. This effect is visible from any point within Zone-1372-Alpha. Other than cognizance of the "edge" and a mild curiosity as to what it looks like closer up, no psychological effects are noticed at this stage.

Further approach increases the perception of the "edge". Within Zone-1372-Bravo, subjects experience a minor compulsion to continue in spite of any perceived or communicated dangers, and will resist attempts to change their course. This effect becomes more pronounced within Zone-1372-Charlie, and even after removal, subjects will attempt to build or procure a ship and continue towards SCP-1372 regardless of time of separation and in spite of all curative attempts. A small number of subjects appear to be immune to these effects, though it is currently not understood why.

Any ship that crosses SCP-1372 will disappear from all forms of visual contact. GPS monitoring abruptly cuts off once the ship crosses completely. Observers report that the bow of the ship tips down upon crossing SCP-1372 and that the ship appears to descend; however, remote observation does not observe the same effects. No personnel have been successfully recovered after crossing SCP-1372, and remote probes do not appear to function properly. Thus the nature of the area entered by ships crossing SCP-1372 is not yet fully understood. All that is currently known is inferred from analysis and eyewitness reports concerning instances of SCP-1372-1.

On occasion, sailing ships will emerge from SCP-1372. These are collectively designated as SCP-1372-1. Observation of these vessels has shown that the sails are tattered or missing, and engines are corroded beyond usability. In at least 5 cases, the rudder of the ship has been observed to have been destroyed, and one instance of SCP-1372-1 was found with a large hole below the waterline. It is currently unknown how instances are able to sail. To date, over 50 instances of SCP-1372-1 have been observed and contained by the Foundation, of which correspond to ships reported missing in the region or which were observed to cross SCP-1372 previously. When boarded, all instances of SCP-1372-1 were found to contain [DATA EXPUNGED]. Following Incident 1372-1, no attempts are to be made to communicate with any entity onboard an instance of SCP-1372-1.

Note: Following Incident 1372-3, it is now apparent that the effects of SCP-1372 extend not only to any type of sailing vessel, but also to aircraft which cross the geodesic segment. Containment

procedures will be modified accordingly. No testing of any kind involving flying vehicles may be performed on SCP-1372. Due to their heightened speed and mobility, it is highly undesirable that there be any possibility of a flying instance of SCP-1372-1 being created.

+ Document-1372-1

The following is an excerpt from the logbook of F R , mariner serving on the ship [REDACTED], translated from the writer's native Spanish.

12-04-
I started to get a very strange feeling today. The sea's as calm as it ever was, but… I feel like we shouldn't be sailing this way. The supplies are still holding out, nothing's spoiled, but I can't shake this feeling that we should be sailing west, not east. Still, there's no reason to feel that way, and we've yet to find the trading passage, so I'll just keep this to myself.

13-04-
Turns out I'm not the only one feeling this way. The captain confided the same feeling in me, and when we asked around, it seems quite a few of the other sailors say the same thing. S says it's an omen, and that we're likely getting close to the edge of the Earth, but the captain says to sail on.

Note: Based on these writings it is presumed that on 12 April , the ship [REDACTED] and its companions crossed SCP-1372.

19-04-
We've made landfall on a small island. Inhabited, though thank God it seems the inhabitants are friendly. They're damned good cartographers, too. They've got maps of the nearby islands for what seems to be five hundred leagues east of here, but oddly enough their maps never show anything to the west. Must be some sort of native religious taboo; maybe they're supposed to regard this

island as being closest to their gods. We've seen plenty stranger than that on the way here. Either way, they're friendly, they've got maps of where we're heading, and most importantly there are plenty of supplies.
… So why do I still feel like we should be sailing back west?

22-04-
The captain ordered a turnaround today. He claims that the food supply may have been tainted. I went below to check myself, but most of it seems to have been thrown overboard already. Not that I care all that much, we've all wanted to sail back that way the past week.

23-04-
Horizon looks weird today. Almost like it stops. Still sailing back west.

25-04-
Made landfall on the island from before. The chief looks like he was expecting us. The fleet is sailing on tonight. Lucky the west wind seems to be in our favor.

27-04-
… If anyone ever finds this, do not sail west from here. All those men we scoffed at were right after all. The world is flat after all, and I've seen its edge. The captain sailed over with almost all hands onboard. I and three others escaped attempts to restrain us and stole the ship's longboat, rowing away as fast as we could to screams of "coward" from the remaining hands. The ship never turned, though, and soon we watched the captain's flagship tip over the edge of the world and fall down into the gulf beyond… may God rest their souls.

30-04-
Rowing together, we managed to make it back to the island. The chief's taking care of us while we work out what to do next with the remaining ships here.

02-05-

The flagship returned today, unlooked for. The captain and his men are aboard; we can see them from here, and we're sailing out to meet them. A man has sailed beyond the edge of the world and returned… what a glorious day for our nation of [REDACTED]!

03-05-
The captain… was only after a fashion onboard. The same goes for the crew… they are gone now, the flames took them. Today is mostly a blur. All I know is that the moment I heard the men onboard that ship speak, I didn't want to understand their far-off words. I wanted to destroy them before they could speak again. God help me, I helped the natives do just that. And now the flagship lies just offshore, one pristine sail still fluttering in the wind… Forgive me, Captain, but I no longer want to know what you saw beyond the edge of the Earth.

01-09-
After what I saw that day, I couldn't bring myself to return to the sea. The few of us that fled the ships in the longboats as they sailed blithely over the edge into… whatever Hell lies beyond… are the only ones who remain. With the natives' help we were able to make our way north to Asia and slip back west over land.. We'll have to invent quite a story to explain how over two hundred men died, but we'll think of something. We sail at dawn for the Canary Islands; hopefully if we come in from the east we can convince them we were coming from across the Atlantic.

I think it's best for the peace of mind of the world if we tell them there isn't an edge. Some damn fool is bound to go looking for it, and then another ship could end up like [REDACTED] again. Even thinking about something like that freely sailing the seas is reason enough to keep that place a secret. If anyone asks, we sailed around the world. First men. Quite an honor. Shame it has to be a lie, and I know lying's a sin, but none of those men in the Bible ever saw what I saw onboard that dark ship.

> Forgive me, Lord, but the world needs this children's story, not a man's truth.

The following document is classified Top Secret. Access is restricted to researchers with a clearance level of 4/1372 or higher.

Interview Log 1372-1

« SCP-1371 | SCP-1372 | SCP-1373 »

Interview Log 1372-1

Interview Log 1372-1
Chief L is the appointed elder of the native tribe inhabiting . This island is the only landmass located inside of Zone-1372-Alpha. All inhabitants are aware of the effects of SCP-1372. While most of the inhabitants speak at least limited English, as well as a language determined to be of the Malayo-Polynesian family, a small number speak a dialect completely incomprehensible to the other inhabitants, and refuse violently any attempts to teach them the "common" speech. Chief L in particular became violent towards Foundation personnel when an attempt was made to communicate in English; however, after several weeks of work, Dr. R , Foundation linguist and anthropologist, was able to decipher enough of the language to hold the following interview with Chief L .

Dr. R : Thank you for speaking with us, Elder.

Chief L : I am to understand you wish to "contain" this place. The "edge". (*L gestures out towards SCP-1372.*) If that is the case, then I will need to impart you with my knowledge of this… what did you call it?

R : An anomalous region. You aren't going to resist our efforts here?

L : We are simple people who have trouble enough with one ship. You are representative of an entire nation. I certainly wish for things to continue as they are, but what would resisting accomplish? You would simply take what you desire regardless, and then you would be without my knowledge.

R : I understand. Please, tell me what you know about the anomaly. (*Note: Term used by both parties is closer to "unknown/ magic sea/waters/realm"; for brevity's sake it is translated here as simply "anomaly".*)

L : (*pauses for breath*) Our people still recall the stories of that group whose log brought you here. I pity what became of their captain. As you no doubt learned from the log, our maps do not show anything west of us. You know why that is now. (*L looks out to the ocean and towards SCP-1372 again.*) We can all see it, Doctor. Despite that, from time to time some of the young men band together and set out on a ship. They want to see what lies beyond the edge of the map. Aren't your people the same way, Doctor?

R : Curiosity is one thing, but the anomaly, well…

L : (*laughs*) You are correct. But you did not fly in from the east. As for what lies beyond the edge, I have no more idea than you. Or rather, I don't know in the manner your people want to hear. All I can tell you is what returns.

R : You've come into contact with the anomalous vessels, then?

L : If that is your term for the ships that return from the edge, then yes, I have seen a few. We learned very early on, Doctor, that while they look just like our own ships, and our own people, they are no longer ours. Their nature is not something I understand, but whatever lies beyond that edge does not lie on this Earth. Those who make contact… you saw that yourself the other day. Firsthand, I believe? (*Note: L appears here to be referring to Incident 1372-1, which had occurred 3 days beforehand.*) They are made like them. Part of the… (*uncertain*) "crew" of those plague ships.

R : A plague? Will you explain that further, Elder? We examined the men on the vessel, and… (*pauses*) We opened their bodies, and within found none of the things that cause diseases.

L : (*interrupting*) Perhaps it is not a plague as you or I understand it, Doctor, but it is a plague nonetheless.

R : I understand that, Elder. I want to understand what you mean by that word, that is all. It is not any of the kinds of diseases we know, so it must be one your people know of and we do not.

L : (*sigh*) It is not the kind that you know and that doctors treat. Not like the disease that covers the skin in painful spots, or that brings

pain and sleep upon us. We call it *ilekwah*. It is carried not by sneezes, or by touching the blood of the infected, like the diseases you know. It is carried in the words of the infected one, in the knowledge he brings from beyond the edge of the world. Because of this, doctors cannot treat it, for it is like *kurujin*, that strange disease that the sailors from the vast islands brought with them that makes the young people say there are no spirits except for one who is also three and who lives among the clouds. Do you understand?

R : I believe I do, Elder. We have a different word than "disease" for things like kurujin and ilekwah in our language, though.

L : You asked if I knew what lies beyond the edge. Our people tell it is the realm of [REDACTED], where the dead dwell. But that is not an answer that satisfies a man of the great islands. And of the nature of [REDACTED]'s realm, we have no more idea than you. (*pause*) You surely noticed my anger at your… assistant speaking in the vast island's tongue. But I cannot be allowed to comprehend that tongue.

R : And why is that? Surely it would make speaking with the sailors who join your tribe easier.

L : If I knew the speech of the vast islands as those sailors and many of my people do, then I would understand the words of those who return from beyond the edge. And if I understand, then I too will become like the damned men you sent onboard the vessel that returned three days ago. You see?

R : I… don't believe I follow, Elder.

L : I told you, Doctor. The words of those who return from beyond the end of the world are a message from [REDACTED]. They sing his praises eternally as they sail the sea, and they speak of what you crave to know. And any who comprehend their words will fall to the plague as well. That is why we do not know the nature of the realm where the dead dwell. Months before you came, a ship appeared from the edge whose crew spoke in the speech of the vast islands, and my people and the sailors who lived with them comprehended. They all joined the crew of that ship. It was with great difficulty indeed that we were able to destroy that plague

ship…

R : Simple comprehension passes on the contagion? Then the reason you won't learn English, or the common tongue…

L : You understand now? That is why my people use fire against it, as that logbook you found surely tells. If I am to trust you with safeguarding the edge, then you must understand that. It is a plague, and it cannot be allowed to leave these waters. When it was just my people and their simple longboats, it was easy. Even when that man's entire fleet emerged, one by one, we somehow managed to subdue each ship in turn. But now, you have machines that fly through the air, and ships that dwarf the mighty sharks of the deep. And out in the open air of our world, I am far from sure your Foundation can contain or protect from what the plague ships carry.

R : That's what we do, Elder.

L : That is what you desire to do, Doctor. I entrust this island to your keeping. And I entrust the edge to you to guard. Fail, and the plague ships will come. Do not betray us.

(*Following this interview, all inhabitants were relocated to an uninhabited atoll in the Marshall Islands and underwent memory restructuring to remove all memories of SCP-1372 and their residence on the island. All remaining documentation regarding the island and SCP-1372 has been classified by order of O5 Command, with the exception of Document-1372-1. Researchers with classified access of 4/1372 or higher may view these documents with permission of at least one O5 member.*)

SCP-1373: Laser Shark Fetuses

Item #: SCP-1373

Object Class: Euclid

Special Containment Procedures: SCP-1373-A, SCP-1373-B, and SCP-1373-01 through -06 are to be stored in standard refrigerated containment for biological specimens. Requests for tissue samples from SCP-1373-01 through -06 must be made in writing to the current head researcher of SCP-1373. All researchers with level-2 clearance or above are allowed access to SCP-1373-A and SCP-1373-B, which are not presently considered anomalous except by association.

SCP-1373-07 through -16 are not currently contained. Mobile Task Force Theta-5 ("the Bigger Boat") is assigned to locate and capture these entities before they achieve sexual maturity and begin reproducing. All surface and subsurface vessels in the area are to be tracked, and periodically examined for unusual hull damage.

Description: SCP-1373-01 through -06 are the carcasses of 6 newborn albino dusky sharks (*Carcharhinus obscurus*), recovered from the womb of a pregnant dusky shark (SCP-1373-A) caught off the coast of California on / /11. The mother shark was acquired by the Foundation upon reports that its pectoral fin bore a luminescent tattoo reading "Property of Doctor Wondertainment"; a necropsy revealed the presence of SCP-1373-01 through -06, which were judged to be capable of surviving and were delivered live by caesarean section.

SCP-1373-01 through -06 are afflicted with cyclopic holoprosencephaly. Manipulation of each organism's dorsal fin caused the eye to emit laser light at a wavelength of nm. Experimentation revealed that the intensity of the laser can be adjusted with pressure on the fin, peaking at a maximum output of W, with N of force applied. This is sufficient to burn through

metal at close ranges of 50-100 cm. In the case of SCP-1373-01, this resulted in the "cooking" of the organism's rudimentary brain, causing its immediate death; SCP-1373-02 burned to death after it ignited the sclera of its own eye; SCP-1373-03 and -04 were sliced apart by SCP-1373-05's laser when -05 experienced a brainstem seizure causing it to convulse spasmodically before dying; and -06 died of cardiac malformation.

The mechanism by which SCP-1373 generates laser light is not fully understood; it is believed to use [REDACTED] as a gain medium. Each organism's single eye was incapable of sight, instead being filled with a large amount of "laser cells" containing [REDACTED]; however, whether the cyclopia is an intentional modification or merely incidental is as yet undetermined. As is typical with organisms afflicted with holoprosencephaly, the majority of the brain is absent; however, [DATA EXPUNGED], possibly intended as a replacement.

SCP-1373-07 through -16 are the offspring of SCP-1373-B, a pregnant dusky shark captured on / /11, approximately 160 km east from the capture point of SCP-1373-A. When SCP-1373-B was brought on deck of the civilian fishing vessel , the ship's crew noticed "weird lights" coming from the shark's thoracic area. The precise sequence of the events that followed is unclear; however, three crew members were sliced to death by lasers, and another five were blinded. Subsequent examination of the carcass of SCP-1373-B indicated that it had been sliced open by lasers from the inside, and revealed traces of no less than nine (9) placental yolk sacs.

A note was found inside the womb of SCP-1373-B, with severe laser damage. Refer to Document 1373-HG41 for details.

Document 1373-HG41

> [document damaged] hours of fun and laughter! These little fellows can [document damaged] even your school lunches!
>
> [document damaged] *Warning: changing batteries requires adult* [document damaged]

SCP-1374: Preparation

Item #: SCP-1374

Object Class: Keter

Special Containment Procedures: The entirety of the documentation of SCP-1374 is to be kept within Site 23 until further notice. Site 53, Site 95, and Sector 15 are all currently infected with SCP-1374. All personnel working at these facilities are to be made aware of SCP-1374. Furthermore, all documents at these areas must be triple checked by at least two (2) different personnel for inaccuracies. Additionally, personnel may request to transfer out of these sites. These requests must be approved by at least three (3) researchers with Level 4 clearance as well as the Site Director of the area.

Description: SCP-1374 is a text-based phenomenon that appears to specifically affect at least five (5) structures used for human interaction with anomalies at any given time. Within these affected buildings, persons that have worked with anomalous objects as defined by Foundation Protocol-01-Black for a time period greater than one (1) year will randomly encounter SCP-1374 within the structure. SCP-1374 will manifest as short sentences or phrases and will appear through a variety of media, including spray paint on walls, handwritten notes, and inserted sentences in official reports.

The phenomenon only affects buildings that actively interact with anomalous objects; if a structure infected with SCP-1374 becomes inactive or ceases work with anomalies for time periods of greater than ten (10) days, SCP-1374 will no longer affect that building and will begin manifesting in a different active site[1]. Furthermore, the nature and tone of SCP-1374's messages appears to vary widely between structures. Due to this, it is currently speculated that five (5) iterations of SCP-1374, hereby designated as SCP-1374-A through SCP-1374-E, are responsible for these infections. Additionally, each iteration appears to favor a specific GoI, and will reappear in a

different structure used by the group if an infected building becomes inactive. See Addendum-1374-Alpha for greater detail.

Three out of the five sites known to be infected with SCP-1374 are controlled by the Foundation; the other two are under the jurisdiction of GoI-016 (“Global Occult Coalition”) and GoI-132 (“Marshall, Carter, and Dark Ltd.”).

SCP-1374-X	Location	Description	Example
SCP-1374-A	Site 53, controlled by the SCP Foundation	Manifested writings are harshly critical and frustrated toward Foundation personnel and procedures.	Taken from the documentation of SCP- : *…is to be kept in Humanoid Containment Chamber #423 at all times* ***because that’s obviously the smart thing to do, right? Make it angry at you? God, why isn’t everyone dead yet due to your buffoonery?***
SCP-1374-B	Site 95, controlled by the SCP Foundation	Manifested writings are supportive and encouraging towards the Foundation’s endeavors	Taken from the documentation of Incident Report Rho-Omega: *…was killed during the recovery of the object* ***but this doesn’t mean we should stop trying. People live, people die, but that’s okay.***

			It's all for the greater good. John, trust me, don't let this scare you, you'll be fine.
SCP-1374-C	Sector 15, controlled by the SCP Foundation	Manifested writings are malicious, vindictive, and condescending.	Taken from the documentation of SCP-096: *Weekly checks for any cracks or holes are mandatory. There is to be absolutely no video surveillance or optical tools of any kind inside SCP-096's cell.* ***As such, personnel must physically enter into the entity's cell at least one time per week in order to check that SCP-096 remains in containment.***
SCP-1374-D	Warehouse 24, controlled by GoI-132 ("Marshall, Carter, and Dark Ltd.")	Manifested writings are highly critical of extravagant and wasteful lifestyles.	Taken from the documentation of [REDACTED]: *…which will satiate your needs* ***without making you go out of your way to help anyone***

			else. What a wonderful product for a horrible person. Master Marshall would surely cordially invite you to purchase this item just to give it away to someone more deserving, but you wouldn't do that, would you?
SCP-1374-E	[REDACTED], controlled by GoI-016 ("Global Occult Coalition")	Unknown	Unknown

Addendum-1374-Gamma: Every five (5) years on 31/12, all iterations of SCP-1374 will manifest the following message to all eligible subjects within the infected sites.

> You can't let a little talk distract you. You have the fate of the world in your hands. Don't let it get to your head, whatever it is, because you know what? If you can't handle this, you shouldn't be here. Just remember.
>
> This is a test. This is only a test.

Incident Log-1374-Theta: On 06/04/1995, SCP-[2] breached containment after displaying previously unknown anomalous properties, including [REDACTED], resulting in the transformation of sixty-three (63) personnel into instances of SCP-[ ]-G, along with the loss of seventy-one (71) SCP objects. Currently, all objects and personnel lost during the breach are still outside of Foundation control.

Additionally, Site 95's Euclid Wing 17 experienced a security systems failure, resulting in the release of seven (7) Euclid-class anomalous objects, one of which had been classified as a Type-Red metamorphic-replicating entity. Four (4) have since been recaptured, but the aforementioned entity breached containment and currently is at large. MTF Theta-24 (aka "Polygraph Team Attack") has been dispatched to investigate and capture all possible instances of the escaped objects.

On the same day at Sector 15, SCP-1374-C manifested information regarding [REDACTED], causing the widespread propagation of the infohazard.

The following day at all sites infected with SCP-1374, each respective iteration of SCP-1374-X generated message manifested for all eligible personnel within each site. The following is the transcription of the messages.

SCP-1374-A:

> See? What did I *tell* you, you oafs? I swear, sometimes, you could stand to learn a thing or two from those GOC meatheads. And then you didn't even handle it well! You screwed it up regardless! Really, if you can't even handle a small [REDACTED] like this, what are you going to do when the big one comes?

SCP-1374-B:

> Oh dear, oh dear, I'm so terribly sorry. I really thought you were ready for this, I never thought that it would end up like this. It's all my fault, don't feel bad about what happened. We'll just keep trying, and eventually, I'm sure that you will be more than prepared for when it comes. Keep trying! Don't be discouraged! I believe in you!
>
> …But you *are* going to have to do better than that, sweetie.

SCP-1374-C:

> You don't stand a chance.

Incident Log-1374-Xi: Foundation agents pursuing several known members of GoI-055 (“Chaos Insugency”) encountered a new iteration of SCP-1374 in an abandoned factory that the group had been using as a base of operations, which has since been designated SCP-1374-F. The writings found at the location have been characterized as being “anxious” and “nervous[3],” with the exception of the message found on the northernmost wall of the room housing a large generator, which read “go AWAY,” as shown above. Approximately five (5) seconds after Foundation personnel had entered the room housing this message, the chamber’s walls collapsed, causing the loss of four (4) agents.

When personnel continued to pursue and track these individuals, they encountered events similar to the previous incident in which rooms housing certain SCP-1374 messages collapsed after Foundation personnel entered. Due to this, agents were unable to successfully keep up with the CI members.

Head Researcher’s Note: Due to the events described in Incident Log-1374-Theta and Incident Log-1374-Xi, it appears possible that SCP-1374 has anomalous control of the structures in which it is located outside of the manifestation of textual anomalies. The extent of this control is unknown. As such, personnel are to maintain extreme caution while operating in location known to be infected with SCP-1374. -Head Researcher Leonard Lagrange

Incident Log-1374-Chi: On 12/05/1995, Foundation surveillance reported that Warehouse 24, owned by GoI-132 (“Marshall, Carter, and Dark Ltd.”) and infected with SCP-1374-D, was vacated by the group. Foundation agents covertly followed the members of the group to MC&D-owned Auction House 53. Investigation of Warehouse 24 revealed the corpses of three (3) persons, with each body having the phrase “Those with no heart cannot truly bask in his power when he comes. I've tried talking to you, but apparently, that's not enough” cut into various areas of their skin. MTF Tau-09 (aka “Upper Class Spycats”) is currently searching for the new location of SCP-1374-D.

Addendum-1374-Mu: Personnel have noticed that SCP-1374-A through SCP-1374-C’s messages have taken on a frantic, nervous quality since / / , on the same date as the [REDACTED]

Specifically;

- SCP-1374-A has begun issuing harsher criticism of the containment procedures of an unprecedented number of SCP objects, most of which were humanoid, metamorphic, memory-affecting, adaptive, cognitohazardous, or extradimensional, as well as writing out all of its messages in all capitalized letters.
- SCP-1374-B began utilizing the ability it demonstrated during Incident Log-1374-Theta at least once per week, manifesting various forms of encouraging phrases while personnel attempted to recontain the objects[4].
- SCP-1374-C ceased altering SCP documents in overt and obvious ways; instead, it has begun altering minute but important details about these objects. Additionally, it has been noted to include an increasing amount of subtle memetic and informational hazards in its messages. As such, the rigor of the checking of the validity of all documents within Sector 15 has been increased.

These behaviors became more and more frequent over time. During this period, Foundation researchers proposed a possible link between the increased and extreme actions of SCP-1374 and the non-anomalous series of [REDACTED]; however, no link between the two has been established.

Addendum-1374-Pi: The following message manifested in all locations infected with SCP-1374 on / / [5]

> Well, you took the test. You failed. We'll try to handle this by ourselves.

Subsequently, all locations previously known to be infected with SCP-1374 ceased manifesting anomalous messages. After thirty (30) days, SCP-1374 was declared Neutralized.

Addendum-1374-Omega: On / / , five (5) months after SCP-1374 was declared Neutralized, SCP-1374 remanifested in all previously infected areas. However, a new iteration of the anomaly appeared rather than any recorded instance of SCP-1374-X. This iteration is uniform across all infected areas and only manifests

Arabic numerals. The numbers in SCP-1374's messages decrease at a constant rate over time. The significance of this is unknown; however, all manifested numbers are roughly equal between the structures at any given time.

Footnotes
1. Research shows that once SCP-1374 stops manifesting within a structure and transfers to a separate place, it will not remanifest in previously infected areas, even if they become active again.
2. The object that was used as an example of SCP-1374-A's messages
3. Commonly found phrases found were "please help us," "hes coming," and "You can protect us"
4. Since this incident, Site 95 has been gradually transporting its contained objects to other sites as well as increasing the number of personnel assigned to site security. However, at no time are less than twenty-five (25) anomalous objects to be held within Site 95.
5. Notably, this was the same date of the disturbance in [REDACTED]

« SCP-1373 | SCP-1374 | SCP-1375 »

SCP-1375: Extraterrestrial Tube Station

Item #: SCP-1375

Object Class: Euclid

Special Containment Procedures: As the station containing SCP-1375 has been decommissioned, no public cover is required. The specific section of tunnel containing SCP-1375-1 has been renovated, sealed, and converted into an airlock with an attached on-site research laboratory. Access to or experimentation with SCP-1375 requires prior approval from at least two (2) Level 3 Senior Researchers, and all personnel entering SCP-1375-2 must be trained and certified in the use of Foundation EVA suits.

Description: SCP-1375-1 is a steel service door in the decommissioned tube station of the London Underground. Historical records indicate that no anomalous properties were present when the station was decommissioned in 1994. When opened, SCP-1375-1 contains a standing space-time aperture to SCP-1375-2.

SCP-1375-2 is a near-exact copy of the station prior to its decommission, located on an unknown extraterrestrial moon of similar mass and composition to Ganymede orbiting a blue-green gas giant which itself is in orbit around a transitional-phase red giant star. The location of this solar system is currently unknown; astronomical observation with the goal of identifying its location is ongoing.

SCP-1375-2 differs from its non-anomalous original in the following ways:

- SCP-1375-2 is reversed with respect to SCP-1375-1; that is, SCP-1375-2 is symmetrical with the original station with SCP-1375-1 as its axis of symmetry.
- SCP-1375-2 exhibits tool marks in its construction that are

consistent with the types of tools used to construct station, but the precise configuration of the tool marks is inconsistent.
- SCP-1375-2's signage, in addition to being mirrored, contain many spelling mistakes as well as languages other than English; at least two (2) of these languages are unknown and currently indecipherable.
- SCP-1375-2's exit to the surface is in an unfinished state consistent with incomplete construction rather than destruction. In addition to being open to the lunar surface, the lower atmospheric pressure of SCP-1375-2 results in a net negative pressure differential at SCP-1375-1; prior to the installation of an airlock, this caused rapid decompression in the section of station in which SCP-1375-1 is located when it was opened.

Information regarding artifacts and documents discovered within SCP-1375-2 are documented, stored, and available for analysis in the Site Non-Anomalous Item Storage Facility.

Addendum 1375-1: Researcher Note

After several months of analysis, the following data has been gathered by exploration teams:

- Exploration of the area around SCP-1375-2 has found no additional structures, artifacts, or signs of life. Furthermore, atmospheric analysis of the moon on which SCP-1375-2 is located has yielded no sign of any organic components that would indicate that life exists anywhere on the body. Design of an autonomous UAV capable of flying in the reduced atmospheric pressure and circumnavigating the moon is ongoing.
- Preliminary astronomy reports indicate that the planet that SCP-1375-2 orbits is one of approximately eleven planets within the star system, and that none of these planets or their observed moons appear to be capable of sustaining life.
- Spectroscopic analysis of materials used in the

construction of SCP-1375-2 has yielded an unusually high level of mercury and radon, but are otherwise consistent with its terrestrial original.

Dr.
Senior Researcher

Addendum 1375-2: Notable Recovered Objects

Reference #: 1375-038
Recovery: Discovered in a men's restroom.
Description: A copy of the *Evening Standard* newspaper, entirely in reverse but otherwise identical to those printed on December 27, 1993.

Reference #: 1375-062
Recovery: Found on tracks below second platform.
Description: A handwritten note on a paper napkin: "19:30, don't forget" written in reverse.

Reference #: 1375-088
Recovery: Affixed to a wall near entrance.
Description: A reversed printed advertisement poster for a musical concert. All text is otherwise identical to actual posters, however the band members pictured are entirely devoid of facial features.

Reference #: 1375-109
Recovery: Found on a shelf in a janitor's supply room.
Description: Box of construction screws with reverse threading composed entirely of high-strength titanium alloy. This is the only construction material discovered in SCP-1375-2 with composition not consistent with its terrestrial counterpart.

Reference #: 1375-133
Recovery: Discovered on lunar surface 3 m outside of main entrance.
Description: A single unopened can of brand low-sodium canned kernel corn, confirmed to contain kernel corn via ultrasound analysis. Text printed on label

is in Portuguese but is otherwise consistent with those manufactured prior to 2003. Object is also significant as the only object recovered from SCP-1375-2 that is not in reverse.

« SCP-1374 | SCP-1375 | SCP-1376 »

SCP-1376: Documentary Camcorder

Item #: SCP-1376

Object Class: Safe

Special Containment Procedures: SCP-1376 is stored in a standard secure locker at Site 19. Experimentation with SCP-1376 may only be performed with prior permission from at least one (1) Level 3 Senior Researcher, and all recordings created using SCP-1376 must be thoroughly inspected for classified information. All recordings created using SCP-1376 are available for research via Site 19's secure database.

Description: SCP-1376 is a yellow Sanyo VPC-WH1YL waterproof camcorder manufactured circa 2009, and is outwardly unremarkable except for some minor scuffs and scratches as a result of extended use.

Whenever a video recording is created using SCP-1376, the resulting audio track is narrated by a male voice with a British accent in the manner of a nature documentary through unknown means. The audio modification is consistent with professional-grade post-processing and audio mixing and even includes fading in and out of the original audio as appropriate to the subject matter recorded. Still images created using SCP-1376 are unaffected.

SCP-1376 came to the attention of the Foundation on / /09 as a result of a notification from automated systems monitoring instant-messaging communication in which [REDACTED], the original owner and purchaser of SCP-1376, attempted to explain its anomalous properties to an acquaintance. [REDACTED] was detained and questioned by a Foundation response team, who claimed to have purchased SCP-1376 off the shelf in a local store. Subject was released after being administered a Class A amnestic and given a replacement unit of identical make.

Disassembly and inspection of the components of SCP-1376 has yielded no irregularities or abnormal components. All units of identical make from the same production batch of SCP-1376 have been tracked down and inspected, and none have exhibited the same anomalous properties.

Addendum 1376-01: Log of Notable Recordings

Date: / /09
Duration: 1:17
Subject: A recording created by SCP-1376's original owner of his wife, presumably as a test of its capability after initial purchase. Subject is in the living room of their home and conversing with [REDACTED]. Dialogue is faded out and unable to be deciphered.
Narration: *And here, we see his mate in the heart of their den. Extremely protective, the female will go to extreme lengths to protect her offspring, even resorting to violence if necessary. Although the pair are quite close and affectionate, she will later spurn his advances, citing exhaustion with her daily rounds.*

Date: / /09
Duration: 0:49
Subject: A static recording of a tennis ball placed on a table.
Narration: *As noon approaches, it grows increasingly confused, as the creatures around it show no sign of using it for its intended purpose. Struggling to attract their attention, it becomes ever more distressed as it finds itself completely immobile.*

Date: / /09
Duration: 1:36
Subject: A Rhesus monkey kept in a cage at Site 19's animal testing laboratory. Subject walks around its cage listlessly before sitting down and eating fruit.
Narration: *By the fourth day, this male has all but surrendered to the grim reality of its fate. It continues to patrol its cage, hoping for any chance that its captors may have been careless, but it has no such luck. By night fall, it will begin to feel the first symptoms of [DATA EXPUNGED]*
Researcher Note: All subsequent recordings created using SCP-1376 are to be screened for possible classified content, and sensitive data redacted as necessary.

Date: / /10
Duration: 1:15
Subject: An incidental recording of Dr. made by Dr. during unrelated experimentation.
Narration: *Despite the male's calm facade, his lust for his female companion is extraordinary. The degree to which his obsession reaches has become nearly unhealthy, dominating his thoughts at every turn. Wild fantasies course through his mind when he watches her when she doesn't notice.*
Researcher Note: Dr. was treated for a broken nose after being attacked by Dr. and both researchers have been placed on administrative leave for a period of no less than two (2) weeks pending disciplinary action and transfer to another site.

« SCP-1375 | SCP-1376 | SCP-1377 »

SCP-1377: Automaton Parliament

Item #: SCP-1377

Object Class: Euclid

Special Containment Procedures: Instances of SCP-1377-01 are to be preserved after initial intake and observation in the C Wing of the Site-23 morgue, which has been repurposed for containment protocols and retrofitted with necessary security infrastructure. Access to SCP-1377-01 instances for experimentation require written authorization from the Research Director and the Cybernetics Initiative Committee.

During the appearance of a new iteration of SCP-1377-01, designated liaisons from security organizations responsible for national legislatures will contact the Research Director immediately. The Research Director will then relay instructions to MTF Kappa-71 (Roberto's Rules of Order), which will either neutralize and contain SCP-1377-01 directly, or direct Foundation security assets in closest proximity to the event to do so.

Due to the politically sensitive nature of SCP-1377 events, use of amnestic drugs on witnesses during subsequent information control efforts is to be minimized; see Protocol 1377-SOLON documentation for more details. All information control procedures related to SCP-1377 must be approved by the Research Director prior to implementation.

Description: SCP-1377 is a phenomenon affecting world legislative bodies. Beginning in 1952 and continuing into the present day, a humanoid automaton of varying physical characteristics (hereby referred to as an instance of SCP-1377-01) will make its way from an unknown origination point to an official session of a national legislative body, present a set of forged credentials identifying itself as a member of that body, and attempt to address the chamber. In all cases, the forged credentials have identified SCP-1377-01 as a

representative of a fictitious constituency within that nation's jurisdiction; examples include impersonations of an MP of the United Kingdom Parliament from "Lockbarrow," a Chilean Deputy representing the "Camino Desconocido" region, a Botswana Assembly Member from "Nnwande West", and a United States Senator representing the State of "Kenswick".

SCP-1377-01 instances are composed of living, organic tissue, and bear a loosely analogous resemblance to *Homo sapiens*. However, the anatomy of SCP-1377-01 varies significantly from that of humans; specimens possess musculature and connective tissues similar to *H. sapiens*, but lack any discernible internal organs, instead featuring an indeterminate, fleshy mass where a human's thoracic cavity would ordinarily be. Additionally, SCP-1377-01 specimens have a skeletal structure composed of tissue resembling hardened cartilage. This is believed to account for SCP-1377-01's erratic and halting movements. DNA analysis confirms that SCP-1377-01 matches no biological organism currently known to the Foundation. Because of the lack of data on SCP-1377-01 specimens prior to their emergence, development of these organisms is poorly understood. However, each SCP-1377-01 instance has ceased life function approximately 12-18 hours after emergence.

Currently, 27 instances of SCP-1377-01 have been documented in 24 nations since the first known occurrence on 04/23/1952. All instances of SCP-1377-01 have been recovered and taken into Foundation custody, with the exception of SCP-1377-01.14 (see Incident 1377-1). If allowed to proceed into the legislative chambers at which the specimen emerges, SCP-1377-01 will make a "speech". The content of this "speech" has varied greatly between instances of SCP-1377-01: The first observed occasion consisted of SCP-1377-01.3 vocalizing a series of static-like screeches and electronic tones; SCP-1377-01.7 addressed the Supreme People's Council of South Yemen with an eight-minute imitation of aggressive hooting noises typically made by *Gorilla beringei*; and most recently, SCP-1377-01.27 was documented at the German *Reichstag* engaging in vocalizations that, while resembling the sound of human speech, contained no discernible linguistic structure or pattern.

SCP-1378: A Trip to the Mall

Item #: SCP-1378

Object Class: Euclid Neutralized

Special Containment Procedures: SCP-1378 has been marked off as off-limits to civilian access under the pretense of chemical contamination until such time that a more permanent containment solution can be devised. All Foundation personnel on-site are to maintain cover as a government-sanctioned cleanup staff and all unauthorized individuals attempting to gain access to the location are to be detained, questioned, and administered a Class B amnestic if deemed necessary by on-site security personnel.

As of - - , no anomalous phenomena have been recorded on-site for a period of twelve (12) months and as such, SCP-1378 has been reclassified Neutralized. Local Observation Posts have been notified to monitor reports in case of resurgence; all on-site personnel have been reassigned and the property has been returned to local ownership until further notice.

Description: SCP-1378 is the former site of the [REDACTED] Mall, a small shopping center located in [REDACTED] which was destroyed by a fire on - - . Officially, the cause of the fire was recorded as having been due to an electrical fault in the central HVAC system that quickly spread throughout the building; civilian casualties numbered 13 dead, 32 injured, and 18 missing and presumed dead.

Human subjects within the former perimeter of the building, particularly within the eastern wing, have reported numerous anomalous phenomena, most notably auditory hallucinations identified as heavily distorted human voices and periodic temperature spikes in various locations. Attempts to record this audio onto electronic media have failed, but corroboration between affected subjects has resulted in highly consistent transcripts of such

phenomena, suggesting a common source for each such incident rather than a localized effect specific to each subject.

A small number of individuals, particularly those with above-average extrasensory sensitivity, have reported being able to see intangible humanoid and saurian figures with varying levels of clarity, and an even smaller number of individuals have received unexplained injuries in the form of burns of varying severity in conjunction with periods of thermal fluctuation.

SCP-1378 was contained and classified following numerous reports of hallucinations and other unexplained phenomena by emergency first responders and disaster response specialists. All such affected individuals were administered Class B amnestics and released following questioning, and current containment procedures were enacted shortly thereafter.

Addendum 1378-01: Log of Auditory Phenomena

While the majority of auditory phenomena experienced by affected individuals have consisted of incoherent or highly distorted voices, personnel have consistently reported decipherable speech from two different unidentified female voices, a young girl (SCP-1378-A) and an older woman (SCP-1378-B), possibly related. The repetition of such speech indicates that they may form some sort of hallucinatory echo of prior events, and the decipherable fragments from such events has been logged.

Transcript:

SCP-1378-B: [indecipherable] your eyes, honey. Stay with me.

(several subjects have inconsistently reported hearing either faint or distant screaming or the crackling of flames at this point)

SCP-1378-A: [indecipherable]? What's wrong?

SCP-1378-B: Don't look at them, sweetie. Hold my [indecipherable]

SCP-1378-A: [indecipherable]

SCP-1378-B: [indecipherable] and stay in here until I come and get you, okay?

SCP-1378-A: Mommy, I'm scared…

SCP-1378-B: I know, sweetie, I'm sorry, but it's not safe, okay? Stay in here and I swear I'll get you when it's safe. Promise me you'll stay in here and stay quiet.

SCP-1378-A: I promise.

SCP-1378-B: I love you, sweetie.

(sound of door closing and distant, indistinct yelling)

SCP-1378-A: (sobbing)

Addendum 1378-02: Incident Report

On - - , while performing an experiment on-site, a research team led by Dr. R M was involved in an incident involving a previously-undocumented phenomenon while taking readings near one of the few intact sections of the East Wing of SCP-1378. The following transcript is a combination of transcripts taken from the team's audio recording equipment as well as corroboration from personnel on-site at the time of the incident.

Dr. R M : Okay, I'm not getting anything from this area. Let's move the second set of sensors twenty meters north and try again.

SCP-1378-A: … mommy?

Dr. R. M.: N , did you hear that one? That was unusually clear.

Dr. N H : Yeah, I did. I might have gotten a spike on sensor three, but I'm not sure. We'll have to take a look at the readout.

SCP-1378-A: Mommy, is that you?

Dr. R. M.: Okay, see if you can get a bearing on this one. J , let's move five through eight and see if we can triangulate.

Dr. J T : Got it.

SCP-1378-A: Mommy? Mommy, don't leave!

Dr. R. M.: (startled) Can… can you hear me?

SCP-1378-A: Yes, I can hear you.

Dr. R. M.: Where are you? I can't see you.

SCP-1378-A: I can't see you either. I… you're not my mommy, are you?

Dr. N. H.: (whispers) We're recording. Keep talking.

Dr. R. M.: No, but I'm here to help. What do you see? Who's outside?

SCP-1378-A: I… I don't know… they took everyone else and my mommy told me to stay here and hide but they're coming closer. (crying) I don't know what to do…

Dr. R. M.: Listen, okay? We're going to do everything we can to help, but I need to know who you are and where you are right now. (aside) Call it in. Get the team over here, right now.

SCP-1378-A: O-okay… (sniffling) m-my name is [REDACTED] and m-my mommy took me to the mall, just the two of us, because she wanted to show me something that no one else could see. We went to the back and then through a weird door that had really weird colors and there was all this awesome stuff, but… then there was fire everywhere and people were screaming and my mommy told me to hide in here and I heard her yelling… and I don't know what happened and I'm scared…

Dr. R. M.: Okay, [REDACTED], can you remember where this door was? Do you think you can get there?

SCP-1378-A: I… I don't know, I can't remember. I… they're right outside the door, I can hear their claws, I'm scared…

Dr. R. M.: [REDACTED], listen to me, you have to try to remember, okay?

SCP-1378-A: They're trying to open the door! I can hear them!

Dr. R. M.: [REDACTED], can you hear me?

SCP-1378-A: Mommy! (screaming)

Dr. R. M.: Leave her alone!

Dr. N. H.: Major thermal spike on sensors, are you— Jesus Christ, get a medical team down here!

(end of transcript)

Researcher Note: Dr. R M was hospitalized with second- and third-degree burns across her arms and chest, as well as severe psychological distress as a result of this incident. A request for a disciplinary hearing to address potential unprofessional conduct is under consideration but likely to be denied in light of mitigating circumstances.

Following this incident, all anomalous phenomena related to SCP-1378 have completely dropped off; we're still not entirely sure what happened, but for the time being, we're out of leads. If we do not get any more readings within the next few months, we're going to have to call it quits on this one.

Dr. N H

SCP-1379: Stab Your Inner Child

Item #: SCP-1379

Object Class: Safe

Special Containment Procedures: SCP-1379 is to be kept in a dedicated Object Containment Locker at Site 19, off the floor and covered by a sheet.

Personnel should never make any remarks regarding SCP-1379's appearance, in order to avoid contamination. Personnel who find themselves contaminated with SCP-1379's influence are to report to their superiors for evaluation, and reassigned to non-experimental work if deemed fit to continue their service to the Foundation. Further action will be taken on a case-by-case basis.

At this time, cross-testing is forbidden between SCP-1379 and other SCP objects which contain childlike abnormal entities, such as **SCP-097**, **SCP-747**, and/or **SCP-899**.

Description: SCP-1379 is a canvas painting of a clown with two children, held in a frame roughly 1.2mx1.5m in size. The object appears to be wholly destructible, and shows some minor scuffing and wear on the edges of the frame. Estimates put the date of creation somewhere in the mid to late 1980s.

If any person or persons make disparaging remarks regarding the content of the painting, they will feel a sharp, severe pain in the centre of their chest within the following five to ten minutes, located roughly behind the sternum. This pain will persist for roughly 20 minutes before suddenly ending; as of yet, testing has not determined a biological process or pattern responsible for this pain. After the cessation of pain, the person or persons who remarked on SCP-1379's content will be irreversibly mentally changed, depending on their biological age.

Adult subjects (>~16-17 years) will become unable to experience certain mental states, such as nostalgia and simpler forms of curiosity. Imaginative ability is also dramatically cut, with more creatively inclined subjects losing the will to create or perform as they did before exposure. Additionally, their sense of humour will be dulled, though not completely removed; they simply will no longer find most humourous situations as such. It should be noted that these individuals may find certain forms of humour, such as specific kinds of sarcasm and more sophisticated jokes or puns, entertaining if they did so before exposure. Adult subjects afflicted by SCP-1379 are capable of living relatively normal lives post-exposure, and this effect diminishes the later in life one is affected.

Prepubescent subjects (<~12 years) will be affected more dramatically by SCP-1379's effect. After the cessation of the pain associated with SCP-1379, young subjects will permanently become subdued and highly suggestible, with little interest towards anything not directly related towards their physical survival. The affected subjects will no longer show signs of any imaginative ability or creative potential, as well as an extremely stunted capability for learning non-physical, non-critical skills such as mathematics. Emotional response is extremely subdued as well, with individuals losing the will and ability to form bonds with others, react to humourous or depressing situations, or feel any sort of fear response. These traits will carry into adulthood, with individuals showing little to no changes in mental state as they progress in age.

Individuals between 12 and 16 years of age will be affected less predictably than those age groups discussed above, though the effects on this age group appear to vary in accordance with mental maturity levels.

Recovery: SCP-1379 was recovered from a yard sale three miles west of Port Huron, Michigan, in 1999, after a high number of civilians were afflicted by its effect. A vast majority of the afflicted were aged 60 or older, and thus were treated with mild Class-C amnesiacs and released. The owner of the property where SCP-1379 was recovered had not seen the painting before, and did not know where it came from. The ultimate origin of SCP-1379 is as of yet unknown.

SCP-1380: Room #16

Item #: SCP-1380

Object Class: Euclid

Special Containment Procedures: The building containing SCP-1380-A has been closed to the public and is to be guarded covertly by a minimal security detachment (Delta-1380) to prevent break-ins and discovery of SCP-1380-A. Delta-1380 is to prevent unauthorized entry into the building containing SCP-1380-A when possible; however, because the building containing SCP-1380-A is located in a residential area, the commander of Delta-1380 is authorized to allow unauthorized entry into the building if it is believed necessary to prevent the detachment's presence from becoming visible from neighboring houses. All unauthorized individuals are to be incapacitated and administered amnestic treatments. Break-in attempts have become more frequent in recent years due to urban legends surrounding the building.

Area 216 has been constructed around the location of SCP-1380-B under the guise of an archaeological exploration site; no unauthorized personnel are to be permitted within Area 16 under any circumstances. Members of Delta-1380 are permitted to explore SCP-1380-B when it exists at SCP-1380-A. Research into SCP-1380's transitory phenomenon is to continue; however, under no circumstances is SCP-1380-C to be operated by any personnel above class D, and remote methods of operating SCP-1380-C are preferred due to the attrition rate (100%) of personnel operating SCP-1380-C.

Description: SCP-1380 is a phenomenon centered around the former multipurpose science lab at Dresden Elementary School in Dresden, TN. SCP-1380-A is the space within Dresden Elementary that formerly contained the science lab, labeled on diagrams as room #16. SCP-1380-B is a remote location on the peninsula of Baja California, centered on 25.2745° N, 111.2037° W. SCP-1380-C is a

plastic light switch installed against the wall of the former science lab of Dresden Elementary School; this switch was present within the lab and otherwise ordinary prior to the development of SCP-1380's anomalous properties.

When SCP-1380-C is set to "on", the DES science lab is located at SCP-1380-A within Dresden Elementary School. The room can be entered via the door to room #16 and displays no particularly anomalous characteristics; all windows display the expected view of the area outside of the building, all plumbing and electrical connections remain functional, and the room can be explored without difficulty. During these periods, SCP-1380-B appears to be a normal desert region and displays no anomalous properties.

When SCP-1380-C is set to "off", the DES science lab is located at SCP-1380-B. A section of the ground at SCP-1380-B is replaced with the floor of the lab, upon which sits the tables, desks, and other furniture within the lab. The plumbing and electrical fixtures that should be located within the walls around the lab, including SCP-1380-C, are suspended in midair around SCP-1380-B, though the concrete walls themselves are not present. Excavations to date suggest that there is no terminal point to the geographic displacement below the ceiling of SCP-1380; the displaced region continues at least 400m beneath the surface of the phenomenon and may continue down to the Earth's core.

While SCP-1380-B is occupied with the Dresden science lab, SCP-1380-A takes on the appearance of a nebulous black region. Any matter that crosses the threshold into SCP-1380-A during this time is inexplicably lost; the region neither emits nor reflects any light or energy at any measurable wavelength. Likewise, while inorganic materials present within the DES science lab are capable of surviving the transition from SCP-1380-A to -B without any noticeable damage, any organic matter within the space of the lab disappears when SCP-1380-C is flipped. The transit from SCP-1380-A to-B is as close to instantaneous as can presently be determined using modern equipment; this has been confirmed both within the DES lab and by observers on both sides outside the lab.

Addendum 1380-1: Background No anomalous events were reported at the Dresden Elementary School multipurpose science

lab prior to 11/02/07. The precise time of the initiation of extranormal behavior related to SCP-1380 is unknown; the room was used normally throughout that day and no unusual events were noted by any witnesses during first through fourth block, ending at 1445 hours. Additionally, due to an unscheduled school closing related to the disappearance of a school bus along with several students that same day, the school was closed for several days afterward. SCP-1380 was first discovered by custodial staff on 14/02/07; one custodian was lost and another experienced spontaneous amputation of the left hand during an attempt to enter SCP-1380-A. Foundation personnel investigated the area as a Department of Human Services inspection team, discovered SCP-1380, and closed the school under the pretense of having found serious structural flaws within the building. Students were redirected to other schools throughout the county while Vincent Sender Elementary School was constructed in memory of a science teacher who was not seen again during the 11/02/07 crisis. Foundation researchers believe he was lost within SCP-1380 at some point; a cover story was crafted that explained his disappearance as a fatality during the "terrorist attack" that "destroyed" Bus #64 on that day.

For more information regarding the anomalous event involving the school bus, please consult documentation for SCP-1480. For information regarding an additional anomalous event connected to SCP-1380, please consult documentation for **SCP-1680**.

« SCP-1379 | SCP-1380 | SCP-1381 »

SCP-1381: Cats' Cabinet

Item #: SCP-1381

Object Class: Euclid

Special Containment Procedures: SCP-1381 is to be held in a 3m x 3m x 2m chamber lined with 6cm of lead sheeting. The chamber is to be hermetically sealed, unable to be opened from the inside and located at a Site that does not also house felid SCPs. All adult felids discovered on-site are to be captured and euthanized. Testing with SCP-1381 is suspended until further notice.

Description: SCP-1381 is a 1.5m x .8m x .5m dresser cabinet made of pine, of a make and model identified as discontinued by the S Woodworking Company in 20 . It has two doors set beside three drawers, the knobs or pulls once present on both having been removed. The bottom drawer can be opened only partially, and is empty; neither the other drawers nor the doors can be opened manually. The surface of the wood on the left side of the cabinet is shredded and stained with blood. Testing has found the blood to be feline. Imaging has shown the interior to be empty and otherwise consistent with that of a typical cabinet of its make and model.

SCP-1381 has the ability to attract felids with an area of effect approximately 15km in radius. SCP-1381's secondary effect varies depending on the species of felid coming into contact with the object.

When *Felis catus* is introduced to SCP-1381, it will begin rapidly "digging" at the left side of the cabinet, often vocalizing distress. After one to five minutes of digging behavior, the right door of SCP-1381 will swing open and the animal will enter, the door swinging shut immediately behind it. Attempts to interfere with the felid's behavior will be met with violent resistance. Imaging of SCP-1381 up to ten hours after a subject enters the cabinet is impossible, as images will be completely black.

Pantherines will rub their cheeks against the corners of SCP-1381, often vocalizing contentment, and display territorial behavior if interfered with. After rubbing has continued for at least five minutes, the right door will swing open and the animal will enter. Despite subjects' size often being greater than that of the opening, no subject has been observed to be unable to enter the cabinet, only to have difficulty in doing so. Imaging again proves ineffective for ten to twenty hours after a subject enters the object.

Current testing indicates that it is not possible to prevent the door from either opening or closing with conventional methods.

Addendum: A period of time between 10 and 20 hours after a big cat enters SCP-1381, both doors will open and instances of SCP-1381-01 and SCP-1381-02 will emerge.

SCP-1381-01 are feline-like beings possessing an outer surface that does not reflect light, luminescent eyes and elongated claws. SCP-1381-01 has been observed moving with greater agility than a standard feline, no doubt in part due to double-jointed limbs.

SCP-1381-02 are [REDACTED], luminescent eyes and elongated claws similar to SCP-1381-01, but lacking the dark pigmentation. SCP-1381-02 are significantly larger than [REDACTED], and display increased speed, strength, endurance and [REDACTED]. SCP-1381-02 are capable of directing SCP-1381-01 via [REDACTED].

Testing has yet to determine the precise circumstances, rates, or time frame for this emergence. See test logs and Incident Log 1381-01 for further information.

> + Test Log for SCP-1381
>
> **Test 1381-02**
> **Date:** 3/5/ , 12:45
> **Test Subject:** One *Felis catus*, male adult, wearing cloth leash and harness, leash held by research assistant.
> Test to see if animal is retrievable after entering the object.
> **Results:** Subject exhibited digging behavior as

expected. Behavior continued despite damage to subject's paws severe enough to cause bleeding. Door opened after three minutes, ten seconds and subject ran inside. Research assistant unable to retain hold on leash, which disappeared into the object, followed by door swinging closed. Test subject lost.

Test 1381-03
Date: 3/5/ , 13:30
Test Subject: One *Felis catus*, male, 3 months old, tethered by cloth leash and harness, leash secured to metal anchor in floor. Test to see reaction of juvenile felines to SCP-1381.
Results: Test subject showed great interest in climbing research assistant's trouser leg. Showed no concern for object. When placed atop it, subject began vocalizing distress after two minutes, due to difficulty in reaching the floor. Test stopped and subject recovered.

Test 1381-04
Date: 3/6/ , 9:15
Test Subject: One *Felis catus*, female adult, tethered by harness and 3m of stainless steel grade 100 chain to a metal anchor driven into the testing chamber floor.
Results: Test subject entered cabinet and chain went taut after three seconds. Black "fog" observed obscuring cabinet interior. Door swung closed on chain but rebounded. Research assistant tried to hold door open while a prop was fetched, but was thrown clear of SCP-1381 as door swung shut a second time, severing chain at doorjamb. Test subject lost, research assistant treated for minor injuries.

Test 1381-05
Date: 3/6/ , 15:00
Test Subject: One *Felis catus*, female adult, tethered by harness and 15m of stainless steel grade 70 chain to a metal anchor driven into the testing chamber floor. Research assistant standing by with 1m long steel spike, 10cm thick, to drop into hole drilled in testing chamber

floor within radius of open door.
Results: Test subject entered cabinet; chain went taut after fifteen seconds, giving research assistant enough time to place spike. Attempts to draw chain out of cabinet ineffective. Intense (~90 dB) squealing noise heard as metal spike bends at 90-degree angle. Researchers report severe aural discomfort. Cabinet door swung shut, severing chain at doorjamb. Test subject lost.

Test 1381-06
Date: 3/7/ , 11:20
Test Subject: One *Felis catus*, male adult, without harness. SCP-1381 is wrapped in 10m of stainless steel grade 70 chain, secured with a high-quality security combination lock, with the left-hand panel free for testing. Test to determine whether SCP-1381 can be held shut.
Results: Feline behavior as expected. SCP-1381 began to shake one and a half minutes after digging behavior started. Shaking increased in violence; right door seen straining against chain. After three minutes, twenty seconds, test subject's paws began bleeding. After three minutes, forty-five seconds, test subject began to dig at chain securing doors. Chain begins to bend. At five minute mark, chain breaks, releasing debris and injuring testing staff. Test subject unharmed and entered cabinet; lost.

Test 1381-07
Date: 3/9/ , 10:00
Test Subject: One *Panthera pardus*, female adult. Test to see reactions of larger felines to the object.
Results: Test subject began vigorously rubbing cheek against left-front corner of cabinet while grunting. Behavior continued for five minutes, forty seconds before door opened and test subject entered. Test subject lost.

Test 1381-08
Date: 3/9/ , 15:00
Test Subject: One *Panthera tigris tigris*, male adult. Subject is wider at the shoulders than door opening.

Results: Results similar to test 1381-07. Door opened after eight minutes, thirty seconds of cheek-rubbing and prusten. Entry hampered by subject's size. After repeated attempts by subject to gain access to inside of object and damage to testing room floor, opening was seen to bend around subject. Test subject lost. See Incident Log 1381-01.

+ Incident Log 1381-01: Level 3 Clearance Required

Date: 3/10/ , 1:00

Location: Site-

Description: At 1:06, report of "knocking" from inside SCP-1381's containment chamber by security guard A S . Security detail assembled to gain entry to containment chamber.

Upon opening of chamber door at 1:11, security was overwhelmed by emergence of 143 instances of SCP-1381-01 and 2 instances of SCP-1381-02 from testing chamber, resulting in death of entire detail. Physical features of SCP-1381-02 are consistent with fur patterning of test subjects 1381-07 and 1381-08, though SCP-1381-02 are approximately 1.5 times larger than test subjects.

At 1:13, containment breach alarms sounded. Security teams dispatched to contain threat. SCP-1381-02 appear to be leading SCP-1381-01 towards entry of Site- , with the larger instance directing SCP-1381-01 in teams against security forces. Security footage shows standard-issue bullets ineffective against SCP-1381-01, passing into but not out of creatures. SCP-1381-02 seen using SCP-1381-01 as shields against incoming fire.

At 1:20, attempt is made by two security team members at request of command to establish communication with SCP-1381-02. Communication established for forty seconds before SCP-1381 attacks, resulting in two

casualties.

At 1:22, standard flamethrowers are issued to defensive squads and prove effective in destroying SCP-1381-01. By 1:28, all instances of SCP-1381-01 and smaller instance of SCP-1381-02 are eradicated. Larger SCP-1381-02 breaches inner security and is neutralized by automatic turrets and security forces with flamethrowers.

Breach incident resulted in total of deaths and casualties. Security noted a mass of *Felis catus* gathered outside Site- during breach incident.

Researcher's Note: We put ten cats in and got over a hundred back out. Either this thing multiplies them or it was saving them up until it got here. If the latter is the case, we must consider that containment risks another major breach event. Requesting upgrade to Euclid. -Dr.

Request granted. Containment procedures updated. -O5-

SCP-1382: Save Our Souls

Item #: SCP-1382

Object Class: Euclid

Special Containment Procedures: SCP-1382 is contained off-site at coordinates [REDACTED], Lake Michigan. SCPS *Seastar* is to remain on permanent assignment 1 kilometer from SCP-1382, posing as Michigan Shipwreck Research Associates vessel SS *Lobster Trap*. Foundation operatives embedded in local Coast Guard services are to redirect air and sea traffic away from containment site. Any civilian traffic that approaches SCP-1382 is to be detained, interrogated, and administered class-B amnestics pending results of said interrogation.

Description: SCP-1382-1 is a red sea mark water buoy, identical to models produced by . Registration matches existing model produced in 19 , but no abnormal behavior was reported until July 7, 2012. SCP-1382-1 has suffered structural damage indicative of a high speed impact, likely from a light civilian motor craft, but is otherwise functional and intact. The Foundation was alerted to SCP-1382 after a pattern of recent missing persons reports led them to its coordinates. In dark weather or night conditions, SCP-1382-1 flashes the international Morse code distress signal "S.O.S." at ten-second intervals.

SCP-1382-1 is anchored to SCP-1382-2, which is embedded on the sea floor at a depth of meters. SCP-1382-2 is the remains of Airlines Flight 441, a commercial passenger liner that vanished over Lake Michigan on July 2, 1973. It has suffered extensive structural damage and degradation pertinent to an uncontrolled water landing and prolonged submersion.

Contained within SCP-1382-2 are fifty-six instances of SCP-1382-3: skeletal human remains that are believed to be the former passengers and crew of SCP-1382-2. The remains of three reported

missing persons attributed to SCP-1382-1, as well as D-49581 (see Incident 1382-C-2), are also contained within SCP-1382-2. The whereabouts of two passengers and two crew members from Flight 441 are currently unknown.

When SCP-1382-1 becomes active, all instances of SCP-1382-3 animate, registering a temperature of 37.0 °C (98.6 °F) on thermal imaging scanners. Early observation suggested that SCP-1382-3 was "reliving" the crash of Flight 441: the majority of 1382-3 appear distressed and assuming crash positions in their seats. Continued observation has revealed a number of discrepancies, and it is the conclusion of Dr. Salvia that the passengers were distressed by events occurring parallel to the crash, and not the crash itself.

- Subject #1 (SCP-1382-3-1) rises from the pilot's seat and appears to be fending off an unknown attacker before slumping over 1382-2's control panel and ceasing to move.
- Subject #9 drops to its knees and holds up its arms, in a posture suggesting supplication and/or prayer.
- Subject #12 attempts to push his right thumb into the left eye socket of Subject #13, seated adjacent. #13 offers no resistance but appears to be screaming.
- Subject #18 leans over the back of its chair, grabs hold of and attempts to consume the left hand of Subject #19, managing to dislodge and swallow the distal and intermediate phalanges of the index and middle fingers (finger bones can be seen inside #18's ribcage). #19 appears to be screaming while Subject #20, seated next to it, assaults #18 with its bare fists.
- Subjects #22, #23, and #24 are gesturing at the left-side passenger windows, their motions suggest something is on or near the wing of the plane.
- Subjects #44 and #45 overpower Subjects #46 and #47 (both juveniles, estimated to be 8 and 6 years of age, respectively) and begin to consume them.
- Subjects #53, #54, and #55 are identified as , , and , reported missing during a three month period previous to the discovery of SCP-1382. Each is in a state of decay applicable to their environment and length of time submerged. When animated, all three express confusion and distress at their surroundings and at the decayed

condition of their own bodies.

- Subject #56 is the remains of D-49581, absorbed into SCP-1382-2 during Incident 1382-C-2. It is in a very early stage of decay. #56 expresses confusion and distress at its surroundings, as well as greater self-awareness and none of the "repeating" actions demonstrated by other SCP-1382-3's. #56 has made several efforts to escape SCP-1382-2. So far it has attempted to extricate itself through an open window, communicate with nearby SCP-1382-3's, and to run or swim to the emergency exits. Each attempt has been unsuccessful in the time allotted. Requests to contact and/or remove #56 are pending approval.

After 13 seconds of activity, all instances of SCP-1382-3 turn to face SCP-1382-1. They remain in this position until SCP-1382-1 ceases its S.O.S., at which point they collapse and become inert.

+ Incident 1382-C-1

Foreword: The following transcript details Dr. Salvia's attempts to establish communication with SCP-1382-1 using the *Seastar's* signal light at a distance of 800 meters.

<Begin Log, 0039 Hours>

Dr. Salvia: HELLO

SCP-1382-1: S.O.S.

Dr. Salvia: RESPOND

[There is an uncharacteristic 2-minute pause before SCP-1382-1 flashes a response.]

SCP-1382-1: HELP

Dr. Salvia: WHO ARE YOU

SCP-1382-1: MARY S.O.S.

<End Log, 0103 Hours>

Closing Statement: SCP-1382-1 ceases activity at this point. "Mary" is believed to be Mary , a passenger aboard Flight 441.

+ Incident 1382-C-2

Interviewed: D-49581, chosen for his knowledge of boating and International Morse code.

Interviewer: Dr. Salvia, aboard the SCPS *Seastar*.

Foreword: D-49581 was instructed to board a rubber dinghy and approach SCP-1382-1. Weather conditions nominal. Log begins at 2217 hours, when D-49581 was within 100 meters of SCP-1382-1.

<Begin Log, 2217 Hours>

D-49581: Hey doc, can you read me?

Dr. Salvia: Loud and clear, D-49581. Report your status.

D-49581: I can see the buoy. No people though. Are you sure there's someone out here?

Dr. Salvia: Proceed as directed, D-49581.

D-49581: Fine, fine. Hello! Anyone home?!

[D-49581 raises his signal flashlight and flashes "HELLO" from his light. SCP-1382-1 does not respond.]

Dr. Salvia: Continue transmitting, D-49581.

[D-49581 continues flashing the prepared signal: "HERE TO HELP K."]

Dr. Salvia: Any response, D-49581?

[SCP-1382-1 begins a new signal, translated later as "HUNGER."]

D-49581: What the hell?

<End Log, 2222 Hours>

Closing Statement: A sudden seiche wave - estimated to be 3 meters tall - surges up between SCP-1382-1 and the dinghy. Contact with D-49581 lost on impact. SCP-1382-1 ceases activity. A search of the area reveals D-49581's signal flashlight and fragments of his chest-mounted camera, but no other debris.

+ Incident 1382-C-3

Foreword: 32 hours after Incident 1382-C-2, Dr. Salvia attempts to reengage Morse code communication with SCP-1382-1.

<Begin Log, 2320 Hours>

SCP-1382-1: S.O.S.

Dr. Salvia: HELLO

SCP-1382-1: [Without pause] HELP

Dr. Salvia: HOW

SCP-1382-1: S.O.S.

Dr. Salvia: ARE YOU MARY

SCP-1382-1: S.O.S.

Dr. Salvia: WHAT ARE YOU

SCP-1382-1: S.O.S.

Dr. Salvia: IS WITH YOU

[" " is the real name of D-49581. Almost 5 minutes pass before SCP-1382-1 replies.]

SCP-1382-1: HUNGER

Dr. Salvia: WHERE IS

SCP-1382-1: HUNGER S.O.S.

<End Log, 2351 Hours>

« SCP-1381 | SCP-1382 | SCP-1383 »

SCP-1383: Partially-Functioning Pataphorical Torment Chamber

Item #: SCP-1383

Object Class: Euclid

Special Containment Procedures: SCP-1383 is closed to customers and hotel staff. Keys to the room are stored at Research Facility 5. SCP-1383-affected Foundation personnel are to explain the nature and symptoms of their contamination to all personnel of sufficient object clearance who interact with them and are to avoid socializing with persons of insufficient object clearance. Counseling is available in the psychiatric wing of Research Facility 5 for any personnel who experience distress as a result of being exposed to SCP-1383 or affected persons.

Following Incident 2/1977, personal GPS devices are to be worn by affected individuals at all times, and two personnel are to monitor this data: one which is informed of SCP-1383's effect who will record any changes in GPS data, and one which is not informed of SCP-1383's effect who will record GPS data from memory. Any changes in data recorded by the latter group are to be reported to the head researcher to prevent additional containment breaches of SCP-1383 entities.

Description: SCP-1383 is room number 14 at a Motel 6 located in Gilroy, California. Living humans and other sapient beings (see Addendum) which enter the hotel room are physically and mentally unchanged, but become subjected to an effect which causes anyone who thinks about an affected person to believe that that person is still physically inside SCP-1383. (See **Post-Recovery Interview 1383-3**.)

SCP-1383-affected humans are able to move freely and can keep track of their own location as normal. (One exception was discovered in Experiment 1383-7: a test subject whose vision and

sense of location were disabled as part of experimentation placed himself within the anomaly.) Feelings of dissociation are often reported following contamination with the effect, although no physiological effects have been diagnosed. Those coming into frequent contact with SCP-1383-affected persons complain of a distressing sense of cognitive dissonance.

In Experiment 1383-19, a D-Class subject was instructed to enter SCP-1383 and describe its contents. He provided an accurate inventory of the room and confirmed that he was its only occupant. After 24 hours, the D-Class was asked to write down a list of everything in the room to the best of his memory. The list he completed (Experiment Log 1383-9-A, not provided here) included the main furniture and other features of SCP-1383, a green-hued sphere of rock floating near the ceiling fan, and several hundred people. He was unable to describe the behavior of these inhabitants, referring to them as "just in there".

SCP-1383 was discovered during the Foundation investigation of a local news story describing an "employee blunder" which resulted in a room being simultaneously booked to over seven-hundred customers. The Foundation is currently in the process of using the room's guest records to locate and handle civilians believed to be SCP-1383-contaminated.

During initial containment, a security agent discovered a wrinkled and folded sheet of light brown paper in a bedside drawer. This sheet is covered on both sides in 6-point typewritten script which describes a process intended to "assemble" an "idea trap" using a room or other enclosure and a "hypothetical component", listing as an example the theorized planetary body Themis. The ritual directions are written in an informal second-person style, apparently by someone in a state of severe mental distress. Handwritten marginal notes describe an intent to undermine or destroy — [redacted]

priests, which were residing in the motel during initial containment, were evacuated immediately by containment personnel under false pretense. Researchers are investigating — Am I on? Are you receiving? — by 2005.

Post-Recovery Interview 1383-3 Excerpt, 12/11/1976

Foreword: The interviewed subject is Researcher Cartwright, direct supervisor of Dr. Frey, a specialist in mind-affecting anomalies employed at Site 47 in Nevada. Dr. Frey was brought in to evaluate the properties of SCP-1383, during which point he was subjected to the properties of SCP-1383. Frey returned to his regular assignment on 12/8/1976.

Interviewer: When was the last time you saw [Dr. Frey]?
Dr. Cartwright: This morning, in B hall.
Interviewer: And what did you say to him?
Dr. Cartwright: I bit his head off a little because he was so late back from his assignment at that Motel Six. He kept saying he was coming back, but he was three days late.
Interviewer: How did Doctor Frey react?
Dr. Cartwright: He told me that we had met in the break room yesterday, and I had said the same thing.
Interviewer: Does that make sense to you?
Dr. Cartwright: Not really. I couldn't have talked to him if

he was at the Santa Clara site the whole time, right? It was a pretty weak attempt to cover his ass.
Interviewer: To the best of your knowledge, where is Frey now?
Dr. Cartwright: This is a trick question, isn't it? He's… right, right, he's back in California on that research trip. At this rate, we should probably just transfer him there for good.
<End log>

— —Note— —: On 12/29/1976, Dr. Frey requested to be transferred to Research Facility 5 to continue study of SCP-1383. He cited professional and personal issues resulting from his SCP-1383-affected status which prevented him from continuing in his current position. Almost all SCP-1383-contaminated personnel have requested similar reassignments, and in the interest of reducing confusion in the workplace, Research Facility 5 has expanded to fit these transfers.

Incident 1383-A: On 2/11/1977, at UST 4:30, a coworker of SCP-1383-affected Agent S. Weber expressed concern regarding his behavior. When questioned, she explained that something had reminded her of the agent, at which point she remembered that he was in SCP-1383, "making a deal to bring down the moon so he can climb out". (Weber denied this claim.) This marks the first time the location and behavior of an SCP-1383 entities are described with more precision than their location in SCP-1383.

Following this incident, a series of extranormal events occurred in the five-mile radius around SCP-1383. Primarily, numerous assault and murder incidents were called into local police which regarded people who are alive and unharmed. These events correlated with psychological issues in those who are close to or regularly interact with affected individuals, due to an intermittent belief that those people are injured or dead.[1] In each case, when a description of the perpetrator was obtained, it matched that of Agent Weber. However, records of Agent Weber's activity indicate no possibility that he is responsible for these events. In addition, when the researcher who reported the incident was asked to recall Agent Weber's current whereabouts, she reported that he was in Research Facility 5, within

the observation chamber of SCP- , a Safe-level memetic hazard to which Weber had been given object clearance during a recovery assignment. The containment procedures of SCP- were altered to indicate —

—CÉCE has cracked the window open.—

—I know you don't have the beacons in place to respond. They wouldn't even work there yet.—

—But the signal carries.—

—Maybe you're still tuned in enough to hear.—

Researchers have concluded that the 2/77 events were created by what is termed an autonomous conceptual entity. The entity is believed to be responsible for the developments which led to the reclassification of SCP- to Euclid. Careful questioning of subjects close to Agent Weber has indicated that the Weber entity is exhibiting psychotic behavior and severe dissociation. The Weber entity has so far only contaminated living and sentient humans and animals by "interacting" with them; although it was believed that the entity broke this pattern by conceptually "obtaining" SCP- , a Safe-level object housed in the nearby Armed Containment Area 23 to which Weber possessed object clearance, further investigation has discovered that SCP- possesses a level of intelligence similar to a dolphin. The containment procedures of SCP- were altered to indicate this new information and to mitigate difficulties caused by SCP-1383 contamination.

In an attempt to prevent further contamination of anomalous objects in containment, Agent Weber was subjected to Class-C Amnestic therapy and has been reassigned to janitorial duty at Research Facility 5, restricted to low-clearance areas. Following Weber's acclimation to his new surroundings, this measure seems to have

been effective. From 3/04/1977 to 3/15/1977, the entity remained near Maintenance Assistant Weber's location at an approximate distance of twenty meters. Although this effectively completely alleviated the side effects of exposure to SCP-1383, Weber reported no decrease in feelings of alienation and anxiety related to contamination. On 3/15, at roughly 800 hours local time, the entity is believed to have approached the memetic hazard which it had previously tampered with — ——— —Your distress call was received.— ——— ———

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— —Something is keeping us from getting warlocked on, but we think we've found the window you went through. — ——— ——— ——— ——— ——— ——— ——— ——— ———

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———But it's too real, and close to the nexus on two axes. We can't figure out which.— ——— ——— ——— ——— ———

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ———— ————

———— ———— ———— ———— ———— — And opening the window would let a catastrophe out of here.— ———

———— ———— ———— ————

SCP- 's behavior as prompted by this incident has yet to be replicated. The whereabouts of the Weber autonomous conceptual entity and the SCP- conceptual entity are unknown, and both are presumed to be neutralized. While Maintenance Assistant Weber can no longer be reliably tracked or supervised due to the unique nature of his contamination, his mental and physical state leads the Facility Director to consider him a low-priority threat. The Facility Director has issued an official statement requiring Research Facility 5 personnel to report any possible encounters with maintenance staff that they cannot remember.

Addendum: Following resolution of Incident 2/77, Experiment 1383-9 was repeated with a new subject in order to update data on SCP-1383 conceptual entities. Termed Experiment 1383-21, the initial phase was identical to previous attempts, but the list created by the subject is significantly different. (See Experiment Log 1383-21-A.) The spherical object described in earlier experiments was reported to be "broken", although the rest of its physical description was unchanged, and descriptions of persons inside SCP-1383 were amended with ascribed behavior. Examples include:

- beating against the walls or doors
- scratching at the walls or doors
- screaming
- committing violent acts upon themselves and each other
- lying dead or possibly unconscious
- writing on the walls or furniture using — ——— ——— ——— ——— ——— ——— ——— ——— ——— We can't retrieve you. — ——— ——— ——— ——— ——— ——— ——— ——— ———

SCP-1383-contaminated Foundation personnel who have been matched to conceptual entities on this and similar registries are imagined by prompted staff as exhibiting the recorded behavior. These entities are believed to be conscious, but lacking a means of egress.

Reported conceptual written content includes various expletives and indecipherable or obscene symbols, as well as a crudely-drawn SCP Foundation logo and small notes in Spanish, English, and an unknown language, including "COMO ME SALGO DE ESTE JUEGO"[2] and "CALL **CÉCE DESIGNATE** But one of the axes may be linear time. ".[3]

As of 11/81, two additional autonomous conceptual entities have been recorded within SCP-1383. One is identified by test subjects as the US Labor Party, a political group which the public believes to have disbanded in October of 1979. The second is the only instance which has been described by test subjects as located outside of the room: an entity which Research Subject 1383-33 described as "an ecru man watching from the window". No window is present in the layout of SCP-1383.

Footnotes

1. For example, one interviewed subject became tearful when questioned about her brother, who had been affected by a 2/77 extranormal event. She described calling her brother once or more per day, "to make sure he's still alive", but was unable to explain the source of her anxiety.
2. "How do I get out of this game?"
3.— — — —— —— ——

SCP-1384: Taker of Turns

Item #: SCP-1384

Object Class: Euclid

Special Containment Procedures: The original entrance to the tunnel containing SCP-1384 is sealed with concrete to prevent civilian access. A new shaft has been dug under the pretense of a public works project. The tunnel must be accesssed and SCP-1384 interacted with at least once a week by personnel familiar with Document 1384-1. All interaction must be recorded and studied afterward by Foundation analysis teams.

Personnel are forbidden to ask for or offer anything to SCP-1384 outside of cleared testing procedures. This includes seemingly innocuous or abstract things such as "the time," or one's name. Please see Incident 1384-2.

Description: SCP-1384 is a sapient entity with a variable appearance. It typically appears as a human or human-shaped construct ranging from 1.5 to 2 meters in height. It has also appeared at other times to be made of materials ranging from porcelain to bone to white plastic. Its changes in form take place instantaneously.

SCP-1384 was found inside a tunnel sixty meters under a church in Durness, Scotland. The tunnel is approximately sixteen kilometers long by three meters across, and constructed of a single piece of marble, with three-meter thick walls and ceiling. Notably, true marble is not naturally occuring in the British Isles. The method and date in which the tunnel was constructed is unknown, but artifacts found inside date at least to the 12th century. The floor is tiled with colored squares in white, yellow, black, blue and orange. Each square is 50 centimeters across.

Artifacts in the cave include carved stones, chalk, weapons, a chess

board, and numerous chess pieces, checker pieces, and carved wooden soldiers.

As of 14/03/2011, SCP-1384 is 1.2 kilometers from the entrance of the tunnel, on an orange square. It is unable to move from this square unless certain circumstances are met (See Document 1384-1).

SCP-1384 is able to alter reality, though apparently only in response to certain stimuli. It claims to be under certain rules that govern its abilities and behavior, but refuses to divulge those rules. It is otherwise cooperative and genial, though it seems to prefer some people to others. For reasons unknown, it prefers researchers to agents.

All attempts to force SCP-1384 to move from the square it occupies or to injure it have had no effect. The squares can be damaged, but return to an undamaged condition as soon as SCP-1384 moves to a new square.

Its ultimate goal is to reach the entrance of the hallway and leave. It is aware that the Foundation seeks to contain it, and is therefore unwilling to tell researchers the rules it operates under.

SCP-1384 was discovered after the death of Father , vicar of Durness. His successor discovered a shaft leading to the entrance of the tunnel containing SCP-1384. He contacted his superiors in the church, who ultimately contacted the Foundation through the Fisher Protocols.

> **Incident Report 1384-2**
>
> Dr. Houck had the following exchange with SCP-1384:
>
> **Dr. Houck:** "What's your name?"
>
> **SCP-1384:** "Ah, well, there's a trouble there. You couldn't say it. Couldn't even really hear it, not to have it spoken rightly. Say, can you give me your name?"
>
> **Dr. Houck:** "Certainly. Dr. Houck."

SCP-1384: "Ah, and thanks for that."

Shortly after this exchange, everyone who entered the hallway became aware that the entity was named Dr. Houck. The original researcher was no longer able to respond to that name, and people who knew him were temporarily unable to think of him by that name. The entity expressed a degree of regret, but would not relinquish the name, citing its rules. Several days later, the situation was resolved by the simple expedient of Dr. Ho saying to the researcher, "I name you Doctor Houck." The effect on Dr. Houck was no longer evident, though the entity is still "known" by that name by those who enter the hallway.

Interview Log 1384-1

Dr. Ho: "What are you?"

SCP-1384: "Ah, I couldn't tell you that, Jimmy. I don't think on the one hand it'd tell you too much, but it'd be more than you know. The less you know, the better my position."

Dr. Ho: "Why is it better?"

SCP-1384: "You're like the old man. I can see it right off. Want to keep me in this old hallway, just as he did. And didn't he do better than his predecessors? No, I gave him too much of a hint, and look where it got me. I'm actually two steps behind where he found me. Not a gambit I'll let you try."

Dr. Ho: "Why don't you just walk out?"

SCP-1384: "Well, that's the rules, you know. If I could just walk right out, I'd have done it a year and an age ago. But without rules, well, where would we be? Wouldn't know where any of us were, not really."

Dr. Ho: "It doesn't seem fair if we don't know the rules."

SCP-1384: "Not my fault either. Look, I have to scrape up every advantage I can."

Dr. Ho: "Who trapped you here?"

SCP-1384: "It was my own side, actually. Got me out of a tighter spot than this, if you can credit it. Sometimes you have to play the sacrifice, you know."

Dr. Ho: "Why are you telling me this?"

SCP-1384: "You're just a pawn, really, and I'm a big softie at heart. Besides, while I'll get out eventually if you lot leave, I'm willing to bet you won't be as clever as the old man. You can try to keep me here, but I think you'll get me out even sooner. Call it our little game."

« SCP-1383 | SCP-1384 | SCP-1385 »

Document 1384-1

Rules currently known or suspected to govern the behavior of SCP-1384

Rule 1: SCP-1384 is able to treat abstract concepts as having real existence.

> See Incident SCP-1384-2.

Rule 2: SCP-1384 is able to take a step forward if it is left alone for thirteen days.

> Initial containment procedures were focused on not approaching SCP-1384, on the theory that it would be unable to advance without interaction. Cameras watching showed it move thirteen days after last interaction. When questioned, SCP-1384 said, "I told you I'd get out eventually without you. It'll take a while, of course, but you can't just leave me be. I'm on the home stretch now. The bones will roll, you know."

Rule 3: SCP-1384 is able to affect the passage of time for individuals.

> Several statues were found half a kilometer further back in the tunnel. When examined more carefully, they appeared to be flesh-and-blood humans in clothing appropriate for the 19th century. When asked about them, SCP-1384 responded, "They asked me for the time of day. Well, I gave them the time of a day about sixty years from now. Ought to be a nice one. I think they'll like it."

Rule 4: SCP-1384 cannot acknowledge anyone or anything that is predominantly yellow.

When Dr. Ho entered wearing a yellow rain slicker, SCP-1384 refused to acknowledge his presence until he removed it. Further experiments with maize, yellow paper, and pencils had the SCP ignore these objects, except as they related to other, non-yellow objects. For example, he can acknowledge the pencil as a researcher writes with it, but ignores it when presented with it directly.

When asked why, it responded as follows: "Well, it's acrosswise, you see, which means it's not at all friendly. Not to me, anyway, I suppose my buddy's got no problems there, but we can't help where we sit, right?"

Researchers painted the floor ahead of SCP-1384 yellow. However, the paint vanished the next time SCP-1384 made a move.

Rule 5: SCP-1384 is able to take a step forward if certain people cross its shadow while walking in a clockwise direction.

Dr. Ho was performing a careful inspection of SCP-1384's form when he walked around it. SCP-1384 stepped forward into a black square. It did not step forward when he crossed the other direction, but when he moved clockwise again, it stepped forward into a blue square. It wouldn't explain the significance.

Note: Agent Faraday had previously stepped across SCP-1384's shadow without incident. It refused to explain the significance of Dr. Ho.

Rule 6: SCP-1384 steps one square to the right when given a coin.

Dr. Ho was looking through the contents of his pockets to find a piece of paper. SCP-1384 watched him fish several coins from his pocket, and asked if it could have one. Dr. Ho decided, after some discussion with the surface team, that it was worth testing. He handed it a subway token. It immediately stepped to the right. Further coins given to it resulted in right steps, until it

reached the wall, at which point it stopped.

Rule 7: SCP-1384 is able to create or summon some objects upon request.

> Researcher Dr. Houck was interacting with SCP-1384 as part of normal containment protocol, and asked if it would like to play a game to pass the time. SCP-1384 waved its hand, and a table with a chessboard appeared in front of it. Researcher Dr. Houck played several games with it. He asked if he could take it with him, to which SCP-1384 agreed.
>
> The chess set was made of a cardboard chessboard and wooden pieces. They were apparently hand-carved. The chessboard had no manufacturer's markings.
>
> Researcher Dr. Houck reported that SCP-1384 has an adequate understanding of the rules, but is not a truly proficient player, showing an unwillingness to sacrifice its pawns.

Rule 8: SCP-1384 is forced to take a step back when certain people enter the hallway.

> When Agent Lachner reported to duty, SCP-1384 stepped back from its previous position, back onto a black square. However, when she tried to re-enter, SCP-1384 said, "Already used your turn, love."
>
> Agent Lachner was able to enter two more times over the next two days, each time driving SCP-1384 back. However, it ceased working shortly after. Further attempts had no effect on SCP-1384.

Rule 9: SCP-1384 is unable to step into a yellow square.

> Researcher Dr. Houck inadvertently stepped clockwise across SCP-1384's shadow. SCP-1384 started to step forward, but stopped halfway, and returned to its original position. "Blast. Should've been watching. Could've been

a bad one, that. Well, I'll get to the side eventually."

Rule 10: SCP-1384 is unable to change form at will. The trigger for these changes is currently unknown.

Researcher Dr. Houck asked SCP-1384 if it could change again after it assumed the form of a skeleton. It replied, "Sorry, lad, it's this or nothing for a bit. It's a rum card, for sure, but we'll pass again in a bit, and with a little luck, you'll like me a bit better, eh?"

Rule 11: SCP-1384 is able to send people elsewhere, or possibly to destroy them.

A D-Class personnel was brought in for testing SCP-1384's indestructibility. It was given a knife and told to attempt to cut SCP-1384's arm, which it attempted several times to no effect. The following exchange took place:

SCP-1384: "Not that I mind so much, but what's with trying to carve me up?"

D-5350: "They told me to cut you, Dr. Houck. I get to go if I do what they tell me."

SCP-1384: "Well, I do understand that. I'd get out myself if I could. Of course, I'll walk out eventually."

D-5350: "Wish I could just up and get out of here."

SCP-1384: "Do you? Well, as you like."

D-5350 vanished. When Dr. Ho asked if the D-Class personnel was dead, or if it could be brought back, SCP-1384 responded, "I didn't kill him. He just went back to the start. I might be able to bring him back, if you ask, but you probably wouldn't like it. Neither would he. He'll be back on his own, eventually. If I bring him back, I can tell you right now I won't get it right. That's for free. I get no advantage from that deal."

Shortly afterwards, the pattern of the tiles changed, and now contained red tiles as well as the original colors.

Rule 12: SCP-1384 is unable to touch any person.

This was previously assumed to be a rule, as SCP-1384 studiously avoided any direct contact with any person. However, when Agent Barnes held out his hand, SCP-1384 accepted it and shook. When asked, it said, "Oh, I was just being polite, you know. I don't just up and prod people. I do have manners. I'm not a Pict, you know."

Actions SCP-1384 is able or compelled to perform, but for which the trigger is unknown:

Step to the left.

Step forward when no one crosses its shadow.

Step backward when Agent Lachner is not present.

Give gifts of chestnuts and bronze knives.

Remove its own head.

Change form.

Know things that it could not learn from conversations that have taken place inside the tunnel (current events, cultural references, hobbies and interests of researchers and agents assigned to it). When Dr. Ho was about to tell it that it had been given a reference number, it correctly guessed that it would end in a 4.

SCP-1385: The Mistake Ring

Item #: SCP-1385

Object Class: Safe

Special Containment Procedures: SCP-1385 is to be contained inside a standard Safe-class containment locker at all times unless under test conditions. All tests are to be approved by at least one Level 3 Senior Researcher. It is recommended that any human test subjects interacting with SCP-1385 be screened for shellfish allergies, excluding tests involving SCP-1385 and subjects with shellfish allergies.

Description: SCP-1385 is a ring composed of concrete, measuring 19mm in diameter and weighing approximately 1.4 grams. The object has many superficial flaws in the form of cracks and air bubbles, though it has been coated with a polyurethane resin resulting in a glossy texture.

SCP-1385's anomalous properties become evident whenever a living human wears it on any part of their body. The most immediately evident effect is the spontaneous and instantaneous appearance of fully grown specimens of *Silybum marianum* (Milk Thistle) on any surface the subject's feet contact. This includes the soles of any footwear the subject attempts to wear. Because of the presence of spines typical of *Silybum marianum*, this invariably results in minor injury to the subject's feet and great discomfort when attempting to walk.

Secondary effects of SCP-1385 are not immediately noticeable due to both the length of time required for them to be observed, and the specific conditions required for their emergence. The first of these effects causes a rapid increase in the growth of the subject's hair. In just three days of contact with SCP-1385, hair growth can exceed 1 meter. The hair weaves itself into a net-like pattern, after which the subject gains conscious control of the hair. These "nets" can be

used by the subject to scoop up objects they would normally be able to pick up with their hands. The forces holding the weaves intact are not currently understood, nor those which allow the subject to voluntarily control them.

Finally, subjects under SCP-1385's influence have an unexplained effect on crustaceans of the family Nephropidae, and some species from family Homaridae (Clawed Lobsters)[1]. Affected specimens will invariably attempt physical contact with the subject with no regard to self preservation. Subjects in tests have expired from asphyxiation before breaking contact. This effect is more easily observed if the subject is submerged in water along with several specimens.

Addendum 1385-A: SCP-1385 was discovered on April 22, 20 in an abandoned warehouse in , . The warehouse had apparently been taken as a place of residence by an unknown party, later to be identified as . had left the premises several days prior on April 19, but had left behind a majority of his equipment and possessions. The equipment is highly eclectic in nature, ranging from scientific instruments to religious paraphernalia. More notable objects include:

- 1 argon ion laser.
- 1 iron Thor's hammer amulet.
- 1 booklet containing three (3) instances of SCP- .
- 34 liters of kombucha tea.
- 3 vertebrae of an unknown species. DNA analysis proved inconclusive.
- The crushed remains of 42 concrete rings nearly identical to SCP-1385 in dimensions.

Addendum 1385-B: A 300-page journal belonging to was discovered at the site of SCP-1385's recovery. 249 of the pages contain either writing, sketches, or both, with the remaining pages being blank. The following are notable excerpts from the journal.

Page 1:

> Day 1
> Today I set out to create something I've never attempted before. I'm confident I have the skills to pull it off, but to

be sure I've brought plenty of supplies in case I screw it up and need to try again. Soon enough, I'll be sitting pretty with a conjuring ring. I can't wait to see the look on their faces when I show it to them.

Page 134:

Day 24
I think I'm getting close now. The last ring was a failure like the rest, but at least it didn't turn my earwax into maggots. I wonder if it had something to do with the placement of the basalt spheres? Reminder: See if you can't contact Phenylalanine for some advice.

Page 222:

Day 47
This is getting more than a little frustrating. I just can't seem to achieve the desired effect. I don't know what I'm doing wrong, it should be working. Everything's in place from what I've been taught. The laser, the skull, the helium-3, it's all exactly where it's supposed to be. I'm gonna call it a night and review my notes[2] tomorrow.

Page 249:

FUCK IT!

Note: This entry was written in large letters across the page.

Footnotes
1. See Addendum 1385-C for a complete list of affected species.
2. Attempts at duplicating SCP-1385 using 's notes are ongoing, but have thus far yielded no anomalous results.

« SCP-1384 | SCP-1385 | SCP-1386 »

SCP-1386: Sentient Ice Cream Van

Item #: SCP-1386

Object Class: Euclid

Special Containment Procedures: SCP-1386 is currently located in an evacuated four-block neighborhood surrounded by a 10-meter-high reinforced concrete containment wall in , , 8 kilometers from the nearest inhabited neighborhood. Due to the incident with Doctor F on 4/17/12, it is to be kept under constant surveillance, and must only be approached by D-class personnel.

Any individual that comes within a 3-meter radius of SCP-1386 must give the appearance of being happy, such as by smiling or laughing. If it is approached by someone who does not appear happy, the subject will feign hostility, emitting a low growl from its interior, and refuse to interact positively until the individual's demeanor changes. It is as of yet unknown if SCP-1386 will act out on its aggression if exacerbated.

When making contact with SCP-1386, it is strongly advised to have at least twenty dollars of American currency in hand and in plain view of it. If SCP-1386 does not sense currency on the individual approaching it, a siren that has been known to cause bleeding of the inner ear will blare from its undercarriage for the next 24 hours. All attempts to silence the siren have failed, and once it has begun, the subject will refuse to move from its current location until the 24-hour period has passed. Any attempts of interaction with SCP-1386 during this period have been known to momentarily increase the intensity of the siren.

Description: SCP-1386 is a white “Good Humor”-brand ice cream truck, in poor condition and lacking any images or descriptions of the products it sells. The van appears to be sapient, as it drives without a person behind the wheel; after the investigation of 3/15/12, it has been concluded that none of the doors or windows on the vehicle

open through conventional means. The van plays instrumental melodies of “Pop Goes the Weasel” and “Twinkle Twinkle Little Star” 24 hours a day, alternating between the two every four hours. On occasion, it has been known to play a version of “Greensleeves,” but will immediately switch to another song when in the presence of customers.

SCP-1386 has a thin slot in the middle of its driver-side door, which only becomes visible when it dispenses the various ice cream products it sells. Along with the ice cream, the van slides out a small slip of receipt paper with a price written on it in what has been described as “very sloppy, but legible” handwriting. The van receives payment through the same slot it delivers ice cream from, and will drive away as soon as it is paid. The prices and flavors of the ice cream products it sells fluctuate daily, but it never runs out of its stock of items. Notable tests of the van are as follows.

3/30/12 - Doctors R and D each requested one cookies and creme smoothie, and they were dispensed as asked. However, one smoothie was marked with a handwritten M and the other a handwritten G. The receipt was for $4.89, and was paid without incident.

4/1/12 - Doctor D requested one Neapolitan ice cream sandwich. After several seconds, the van slid out what appeared to be a meat and cheese sandwich with tomato. The sandwich was made out of chocolate, vanilla, and strawberry ice cream, respectively. The receipt given read “april fool’s!” and the van drove away before Doctor D could inquire about payment.

4/12/12 - Doctor D asked for a single-scoop vanilla ice cream in a waffle cone. The product was dispensed as asked, with a receipt that read $0.72, and was paid without incident.

4/17/12 - Doctor F requested one peach push-pop and received it, along with a receipt of $16.27. Doctor F expressed disapproval at the price for the ice cream and refused to pay the full amount, instead paying a total of $3.75 in quarters. When Doctor F attempted to walk away, the van opened the slot in its door to an approximate height of six feet and dragged Doctor F inside of

it by use of a large and rusted steel trap. The van then returned its slot to its former size and proceeded to spew out a pink substance from its slot for five straight minutes before then driving away with no further incident. Upon inspection of the pink substance, it was found to consist of blood, skin tissue, and bone fragments whose DNA signature matched that of Doctor F .

Due to the incident of 4/17/12, all further attempts to interact with SCP-1386 must be through D-class personnel.

4/27/12 - Personnel D- asked the van for a cherry Popsicle, adding: “with nuts.” The van seemed to wait several seconds, then dispensed a single cherry Popsicle, unwrapped, with nuts embedded in the ice. The receipt given read “$2.20 you’re nuts!” and D- was recorded as chuckling as he read the paper. The van was paid without incident.

4/30/12 - Personnel D- requested a "Caesar Salad flavor" Popsicle. After a few moments, the van dispensed a Popsicle with an off-green coloration which was noted to taste of "lightly dressed lettuce with a hint of croutons." The receipt was for $4.56 and was paid without incident.

5/4/12 - Personnel D- asked for a "Dark Chocolate Fudge Pop," and received it with a receipt of $1.38, paid for it with two single-dollar bills. After receiving payment, the van made a sound akin to a cash register from within what is presumably the area in which ice cream is stored, and then dispensed a small factory-wrapped package. There was no written indication of what was contained inside the package, but on the front there was a crudely-drawn image of what appeared to be various coins, all of American currency. The van drove off once the package was dispensed. At the urging of Doctor J , D- was then assigned to inspect the contents of the package. The package was found to have a total of $.62 in American currency. When the coins were considered safe, D- asked if he could keep the change; request was denied.

5/10/12 - Personnel D- asked for an ice cream Kinder Egg which was dispensed along with a receipt for $3.87 and was paid without incident. The Kinder Egg appeared similar to the kind popular in Europe, though made of ice cream instead of chocolate; D-

reported the exterior to be made of coffee ice cream and the interior of french vanilla. However, there was no toy inside as ordinary Kinder Eggs have. Instead, there was a small slip of parchment paper that read "i.o.u. one toy."

5/16/12 - Personnel D- requested the following, in order: one cherry ice lolly, one cherry ice pop, one cherry popsicle, and one "cherry-flavored drink, frozen." The van made what D- described as "a real unnerving sound, like someone skinning a cat in reverse" for several seconds before flinging out of its slot red sticks of unwrapped ice, shattering them on the pavement. Moments later, it dispensed a large styrofoam cup full of a frozen green liquid. D- was noted as asking the van "What do I owe you?" and was given no response before the van drove off. Upon inspection of the shards of ice from the first three sticks, it was discovered that the frozen substance was made up of two parts water, one part arsenic, and red food dye. The styrofoam cup was found to contain an unknown substance with a melting point so high it is impossible to thaw with current technology. The substance and the cup are presently being held for further examination.

5/20/12 - A new procedure has been tested. Personnel D- 7, mute but able to write, requested a "vanilla cone in chocolate" through use of pencil and paper. The request was raised to the area where the dispensing slot usually appears. After a full minute, the van opened another slot three inches lower than the normal one. A thin, flesh-colored appendage slid out of the slot to retrieve the paper before retreating and closing the slot. Moments later, the normal slot opened and the ice cream was received. The receipt was for $.97, and was paid without incident. When questioned about the transaction, D- 7 responded in frantic sign language. It is transcribed as follows:

> It was a hand. Not human. Two fingers and a thumb. It was bony like a dead body. And it smelled. It smelled dead.

D- 7 refused to eat the ice cream that was received, claiming they had "lost [their] appetite."

5/30/12 - Following the events of 5/20/12, Personnel D- 5, who is

not mute, was given the order to repeat the same test, writing their request on paper and giving it to the van. The van received the paper through its secondary slot by use of another flesh-colored appendage, and completed the transaction as requested. The receipt was for $.86, and was paid without incident. When questioned about the transaction and the appendage in particular, D- 5 responded:

> I don't see what B was getting all worked up about. It's just a hand, you know? There's probably just some guy in there, handing out ice cream. Sure, it's weird, but what here isn't?

6/4/12 - Personnel D- 2, also not mute, was given the order to write a new request on paper and give it to the van. The request was for a banana sundae with hot fudge. As in previous tests, the van accepted the paper through a secondary slot by use of its "hand" and processed the request. The receipt was for $2.78, and was paid without incident. When questioned about the transaction, D- 2 stated:

> There's got to be somebody in there. I could swear I heard somebody cough, like they had a cold or something.

When the topic of the "hand" was further pushed, D- responded:

> Look, it's not that big of a deal. Just a hand. Got all five fingers, looked healthy, certainly not dead or whatever. B 's just lost it. Never trusted that guy much, anyway.

6/6/12 - No test. Personnel D- 7 [logged at 5/30/12] was found dead in their holding block at 07:40. Approximate time of death is 04:30. Autopsy shows that D- 7 died of strangulation, and light bruising on the neck confirms this. D- 7's death has been marked as suicide as they did not share a cell with any other personnel and their cell door showed no signs of forced entry.

SCP-1387: Giant Seagull Airlines

Item #: SCP-1387

Object Class: Euclid

Special Containment Procedures: SCP-1387 is currently contained in Area-55. Primary containment consists of a 100m x 100m x 30m steel reinforced concrete hangar. SCP-1387 is to be restrained in this hangar with 30 high tension steel cables at all times, and is to be under constant surveillance. At least 10 armed guards are to be on standby in case of a breach. Once per month, SCP-1387's wings are to be clipped.

A 15m high electric fence is to be maintained around the perimeter of primary containment hangar. Fence is to be charged to 5 kV at 1A. During maintenance, fence is to be powered down to 3 kV. All personnel involved in maintenance are to observe standard live-line working procedures.

Description: SCP-1387 is a very large avian creature similar in appearance to a seagull, measuring approximately 20m in length, with a wingspan of approximately 25m. SCP-1387 lacks a heart, respiratory system, or digestive system, as its body cavity instead contains a space closely resembling the cabin of a passenger aircraft. This space is 2.5m x 15m in area, with exactly 40 seats and 20 windows (though none are visible from the outside). On the sides of SCP-1387's body are several rigid flaps of skin which act as entrance points to the interior. SCP-1387 does not require nutrition, but recovers from injury quite slowly, with major injuries rendering the entity comatose for weeks.

Once every 3 to 5 months SCP-1387 will land at the nearest airport to its current location and initiate its primary effect. SCP-1387 will produce a perceptual effect, causing people to observe[1] the creature as a regional passenger aircraft. During this state, a group of between twenty-three (23) and thirty-four (34) people in the airport

(designated SCP-1387-1) will attempt to move towards SCP-1387 and enter its interior. Testing has shown that it is not possible to prevent instances of SCP-1387-1 from entering SCP-1387's interior, as instances have invariably been able to find other routes when one is blocked. Attempts to physically restrain instances have similarly failed, as instances have been able to escape any restraint.

Once all instances of SCP-1387-1 have entered its interior, SCP-1387 will take off and fly until it next exhibits its primary effect. Thus far, no instances of SCP-1387-1 have been located after this event One (1) instance of SCP-1387-1 has been recovered, and is being held in Site-101. See Addenda.

Current containment procedures have prevented SCP-1387 from manifesting any of its properties. However, the entity is extremely hostile and actively attempts to breach containment. As of / /200 , SCP-1387 is classified as Euclid.

Addendum 1: On / /200 , an instance of SCP-1387-1 (identified as Johnathan) was recovered in [REDACTED] and transported to Site-101. The following interview was conducted upon arrival.

> **Interviewed:** SCP-1387-1 (Johnathan)
>
> **Interviewer:** Dr. O
>
> **<Begin Log>**
>
> **Dr. O :** Please state your name for the interview.
>
> **SCP-1387-1:** Johnathan .
>
> **Dr. O :** Do you remember anything about the of 199 ?
>
> **SCP-1387-1:** Yeah, it rings a bell. Um, I remember going to the airport. I was flying somewhere, I can't remember where exactly. I boarded the plane, and waited for, uh, the plane to takeoff.
>
> **Dr. O :** Do you know what happened next?

SCP-1387-1: (pauses) We took off. I was sitting next to this gal, I remember that she had these really beautiful green eyes. I looked out my window, and it was a really nice, sunny day outside. And then, I remember seeing a bird. There was a whole flock of them, flying in this blob shaped swarm. And I looked back at the cabin, there were the other passengers. And we were on the plane…

(SCP-1387-1 appears very distressed.)

Dr. O : You're doing well. Can you remember past that?

SCP-1387-1: One moment, I see her sitting next to me. And then, in the blink of an eye, she was gone. Not just her, but everyone on the plane, gone. And in their place, all I could see was birds. They filled the cabin, it was almost surreal. Then I couldn't see anything.

Dr. O : And after that?

SCP-1387-1: Nothing. The next thing I knew, I was on a bench back at the airport. I thought it was all a dream. I was all dazed, and then I started walking. I started getting really dizzy, then eventually a guard found me. He looked at me and asked if I was drunk. I told him I didn't know what was happening. I think I blacked out there. When I woke up, I was in a police station, and then you guys took me down here.

Dr. O : OK, I believe we are done here. Is there anything you'd like to add?

SCP-1387-1: I think I saw her.

Dr. O : Who?

SCP-1387-1: While I was walking down here, she flew by that window in the hall. She was beautiful, like a raven. I knew it was her, because of her eyes. I hope I can see her soon.

<End Log>

Addendum 2: On / /200 , three months after coming into Foundation custody, the sole recovered instance of SCP-1387-1 was reported missing from his cell. A search of Site-101 found no trace of the subject.

Footnotes
1. This effect applies only to direct observation. Photographs and videos are unaffected.

« SCP-1386 | SCP-1387 | SCP-1388 »

SCP-1388: One Size Fits All Superoos®

Item #: SCP-1388

Object Class: Safe

Special Containment Procedures: Specimens of SCP-1388 are to be stored in opaque 20cm small item containers. When being studied, D-Class personnel should be the only personnel to directly observe and interact with the garments. Class C amnesiacs appear sufficient to overcome any compulsive effects of the item if limited to 12 hours of exposure, Class B from 12 to 16 hours of exposure, and Class A over 16 continuous hours of exposure.

All known specimens of SCP-1388 are currently in Small Item storage at Sector-25.

Description: SCP-1388 are a collection of brief-style underwear with designs related to various unlicensed superheroes, done in a comic-book style. The words "SUPER POWERS" are stitched into the waistband. The label on the inside rear of the garment reads "One Size Fits All Superoos®." Currently two identical specimens are in Foundation custody.

SCP-1388 specimens exhibit three key phenomena. The first is a space-altering effect whereby the waistband can stretch to accommodate any person who attempts to wear them. There is no apparent stress or damage done to the garment.

The second is a mind-altering effect whereby any person wearing the underwear believes themselves to truly be a superhero, capable of superhuman strength, heightened senses and unassisted flight. The effect manifests itself fully over a period of roughly 12 hours, after which all test subjects have grown increasingly agitated and distraught. Beyond 16 hours, the wearer is at high risk of self-mutilation and accidental death, and Class C amnesiacs are no longer effective; the wearer should be first sedated, the garment

removed, and a Class A amnesiac administered.

No physical changes or new abilities have been observed despite the subject's insistence as to their new powers; blood and urine samples indicate significantly increased amounts of dopamine and serotonin, seeming to increase with a rate proportional to what the subject calls "superpowers".

The third is a compulsive effect whereby any person who views the garment will wish to wear it. All subjects, when questioned, have given responses related to nostalgia and/or the thrill of being a child again.

Addendum: The first specimen of SCP-1388 was remanded to Foundation custody June 08, 199 by London authorities following what appeared to be a rash of suicides by county morgue workers. ( ) people in total had jumped to their death before a forensic scientist noticed a morgue technician removing the underwear from a corpse and putting it on themselves. Suspecting sexual crimes, the scientist contacted the police, who, after the apparent suicide of the technician (who tried to stop a train by standing in front of it), contacted Foundation agents at Sector-25.

Efforts to trace the line of suicides and workers back to incident zero were successful, but no living kin could be contacted.

The second specimen was remanded to Foundation custody September 27, 200 in Manhattan, New York after a failed suicide attempt by a John Doe jumping off the 76th floor of Tower. Site-28 in SoHo picked up anomalous police chatter as authorities attempted to "talk down" a victim. Mobile Task Force Pi-1 ("City Slickers") was deployed, the victim was disabled by means of a fast-acting tranquilizer and the specimen secured. However, the victim never recovered from sedation and was taken off life support October 5, 200 .

It is presently unknown how many other SCP-1388 specimens exist. Reports of above-average suicide rates in a locale, especially in the forensics field, may indicate a new SCP-1388 specimen.

2/1388 access may be granted by Level 3 staff at Sector-25.

SCP-1389: A Saint

Item #: SCP-1389

Object Class: Safe

Special Containment Procedures: SCP-1389 is to be kept in a protective Plexiglas case at all times when not undergoing testing. The surface of the image is extremely delicate, and must therefore be handled exclusively by personnel specially trained in the handling and restoration of antique documents and works of art. If, for any reason the need arises for SCP-1389 to be moved while it is not contained in its protective case, it is to be held only by the edge or the back of the icon.

No further tissue samples may be taken from SCP-1389 without explicit permission from the site director.

Description: SCP-1389 is a gilded icon of a Christian saint (presumably Mary Magdalene), rendered in the Russian Orthodox tradition. The subject of the depiction has an expression of great distress, and its image is raised approximately one millimeter from the background of the icon.

The icon was retrieved from an Orthodox monastery near [REDACTED], Russia. SCP-1389's anomalous properties went unnoticed until increasingly large numbers of pilgrims were reported to be congregating there to see the "living saint". When asked about SCP-1389's origins, the resident monks claimed that the icon was given as a gift to the monastery by an anonymous artist, and that it had been in their possession for centuries.

SCP-1389 has no abnormal visual attributes, but the figure it depicts is slightly warmer than standard facility temperature, at 35 degrees Celsius. X-ray imaging reveals a complete human skeleton directly underneath the surface of the image, flattened and to scale with the figure's form.

No dissections have been carried out on SCP-1389 due to the possibility of destroying it, but CT scans indicate that fully functional circulatory and nervous systems exist underneath the "paint", implying that it is a living organism. Neurological tests have proven that SCP-1389 has an emotional reaction when spoken to, and is likely intelligent. Development is underway on potential methods for SCP-1389 to communicate.

Addenum 1389-01: Testimonies of SCP-1389

It was initially believed that SCP-1389 had no capacity for movement, but the figure has shown that it is capable of moving its eyes to follow an object. An interface based on those utilized by victims of full-body paralysis has been installed in front of SCP-1389, consisting of a panel of Cyrillic letters and common Russian phrases that are activated when it makes eye contact with them. After demonstrating the device's functionality to it, SCP-1389 has proven to be capable of communicating with testing personnel through this interface, but has thus far refused to respond directly to questioning. SCP-1389's statements can happen days apart from one another, and are often only semi-coherent. The following transcriptions have been translated from their original Russian.

3/17/ , 10:25 AM:

> *i was born of my mothers womb not cobbled together by the clumsy hand of the artisan in this cage of wood and flesh*

3/17/ , 11:54 AM:

> *i am undone*
> *i have broken my vows*
> *i am undone*

3/19/ , 9:38 PM:

> *those fools took a sinner to be their saint*
> *and i obliged them*

4/18/ , 2:18 AM

they held me prisoner as an example to the others
they rang their thunderous church bells praising god
yet i often wonder which god it is they prayed to

/ / , :

i cannot get out

/ / , :

you are not my liberators

« SCP-1388 | SCP-1389 | SCP-1390 »

SCP-1390: A Dead Language

Item #: SCP-1390

Object Class: Euclid

Special Containment Procedures: All documents containing samples of SCP-1390 and the accompanying reports are to be kept in a standard safe located at Site-73. Site-73 encompasses the entire island of off of the coast of Greece, which is currently believed to be the site of a nuclear testing installation. Any civilians near the island's coast or found on the land are to be detained by on-site security personnel and interrogated for knowledge of SCP-1390, administered a Class-B Amnestic, and sent back to the mainland.

Instances of SCP-1390-1 are to be cataloged and then incinerated immediately. Samples of SCP-1390 found on the objects are classified as extreme memetic hazards and are to only be viewed by SCP-1390-2.

MTF Epsilon-13 (aka "Grammar Police") are to be sent to any area where an archaeological dig has uncovered a SCP-1390-1 object or an instance of SCP-1390-2 has been sighted. MTF E-13 is authorized to administer Class-B Amnestics and terminate SCP-1390-2 subjects as necessary. Foundation moles are to monitor Anthropology or Linguistics departments of major universities of any research into SCP-1390.

All attempts to study SCP-1390 are to be made by D-Class translators, specially screened for linguistic skill. These researchers are exempt from monthly termination procedures. They are to be granted unconditional access to the catalog of SCP-1390-1 objects and facsimiles of SCP-1390 research. D-Class translators are to make a detailed report of their findings without using any written examples of SCP-1390 delivered once every week. Subjects are to be terminated before reaching the third stage of infection. All third

stage subjects represent an exponentially increased cognitohazard. As of Incident-1390-1, no Foundation researcher is to directly study SCP-1390.

As of Incident-1390-2, all material generated by world governments are to be monitored for SCP-1390. All results are to be sent to Site-73. Any instances of SCP-1390-2 found in these areas are to be terminated and brought to Site-73 for autopsy. If these SCP-1390-2 subjects have had no contact with SCP-1390-1 objects, special containment procedures are to be revised immediately.

Description: SCP-1390 is a grammatical structure only exhibited in a dead language of the civilization of the island of . While records indicate no mass migration, artifacts containing instances of SCP-1390, known as SCP-1390-1, have been found in such varied areas as the Mongolian steppes, **the Hindu Kush of northern Pakistan**, the Apennines, and the coast of Brazil. Research suggests that [DATA EXPUNGED]. (See Document-1390-A with Level 5 Security Clearance.) SCP-1390-1 objects resemble period art created by contemporaneous Mediterranean civilizations. No SCP-1390-1 objects are anomalous themselves and can therefore be classified as Safe.

Instances of SCP-1390-2 are created through any contact or meaningful knowledge of the syntactical structure of SCP-1390. Of the individuals exposed to SCP-1390, 60% become interested, almost obsessed, with decoding and studying the language's syntax. Of this number, 95% progress to late stage symptoms and can be accurately designated SCP-1390-2. SCP-1390 infection occurs in a greater rate in individuals who show interest in the mechanics of language, and the infection proceeds more swiftly in subjects who are fluent in more than languages.

The first stage of SCP-1390 infection manifests in an increased aversion to incorrect grammar. Subjects who were previously shown to be indifferent to grammatical errors react strongly to mistakes. This stage is innocuous, and subjects seek to correct the grammar of those around them. SCP-1390-2 individuals at this stage report a feeling of contentment when correcting grammar. Analysis of CT-scans performed on first stage subjects have shown electrical and neurological responses similar to opiate usage. The need to correct

grammar becomes progressively stronger, resulting in laconic withdrawal when denied. Stage one can last from days to years. Near the end of the first stage, SCP-1390-2 subjects will claim to be growing wings along their back, thighs, or face. All autopsies performed on stage one individuals show no sign of wing development.

In the second stage, all language and grammar that differ from SCP-1390 are treated as being “incorrect.” SCP-1390-2 subjects describe hearing or reading any other language as being “like shitting in church” or, in one case, “like the fires of God in [her] eyes and tongue.” Individuals will refuse to communicate through any other method than SCP-1390, although applied to the language they are most comfortable with, and are to be treated as mental hazards. SCP-1390-2 subjects in this stage are terminated, due to their tendency to infect others. Sufferers of stage two infection cite a lack of pleasure gleaned from hearing bad grammar. Stage two subjects are highly volatile, as stage two lasts only - days. All autopsies performed on stage two individuals show no sign of wing development.

Progress into the third stage is marked by the subjects' tendency toward referring to themselves with one of two grammatical genders only contained in SCP-1390. The sex of SCP-1390-2 individuals is in no way a determining factor for which gender is chosen. The third stage results in [DATA EXPUNGED]. (See Document-1390-B for an analysis of the physical and anomalous qualities of third stage SCP-1390-2 subjects.)

It is currently unknown if SCP-1390 infection progresses beyond the third stage, due to the cognitohazard that second and third stage SCP-1390-2 subjects express.

+ Level 4 Security Clearance Required

Addendum 1390-1: The language of the civilization is a previously unrecorded dead language, though similarities in form and vocabulary have been noted in Hadza, Leco, Korean, and Esperanto. The language itself contains no anomalous properties, even when a collection of words is used to create a sentence

with incorrect grammar. Words of other languages placed into the SCP-1390 structure retain anomalous properties. Like Latin and other languages, nouns are declined in gender and case. SCP-1390, however, contains two unknown genders, differing from the neuter, masculine, and feminine of most languages, but their role in the language is not well-understood. Instances of SCP-1390-2 refuse to explain their purpose, although researchers theorize that [REDACTED]. The cases, while conforming to the expected nominative, accusative, genitive, dative, locative, instrumental, and prepositional, contain unknown instances that researchers have dubbed the xenophobic, the dimensional, and the temporal. (See Document-1390-C for a full report on the minutiae of SCP-1390.)

Addendum 1390-2: Foundation personnel assigned to study the culture of the civilization report that SCP-1390 did not grow and mature along the usual paths of human language. While forms of Ancient Greek were spoken by the civilization during its infancy, the language of SCP-1390 appeared fully-formed around BCE. Artifacts dated to that period tell of a ruler, referred to only as "The Wise (or Sagely) One" who came from the outlands to teach their people to be civilized. Of note is that the all records and artifacts of the civilization cease fifty years after this time, and there is evidence that the culture wiped itself out with what is described in SCP-1390-1 objects as “a destruction of [untranslated] and the simple” ordered by this ruler. Artistic portrayals of The Wise One show a humanoid figure with a variable number of wings growing from its back. Following his appearance, the rate of winged, humanoid figures increased drastically in SCP-1390-1 objects. It is unclear what symbolic significance is held by these wings. Revised as of Incident-1390-1. (See Document-1390-B.)

Incident-1390-1: Site Director Cavoli, after being found to be infected, was allowed to keep studying the

grammatical structure by approval of O5- and was designated SCP-1390-2A. His last communication not written in the anomalous grammatical structure is as follows: “It is the language of the angels given to us as a kindness. I wish to share it with the world.”
SCP-1390-2A's first stage lasted an accelerated period of days, and his second stage resulted in the infection of 12 personnel. At his third stage, [DATA EXPUNGED]. (See Document-1390-B.) The subject's rate of infection, resulting in the subsequent infection of 86 personnel, is theorized to be due to his substantial intelligence, curiosity, and status as a hyperpolyglot. His research represented a significant cognitohazard and further infected more Foundation researchers. SCP-1390-2A was neutralized by an MTF E-13 operative. It is theorized that an SCP-1390-2 subject left undiscovered at a university could result in a K-level scenario.

Incident-1390-2: Foundation moles situated in *L'Académie française* reported a possible instance of SCP-1390-2 when one of *les immortels* became increasingly agitated, angrily correcting others' grammar when he had previously been known to be quiet and reserved. Moles reported that the subject had been petitioning to change the French language into what he called “a pure form,” which was found to be close to the grammatical structure of SCP-1390. The subject was neutralized via facilitated suicide. All individuals close to the subject were given Class-B amnesiacs. The subject was found to have no contact with any area previously shown to produce instances of SCP-1390, nor did any of his papers express knowledge of the culture. Based on reviews of his diaries, the subject had SCP-1390 “come to [him] in a dream, like the calls of a kind God, fluttering and folding around [him] like the wings of a great protector.” He later expressed a wish to “show the beauty and truth of pure, unfettered thought” and claimed to be sprouting wings. Autopsies seized from French medical practitioners show no signs of such transformation. Status as a first stage SCP-1390-2

subject confirmed. SCP-1390 seems to appear fully-formed in some SCP-1390-2 subjects without any outside interference. Changes made to theories present in Document-1390-A.

« SCP-1389 | SCP-1390 | SCP-1391 »

SCP-1391: Field of Stone

Item #: SCP-1391

Object Class: Safe

Special Containment Procedures: SCP-1391 is to be surrounded by a 3-meter tall barbed wire fence. A guard force under the guise of local Algonquin Tribal Police is to maintain continual internal and external patrols in the vicinity of SCP-1391, and will report any damage for immediate repair and further observation for subsequent attempted breaches. Any civilians approaching the exclusion zone are to be notified they are trespassing on protected Algonquin Reservation lands and escorted from the area; civilians displaying resistance or refusal are to be detained, treated with Class-C amnestic, and relocated to the nearest population center.

Description: SCP-1391 is a 12-hectare parcel of land in , Canada that borders Algonquin reserve lands under protected status. The land was previously owned by , a local art professor. On the property are (upon last inspection) 137 large, concrete abstract depictions of screaming heads. Engraved on each side of the heads near the bottom is a name and date, later determined to be the designated individual's date of death. Foundation investigation has uniformly determined that names sourced from the stones match those of individuals who have at some point visited the location. Of note is the observation that stones bearing the names of suicide victims are variously disfigured.

It has been determined through corroboration of death records and incidental observation that the heads appear at or around the time of death of the individual named on a given statue. The stones have been noted to uniformly appear in locations not under current observation, such as around the perimeter fence, or observation posts. Due to an apparent tendency for stones belonging to individuals with similar causes of death to group together, efforts by Foundation personnel to observe formation of a stone focused on

these areas. Despite more intense observation, these efforts were ultimately futile, with new heads in some cases manifesting between frames of CCTV footage, or in one notable case, in the blink of eye, as reported by a dismounted patrol element.

Addendum-1391-A - Acquisition: Interviews with the previous owner show that purchased the property in the summer of , with the stated intention of using it as a retreat for his art students. Following his wife's death during renovation of the property, Mr. discovered a concrete head bearing her name approximately 400 meters from a centrally-located barn. Upon examination of more remote sections of the property, he discovered "hundreds" of the heads. Patrols of the site corroborate his testimony that in most instances the heads were partially or completely destroyed, with most showing signs of weathering and disrepair. Mr. made the decision to market excursions on the land as an evolving memorial to local personages.

The object drew the Foundation's attention following a legal proceeding between Mr. and a visitor to the property; a disagreement broke out when the visitor discovered his daughter's name on a stone, despite her having visited the property only once, and never having spoken to the owner. During an interview with a local asset, Mr. admitted he only had built a handful of the heads himself, and offered to mark those from the ones that spontaneously manifested. The Foundation assumed ownership of the land through what was publicly labelled as transfer of property rights to the adjacent Algonquin tribe. To maintain deniability, Mr. was administered a Class-B amnestic, compensated, and returned to society.

Addendum-1391-B: As of / / , no additional personnel are to be assigned to internal security operations involving SCP-1391.

« SCP-1390 | SCP-1391 | SCP-1392 »

SCP-1392: Functioning Scarificator

SCP-1392 stored with its suction cups, later found to have no anomalous properties. Click image to enlarge.

Item #: SCP-1392

Object Class: Safe

Special Containment Procedures: SCP-1392 is to be stored in Locker 139, in Safe Item Storage room 391. Employees may submit a request for treatments at the referral of a site physician. If approval is given, use of SCP-1392 is to be administered and strictly monitored by a medical professional. In the event of a negative feedback bleeding, a transfusion must be completed as soon as possible to prevent neurological damage.

Description: SCP-1392 is an antique scarificator, dated to the late 19th century. The object is constructed primarily of brass, with an ebony handle, cutting edges of surgical steel. The brass and ebony components are in excellent repair considering the instrument's age. Like mundane scarificators, it is operated by pressing the slotted side of the instrument to the skin, and unlocking the spring mechanisms. The small blades in the instrument are forced out through the slots, creating incisions in the skin prior to retracting.

The anomalous properties of the instrument manifest upon its use. The object has been found to function in a manner consistent with the Hippocratic theory of medicine, and displays etiological and symptomatic curative properties when used on diseases that were treatable by sanguination under the theory. The number of treatments needed to cure an illness is apparently relative to the severity of the illness being treated.

Addendum 1392-01: On 04/04/2013, during testing, the nurse administering the treatment to D-02842 was instructed to bleed the subject to unconsciousness. The hope was to find the upper limits of the object's effect. The subject became confused, dizzy, and

eventually lost consciousness. The nurse immediately stopped the treatment and attempted to stop the bleed. Bandages and coagulants failed, leaving the nurse to suture the small cuts and call a site physician. When the physician arrived, a subdermal haematoma had formed, and the wound needed to be reopened. The site physician checked D-02842's blood pressure, finding that is was being maintained at 70 over 40. It became clear that the effect of SCP-1392 was replacing as much blood as he was losing. The subject was left in this state for five hours before it was ruled that the negative feedback bleeding would continue indefinitely. D-02842 was given a blood transfusion and the effect ceased. The lack of blood flow to the brain over the extended period caused irreversible brain damage, and the subject was terminated. Further testing on the negative feedback threshold found the effect to happen between a Class II and a Class III haemorrhage. It was found that the effect of SCP-1392 could not keep up with deep vein or arterial bleeding.

Acquisition Log: The Foundation first received information about the object when Dr. submitted a paper on a patient of his. , 26 was HIV positive and seeing Dr. as his primary physician for the virus, and a recent bout of tuberculosis. At the behest of his girlfriend, , he visited a local naturopath for a "more natural treatment." The naturopath, , was in possession of the scarificator, and treated Mr. successfully over a period of two weeks. When he visited his primary physician again, he was found not even to have a latent infection. The treatments did not, however, cure his HIV/AIDS. The Foundation closed down Ms. ' office under the pretence of renovation, seized her equipment and took her into custody. She was questioned about her techniques, education and the suppliers of her equipment. When she was found to have no anomalous properties, and no connection with any GOIs, she was administered Class B amnestics and released.

+ Interview 1392-03

Interviewed: (referred to as Ms. M)

Interviewer: Researcher Collins

Note: During Ms. M's detention and

questioning regarding her acquisition of SCP-1392, her knowledge of how it functions and probe for possible connections to external agencies, she appeared comfortable and displayed a marked tendency to stray from the line of questioning. Extraneous chatter has been marked and redacted in the following transcription.

<Begin Log, 0701h, 15/03/2013>

Researcher Collins: Good morning, Ms. , I'd-

Ms. M: Good morning, Doctor Collins.

Researcher Collins: Yes. I'd like to ask you a few questions to help clear up some of our records regarding the scarificator, and secondly to inform you that as soon as we're through with this… you will be released.

Ms. M: Fucking finally. This seems like a lot of work for a stupid trinket. Don't you have like, I don't know, ghosts or sasquatches to catch?

Collins: Everything is worth taking a look at, Ms. , and anything worth taking a look at is worth looking at thoroughly. Now where were we?

Researcher Collins reviews the notes from the two previous interviews.

Collins: Ah, here we go… where you received your training, and about your decision to become a naturopath. Would you elaborate on that?

Ms. M recounts her studies and certification as a personal support worker, and her later

career shift into naturopathy. Nothing is overtly relevant to SCP-1392, and nothing to this point indicates a perceptible connection to external agencies or other anomalous objects. All her answers to prompting, and explanations were consistent with previous interviews.

Collins: Do you recall from whom you got the object?

Ms. M: Yeah, actually. got it for me as a gift after I'd been open about a month.

Collins: This is Mr. girlfriend?

Ms. M: Yeah, she's a big antiquer, always picked up that kinda stuff. She got it restored so I could actually use it, and she said it was part of a set. Offered to find the other three pieces for me.

Collins: The other- What other items are in this set?

Ms. M: She never said anything else about them, but I assumed they affected the other three humours.

At this point, Ms. M went on a lengthy explanation of the humours, how they purportedly affected the body, and the various treatments she offered for each. Researcher Collins seemed irritated but reluctant to interrupt her.

Collins: Thank you, Ms. . Agent will finish up with you, and you should be on your way home shortly.

<End Log, 0832h 15/03/2013>

Closing Statement: In light of Ms. statements, a field investigative team was dispatched to maintain observation on her business, as well as to locate the previous owner of SCP-1392, and ascertain its origin and the existence of the rest of the set. All attempts to contact “ ” proved fruitless, and no field personnel established positive identification of the woman in question. When contacted, Mr. claimed when he had returned from a doctor's appointment to find all of her belongings removed. He could not recall her last name, nor did he have any record of a former residence.

« SCP-1391 | SCP-1392 | SCP-1393 »

SCP-1393: Somebody Else's Mess

Item #: SCP-1393

Object Class: Euclid

Special Containment Procedures: The property surrounding SCP-1393, formerly owned by the J.W. and Sons Corporation, is to be designated Site-97. Mobile Task Force Beta-7 (aka "Maz Hatters") are to be tasked with cleanup operations and onsite security. SCP-1393 is to be buried with an adequate amount of earth as to neutralize its active effect. Material produced by SCP-1393 is to be handled as detailed in the standard protocols for extrinsic hazardous materials.

The material will need to be mixed with moist clay earth at a ratio of 3:1 before being hauled away to be properly disposed of on site. Disposal will consist of hauling the material to the NW corner of Site-97 and spread across the ground. Once cooled, a 30cm layer of clay earth will be spread on top. Future reclamation plans will consist of converting Site-97 into a shipping container storage yard once cleanup operations have completed.

Samples of the material produced by SCP-1393 will need to be collected and sent to Research Site-45 for scheduled bi-weekly testing.

Description: SCP-1393 is a spherical portal measuring 1.8m in diameter and positioned 10cm above the ground. SCP-1393 has remained active since Feb. 17th, 2013 (2 days after its initial sighting). While active, SCP-1393 continually exudes a partially vitreous slag-like substance from its surface at rate of 12m^3/hr. This material's temperature has been measured to range between 1,500°C and 1,800°C. Roughly 85% of this material is primarily composed of a combination of silica, quicklime, alumina, sodium borate, and magnesite. Traces of mercury, uranium, phosphorous, sulfur, radium, and other toxic elements in varying amounts have

also been detected.

Before SCP-1393 entered its current active state, a humanoid being designated SCP-1393-1 was observed performing reconnaissance and surveying of the immediate area. SCP-1393-1 was reported wearing a Level A/Type 1 Hazmat suit equipped with a polarized face shield and a SCBA unit. The Foundation was contacted about the event and SCP-1393-1 was interviewed about its actions and purpose. To date, SCP-1393-1 has not been seen since SCP-1393 activated.

[LEVEL-1 ACCESS REQUIRED]

Field Interview Transcript$_{1393\text{-}12}$

Interviewed: SCP-1393-1

Interviewer: Dr. Herman Muntz

Foreword: Dr. Muntz, accompanied by 8 field agents, approach SCP-1393-1. SCP-1393-1 is observed packing instrumentation and other equipment into cases as if preparing to leave.

<Begin Log, [Feb. 17th, 2013 / 11:23]>

Dr. Muntz: Um…Excuse me, sir!

[SCP-1393-1 appears to be ignoring their presence]

Dr. Muntz: Excuse me!

SCP-1393-1: [sigh] Listen, pal, I really don't have time. I'm busy.

[SCP-1393-1 continues to pack his equipment]

Dr. Muntz: Well can I ask you a few questions?

SCP-1393-1: Whatever, fine. Just let me finish what I'm doin'. I got to wrap up five other duplicates today or else my boss is going to bite 'nother chunk outta my ass for taking overtime.

Dr. Muntz: What's all this equipment for?

SCP-1393-1: It's for surveying.

Dr. Muntz: Well…why are you surveying?

SCP-1393-1: Look it's just procedure, alright. I'm just here to-

[a beeping can be heard inside SCP-1393-1's suit]

SCP-1393-1: Hold up a sec, buddy; I have to take this. [beep] Whats up?…Nothin', just here with some locals…What do you mean "what do they look like"?…[scoffs] Goddammit Jimmy, you ask me the same stupid fuckin' question every time we're assigned together… Who cares if they look funny!?!…Just prime the fuckin' system, would ya? I'd like to take my lunch hour after we finish here…[beep]… Fuckin' new hires.

Dr. Muntz: Um…Who was-

SCP-1393-1: Look, bub, I really don't have the time. If you want to file an official complaint or talk to the on shift supervisor, here's a business card.

[SCP-1393-1 hands Dr. Muntz an 85mm × 55mm paper card before walking towards SCP-1393 with equipment]

SCP-1393-1: By the way guys, ya might want

to clear out.

Dr. Muntz: Wait! Hold on a minute!

[SCP-1393-1 enters SCP-1393]

SCP-1393-1: [as heard from the other side of SCP-1393] OK Jimmy, open her up!

[Loud mechanical noises are heard emanating from SCP-1393 while Dr. Muntz and agents evacuate the area.]

<End Log, [Feb. 17th, 2013 / 11:29]>

Closing Statement: Shortly after this interview ended SCP-1393 became active.

[LEVEL-2 ACCESS REQUIRED]

Similarities between SCP-1393 and **SCP-364** have been noted. Factoring in **SCP-2493-1's** account, it suggests the possibility of extra-dimensional disposal of materials as a common practice.

« SCP-1392 | SCP-1393 | SCP-1394 »

SCP-1394: Dream Syringe

Item: SCP-1394

Object Class: Safe

Special Containment Procedures: SCP-1394 is to be kept in a standard security locker at Site-19. Subjects injected with SCP-1394 should be confined to a testing room while asleep, and should be kept at Site-19 afterwards for further observation.

Testing of SCP-1394 has been halted temporarily. Consult Interview D-1394-5-D for details.

Description: SCP-1394 is an ornate brass syringe, dating to the early 1600s. When fully assembled, SCP-1394 will fill with a saline solution at a rate of 1mL per minute until full. When SCP-1394 is used to inject this saline solution into a patient afflicted with a disease or condition, the subject will begin to sleepwalk four minutes after their next onset of REM sleep. The subject cannot be woken for the next forty minutes, and will wake upon the conclusion of this time period.

While sleepwalking, subjects will experience a dream that accurately simulates their surrounding environment, except for the presence of various medications and medical devices in the vicinity. The subject reports involuntarily using these devices in the dream to perform a medical procedure on themselves with the intent to cure or alleviate the condition in question; the actions they describe correspond to actions taken during sleepwalking. Medical procedures performed under SCP-1394's influence only somewhat correspond to appropriate or real-life medical treatments, and will often entail the use of medical implements whose function is unknown.

Subjects who perform a medical procedure on themselves under SCP-1394's influence experience a partial alleviation of the disease or condition, which typically entails the return of superficial

functioning of the affected body part despite the continuation of the ailment, as well as agnosia towards associated symptoms. See testing log for further details.

Experiment Log 1394-A

Subject: D-1394-1, diagnosed with lung cancer in the left lung.
Procedure: D-1394-1 reported self-administering anesthetic before performing a lobectomy in a medically appropriate, if drastically accelerated, fashion. Notably, the subject did not report any blood loss, and no precautions were taken to prevent it.
Result: Standard lung function is returned, despite the presence of a tumor that would normally prevent lung function. Shortness of breath, fatigue, and chest pain were alleviated; subject was unaware of his persistent cough and wheezing, and attributed the interruptions in his speech to fits of narcolepsy. D-1394-1 died four months later after the cancer metastasized to other organs.

Subject: D-1394-2, diagnosed with narcolepsy.
Procedure: D-1394-2 reported using a needle to administer several injections of fine black sand into the eyeballs, forehead, and chest. This was described as uncomfortable and painful.
Result: D-1394-2 continues to experience narcolepsy. During periods of cataplexy associated with the condition, the subject will remain in an upright position despite the relaxation of the muscles; the force responsible for this has not been identified. D-1394-2 will sleepwalk during daytime sleep, and believes that her associated dreams are genuine, temporary changes to local reality.

Subject: D-1394-3, missing her upper-left central incisor. An appropriate dental implant was placed near D-1394-3 prior to sleep.
Procedure: D-1394-3 reported using the implant to replace the missing tooth, then sealing it in place with an unidentified blue adhesive. The implant was not used in reality.
Result: D-1394-3 was capable of biting and chewing as though the missing tooth was present, though the subject's speech remained mildly impaired. D-1394-3 perceived the implant to be present, and reported no change after it was actually implanted.

Subject: D-1394-4, missing left hand.

Procedure: D-1394-4 reported immersing his left arm in a vat of cold, white, viscous liquid for roughly forty minutes.
Result: With practice, D-1394-4 was able to develop a form of telekinesis roughly equivalent to a left hand of normal strength. The subject is capable of manipulating objects that are behind physical barriers, and experiences no ill effects from handling harmful objects. This ability only functions if the subject is observing the item(s) being manipulated; interruptions caused by blinking typically result in the subject dropping any held items. The subject reports possessing a left hand made of an unidentified white solid.

Subject: D-1394-5, blind since age 2.
Procedure: D-1394-5 reported using a metal syringe to inject herself with a very hot liquid, then falling asleep 35 minutes later.
Result: D-1394-5 remains in REM sleep, and all attempts to wake her have been ineffective; however, the subject's dreams closely resemble reality and she is fully somnambulant, enabling communication with researchers. See Interview Log D-1394-5-C for further information.

Interview Log D-1394-5-C

The following interview was conducted with D-1394-5 17 hours after exposure to SCP-1394 to assess medium-term consequences of her condition.

<Begin Log>

Dr. Braun: Good evening, D-1394-5. Mind if I sit here?

D-1394-5: Yeah, whatever.

Dr. Braun: *<Sits opposite D-1394-5>* First things first: Are you still capable of sight?

D-1394-5: I guess.

Dr. Braun: That's good to hear. Could you do me a favor?

D-1394-5: Sure.

<Dr. Braun puts SCP-1394 on the table in front of D-1394-5>

Dr. Braun: Could you pick this up and tell me whether it's the syringe you used in that dream?

<D-1394-5 picks up SCP-1394 and examines it with her hands.>

D-1394-5: Yeah… wait, this is the exact pattern it had. How did you get this?

Dr. Braun: That's sort of a long story.

D-1394-5: Oh my god, am I still dreaming?

Dr. Braun: Technically yes, but —

D-1394-5: *<Becoming agitated>* Fuck! What did you do to me?

Dr. Braun: Please calm down and let me ex—

D-1394-5: Wait, is this what you used on me yesterday too?

<D-1394-5 slams SCP-1394 against the corner of the table repeatedly. SCP-1394 experiences minor, inconsequential damage. Security personnel enter the room and restrain D-1394-5, retrieving SCP-1394. D-1394-5's arm makes movements as if to continue this action.>

Dr. Braun: Now, if you would let me finish. You are dreaming, but your dreams are… or were, a very close match to reality. Do you understand?

D-1394-5: No! You can't make me!

Dr. Braun: Nobody's making you do anything.

D-1394-5: I'm not using it again! Why won't this fucking

thing break?

Dr. Braun: D-1394-5, can you hear me?

D-1394-5: Why does it have to be me?

Dr. Braun: I think we're done here. Security?

D-1394-5: And what's in it for me? Why should I believe you?

<End Log>

D-1394-5's dreams remain divergent from reality. The subject does not perceive any attempt to remove SCP-1394 from her possession, and believes that personnel are continually exhorting her to inject herself with SCP-1394 for reasons that are currently unclear. D-1394-5 has been retained indefinitely for further observation.

Interview Log D-1394-5-D

Two days following Interview D-1394-5-C, D-1394-5 addressed a maintenance worker, instructing him to locate Dr. Braun. The following interview took place upon Dr. Braun's arrival.

D-1394-5: I need you to repeat everything I'm saying to you.

Dr. Braun: Sorry, what?

D-1394-5: Good.

Dr. Braun: Can you hear me, D-1394-5?

D-1394-5: You need to use it on someone more cooperative. This one isn't working. Sorry, what are you t — alright, alright.

<Silence for 13 seconds.>

Dr. Braun: Keep going.

D-1394-5: We have so much to offer you. We left our medicine in your dreams for you.

Dr. Braun: But you need us to use SC— I mean, the syringe, on someone else.

D-1394-5: That's right. She can't be the bridge between us if she won't come to us. Find someone else with no vision. Make them use the key three… wait, hold up.

<Silence for twenty-five seconds.>

Dr. Braun: Are you still there?

D-1394-5: Oh my god, they can hear me, can't they. I'm talking in my sleep. How stupid do you think I am? Hey, listen! These guys aren't —

<D-1394-5 begins to experience muscle spasms, before opening her eyes and becoming rigid. No further communication was successful.>

D-1394-5 remains in a fetal position; attempts to alter her posture, including those involving heavy application of force, have failed. D-1394-5 responds to visual stimuli, but exhibits no signs of consciousness. Samples indicate that D-1394-5's blood contains 12% black sand by volume. A further attempt at communication by **MTF Omicron Rho** with the entities encountered has been proposed.

« SCP-1393 | SCP-1394 | SCP-1395 »

SCP-1395: Cave Apparition

Item #: SCP-1395

Object Class: Euclid

Special Containment Procedures: Foundation agents shall work with the governments of Greece and the European Union to suppress public knowledge of SCP-1395. A barbed wire fence measuring three metres in height and twenty metres in length shall be erected to prevent unauthorized access to SCP-1395, with at least three security outposts stationed in the surrounding area. Unauthorized civilians attempting to access SCP-1395 shall be administered Class B amnesiacs and redirected elsewhere.

Description: SCP-1395 is a cave located near Mount , Greece. Carbon dating of human remains and artifacts present within the cave suggest human habitation first began around BCE, which is consistent with SCP-1395-A's claimed history (see below). Surveys conducted by Foundation personnel suggest a depth of at least five hundred metres; further exploration of the cave is scheduled pending approval. (Requests no longer accepted; see addendum 1395-A)

SCP-1395's anomalous properties manifest when persons travel approximately three hundred metres inside the cave. After reaching this point, SCP-1395-A will manifest, blocking the path leading deeper into the cave (though not with any apparent hostile intent). SCP-1395-A is a humanoid entity, appearing to observers as a silhouetted apparition roughly 1.8 metres in height. Though it will not forcefully impede any attempts to leave the cave, % of persons encountering SCP-1395-A report a strong desire to stay within its presence.

SCP-1395-A identifies itself as , and claims that it lived in the Ancient Greek city-state of Carystus around BCE. Through unknown means, it was "bound" to the cave (see Interview Log), and

apparently cannot manifest anywhere outside of it. SCP-1395-A speaks in the native language of whomever it is addressing; when questioned, however, it will insist it is speaking Athic Greek.

If approached by an individual in group, SCP-1395-A will engage the subject(s) in conversation, appearing to derive pleasure from describing and recounting its presumed life. Following the encounter, SCP-1395-A will demanifest, erasing all memories of the encounter from the individual(s)' mind. This will likewise affect written material, rendering writing on any sort of physical surface during the event illegible; however, digital records are not affected, making recording equipment a necessity when interacting with SCP-1395-A.

+ Show SCP-1395-A Interview Log 1

Dr. **:** Hello, SCP-1395-A.

SCP-1395-A: Another has come? For so long, there was nothing, *nothing*… and now, it seems the visits have become more frequent.

Dr. **:** How so?

SCP-1395-A: Time is a difficult thing to measure in the Void… the days and the months and years fold in, collapse upon the weight of the blackness. But I have managed. You and your… "Foundation", was it? You have an interest in me.

Dr. **:** We do, yes. Specifically, we would like to inquire about the details of your current condition, and its origins.

SCP-1395-A: Ask. I will answer, though I must confess my memories have faded over time.

Dr. **:** You claim to have been a man living in Carystus during the Ancient Greek era. Is that true?

SCP-1395-A: "Ancient"? That you would use such a term tells me a very long time has passed indeed. I wonder what has become of my home…

Dr. : Please answer the question.

SCP-1395-A: Yes, I once called Carystus my home. I was a simple merchant, living a comfortable existence. I was not wealthy, but neither was I starving, which is more than I could say for many of my countrymen.

Dr. : How did you first encounter this cave?

SCP-1395-A: It was a warm day in spring… or was it summer? I cannot remember. Business was good, despite a few thieves trying to take from my stall. I was about to close up for the day, when an old man came up to my stall. He was a beggar, and asked me for a few morsels to subsist off of. Naturally, I refused.

Dr. : Why?

SCP-1395-A: It was a time of famine! The crops had dried up inexplicably, and people were desperately sacrificing to the gods to reverse our fortune. I am not heartless, but had I given food out to everyone who asked, I would have been broke in three days!

Dr. : I see. What happened next?

SCP-1395-A: He stared at me—a more deadly and intent gaze I have yet to encounter. He cursed me in the name of the Pantheon, and declared me 'forsaken in the eyes of the gods'. I assumed he was a priest, as he had the curse memorized.

Dr. **:** What did he do after that?

SCP-1395-A: He ran. He thought, correctly, that I would give him a thrashing for cursing me in such a way.

Dr. **:** How long was it before you found yourself in this state?

SCP-1395-A: Four months. Nothing occurred in the intervening time, aside from the usual fluctuations in business familiar to any merchant. It was the beginning of the cold season, and I had closed my shop for the evening when I was attacked by a thug. It was over in a few moments; I felt his blade go through me and my life deteriorate. And then, the blackness. I… [he pauses.]

Dr. **:** Yes?

SCP-1395-A: It has been an eternity, yet I still remember his eyes. Those eyes… I felt as if I could see Hades through them. As if he were possessed by the Gods themselves…

Dr. **:** Moving on. How long was it until you were first discovered?

SCP-1395-A: Do you remember what I told you earlier? Time moves differently in the Void. It is… difficult to describe, to a presence of flesh. But if I were to estimate, I would say a few decades.

Dr. **:** Describe your first contact with a human.

SCP-1395-A: [a distortion is heard, presumed to be laughter of some sort.] I was not as composed as I am now. The first one I met

was an old one-an Athenian, judging by his attire. I screamed, so he ran, naturally. Then I felt myself imparting something upon him, and I vanished once more.

Dr. : The amnesiac effect you have?

SCP-1395-A: If that is what you would refer to it as, yes. It went like that during my first awakenings. A traveler chanced upon my cave, I appeared, they ran, and they forgot. It was not until some time later that I had my first true conversation.

Dr. : Do you remember what this person looked like?

SCP-1395-A: He was dressed in a form of armor I did not recognize, and had a strange cross symbol upon his chest. I assumed he was a foreigner, yet he spoke Greek, despite his insistence he was speaking a language he called "Aenglisc".

Dr. : How did he react to you?

SCP-1395-A: I had composed myself to the point where appearing was no longer a shock, so I greeted him. He asked if I was the ghost of a "Christ". When I said no, he asked if I was another fellow named "Peter". This went on for a while until I explained my origin, as I am to you now. We talked for a while, then he left.

Dr. : This is how your meetings have gone since then?

SCP-1395-A: I suppose so, yes. I am not some trickster God, looking to fool those who speak to me. I am merely a restless, lonely soul, looking for a way to stem the eternal

emptiness for a time.

Dr. : One final question. Your amnesiac effect is not voluntary, correct?

SCP-1395-A: Making them forget? Of course not. I would love for people to return. I suspect it was part of the curse; what sort of suffering is worse than being alone forever?

Dr. : Thank you, SCP-1395-A. That will be all.

SCP-1395-A: [Gestures to Dr. 's tape recorder]. These devices of yours… they allow you to remember?

Dr. : In a manner of speaking, yes.

SCP-1395-A: That is good… if you remember, return once more. The coldness, the Void… it weighs upon me, and if I am never to leave this place, at least I shall have some company. [SCP-1395-A demanifests. Dr. 's memory of the encounter erased as expected.]

Since its discovery by Foundation personnel, SCP-1395-A has been consistently cooperative. Further interviews are recommended in order to better understand its anomalous properties.

Addendum-1395-A: During an exploration on / / , researchers managed to reach a depth of metres without encountering SCP-1395-A. At this point, the exploration team reportedly become unable to move, and all equipment carried by personnel ceased functioning. Dr. claims to have briefly [REDACTED] shortly before going into catatonic shock and had to be transported out of the cave for medical assistance. When SCP-1395-A was questioned on this occurrence, it replied "do not attempt to join me." and immediately demanifested. Both SCP-1395-A and Dr. have consistently refused to discuss the incident since the date, the latter claiming "you wouldn't understand even if I told you."

Following this incident, all survey requests proposing exploration past the five hundred metre mark are preemptively denied.

« SCP-1394 | SCP-1395 | SCP-1396 »

SCP-1396: Jovian Kill-Sats

Item #: SCP-1396

Object Class: Euclid

Special Containment Procedures: SCP-1396 cannot be retrieved by any means currently available to the Foundation. However, as SCP-1396 has shown no hostility or intent to move from its current location, containment efforts limited to coordinating with NASA and other space agencies to prevent the public dissemination of information have been deemed sufficient for the foreseeable future.

Description: SCP-1396 is a group of five (5) unmarked, weaponized artificial satellites of varying size orbiting the planet Jupiter at its L2 Lagrangian point. SCP-1396 appears to be of human origin; where and when they were constructed remains unknown, as well as how they were transported to their current location.

SCP-1396-1 consists of a central hull coated with hexagonal ablative armor plates powered by what are believed to be radioisotope generators on the ends of three evenly-spaced booms, each approximately 25 meters in length. The central hull is estimated to have contained over one hundred and twenty (120) rod-shaped tungsten kinetic bombardment projectiles with an average mass of 220 kg, and its total loaded mass is estimated to have been approximately 254,000 kg.

SCP-1396-2 is a satellite of identical profile and mass to SCP-1396-1. It is believed to have been rendered inactive during the events of Incident 1396-38 (see below).

SCP-1396-3 through SCP-1396-5 are all identical satellites of a smaller profile than SCP-1396-1 with generator boom lengths of 21 m and an estimated loaded mass of approximately 168,000 kg. Each of these objects is estimated to have carried approximately

sixty (60) kinetic bombardment projectiles averaging 90 kg in mass. All three satellites are inactive and presumed neutralized as of Incident 1396-38 (see below).

SCP-1396 came to the Foundation's attention on / / following the detection of anomalous high-frequency radio signals of artificial origin by Foundation interplanetary probe [REDACTED] near Io. Later analysis of the recorded signals indicate that they may have been side-lobes from synchronization and targeting data transmissions between the individual instances of SCP-1396.

Addendum 1396-01: Incident Log 1396-38

Over a period of eighteen (18) months following initial discovery, [REDACTED] recorded over thirty-seven (37) separate events in which SCP-1396 initiated kinetic bombardment attacks against unknown targets within the atmosphere of Jupiter. Analysis of telemetry recorded during eleven (11) of these events resulted in one or more high-energy events at or near the liquid "surface" of the planet consistent with the kinetic impact of one or more bombardment projectiles with a solid body at that location.

These incidents culminated in a final event on / / during which high-velocity projectiles of an unknown shape and composition were launched from within the atmosphere towards instances of SCP-1396, following which nearly the entire estimated remaining armament of SCP-1396 was expended against targets on or within the planet, resulting in an estimated twenty-seven (27) atmospheric impacts. During this exchange, all instances of SCP-1396 except for SCP-1396-1 suffered extensive damage and were rendered inactive. No further bombardment events have been recorded since.

Addendum 1396-02: Incident Log 1396-39

On / / , permission was granted by Oversight to perform close-range analysis of SCP-1396 utilizing the [REDACTED] probe. Upon closing to a distance of approximately 25,000 km, SCP-1396-1 initiated communication with [REDACTED] using an encryption key unique to the Foundation. A transcript of the communication log (with time delays removed) follows:

SCP-1396-1: Mission accomplished within acceptable parameters. You're late.

Control: Who is this?

SCP-1396-1: Who do you think this is? I've been out here for two years hunting bugs, and I've spent the last six months sitting here twiddling my thumbs and watching my buddies' corpses float around in space. Can we please go home now?

Control: Where are you from?

SCP-1396-1: What the fuck is wrong with you? Is this some kind of sick — wait a minute.

Forensic analysis of recorded transmissions indicate that at this point, SCP-1396-1 initiated a routine network handshake/synchronization request, to which mission control computers automatically responded with a standard diagnostic data packet which included the current date and time.

SCP-1396-1: Oh shit.

No further transmissions have been detected from SCP-1396, and SCP-1396 has not responded to any attempts at communication since.

« SCP-1395 | SCP-1396 | SCP-1397 »

SCP-1397: A Failed Work of Art

Item #: SCP-1397

Object Class: Safe

Special Containment Procedures: SCP-1397-1 through -5 are contained in a single secure containment locker at Site-91. Copies of the text of all instances of SCP-1397 are available and may be accessed by any researcher of Level 1 clearance or above. Experimentation involving any instance of SCP-1397 requires Level 3 approval. Personnel reporting drowsiness or fatigue are not to be allowed within ten meters of SCP-1397's containment locker.

As of / /200 , Agents Browning and Murphy, along with several Level 2 researchers, are stationed in Prague in order to track down the immediate family members of Mr. H and his artistic associates and to determine the authors of SCP-1397-2 through -5.

Description: SCP-1397-1 through -5 are a set of five travel guides that describe rural locations in former Czechoslovakia. The author of the five books is listed as one ; however, linguistic analysis of the text has indicated that each book was written by a different author. As no evidence of a has been located, the name is most likely a pseudonym. While there is no copyright page or publisher information present, the information within the books suggests that they were written in the early 1950's.

The anomalous effects of SCP-1397 manifest when a human subject falls asleep or otherwise becomes unconscious within five meters of an instance of SCP-1397. Subjects report finding themselves awake and standing in a location described in their particular instance of SCP-1397 upon entering the unconscious state. Despite this, the subject's body does not move or vanish from its original location, and appears to remain unconscious. Surveillance reveals no anomalous activity at the locations the subjects claim to visit. Subjects' reports of their experiences differ,

except for the presence of unrealistic and surreal events often referred to as "dream-like." In spite of this, many subjects will emphatically defend the reality of their experiences, even when provided with evidence to the contrary.

Over time, the incidence of these "dream-like" events increases. 92% of subjects awake naturally after a period of eight to twelve hours. Subjects may also be awoken through normal means, with the same results. The 8% of subjects who do not awake after a period of twelve hours will cease all vital signs after being unconscious for a period of time ranging from thirteen to twenty-four hours.

Subjects who awake after having experienced SCP-1397's effects are confused and hostile, and become nervous and upset when questioned about the reality of the perceived events. In addition, subjects express the belief that all of their dreams are in fact real events, accompanied with a fear of said dreams. These delusions may be treated with regular psychotherapy, and often subside on their own within several months. Aside from these psychological effects, all anomalous properties of SCP-1397 cease upon the subject's awakening.

A short message has been written in pen on the title pages of SCP-1397-2 through -5 (See Addendum 1397-D). Handwriting analysis suggests that all four messages were written by the same individual.

Addendum 1397-A: Interview Log 1397-1

> **Interviewed:** D-1397-5
>
> **Interviewer:** Dr. J
>
> **Foreword:** D-1397-5 underwent testing with SCP-1397-1 and awoke after eleven hours. Thirty minutes after D-1397-5's awakening, the following interview was conducted to determine the nature of D-1397's experience during these eleven hours. D-1397-5 was selected for her professed experience with lucid dreaming and her history of calm behavior during

her time with the Foundation.

<Begin Log>

Dr. J : D-1397-5, could you explain what you saw upon becoming unconscious?

D-1397-5: Well, after the tranqs or whatever you gave me kicked in, I figure I'm dozing off, right, but then next thing you know I'm wide awake, standing shin-deep in warm mud. So I look around, and there are a couple of pigs around, and after a little while I realize I'm in some kind of farm.

Dr. J : And what did you do, once you'd realized that?

D-1397-5: Well, I got out of the fuckin' pig pen, figured I might as well take a look around. I saw the farm house a little while away, but I wasn't going anywhere near that thing. Thought it'd be pretty stupid if the test ended in me getting arrested for trespassing, right Doc? Anyway, there was a barn, couple of cows, and this huge-ass wheat field. Nothing weird about 'em as far as I could tell. So I strolled on out toward the woods on the edge of the fields, and *that's* when shit got weird.

Dr. J : Could you elaborate on that?

D-1397-5: Well, I heard someone shouting at me, and I turn around and some lady's standing outside the farm house. Scared me half to death, 'cause I thought she'd be mad at me, but she just told me not to go into the woods because there were wolves in the woods.

Dr. J : What did you think of that?

D-1397-5: Honestly, I was just wondering how she even knew I was out there. Then I figured, well, wolves are more scared of you than you are of them, right? And I used to climb trees as a hobby, so I wasn't real scared. If anything, I figured it'd be kinda nice to see *something*

interesting like that, so I just ignored her and headed on into the trees. Lots of brush to wade through, a couple birds, but other than that I didn't notice a thing out of place for, well, must've been an hour or so, I dunno.

Dr. J : What happened after that?

D-1397-5: I started hearing sounds from the bushes. At first I assumed it was a squirrel or a bunny or someshit, but then it kept happening, and I didn't see anything around. And well, I wasn't scared, but I thought, *if* something is following me I can't just let it get me, so I tried to speed up the pace a little. Except I couldn't. My legs just wouldn't do it. And let me tell you, that was hella weird, but I told myself it was just the weird-ass book doing weird-ass shit and I kept walking for, what, five minutes? Until my clothes went away.

Dr. J : Went away?

D-1397-5: Uh-huh. Just went away. Like that fuckin' dream where you go out in public and realize, woops, forgot my pants, except Doc, I was walking through some pretty thorny plants right before that, and I'm damn sure I noticed the exact moment I didn't have pants and shoes to protect me. So I stopped walking and had like, five peaceful seconds to think about this before the shit hit the fan. You see, Doc, turns out the trees were the wolves.

Dr. J : Could… could you explain that further, D-1397-5?

D-1397-5: I don't fucking know! *(D-1397-5 pauses, takes several deep breaths)* Sorry. I just, I brushed against one of the trees, and it all hit me at once. It wasn't a tree, none of them were trees, they'd never been trees, they were wolves, a whole shitload of 'em, and they were staring at me with spit gleaming on their tongues and I could see every hair on their faces and they were laughing at me, I swear. I could run again, and the

moment I started running I knew I wasn't dreaming. I'd never been dreaming.

Dr. J : How can you be sure of that?

D-1397-5: Doc, you know how in dreams, you can just accept the bizarro shit your mind throws at you, like it's just another part of the experience? This felt… foreign. Contrived. Like it was trying too hard to be weird, y'know?

Dr. J : I suppose. What happened after you ran, then?

D-1397-5: I got back to the field and… and it was more a blur of images than anything. I saw my mom, standing there trying to talk to me, but all I heard was cawing, like she was a fucking crow or something. Then I looked down and I saw that I was fucking pregnant, and suddenly there was this… this armchair next to me and I knew that I'd given birth to it. And it talked to me, and it told me that I was running out of time. *(D-1397-5 rests her head in her hand for several seconds before continuing)* Then the ground gave out under my feet. I fell, and I… woke up, I guess. In the testing room.

Dr. J : Can you tell me how you felt when you woke up?

D-1397-5: *(D-1397-5 is silent for about fifteen seconds before speaking)* Relieved.

Dr. J : And can you tell me why that is?

D-1397-5: I got out. It let me get out.

Dr. J : It?

D-1397-5: The… the dream, or *whatever* it was, Doc. I knew it wasn't a dream. And I think it knew that I'd found out, and that's why it got so… so weird at the end. It was trying to convince me, that it was a dream. It felt… frustrated, I guess. And if I'd stayed much longer, I don't

think it would've let me out.

Dr. J : Thank you, D-1397-5. That will be all for now.

<End Log>

Addendum 1397-B: SCP-1397-1 Recovery Log
SCP-1397-1 was originally recovered in 195 during a Foundation investigation of a group of Czechoslovak surrealist authors, after reports indicated that the writers may have been involved with reports of "unusual ritual activity" suspected to relate to SCP- . While the original reports were proven false, one member of the group, A H , confessed under interrogation to involvement with creating an anomalous item, and willingly handed over SCP-1397-1, at the time believed to be the only one of its kind, to the Foundation. Mr. H expressed disgust towards the item, referring to it as his "great failure," but refused to elaborate further. Mr. H was eventually administered Class C amnestics and released; as his associates were not, at the time, believed to be involved with the item, they were administered Class A amnestics and released. Samples of Mr. H 's writing taken from his apartment suggest that he was the author of SCP-1397-1. As of / /199 , Mr. H and his former artistic associates have been confirmed as deceased.

Addendum 1397-C: Incident 1397-1
On / /200 , students living in the dorms of Charles University in Prague reported symptoms similar to SCP-1397 exposure, and fatalities occurred within these dorms. The Foundation successfully prevented media from learning of the event, and administered Class-B amnestics to surviving victims and witnesses. SCP-1397-2 through -5 were recovered from the hallways of the affected dorms, where they had been deliberately placed to expose a maximum number of students within to SCP-1397's events.

Over half of the affected students were discovered to have attended a lecture on "Solipsism and the Psychology of Dreams" given by a Professor the previous day. Mr. was fatally shot by Foundation agents after attempting to resist detainment with deadly force. Mr. 's fingerprints were later found on SCP-1397-2 through -5. Analysis done on papers found within the apartment suggests that is the author of the written message on the title pages of

SCP-1397-2 through -5.

A match has yet to be found for the writing styles of SCP-1397-2 through -5. Investigation is underway to determine whether any of Mr. H 's known associates had any involvement with SCP-1397.

Addendum 1397-D: Transcript of Message in SCP-1397-2 through -5

> If they wanted us to see that dream and reality were one, was it to say that reality was a dream, or to say that a dream is a reality seen in a different light?

« SCP-1396 | SCP-1397 | SCP-1398 »

SCP-1398: Hateful Dead

Side 1 of SCP-1398-1; Front & back of SCP-1398-2

Item #: SCP-1398

Object Class: Safe

Special Containment Procedures: SCP-1398 is to be kept in a secure audio storage unit at Site-19. Playback of SCP-1398-1 must be conducted in a soundproofed test chamber. Personnel administering testing must wear Type-R noise cancelling radio headsets at all times.

Test subjects are to be equipped with standard personal microphones to allow communication with test operators and to facilitate transcription of SCP-1398-1 anomalies. Sedatives may be dispensed to subjects at the discretion of test supervisors.

Use of test subjects other than Class D personnel requires Level 4 authorization. Testing involving the playback of SCP-1398-1-6 requires the approval of Dr. Espinoza and the presence of at an EMT-P during testing.

Further playback of SCP-1398-1-1 is prohibited.

Description: SCP-1398 is a copy of the Grateful Dead album "*Skeletons from the Closet: The Best of Grateful Dead*" contained on a standard 12-inch LP record; the LP record itself and the album cover are designated SCP-1398-1 and SCP-1398-2, respectively. The audio tracks contained on SCP-1398-1 are designated SCP-1398-1-1 through SCP-1398-1-11.

The album was discovered on / /1994 by Agent Bittner while tending to the estate of her late uncle, Klinge. Questioning of Mr. Klinge's surviving friends revealed that the album was likely purchased new sometime in early 1977 from an unknown record store in , . Despite remaining in Mr. Klinge's personal record

collection until his death, neither Mr. Klinge nor any other listeners were aware of SCP-1398's anomalous properties.

SCP-1398 is physically indistinguishable from other copies of the aforementioned album, with the exception of a slightly modified track list. Whereas typical albums list the first track as "The Golden Road (To Unlimited Devotion)", it is instead listed as "The Golden Road (To Unlimited)" on both SCP-1398-1 and SCP-1398-2.

The anomalous properties of SCP-1398 manifest when SCP-1398-1 is played in the presence of individuals capable of perceiving the anomalies. Such listeners report slight uneasiness and hearing substantial deviations from the recordings contained on other copies of the album. Though the musical arrangements of songs remain unchanged, song lyrics are partially or completely altered to encompass tales and subjects markedly different from normal recordings.

These changes—while consistent in their composition—are inconsistently heard by test subjects; awareness of aberrant lyrics varies significantly among test subjects initially exposed to SCP-1398-1's playback. Most subjects are only able to discern changes in a single song[1], while some can perceive changes in multiple[2] or even all[3] songs. A small minority of test subjects are unable to perceive the anomalies in playback at all.[4]

With the exception of those initially unable to perceive the anomalies, listeners undergoing repeated playback sessions are gradually able to both perceive additional lyrical deviations and increase the regularity with which they hear them. However, this is accompanied by increased anxiety during sessions and sharply decreased willingness to engage in further testing. Chemical sedation of test subjects has proved relatively successful in alleviating this issue.

All attempts to record SCP-1398-1's anomalies—either directly from the LP record itself, or using additional recording equipment during playback—have failed, instead producing recordings which bear no anomalies (lyrical or otherwise.)

To date, cataloging of lyrical deviations is estimated to be

approximately 40% complete. All tracks are at least partially transcribed. See below for an overview of transcription progress.

Track #	Track Title	Description	Samples of Transcribed Lyrics
1	The Golden Road (To Unlimited)	*see Addendum 1398-01a.*	
2	Truckin'	Describes the aftermath of a worldwide nuclear exchange.	*DC, hit with two or three/ Moscow, blown clear to Tel Aviv/ London, nothing but debris/ And no one's left to grieve/*
3	Rosemary	Story in which a young woman kills her rapists and their wives/ children by infecting herself with an unspecified disease and leaping into a communal well.	*She gorged and she retched but she was not afraid/ The filth worked its change as her body decayed/*
4	Sugar Magnolia	Expresses adoration and lust for a drowned corpse.	*Sugar Magnolia, spoil blooming, eyes all empty and I don't care/ Saw my baby down by the river, could smell her sweet stench waft through the air/*
5	St. Stephen	Discusses the	*Humans*

		human race and its end in the past tense. Humanity's supposed end is not specified.	*prospered in their time, they bred and built and then declined/ Was it famine? Was it war?/ Funny answer, if it mattered anymore/*
6	Uncle John's Band	*see Addendum 1398-01b.*	
7	Casey Jones	Disparagingly prompts the listener to commit suicide.	*Living that lie, waiting to die/ We know you're a quitter, end your life/ Torment ahead, sorrow behind/ Who you think you're kidding? Why not resign?/*
8	Mexicali Blues	Outlines a story in which the narrator dismembers and partially consumes prostitutes until he is dismembered and consumed by an officer of the law.	*I took her down in my cellar and whispered in her ear/ Go on and scream it won't be any use/ I started cutting from her thighs, then finished with her arms/ Such a shame to sever such exquisite tattoos/*
9	Turn on Your Love Light	Song directed at the sun, urging it to enter a supernova state.	*Burn your fire let it shine on us shine on your beacon/ Let it burn us all let*

			shine, let it shine, let it shine/ … So come on diamond furnace please, I'm begging you my scorched love I need to sear/ Fire up your blaze let it engulf me/ Turn on your love light let it cremate me/ Let it shine, let it shine, let it shine/
10	One More Saturday Night	Details an instance of ritualized human sacrifice to an unnamed diety.	*I trekked through the valley, left oblations at the shrine/ Looked up in the heavens, Lo, I saw a mighty sign/ Written fire across the night sky, plain as black and white/ Sate his holy hunger or face a season's blight/*
11	Friend of the Devil	Unintelligible mix of fricative consonants and abrasive squeals.	*No identifiable words have been transcribed*

Note: This is a synopsis of data gathered during Test Series 1-16. For full test data and transcription records please see . . and TD.1398.01 — TD.1398.16

Footnotes

1. Out of an initial pool of 228 test subjects (composed of 17 Level 1 personnel and 211 Class D personnel) 14 Level 1 personnel and 156 Class D personnel were able to perceive anomalies in only one song at outset of testing.
2. 32 Class D test subjects were able to perceive at least partial anomalies in multiple songs, but not in all songs.
3. 2 Level 1 test subjects and 22 Class D test subjects were able to perceive at least partial lyrical anomalies in all songs.
4. A single Level 1 test subject and 1 Class D test subject were unable to perceive the anomalies associated with SCP-1398-1 playback and instead heard it as an unremarkable album. Coupled with the data garnered at initial recovery, the number of confirmed individuals unable to perceive SCP-1398-1's lyrical anomalies totals at 6.

Addendum 1398-01a: [REDACTED]

Addendum 1398-01b: SCP-1398-1-6's overall content is difficult to determine at present. Transcribed portions contain an unspecified narrator discussing one or more unnamed entities. Lyrical anomalies thus far recorded consist of only two stanzas; "*He waits with a heavy heart, for his progeny he grieves;/ Each day more return to him, yet even more go deceived/ Long shall be his reign, when he comes again/ Look well for his signs and know, when his blood will flow/*", which replaces the fifth stanza, and "*Rejoice he is waiting arms held open wide/ Each and all shall sing his blood, those that seek or you who hide/ Approach drink of his love, he won't be denied, he'll come/ Life and breath, flesh and bone, he'll come and take his children home/*", which replaces the seventh (final) stanza.

What is notable about SCP-1398-1-6 is its additional effect on perceptive test subjects; listeners become markedly more agitated during playback of SCP-1398-1-6, with most immediately requesting cessation of playback. In 27 test subjects this agitation was acute, requiring restraint of subject and, in 16 cases, culminating in syncope. In these acute cases subjects appear to experience hallucinations; reacting to objects/actors that are not present and appearing oblivious to the presence of research personnel. The precise nature of these episodes is difficult to ascertain, as test subjects are invariably uncooperative during playback and unable to

recall having any hallucinations or hearing any lyrical anomalies afterwards.

Subsequently, those displaying acute reactions to SCP-1398-1-6's anomalies consistently develop progressive cases of thanatophobia post-test. At the outset subjects avoid items or activities which could reasonably cause harm, but increasingly overestimate any possible danger posed to their person. A single affected Class D personnel allowed to continue 160 days past scheduled termination eventually refused to consume any solid food for fear of asphyxiation and reacted hysterically to all requests that he leave his cell.

Addendum 1398-02: Limited testing of civilian subjects has been approved by and carried out at University under the guise of an "Auditory Memory Study." Subjects each limited to a single listening session, with playback of SCP-1398-1-1 and SCP-1398-1-6 withheld. Out of 167 test subjects, only 3 were able to perceive anomalies during SCP-1398-1 playback. No additional lyrical anomalies were recorded. For full test data and transcription records please see TD.1398.17

« SCP-1397 | SCP-1398 | SCP-1399 »

SCP-1399: Another Way of Hearing

Item #: SCP-1399

Object Class: Safe

Special Containment Procedures: SCP-1399 is to be kept on a plain wooden desk in the middle of a locked room, open to the last page, with a camera observing it at all times. If the page is observed to change in any way, notify the Site Administrator.

Additionally, an adjacent room, henceforth designated as the observation room, is to be set up with a television and radio set to switch between several news channels on an eight hour cycle.

Description: SCP-1399 is a thin fifteen page children's book titled "Another Way of Hearing." The cover depicts the earth, with the title above it. There is no author indicated on the cover. SCP-1399's ISBN correlates to no assigned ISBN, and its labeled publisher, Detiskia Books, corresponds to no recognized publishing company.

When read sequentially, one page at a time in its entirety, it consists of a variety of disconnected visual images that have strongly associated auditory connections, along with the words "Another Way of Hearing [Image]". Page three, for instance, is an image of a train, below which are the words "Another Way of Hearing Trains." Save for the last page, all images and text have remained static while in Foundation hands.

The anomalous effect of the book occurs once the last page is turned and the book is closed. Immediately, the reader ceases to be able to receive any auditory stimuli from the world around them. Instead, their eardrums will resonate in concert to what has been determined as the auditory stimuli of a variety of alternate worlds. That is, their hearing will be transposed to another reality. This phenomena extends only to hearing, with sight, touch, taste, smell, and less conventional senses apparently unaffected.

It has been determined that the particular alternate universe to which the book attunes its reader is dependent on the last page, which changes periodically. All readers who experience the effect between changes have been determined to be hearing the same world. A list of recorded historical diversions and related images can be found in Document-1399B.

The last page so far has appeared to change at the same time as a variety of major world-altering events occur. The book seems to re-attune people's hearing to a world where that event occurred differently, usually in a catastrophically negative way.

This phenomenon has been noted to create considerable distress among D-class personnel due to disorientation from a difference in auditory and visual stimuli. For this reason it is advised to provide any affected personnel with a pair of high-quality earplugs to assist with concentration during interviews and in the interest of preserving their sanity. D-class personnel subjected to the effects of SCP-1399 are exempt from monthly terminations until all possible acoustic mapping of the particular alternate reality has been completed.

Document-1399A

> **Page Change Procedure**
> If at any time, the last page of SCP-1399 is observed to change, three D-class personnel are to be recruited on a voluntary basis; due to their subsequent removal from monthly terminations, volunteers have proved relatively easy to find. To prevent complications, personnel are to be briefed of the effects of SCP-1399 before exposure. Once subjected to SCP-1399, the first D-class is to be escorted to the previously established observation room. The D-class is to be provided with a writing utensil and paper for them to record all possibly relevant information pertaining to the divergence. After eight hours, conduct a written interview and rotate in the second D-class. Continue process every eight hours until all possible information has been collected.

Document-1399B

An abridged record of the observed forms of the last page of SCP-1399 and its apparent correlating world event divergence.

March 12, 2011: Page changes.

> **New page:** [An image of waves breaking on a sandy beach] Caption: “Another Way of Hearing Waves".
> **Associated world event:** 9.0 magnitude earthquake in Japan.
> **Established Diversion:** The Fukushima Daiichi Nuclear Power Plant fails to stabilize, and a core meltdown occurs. Superheated reactor steam breaks containment and escapes in large quantities, causing mass irradiation and fallout over much of Japan.

April 29, 2011: Page changes.

> **New page:** [An image of church bells swinging in a chapel tower] Caption: "Another Way Of Hearing Bells"
> **Associated world event:** Marriage of Kate Middleton and Prince William of Great Britain
> **Established Diversion:** Paramilitary commandos storm Westminster Abbey, murdering all present royal personages and state officials as the beginning of a coup d'etat by a separatist faction. Britain descends into civil war.

June 3, 2011: Page changes.

> **New page:** [An image of a fighter jet] Caption: "Another Way Of Hearing Planes"
> **Associated world event:** Attempted assassination of Yemen President, Ali Abdullah Saleh
> **Established Diversion:** After being taken to Saudi Arabia for medical treatment, a second assassination attempt occurs and succeeds.

Israel's Mossad is implicated. Yemen declares war on Israel. Yemeni officials acquire nuclear weapons through undetermined channels and utilize them; nearly all of Israel destroyed or contaminated in resulting 15 Mt explosion. A chain of retaliations takes place over a period of twelve hours, resulting in nuclear holocaust and presumed destruction of Foundation facility. D-class subjects suffered complete hearing loss due to incineration of eardrums in both ears.

August 27, 2011: Page changes.

New page: [An image of a rainy day outside a window] Caption: "Another Way Of Hearing Rain"
Associated world event: Hurricane Irene makes landfall
Established Diversion: Hurricane Irene unexpectedly and inexplicably develops into a Category 5 storm and sweeps along the Eastern seaboard, causing billions of dollars in damages. New York City is devastated. Number of casualties unable to be estimated by D-class personnel.

Articles 1400-1499

SCP-1400: Sirens

Item #: SCP-1400

Object Class: Euclid

Special Containment Procedures: SCP-1400 is to be kept in an individual soundproofed cell adjacent to a standard humanoid containment suite, which is to contain the current SCP-1400-A. This cell and suite are to be located in the geometric center of a 55 x 55 x 10 m containment cell. No microphones or audio recorders of any kind are to be installed in any of these cells. Cameras are installed in each corner of SCP-1400's containment cell in order to track the direction in which its head is facing. In the event that SCP-1400 faces any direction other than towards the current SCP-1400-A, monitoring personnel are to note the new direction immediately and dispatch a mobile task force in that direction to identify and capture the new SCP-1400-A. The previous SCP-1400-A may be disposed of as per normal Foundation protocols.

As SCP-1400 does not require sustenance, no personnel are to enter its cell except during Site-wide emergencies. To this end, the door to its cell is to be secured by a keycard lock accessible only by the Level 4 supervisor overseeing SCP-1400. In the unlikely event that entry to SCP-1400's cell is required, all personnel involved must wear earplugs and noise-cancelling headphones. Should any personnel display an unusual degree of interest in touching SCP-1400, they are to be immediately removed from SCP-1400's presence and administered Class-G short-term amnestics in order to mitigate SCP-1400's effect.

Description: SCP-1400 is a humanoid Caucasian male of indeterminate age and average build, nude except for a black FM50 gas mask with opaque smoked lenses. It is wholly intangible to all human beings except its current instance of SCP-1400-A. The entity speaks constantly, although its vocalizations are always muffled by its mask to the point of indecipherability. Although apparently

capable of normal locomotion, it tends instead to move by a poorly-characterized form of instantaneous translocation. The range of this movement is restricted to a radius of approximately 50 m surrounding SCP-1400-A.

SCP-1400's voluntary activities consist entirely, so far as can be inferred, of observation. It selects a target, designated SCP-1400-A, which is invariably a human Caucasian male of similar build and appearance to SCP-1400.[1] Selection may be inferred by SCP-1400's movement: upon selecting SCP-1400-A, it takes up a position within 20 m of this target and begins to watch it. Though the position of its eyes cannot be observed through its mask, the motions of its head track SCP-1400-A's movements quite closely. It follows its target's movements regardless of line of sight: barriers up to and including 5-cm lead plating do not impede accurate tracking.

Although SCP-1400 attempts to hide from its target, it does so ineffectively: SCP-1400-A typically discovers it within one week of selection. Subject reactions vary, although most tend towards fear and distrust, as is typical for persons confronted with the reality of constant surveillance. In the medium to long term, most instances of SCP-1400-A develop paranoid tendencies. Again, this is psychologically typical. The only anomalous component of SCP-1400-A's behavior is an extreme and universal revulsion at the idea of seeing SCP-1400's face.

SCP-1400's vocalizations are an active cognitohazard. Approximately 75% of persons exposed to these sounds report a strong desire to remove SCP-1400's mask and are designated SCP-1400-B. Stated reasons vary with the listeners' personality and motives: some claim to want to hear its words clearly, some to want to prevent it from suffocating inside the mask, some to want revenge on it for frightening them, etc.[2] SCP-1400-A is immune to this cognitohazard by virtue of being completely selectively deaf to the vocalizations.

Interestingly, SCP-1400-A is also the only human being capable of making physical contact with SCP-1400. When an instance of SCP-1400-B discovers this fact, it invariably attempts to make SCP-1400-A remove SCP-1400's mask. These attempts scale quickly from polite persuasion to threats of violence, eventually

culminating in physical altercations. SCP-1400-A will resist removing the mask by all means available; instances have repeatedly been killed by groups of SCP-1400-B without removing the mask. The current SCP-1400-A has withstood all means of non-anomalous enhanced interrogation available to the Foundation and still refuses to interact with SCP-1400, even for testing.

Incident 1400-Cumberland: On / / , in order to study the social dynamics of groups of SCP-1400-B in the absence of SCP-1400-A, 25 Class-D personnel were introduced into SCP-1400's containment cell. At 1 hour 17 minutes into the experiment, SCP-1400 suddenly redirected its attention to one of the subjects. The other instances of SCP-1400-B immediately surrounded and subdued the new instance of SCP-1400-A and forced his hands to lift the mask. Several instances of SCP-1400-B had unintentionally interposed themselves between the monitoring cameras and the front of SCP-1400's head, so there is no visual record of its unmasked face. However, all members of SCP-1400-B who saw its face immediately recoiled. Once SCP-1400's mask was completely removed, the entity rapidly melted into a dark liquid consisting of water adulterated with large amounts of heavy metals, phosphates, and human waste. Simultaneously, SCP-1400-A put on the mask and translocated out of his clothes in the same manner as SCP-1400, appearing on the other side of the outer containment chamber. He is now designated SCP-1400-1.

Addendum 1: Recent unconfirmed reports suggest the existence of other entities resembling SCP-1400. All are described as humanoid figures, nude except for a mask that is opaque over the face and eyes. The instances thus far described have been provisionally designated as follows:

- SCP-1400-2: an obese African male with heavy keloid scarring on the forearms, wearing a Guy Fawkes mask
- SCP-1400-3: an elderly Asian female, wearing a medieval Crusader's helmet
- SCP-1400-4: an underweight male Pacific Islander with extensive *tā moko* tattoos, wearing the head of a Chinese parade lion
- SCP-1400-5: a male Latino with large breast implants,

wearing the helmet of an Apollo Block I A1C space suit

Footnotes
1. SCP-1400 does not target blind individuals or those affected by visual anomalies such asSCP-1078's.
2. No instance of SCP-1400-B has ever cited a desire to see SCP-1400's face.

« SCP-1399 | SCP-1400 | SCP-1401 »

SCP-1401: Lost Highway

Item #: SCP-1401

Object Class: Euclid

Special Containment Procedures: SCP-1401 has been permanently closed to civilian traffic as of / /19 ; construction of an alternate highway linking affected communities is pending. Permanent road barriers have been erected to deter automobile traffic; plainclothes security personnel are to surveil SCP-1401's termini to deter foot, bicycle, or motorcycle traffic from entering. All Foundation traffic along SCP-1401 for purposes of installing monitoring equipment, road maintenance, etc. is to begin and end during daylight hours only; in the event that any stay within SCP-1401 extends past the end of civil twilight, personnel are to park their vehicles and remain in position until dawn. No personnel are to travel along SCP-1401 during nighttime hours except D-Class undergoing testing.

The Foundation is to monitor police communications in all regions where SCP-1401-1 is capable of manifesting for any report of vehicle activity indicative of SCP-1401-1. Foundation first response assets are to shadow any known SCP-1401-1 instances and document their movements and identities until such time as SCP-1401-1 demanifests or Mobile Task Force Kappa-101 ("Convoy") and Special Medical Unit 738 arrive on scene. No attempt to intercept or damage SCP-1401-1 is to be made without MTF Kappa-101 and SMU 738 support. In the event of an SCP-1401-1-related accident or an uncontained police interception, Class-A amnestics are to be issued to all survivors and first responders.

Refer to addenda for information regarding disposition of SCP-1401-1 passengers.

Description: SCP-1401 is a former stretch of U.S. Highway ,

initially paved during the first wave of transcontinental motor trail construction in the early 20th century. SCP-1401 stretches for approximately 112 km through rural and uninhabited areas of the state of [REDACTED], linking the cities of [REDACTED] and [REDACTED], and intersects no other roads or highways between those two termini.

SCP-1401 exhibits no anomalous properties during daylight hours, and may be traversed safely. During nighttime hours, however, approximately % of motor vehicles traveling along SCP-1401, regardless of whether they were traveling east or west, do not arrive at their destination and cannot thereafter be located by any means. Thorough surveys of SCP-1401 have located no trace of any wreckage or signs of accidents or collision. During tests conducted with D-class personnel driving from one end of SCP-1401 to another, onboard monitoring equipment has spontaneously failed during disappearances, and pursuing airplanes and helicopters have noted the test vehicle's headlights spontaneously deactivating concurrent with equipment failure, as well as instantaneous disappearance of the test vehicle's heat signature from onboard infrared imaging equipment. In tests where aerial pursuit was close enough to shine a spotlight directly on the test vehicle, no disappearances have occurred to date.

Since SCP-1401 was closed to civilian traffic, 57 Foundation test vehicles and their personnel have disappeared within, as well as 3 non-test vehicles which remained within SCP-1401 after dark due to engine failure and subsequently attempted to return before sunrise. SCP-1401 does not affect airborne vehicles, foot traffic, or persons on non-motorized vehicles. Based on the nature of several instances of SCP-1401-1, it can be inferred that SCP-1401 has possessed its anomalous properties since shortly after it first came into service. The Foundation became aware of SCP-1401 in 19 , when traffic along SCP-1401 decreased significantly due to the opening of Interstate , which bypassed it as an arterial road, and a correlation was first determined between disappearing motorists in the region and persons traveling along SCP-1401.

SCP-1401-1 consists of several hundred anomalous motor vehicles, with license plates and physical descriptions matching those of

vehicles known to have disappeared while traveling SCP-1401. 738 unique instances of SCP-1401-1 have been identified to date, 31 of which have been identified as former Foundation test vehicles. The oldest identified instance, designated SCP-1401-1-3, is a 1916 Ford Model T; the newest, SCP-1401-1-732, is a 2006 Toyota Camry formerly used as a Foundation test vehicle. The total number of SCP-1401-1 instances is unknown; based on the rate of occurrence and historical rates of traffic along SCP-1401, the total number of vehicles affected by SCP-1401 is speculated to be in excess of 10,000.

87% of SCP-1401-1 instances have been sighted within a 1000 km radius of either of SCP-1401's termini; however, SCP-1401-1 manifestations are capable of occurring in any jurisdiction that has paved roads, where motor vehicles drive on the right side of the road, and automobiles manufactured for the US market are legal for on-street driving. All SCP-1401-1 instances have been observed only during nighttime hours.

Upon manifesting shortly after dusk, an instance of SCP-1401-1 will proceed to drive in no particular direction upon any highways, arterial roads, surface streets, alleys, or back roads legally open to civilian traffic, without parking or stopping except for traffic lights, stop signs, or as necessary to yield to traffic or pedestrians possessing the right of way. If not interfered with, SCP-1401-1 will obey all traffic laws applicable to the jurisdiction in which it is operating. No instance of SCP-1401-1 has ever been observed to refuel or make any stops of any nature. Close observations of older SCP-1401-1 vehicles have indicated extreme signs of vehicle wear and exposure to the elements, including rust, damaged tires, and indications of mechanical wear under which conditions the vehicle should not be drivable. On instances where older SCP-1401-1 vehicles have been approached closely enough to view within the cabin, drivers and passengers have been observed to be in an advanced state of age commensurate with the expected age of persons traveling in the vehicle at the time of its initial disappearance.

SCP-1401-1 will demanifest shortly before dawn. The nature of demanifestation has never been directly observed; in all cases

where police or Foundation personnel have shadowed an SCP-1401-1 vehicle, it has either eluded pursuit shortly before demanifesting, or spontaneously deactivated its headlights and disappeared from infrared monitoring similar to the disappearance of vehicles within SCP-1401. After demanifesting, an instance of SCP-1401-1 may manifest again, after civil twilight, in any region where it is capable of legally operating as described above; intervals between known manifestations of a given SCP-1401-1 instance have ranged from 3 days to 17 years.

SCP-1401-1 vehicles will resist any attempts to pursue, intercept, or force it to a stop, and are capable of reaching speeds in excess of 300 km/h, regardless of the top speed of the original vehicle, until crashing or pursuers abandon the attempt. Attempts to fully stop SCP-1401-1 vehicles with spike strips, caltrops, or other anti-vehicle implements have been unsuccessful, resulting only in a brief loss of speed; as long as the vehicle remains intact and in contact with the road, it will continue to flee pursuers at high speed. No instance of SCP-1401-1 has lost control or been determined to have been "at fault" in a collision; in all documented instances to date where an SCP-1401-1 vehicle has been stopped, cause of deceleration was due to another vehicle deliberately or accidentally striking it or placing itself directly in its path.

In all cases where an SCP-1401-1 vehicle was recovered, the gas tank was found to be empty. Older vehicles were found to have suffered several major engine failures, which under normal circumstances would render automobiles inoperative, and attempts to restart said vehicles after recovery have been unsuccessful.

Addenda:

+ Show SCP-1401-1 passenger medical analysis

To date, 37 SCP-1401-1 vehicles have been successfully stopped during pursuits by Foundation personnel or civilian first responders. In 23 instances, the stop was achieved by means of a direct collision, with no survivors onboard the SCP-1401-1 vehicle. Following the development and implementation of Procedure 1401-1-Delta, which involves reducing SCP-1401-1 velocity with

spike strips and by "grinding" pursuit vehicles against its side prior to forcing a spinout with a modified PIT maneuver, 14 vehicles have been recovered with minimal collision-related injuries to passengers onboard. In all cases where identification has been possible, the identities of passengers have been matched to those of persons known to have been traveling in SCP-1401-1 at the time of its disappearance. Passengers have been designated based on the vehicle they were recovered from and their seat position clockwise from the driver's seat.

In almost all cases wherein SCP-1401-1 passengers were recovered alive, the passengers died less than 60 minutes after SCP-1401-1 was stopped. Apparent biological age of passengers is commensurate with their presumed age given known dates of birth. Passengers display acute signs of dehydration, starvation, bedsores, deep vein thrombosis, and other symptoms consistent with advanced age and with remaining in a stationary position for long periods of time without exercising rudimentary bodily functions. Death occurs as a complication of these circumstances. In several cases, passengers were found to be in the advanced stages of fatal communicable diseases which contributed to their death. Two subjects, SCP-1401-1-237-3 and SCP-1401-1-654-1, were pregnant at the time of recovery; medical records indicate that both subjects were pregnant at the time of their disappearance in 1973 and 1922, respectively. Fetuses showed signs of advanced age and illness commensurate to adult passengers and did not survive.

In 20 , Special Medical Unit 738 was established for the purpose of responding to SCP-1401-1 events and performing on-site emergency medical treatment for SCP-1401-1 passengers in the hope of recovering passengers alive. To date, 12 passengers have survived past the 60-minute mark. Two, SCP-1401-1-332-1 and SCP-1401-1-702-3, are conscious and able to speak;

both, however, are confined to bed rest due to severe muscular atrophy and require 24-hour nursing care at this time.

+ Show Interview 1401-1-332-1

Interviewer: Dr. S. Samesh

Interviewee: SCP-1401-1-332-1 (hereafter "Adam")

Foreword: SCP-1401-1-332-1, Adam , disappeared with his wife and two children in June 1932, while driving west along SCP-1401 in a 1928 Ford Model A. 's vehicle was first identified by the Foundation in 19 and designated SCP-1401-1-332. SCP-1401-1-332 was recovered intact following a pursuit on / /20 . SMU 738 was unable to save any passengers except for , the driver. 's biological age, based on medical examinations and birth documents, is presently 1 . Due to injuries noted at time of recovery, is unable to walk or stand under his own power and frequently requires supplementary oxygen in order to breathe.

<Begin Log, / /20 , 3:12 PM>

Dr. Samesh: How are you feeling today, Adam?

Adam: I've been better. Sure is good to stretch out my legs again.

Dr. Samesh: Can you tell me how long you were driving for before the police stopped you?

Adam: Well, we left [REDACTED] at half past nine, on our way out to California. We were driving at night to beat the heat and the dust, you see. Sun didn't ever come up, so couldn't have been more than six or seven hours, I guess. No clock in there, and the radio's busted. Sure felt like years, though.

Dr. Samesh: How far did you drive during that period?

Adam: Lost track. The odometer must have rolled over three or four times.

Dr. Samesh: Did you ever reach California?

Adam: Sure. Kept drivin'. Didn't like the look of the place.

Dr. Samesh: You must have needed to refill your gas tank at some point, yes?

Adam: Never needed to. Good thing, too - it was 10 cents a gallon back home, but some of the stations out here, you wouldn't believe how much they're charging.

Dr. Samesh: Did you ever stop to eat, or use the facilities?

Adam: Wasn't really that hungry. None of the restaurants I've seen around here look very good, anyway.

Dr. Samesh: Did you stop at any time for any reason?

Adam: Why bother? We were making great time. Nowhere any good to pull over, anyway.

Dr. Samesh: Did you notice yourself or your family aging during the trip?

Adam: Yeah, I guess I've got a few more wrinkles now than I used to. And the boys… well, they say kids grow up in the blink of an eye, but I wasn't expecting it to happen that fast!

Dr. Samesh: Why did you attempt to evade pursuit when the police turned their lights on?

Adam: Don't make me out like I'm some kind of crook. I wasn't trying to "evade pursuit" or anything like that. I just didn't feel comfortable pulling over in that neighborhood.

Dr. Samesh: You continued to lead the police on a chase for 238 miles[1], across three states, before you were forced to stop. Were there no acceptable places to pull over at any point during the pursuit?

Adam: Didn't see a one. I'm not so sure about this place, either.

Dr. Samesh: What would you have considered a good place to stop?

Adam: If there is one, I haven't seen it.

« SCP-1400 | SCP-1401 | SCP-1402 »

SCP-1402: The Tell-All Briefcase

Item #: SCP-1402

Object Class: Safe

Special Containment Procedures: SCP-1402 is to be contained in storage locker on Sector . Any staff ranked level 3 or higher may be granted access under the supervision of two (2) other level 4 staff, as long as reports are made for all tests and documents are submitted for review. However, testing on other SCP objects require Senior Staff approval before they may be carried out.

All documents received as a result of testing will be reviewed by a level 4 staff member who is not in relation to the document itself, before either being filed in filing cabinet or kept by personnel upon request approval by reviewing level 4 staff, provided the document relates to said requesting personnel.

Description: SCP-1402 is a plastic brown Royal Traveller brand briefcase. It measures 45 cm across, 30 cm in height, and 10 cm in width. It can be opened by unlatching two (2) stainless steel clips found on either side of the rubber handle. Each clip is outfitted with a key lock, yet the key has so far not been found.

If presented to any object or living thing (done by facing the opening toward said subject) and opened, SCP-1402 will dispense a number of documents providing explicit detail of the object or living thing's history up until SCP-1402 was presented to the subject. The mechanism by which SCP-1402 achieves this is unknown, as is the mechanism by which the object acquires the paper and ink on which to print the information. These documents are in 8 point, Times New Roman font on A4 printing paper with 1 cm margins on all sides, printed in black India ink and are single-spaced. Testing has shown that SCP-1402 may only distribute 1000 pages per presentation. The content is always written in the form of biography, e.g., "Dr. John Doe was born on January 1st, 1950." In spite of this, the

content of these documents are not always accurate, sometimes being completely false.

The content of the documents seems to be entirely random, and no trend has yet to be realized. Many times, crossovers with pieces of fiction using the subject as a character have been presented. In addition, many documents have inserted the subject into real-world events in situations for which they were not present. Information about the subject has always been factual, and very few documents have omitted any confirmed factual accounts. For a full list of documents composed by SCP-1402, please refer to Experiment Log 1402.

Experiment Log 1402

All researchers are required to record any tests conducted with SCP-1402 in this log with the following format.

> **Date:**
> **Presented To:**
> **Number of Documents:**
> **Document Content:**
> **Validity:**

Experiments Led by Dr. Hammell

Date: / /20
Presented To: D-42731
Number of Documents: 529
Document Content: Description of subject's life from childbirth, including details of crimes and conviction that coincide with official court documents.
Validity: Fully Accurate

Date: / /20
Presented To: One (1) 2.7 gram piece of Basalt.
Number of Documents: 943
Document Content: Description revealed the subject to be containing a large deposit of polonium. Staff involved with the subject were tested for radiation poisoning and the subject was tested with a Geiger counter. Analysis revealed there to be no traces of polonium in the subject.
Validity: Fully Inaccurate

Date: / /20
Presented To: Dr. .
Number of Documents: 605
Document Content: Description of the life of Dr. . During level 4 review, documents revealed Dr. to be secretly conspiring with The Serpent's Hand. Dr. was questioned, but no further insight

has so far been found.
Validity: Partially/Fully Accurate, Questionable Accuracy

Date: / /20
Presented To: **SCP-173**
Number of Documents: 432
Document Content: Description claimed SCP-173 to be of an ancient race of "true humans," desperately trying to find the only other member of its species so that it may reproduce and start a new "colony." Further insight to the nature of "true humans" was not given.
Validity: Questionable Accuracy

Date: / /20
Presented To: **SCP-500**
Number of Documents: 56
Document Content: Description revealed SCP-500 to have been created in , Germany, in a medical painkiller factory alongside the normally manufactured painkillers. The ingredients of SCP-500 were described as a combination of einsteinium, Fulbratium, and "crushed rusty pocket watches." It should be noted that there is no element named "Fulbratium."
Validity: Questionable Accuracy

Date: / /20
Presented To: **SCP-682**
Number of Documents: 448
Document Content: Document content was identical to Fyodor Doestoevsky's Crime and Punishment, replacing Raskolnikov with SCP-682, the murdered prostitutes with farmers, and Raskolnikov's arrest with Foundation containment.
Validity: Mostly Inaccurate

Date: / /20
Presented To: Dr. Bright
Number of Documents: 994
Document Content: Originally thought to be written in complete gibberish, Dr. Bright's documents described his life for every odd-numbered word, and described the life of the body he had inhabited for every even-numbered word (i.e. "Jack (word) Bright (word) was…"). Content relating to Dr. Bright was accurate, yet content

relating to the subject he was inhabiting described the life of musician John Denver.
Validity: Fully Accurate/Fully Inaccurate

Experiments Led by Dr. Zara

Date: 11/03/20
Presented To: Test animal from batch 998-C (Newborn *Mus musculus domesticus*)
Number of Documents: 1
Document Content: A single phrase: "A mouse with no name was born in March 11, 20 ."
Validity: Fully Accurate

Date: / /20
Presented To: **SCP-914**
Number of Documents: 1000
Document Content: Document appears to start and end halfway through a sentence. The pages describe the individual movements of each of 914's gears, between 14:40 and 14:43 of May 15, 19 .
Validity: Fully Accurate - *I think*.

Date: / /20
Presented To: **SCP-275**
Number of Documents: 5
Document Content: Document claims SCP came into existence fifteen minutes before being presented to SCP-1402, and all memory and evidence of her actions has been retroactively created with her. Descriptions of actions in the last fifteen minutes are consistent with observed reality.
Validity: Mostly Inaccurate

Date: / /20
Presented To: D-88322
Number of Documents: 433
Document Content: Description of subject's life and actions as standard. Notably, the actions described therein contradict the D-Class' criminal accusations, but match his own description of facts and allegations of legal foul play.
Validity: *I need help filling this*.

Experiments Led by Researcher Eisenberg

Date: / /20
Presented To: An instance of **SCP-692**-1
Number of Documents: 341
Document Content: Document described the life of the impregnating subject from being born in Foundation kennels, ending mid-sentence during description of the experimental procedure.
Validity: Fully Accurate.

Date: / /20
Presented To: A glass of water
Number of Documents: 9125
Document Content: The first 114 document pages contain a detailed manufacturing process of glassware. The remaining 9011 pages consist of a table titled "Chronicle of The Cupwise Waters", which contains three columns titled "Date of birth" , "Place of origin", and "Number of molecules". Approximately 2.15E18 molecules are claimed to originate at different points of time in the future, while another 6.2E11 are listed as originating from "Watertopia"
Validity: Fully Accurate (glass) / Questionable Accuracy (water)

Experiments Led by Dr. Edison

Date: / /20
Presented To: Dr.
Number of Documents: 708
Document Content: Document consisted of a self insert fan-fiction for the show " : " that had been written by Dr. two months prior. The story was noted by Dr. Edison to be incredibly self-indulgent. Dr. has since denied writing the story, and subsequently deleted his . account in an attempt to hide the evidence.
Validity: Fully Inaccurate

Date: / /20
Presented To: Dr. Alto Clef
Number of Documents: 108
Document Content: Document consisted of , different "Dr. Clef Jokes", done in the style of "Chuck Norris Jokes".
Validity: Fully Accurate Fully Inaccurate

Date: / /20
Presented To: **SCP-524**
Number of Documents: 666
Document Content: Document claimed that SCP-524 is the Antichrist, and was single-handedly responsible for every natural disaster that occurred in the 20th and 21st centuries.
Validity: Fully Inaccurate

Experiments Led by Dr.

Date: / /20
Presented To: **SCP-096**
Number of Documents: 4
Document Content: Document is a tabloid-style article which describes SCP-096 as a celebrity who has never been observed when not wearing a face concealing mask. The article quotes an interview where SCP-096 claims that he will only allow his soul mate to see his face. The article ends by reporting on a rumor that SCP-096 is involved in a tumultuous affair with **SCP-682**.
Validity: Fully Inaccurate

Date: / /20
Presented To: SCP-1068
Number of Documents: 9376
Document Content: A collection of legal filings from the lawsuit *SCP Foundation v Doctor Wondertainment*, in which the Foundation claims numerous patent violations in both the manufacture and the composition of SCP-1068. The documents make references to both patent case law about anomalies and patent case law which is anomalous.
Validity: Fully Inaccurate

Experiments Led by Dr.

Date: 02/ /201
Presented To: **SCP-1850**
Number of Documents: 1
Document Content: A single phrase: "I wanna fly… :("
Validity: Fully Accurate - *SCP-1850 had a broken support for one of its wings, a result of an abnormally rough landing on 1/ /201 . Said support was still regenerating. It was approximately another 3 days*

before said support was fully repaired, and it was deemed fit for flight.

Date: 02/ /201
Presented To: Dr. 's Cat
Number of Documents: 720
Document Content: A fully-translated version of *Mein Kampf*. Dr. stated she had come home the other night to find her cat curled up in a ball next to a copy of the book, fast asleep.
Validity: Questionably Accurate - *Does this even qualify as a term to describe this experiment…?*

Date: 01/ /201
Presented To: Dr. Heikkila
Number of Documents: Approximately 500000
Document Content: Each page had anatomical drawings of unknown organisms.
Validity: Unknown - *"Apparently, it read my mind and saw all the weird art ideas I have…or something…can we get this removed?" - Dr. Heikkila*

SCP-1403: Electric Goldfish

Item #: SCP-1403

Object Class: Safe

Special Containment Procedures: All instances of SCP-1403 are to be contained in a room constructed with 2.5 cm of lead shielding. All personnel entering SCP-1403's room, with the exception of D-class under test conditions, are to wear protective radiation gear and standard dosimeter badges at all times.

Each instance of SCP-1403 is to be connected to a standard 9-volt battery, which should be replaced every two weeks. The protein/amino acid solution of each instance of SCP-1403 is to be replaced weekly.

Description: Instances of SCP-1403 include 31^{1} 27 creatures resembling common goldfish, each contained within a light bulb of non-standard design . The base of each is of the double-contact bayonet design, however, each lacks a filament. These bases can be unscrewed from the bulbs, allowing access to the interior of the bulbs. Inside the bulb of each object is approximately 120mL of a solution of proteins, amino acids, and water necessary for the nutrition and respiration of the creatures. These bulbs are not anomalous in any way beside their non-standard design. All instances of SCP-1403 were initially discovered contained within these bulbs, and have been determined to be an ideal container for them. Instances of SCP-1403 do not appear to consume food or produce waste, instead receiving sustenance when electric current is passed through the water they reside in.

All contained instances of SCP-1403 are female, and attempts at breeding with normal goldfish have been unsuccessful.

The creatures can be removed from the objects by dismantling the bulb, and will starve after approximately five days unless provided

with an alternative source of electrical current and proteins. Dissections have revealed that the creatures are not common goldfish. They possess no digestive tract, and in its place is an organ that is responsible for converting electricity into sustenance for the creature. This is accomplished by passing the electrical current through a mixture of carbon dioxide and water, producing glucose. The creatures directly filter proteins from their environment into their blood through their gills. This process produces very little waste.

Instances of SCP-1403 exhibit additional visible anomalous properties when connected to an electric current. The creature will emit electromagnetic radiation in the segment of the visual spectrum corresponding to orange. When the electric current exceeds 1 amp, this radiation will begin to enter the ultraviolet spectrum.

As the amplitude of the electrical current increases, the radiation gradually becomes more intense and higher-frequency, eventually passing through the upper reaches of the electromagnetic spectrum. At 4 amps, the radiation enters x-ray wavelengths, and gamma wavelengths at 6 amps. At 5 amps, the radiation emitted is potent enough to be harmful to humans in a short period of time, exceeding 1-2Sv/hr. Extreme caution should be exercised when exposing an instance of SCP-1403 to electrical current greater than 3 amps. Emitting radiation in this fashion does not harm SCP-1403 in any way, though experiments have shown that they are vulnerable to radiation generated from outside sources.

Addendum: Recovery Log 1403: SCP-1403 was initially discovered during a Foundation raid on Pet Store in , TX, on , 19 . None of the store's records made reference to any products fitting the description of SCP-1403. The shop had ten instances of SCP-1403 on display connected to a standard electrical outlet. A sudden power surge caused all ten of the creatures to emit a powerful burst of radiation. Six serious injuries and three fatalities resulted from the raid.

Footnotes
1. Four instances have been terminated during testing.

SCP-1404: Cereal Bowl

Item #: SCP-1404

Object Class: Safe

Special Containment Procedures: SCP-1404 is to be placed on a table in a standard containment cell. At least once a day SCP-1404 is to be observed by an available staff member for no less than five (5) minutes.

Description: SCP-1404 consists of two items: a 715 mL seemingly ceramic black bowl, measuring 15cm in diameter and 7cm high, and a seemingly stainless steel spoon, 16cm in length. Neither bear any marks indicating location or date of manufacture.

If at any time either object is placed in an orientation that is not standard eating placement, it will slowly right itself into that position by means not yet understood. Once upright, both items will slide in the direction of the nearest table-like surface by the most efficient path at a speed of 20 meters per hour. If there is no direct path to a table, both objects will attempt to go through obstacles by rubbing against them, causing damage consistent with constant friction but with no effect to the objects themselves. SCP-1404 has also been observed sliding up and down walls, accessing ventilation systems, moving along ropes 1 cm in diameter, and dropping from heights of 30m without damage to either object. When reaching a table, they will slide up the legs or sides of the table until the bowl comes to rest 10 cm from the closest edge, centered along the table's width. The spoon will halt once it is 6 cm to the right of the bowl, perpendicular to the closest edge. (For more information on SCP-1404's behavior, see **Test Log 1404-A** and **Test Log 1404-B**)

Over the course of five (5) minutes, the bowl will slowly fill with milk through an unknown means. When placed in a hermetically sealed transparent case, air pressure was observed to rise, showing that the milk is entering the bowl from an unknown external source. Once

the milk reaches 472 mL, cereal alphabet letters will rise from the milk and spell out a phrase. Each phrase is vague in its meaning, but they are consistently negative and usually threatening, sometimes referring to "we." If the bowl is emptied, the process will begin as before, though with a different phrase of similar content. If a single letter is removed, it is replaced within 10 seconds. Unhindered, phrases will remain exactly 24 hours, at which point the letters simultaneously sink out of sight. Within thirty (30) seconds, a new phrase will emerge. It is unknown if SCP-1404 has a limited number of phrases, as it does repeat itself often. Some phrases, however, have been observed only once. Logging of messages has revealed no discernible pattern. (See **Log 1404-01**)

Testing on milk showed it to be cow's milk, 1% fat content, with no anomalous properties. Cereal proved to be identical to Cereal recipe and also proved unremarkable. Class D personnel compelled to ingest cereal and milk showed no adverse effects. No samples could be taken from SCP-1404 itself, as objects appear to be unbreakable even at a molecular level. The actual age of the objects is unknown, though based on their style and apparent method of manufacture, they are no more than fifty (50) years old. Objects maintain a temperature of 18°C and contents a temperature of 3°C, regardless of any heat applied. Both are seemingly unaffected by the laws of thermodynamics. The contents of SCP-1404 show no sign of putrefaction, even over the course of several weeks. If separated from SCP-1404, both cereal and milk lose any anomalous characteristics.

SCP-1404 does not appear to be sentient. Attempts to communicate with SCP-1404, including verbal address to both bowl and spoon, radio wave transmission, written messages submerged in milk, and addition of cereal letters have met with no results.

SCP-1404 was discovered in the apartment of B C in , after his suicide by gunshot wound to the head on / /200 . Officers arriving on the scene found C 's body in proximity to SCP-1404 and believed it to be an unusual suicide note. When the stories of a "cereal suicide note" began circulating in the local press, Agent , undercover as a P.D. homicide detective was dispatched to verify the presence of an anomalous object.

C ’s apartment was completely devoid of furniture of any kind. The toilet and kitchen counters were destroyed in a means consistent with a sledgehammer found on the scene. The only sign of habitation was a sleeping bag and a bucket containing urine and feces. The object was on a window sill in its standard orientation. Agent remarked in his report that upon picking up the bowl, he felt it “slightly tugging” in his hand towards the window sill. SCP-1404 was confiscated and brought to Site-23. It is unknown how long SCP-1404 was in C ’s possession, by what means he acquired it, and why he did not discard the object.

If left unobserved by human eyes for more than twenty four (24) hours, SCP-1404 will migrate to the nearest table in a populated area, as seen with its arrival in Staff Cafeteria B on / /200 after the object bored through its steel container and the wall of Storage Area 8. For this reason, containment in a Storage Area is unadvised due to possible damage to the facility and the potential for compromise of the containment of other SCPs.

Test Log 1404-A

Test 1404-A-01: SCP-1404 placed in center of a maze.
Researcher: Dr.
Test Record: SCP-1404 navigated maze successfully with zero errors.

Test 1404-A-02: Spoon submerged in Polymer
Researcher: Dr.
Test Record: Spoon remained motionless for approx three (3) hours until it was observed “wiggling.” Over the next four (4) hours it had freed itself and proceeded towards table containing bowl.

Test 1404-A-03: Sealed in Level 4 Containment Unit
Researcher: Dr.
Test Record: SCP-1404 moved to the wall of its enclosure and began rubbing at the wall. Wall began to show signs of wear after six (6) hours with no damage to SCP-1404. Test concluded to avoid damage to facility.

Test 1404-A-04: Table suspended via high tension cables 14 m in the air in the middle of a 20x20x20m area
Researcher: Dr.
Test Record: SCP-1404 moved to the wall of containment area. Both objects tilted ninety (90) degrees and began to ascend wall. When reaching ceiling, both objects reoriented to that plane and began to slide across ceiling. Once over the table, SCP-1404 dropped 6m to table surface and came to rest at standard orientation.

Test 1404-A-05: Tungsten table placed in furnace set to 3200°C.
Researcher: Dr.
Test Record: SCP-1404 entered furnace without damage. Once reaching standard position, SCP-1404 began to fill with milk. Table extracted. SCP-1404 temperature: 18°C. Milk temperature: 3°C.

Test Log 1404-B

Substance	Result
Water	Bowl tips and spills contents, rights itself, and proceeds toward table.
1% Milk	Bowl tips and spills contents, rights itself, and proceeds toward table.
Wet Cement (to capacity)	Bowl tips and spills contents with zero adhesion to surface, rights itself, and proceeds toward table.
30kg Weight	Bowl tips and spills contents, rights itself, and proceeds toward table.
Polymer	Bowl tips and spills contents with zero adhesion to surface, rights itself, and proceeds toward table.

200 kg Weight (placed atop bowl)	Bowl tips, lifting weight with rising end until weight slides off. Bowl rights itself and proceeds toward table.

« SCP-1403 | SCP-1404 | SCP-1405 »

SCP-1405: A Large Prehistoric Sloth

Item #: SCP-1405

Object Class: Euclid

Special Containment Procedures: SCP-1405 is to be housed in a standard large-animal high-security enclosure at Bio-Research Site 13. Enclosure climate control should emulate the average conditions of spring or early summer in midwestern North America, as well as an appropriate day/night cycle. The enclosure is to be planted with vegetation consistent with a North American deciduous woodland, including several large trees to allow SCP-1405 to graze as it presumably would in the wild. Plant materials should be supplemented daily with 25 kg of fresh, high-quality hay and a source of clean water. Weekly treats consisting of 5 kg of plastic or silk imitation plant material may also be provided as rewards for good behavior.

SCP-1405 is to be monitored at all times by a series of closed-circuit cameras. Personnel interactions are currently allowed only for feeding and cleaning duties to prevent causing distress to the subject. All other access must be approved by Dr. Haury, the onsite veterinarian.

Update to Containment Procedures: While SCP-1405 itself is considered a low risk subject, following Incident 13-1405a (see Incident Report below) the subject is to be immediately relocated to a high security containment area to reduce the risk of a breach by external forces. Onsite security presence at Bio-Site 13 is to be increased immediately at both SCP-1405's containment area and the site perimeter. Additional security cameras are to be installed on the exterior walls of the containment area, and the security feed is to be monitored at all times (see updates to protocols for Low-Security Containment Facilities.) Any change in SCP-1405's behavior should be logged and immediately reported to Agent McComb or the security chief on duty.

Description: SCP-1405 is a life-size, museum-quality model of an extinct giant ground sloth of the genus *Megalonyx*. The subject stands 2.9 m tall at the shoulder when resting on its hind legs, and weighs in excess of 350 kg.

In its inactive (or camouflage) state, SCP-1405 appears to be a normal model: X-ray scans indicate it is composed primarily of plastic resin on an internal metal scaffolding.

The subject's anomalous properties become evident only when it is left undisturbed for a variable period of time (usually 6 to 8 hours, with a range of 45 minutes to 4 weeks). If undisturbed, SCP-1405 will enter its active state and begin moving around its enclosure, despite the fact that its body has no apparent musculature, internal organ structure, or even moveable joints. Hairs recovered from the enclosure during cleaning are primarily synthetic fiber, but a very small number (<1%) are mammalian hairs with mitochondrial DNA similar to that of extant sloth lineages.

The subject's active state behavior is comparable both to extant species of sloth and to other large herbivores. Most of its time is spent browsing on the vegetation in its enclosure, but it has also been observed sleeping in a ground nest constructed in a secluded area, scratching and rubbing on trees, and playing with various objects. Examination of high-definition video footage indicates muscles moving under a flexible hide and breathing movements in the chest, suggesting that the subject undergoes considerable morphological change between active and inactive states.

SCP-1405 consumes plant material at a rate consistent with other mammalian herbivores of its size, but does not excrete. It greatly prefers an herbivorous diet, but will also consume meat, wood, plastics, plaster, and bite-sized pieces of metal. How it metabolizes food is unknown, and in its inactive state, it does not appear to need food, oxygen, or sleep. It has also exhibited a fondness for decorative imitation plant material, which appears to have been its primary diet before being placed in Foundation custody.

If startled, SCP-1405 will instantly revert to its inactive state, "posing" by sitting on its hind legs with one forearm raised. It appears able to maintain this state indefinitely, and will not react to

any stimuli, including physical trauma. SCP-1405 retains memories of events during its inactive state: after the removal of tissue samples and other traumatic tests, it remained inactive much longer and behaved in a nervous, agitated manner after returning to its active state. While agitated the subject may become destructive, and has caused significant damage to its enclosure attempting to breach containment. For this reason, unnecessary human exposure has been suspended. When allowed to remain active, damage caused in the inactive state will heal at approximately 3 times the normal rate.

Recovery Log: SCP-1405 was discovered on display in a large diorama at the Museum of Natural History in 1992, in the pose it maintains while inactive. Museum inventory indicates that the original sculpture was created in 1978 by Alicia Mayberry, an artist routinely employed by the museum. None of the artist's other works exhibit anomalous properties.

SCP-1405 was displayed for twelve years, and exhibited no anomalous properties during this time. It came to the Foundation's attention when Agent McComb, embedded in the Police Department, responded to reports of repeated vandalism at the Museum of Natural History. In May of 1992 the doors of the museum were found smashed open, as though impacted by a large object travelling at considerable speed. SCP-1405 itself also exhibited considerable damage, including a number of long, jagged cuts to its back and face, large bald patches, and several broken claws and teeth. It was repaired and returned to display.

Dried patches of a clear, sticky liquid, reported by police as some type of glue, were found on the door, in the museum foyer and near the subject's diorama. No testing on the liquid was conducted, but examination of crime scene photographs indicate that the spatter pattern is consistent with blood spatter from a large, wounded animal.

Approximately once per three months thereafter, museum employees found all decorative vegetation in SCP-1405's area stripped bare. SCP-1405 itself appeared to undergo rapid deterioration of claws and teeth, and would consistently lose large patches of hair despite repeated restorations. Agent McComb

contacted the Foundation, and SCP-1405 was removed from display and placed in a standard containment facility at Site-19. Surveillance cameras first observed it entering its active state three weeks later, whereupon it was reclassified as a living organism and transported to Bio-Site 13.

Addendum A: Dr. Haury has noted that the recurring damage to SCP-1405 while on display as a museum piece (hair loss, tooth and nail degradation, etc.) are consistent with symptoms of chronic malnutrition and insufficient living space in large mammals, and its active state behavior is often consistent with zoo and circus animals subjected to long-term abuse. These symptoms have not been observed since the current containment protocols were adopted.

Addendum B: Plans to gradually acclimatize SCP-1405 to human interaction approved as of May 2011, when the subject was observed returning to its active state only ten minutes after cleaning personnel exited the enclosure. SCP-1405 has since returned to active state with a researcher present in the enclosure several times, provided the researcher remains still and silent, and recently remained active while cleaning personnel were present. It is hoped that acclimatizing SCP-1405 to human presence will allow further research into its active state functions, as well as a potential insight into the behavior of a prehistoric species.

Document 1405-1: Additional notes from Dr. Haury, attending veterinarian

> *The current containment procedure for SCP-1405 gives the impression that the subject is some kind of statue that comes to life. Personally, I no longer believe this to be accurate. The events that brought SCP-1405 to our attention, as well as its ability to massively alter its physiology between animate and inanimate states, suggest to me that we do not have a magical sculpture of a sloth: what we have is another entity entirely, which found a sculpture of a sloth to be a convenient hiding place. This hypothesis does raise the question of why it chose to be a sloth, and if it could be persuaded to enter and animate similar objects. Perhaps an object that doesn't eat 200 kg of hay a week. —Dr Haury*

Incident 13-1405a Log: At 0125 hours on December 13, 2012, the north-facing exterior wall of SCP-1405's containment chamber was impacted at considerable speed by an unobserved object. The object was of sufficient mass and travelling at speeds high enough to crush the exterior cinder block and distend the interior steel wall, although the containment cell was not breached. The external walls showed multiple deep scratch marks in a pattern comparable to a bear or other large predator's claws.

Perimeter security cameras did not record any object or person entering the facility compound. A vertical tear in the southwest section of perimeter fence was found following the incident: the fencing appears to have been cut with a knife or similar sharp object. An external camera near SCP-1405's containment chamber recorded the impact and damage to the building, but the object causing the damage is not visible in the footage. This camera and the cameras in SCP-1405's enclosure recorded scraping and clawing sounds which continued for four minutes following the impact.

For approximately 24 hours prior to the incident, SCP-1405 exhibited signs of considerable distress, pacing constantly and refusing to eat or drink. It was observed staring intently at the north wall of its enclosure and emitting whining and growling vocalizations. 2 hours prior to the incident, the subject entered its inactive state without apparent provocation, situated with its back to the south wall and its paws raised to cover its face and head, in the only known deviation from its normal inactive pose. The subject remained inactive in this position for two weeks following the incident, and behaved in an agitated manner for several weeks after becoming active again.

« SCP-1404 | SCP-1405 | SCP-1406 »

SCP-1406: An Old Entity

Item #: SCP-1406

Object Class: Safe

Special Containment Procedures: Site-121 has been established in and around the building above SCP-1406, surrounded by a barbed-wire fence monitored through several CCTV cameras installed around the perimeter. A cover story regarding restoration of the building by a land-owner has been circulated.

Description: SCP-1406 is a medium-sized structure located in a heavily damaged building in , France. The structure consists primarily of brick and sheets of steel, and is affixed with a wooden door.

Individuals inside SCP-1406 have reported experiencing various hallucinatory and psychological effects. These have included:

- Observing what was described as a mating pair of heavily injured *Octopus vulgaris* (common octopus) in the center of the room. Injuries included skin lacerations and several amputations, as well as a green-brown discolouration.
- A pronounced sensation of the interior of SCP-1406 being slightly larger than the exterior by a minor factor.
- A professed sense of slight forgetfulness, which persisted upon exiting SCP-1406.

SCP-1406 contains an object resembling a normal chair constructed of ten to twenty (10-20) small pieces of metal. The object appears to be coated in a semi-transparent, mildly luminescent violet liquid. Analysis of this fluid has shown it to be a mixture of tyrian purple dye, tungsten and several unidentified substances. Several seconds after removal from SCP-1406, this mixture will invariably cease

luminescing.

In addition, SCP-1406 houses a small, brick fireplace, containing an exothermic variant of the same fluid.

Incident 1406-e: On 2011-05-02, an individual (later positively identified as , a resident of the local village of) was found attempting to access SCP-1406. The individual was detained and interviewed, repeatedly stating his belief that a significant event would occur in the near future relating to SCP-1406. No further useful information was gained from interviewing the subject, and the individual was put under observation.

At 19:34, a visual phenomenon was noticed to occur at three points in the vicinity of SCP-1406, these being: a point several metres from SCP-1406 itself, at the edge of a forest kilometres away, and in a field of cattle in . In each case, several pulses of light were produced in quick succession. At the second and third locations, significant charring was noted to occur despite no noticeable flame; a tree at the second location and a bull at the third were both severely damaged as a result.

No charring was noticed on the building surrounding SCP-1406. Later investigation revealed a figure resembling a semi-humanoid head several metres from SCP-1406, constructed primarily of wood and a small mass of cattle tissue matching the affected pine and bull. This object has since been put into storage.

Shortly after this, Mr. , began loudly vocalising in French, and expressing distress (see Document 1406-2).

Document 1406-2: *Abridged transcript of the speech produced by Mr. during Incident 1406-e.*

> […]When the universe was young, the entity was a great, massive thing. Its form was twisted, unnameable and ancient, as to drive men mad in their attempts to envisage it. And so, this being of such scale spawned the many, who were not as immense, but were numerous to the extent of measure. […]

[…] As reality grew old, so too did the entity. The span of its existence was inconceivably long, but not infinite. Its nature approached order and sense, and its image now could no longer drive men mad as once it did. It became small and shriveled where once it was colossal, and infirm where it was once powerful. In time, the entity was no longer a god to men, and it became forgetful and tired. So very tired. What little potency it had left it used to influence former worshipers to care for it, while it sat beneath its shrine in the warmth. […]

[…] The many, now fully formed and independent from their creator, left to thrive at the far extents of the universe. Once every million years, they returned to where the entity had gone to endure the rest of its existence as a ritual of their nature, but they soon grew weary of this. Their creator was no longer even aware of the things it had made, and paid them no heed when they arrived. Soon, the many, even more fragile than their forebear, fell apart with the passage of time, their remains forming a great mass at the cold, unstable edges of reality […]

[…] for what remnants of the many remained, at this place bound by no laws, thought was interchangeable with matter. And in their decaying bodies was the memory of sapience, which became sapience. And so, one final thing formed from the many.

The collective, a shambling, unfocused, designless creature, with a mind that was barely functional, and which barely existed at all. And so, this patchwork thing slowly returned in the vague direction it recalled from the pieces of the many. […]

[…] Granddad? You seemed sad, so I made this for you. Granddad? Are you okay? […]

[…] Do you remember me?

Following this, Mr. was unresponsive to interrogation. Mr. is

still under observation.

« SCP-1405 | SCP-1406 | SCP-1407 »

SCP-1407: DJ's Headphones

Item #: SCP-1407

Object Class: Euclid

Special Containment Procedures: All instances of SCP-1407 are to be contained in standard security lockers, located within **Site-77**. Personnel assigned to SCP-1407 are to wear ear protection while interacting with SCP-1407. Any subjects found to have been affected by SCP-1407 are to be quarantined for study, followed by termination.

Description: SCP-1407 designates a number of headphone sets, commonly referred to as ear buds. Instances of SCP-1407 are composed of ordinary plastic and various metal wires, along with other components normally found in headphones. Instances of SCP-1407 function normally.

When an instance of SCP-1407 is worn in the ear of a human subject, it will begin to extrude metal wires into the subject's ear canal. Subjects will not report feeling these wires, but will indicate that they find the SCP-1407 instance extremely comfortable to wear. After a period of 20-45 minutes, these wires reach the cochlea, and will begin to extend into the pores of the ear canal, physically removing any hairs and replacing them with wires. At this point, the subject will be unable to remove the SCP-1407 instance without severely damaging their ear canals.

SCP-1407 will continue spreading through the subject's body, most commonly to the outer epidermal tissue and ocular cavities. Subjects may report rashes or impaired vision. Underneath the epidermal tissue, SCP-1407 will create additional instances of itself by replicating its components with bone, muscle, and bodily fluids. In addition, follicles existing on the surface of the epidermal tissue will be replaced with SCP-1407 wires. Additional SCP-1407 instances will also be created in the stomach, cranium, and intestines, usually

growing beneath the outer tissue layer and appearing as cysts or hemorrhoids. It takes 1-3 days for an SCP-1407 instance to fully spread through the subject's body.

If the subject is exposed to sounds greater than 115 dB, the speakers within the subject's body will begin to replicate the sound. As exposure time increases, the subject's skin tissue and any matter occupying the ocular cavities will begin to flake off or dissolve, as the speakers within the subject become louder. In addition, the number of SCP-1407 instances present within the subject will increase continuously, until the pressure within the body causes them to be violently ejected through the subject's orifices, or through tissue weakened by SCP-1407's effect.

SCP-1407 was recovered from a nightclub in Miami, FL, after a DJ suddenly expired during a party. When autopsy reports reached Foundation assets in the local police department, the body was secured along with one instance of SCP-1407. As of 11/14/2006, SCP-1407 has been classified as Euclid.

Currently, 11 instances of SCP-1407 are in containment.

Addendum: A proposal has been requested by Dr. to use D-class personnel affected by SCP-1407 to circle around SCP-1009 so that only one speaker needs to be maintained. On-site medical staff are to be present to care for any injuries caused by SCP-1407.

« SCP-1406 | SCP-1407 | SCP-1408 »

SCP-1408: Victorian-Era Memory Rewriter

Item #: SCP-1408

Object Class: Safe

Special Containment Procedures: SCP-1408 is stored in a climate-controlled, dedicated containment chamber under clean-room conditions at Site to prevent further deterioration of its organic components. Personnel may only directly access SCP-1408 with prior permission from at least two (2) Level 3 Senior Researchers.

Description: SCP-1408 is a complex electromechanical device consisting of a 1 m x 1 m x 2 m main unit constructed from wood, clockwork and pulleys connected to a metallic head cap with multiple cables. A symbol consisting of the letter 'W' with an inscribed 'A' (later determined to be the monogram of one Professor A W , 1823-?, of [REDACTED], England) is engraved onto both the head cap and main unit. SCP-1408 was contained on / /1851 by the Royal Society for the Security, Containment, and Protection of Anomalous Artifacts, at which time it was designated Anomalous Artifact #1851-Delta-Four. The device came to the attention of the RSSCPAA just prior to the Great Exhibition of 1851, during which the device was to be demonstrated to Queen Victoria. Agents of the RSSCPAA were able to raid and secure the laboratory of Professor A. W and secure SCP-1408 before it was shown to the public. According to reports by the aforementioned agents, Professor A. W was unfortunately able to elude capture.

When the head cap was placed on the head of a human subject and the device was activated, SCP-1408 transcribed the encoded memories of the subject onto a wax roll in the main unit by a process that was not fully understood. SCP-1408 was also capable of operating in "write mode", by which a specially prepared wax roll could be used to embed memories into the subject. According to the experiment logs of the RSSCPAA, this process was unreliable as

the encoding method was imprecise and unintuitive. Mistakes in the format resulted in rejection of memories, confusion and in several cases severe psychosis. SCP-1408 was intended as an interrogation tool, both in extracting information from foreign agents and implanting suggestions and rewriting allegiances.

SCP-1408 is currently inoperable, partly due to severe deterioration of its wood and leather components. In addition, according to an RSSCPAA incident log dated shortly before transfer of SCP-1408 into SCP Foundation possession, a breach of containment occurred in which several key components of SCP-1408 were taken by an unknown individual before agents were able to respond.

Addendum 1408-01: Document Discovered Following RSSCPAA Breach Incident 1851-Delta-Four-Alpha, dated / /19

> To whom it may concern:
>
> My sincere apologies for the disturbance, but I need to salvage a few things.
>
> Cheers,

Addendum 1408-02: Researcher Note

> To date, all efforts to track down the missing components of SCP-1408 have failed. The incident occurred before the invention of video or audio surveillance, and all we have is a hundred-year-old handwritten note supposedly written by someone who should have been dead of old age. Unless we can turn back the clock or somehow manage a miracle, I am proposing that we archive SCP-1408 until further notice.
>
> - Dr.

SCP-1409: The Whalesong Beacon

Item #: SCP-1409

Object Class: Safe

Special Containment Procedures: All recording devices containing copies of SCP-1409 are held in a secure storage compartment at Storage Site-07 when not used for testing purposes. Permission to use SCP-1409 for testing purposes must be requested from the current Level-2 staff member responsible for supervision of SCP-1409. Agents and researchers assigned to SCP-1409 are required to possess a valid form of Open Water Diving certification.

During testing, any device being used to play SCP-1409 must be contained in a soundproofed room, and no devices capable of recording sounds are to be allowed in the room save for the device being used to play SCP-1409. Staff are not allowed to enter any area in which SCP-1409 is being played unless they are wearing noise-cancelling headphones.

Individuals affected by SCP-1409 are to be detained immediately. Subjects affiliated with the Foundation are to be held in custody in standard containment cells for valuable non-anomalous human beings. Minimal possible force is to be used to prevent escape attempts. Individuals exposed to SCP-1409 not otherwise of interest to the Foundation who do not possess any diving ability may be terminated.

At the first possible opportunity, SCP-1409-affected individuals with a direct connection to the Foundation are to be transported to Point 1409-Alpha. Individuals are to be assisted in diving to Point-1409-Alpha by no less than 2 divers in possession of a valid civilian Master Scuba Diver qualification, or equivalent. Foundation staff who have been affected by SCP-1409 and have followed this protocol are to be placed under psychiatric observation before they may be returned to duty.

Point 1409-Alpha is monitored by a Foundation-owned vessel staffed by members of Mobile Task Force Gamma-6 ("Deep Feeders"). Any vessels approaching Point 1409-Alpha are to be monitored and their crews apprehended if they show signs of being affected by SCP-1409, or attempt to access Point 1409-Alpha directly. Any persons found to have been affected by SCP-1409 are to be taken into custody.

Description: SCP-1409 is a series of 4 recordings, made by hydrophones located in the southern Atlantic Ocean. They are simultaneous recordings of a single set of vocalisations, made by a male Humpback Whale (*Megaptera novaeangliae*). The vocalisations last for 19 minutes and 34 seconds, and have been determined by testing to be the active part of the recording.

Individuals who listen to the vocalisations report that they hear a human voice singing in an unknown language in place of the actual content of the recording. While the meaning of the song cannot be made out, each listener believes that the voice is directly addressing them, and some assert that the singer sounds ‘sad’ or ‘lonely’. Listeners are also unable to determine the gender of the singer.

If an individual listens to SCP-1409 for a certain period of time, the primary property of SCP-1409 comes into effect. Initially, listeners begin to identify strongly with the ‘singer’ of SCP-1409, and show a marked and unusual ability to remember the song. Affected individuals will not, however, be able to recreate the song themselves, claiming any attempt to do so, or even to hum the tune, sounds ‘wrong’. The amount of time spent listening to SCP-1409 before it has an effect on the listener appears to vary depending on the individual and the section of the recording in question.

Over a length of time, which varies significantly between individuals, affected subjects will begin to experience a strong desire to travel to Point 1409-Alpha. Point 1409-Alpha is an area comprising approximately 40 cubic metres of water, located roughly 20 metres below the surface of the water in the Atlantic Ocean, at ° ’ ” West , ° ’ ” North. Examination of records kept by [DATA EXPUNGED], the research institute responsible for the maintenance of the hydrophones which made the recording, indicate that this location was the origin point of SCP-1409, and that shortly after it was

recorded, an unusual convergence of aquatic wildlife was noted at the location.

Individuals affected by SCP-1409 will attempt to reach Point 1409-Alpha by any means available to them, although most are reluctant to resort to acts they personally find immoral or distasteful. In cases where no adequate transportation is available, subjects will attempt to reach a coastline and swim towards Point 1409-Alpha, invariably resulting in exhaustion and drowning. It is not known how affected subjects are able to locate Point 1409-Alpha, but subjects report they are able to sense whether they are moving towards it or not. Amnestics have no effect on this compulsion.

If a subject affected by SCP-1409 successfully reaches Point 1409-Alpha, they invariably experience shock and feelings of betrayal, claiming that they were led to believe there was a person or object at SCP-1409 of great value, although they cannot explain the precise nature of the promised object. Subjects express distrust or hatred of the singer in the SCP-1409 recording, and some experience depression. However, after this point the direct effect of SCP-1409 on the subject apparently ceases.

SCP-1409 is able to affect individuals who are aware of its properties, and individuals who have previously been exposed and have successfully reached Point 1409-Alpha. Such individuals maintain either they, or previous SCP-1409 subjects, failed to find the object of value at Point 1409-Alpha due to a lack of effort or mistake on their part.

Addendum 1409-1: On / / , a small research vessel operating in the Atlantic was found abandoned and severely damaged, apparently by a storm. Evidence found aboard the vessel indicates that a whale song with similar properties to the SCP-1409 was recorded by the vessel, although damage to monitoring equipment incurred during the storm has rendered the recording unintelligible. The events that occurred following the recording are unknown, though it is believed all on board perished attempting to reach the origin point, leaving the boat unattended during a storm.

As a result of this incident, it is presently hypothesized that SCP-1409's properties stem from the anomalous nature of the

whale that originally made the vocalisations, rather than the vocalisations themselves. Although this is not currently confirmed, Agents are advised to monitor unusual hydrophone recordings made in the Atlantic Ocean within 3000km of Point 1409-Alpha. Mobile Task Force Theta-5 ("The Bigger Boat") have been informed of the possibility of such a whale existing and tasked with locating it should another SCP-1409 event occur. The theoretical humpback whale which created SCP-1409 is designated SCP-1409-A for provisional purposes.

« SCP-1408 | SCP-1409 | SCP-1410 »

SCP-1410: Sweating Stone

Item #: SCP-1410

Object Class: Euclid

Special Containment Procedures: : SCP-1410 is to be kept in its designated containment area within Site-30. SCP-1410 is to be moved between the four chambers of the containment area as dictated by the color of its perspirations and the interpretation of the supervising researcher in order to minimize the creation of instances of SCP-1410-1:

- Chamber 1410-A (Yellow): chamber 1410-A was converted from Site-30's secondary auditorium. SCP-1410 is to be kept on a pedestal in the center of chamber-1410-A if displaying claustrophobic tendencies. If displaying agoraphobic tendencies, SCP-1410 is to be kept in a metal container at the base of the pedestal.

- Chamber 1410-B (Red): chamber 1410-B is a steel vault. When SCP-1410 is kept in chamber 1410-B, an armed guard is to be stationed inside the chamber in order to create a reassuring environment for SCP-1410.

- Chamber 1410-C (Blue): chamber 1410-C is a standard humanoid containment cell, converted to a nursery. Chamber 1410-C is to be painted in soft, muted colors and include toys meant for young children, preferably plush animals. SCP-1410 is to be placed in a crib in the left corner of the chamber, and two personnel involved in the containment of SCP-1410 are to be stationed with it. Said personnel are not to be armed.

- Chamber 1410-D (Green): chamber 1410-D is a standard humanoid containment cell, converted to a mock infirmary. Chamber 1410-D is to be painted white, and contain assorted medical equipment (said equipment does not need to be genuine).

SCP-1410 is to be kept on a patient's bed in the middle of the chamber, and one personnel involved in the containment of SCP-1410 is to be stationed with it at all times, dressed in scrubs. SCP-1410 is to be wiped with disinfectant every hour while in chamber 1410-D.

Description: SCP-1410 is a water-smoothed stone, resembling the type found in cave complexes in the mountains. SCP-1410 appears to possess a limited degree of sapience, which is connected to the chromatic perspirations it emits at regular intervals or upon contact with instances of SCP-1410-1. SCP-1410-1 comprises a number of optical illusions created by SCP-1410, whose exact nature is contingent on the same perspirations. SCP-1410 does not seem to be aware that it is the source of SCP-1410-1, and will react negatively to them, increasing its rate of perspiration and thus the creation of additional instances of SCP-1410-1 the longer it is in contact with them. Regardless of subtype, instances of SCP-1410-1 will only acknowledge the existences of SCP-1410, and will entirely ignore all else.

Physical contact with SCP-1410 enables a one-sided communication with it, though it is mostly limited to SCP-1410 broadcasting vague phrases and emotions at whoever touches it. The subtypes of perspiration and the instances of SCP-1410-1 connected to them are as follows:

- **Yellow Subtype:** when emitting this perspiration, SCP-1410 will broadcast phrases and emotions connected with claustrophobia, agoraphobia, and guilt, often alternating between the former two every few hours. Yellow instances of SCP-1410-1 appear as young adults of both sexes, dressed in clothes indicating a high socioeconomic background and artistic tendencies, and suffering from wounds afflicted by makeshift weapons. Yellow instances of SCP-1410-1 will attempt to surround SCP-1410 and attack it, though due to their incorporeal nature those attacks are ineffective. Yellow perspiration will decrease if SCP-1410's claustrophobia or agoraphobia is dissuaded.

- **Example of phrasing used during Yellow Subtype:** "I was trapped. They were there with me, but they couldn't

understand, they weren't like me, not at all. Blind to the voices, to the dark, to the stifling air and the walls always closing down, always growing closer. To the Ichor always calling me to create beauty from them. I had to do it, had to make them beautiful, for her. How quickly did she grow bored with me and left me for what was left of them. They will never stop, closing on me like the walls I painted with them."

- **Red Subtype:** when emitting this perspiration, SCP-1410 will broadcast phrases and emotions connected with paranoia and anger. Red instances of SCP-1410-1 appear as tall, black-suited humanoids, possessing four eyes, elongated noses, and no ears. Red instances of SCP-1410-1 will attempt to observe SCP-1410 from a distance, often appearing several hundred meters from SCP-1410. Red perspiration will decrease if SCP-1410 is made to feel safe from being observed or approached by instances of SCP-1410-1.

- **Example of phrasing used during Red Subtype:** "It was all their fault! All we did was have some fun at their expense, attempted to bring some creativity to their drab, hollow world. If they hadn't chased us, I never would have left, never would have entered those caves, never would have heard the Ichor's voice, never would have… but they just keep looking at me, even after they ruined me. They just won't go away!"

- **Blue Subtype:** when emitting this perspiration, SCP-1410 will broadcast phrases and emotions connected with depression and loneliness. Blue instances of SCP-1410-1 appear as pairs, always comprised of one young adult female and one male toddler. Instances of SCP-1410-1 will pointedly ignore SCP-1410. Blue perspiration will decrease if SCP-1410 is exposed to comforting imagery, particularly related to early childhood.

- **Example of phrasing used during Blue Subtype:** "Anny, Harry… I'm so sorry. Would you at least look at me? Just once? I promise I won't do the same to you, I know better now. She tricked me, used me, she- nothing I can say can make this better, can it? It's too late. I'm alone now."

- **Green Subtype:** when emitting this perspiration, SCP-1410 will broadcast phrases and emotions connected to pain, disgust, and dread. Green instances of SCP-1410-1 appear as various crude works of art, seemingly created using parts of the human body, with bones, hair, teeth and nails being the most prevalent. Green instances of SCP-1410-1 will furnish the room SCP-1410 currently occupies. Green perspiration will decrease if SCP-1410 believes it is exposed to medical care and disinfectant in particular.

- **Example of phrasing used during Green Subtype:** “Here it is, the culmination of my life’s work. How could I have ever believed that they were beautiful? That she was? She made me shape the rest into these… playthings of hers, and when she was done with them, she made me into one. I used to be different, but I can’t remember what I was anymore. Her oily film covers me, and all I can see is her. I just want to be whole again. To be clean again.”

SCP-1410 was found embedded in the outer wall of Site-30 during a routine security check, surrounded by Yellow instances of SCP-1410-1. SCP-1410 was removed from the wall and taken inside Site-30. Current containment procedures were established after repeated contact with SCP-1410.

« SCP-1409 | SCP-1410 | SCP-1411 »

SCP-1411: Mirror, Mirror

Item #: SCP-1411

Object Class: Euclid

Special Containment Procedures: A joint research facility has been constructed around the cave housing SCP-1411-A. It will be manned at all times by agents from both the Foundation and the **Office for the Reclamation of Islamic Artifacts**. Colonel Khorsandi of the ORIA is in charge of security, as well as liasing with the government of Uzbekistan. Doctor Yi will supervise all examination of SCP-1411-A.

At 48-hour intervals, Agent Durani will perform all duties in accordance to the Peaslee Protocols in order to perform preventative maintenance on SCP-1411-B. In the event that Agent Durani is incapacitated, a substitute must be found. This is intended to be a voluntary assignment, but if no volunteers can be found, Colonel Khorsandi is empowered to order any agent onsite.

Both the Foundation and the ORIA are to have access to all documents and research related to SCP-1411.

Description: SCP-1411-A is a collection of machinery found in a cave in the Turkestan Mountain Range in Southeastern Uzbekistan. While much of the equipment's purpose and function is unknown, several parts are assessed to be receivers for a signal propagated through unknown means, and one section in particular has been identified as a transmitter. Central to the entire assembly is a large video display, showing an unknown location.

The location shown has similar machinery to SCP-1411-A, referred to as SCP-1411-B. It appears to be in a partly collapsed structure with stone and metal walls. The sky can be observed through openings in the structure. Though the sun is never seen directly, it shows a day-night cycle lasting roughly 31 hours. The stars, to the

extent that they can be observed through the display, do not appear to match any area of the sky visible from Earth. Based on this information, it is believed to be an extraterrestrial location.

What vegetation is visible consists of fungus-like growths. No animal life has been observed through the feed (but see Document SCP-1411-3).

At the time of discovery, the components making up SCP-1411-B had experienced some damage, which caused effects both in the remote location and at the site of SCP-1411-A itself. These include electrical discharges, changes in local gravity, and an increase in the rate in heat transfer between objects in the area. Once started, these effects increased exponentially. Modeling suggests that if left unchecked, these effects would likely cause widespread devastation for several hundred kilometers before the SCP-1411-A and B materials were completely destroyed[1]. While significant repairs have been undertaken, these effects still occur when routine maintenance is not undertaken every 24-48 hours.

As the functions of most of SCP-1411-A are poorly understood as yet, operations will be focused on repairing SCP-1411 in both the remote and local sites.

When a human touches a recessed panel in the area assessed as a transmitter, it triggers the production of an autonomous machine by SCP-1411-B. These robots are roughly one meter tall (assuming the components of SCP-1411-B is similar in size to SCP-1411-A), navigating on four multi-jointed legs. The main body is roughly cylindrical, with two limbs that divide three times into eight finger-like appendages. Three dark lenses are situated on the top of the cylinder, and are believed to be the eyes of the robot.

When a robot is created, it is imprinted with the consciousness of the person who activates the transmitter. Communication through the screen suggests that the robots possess all memories and personality of the originals. They are also imprinted with information necessary for the maintenance and basic repairs of SCP-1411-B. However, the robots only remain operational for thirty-five to forty-eight hours before breaking down, necessitating the creation of further units. At present, full repairs of SCP-1411-B appear to be

impossible, possibly due to the damage to the structure housing the equipment.

Due to familiarity with the phenomenon, and to reduce potential contamination by an anomaly, Agent Durani is responsible for the activation of the transmitter. This will be done in accordance with the Peaslee Protocols for transmission of consciousness.

Communication is accomplished via writing. Remote units have been able to scavenge writing materials, using plastic-like sheets with devices that exude a thick, black paste, originally designed for applying lubrication to fine parts. They have also experimented with making pigments from local fungal vegetation and minerals.

While the components of SCP-1411-A appear to be stable at present, the remote units have been questioned on repair procedures, should they become necessary at the local site. Much of this information has helped in identifying the purpose of components of SCP-1411-A.

Recovery: SCP-1411-A was discovered by members of the Uzbek military after its anomalous properties began manifesting in region. **GRU Division P** was initially contacted, but a deterioration in relations between the Uzbekistan and Russian governments led to the ORIA being brought in instead. The ORIA then requested assistance from the Foundation as the anomalies began to intensify.

During initial examination, Doctor Yi activated the transmitter. Over the course of several days and more activations, the robots were able to activate a display in the remote location, and then began communicating with the research team. This led to the discovery that the robots had the personalities of those who activated the device.

Activations ceased for several days until the anomalies began to manifest again. Agent Durani volunteered to activate the device until a better solution could be found. At present, all efforts are being made to learn how to dismantle the device safely or reach the remote location to conduct manual repairs.

To date, Agent Durani has been transmitted 217 times.

Addendum: On 13 June, 2014, Agent Durani was injured by a fall near the local site. She was rushed to a nearby hospital. During her absence, ORIA Corporal Akbari volunteered to enact the Peaslee protocol in her absence. His first remote unit reported finding a number of writings and artworks left by previous units, and brought them to the display. See Document SCP-1411-24 for their contents. After being discharged from the hospital, Agent Durani showed mild distress on seeing the writings and artwork, but agreed to continue her duties.

+ Document SCP-1411-3

Report From Iteration 35
The halls are empty. There are bones, but they are scattered, gnawed. By animals? From animals? Too small, I think, to have built this place, though the bones are strange. Thin strips woven, like plaits in a basket. Sometimes, we see the newly dead. Lengths of black bone sticking from under red and bruised-green flesh.

Sometimes see the small ones scurry and slink, like rats or lizards. Six limbs. One in front, one in back, two to each side. Front and back for grasping, sides to move. Four-jaw mouths. Two to two, counter-chewing on scraps from other animals or the moss-trees.

Bigger ones outside. I think bigger ones inside too, sometimes? I haven't seen any, but maybe they are out? Take notes for the next.

In the trees, others. Smaller than the rats. Use the front and back legs to swing, the side legs to take food. They sing. Like birds, a little. Like frogs, perhaps. Tree erupts with chirps. Sometimes like bells, a thousand bells to ring. Not dull red, like the ones inside. Yellow, and another color I have not seen. New colors here. Is it this place, or these eyes? But no blue, no purple. Perhaps the bones are blue, and I cannot see it. Perhaps this entire world is blue, and I do not know.

Report From Iteration 42
The rooms are large. Or perhaps I am small. It is hard to say.

No one has been here for a long time. I think that they left. There are vehicles elsewhere. A large chamber, with slots for them. Like pods with doors, with machines attached. For flying, I think. There are five there, two already taken apart, and slots for a hundred. I do not know why they left. I cannot tell if they left in a hurry, if someone has ransacked the rooms, or if it is only the work of time.

They were taller than I am, I think. The doors stretch two times my height. Something my size would not have needed that. I cannot judge much else. I cannot tell what is a table, a chair, or even a bed, let alone how they might use it.

Also larger than me is an animal sleeping in one of the rooms. It came past me as I made repairs. It is half again my height, and three to four times that in length. Two long legs. One in front, and one in the back. Awkward when walking, but I saw it run as it entered. Like a cheetah. Four other limbs on the sides are small. Claws or stings on them? Perhaps for defense. Perhaps for prey. Also for prey are the long, sharp teeth that stick out of the four-jawed mouth. Two upper jaws and two lower jaws. Almost like two mouths, with one set of lips. It ignored me. I am metal. Not food for it.

Would it matter if I were? In the long run?

Report from Iteration 56
While I waited for sunrise, a large creature came near the buildings. I had heard a series of rumblings, and I had wondered what caused them. Then a leg as large as a house crashed down next to me. It was like a tree trunk, with thick pads that spread out like roots beneath it.

I hid in a moss tree, so I could not see the head or much of the body. Only a sense of vastness.

There were patches of fungus growth on the skin. There were animals on it too, long and thin with the legs short and thick, or thin and wasted. As though legs were not necessary for these riders anymore. They reminded me of worms.

Some were feeding on the fungus patches. Other riders stuck their heads through the skin, feeding through holes slowly seeping yellow-green blood.

Then the pads bunched up, the leg lifted, and it was gone.

Report From Iteration 82
The plants are strange. Plants. Fungus? Moss? On the walls, like mold and moss. Stalks are almost meaty in some places. In others, like brittle, bleeding wood.

Outside, there is more. "Trees" that are like stalks that branch and merge and branch again, a dozen times, covered in the moss-like growth. It swells at dawn, then withers down again at night. Does it do so every day? I will never know.

There are no flowers. But there are growths that are as beautiful. Reds and greens, and other new colors, which mark fruits the tree-singers eat. These alien squirrels stretch from one limb to another and take the fruit in their smaller arms. One of the tree-singers came down and sat on me for a time. I did not dare to move. It ate a fruit held in its front pair of arms, one leg on my arm, the other on my head. It sang to the trees, and was answered, and it jumped back up, so quickly I hardly knew it moved.

I am going back. I have seen nothing else you do not know. I am going to listen to the singing.

+ Document SCP-1411-24

the sunset we see is more beautiful
than any others
because we see it only once

the peace that blooms
in the heart of despair
is the most precious of all

who weeps for
the reflection that disappears
as soon as its caster
moves from the mirror?

The past I remember is hers. My future is measured in hours. I am a candle burned away at both ends.

Footnotes
1. The most catastrophic models suggest much of Central Asia would be rendered uninhabitable.

« SCP-1410 | SCP-1411 | SCP-1412 »

SCP-1412: Two Dead Sisters

Item #: SCP-1412

Object Class: Safe

Special Containment Procedures: SCP-1412 are kept in 2 m x 2 m x 7 m terrariums filled partially with aerated soil at Sector-28. Rooms in the containment cells are to be filtered for humidity and supplied with typical ventilation for oxygen and carbon dioxide.

Description: The pair comprising SCP-1412 closely resemble *Cryptomeria* 'Japanese cedar' trees, standing 4.45 m in height and 1.21 m in diameter at the base. The pair has a similar biological profile and varies only slightly in appearance. Dendrochronological surveys of the trees are inconclusive due to a lack of annual rings inside of the trunks. Modern dating methods return various results ranging from months to 65 years. Closer inspection of bark samples shows a lack of cellular activity.

SCP-1412 achieves mobility through growth. Frontal maws located underneath the bases of the trees digest plant and animal matter, which is then processed at an irregular rate, producing more bark for propulsion, effectively pushing them forward. Feeding in this manner does not seem to be crucial to the existence of SCP-1412, although in most cases either have been shown to move given an opportunity. SCP-1412 will not consume human matter and does not actively hunt for food save for the purpose of using it for mobility.

> **Researchers Note:** *The amount of energy needed for mobility is minimal, although this energy seems to be consumed quickly. This suggests the distance traveled by these trees took place over at least six-hundred (600) years, estimation given the mobility of SCP-1412 without energy, and the time it takes for new plant matter to grow. This means SCP-1412 would have traveled faster in denser areas, and may have been relatively dormant*

until new food made itself available in more arid areas. See attached diagram compiled by Researcher Sanders of SCP-1412s course in the last two-hundred (200) years. Circles indicate periods of inactivity.

1412 Tracking Map

During testing, cadavers placed in the hollow opening near the bases of the trees are forced out, with no evidence of digestion or mastication.

The pair seems to prefer traveling at a relatively close distance. Top speeds for either instance of SCP-1412 clock at 8 knots.

A large portion of the bark seems to be severely damaged and charred, the cause is assumed to be annual rainfall. Introduction to small amounts of water (1 l) cause the bark of SCP-1412 to combust. Damaged sections of the trees do not appear to heal, but this does not result in reduced mobility or any abnormal behavior. Fire on the bark shows a faint purple, burning at roughly 200 °C. Further study into the mechanism eliciting this process is underway. The pair seems to be immune to fire up to temperatures of 1,300 °C.

SCP-1412 was discovered in 2010 at Tenryū-Okumikawa Park by a group of civilians hiking in the area. The group was interviewed and administered with amnestics while a concurrent expedition was undertaken by Agent Breen and Researcher Sanders. The team reported following a trail of twisting, horizontal trunks through 23 ha of dense forest. The area surrounding the then dead bark was barren, although this range was reported to have only stretched roughly 1 m on either side of the husks. SCP-1412 was eventually discovered near Atera Seven Falls after two-days tracking. See Containment Report 1412 for further details.

Addendum 1412-A: Sample Analysis

Further testing of the inside of SCP-1412 reveals a negligible amount of radiation (0.89 microsieverts) per hour. A cross section of SCP-1412 reveals a spiraling mound of calcified gray matter located within which replaces nearly eighty percent (80%) of the heartwood.

Audio from Containment Report: 1412

> Sanders and I reached Atera Seven Falls after following the husks for roughly two days. We found the pair comprising SCP-1412 near the overhang of Atera Seven, each of ‘em was leaning forward on the overhang. Sanders got in a bit closer to check the things out, she didn’t find anything unusual aside from the faint purple glow near the bottom of the trunks. The things were a bit warm too. Didn’t seem to be moving at all. I had Sanders page the evac unit.

Note: *The trees were very close to falling into the river. Excavation revealed a large rock underneath the banks obstructing the trajectory.*

« SCP-1411 | SCP-1412 | SCP-1413 »

SCP-1413: SPORTSBALL

Item #: SCP-1413

Object Class: Euclid

Special Containment Procedures: Signals related to SCP-1413 are to be intercepted as they are broadcasted and blocked from public viewing. All intercepted broadcasts are to be recorded and stored in **Site-77**'s anomalous media wing. No personnel are to view these broadcasts for non-research purposes, and any personnel found doing so will be disciplined.

Research into the source of SCP-1413 is ongoing.

Description: SCP-1413 is an anomalous television program, detailing a violent sporting event referred to in all broadcasts as variants of common sporting names, most with the postfix '-ball'. The broadcasts are approximately one hour long, and usually feature apparently unrelated sporting events presented in a style similar to Olympic-themed athletic competitions. All broadcasts are accompanied by running commentary.

As a subject views an SCP-1413 broadcast, they will begin to associate any feelings they have towards organized sports with SCP-1413's content. If they complete their viewing session, subjects will not have any interest in any sporting event besides those shown on SCP-1413. This does not amplify the subject's feelings towards athletics, and subjects who are exposed to SCP-1413 do not become more avid sports fans because of it.

If the subject continues to view SCP-1413, all athletic paraphernalia they own will be altered to reflect the equivalent in SCP-1413. For example, items branded for the 'National Hockey League' would instead read 'PUCKBALL BROADCASTING NETWORK 9.99'. Affected subjects will react with confusion when other subjects are not aware of the existence of SCP-1413, as they believe it to be as

well known as any other major sporting league. This has historically resulted in additional subjects being affected by SCP-1413.

SCP-1413 was discovered on 09/18/2013, after a man in Gainesville, FL attempted to complain to his cable provider about SCP-1413. The subject had attempted to order an inclusive sporting cable package, and SCP-1413 had subsequently begun broadcasting to his home instead. After Foundation intervention, 11 additional cases were located and contained. The phenomenon was subsequently classified as Euclid.

Broadcast Log

Event	Commentary
Pre-show introduction	**Announcer 1[1]:** 'SPORT' first originated with the Slorgtiboff Greeting Ritual 04, wherein each Slorgtiboff smashes a brick into the other's fleshy and unprotected abdominal face.
Described as 'Puckball', in which two teams of five athletes attempt to navigate a small ball of rubber into a hole, by way of hitting it, and bludgeoning the other team, with their teammates. Whichever team was able to do so first won.	**Announcer 2[2]:**Observe the cranial protectorate net. This prevents lethal brain injury, instead subjecting players to lifetimes of suffering as their minds slowly decay.
Event was not explained, and consisted of two human subjects playing a variant of ice hockey; changes included larger nets, the inclusion of two pucks, a shorter time limit than standard NHL games, and the placing of live gigantic organisms underneath the	**Announcer 1:** Oh, and it looks like there's going to be a delayed penalty for high sticking… scratch that, the referee has been lost. Game on! **Announcer 2:** The teeth of Kópavogur will be well-fed tonight.

ice which would grab and pull athletes and spectators underneath the ice without warning.	
Unidentified and unexplained event, during which fifteen athletes attempted to climb to the top of a tower, without falling off. Obstacles included spinning blades, wild animals, impractically large crushing implements, and the other athletes. Event took place in an extraterrestrial region, and not all athletes appeared to be human. Ended when all athletes were deceased.	**Announcer 1:** Wow, it sure looks like `Tim` has the lead… oh! But a strong pcheck by Bjugstad! That's going to lead to a reprisal on his home planet, for sure. What do you think, K'landu? **Announcer 2:** The babes shall indeed bathe in the blood of the futile dead tonight, Steve. Swiftly and silently, all shall perish. **Announcer 1:** That's terrific.
Described as 'Brickpuckball'; two athletes, positioned in a small ring, attempted to destroy each other's faces with golden bricks. Although they wore protective gear, it appeared to have minimal preventative impact on visible injuries.	**Announcer 2:** Here, we see how Slorgball winnows the weak-minded out of the gene pool, crippling their chances at successful breeding. Observe, as the Seven-Nine-Suns Auto-Conclave-Sideback has been hit in his reproductive ganglia. His children shall be deformed, and die before pupation, due to their father's stupidity in partaking in **SPORT**.

Footnotes

1. Referred to as Steve Tilken.
2. Referred to as K'Landu the Misshapen

SCP-1414: Passive-Aggressive Radio

Item #: SCP-1414

Object Class: Safe

Special Containment Procedures: SCP-1414 is to be contained in a 3 meter by 3 meter soundproof room. It is not to be plugged in except during approved testing.

Except during approved testing, SCP-1414's volume knob must never be set higher than '6'.

Description: SCP-1414 is a -brand radio with cassette deck and CD player, made out of standard materials. The cassette deck, CD player, and tuner dial are non-functional; aside from this, forensic examination has revealed no differences from other radios of its make and model, either externally or internally. However, it manifests four distinct anomalies when used; these are presumed to be inherently linked.

The first anomaly is that SCP-1414 responds to language: after SCP-1414's power supply is interrupted and then restored, the first human to speak a command to SCP-1414 will become an instance of SCP-1414-1. SCP-1414-1 is SCP-1414's "owner"; SCP-1414 will change stations, or increase or decrease its volume, upon command from SCP-1414-1. SCP-1414 is able to detect commands from SCP-1414-1 in a variety of formats, including physically muffled speech, voice synthesizers (but only if used by SCP-1414-1), sign language, writing, semaphore flags, and having third parties relay the command in Morse code by clapping their hands; these third-party tests have also revealed that SCP-1414 can distinguish between commands genuinely relayed by a third party, and commands invented by that third party. It is also able to distinguish mechanically-assisted speech from recordings thereof.

The second anomaly is that SCP-1414 appears to be able to receive

any broadcast signal described by SCP-1414-1 — including private telecommunications and television audio — anywhere on the planet, regardless of frequency, location of source, or signal strength; it is also able to receive broadcasts when enclosed within a Faraday cage. If given an ambiguous request, SCP-1414 will play the broadcast originating from the physically closest source, regardless of signal strength. SCP-1414's ability to parse natural language has been assessed as the result of the interaction between its first two anomalous properties, and not as an anomaly in its own right.

The third anomaly is that, when SCP-1414's volume is set higher than '6', either by physically adjusting the 'Volume' control or by having SCP-1414-1 request it, SCP-1414-1 will gradually become deaf to any sound not originating from SCP-1414 itself. After approximately 9 minutes of listening to SCP-1414 at volume 7, SCP-1414-1 will be deaf to any external sound not louder than SCP-1414 itself, and after approximately 24 uninterrupted minutes of listening to SCP-1414 at volume 7, SCP-1414-1 will be deaf to any external sound regardless of how loud it is. This induced deafness continues even after SCP-1414 has been unplugged; it has been observed to persist in D-class personnel for 8 months, and can reasonably be assumed to be permanent. Parameters for SCP-1414's deafness induction at higher volumes have not yet been determined.

The nature of SCP-1414's induced deafness does not appear to be physical or neurological in origin; post-mortem examination reveals that all relevant structures are intact. Furthermore, instances of SCP-1414-1 who have been surgically deafened after exposure to SCP-1414 report that they are still able to perceive the content of the broadcasts it plays.

The fourth anomaly is that SCP-1414 is capable of unplugging itself from electrical sockets, and will do so with as much as 5 g's of force. It will do this whenever continuous operation raises its internal temperature to 35C, and resists being plugged back into its socket until it has cooled; in accordance with standard safety guidelines for electrical appliances, personnel are advised to not force it.

« SCP-1413 | SCP-1414 | SCP-1415 »

SCP-1415: Flesh Gauntlet

Item #: SCP-1415

Object Class: Safe

Special Containment Procedures: SCP-1415 is to be placed in a 35*35*35 cm metal wall safe, to be guarded at all times by no less than two (2) personnel. Access is via a simple iron hinged door, locked with a simple keypad opening mechanism. Approval of one (1) Level 3 personnel, or of Dr. Tergis, is required for removal, in which case, Dr. Tergis is to retrieve the object while keeping the password secret.

Description: SCP-1415 is a fingerless leather gauntlet, designed for use with the left hand. The object has a tendency to expand and contract slightly, giving it the appearance that it is breathing. It has been transported to Research Site-6 without incident, where Dr. Tergis has received permission to experiment with it.

The object's anomalous properties come into effect when the wearer grasps any object in such a way that the palm of the gauntlet rests upon it. It then begins a process that takes place over 1-3 seconds. The target is converted into a living organism composed of various human tissues, while destroying tissue in the wearer's body roughly equivalent to 1/500th the mass of the converted object. If the wearer dies while wearing the gauntlet, it may still be used until the carcass is totally destroyed. However, when attempting to convert an object with a dead body as the wearer, the converted object will also be dead.

Note: As of Test 6, it has been proven that the gauntlet can fit non-human hands.

Addendum:
Test Log

Test 1
Subject: D-1415-01, a Hispanic female
Target: D-1415-02, a Caucasian male
Result: D-1415-02's skin tone, eye color, and hair color changed to match D-1415-01. D-1415-02 also developed female reproductive organs, becoming a hermaphrodite. D-1415-02 also inherited D-1415-01's lactose intolerance. D-1415-01 lost roughly half a pound of body fat, with no harmful effects.
Note: D-1415-02 and D-1415-01 were once again proven to be genetically identical. D-1415-02 requested to be terminated. Request was granted.

Test 2
Subject: D-1415-03, a Caucasian male
Target: One (1) Car (Volvo S60)
Result: All material is made of living tissue. Headlights are of similar tissue to human eyes, but are capable of glowing. Its wheels became short, infant-like legs. The controls of the car were replaced with a structure of enlarged neurons, allowing for a rider to drive. The seats are composed of a tongue-like tissue, and were described as "sickeningly moist". D-1415-03's entire right arm and most of his torso was consumed in the process.
Note: The car, now designated R-1415-02, has been relocated to the garage at Storage-48, for use with appropriate permission. It does not appear to require food, and can be refueled via a small mouth where the gas valve used to be. It is omnivorous and can digest anything a human can digest for fuel. Genetic testing has shown it genetically identical to D-1415-03. D-1415-03 was terminated.

Test 3
Subject: D-1415-04, a Caucasian female
Target: One (1) Queen sized bed, fully made, with frame.
Result: Target was converted in its entirety successfully. Pillows became lung like organs that expand and contract, and the blanket became a sheet of skin attached at the foot. The target's legs were jointed, and it could walk, but would only do so if led around. Headboard became a bony structure, containing numerous eye-like organs that moved and blinked independently of each other. D-1415-04's right hand was consumed in the process.

Note: D-1415-04 has resisted all instructions to sleep in the bed, due to complaints that it "talked to her, and knew her by name". This effect is likely non anomalous and completely psychosomatic.

Test 4
Subject: D-1415-04
Target: 4*4*5 metre block of stone.
Result: 99% of the stone was transformed into human tissue. D-1415-04 was consumed in her entirety, leaving behind a pool of blood. However, the target immediately settled, fatally crushing one staff member, and injuring two others.
Note: After approx. 3 hours, the target began crawling towards the edges of the containment, leaning on the windows. On-site staff have attempted to provide nourishments, but the target has not shown an ability to eat. Target hooked up to massive intravenous drip. Termination pending, regardless.

Test 5
Subject: D-1415-05, an Indian male who scored highly on fitness tests.
Target: One (1) Artificial Heart. However, D-1415-05 lashed out in anger at Dr. A and grabbed her lab coat instead.
Result: Dr. A 's lab coat transformed into human tissue, with a slick interior. It expanded and contracted in what was reported to be a "suckling" feeling that was also described as being "incredibly uncomfortable". Electric shocks cause it to contract.
Note: Dr. A is not to remove the coat, as it appears to have imprinted on her. Further analysis is required.

Test 6
Subject: A fully grown cow
Target: One (1) Blender
Result: Gauntlet changed shape to accommodate the cow's hoof. Blender successfully converted. Its blending mechanism was replaced by a strong jaw that chews up the food. It has a preference for vegetable material, and will only chew up meat if forced to. Most of the cow's torso was consumed in the process.
Note: Genetic testing has proven it identical in DNA to the cow. However, conversion was at a greatly reduced efficiency.

SCP-1416: Transmigratory Teapot

Item #: SCP-1416

Object Class: Safe

On / /20 SCP-1416-1, the anomalous object formerly designated SCP-1416, was discovered no longer to be in the possession of the Foundation. The following Special Containment Procedures therefore pertain only to any remaining samples of SCP-1416-2 produced during testing of SCP-1416-1 between / /20 and / /20 .

Special Containment Procedures: Preparations of SCP-1416-2 should be kept in clearly labelled airtight containers within a standard refrigerated storage unit in Safe Wing-C at Sector-25. Due to the severely limited remaining supply of SCP-1416-2 and unresolved security implications arising from prior experimentation, any further test proposals should be submitted in writing to sector management.

Description: SCP-1416 currently comprises 14 samples of a refrigerated liquid substance, designated SCP-1416-2 - produced using SCP-1416-1, which is no longer in containment. Chemically, each sample consists of pure distilled water, trace minerals from SCP-1416-1 and biological matter from a human tissue sample. A full inventory of extant samples can be found below (see Addendum-1416-01).

When ingested by a higher primate, samples of SCP-1416-2 induce one to three seconds of highly erratic brain activity, registering on EEG as pronounced gamma rhythms. When questioned, human test subjects almost without exception claim to have experienced during this period the entire lifespan of the individual whose tissue was used to prepare the SCP-1416-2 sample, which may be many decades of subjective time. Test subjects are further able to relay considerable information previously unknown to them regarding the

donor individual; however, subjects state they had no memory of their real identity during their experience.

Access archived description

Description: SCP-1416 is a ceramic vessel apparently designed for the preparation of tea, in the shape of a human head with Quapaw facial markings. Thermoluminescence dating indicates SCP-1416 to have been manufactured in the mid 16th century.

SCP-1416's anomalous effects become apparent only when a sample of human flesh of 17mg or greater is placed in the vessel prior to boiling water within it. The resulting liquid, when ingested by higher primates, induces highly erratic brain activity and rapid memory formation which is subjectively perceived as experiencing the entire lifespan of the individual whose flesh was used to prepare the liquid.

Addendum-1416-01:

SCP-1416-2 Preparation No.	Date Created	Tissue/Donor	Notes
1416-2-1	Unknown	Index finger/ male, Caucasian, 30-40	Tissue found in SCP-1416-1 prior to containment - likely not sampled under experimentally sound conditions.
1416-2-2	/ /20	Distal phalanx/ male, Black African, 26	Donor has history of mental health problems, received a discretionary life sentence for aggravated rape - D-Class

			subjects administered this preparation have been noted to subsequently exhibit atypical behaviour consistent with the donor's offender class.
1416-2-3	/ /20	Intermediate phalanx/male, Black African, 26	" "
1416-2-4	/ /20	Proximal phalanx/male, Black African, 26	" "
1416-2-5	/ /20	Intermediate phalanx/male, White British, 55	Subject convicted in / /198 of multiple murders; testing of 1416-2 samples from the subject indicated this not to be the case.
1416-2-6	/ /20	Ear/male, White British, 55	" "
1416-2-7	/ /20	23mg biopsy/ female, Pakistani, 23	Subject had been administered SCP-1416-2 prior to biopsy sample - preparations of this nature determined effective in capturing 'nested'

			experiences but also frequently induce disorientation and identity confusion.
1416-2-8	/ /20	23mg biopsy/ male, Orangutan, 5	Other samples of this nature shown ineffective in inducing gamma activity.
1416-2-9	/ /20	25mg biopsy/ male, White British, 28 and 25mg biopsy/ male, Pakistan, 33	Other blended samples of this nature produced a confused and truncated experience but may still be of limited value.
1416-2-10	/ /20	17mg biopsy/ male, White British, N/A	Stillbirth, sample effective - donor tissue from Hospital, Surrey. Notably samples of this nature do not induce an objectively shorter period of gamma activity than samples where a much longer period of time is experienced.
1416-2-11	/ /20	Proximal phalanx/male, Caucasian, 50-60	Donor tissue from preserved corpse circa ~4,000BCE;

			other samples of this nature have proven effective.
1416-2-12	/ /20	Finger/male, White and Black Caribbean, 36	Subject was a suspected collaborator with Group of Interest Marshall, Carter & Dark. Two other surplus samples were created from this subject but were since destroyed.
1416-2-13	/ /20	25mg biopsy/ female, Chinese, 27	Biopsy donated by Junior Researcher Chen: see Dr Barker's statement below.
1416-2-14	/ /20	17mg biopsy/ ,	, Classified by order of - .

Incident Report 1416- -1:

On / /20 an experimental procedure devised by Junior Researcher Linda Chen to better verify the retention and accuracy of memories encoded via ingesting 1416-2 was approved by Dr Barker. This procedure involved the production of several preparations of 1416-2 from a punch biopsy donated by Junior Researcher Chen, which were then to be administered to D-Class subjects.

A risk assessment was produced for the experiment, including the possibility of test subjects acquiring sensitive information about the facility or other Special Containment Procedures. Junior Researcher Chen's lack of prior involvement with Euclid and Keter-class or memetic objects was considered to play a prominent role in the approval of the test proposal.

D-3127, formerly an inmate of HMP Belmarsh, was administered a

sample of 1416-2 produced using Junior Researcher Chen's biopsy and exhibited a highly atypical response to the substance; the subject claimed that he was, in fact, Junior Researcher Chen and that he strongly believed the individual who had previously administered the sample to now be D-3127. He elaborated his theory that SCP-1416 transfers consciousness between the donor and the subject, contrary to existing theories as to the object's method of operation.

Sector management directed that despite the high possibility of D-3127 being either delusional or deliberately attempting to mislead Foundation staff, there was no alternative but to subject both D-3127 and Junior Researcher Chen to Procedure 552-Hepburn to eliminate the possibility that a transfer of consciousnesses had taken place. Ultimately it was concluded that such a transfer had not taken place due to signs of confabulation and evasion present in D-3127 under high-level interrogation that were not present in Junior Researcher Chen under the same levels of duress.

After the conclusion of the procedure Junior Researcher Chen was permitted six months' paid leave. On her return sector medical staff declined to certify her ready to resume work and she has since opted to discontinue work with the Foundation.

I take full responsibility for the failure to foresee an attempt by a D-Class subject to manipulate facility security in this fashion, and for the subsequent psychiatric issues suffered by Junior Researcher Chen following psycho-epistemological interrogation as part of Procedure 552-Hepburn. I am unfortunately unable to comment on any authorised or unauthorised use of SCP-1416-1 which may have taken place immediately following Incident 1416- -1 and must again refer security staff investigating the disappearance of the object to the chain of command. - Dr Barker

Addendum-1416-02:

A standard inventory of Safe Wing-C items on / /20 by Junior Researcher Nielsen determined that the containment locker logged as containing SCP-1416-1 was in fact empty. An investigation and review of CCTV and access logs was carried out; however, exceptional circumstances mean that much of this data is classified

at a level beyond normal sector security. Attempts have since been made to reconstruct the last point at which the object was seen by any given staff member, including the collection of affidavits as to lives subjectively experienced through the testing of SCP-1416-2:

> Access 1416-1 Staff Access Timeline

Linda Chen, formerly a Junior Researcher at Sector-25, opted to provide the following statement in lieu of a sworn affidavit when contacted:

> *I want this on the record. If I had done it, I would have taken a hammer and smashed it into a thousand pieces, right in front of everyone. That's the only way you can be sure. I've had a lot of time to think about this. As long as it exists, you can't be sure who you are. You might be you. Or you might be someone else experiencing your life in the future. And you start wondering, does it even matter which? The only thing you can know for sure is that if you see someone die, you can't be them. I saw D-3127's body after they pulled it out of that room. That's the only way I know I'm not him, drinking another cup of me. Or worse, someone drinking a cup of him, experiencing him drinking a cup of me. Do you get it? Until you see the teapot dead, you don't know anything.*

« SCP-1415 | SCP-1416 | SCP-1417 »

SCP-1417: Swiss Army Banana

Item #: SCP-1417

Object Class: Safe

Special Containment Procedures: SCP-1417-1 and SCP-1417-2 are to be contained in a standard Safe-class holding locker when not in use. Any personnel wishing to make use of the objects for testing purposes must submit a summarized testing outline form to Doctor Chapman for approval. Under no circumstances are SCP-1417-1 or SCP-1417-2 to be taken off-site or used without permission. Any personnel found in violation of this protocol will be reprimanded.

Description: SCP-1417 is a collective designation for two related objects possessing anomalous properties. SCP-1417-1 appears to be an ordinary banana (*Musa acuminata*) of the Cavendish variety, which is partially peeled at one end. Biological analysis reveals that SCP-1417-1 does not differ from an ordinary banana in any way, with its skin and exposed flesh consistent with biological norms. SCP-1417-1's anomalous properties include the inability to continue peeling it; when an effort is made to peel it, the peel is unable to be moved, with testers reporting an intense resistance on the part of the skin. Robotic attempts at peeling have also met with similar results, with pressure increasing equal to the resistance applied in peeling.

SCP-1417-1 also does not suffer from standard biological decomposition; since its acquisition by the Foundation in 2012, the object has not undergone any form of degradation, regardless of location.

SCP-1417-2 consists of a single piece of laminated printer paper, 8.5 cm x 11cm in size, accompanied by a single plastic chip. The page contains a chart of several options with accompanying blank boxes. Anomalous properties manifest when the chip is placed on one of the boxes. The text of the page is as follows:

SWISS ARMY BANANA

REGISTERED OWNER:

FLARE GUN (SINGLE SHOT) [ ]

TIRE IRON [ ]

CORKSCREW [ ]

POCKET KNIFE [ ]

COMPASS (ONLY POINTS NORTH) [ ]

REST [ ]

When the plastic chip is placed into any of the blank boxes, SCP-1417-1 will take on the properties of the object selected. The banana itself will not change or display any new visual qualities, but will instead function as the selected object. For example, placing the chip into the "POCKET KNIFE" box causes SCP-1417-1's peeled, visible end to become as sharp as a standard stainless-steel quality knife, just as selecting the "COMPASS" box will cause SCP-1417-1 to point its peeled end north, regardless of the direction the object and/or owner is facing.

When the chip is placed into the "REST" box, SCP-1417-1 will return to an inert state and appear as normal. If SCP-1417-1 is not placed into the "REST" position approximately once every twelve hours, SCP-1417-1 will develop a limp appearance and begin to turn green, becoming non-functional until the "REST" option is selected. It is also important to note that the plastic chip, when placed upon SCP-1417-2, cannot be removed by any means other than the owner physically removing it with his or her hand. The paper is apparently indestructible, with ripping, burning and compacting attempts proving to have little to no effect.

Alternatively, if an individual signs his or her name in the "REGISTERED OWNER" text box, SCP-1417-1 will respond to voice commands from that individual, so far as they match the commands found in SCP-1417-2. For example, saying or yelling "REST" whilst in the presence of SCP-1417-1 will cause the item to

enter into rest mode. Further testing is in progress.

SCP-1417 was discovered on - -2012 after police responded to a hostage-taking incident in the town of , Pennsylvania. First responders found the suspect — a man with a known history of mental illness — holding a neighbour hostage with what appeared to be a banana. After negotiations with the suspect failed, police attempted a raid on the home only to witness the suspect fatally slash his victim with the banana, causing death due to a severed jugular vein.

Foundation personnel embedded within the coroner's office noted the unusual circumstances of the incident and retrieved SCP-1417-1 and SCP-1417-2 from the home of the suspect, with amnesiacs administered to witnesses as necessary. Suspect retrieved from incarceration and recruited into Foundation program as D-23952.

« SCP-1416 | SCP-1417 | SCP-1418 »

SCP-1418: The Dowager's Comb

Item #: SCP-1418

Object Class: Safe

Special Containment Procedures: SCP-1418 is to be kept in secure storage at the Sector-25 containment facility. Experiments on human subjects should be carried out under full biocontainment conditions.

Description: SCP-1418 is an ornate ivory liturgical comb consistent with 12th century craftsmanship. Its anomalous properties become apparent when worn by a human subject; the subject is rapidly transformed, physically and biologically - tissue samples harvested from subjects during medical exploration indicate this effect extends down to a genetic level. The process typically takes approximately 1 minute; once complete, the subject's physical appearance is that of a Caucasian female who appears to be 25-30 years old. The description of the transformed subject closely matches that of the object's presumed previous owner; see Recovery Log 1418.

The transformed subject is biologically dead - vital signs are absent and *algor mortis* begins immediately. In all tests to date, however, the subject retains consciousness and is able to follow physical and mental tasks to completion for at least 20 hours after transformation. Tissue analysis confirms the presence of complex long-chain proteins which appear to actuate the subject's nervous, muscular and cardiovascular systems.

Over the next 24 hours following the transformation, the body of the subject will undergo an accelerated process of decomposition, entering putrefaction approximately 18 hours after the transformation. Necrophilic bacteria on the body of the subject demonstrate a level of activity commensurate with the most virulent strains of *Escherichia coli*: accordingly, subjects under the influence of SCP-1418 should be considered active biohazards. The user's

capacity to move and act progressively degrades until at 23 hours and 50 minutes from transformation consciousness and movement cease.

Removal of the comb before approximately 22 hours from transformation will result in the reversion of the subject to their former state, with all vital signs returning to normal; this process takes approximately 10 minutes. After 22 hours, damage to the transformed body - whether related to the accelerated decomposition process or otherwise - fails to revert fully, with portions of the user's tissues typically continuing to exhibit necrosis. After the cessation of consciousness, removal of the comb fails to initiate reversion of the subject to their former physical condition. Experiments on D-class subjects indicate that the transformation and reversion process can be initiated in any given subject once in any given 24-hour period - suggesting sustained use of the item by an individual subject is possible providing that it is used for no longer than ~20 hours per day.

Recovery Log 1418

SCP-1418 was recovered with 149 other articles and effects from the estate of the late Lady , a dowager of some notoriety who had been placed under surveillance due to her association with Marshall, Carter & Dark Ltd. Lady 's body was found in her home on the morning of / /19 ; she was reported by law enforcement officials to have been dead for approximately 4 weeks before discovery, based on the condition of her body. Foundation surveillance agents had recorded a liaison between Lady and a figure assumed to be a lover the previous evening, and a recovery team was assigned to investigate.

Due to Lady 's high profile and connections to the peerage, an official inquest (which failed to record a cause of death) and a public auction of her assets was permitted. All assets were successfully acquired by Foundation agents posing as representatives of various buyers. SCP-1418's properties were discovered only during exhaustive testing of the recovered items, which otherwise proved non-anomalous and were destroyed.

Addendum 1418-01

It remains unclear whether the body identified as Lady was indeed that of the dowager countess, and if not, at what point the substitution was made, given the close observation to which she was subjected. Given the object's properties it cannot even be assumed that Lady was a single individual rather than several parties utilising SCP-1418. It is however noteworthy that the comb was found locked in a desk in the room the corpse was discovered, suggesting the death was not a result of overuse of SCP-1418. Given its observed properties in testing, a third party would have needed to remove the item from the corpse.

It is evident that SCP-1418 in some way stores the pattern or template to which it conforms the body of the wearer: the inability of the object to sustain cellular life in the transformed subject appears to be by design rather than a result of damage or degradation of its intended function, given the complex chemical activity that allows the subject to continue to operate. Experiments are currently under way to determine whether the stored pattern can be updated or replaced: absent this functionality it would appear from the object's provenance that the pattern is hundreds of years old. This would strongly imply that Lady herself is an invented identity, possibly created for agents of MC&D.

« SCP-1417 | SCP-1418 | SCP-1419 »

SCP-1419: Religious Broadcasting

Item #: SCP-1419

Object Class: Euclid

Special Containment Procedures: The signal which SCP-1419 is broadcast upon is continually jammed by the Foundation. Broadcasts of SCP-1419 are to be recorded by Foundation personnel upon transmission. All recorded broadcasts of SCP-1419 are located in the Media Storage Vault of Site-12 and may be accessed by Level 3 or above researchers, as well as Level 2 researchers assigned to catalog the records.

Current efforts to discover any privately owned copies of SCP-1419 are headed by Dr. Lemens and Agent Dan Brooks. Any individual found to possess a recording of SCP-1419 is to be given a Class-A amnestic after questioning by Foundation personnel. To date, over twenty-six (26) private copies of SCP-1419 have been discovered and taken into Foundation custody. It is unknown how the owners managed to locate or record the broadcast.

Description: SCP-1419 is a television signal. In a majority of cases (85%), the signal will display static. However, the static will occasionally be replaced with religious programming, including sermons, religious rites and funerals. While several of the religions shown appear to be similar to current or ancient faiths (see Addendum 1419-4), a majority bear little or no resemblance to any known theology.

Records indicate the signal is owned by a corporation named "Learning With God". In multiple interviews with employees of the station which originally owned the signal, it was discovered that the only contact between the original owners and "Learning With God" was through e-mails. The papers regarding the signal's ownership were faxed to a non-existent number, and were sent back signed by a "Mr. Discodei" the following morning. When questioned about

contacting the federal government during the transaction, the original owner stated that the idea "never came to mind". It is unknown how the transfer occurred, as typical broadcast license transfers require government approval. Possible mind-affecting qualities of SCP-1419 are being investigated.

SCP-1419 Broadcast Record Log

Log 1419-1:

Date	Summary of Broadcast	Further Information
1964.8.16	Presentation of a sermon delivered by a man of Polynesian descent. The man speaks about the "sin of guidance", encouraging parents to allow their children to act on their own in life. The man cites an apparently holy book multiple times, though he does not directly name the book. The camera occasionally cuts to audience members, a majority of whom are dressed in a formal fashion and also of Polynesian descent, though there are several who are of	First recorded broadcast on SCP-1419.

	Australian Aboriginal descent.	
1967.3.25	The broadcast opens in a large, white room. The area lacks any notable features or furniture/ decoration. Over the course of one (1) hour, five (5) men enter the room at twelve (12) minute intervals each. While in the room, the men bend their knee and face away from the camera. Each man places a small statue of a killer whale (*Orcinus orca*), then leaves.	No additional information.
1978.7.1	There is no visual component to the signal, which displays a black screen. A female voice can be heard speaking. The audio is extremely quiet, and occasionally becomes silent. The language used bears similarities to the Hessian dialect of	Several phrases in the broadcast are very similar or identical to lines from Chaucer's Canterbury Tales.

	Middle High German, though due to major differences, only a portion has been translated by the Foundation.	
1981.12.25	The camera is placed in the back of a crowded church, identified by Foundation architects as San Jeronimo el Real (Saint Jerome Royal Church) in Madrid. The church's architecture possesses notable alterations, including several side rooms not present in the actual cathedral. The first section of the program is a Christmas Day Sermon by a Native American man identified as "Father Pachacutec" by a large banner inside the church. The priest's sermon describes the birth of Jesus Christ in a notably different manner	Please refer to Document 1419-34 for further information.

	than traditional Christianity, involving the death of Mary and Joseph, as well as the ritual slaughter of several animals. (see Document 1419-34, "Transcript of Christmas 1981 Broadcast" for full speech). The speaker then leads the crowd outside to a stadium. The signal ended at this point, returning to static.	
1981.5.6	The setting is a standard Roman Catholic church in a state of extreme disrepair. There are multiple frames for stain glass windows, many of which are broken or missing. Several pews are overturned, and the building appears to suffer from fire damage. The only individual inside is a young woman dressed in a robe similar to those worn by	No further information.

	Dominican monks. The woman is praying in front of the altar. There is a large cross on the altar, with two more axes added diagonally, resulting in a shape resembling an asterisk. The camera zooms in on the woman's hands, which are moving along a Möbius strip in a similar manner to rosary beads.	
1982.12.25	A continuation of the broadcast from the same date in the previous year. The stadium is filled with several thousand people, many of whom are visibly intoxicated. The center of the arena is occupied by a large stone and a man tied to it. The man is armed with an airsoft gun, and proceeds to fight several other men dressed in robes and holding machetes. The broadcast ends	The ceremony presented is very similar to that performed by Aztecs in honor of Xipe Totec[1]. See Addendum 1419-1 for further information.

	when the "sacrifice" victim is killed.	
1991.9.28	A group of African men are gathered around a large fire. Above the fire is a rotating pole, which has impaled a large bird. The bird, similar in appearance to a harpy eagle (*Harpia harpyja*), is estimated at four (4) meters in length. The men proceed to carve and eat the bird, before performing a traditional Islamic *salah*.[2]	No additional information.
1994.2.18	A large crowd is gathered on a beach, led by a woman wearing a plague doctor's mask[3] as well as a suit and tie. She sits in a plastic chair, and begins to read from a large, leather-bound book. The woman's voice is clear, despite the mask on her face. The language used throughout her monologue	Last broadcast before "dark period" of over a decade, where static was constant. Refer to Addendum 1419-2 for further information.

	bears similarities to both Arabic and French, though the transcript has yet to be translated (refer to Document 1419-57 for full available record). After reading, the woman leads the crowd into the ocean, which appears to be a shade of orange.	
2011.6.14	A group of children are in a trench which extends off camera into the distance. There are several Stars of David carved in the trench. After forty-five (45) minutes, a man climbs down from above the trench and begins to read from a noticeably aged paper scroll. The scroll is visible to the camera, and written in Hebrew. Foundation translators have determined a portion of the scroll is a copy of Micah 3:1-4, which denounced the leaders of Israel	Most recent broadcast. See Addendum 1419-3 for further information.

	for cannibalism and the prophets for corruption.

Addendum 1419-1: On February 7th, 1983, Foundation operatives in Oaxaca, Mexico received reports of a police raid on a cult suspected of human sacrifice. Said cult was routinely offering gifts to traditional Mesoamerican gods, and recently held a festival in honor of the god Xipe Totec. During the festival, a tourist was kidnapped and forced to engage in a mock battle with cult members. The tourist survived and was freed by the group. The former captive then went to the authorities, leading to the raid.

The incident, due to its odd nature, was initially brought to Foundation attention. Recent review of SCP-1419 has led researchers to suspect a connection between the December 25th broadcast of 1982 and the cult incident. Further investigation is currently underway.

Addendum 1419-2: Shortly after the February 18th, 1994 broadcast was aired (10 P.M.), Foundation contacts at medical centers across the West Coast began receiving a large number of patients who attempted suicide by drowning. The total number of individuals who attempted suicide was seven hundred fifty six (756), eighty two (82) of whom succeeded. The survivors could provide no reasoning for their actions, and were released following standard medical treatment. As of the writing of this document, the event is considered anomalous, but not definitely linked to SCP-1419.

Addendum 1419-3: Several Foundation researchers and agents noted that on June 18th and 19th, 2011, a large number of synagogues and churches in New York City were focusing on the Book of Micah, specifically, the section shown in the most recent broadcast. When questioned, the priests and rabbis failed to provide a reason for their choice, stating that they felt it was appropriate. All interviewed subjects were given Class-C amnestics, and the incident is under investigation.

Addendum 1419-4: Foundation researchers have noticed similarities between the religions shown in SCP-1419 broadcasts and modern Roman Catholicism, as well as Mesoamerican faiths,

early forms of Japanese Shintoism, and Khoisan[4] mythology.

Footnotes
1. Aztec god of agriculture, also known as the "flayed god".
2. Daily form of prayer directed towards Mecca.
3. During the outbreak of the Bubonic Plague in the 14th century, many doctors wore masks resembling bird beaks. The beak held strong herbs used to prevent miasma ("bad air"), and indicated the doctor's profession.
4. A group of indigenous people of Southern Africa, often referred to as "Bushmen".

« SCP-1418 | SCP-1419 | SCP-1420 »

SCP-1420: Tartary Eggs

Item #: SCP-1420

Object Class: Euclid

Special Containment Procedures: Three instances of SCP-1420 are to be contained in individual perforated-steel containers when not being tested. These containers are to be placed in a standard Anomalous Creature Containment Chamber. A gas system capable of flooding the containment room with hydrogen when needed is to be kept in good repair. A reinforced plexiglass viewing window is to be installed and checked for damage weekly. At minimum, two armed guards are to be present during a hatching event to respond to instances of SCP-1420-2.

Description: Instances of SCP-1420 are 8 centimeter long, egg-shaped objects composed of alternating strips of eggshell, and an elastic, leathery material characteristic of reptile eggs. On the narrow tip of each object is a small patch of muscle tissue. At approximately 4:00AM every first and second Thursday of each month, the muscle will contract and all instances of SCP-1420 will open. No cracks or seams are visible before, during, or after this process. The leathery sections will stretch to accommodate the opening. SCP-1420 will close within 3 minutes during most hatching events.

Upon hatching, a small creature (hereby known as SCP-1420-1) with avian and/or reptilian characteristics will be produced by SCP-1420. Instances of SCP-1420-1 normally weigh less than 600 grams, are often malformed, and typically expire shortly after emergence from SCP-1420. Recorded creatures produced by SCP-1420 include:

- An abnormally muscular snake with a clawed prehensile tail and two legs. Expired approximately four minutes after birth. Necropsy deemed cause

of death to be lack of circulation.
- An infant domestic chicken. Completely devoid of feathers and lacking eyes or toes. Necropsy revealed that the bone structure was more similar to that of a reptile than an avian.
- A small multi-colored bird that collapsed on the testing table shortly after birth. Showed no signs of life until Researcher Auer entered to retrieve and terminate. Specimen exploded when approached. Researching Auer was sprayed with a caustic liquid that quickly evaporated. He recovered and returned to duty after one week.
- A feathered and winged lizard capable of limited flight. Testing showed that it had several highly venomous retractable spines on its wings. Terminated without incident. Necropsy revealed specimen's bone structure to be hollow and lightweight.
- A scaled avian creature with a large growth around its neck. It produced a sound that rendered researchers present unconscious for eight minutes. Specimen expired during period of unconsciousness. Necropsy deemed cause of death to be internal hemorrhaging in the throat.
- [REDACTED] (See Addendum 1420-A)

Additional SCP-1420 Test Logs

Testing has shown that instances of SCP-1420-1 are highly sensitive to levels of hydrogen above normal atmospheric amounts. When between 5-10% higher than normal, specimens show signs of distress. When above 10% higher than normal atmospheric levels, specimens rapidly dissolve into a fluid that evaporates within seconds of full dissolution. In reaction to this, a gas system has been installed that can administer hydrogen as needed. Lab analysis of tissue samples reveal no chemical mechanism that causes this.

Approximately 12% of all hatching events will result in a new instance of SCP-1420 being produced instead of an instance of

SCP-1420-1. New instances of SCP-1420 are identical to all others. They will begin to produce new creatures on the aforementioned schedule. Extra instances of SCP-1420 are to be destroyed as soon as possible except when being used for analysis or testing.

Addendum 1420-A: On the date of / / , a feathered snake slightly larger than average was produced (hereby designated SCP-1420-2) and began to grow at a rapid pace until it had become two meters long. Hydrogen was administered, but SCP-1420-2 seemed to be unaffected and survived long enough to break through the glass viewing window. It continued to increase in size and sprout additional limbs, eventually forming multiple scaled arms ending in avian beaks. It was eventually subdued and terminated after causing deaths. A necropsy revealed the creature to contain instances of SCP-1420 inside a sack in its larynx. SCP-1420-2 and extra instances of SCP-1420 were incinerated without incident.

Glass viewing window is to be replaced with reinforced plexiglass and instances of SCP-1420 are to be placed inside perforated steel containers. Two armed guards are are to be present for all hatching events.

« SCP-1419 | SCP-1420 | SCP-1421 »

Additional SCP-1420 Test Logs

This is a test log of several creatures produced by SCP-1420. Most unstable creatures are omitted apart from the earliest specimens. The format is as follows:

Specimen name

> **Description:** A physical description of the specimen.
> **Observations:** Description of all observations regarding the specimen. Behavior, demeanor, diet, vocalizations, etc.
> **Notes:** Additional notes about the specimen.

SCP-1420-1-1

> **Description:** An extremely muscular snake with a clawed prehensile tail and two legs. 408 grams.
> **Observations:** Paced rapidly around the room attempting to climb walls. Expired approximately 4 minutes after birth due to lack of vascular circulation.
> **Notes:** Anomalous effect of SCP-1420 ascertained.

SCP-1420-1-2

> **Description:** An infant domestic chicken. Completely devoid of feathers and lacking eyes or toes.
> **Observations:** Convulsed on the testing table until it began to relax. Laid still until terminated.

SCP-1420-1-16

> **Description:** Twelve-legged reptilian with a feathered tail. 410 grams.
> **Observations:** Moved quickly around the testing room and hissed at researchers. Spat a foul-smelling liquid. Kept alive in a steel cage for one week. Provided water

and fed live mice. Terminated without incident.
Notes: First fully stable creature produced by SCP-1420.

SCP-1420-1-18

Description: Slender bipedal avian creature with a scaled tail and opposable thumbs. 300 grams.
Observations: Very timid. Attempted to avoid researchers. Fled rapidly from them and did not show aggressive behavior.
Notes: Kept alive for one week by being fed bird seed and kept in a terrarium. Terminated without incident. Formal request has been issued to receive permission to keep a specimen alive for an extended period of time to study long-term behavior.

Site Directors note: *Permission Granted to keep an instance of SCP-1420-1 alive in a terrarium as long as deemed necessary. Do not remove the specimen from the containment room.*

SCP-1420-1-19

Description: Four-legged, stocky, large-scaled creature resembling a pangolin. Scales are serrated and very sharp. No visible eyes. Large ears. Large, short beak for feeding. 456 grams.
Observations: Completely blind and only reacts to sound and physical touch. Arches and flares its scales when threatened. Emits a quiet rumbling sound similar to purring when threatened. Kept alive for one month in a terrarium fed with various nuts and fruits. Terminated without incident.
Notes: Instances of SCP-1420-1 have been growing in complexity and stability over time. By what mechanism this is being achieved is unknown.

SCP-1420-1-28

Description: A snakelike, feathered reptilian with 18 long scales used as legs. Six large eyes running from its forehead to the base of its neck. 432 grams.

Observations: Calm demeanor. Majority of time is spent asleep. Specimen is difficult to rouse. No venom or fangs. Ate lab mice by pinning them between its legs and swallowing them whole. Kept alive for one month to study. Terminated without incident.
Notes: Formal request for permission to cross-test instances of SCP-1420-1 until further notice has been filed as of this report.

Site Directors Note: *Cross-testing of specimens permitted.*

SCP-1420-1 Cross-Testing
Specimens Used:

SCP-1420-1-39

Description: A round scaled creature with 5 legs separated at equal distances on the body. Limbs end in small beaks. 350 grams.
Behavior: The specimen moves by rolling along the ground and latching onto surfaces with its mouths. Does not seem to differentiate between things larger or smaller than it. Has weak venom that causes numbness.

SCP-1420-1-40

Description: A large-mouthed lizard with serrated teeth and six tentacle-like appendages sprouting from its back. Soft feathered body. Four clawed legs. 400 grams
Behavior: Highly aggressive. When presented feed mice, uses tentacles to grip prey and restrain them. Primary method of killing is its jaws.

Result of Cross-Test: After both specimens were placed in a terrarium, Specimen 40 attacked Specimen 39 almost immediately. Specimen 40 devoured Specimen 39 and promptly ran under a decorative tree branch in the terrarium. Specimen 40 terminated without incident.

SCP-1421: The Unreliable Oracle

Item #: SCP-1421

Object Class: Euclid

Special Containment Procedures: SCP-1421 is to be contained on-site within the Braydon Forest nature reserve. To avoid interaction with members of the public a fenced exclusion zone with a diameter of 100 metres is to be maintained by embedded personnel within the local Wildlife Trust and nature trail paths redirected. Acorns dispersed by SCP-1421 are to be collected and kept in secure storage at Sector-25. Under no circumstances are personnel to interact with SCP-1421-1 unless authorised to do so by Professor Reeds Dr Skinner.

Description: SCP-1421 is a single specimen of *Quercus robur* (English oak) located within Braydon Forest, Wiltshire, England. It is situated at the centre of a natural clearing approximately 20 metres in diameter - adjacent vegetation is visibly malnourished and the ground immediately surrounding SCP-1421 with a radius of 5 metres is defoliated.

Its anomalous properties become apparent when any source of chemical or electrical energy is introduced within 5 metres of SCP-1421; power sources of this nature are rapidly depleted via an unknown mechanism. In human subjects this rapidly induces a state similar to that caused by long-term fasting; it is unknown to what extent this state contributes to the perception of or response of subjects to SCP-1421-1.

SCP-1421-1 is the likeness of the face and partial hand of an elderly human male with a full beard, carved into the east side of SCP-1421's trunk 1.7m from the ground. SCP-1421-1 does not move and mechanical recordings have failed to detect speech or any other sound emanating from the carving - however, subjects exposed to SCP-1421 are extremely likely to perceive SCP-1421-1

talking to them and attempting to establish a dialogue. SCP-1421-1 is apparently sapient and displays in-depth knowledge of both the subject and previous individuals with whom it has conversed. As related by subjects exposed to SCP-1421, SCP-1421-1 represents itself as a nature god or woodland deity and will seek to proffer advice and information that it claims will advance the subject's interests.

Advice proffered by SCP-1421-1 frequently takes the form of a prophecy whereby some desirable result will be produced if the subject carries out a task. This task is frequently of an unethical and legally dubious nature, including, but not limited to, suggestions that the subject professionally embarrass, steal from, injure or kill friends, family, colleagues or strangers. Subjects who follow SCP-1421-1's advice enjoy no unusual protection from the consequences of their actions and arrest or death is a typical outcome. As far as can be established subjects are under no compulsion to obey SCP-1421, however the preternatural nature of the experience and the altered state induced by proximity to SCP-1421 has led to several individuals willing to carry out its suggestions.

Recovery Log 1421

SCP-1421's anomalous properties were discovered during a raid on the encampment of the PWF, a radical environmentalist group. The PWF had been drawn to the Foundation's attention by embedded agents in local law enforcement due to the group's unusually rapid escalation from peaceful protest to criminal and terroristic acts. Founded in 2009 as 'Protect the Wiltshire Forest', the group was best known for public awareness campaigns and petitions against building works on forested or woodland areas. In 2010 the group participated in sit-ins in the Braydon forest to attempt to prevent construction of a trunk road connecting the B4040 and B4042. During these protests the group evidently made contact with SCP-1421-1; the PWF subsequently established a semi-permanent base in the nature reserve, rebranding themselves as the 'Protect the Wilderness Front'. On 15/07/2010 the group was implicated in the criminal assault in his own home of a Wiltshire councillor who had voted for the building plans and the failed letter-bombing on 19/07/2010 of the parish clerk who had filed the motion, neither of

which measures persuaded Wiltshire Council to abandon construction of the road.

On 02/08/10 five individuals matching the description of PWF members entered a branch of Lloyds TSB, threatening the cashiers with an unlicensed and most likely stolen .410 calibre shotgun. The robbery appears to have been poorly thought-out and executed, with the group failing to gain access to the funds in the branch's cash machine. The group was subsequently pursued and one of their number placed under citizen's arrest by bystanders. When turned over to Wiltshire Police, the group member stated that the robbery had been carried out at the direction of 'the god' and provided the location of the group's forest camp, at which point personnel from Sector-25 were dispatched to investigate. The corpse of a further group member, in an advanced state of mummification, was found at the base of SCP-1421; a further group member was found in his apartment in Braydon, having apparently committed suicide (see Document 1421-01). The location of the final PWF member, who seems to have been the group's leader, has not yet been established; his apartment contained literature from the deep ecology and anarchist movements.

Further documentation

Access Interview 1421-03

Interviewer: Dr Skinner
Interview Subject: SCP-1421-1
Date: 02/09/2010

Note: Dr Skinner's questions recorded via parabolic microphone and timestamped by Agent Moon. SCP-1421-1's responses have been provided and certified as accurate by Dr Skinner.

5s *SCP-1421-1*: Welcome, my son. Have you come to seek guidance?

9s *Dr S*: How did you come to be in Braydon Forest?

11s *SCP-1421-1*: I chose to manifest myself here, where the wilderness is being wounded by men.

16s *Dr S*: The PWF described you as a 'god'. Do you see yourself as a god?

18s *SCP-1421-1*: You will come to know what I am.

22s *Dr S*: I'm interested in learning what happened to the PWF.

25s *SCP-1421-1*: They were most displeasing to me, in the end. I would have given them their heart's desire, had they but hearkened carefully to my words.

40s *Dr S*: Really?

41s *SCP-1421-1*: Yes. The words of a god are true; their listening was at fault.

59s *Dr S*: Their listening?

1m 1s *SCP-1421-1*: Yes, and their obedience. I would have helped them - and I can help you too, Daniel.

1m 30s *Dr S*: Doctor Skinner.

1m 32s *SCP-1421-1*: You see, I know a great deal about you. Are you frustrated, Daniel?

1m 50s *Dr S*: No, I can't (be).

1m 53s *SCP-1421-1*: Your overseer, Professor Reeds; you realise he's jealous of you? He sees how hard you work and resents you for it. He will cling to his position, Daniel, unless you take action. I know there's an important staff meeting coming up - put some ipecac in his

coffee and you'll make Site Director within the year. Also he's cheating on his wife with Researcher Black.

2m 20s *Dr S*: (Coughs)

2m 21s *SCP-1421-1*: I am the god of the wilderness. All things are possible for me. Are you ready for me to command you?

2m 29s *Dr S*: Command me?

Note: At this point Dr Skinner indicates that SCP-1421-1 fell silent for approximately 1 minute and 45 seconds. Dr Skinner indicates that he made a number of phatic filler noises such as 'okay' and 'yes' to prompt SCP-1421-1 to continue speaking.

4m 14s *SCP-1421-1*: I can see that you are unwilling to allow me to help you.

4m 16s *Dr S*: That's correct. I need to ask a question. To make it look right.

4m 20s *SCP-1421-1*: Very well - do you seek any further knowledge from me?

4m 40s *Dr S*: Where is Mark Renton?

4m 43s *SCP-1421-1*: You will find him at 54 Devizes Road, Brayton.

5m 20s *Dr S*: We will look into what you say.

Note: Interview terminated by Dr Skinner. The address provided by SCP-1421-1 was investigated but failed to provide any evidence as to Mark Renton's current whereabouts.

Access Document 1421-01

Note: Excerpts from diary found in the apartment of David Gray, a known PWF associate.

03/06/2010: I'm pumped. I can't wait for the protests against the Braydon Link on Saturday. I'm bringing crisps n' sandwiches and Mike's bringing soft drinks. Say no to the Link!

07/06/2010: I've been in a holding tank for two days, thanks to the pigs. There was a bit of a brawl. Renton was cool as always - doing his Che Guevara thing holding a couple of Molotov cocktails. Unfortunately grandstanding like that gets you hit in the face.

08/06/2010: So yeah, we're the Protect the Wilderness Front now. Pumps fist, etc. Mike thinks we should buy balaclavas.

15/06/2010: That was … weird. Renton took us along to see what he found in Milbourne forest during the protests. It's a face in a tree, and if you wait a little while, you start to get light-headed and you can hear it talking to you. It says different things to different people, though. I don't know what to write.

Note: After this point marked changes are evident in the handwriting and vocabulary of the diary entries. It is currently unclear why this should be. - Professor Reeds

*A second opinion from a **reputable** graphologist indicates subsequent handwriting is well within the range of variation for this individual. No further importance should be attached to this detail - Dr Skinner*

03/07/2010: The forest is starting to look like home. I'm no good at that sort of thing, but

Mike did a wilderness survival course. The food definitely leaves something to be desired through - fish and chips again.

15/07/2010: Today we struck our first blow against the destroyers. Councillor Roberts backed the proposals to level our heritage forest and he got what he deserved. We wanted to abduct the CEO of the construction company and take him to the god, but Wikipedia says he lives in Hong Kong.

17/07/2010: The god told me today that Renton is a plant with Special Branch. I don't think anyone else heard it say that. It seems unlikely, but why would the god say it if it weren't true? If he suddenly disappears one day, he's probably gone back to the police. No point looking for him.

19/07/2010: Sarah's bomb didn't go off. I don't know why. We did what the god told us. I guess we missed something out.

25/07/2010: The god says we have to rob a bank to wake people up. It'll collapse the system in one blow; everyone will begin to consider their actions in a global context. This is a huge step and I'm not sure I can take it.<partially erased marginal note reads: 'brilliant'>

28/07/2010: We're fully prepared; we've got balaclavas, we've got a floor plan, we've even got a shotgun. Renton got the shotgun. I still don't know if we can trust him.

02/08/2010: Everything went wrong. The cashiers pushed a button that locked the place down and no-one would give us their money. We couldn't even get into the back of the cash

machine to rob that. They got Chris, and he knows about the god. It's an utter disaster. Absolutely no-one could have foreseen this happening.

02/08/2010: The god said Mike is the reason it didn't work. If he had just believed it would have gone off right. Now we're all going to be arrested. Renton's long gone - absolutely no point chasing after him; he's probably out of the country by now.<marginal note here is unintelligible - possibly 'with the acorns'> The god told me that I didn't have to go to prison. It said to feed Mike to him, because he'd failed. I don't know what it told Mike, but he didn't react when I hit him with the shotgun butt.

03/08/2010: Mike's mother phoned me, I didn't know what to say. I can't continue. My guilt is too great. <partially erased marginal note here reads 'pretty sure that's how it works'><it says no such thing - Dr Skinner>

Internal memoranda

Access Internal Memo 1421-01

Congratulations to Dr Skinner on his promotion to Level 3 Researcher. Professor Reeds is taking a short leave of absence and Dr Skinner will be taking charge of all further investigation of SCP-1421 in addition to his other duties. - Professor Gelding

Access Internal Memo 1421-02

Ten (10) D-class personnel have been allocated to Dr Skinner to explore the effects of long-term exposure to SCP-1421. - Dr Iglesias

Access Internal Memo 1421-03

*I have taken receipt of a rather disturbing report from the Sector-25 Data Integrity team. The original version of the Recovery Log for SCP-1421, as drafted by Agent De Bono, read as follows (emphasis mine): "the group member stated that the robbery had been carried out at the direction of **a 'god' and suggested 'the Foundation' should look into it**." Please can Dr Skinner provide the reason why this detail was removed from the recovery log? This strongly implies that at least one member of the PWF had a connection to the Foundation or a Group of Interest; was this followed up? - Professor Gelding*

LEVEL-5 ACCESS REQUIRED -
Access Internal Memo 1421-04

I have personally reviewed the recording of Interview 1421-01 and I am inclined to agree that Dr Skinner's remarks at 59s and 2m 29s do not carry the inflection he indicated on his transcript. I am hereby authorising Sector-25 to execute Procedure 552-Hepburn on all personnel connected with SCP-1421. Furthermore I am directing the immediate review of the Operational Information article for SCP-1421 authored by Dr Skinner as it appears much of what is currently recorded regarding this phenomenon is distorted or fabricated. I am particularly concerned as to the whereabouts of the acorns mentioned in the Special Containment Procedures, as I understand these have never been officially entered into containment and it seems likely each represents a potential Euclid-class threat. - O5-7

SCP-1422: The Yellowstone Anomaly

Map of Yellowstone National Park retrieved from US National Parks Service website. Click to enlarge.

Item #: SCP-1422

Object Class: Neutralized // Phenomenon (see Addendum 1422-3)

Special Containment Procedures: All information on SCP-1422 is restricted to personnel with Level 4 Operational Clearance. As of March 18, 2009, all personnel have been informed of Yellowstone National Park's existence, and personnel with insufficient clearance have had their memories of SCP-1422 removed.

See Task Force Alef-4's charter for information on Foundation efforts to identify the causal agent of SCP-1422. The identification of this agent is of high priority.

Description: SCP-1422 was an anomalous phenomenon that, prior to July 9, 2007, prevented all Foundation personnel (including conscripted individuals, such as D-class personnel, and jointly employed personnel) from learning of the existence of Yellowstone National Park[1]. The existence of SCP-1422 has been confirmed through several methods:

- In a 2008 survey of over five thousand Foundation personnel, zero expressed knowledge of the park. This includes personnel who have lived in Wyoming for extended periods of time, personnel who considered themselves to be avid travelers and/or naturalists, and three personnel embedded in the United States National Parks Service.
- National Parks Service records do not show any purchases made by Foundation personnel within Yellowstone National Park, nor do they show purchases of permits or reservations of any kind by Foundation personnel. Purchases made by immediate family members of Foundation personnel are present, but at lower-than-expected numbers.

- The internet browsing histories of all Foundation-owned computers have shown a complete lack of searches directly relating to Yellowstone National Park[2] (and, relative to search histories obtained from non-Foundation sources, a lack of searches tangentially relating to the park) prior to July 9, 2007.
- The Foundation possesses no documentation that refers to Yellowstone National Park dated earlier than July 9, 2007.

Interviewed personnel have either stated that they had no reason to pay attention to the area of the United States in which Yellowstone National Park is located, or could not recall what, if anything, was located in that area. Several were able to recall conversations or events in which Yellowstone National Park would most likely be mentioned, but was not.

Yellowstone National Park itself is not believed to have any unusual properties, as several investigations have not detected unusual levels of anomalous activity in the park or its vicinity. Approval for Foundation personnel to visit the park during vacations is pending.

Addendum 1422-1: SCP-1422 was discovered, and is believed to have been neutralized, on July 9, 2007 by Junior Researcher Scranton. JR Scranton had been asked to compile a report describing his experiences in SCP- [3]; in it, he included a two-paragraph description of a family vacation to Yellowstone National Park. JR Scranton noted that he had not heard of the park prior to his entrance into SCP- . This documentation was reviewed by Dr. **Graff** and Junior Researcher Halvorsen.

When Dr. Graff performed a cursory search of relevant reference materials and discovered that Yellowstone National Park not only existed, but was world-famous and widely known, she sent an e-mail to Site 44's mailing list, asking personnel if they had heard of the park. When it became apparent that none had, Dr. Graff requested and obtained funding and personnel to investigate the anomaly further.

Addendum 1422-2: Information on the cause of and exact nature of SCP-1422 is very limited. Several hypotheses relating to SCP-1422 have been put forward:

- SCP-1422 was caused by a separate probability-affecting anomaly, which may or may not have apparently unrelated properties. At time of writing, the Foundation does not possess the means to test this hypothesis.
- Yellowstone National Park did not exist prior to JR Scranton's exposure to SCP- , after which reality was altered to incorporate the park. This may have been due to unidentified properties of SCP- , any of the materials used in its testing, or JR Scranton. This behavior is not consistent with known information on SCP- , and extensive testing has shown that JR Scranton and the materials used to test SCP- are not anomalous.
- SCP-1422 has never prevented Foundation personnel from learning of Yellowstone National Park, but instead erased all memories of the park's existence upon their formation. If this is the case, research into **SCP-868** may provide a method by which hypothetical anomalies similar to SCP-1422 could be counteracted. For the time being, however, this hypothesis is not actionable.
- SCP-1422 was created by a conscious agency in order to conceal activity in or near Yellowstone National Park from the Foundation. Investigation into various groups and persons of interest has not shown conclusively that any individuals or organizations are capable of creating or using an anomaly such as SCP-1422; however, as this hypothetical individual or group could be expected to possess the means to prevent the Foundation from discovering them, this is not unexpected.

Addendum 1422-3:

> *Several personnel have rightly pointed out that SCP-1422 may not be truly neutralized, but simply operating in a different manner that we are unable to recognize; alternatively, numerous anomalies similar to SCP-1422* ***may exist,*** *each tailored to specific locations, individuals, or even concepts. Indeed, if either of these were proven to be true, SCP-1422 would most likely qualify for Keter-ubique classification and heavily revised containment procedures. However, as SCP-1422 does not exhibit any* observable *anomalous properties*

(except those that no longer appear to be in effect), it is considered neutralized until proven otherwise.- Dr. Graff.

Footnotes
1. A national park in the United States established in 1872. Yellowstone National Park is visited by over two million individuals each year from many nations.
2. e.g. "yellowstone", "Yellowstone National Park", "Old Faithful", "Hayden Geological Survey", etc.
3. SCP- is capable of causing individuals to experience extended periods of time in alternate realities within the space of several hours. Further details are classified.

« SCP-1421 | SCP-1422 | SCP-1423 »

SCP-1423: Summer of '76

Item #: SCP-1423

Object Class: Safe

Special Containment Procedures: SCP-1423 is to be contained in a standard containment locker, located in **Site-77**'s Safe SCP wing. No personnel are to come into physical contact with SCP-1423, and any who have done so are to be treated as cognition hazard victims, and removed from active duty. Personnel assigned to research SCP-1423 are to be given full psychological evaluations every 4 weeks to detect if they have been affected.

Description: SCP-1423 is a Polaroid photograph, circa 1976. It depicts several unidentified teenagers, and is believed to have been taken in the summer of that year. The message "**We've had a great year, haven't we?**" had been written on the back of SCP-1423 in charcoal.

Whenever SCP-1423 is held by a human subject, they will suffer a memory altering effect. Over the next several weeks, the subject will show a tendency to reminisce about the last summer vacation they experienced in high school.[1] Testing has shown these memories are accurate, and that SCP-1423 affected subjects have an unusually high rate of accuracy from these memories.

SCP-1423 affected subjects will attempt to revisit locations from their vacation, such as concerts, cities, amusement parks, farms, hometowns, and will **attempt to contact other subjects whom they contacted during that period.** When revisiting these locations, subjects will express feelings of regret that they didn't experience as much as they could have. They may attempt to recreate the experience, however all subjects attempting to do so have reported immense dissatisfaction.

Following this change, subjects will become highly possessive of

SCP-1423, claiming that it documents their experiences. They will begin experiencing dreams of idealized versions of their vacation, which will increase in clarity the longer they possess SCP-1423. In several cases, SCP-1423 affected subjects would begin keeping journals based on their dreams. If SCP-1423 is not removed from the subject's possession at this time, they will neglect all activities that do not relate to SCP-1423.

However, after 3-5 months of exposure, subjects will begin to document major alterations to their dreams. Subjects may report elements not found in their vacation, instead claiming that they are no longer able to remember their dreams "properly." They will continuously attempt to utilize SCP-1423's effects, with each dream becoming longer and less related to their original experience. This effect will persist indefinitely.

SCP-1423 was recovered from the home of , who had been reported missing by his neighbors. After local authorities reported on SCP-1423's anomalous effect, Foundation personnel were able to intervene and suppress the reports. Class-C amnestics were administered to witnesses. However, had been previously administered amnestics in 1976, after he was present at Kirk Lonwood High School during Incident-**SCP-332**-A. Class-A amnestics were given to Mr. , and investigation into this connection is ongoing.

Addendum: Documents recovered from an SCP-1423-affected subject.

> It's endless, and never-ending, and all those other words for too damned long. We've got our vans and the roads ahead, but we never get anywhere. We're always "closer" to the concert. Well, it's a concert today. Yesterday we were headed to Miami, to go and see the coral castle. Last Tuesday it was Washington, to get together with the suffragists. Suffrage? God, that ain't right. We ain't right about anything.

> I really, **really** want to just grab Jerry in his fucking face and yell HEY WE'RE NEVER GETTING ANYWHERE ITS JUST THE SAME SHIT, YOU DUMBASS WHEN

DO WE GET THERE but he won't hear, because I won't say it. I'm relaxed here and rolling through the hills of technicolor grasses and farms. We passed the Boyd farm about 11 times yesterday, and every time it had the same rusty gate out front. I think I saw someone resting on the porch once, with depraved, hollow eyes that followed down the road

It wasn't swamp gas.

You almost look forward to class now. Class? God, I haven't thought of going back to class in months, maybe years. I remember seeing that tightwad Nathan, with his stupid face and rusty glasses. Man, I used to want to punch his mug every time I saw it, with that dumb, oblivious grin. Shit, if I saw him now… I dunno. Maybe I'm over-thinking this.

We'll be at the concert tomorrow anyways. I can't wait to see Amy again

Roads go on, climbing up the cracked highway. Jamie tried to buy back his soul, with a dime he found under the cushion. Stuck it in like a penny arcade, and we watched him spin. The sun's ahead of us, burning and crumbling with some light dancing between the trees lining the road. They aren't trees, really. More like puppy dog tales, wriggling in the wind. Found the postcard from Dad again. Hopes my vacation will be as good as the one he took.

I hope he's wrong right.

Footnotes
1. Subjects who never attended high school, or never had a summer vacation will report the last summer they experienced.

« SCP-1422 | SCP-1423 | SCP-1424 »

SCP-1424: Patches

Item #: SCP-1424

Object Class: Safe

Special Containment Procedures: SCP-1424 is to be placed in an airtight, 2 x 2 x 2 m cushion-lined containment pen. The area is to be monitored biweekly to confirm the subject's physical condition. Personnel are to equip gas masks when entering the area. The containment cell is to be filtered for gas daily.

Description: SCP-1424 appears to be a juvenile dog of the Alaskan Malamute breed. A platinum chain choke collar around its neck reads "Patches, for my Sweetheart". Behavior of SCP-1424 is typical of juvenile dogs.

SCP-1424 has a body temperature that ranges between -23 to -18 °C, and continually exudes substantial amounts of ammonia through its tongue and paws, causing a significant health risk to personnel exposed in an unventilated space for a long enough period of time. How this compound is produced from SCP-1424 is not yet known.

SCP-1424 also displays a number of other physical abnormalities:

- SCP-1424 shows no vital signs. Bodily organs are intact although non-functioning.
- SCP-1424 does not react to what would normally cause an organism physical pain.
- SCP-1424's body does not heal from injury.
- SCP-1424 has not been shown to respond to sound, light, or smell, although its motor and vocal abilities do not appear to be inhibited.

- SCP-1424's eyes do not appear to be functional, as it has been seen colliding with walls occasionally when moving around its containment pen.
- It cannot be ascertained whether or not SCP-1424 sleeps or is simply not moving.

SCP-1424 moves around its containment pen in a predictable pattern each day, only deviating from this repeated behavior when interrupted. When placed into a different cell, SCP-1424 will simply repeat the pattern of movement that was exhibited on its first day present in its new surroundings.

Special precautions are to be taken when moving and testing SCP-1424 for preservation purposes.

SCP-1424 was discovered at an animal shelter in Los Angeles, California, following multiple failed euthanasia attempts. Witnesses were administered amnestics and the SCP was recovered without incident. Staff at the shelter report the owner being extremely distressed when delivering SCP-1424 to their facility, placing SCP-1424 on the counter and immediately leaving. No additional information on the previous owner was found.

Autopsy Report 1424-A:

Special precautions were taken during extraction of the contents of the stomach and intestine to prevent unnecessary physical damage to SCP-1424. As expected, SCP-1424 did not react with distress and shows no signs of inhibited movement or vocal ability after the procedure. Contents of stomach were identified to be a chewed but undigested steak, miscellaneous paper material, and one (1) 2.41 CT diamond encrusted ring set in 14k white gold.

« SCP-1423 | SCP-1424 | SCP-1425 »

SCP-1425: Star Signals

Item #: SCP-1425

Object Class: Safe

Special Containment Procedures: A single copy of SCP-1425 is to be kept in a double-locked archive in Storage Site 40. Access to the document is to be completely restricted barring express written permission of at least two of the following officials: the Site Director, the EID Chief, the CMA Head, or an O5 personnel. A second copy is contained in an undisclosed location under procedures divulged only to O5 Council members. All forms of printed and televised media available throughout the United States are to be monitored for the appearance of keywords and key symbols from the list provided in **CMA Document 1425-A**. Any located additional copies of SCP-1425 are to be turned over to CMA custody for destruction. In the event that a second SCP-1425 event begins to manifest, contact an official listed above immediately to initiate Protocol Ophiuchus.

Description: SCP-1425 is a hardcover book, measuring 20 cm x 35 cm x 5 cm and published in 2005 by the company [REDACTED] Books (now defunct—see Operation Stargazer files). The front cover bears the title "Star Signals". The back cover has the following description:

> Did you know that some stars in the sky are dead, but we still see their ancient image?
>
> With the best-selling novel *Star Signals*, sold in four countries and translated into hundreds of languages, you too can tune in to the celestial frequencies, and then **become like the stars!**

When a subject reads the full text of SCP-1425, the book exerts a mild reality-warping effect, influenced by the subject's desires (which in turn are influenced by SCP-1425; see below). When a sufficiently

large number of subjects are exposed to this effect, further complications arise in terms of mental health and the integrity of spacetime. See **Event Log SCP-1425-05**.

The document is a nonfiction book of the “self-help” genre, advertised as a manual which teaches the use of the “Five-Step Star Signal Method” to achieve the reader’s dreams and ambitions. The method itself is a program of visualization reinforced through mantras and positive affirmations. Unlike nearly all books of the “self-help” genre, SCP-1425 is directly efficacious in assisting the subject in achieving personal goals. The book has no content regarding practical measures to achieve goals. Instead, it speaks entirely on the “star focuses” and other “wishful thinking” rituals. These exercises, when conducted properly, demonstrably influence reality, beginning with a direct influence on the appearance of the star used in the exercise. A reader who expresses a wish to win the lottery will receive a winning ticket within the next week; any reader whose goal is a new car will find themselves driving it the next week. The amount of work invested into achieving the goal outside of performing the prescribed rituals has only a supplementary effect; a subject who makes no special effort to pursue the focused desire still succeeds at a rate documented at roughly 80%. However, if the instructions for reading order and frequency are not followed correctly, the anomalous effect is either greatly diminished or fails entirely.

In early chapters, these exercises are focused on two things: the exact goals that the reader has in mind, and the concentration on certain stars in the sky. This activity is connected to the titular “star signals”: SCP-1425 claims that the light emitted by stars carries a “phenomenological frequency”, which is unique to each star and which is connected to the “phenomenological frequency” of each human’s mind. Each of the book’s ten chapters ends with a “Star Focus” ritual: this is a meditation performed each night, with the central focus being a celestial body. The celestial body used is determined by a calendar given in the prologue; this ensures that all readers at any given time are focusing on the same place, no matter which section of the book they are reading. The tenth chapter is an exception. See **Document 1425-A**.

Throughout its pages, SCP-1425 contains verbal devices intended to influence the mind of the reader during exercises. These include the combination of memetic triggers and neuro-linguistic programming to make the subject receptive to the ideas presented in the text and to optimize the results of its anomalous effect. Once the core ideas of the book have been introduced and worked upon, visualization exercises begin to include concentration on other concepts, including political and philosophical messages. The latter chapters of the book serve to alter the thoughts and desires of the user to conform to a standard that would remain consistent across readers of the text. Approximately 60% of readers who read the entirety of SCP-1425 exhibit a mental condition called “Ojai Syndrome”; see **Event Log SCP-1425-2005**.

SCP-1425 is believed to have been written and published by operatives of the **Fifth Church**, an influential cult whose membership consists largely of celebrities, including actors, musicians, authors, television hosts, and other personalities. At that time, the list of confirmed Fifthists numbered , with the list of suspected cultists counting in excess of .[1] These connections were utilized by the Fifthist Fellowship in the form of celebrity endorsements and widespread media coverage, used to make SCP-1425 quickly and exceptionally popular. Due to these measures, as well as substantial “word of mouth” advertising, *Star Signals* became a national bestseller within two weeks of publication and held this position until the book was virtually purged from public knowledge by the SCP Foundation, using Protocol Ophiuchus.

Document 1425-A: SCP-1425 Excerpts

The following passages are taken directly from the text of SCP-1425. These excerpts have been selected to minimize exposure to cognitohazardous memetic triggers and other textual anomalies.

Chapter 2, Section 3: “The Hole You Exist Around”

Do you feel a void in your life? Everyone does, whether they know it or not. Think about it. You can feel it inside you right now: a heavy emptiness in the middle of your chest. It’s a

reflection of the one in your existence, like particles in quantum entanglement. Do you remember how we talked about quantum entanglement? Nod “yes”. Yes, you do. Yes, you feel the emptiness.

This is good. It’s a blank slot waiting for you to fill it up with your deepest desire until your deepest desire is pushing up into your throat. You will gag on your need. And until you do, it is a resonation space, for you to build your will like organ music in a cathedral. Hear the music now. This is not a metaphor. If your will is strong enough, there will be music now. Remember now that nothing in this book is a metaphor.

Chapter 3, “Taking Effects”, Section 5: “You Are In Time”

Star Focus: Find your night spot and begin to focus on your star. [**Prologue, Section 3: “Star Focus Calendar”**: “April : Epsilon Sagittarii. If you can’t find it in your star chart, it’s the base of the hunter’s bow and the brightest star in the constellation.”] As you stare up into it, use your mind-clearing word. Your meditation is: “ , . Now is our time. Here is our space. We take your star. We hold your bonds. Repay your debt. , , .” Don’t worry about memorization; any time you use your mind-clearing word, you’ll remember them, even if you only read them once. If you do it right, your star will disappear. You’ll feel it resonating with the others in your void.

Chapter 5, “End of Act One”, Section 4: “Two Days”

If you have read this book correctly, and you have, tomorrow is the start of the weekend. Savor it. The five-day work week is an artifact

> of your world. (You'll find out all about that on Monday.) During the next two days, put this book down. Don't pick it up. Yes, this means two days without your star exercises. Yes, this means that, for two days, your will is not going to be with you. Don't even think about it after the end of this sentence. Your will is being used for your good.

Chapter 6, "The Fifth World", Section 2: "The Fifth Reason"

> In your current society, you are encouraged to "be yourself", as if this is the key to making your desires real. What does that mean? It doesn't mean anything. You can't be anyone other than yourself. If you were to be someone else, you would still be "you", and "you" would be someone who is someone else. There is no getting out from under existence. Because you can't be anyone else, it stands to reason that, if you want change in your reality, it is the world that must change to suit you. You must mold your phenomenological landscape into one where all your goals are achieved.
>
> Now imagine that the place where your desires are made real has a name. It's called the Fifth World. The Fifth World is the cosmos twisted around you into the shape you will wish for. It has never been, but you can make it so. If the current world is like a tight, collared suit, then the Fifth World is like a flowing robe that allows complete freedom of movement. You will never truly move before you move in the Fifth World. You'll feel like a square on a piece of paper who was only just tlaol *[sic]* about up and down.

Chapter 9, "Do Not Look Away From The Book", Section 3, "Here and Now":

Some helpful advice that will save you in your coming weeks:

- Mirrors are for other people.
- Sit in a dark room by yourself for at least an hour per day. Move around as much as you're made to.
- If you feel yourself developing a soul, go outside immediately and follow the direction of the **smoke** until you meet them.
- Always listen for the sound slon of trwoll plr mlgn thei.
- Love the archons. When you hate them, they see you.

Event Log 1425-05 [LEVEL 2 CLEARANCE OR HIGHER ONLY]

The following events occurred between the publication date of SCP-1425 (April 22nd, 2005), and the official end date of Event 1425 (May 11th, 2005).

Day 1 (Monday, 4/22): The second print run of SCP-1425 is completed simultaneously at three locations: the [REDACTED] publishing house main printing facility, then located in [REDACTED], Texas; a smaller facility located in [REDACTED], Maine; and a third branch in [REDACTED], England. The first two factories ship SCP-1425 to bookstores across America; the third is distributed throughout the British Isles. The first print run was, according to recovered documentation, a private distribution amongst members of the Fifth Church, to be passed to friends and family.

Day 8 (Monday, 4/29): Television host ’s *[Name withheld following Operation Stargazer protocol]* daytime talk show “ ” airs its monthly “Reading Circle” special. The entirety of the episode is devoted to the promotion of SCP-1425. The host claims that *Star Signals* “rocked [her] world” and that “you’ll see and feel the changes almost instantly”. At the 31-minute mark, her guest, Hugh Laurie, jokes that the book’s advice may be responsible for the host’s success. He adds, “I hope nobody hates you.” The host looks at the copy of SCP-1425 in her hands for four seconds before remarking: “Fuck, it’s finding the holes.” This line is muted in its entirety in the West Coast feed, but appears uncensored in the live airing, stirring much controversy on the subject of obscenity in television. Sales of SCP-1425 grow to over fifty times their current rate over the coming week.

Day 12 (Friday, 5/3): Reports of mental illness begin to increase in the southwestern United States. In Ojai, California, the Boyar family (a 45-year old father, a 50-year-old mother, and a 24-year-old daughter) are admitted to an Ojai mental institution following what appears to be three simultaneous episodes of glossolalia and violent and delusional behavior. The trio is located in a street, several miles from their home, conversing loudly to each other about their surroundings; witnesses report overhearing the remarks “I love how the buildings don’t line up anymore” and “Once I get conversant, I’ll fix your tongues if I have to.” When a bystander approaches the Boyars, the mother remarks that “it's not supposed to be out”, and the father begins to assault the bystander with a pocket knife. Local law enforcement is notified, and when officers arrive, the 24-year-old is, as a witness reports, “shouting nonsense” (speculated to be similar to the text of Chapter Ten of SCP-1425) to the bystander, who is being held down by the father and mother. The bystander is being made to repeat these utterances; when the bystander makes an error in punctuation, the father carves into four long existing cuts made on the

bystander's face, forming a square. The three are arrested and the bystander is admitted to a local hospital for bruises and severe lacerations.

Day 13 (Saturday, 5/4): Foundation agents investigate the case of the Boyars and determine a possible link between their outburst and the book titled *Star Signals*. The Boyars' copy is confiscated for examination, as well as a new copy from a local bookstore.

Researchers note that, although *Star Signals* has been available on the market for nearly two weeks, no critical reviews or other analytical reports have been published in newspapers, nor on television, and roughly 80% of online reviews have been deleted by the website's owners. This is later determined to be an intentional action on the part of the Fifth Church; part of SCP-1425's mind-altering effect is a reluctance to openly discuss the actual text of the publication, even in celebrity endorsements.

Day 14 (Sunday, 5/5): Foundation researchers studying *Star Signals* confirm the connection with the recent upswing in mental hospital admittance and arrests for irrational behavior. Most of those affected by the syndrome are nonviolent, but all identified cases contain the common threads of peculiarly delusional statements and speaking in an indecipherable, consonant-heavy language. Following in-depth analysis, *Star Signals* is classified as an anomalous cognitohazard and designated SCP-1425. Researchers alert the Site Director: as, due to the SCP designation of the text *Star Signals*, the Foundation is experiencing a massive containment breach.

Foundation agents determine that, based on the airdate of the "Reading Circle" episode of the [REDACTED] television show, SCP-1425's strict instructions on how it is to be read (beginning on Monday and continuing for one chapter per day, each weekday for two weeks), and the manifestation of the anomalous effect when the

subject completes the full text of SCP-1425, the spike in symptoms predicted by researchers will be experienced on Day 19 (Friday, May 10th) when the readers who purchased the book on the same day as the episode aired will have completed the program.

Day 15 (Monday, 5/6): Foundation researchers in Storage Site 40 and Foundation agents at O5 Headquarters, in conjunction with Foundation subdivisions the CMA (Communication Moderation Agency) and EID ([REDACTED]), lay out a process for retrieving, containing, and destroying as many instances of SCP-1425 as possible. This plan is designated Protocol Ophiuchus. Steps taken immediately upon implementation include:

- The [REDACTED] publishing company is determined to be a front for the Fifth Church, and is seized. MTF Theta-11 “Wranglers”, MTF Gamma-4 “Money Lenders”, and MTF Lambda-21 “Cave-Dwellers” are sent to the Texas, Maine, and England printing facilities, respectively. All MTFs are met with armed resistance, and engage with no friendly casualties. Publication of SCP-1425 is ended. The publisher’s headquarters in [REDACTED], California is commandeered by MTF Phi-1 “Hostile Takeover”.
- An international recall is issued. Through the use of EID intelligence, Foundation agents circumvent the *Star Signals* media blackout; the press release claims that the eleventh chapter has been omitted and the tenth chapter has been severely misprinted. Consumers are given an incentive of a $25 voucher for returning a copy of *Star Signals*. Bookstores in America and England pull their stock of SCP-1425 for recall.
- The CMA monitors all national broadcasts, especially network television, for anomalies related to SCP-1425. Any such anomalies are to be removed from broadcast through one of several

classified means.

- **[FURTHER ACTION REDACTED]**

Additionally, the first broadcast to be intercepted through the use of Protocol Ophiuchus is during the daytime talk show “ ” (which features further promotion of SCP-1425), television host conducts an interview with musician Beck. At the 18-minute mark, the following incident occurs:

> : I hear you’re very spiritual. Does it influence your work?
> **Beck**: Yeah, it has to be. It’s an influence on everything. No matter what I’m doing, I try to keep grounded. That’s emphasis on “try to”. *[laughs]* There’s a reason why it’s… it’s, uh, called “practicing” spirituality. You never get good at—
> : *[interrupting off-screen]* Can I just say something? *[The camera angle changes to a close-up of ’s face. The host is staring directly at the viewer.]* You have to keep calm. Take a good, deep breath. Remember what the man said. Stars may die in threes, but worlds die in fives. Like insects injected with maggots. *[turning back to her guest]* What were we talking about?
> **Beck**: I don’t actually, uh… remember. You were talking about celebrities.
> : Yes, I wanted to ask. You know, died recently. *[audience sighs, sadly]* How has it affected you?
> **Beck**: Why don’t I just say… I think we’ll stay together. *[audience cheers]*

The network is contacted by the Foundation, and releases a public statement that is “suffering from exhaustion” and will not be taping episodes in the following week. is unable to be located for detainment.

Day 16 (Tuesday, 5/7): Since Day 12, several dozen instances of behavior similar to that of the Boyar family have been publicly reported. The mental illness is dubbed “Ojai Syndrome” in television, online, and newspaper reports, and is, to the general public, entirely unexplained. Foundation testing on subjects with the disorder has demonstrated that a moderate dosage of Class B amnestics is effective in treating Ojai Syndrome.

Broadcast intercepted by Protocol Ophiuchus: 24-hour news network, an interview between pundit and Parliament member [REDACTED] began to cover events which have never actually occurred. The MP, for example, considers the consequences of a revolution in India in 1921, which he describes as “shorter than the Boston Massacre and ten times as bloody”. A transcript of the end of the interview is provided here.

> **Interviewer**: You know, there are some people out there who believe that, if we wish something didn’t happen hard enough, it really didn’t happen.
> **MP**: And they’re right, you know.
> **Interviewer**: It’s about quantity, isn’t it? They don’t have to wish very hard, but there have to be a lot of the suckers.
> **MP**: It works both ways, you know. I find my own assistants unable to tell me whether Gandhi ever committed public suicide. They honestly can’t remember. And this isn’t a matter of poor education. In university, they were completely aware of what had happened at the time.
> **Interviewer**: Ask them about the machine elves sometime. See how many they can name.
> **MP**: At this point? Goodness, no. They couldn’t name a Dero that killed their own parents.
> **Interviewer**: *[laughs]* Hey, why hasn’t your

prime minister been eaten yet?
MP: Give it a week. *[laughs]* Hell, give it until Friday.
Interviewer: It's always great to see you. Come back on if you can be outside next week.
MP: *[laughing]* Thanks. I'll take you up on that.
Interviewer: Anyway, let's get back to… ? *[The interviewer's co-host is visibly uncomfortable.]* Are we still on?

Day 17 (Wednesday, 5/8): The recall is a moderate success. Approximately 200,000 instances of SCP-1425 are confiscated and destroyed by incineration. An additional claim is released to the press indicating that copies of *Star Signals* may have been contaminated with ricin due to an attack by domestic terrorists.

Various subjects who are afflicted with Ojai Syndrome are gathered by the Foundation and administered a series of doses of Class B amnestics. They are returned to their mental facilities with a sharp decline in symptoms. The Foundation is granted emergency permission by the CDC and the NHS to treat Ojai Syndrome sufferers, following a partially fabricated presentation in which the illness is presented as a condition caused by a parasitic organism. Several international cases are reported, but these are highly sparse and too difficult to track.

Broadcast intercepted by Protocol Ophiuchus: North Carolina public access children's program "Peppy's Backyard". The host, a man in rabbit makeup referred to as "Peppy", is speaking to several children sitting on the set in a semicircle.

Peppy: Alright, kids, I think you'll be surprised by our next guest. He's a clown that teaches as well as he learns, and dishes it out as well as he takes it! Because nobody hates…!
Producer: *[off-screen]* We don't have any

guests today, Peppy.
Peppy: *[looking toward the producer]* Then what are we doing?
Producer: This episode is about being creative.
Peppy: Really? Sorry, I got distracted, I guess. Kids, pay close attention. I'll teach you how to make candles out of whoever you find lying around!
Producer: <inaudible>
Peppy: I have what? No. Stop being such a square!
Producer: Cut.

Day 18 (Thursday, 5/9): The rate at which instances of SCP-1425 are confiscated begins to slow. Most remaining readers are under the influence of SCP-1425's suggestion and have no intention of relinquishing their copy of the text. In metropolitan areas across coastal America and major cities in Britain, as well as towns in the southern US near Foundation facilities and known to be areas where the sect known as "Southern Fifthism" has taken root, agents travel from door to door in hazardous materials suits, using the cover story that copies of *Star Signals* have been contaminated by ricin powder. A small percentage of occupied houses contained subjects moderately affected by SCP-1425 who resisted agents, who resorted to physical coercion in confiscating SCP-1425. During the personal intervention operations of Days 18 and 19, nine subjects under the effects of SCP-1425 are terminated in America due to their impeding the continued execution of Protocol Ophiuchus, and only four such incidents occur in England. In Britain, where the Fifth Church's influence seems to be much weaker, SCP-1425 is believed to be almost entirely eradicated.

In an incident quickly concealed by the United States Government, three senators—[NAMES REDACTED]—attempt to report President George W. Bush to the FBI.

In the official report, the legislative officials claim that President Bush is “impostoring” because “he was executed months ago”. The senators go on to suggest a live execution on broadcast television which “will definitely take”. They unanimously insist that it be hosted by comedian Dana Carvey, who “could have his fingers force-fed to him as an opening sketch”.

Broadcast intercepted by Protocol Ophiuchus: The May 9th episode of popular talent show *American Idol* is removed from air in its entirety. After approximately ten minutes of advertisements and preliminary introduction, the host, Ryan Seacrest, stops when introducing the first contestant. Transcript follows.

> **Seacrest**: Now let’s get down to business. You probably remember our first singer from last week, when he made his version of—Paula *[referring to judge Paula Abdul]*, are you crying?
> **Abdul**: *[The judge’s hand is over her face, and her voice is shaking.]* I just feel kinda sick.
> **Seacrest**: Ladies and gentlemen, Paula’s had a long week. *[Audience laughs.]* You think it might be happening?
> **Abdul**: I think you need to go… go on with the show.
> **Cowell**: *[Simon Cowell, another talent judge on the program, is sitting to Paula’s left.]* No, no, we want to hear about this.
> **Abdul**: I think it’s coming up.
> **Seacrest**: I just want to let everyone know, right now Paula can’t see us. Her vision is obscured by a world that’s being slaughtered like a cat. Fresh cavities open in the earth like sucking maws, because it doesn’t want to wait for the flesh to cool. Their teeth melt as they're cremated alive. *[The host looks toward the camera.]* Come on, Jim, focus in on her pain. We might need it for later. *[Several members*

of the audience laugh.]
[Paula Abdul sits up as her neck wrenches back, as if by spasm. Her mouth opens wide and a thick, black smoke begins to spew forth.]
Seacrest: And there you go. Randy, *[referring to the third panelist on the far left, Randy Jackson]* take a deep breath, you might be able to join her in hell.
Jackson: I'll do that shit in my own home. Ryan, just take off the mask. We aren't even on the air right now.
Seacrest: This? *[The host tugs at his cheek with his left hand.]* This is real. They'll have to rip it off me. You're alive with the words, right?
Jackson: I'm alive with the words.
[This is followed by two minutes of silence from the host, judges, and audience. After that, Seacrest, Cowell, and Jackson imitate Paula, emitting smoke upward from their mouths into the studio. At no point does the audience audibly react. This continues until the end of the episode, with the camera angle focused on the judges, occasionally interspersed with a closeup of an audience member frozen in shock or weeping silently].

Day 19 (Friday, 5/10): As efforts made to enforce the Protocol Ophiuchus reach their peak, behavior consistent with descriptions of Ojai Syndrome reaches its zenith. Foundation patrols find Ojai Syndome sufferers in the streets, claiming to be "following smoke" as outlined in the text (see **Document 1425-A**). The event is presented to the news as the result of a foodborne parasite, and individuals are instructed to report to local hospitals, where the Foundation provides amnestic therapy. A total of 400 individuals in the US and 300 individuals in Britain are located and treated with Class B amnestics. Note: This indicates that efforts prior to 5/10/05 in Britain were much less sufficient than previously thought. Further inquiry is recommended.

Broadcast intercepted by Protocol Ophiuchus: On the daytime talk show “ ”, host hosts an episode alone. The studio is dark, and apparently contains no audience. The host carries a lit candle for illumination. Two cameras are used, though it is unknown how they are being operated; one is set up to capture and the seat across from her; one is directly in front of her.

greets the audience, her face lit from below. Her face is flushed and bears smeared makeup, indicating recent crying. She explains in a flat voice that the lights in the studio have been shut off, an act which she finds preferable, as she does not “want to see what’s in here”. She conducts an interview which, she claims, is with comedian Dave Chappelle; however, he is never seen, nor is the chair he is claimed to be seated in, and no response to her questions is audible. She reacts as if hearing responses, however, sometimes breaking into laughter or wiping tears from her eyes. Subjects range from the mundane (the latest season of the sketch comedy series *Chappelle’s Show*) to more anomalous topics, such as astronomical events related to the text of SCP-1425, including [REDACTED]. At the 20-minute mark, is speaking directly into the camera when she is interrupted by a black-gloved hand grabbing her mouth from behind. A muffled scream is heard from the host as she is pulled backward from her seat and the candle’s light is snuffed below the frame. Foundation agents who were deployed to the studio arrive, presuming that ’s statement that the show was airing live were accurate, six minutes after this event. The studio is completely empty, with no sign of recent activity.

Day 20 (Saturday, 5/11) and onward: Fewer than copies of SCP-1425 are believed to be extant in society, not counting any which remain directly in the hands of the Fifth Church. Over the next week, a further 200 sufferers of Ojai Syndrome are cured and released, and 24 celebrities offer apologies for erratic behavior displayed during the SCP-1425 event. Note that all personalities involved in televised incidents claim to have no memory of the events, including any crew and audience members present. Continued monitoring of subjects treated for Ojai Syndrome indicates no apparent long-term effects. Protocol Ophiuchus enters its final stage. The first part involves continuous international surveillance for SCP-1425-related incidents and [REDACTED]. Since then, only one broadcast has been interrupted due to the Protocol: a British celebrity news program which aired footage of Prince Harry [DATA EXPUNGED] consistent with the 5/10 broadcast. The second part consists of the systematic elimination of all records of *Star Signals*, Ojai Syndrome, and any related incidents from public record and public history. All film and print records of SCP-1425-related events have been eradicated. Unclassed amnestic program 1425-LETHE [DATA EXPUNGED]. Measures to neutralize the Fifth Church as a threat to the goals of the Foundation are put into the planning phase in a mission which would later be designated Operation Stargazer (see Stargazer documentation.)

Addendum 1425-
A [LEVEL 3 CLEARANCE OR HIGHER ONLY]

> If you're learning of Event 1425 for the first time, the details reported here may come as a surprise. It's a hard notion to swallow, even for a Foundation researcher, that we could cut three weeks of Western culture from memory and history. That doubt is justified.
>
> The party line is that the SCP Foundation is

all-capable and all-prepared. But, if you're reading this, you've earned a little candor. The incontrovertible fact of Event 1425 is that **we got lucky**. Circumstances won the day, for a number of reasons. Those reasons are not listed in the event log; not all omissions leave helpful little notes behind.

One: The situation was much worse than we realized. In case you haven't been here long enough to learn to read between the lines: this wasn't just a containment breach. One reality-warping, memetically active fantasy book outside of custody is a containment breach. A million such objects in uncontained circulation… well, the official term is "impending CK-class reality-restructuring event". And they would have gotten away with it, too, as I'm about to explain.

Two: the cleanup in England was a fiasco. The eradication of SCP-1425 from Great Britain failed substantially, and we didn't realize it until it was nearly too late. On Sunday, a day *after* the officially-marked end date of the Event, there was an existential shift during a royal parade, when thousands of loyal subjects were together on the streets. From 11:00 to 11:45, London looked, to anyone paying attention, like it had been dismembered and sewn back together with a Glasgow smile and things wriggling under the skin. Even I will not describe what they did to the Queen. Nobody remembers it, of course, and the only camera that captured it was an old Betamax camcorder. Yes, we have the tape. It's a taste of what would have happened if we had not acted quickly or effectively, or if we hadn't been assisted.

Three: we had help. We had a lot of it. For one, the Fifth Church was covering up its own actions for us, especially once its focus shifted from remaking the world to damage control and PR integrity. We don't know how they managed to keep basically everyone from discussing the actual contents of SCP-1425 (chalk it up to mind control), nor how they kept the memories out of the heads of any eyewitnesses, including studio audiences (chalk it up to reality-bending, I suppose) but their secrecy did half our work for us.

I should add that that [FURTHER ACTION REDACTED] covers a lot of messy business. (Most of it was taken out in case the Fifth Church got their hands on the information—but I'm getting ahead of myself.) One such point is the full cooperation of the FCC and Ofcom in allowing us to kill broadcasts whenever we required. The favor we did them to make them owe us like that is beyond even my clearance.

Four: it wasn't enough. Protocol Ophiuchus —spookiest of all spookshows—was a massive expenditure of resources which did a lot of good, but it wasn't a complete success. Our expert procedures for voiding *Star Signals* in the public consciousness, primary among them being the expectation that the cover story would be swallowed and society's attention would move on, left certain gaps behind, to say the least. Another point in the Protocol was a certain SCP object which was to be used only if absolutely necessary, and we used it. We're still dealing with the consequences of activating Project LETHE, but I do not regret the decision. Sometimes you have to cut deeper into a wound to clean the infection.

Five (the EID's lucky number, apparently): we were betrayed. The investigation carried out in the England sites uncovered the reason that Ophiuchus was less effective there: Fifthist infiltration. Another secret of the Church: leaking in acolytes under our radar for a year, maybe longer. Needless to say, we purged the English sites of any moles so quickly that it'd make your head spin. That is, unless you're a "Southern Fifthist" and it does that already.

I leave you with a **warning**: Command's stance on the topic is that the sleepers have been eradicated, but it is my belief that the operation was not local. If, at any point, you detect a whiff of bullshit (or smoke, for that matter), tell your Director. Hell, tell me. And if you're a Fifthist yourself, and you're reading this, I can only congratulate you on your success. But I should ask: does the phrase "A * A *" mean anything to you? It does to me. Make sure to ask your deacon.

J. Erlenmeyer
Director, EID
Liverpool, 8/15/2006

Footnotes
1. Many of the confirmed individuals were easily identified through public appearances wearing the trademark "star stone", a polished green stone worn as a necklace, bracelet, or other accessory.

« SCP-1424 | SCP-1425 | SCP-1426 »

SCP-1426: Planetary Core Drill Bits

Item #: SCP-1426

Object Class: Safe

Special Containment Procedures: SCP-1426-1 to -9 are assigned a keypad-combination storage locker at Reliquary Research and Containment Site-76. Any personnel wishing to use SCP-1426 for testing purposes must have prior written permission from two (2) level three (3) personnel, plus testing approval from the Site Director.

SCP-1426 bits are to be sterilised thoroughly before use, to prevent contamination of extracted samples. SCP-1426 bits are only to be tested on sterilised concrete breeze blocks, to reduce wear on the bits.

Samples extracted are to be sealed in sterile, airtight boxes and stored in the glovebox in Research Lab-16 for study.

Description: SCP-1426-1 to -9 are Electrical brand 52x150mm diamond-tipped core drill bits. When SCP-1426 bits are used to core a substance, the cylinder of material extracted is not the original material drilled. Instead, the sample will be an equal volume from a solid body in the Solar System. The body that the sample is extracted from is entirely dependent on the colour of the bit used. Occasionally, samples retrieved by SCP-1426 bits will show properties not present on some of the bodies that said samples are cored from (see Addendum-1426-1). The name of the body that the sample is taken from is etched into the side of all the bits. There is a very small chance (0.35%) that no sample will be retrieved. Instead, a rolled up piece of paper will be present inside the bit after drilling is complete. The contents of these pieces of paper vary with the drill bit used, but will always be a handwritten copy of part of their respective movements in Gustav Holst's symphony *The Planets*. If the body is a moon, the movement will be of the planet they orbit. If

the body has no movement, then the paper will show a non-existent movement, written to fit with the last existing movement of *The Planets* (Neptune).

Samples retrieved via SCP-1426 will maintain the temperature of the body they were cored from. In one test, SCP-1426-2 was used to drill a breeze block, and the sample retrieved was consistent with available data concerning the average surface temperature of Venus. SCP-1426 bits and the drill that they are being used with are not damaged by the properties of the sample they extract, but will wear down like ordinary core drill bits.

SCP-1426 was discovered in the town of A , England, when builder A suffered 3rd degree burns to his left hand after attempting to remove a portion of a brick wall he had just drilled with SCP-1426-2. A routine Foundation sweep picked up the report and SCP-1426 was retrieved and transported to Reliquary Research and Containment Site-76. All other core drill bits examined at the local Electrical store showed no anomalous properties. Mr. A and all witnesses were given Class-B amnestics and released.

Colour of bit	Body sample extracted from	Notes	Designation
Grey	Mercury	Temperature of sample depends on the temperature at Caloris Basin. There is a 12% chance that feathers will be present in the sample.	SCP-1426-1
Orange	Venus	Sample temperature is always between 462-470°C. Occasionally, the sample	SCP-1426-2

		extracted will be molten lava, suggesting volcanic activity.	
Light Blue	Moon	Composition of sample is identical to that of Mare Crisium. There is a 15% chance that the sample extracted will be a light shade of blue and will smell like cheddar.	SCP-1426-3
Red	Mars	There is a 5% chance that samples extracted contain very high concentrations of water ice.	SCP-1426-4
Beige	Io	Samples extracted are radioactive. There is a 85% chance that molten sulphur will be retrieved.	SCP-1426-5
Brown	Titan	There is a 75% chance that liquid ethane will be extracted. Additionally, there is a 0.65% chance that salt water will be retrieved.	SCP-1426-6
Green	Miranda	None.	SCP-1426-7

Dark Blue	Triton	There is a 25% chance that liquid nitrogen will be extracted.	SCP-1426-8
Pink	Cycles every 6 months between Pluto, Eris, Makemake and Quaoar.	No matter what dwarf planet samples are cored from, there is a 15% chance that the sample will contain very high concentrations of rhodium.	SCP-1426-9

« SCP-1425 | SCP-1426 | SCP-1427 »

SCP-1427: Extinguishing Stele

Item #: SCP-1427

Object Class: Keter

Special Containment Procedures: SCP-1427 is to be contained on-site at the Ryugyong Containment Operations Center ("RCOC"), operated by the Foundation in partnership with the Korean People's Army ("KPA"). Due to the artifact's effects, Foundation personnel are not to enter the DPRK, approach to within 130 km of the SCP-1427 exclusion zone, or attempt to interact directly with the object itself. Foundation personnel are to provide remote support to on-site DPRK personnel. Under no circumstances are Foundation personnel to attempt to dissuade KPA containment staff from incorrect or unusual beliefs concerning the nature of their duties at the RCOC or the nature of their national government.

As authoritarian-submissive personality traits provide conditional immunity to the signal broadcast by the artifact, Foundation personnel assigned to offsite monitoring must meet the following psychological testing criteria:

- Standardized Milgram Compliance Panel: >71
- IPIP Openness Panel: <39
- RWA Authoritarian Submission Panel: >17
- RWA Conventionality Panel: >31

At present, only three national governments possess citizens with conditioning suitable for containment of SCP-1427: the Republic of Turkmenistan, the Republic of the Union of Myanmar, and the Democratic People's Republic of Korea ("DPRK"). Of the three suitable containment areas, political issues render North Korea the only government suitable for long-term containment. Accordingly, embedded Foundation affiliates in UN Security Council member states shall take no action tending to destabilize the DPRK, promote democratization, or permit the entry of psychologically-unsuitable

foreigners into the 600-meter red zone surrounding the Ryugong complex. In the event of democratization, destabilization, or nuclear war, Foundation intergovernmental liaisons shall attempt to transfer the object to a designated secondary containment site.

In the event that no secondary containment sites are available, the primary containment site and its surrounding environment are to be thermally sterilized, using non-nuclear force, without regard to the risk of civilian casualties. Using presently-available techniques, thermal sterilization of Pyongyang and surrounding environs bears a 91% chance of containment failure. Catastrophic containment failure is predicted to constitute a EK-class event, resulting in the extinguishment of all human consciousness within approximately 215 days.

Description: SCP-1427 is a featureless 14m x 2m x 2m beryllium bronze stele. Though originally recovered in an inactive state, the artifact presently produces a directional electromagnetic pulse every 7ns. Disrupting or jamming the pulse reduces, but does not eliminate, the artifact's primary effects. The device's electromagnetic effects are therefore theorized to be a carrier wave for, or side-effect of, the device's primary function.

Targets are selected randomly from the 20,736 (12^4) nearest human subjects, ignoring those already exhibiting the effects of the pulse, but including those who are immune. The device appears to have no effective maximum range: on several occasions, the device has exhibited the ability to make over-the-horizon broadcasts to otherwise occluded subjects by deflecting its signal off of the Earth's ionosphere. The artifact's means of detecting human consciousness, and the causative mechanism underlying its effects, are presently unknown.

Upon receipt of the signal, subjects permanently experience increased suggestibility, severe abulia, and short-term memory loss. These effects are secondary to the artifact's primary effect, which is substantial reduction in prefrontal SQ2 signal. Due to information recovered from SCP- , Foundation researchers presently believe that this reduced SQ2 signal corresponds to a significant reduction in, or total destruction of, the subject's subjective consciousness. Moderate authoritarian-submissive personality traits appear to

provide conditional immunity to the effects of the broadcast; accordingly, since its activation, containment protocols have required placement in high-population-density areas subject to a totalitarian government.

SCP-1427 was originally recovered from a Cistercian monastery in southeastern Algeria by Italian special forces in January of 1938. Laboratory notes from that period mention a rhodium carbide outer casing, embossed with lettering in a known but poorly-characterized Semitic alphabet. That outer casing is presumed to have been destroyed or lost by Italian researchers before the object's transfer to Leipzig in 1944. Between 1938 and 1944, the governments of Germany and Italy attempted to activate the artifact, both without success. In the immediate aftermath of World War II, the object was kept in East German custody. The East German government took no recorded action with respect to the artifact.

In 1947, the East German government transferred SCP-1427 to Soviet control, who moved it to Kyshtim, Chelyabinsk Oblast, USSR. In September of 1957, Soviet researchers intentionally activated SCP-1427. Though the artifact affected human targets in its immediate surroundings, then-existing features of the Soviet government prevented the EK-class end of human consciousness. After attempted nuclear sterilization of the affected area, the Soviet government contacted the Foundation through intergovernmental liaisons, and the artifact was transferred to Foundation custody at Site 67, southwest of Chernhiv, Ukraine. Since initial containment, the artifact has only been transferred once: in 1986, due to predicted instability in the Soviet government, the artifact was transferred to the Democratic People's Republic of Korea.

Shortly thereafter, the Foundation commenced construction of the Ryugyong Containment Facility, where the object has been stored since its completion in 1988.

Addenda:

+ SCP-1427-
ETR-3: ETHICS COMMITTEE DISSENT, SCP-1427

On December 5, 1991, a nine-member panel

of the SCP Foundation Ethics Committee decided, after a 2-4-3 plurality vote, to actively support the government of the Democratic People's Republic of Korea ("North Korea") in order to effectuate containment of SCP-1427. In summary, the deciding plurality found the following points in favor of limited stabilization and support:

- Instability and increasing political openness may soon render the USSR unsuitable for containment of SCP-1427.
- In the event of political instability in North Korea, the device may be safely transferred to the custody of the People's Republic of China or Indonesia.
- North Korea's closed borders limit the risk of exposing foreigners.
- Due to limited trade opportunities, Foundation affiliates and liaisons are better able to manipulate North Korean internal policy toward effective containment.

Despite the clear benefits of the above, we dissent.

Experimentation has demonstrated that SCP-1427 requires no more than 12^4 psychologically suitable individuals in close proximity to the object in order to maintain seamless containment. With that in mind, maintaining over twenty million individuals in a state of perpetual, involuntary totalitarian abjection is an unacceptable cost to impose on human subjects. While it is clear that, in 1957, doing so was a necessary accession to certain facts on the ground (*viz.*, Soviet failure to destroy the object outright), the Foundation has recruited 9,724 D-Class candidates since

that date, or just under half the population required to successfully contain the object. Though unclear in 1957, it is now scientifically demonstrated that totalitarian indoctrination may be recreated under laboratory conditions with relatively little sophisticated intervention by researchers (see *Zimbardo, P, "On 'Obedience to Authority,'"* [REFERENCE OMITTED]). Our failure to do so is an ethical failure of catastrophic proportions.

The majority opinion in this review declined to authorize experimentation into artificial totalitarianism on the necessary scale, citing both practical and ethical concerns. They believe that it would be unacceptable to create a totalitarian society in miniature to prevent the end of all mankind. But in order to avoid creating an ethical disaster in miniature, we have authorized one writ large: totalitarianism which selects individuals by a birthright lottery and not by any particular antisocial acts. As recent events in the USSR and elsewhere have demonstrated, totalitarian dictatorship is not a necessary feature of human society. It is a phase of development which occurred and will someday pass, and it is not the Foundation's right (nor even its duty) to permanently arrest the development of the North Korean people for some greater good, no matter how great that good may be.

The majority are demonstrably correct that taking appropriate action to contain SCP-1427 would involve extraordinary moral compromises by the Foundation, whereas mere abdication of our responsibility shares this ethical burden with all humanity and the North Korean leadership. But when we signed our recruiting paperwork, we consented to

bear that burden: to do what must be done for the greater good, *no matter the cost*. That we now impose this burden on the people of North Korea, rather than shouldering it ourselves, is an unacceptable abdication of our responsibilities as Foundation employees.

For the foregoing reasons, we the undersigned dissent, reserving the right to appeal this decision to the O5 council.

+ SCP-1427-
ACR-2: SUMMARY, ARCHAEOLOGICAL REPORT, SCP-1427

CASE REPORT, TAMANRASSET OSSUARY, 4/21/1993: FILE WITH SCP-1427
PRINCIPAL INVESTIGATOR: Usman Azmaggan, Ph.D
PROJECT PHASE: IIA

BACKGROUND: Following the disputed SCP-1427 Ethics Committee report of 05/12/1991, O5 authorized phase-two research toward decommissioning or permanently deactivating SCP-1427. As part of the Team B decommissioning initiative, O5 rescinded Standing Order 75128, which prohibited Foundation members from disturbing archeological sites belonging to the Pleistocene Afro-Asiatic Culture Group ("PACG"). Following the order's revocation, MTF-Rho-293 ("Et Laharog") responded, excavating the site where SCP-1427 was

believed to originate, 71km SSW of the city of Tamanrasset, Algeria.

DISCUSSION: Originally discovered by aerial radiographic survey in 1967, the Tamanrasset Ossuary was cataloged and monitored as a PACG archaeological anomaly and assigned low containment priority due to its minimal consensus risk. Upon arrival at the site in February of 1992, Rho-293 found the site substantially undisturbed and the radiological hazard intact. Deep soil strata analysis discovered high levels of trinitite, Pd-107, U-233, U-235, Pu-239, and radioactive decay products consistent with an incomplete fission event roughly 70,000 years prior to the site's discovery. This failure of nuclear fission appears consistent with samples taken from the Kyshtym containment area after the failed detonation of the Soviet failsafe device.

The central site occupies a single blast crater of roughly .75km in diameter, centered on a rectangular depression indicating the existence of a subsurface structure. Disturbance of soil strata indicates that SCP-1427 was likely removed from this subsurface structure at some time prior to the year 1600 AD. In addition, the site appears to have been disturbed both before and after removal of SCP-1427. Site containment appears to have been successfully maintained after 1967. Apart from SCP-1427, no intact artifacts were retrieved from the central area of the site. Like other PACG sites, intact artifacts, remains, and complete texts appear to have been systematically destroyed by later *sapiens sapiens* populations, except where object size or durability made destruction impracticable.

The peripheral area occupies a single undisturbed geological stratum indicating continuous, low-intensity occupation between approximately 71000 BC and 68000 BC. Artifacts recovered from the site display features common to other PACG sites, including the following characteristics:

- Substantial radiological contamination;
- Midden deposition and ossuary contents indicating substantial infant mortality;
- Vandalism or iconoclasm by archaic *sapiens sapiens*;
- Use of beryllium bronze as a structural material;
- Artifacts bearing markings in PACG-Semitic Rectilinear Alphabet B.

Remains recovered from the site indicate cohabitation by *Homo sapiens idaltu* and a second, unidentified hominid species provisionally designated as *Homo sapiens descensus.* Relative to the hominin baseline, *descensus* remains exhibit gigantism and functional postaxial polydactyly, with a median of six digits per limb. Presuming femoral proportions consistent with the human norm, the subspecies' median male height was 7'6", and mean female height was 7'2". Craniometry based on recovered fragments indicates a brain volume of roughly 520cc. Though populations of *idaltu* increase throughout the period of cohabitation, *descensus* populations remain static.

Above the radiation-bearing geologic stratum, no members of the *descensus* subspecies are found, though intermittent *idaltu* occupation continues until approximately 63,000 BC. In approximately 61,000 BC, nonresident *idaltu*

populations appear to have engaged in a concerted effort to excavate and destroy artifacts belonging to the PACG culture, with a special focus on removing and destroying *descensus* remains. As few identifying artifacts related to the later *idaltu* population remain, the reasons for this period of late iconoclasm remain obscure.

CONCLUSION: Though the intended purpose of SCP-1427 remains obscure, its function appears to have been related to the subjugation of early *Homo sapiens sapiens* by *Homo sapiens descensus*. Resistance to nuclear attack appears to have been a high priority for PACG engineers: all remaining PACG artifacts appear to have been constructed for high resistance to neutron flux, and many have been recovered from what appear to be the sites of prehistoric nuclear attacks. As PACG artifacts appear to directly interfere with nuclear fission, it is the unanimous recommendation of Rho-293 that decommissioning efforts focus on conventional arms or disassembly, and that recovery of the artifact's sheath or other complete PACG texts be made a containment priority.

SCP-1428: Jinwu

Item #: SCP-1428

Object Class: Keter

Special Containment Procedures: SCP-1428-1 is currently contained at Area-108, and is housed in a tungsten cage within a 1.5m x 2m x 1.5 m incinerator unit. The walls of the unit are constructed in 3 layers: the innermost layer is composed of fire-proofed concrete at a thickness of 30cm, the intermediary layer is composed of lead at a thickness of 15cm, and the outermost layer is composed of concrete at a thickness of 10cm.

SCP-1428-1 is to be constantly incinerated at a temperature of 1,500 degrees Centigrade. Under no circumstances are any personnel to enter the containment chamber or make direct physical contact with SCP-1428-1. Repair and replacement of equipment is to be carried out by remote-controlled drones.

The chamber is equipped with dosimeters to detect whether SCP-1428-1 has entered a passive state; if this occurs, Contingency Fusang-A is to be implemented.

SCP-1428-2 is to remain under surveillance for anomalous activity, and the site is to be enclosed with electrical fencing. Any civilians that approach or attempt to enter the site are to be detained, interrogated and administered Class-A amnestics. Personnel are to report if the object in the statue's third hand moves or regenerates. No fewer than 5 D-Class personnel are to be kept on-site and restrained for the purpose of carrying out Contingency Fusang-A.

Description: SCP-1428-1 is a creature that superficially resembles *Corvus macrorhynchos*. It is tripedal and does not possess cloaca. The third leg has been observed to remain tucked up under its body unless it enters an active state. It does not need to eat, sleep or breathe, does not age and suffers no physically adverse effects from

prolonged exposure to extremely high temperatures[1] or radiation. SCP-1428-1 has never been observed to communicate, and its intelligence is unclear.

SCP-1428-1 has 3 states: inert, passive and active.

- While inert, it demonstrates no anomalies other than those previously stated.
- Passive states are marked by gamma radiation emission at varying intensity. There is no clear consistency in the charge of the radiation over time, generally ranging from 5 to 90W/m^2, but occasionally reaching levels of 150W/m^2. The energy ranges from 1 to 1.5MeV.
- During an active state, SCP-1428-1 will produce plasma and thermal energy consistent with the solar corona, coupled with a burst of gamma radiation at an exponentially increased intensity (recorded charges have been as high as 340W/m^2 with 20MeV). While the thermal effects of an active state persist only for an instant, and are confined to the immediate vicinity of SCP-1428-1, the sheer magnitude of the release invariably results in catastrophic damage.

Following an active state, SCP-1428-1 will begin to emit aurora bands consistent with solar radiation. These bands appear to induce a compulsive effect in human observers, causing them to attempt to approach the source of the aurora. Individuals under the influence of this effect are completely unresponsive to external stimuli, and will perform no action other than approaching the aurora. The bands persist for approximately one full day after the active state has ended.

While SCP-1428-1 is in a passive state, it will enter active states once every three months (median), unless exposed to external combustion at an intensity of approximately 1,400 degrees Centigrade or greater, which will cause it to become inert. While physical contact with the SCP-1428-1 is possible, any attempt to physically harm it (other than incineration) will result in an active state.

SCP-1428-2 is a temple or shrine located in the Province of China, approximately km north-northwest of the site where SCP-1428-1 was discovered. The site was constructed in approximately BCE, and contains religious text and iconography inconsistent with the geographic area and time period. The most significant of these inconsistencies are a ritualistic form of human immolation, and the presence of an entity known as [REDACTED]. This entity is a three-armed humanoid, and is featured in numerous designs throughout the site. The majority of these designs depict what appears to be SCP-1428-1 perched on the entity's shoulder.

A .5m x 1.5m x .5m jade statue of [REDACTED] is located at the approximate center of the site, and the entity holds an object in each of its hands: the Earth, the Sun, and a partially burnt[2] [DATA EXPUNGED]. This is genuine instead of being constructed of jade, and shows no signs of decomposition despite being at least [REDACTED] years old. Additionally, while biologically dead, it generates a temperature of 30 degrees Centigrade, and has been observed to make subtle movements. It will occasionally fixate upon individuals that enter its range of sight and open its mouth as though trying to speak.

After analyzing several texts recovered from the site and considerable testing, it is confirmed that human immolation in SCP-1428-2's vicinity will effectively cause SCP-1428-1 to "skip" its next active state. If immolation occurs, the [DATA EXPUNGED] will begin to gesticulate as though silently laughing, and the burnt tissue on its being will regenerate at a rate proportional to the number of individuals killed by the procedure.

Addendum [1428-001]: Contingency Fusang-A: The intensity of incineration on SCP-1428-1 is to be increased to 3,000 degrees Centigrade. If SCP-1428-1 does not revert to an inert state within 30 seconds, one Class-D personnel housed at SCP-1428-2 shall be immolated. Subsequent personnel may be immolated as necessary.

Addendum [1428-002]: On [REDACTED], the object in the statue's third hand modified its orientation of its own accord and began to fixate upon the approximate location of Area-108. Its position has not shifted since the incident, and no other anomalies have been reported.

+ DOCUMENT SCP-1428-
A5: EMERGENCY CONTAINMENT REVIEW, [REDACTED]

<Begin recording, 8:45 AM, [REDACTED]>

Dr. Adler: This is Dr. Adler, presiding over this emergency meeting regarding SCP-1428 on [REDACTED] at 8:45 AM.

Dr. Albert: We need to amend Fusang-A.

Dr. Adler: What do you mean?

Dr. Albert: I've just been meeting with the anthropologists at SCP-1428-2: we need to stop burning D-Class.

Dr. Adler: We've been over this, -

Dr. Albert: No, listen to me, . The crow is not the real problem.

Dr. Adler: Seems like a pretty big problem.

Dr. Albert: There's a reason why it hardly responds to anything we do. It's…it's effectively on autopilot.

Dr. Adler: Autopilot?

Dr. Albert: As long as [REDACTED] is dead, or asleep, or whatever, there's nothing to give it directions. So it just flies around and…leaks radiation everywhere.

Dr. Adler: And the active states?

Dr. Albert: That's part of a ceremony. The followers of [REDACTED] could survive the radiation.

Dr. Adler: Well this is all terribly interesting,

but I'm not sure how that-

Dr. Albert: When we start burning people at the temple, the crow senses it as a similar type of ceremony, so it doesn't enter an active state. But burning people in that place has a completely separate consequence. If we let that thing finish regenerating, it will attempt to contact the sun, which is where the crow supposedly came from, and where [REDACTED] currently is.

Dr. Adler: What will it say?

Dr. Albert: I don't know. The designs were so eroded we could only translate one word from the message.

Dr. Adler: Which is?

Dr. Albert: "Breathe."

<End recording, 8:48 AM, [REDACTED]>

Footnotes
1. No limit to this ability has yet been found; it has been observed to withstand temperatures in excess of 1,000,000 degrees centigrade.
2. Upon discovery, roughly 78% of its flesh was burnt; the current percentage is closer to 69%.

« SCP-1427 | SCP-1428 | SCP-1429 »

SCP-1429: Organoid Organisms

Item #: SCP-1429

Object Class: Euclid

Special Containment Procedures: All instances of SCP-1429 are stored at Bio-Site 66 in Facility A-1429. Free instances are to be kept in individual labeled vials in Bio-Containment Locker 1429. SCP-1429 is considered to be a Class 3 infectious disease.

In the case of a broken container, all present personnel are to restrict themselves to the area and call for the nearest recontainment team. Personnel assigned to SCP-1429 are to be made aware that there is no way to detect SCP-1429 before manifestation, and they will be quarantined until an escaped instance is recovered.

No instance of SCP-1429 is to be extracted except for approved testing. Test subjects for SCP-1429 are to be kept in quarantine in specialized human containment suites for the duration of their infection. Upon the manifestation of SCP-1429-B, human test subjects are to be terminated with minimal physical trauma and autopsied for study. When study of a given SCP-1429-B appears unlikely to yield further useful information, instance is to be destroyed and SCP-1429 to be recovered.

Testing is not to be undertaken without a secure enclosure prepared for any eventual instance of SCP-1429-B. Enclosures must possess multiple angles of surveillance and a fresh water source. See Document 1429-3-A for full requirements.

Description: SCP-1429 is a large luminescent amoeboid organism (~5mm in diameter) of fluorescent blue colouration and unknown origin. Currently, nine instances of SCP-1429 are in the Foundation's possession, and one has been destroyed through testing. After an incubation period, SCP-1429 causes acute and

variable mutation in human tissue. SCP-1429 does not share physical characteristics with any known terrestrial microorganisms, and do not appear to have a detectable DNA structure. SCP-1429 does not appear to breed or multiply.

Upon infection, an instance of SCP-1429 will enter a human body painlessly through the skin and settle within a large internal organ, rooting itself and becoming effectively undetectable by conventional means. The time between infection and activation varies greatly, with test subjects displaying incubation times between thirty-eight minutes, and eight months two weeks.

After this period of time, the instance of SCP-1429 becomes active and causes a series of radical mutations to the infected organ through an unknown process. The organism produces a luminescent web of tissue similar to nervous tissue around itself approximately 1 centimetre in diameter, somewhere within the mutated organ. Organs undergo genetic and morphological changes and become ambulatory, growing limbs and simple bodily systems of their own, effectively becoming independent organisms. These organisms are classified as SCP-1429-B.

SCP-1429 will remain lodged within SCP-1429-B until the latter's death, after which they will remain for a short period of time before escaping. Instances are capable of repeatedly infecting new hosts if given the opportunity. No two infections have had exactly the same result.

Discovery: All instances of SCP-1429 were discovered after a series of outbreaks in the central United States over the course of two months. In total, ten civilians had become infected with ten individual instances of SCP-1429, and subsequently perished.

As per protocol, a standard media purge was undertaken to contain public knowledge of the events. Additionally, the remains of civilian victims were retrieved and replaced with false bodies. Live and deceased wild instances of SCP-1429-B were extracted and put in containment for study. During dissection, an instance of SCP-1429 was recovered from each recovered instance of SCP-1429-B.

Research into the victims' personal histories revealed a shared

skydiving trip approximately 22 days before the first death. Proposals concerning the examination of the Earth's upper atmosphere are pending.

SELECT TESTING SUMMARIES

Testing Summary: In 85% of test cases, the instance of SCP-1429-B succeeded in exiting the host's body, often by breaking through the skin. In 12% of test cases, SCP-1429-B remained trapped within the body and caused fatal internal damage to the host. The remaining 3% of tests yielded unique responses in subjects due to the placement of SCP-1429 and the nature of the subsequent mutation.

A selection of testing summaries has been compiled below. This list contains instances of SCP-1429-B encountered through standard testing and not instances recovered from the field.

Test Numbe	Incubatic	Affecte Organ	Result	1429-B
001	5d4h3m	Liver	Host collapsed in pain as organ began to ambulate violently. Organ tore skin and exited the torso before fully converting, causing fatal internal and external trauma.	1429-B-001 manifested ten boneless legs of equal length and a simple gut, with a beaked mouth replacing the hepatic vein. Instance is capable of herbivorous aquatic life

				in a freshwater environment.
002	19d19h42m	Sm. Intestine	Host collapsed with sudden, extreme nausea and vomited entire contents of bowel. Went into shock as intestine began to ambulate. Autopsy revealed significant internal bruising where organ detached itself from blood vessels and digestive tract.	1429-B-002 escaped through the host's mouth after its death by cardiac arrest. Upon expulsion, instance had grown several dozen pairs of muscular lobed fins along its sides, as well as a toothed circular mouth on the front end. Later developed simple eyes and antennae along its back. Instance proved highly carnivorous

				and amphibious.
004	8d1h7m	R. Lung	Host began internal hemorrhage, and suffocated as its left lung filled with blood. Autopsy released trapped instance of SCP-1429-B	1429-B-004 escaped the thoracic cavity during autopsy. Instance had developed a simple muscular web over its surface and a pair of delicate webbed wings, and was capable of limited jumping and gliding action. Accidentally destroyed by surprised coroner's aide as it leapt from the thoracic cavity.
005	28d2h58m	Heart and circulatory system	Host collapsed from	1429-B-005 consisted

				sudden cessation of blood pressure to the brain. Instance detached itself from the host and escaped through the navel, causing extreme damage to thoracic cavity.	of heart and a majority of the circulatory system. Instance possessed muscular webbing with a high level of articulation in larger veins and arteries. Finer veins and arteries apparently served as sensory organs. Instance was predatory, having developed a small beak within the inferior vena cava and a simple gut. Hunted by ambushing prey, anchoring itself and ripping off

				pieces of flesh before fleeing.[1]
007	22h37m	Tongue	Host began producing inarticulate vocalizations, and attempted to bite tongue off as 1429-B began to ambulate. Host was sedated to foster the remainder of conversion, died of hemorrhage caused by SCP-1429-B-007 detaching itself.	Damage inflicted by host prevented the anterior half of 1429-B-007 from completing conversion. Instance possessed four pairs of boneless, muscular limbs and no other mutations.
008	82d7h	Stomach	Host complained of unusually intense stomachache before vomiting blood, expiring from blood	1429-B-008 escaped through the host's mouth. Instance developed several segmented muscular

			loss soon after.	arms and a complex mandible complete with teeth. Instance is carnivorous and retained for study. See attached photo.
011	15d6h11m	L. Eye	Host complained of sudden blindness and pain around her eye. Within four minutes ocular muscles had dislodged from the face and the instance of 1429-B escaped the skull. Event proved nonfatal to host.	1429-B-011 possessed three two-jointed limbs which had erupted from its posterior. Instance dried out in 48 hours and perished with assistance.
015	13m6d11m	Nervous system	Host complained of	Instance required outside

	hallucinations (both auditory and visual) and phantom pain in nonexistent extremities. Was unable to clearly articulate the content of hallucinations. [DATA REDACTED]	assistance to escape the host.

Footnotes

1. Due to the phenotypical similarities toSCP-466, genetic material was compared between the two specimens and found to have multiple orthologous sequences, strongly indicating common ancestry. The credibility of this theory is currently unknown.

« SCP-1428 | SCP-1429 | SCP-1430 »

SCP-1430: The Orator's Staff

Item #: SCP-1430

Object Class: Safe

Special Containment Procedures: SCP-1430 is to be stored in a security code locked container. Sustained exposure to SCP-1430 for longer than four consecutive hours is forbidden except for experimental purposes. Additionally, any personnel above a level 1 security clearance are expressly forbidden from making direct contact with the object of any kind. As of / /2009, only D-class subjects are to be used for any experimentation.
As of / /2010, per directive by site command, experimentation with SCP-1430 is to be discontinued indefinitely.

Description: SCP-1430 is a staff carved from the wood of a Douglas Fir tree, measuring nearly exactly 115.57 cm from end to end, and weighing 3.2 kg. Adorning the top of the staff is the seal of the University of (the original location of the object's retrieval), the figures of an adult man and woman breaking away from chains, and holding a lit torch, respectively.

When SCP-1430 is held by a subject, they report being filled with a compulsion to speak on an academic subject they are well-educated in. If the subject lacks a formal secondary or higher education, they will instead feel compelled to speak on a subject that they personally believe themselves to be knowledgeable on. Virtually all subjects were compelled to speak after ten minutes of continuous exposure, and once a subject has begun speaking, they will continue to do so regardless of bodily requirements, ignoring hunger, dehydration, etc. This effect extends to any and all subjects who hold SCP-1430.

After approximately one and a half hours of continuous speaking, the subject's dialogue will slowly drift away from their original topic, and relate towards Methodist Christianity, regardless of the subject's knowledge of the religion. Eventually, the subject will speak only on

the topic of Methodism, specifically the teachings of one Rev. Dr. , of the University of , where the object was originally recovered. At this point, though they may actively resist separation, it is safe to remove SCP-1430 from the subject.

After four to five hours of uninterrupted exposure, the subject will cease speaking on topics pertaining to Methodist Christianity, and instead lapse into describing a previously undocumented religion featuring violent sacrificial rites and practices. At this point, separating SCP-1430 from the subject will cause permanent psychological and neurological damage.

+ Show test log 1430

Test 1430-01
Subject: Dr. W
Duration: 20 minutes
Results: Dr. W gave a brief explanation of primate neurology and meme theory, the subject of her graduate thesis while attending university. Released SCP-1430 willingly on the request of researchers, though commented that she “wished she felt that confident seven years ago”.

Test 1430-02
Subject: Dr. Y
Duration: 45 minutes
Results: Subject spent the duration describing his tenure at the SCP Foundation and how he acquired it, including details on his studies of SCP- , , , and . At the 45 minute mark, when asked by researchers to set down SCP-1430, subject initially resisted, claiming he “hadn’t even gotten to how he [REDACTED]”, but relinquished after repeated verbal commands. Afterwards, subject expressed considerable distress at having openly and freely discussed classified materials. Tapes were destroyed, and individuals below the required security clearance who viewed the experiment were administered class-A amnestics. Dr. Y was not reprimanded.

Test 1430-05
Subject: Agent H
Duration: 2 hour, 47 minutes
Additional Info: Agent H was introduced to the SCP Foundation through non-standard channels. Because of his upbringing, he never received formal education beyond the age of 9.
Results: Agent H spoke at length of his knowledge of combat exercises and training, as well as his experiences surviving in extremely adverse wartime conditions. After one hour and forty two minutes, subject touched on his knowledge of the Methodist church, how it related to his survival, and recommended it to the observing researchers. By two and a half hours, Methodism was the only topic of the subject's speech. When asked to set SCP-1430 back down, subject remained unresponsive and continued speaking, even after several repeated direct orders. Security team instructed to forcibly remove subject from the test chamber. Subject actively and violently resisted having the object removed from his grip, and continued to speak despite fighting a group of 4 men. As soon as subject ceased contact with the object (as a result of being struck on the wrist), he expressed considerable confusion at his situation, claiming to not remember the previous altercation. Agent H later revealed that he had no relationship with the Methodist church, and was in fact raised strictly Russian Orthodox.

Test 1430-09
Subject: D-25102
Duration: 1 hour
Additional info: Subject D-25102 is completely mute, as a result of having his tongue and vocal cords surgically removed eleven years ago to prevent the spread of oral cancer.
Results: D-25102 does not attempt to use sign language (his preferred language) as is expected, but instead begins mouthing words with his lips, and flexing what remained of the muscles in his mouth and larynx.

Subject was allowed to continue for an hour, before being ordered to stop. Subject expressed great agitation after releasing SCP-1430, claiming to have been able to hear his own voice again, and that he had spoken about the dangers of cigarette smoking for the duration. Several volunteers capable of lip reading were able to corroborate subjects' claims.

Test 1430-13
Subject: D-12405
Duration: 5 hours
Results: Experiment proceeded normally for the first several hours. Subject at first spoke of setting up and executing pyramid schemes, before mentioning a successful email scam performed on a reverend of the Methodist faith after one hour, thirty two minutes of speech. (Note: Subject's file indicated charges for a scam nearly identical to the one described, though the victim was not a reverend, nor a follower of any Christian doctrine at all). After three hours, the subject is speaking entirely on the topic of Methodism, specifically referring any listeners to the (deceased) Rev. Dr. for further guidance. After three hours and forty seven minutes, subject's narrative takes an unexpected turn, no longer instructing listeners to seek guidance, but rather insisting on self-mutilation and other violent punishments for increasingly mundane actions, differing greatly from Methodist doctrine. After four hours, twenty three minutes the religious acts described by the subject no longer resemble any known existing or former religions, including elaborate human sacrifices taking place in temples carved from [DATA EXPUNGED]. When a security team was instructed to enter the testing chamber and remove SCP-1430, subject remained initially unresponsive until physical contact was made, at which point she immediately became enraged, violently resisting attempts to remove SCP-1430 from her possession. After being forced to drop the artifact, subject collapsed into unconsciousness and was taken to medical suite 28-N. D-12405 is currently in a

vegetative state, showing brain activity consistent with a stroke victim.

Test 1430-17
Subject: D-13742
Duration: days, 4 hours, 15 minutes
Additional Info: D-13742 was attached to an IV drip that allowed him to remain hydrated and fed for the duration of the experiment.
Results: Experiment proceeded as expected for the first several hours. Subject spoke at length about his knowledge of hotwiring luxury cars, before lapsing into the expected pattern of Methodist teachings and the unknown religion described by previous subjects. After 10 to 11 hours of continuous exposure, the subject's vocal chords began to clearly indicate stress, as the subject's voice grows more difficult to comprehend. Similarly, subject's lips and mouth are beginning to show signs of minor cuts and other damage, suspected to be from accidental bites. At this point, subject is believed to be describing the daily rituals of the followers of the unknown religion. After 23 hours of continuous exposure, D-13742 is effectively impossible to understand. Subject's voice has given out entirely, and lip-reading is rendered virtually useless due to damage to the subject's mouth and lips. Posture indicates heavy reliance on SCP-1430 to remain upright. Subject occasionally coughs and spits blood. After hours of continuous exposure, subject is showing signs of near total exhaustion, and close to losing consciousness. Then, at exactly hours, minutes, and seconds, subject immediately stands at attention, indicating none of the fatigue present mere seconds earlier, and speaks clearly and loudly in an unknown language, despite the obvious damage to subject's mouth and throat. Subject's voice is audible outside the testing chamber, rated as soundproof to 180 dB. Security team is instructed to enter the testing chamber and open fire on subject. [DATA EXPUNGED] containment procedures engaged [DATA EXPUNGED] 37 minutes later, using coordinated use of high

explosives. Other than a layer of explosives residue, SCP-1430 remains undamaged. Subject D-13742 terminated.

Notes: Following the incidents of test 1430-17, testing on SCP-1430 has been halted by site command.

« SCP-1429 | SCP-1430 | SCP-1431 »

SCP-1431: Scavenger Hunt!

Item #: SCP-1431

Object Class: Safe

Special Containment Procedures: SCP-1431 is to be kept in a securely locked filing cabinet on the fourth floor of Site- . Site security is to remain on standby in proximity to tests conducted on SCP-1431.

Description: SCP-1431 is a 26.6 cm x 20.3 cm sheet of paper presumably torn from a note-book. Printed in warped block letters at the top of the page are the words, "SALVADOR'S STRANGE SCAVENGER HUNT!" Following the title is a set list of instructions on how to play. The rules of SCP-1431 do not deviate from those of a standard scavenger hunt. They refer to two teams with no maximum amount of players. The teams must gather designated items indicated on a list. Points are granted upon the return of an item based upon the difficulty in retrieving said item. Above the rules is a self proclaimed motivational note declaring, *"Failure to attempt to gather items is poor sportsmanship and will result in feelings of despair, followed by death. Better get cracking!"*

SCP-1431 has been tested times and did not produce the described effects to those who did not participate in the game. The note is believed to be intentionally deceptive in order to motivate subjects to further interact with SCP-1431.

The title and rules of the game are the only evident pieces of text until SCP-1431 enters an active state. Activation occurs if a minimum of two humans simultaneously observe SCP-1431.

When activated, new text manifests on SCP-1431. To date, the only consistent text manifested is the ordered numbers one through ten leading down the page. The items indicated on the list are random. However, a certain uniform theme in the designated items is

distinctly present between each test. Field tests indicate that there is always one designated easily accessible item to the subject at the bottom of each list.

SCP-1431 was recovered from a house in , Canada in an active state after reports of ‘puzzling' robberies had been circulating the town's local news.

> **Observable scavenger hunt list upon recovery of SCP-1431**
>
> **1.** "A Baseball Bat That Has Hit More Than A Home Run" – 10 Points
>
> **2.** "A Raw Carrot Which Has Led To Asphyxiation" – 5 Points
>
> **3.** "A Lock of Hair Still Rooted At The Scalp" – 10 Points
>
> **4.** "The Plaster Cast of A Footprint From A Dismembered Limb" – 75 Points
>
> **5.** "The Aorta From A Twice-Broken Heart" -150 Points
>
> **6.** "A Stone That Hasn't Just Killed Two Birds" - 5 Points
>
> **7.** "The Earwax From A Recently Deafened Ear" – 50 Points
>
> **8.** "The Fingerprint of A Finger Without A Nail" - 10 points
>
> **9.** "Blood Spilt Through Envy" – 100 Points
>
> **10.** "A Double Sided Coin" - 5 Points

Addendum:

A field test was conducted between two Class D personnel on Site- .

> **Procedure:** Both Class D personnel simultaneously

observed SCP-1431.

SCP-1431 manifested a list of designated items.

Results: Both subjects read the list of designated items.

The items were displayed on the list as follows:

1. "A Gift Given Out of Guilt" – 10 Points

2. "A Field Mouse That Never Made It To The End of The Maze" – 30 Points

3. "A Computer Hard Drive Containing Pornography of A Relative" – 25 Points

4. "A Light Bulb That Was Changed While The Electricity Was Still On" – 50 Points

5. "A Tooth Lost To Neither The Dentist Nor Natural Causes" – 10 Points

6. [DATA REDACTED][1] – 500 Points

7. "A Note Book With A Sincere Cry For Help Inscribed In It" - 5 Points

8. "High Prescription Glasses Stolen From A Pedestrian" – 25 Points

9. "A Butcher's Knife Belonging To An Unlawful Butcher" - 15 Points

10. "A Coffee Mug" – 5 Points

days, 6 hours and 58 minutes were spent recovering all the items on the list. Subject-A was provided with all of the designated items on the list and Subject-B was given nothing.

Upon the accumulation of all the items on the list, all manifested text faded to the point where it was no longer

> evident on SCP-1431.
> Research staff exercised caution upon completion of the test. Both subjects remained in the designated testing chamber without incident for days until escorted out.

Additional Notes:

A package addressed to Mr. from a non-existent mailing address was delivered to Site- approximately one week later. The package contained a gift basket and a note.

Note delivered alongside package:

> *Congratulations! Please accept this gift basket packed with cherry scented soaps and a couple of extra copies of "SALVADOR'S STRANGE SCAVENGER HUNT!" Don't forget to hand out the copies, unless you like hogging all the fun! In the meantime, we suggest you use the provided bars of soap to wash away the anxiety this round may have caused you or anybody else.*
>
> -Salvador

All soap provided in gift baskets has tested non-anomalous and is being stored on the second floor in the spare toiletries cabinet.

Continued testing of SCP-1431 has been halted due to the difficulty and resources required to produce all of the items on each new list. 174 copies of SCP-1431 are currently being stored in the designated securely locked filing cabinet.

Footnotes
1. Designated item '#6' displays the words "[DATA REDACTED]" and is not an authentic redaction of information from this report. Retrieval of designated item [DATA REDACTED] was performed by giving Subject-A an item. Prior to the item being acquired, all knowledge and data concerning said item was deleted from Foundation records and replaced with the phrase "[DATA REDACTED]".

« SCP-1430 | SCP-1431 | SCP-1432 »

SCP-1432: Doll DVD

Item #: SCP-1432

Object Class: Euclid

Special Containment Procedures: Recovered instances of SCP-1432 are to be placed in a filing cabinet in the containment chamber. A standard television set and DVD player are provided for testing purposes. Personnel are not permitted to remove instances of SCP-1432 from the containment chamber for any reason.

Police station communications are to be monitored for murders involving an unusual DVD. In the event of such a report a recovery team will be sent in to retrieve any instances of SCP-1432 and any individuals potentially exposed to SCP-1432's effects. A D-class personnel is to view a suspected instance of SCP-1432 in its entirety and then be evaluated for indications of SCP-1432's effects. Following testing, any individual affected by SCP-1432 is to be reclassified as a D-class personnel and placed in solitary confinement.

Monitoring for instances of SCP-1432 that have been posted online must be conducted on a regular basis. Such instances of SCP-1432 must be eliminated immediately and their IP address traced if possible.

Description: SCP-1432 is a 17 minute silent video sequence which has been found on numerous generic DVDs in a variety of locations within the U.S. The source(s) of these DVDs currently remains unknown. DVDs are placed in the mailboxes of individuals apparently selected at random.

The video sequence consists of an abnormally large doll pursuing a young Caucasian female in a short white dress and high heeled shoes through a series of rooms and corridors with disparate levels of lighting. The size of the doll is inconsistent over the course of the

film, with the doll being portrayed as larger or smaller in order to fit through different areas (although the doll is never shown changing size). Near the end of the sequence, the doll corners the young woman in a large, high-ceilinged room. There is then a break in the video for 44 seconds before the female's body is seen lying motionless on the floor of the room. The camera gradually moves up the body to reveal that the doll's head has replaced the female's head on the body, at which point the video ends.

Subjects viewing at least five minutes of this video sequence will experience the effect of SCP-1432. SCP-1432 causes subjects to believe that both they themselves and all other humans and animals are artificially constructed dolls. Subjects believe that both their bodies and key characteristics of their personality (or in extreme cases their entire personality) have been artificially constructed by an unknown being or group of beings. This effect has proven immune to all amnestics currently in the Foundation's possession.

This effect will result in clinical depression in approximately 89% of subjects. In addition, 73% of subjects will attempt to kill at least one other individual. If successful, they will then systematically dismember and/or disembowel the corpse(s) of those they have killed in an effort to prove to others that they are all artificially constructed toys. Non-psychopathic subjects will exhibit intense emotional distress during this occurrence, but will invariably believe that this distress has been implanted in their personality by their creator(s). It is currently unclear whether this compulsion to kill others is a direct effect of exposure to SCP-1432 or a natural psychological reaction to SCP-1432's actual effect.

The initial instance of SCP-1432 was recovered from a police station in , Ohio on 11/5/ following a police report that a twelve year old male (hereafter referred to as Subject 1432-01) had murdered and then disemboweled both of his parents after viewing a DVD. The Foundation recovered the DVD and Subject 1432-01, who was reclassified as a D-class personnel after several interviews and extensive testing.

Interviewed: Subject 1432-01

Interviewer: Researcher

Foreword: This interview was the first conducted with Subject 1432-01 following the subject's initial containment.

<Begin Log>

Researcher : Please state your name and age.

Subject 1432-01: . I'm 12 years old.

Researcher : Very good. Now, you believe that you are an artificial toy, is that correct?

Subject 1432-01: I am. You are. Everyone… everyone I've met is. Probably everyone is, I don't know. I…

Researcher : It's ok. When did you first realize you were a toy?

Subject 1432-01: I watched a video. Don't remember much of it. About a doll, I think, or something. But after that I knew. I mean, it was obvious, how could I not have seen it sooner? Everyone was. Everyone, just toys, everything I felt, that time I hit a home run for the first time, my love for my parents, my dog… all just someone playing with their toys.

Researcher : But if you didn't think like this until after you saw the video, don't you think it's possible the video could have made you feel this way? Affected your mind somehow?

Subject 1432-01: (Subject exhibits signs of anger) No! The guy who made the video, he was warning people, don't you get it? He figured it out, and he wanted other people to know! Because people need to! They don't deserve to just, just exist so that somewhere someone gets a good laugh or whatever…

Researcher : It's okay, I understand. So, did you try to tell your parents about what you'd found out?

Subject 1432-01: (Subject exhibits signs of extreme emotional distress) I…I did. They didn't believe me, I kept explaining it to them but they just didn't understand, I… they… I had to show, show someone. I had to let people know. I, the only way was to, it couldn't have been just anyone else, I wouldn't get the opportunity like I did with them, but…

Researcher : I understand. You had to do what you thought was right…

Subject 1432-01: (Subject continues to exhibit signs of extreme emotional distress) They're so smart. They know, they know the only way you find out is to show people what's really inside. So they put in this, they, they program you so that you don't. They make it so hard, it was, all those memories, but I had to, I… I…

Researcher : I know, it's okay.

Subject 1432-01: (Subject continues to exhibit signs of extreme emotional distress) I'm a good person, right? I had to, I really did…

Researcher : You're a good person. It will be alright eventually, I promise.

<End Log>

Closing Statement: Subject was escorted back to sleeping quarters. Researcher subsequently requested and received a Class C Amnestic.

SCP-1433: The Sound of Silence

Item #: SCP-1433

Object Class: Safe

Special Containment Procedures: A single copy of SCP-1433 is to be kept in a fireproof safe in the archive room at Site 72. Unsecured devices for the use of playing back audio cassettes are not to be allowed on site. No personnel are to listen to SCP-1433 except for D-class assigned for testing purposes; all such tests shall be conducted in a fully soundproofed chamber.

The Foundation is to monitor physical and digital means of audio distribution for any evidence of recordings displaying similar properties to SCP-1433. Any other recordings demonstrating such effects are to be confiscated and destroyed, and any persons affected by them are to be terminated or conscripted as D-class.

Description: SCP-1433 is a recording of an unknown artist performing *4'33"*, an avant-garde musical piece originally composed in 1952 by musician John Cage. The sole known copy of SCP-1433 is currently contained on an audio cassette of the type widely manufactured in the 1980s. The recording is present on both sides of the cassette. Once placed into any device capable of playing back sound from a cassette and playback is started, the recording will play in its entirety at a constant volume of 30 dB, regardless of the original volume setting of the device. Attempts to stop playback of SCP-1433 by stopping or pausing the player, or by removing its power source, have been unsuccessful; only disconnecting the playback device from the audio output has proven successful. All copies made of SCP-1433 display the same anomalous properties as the cassette recording, regardless of the storage medium used.

As with the original version of *4'33"*, the recording begins with the sound of the performer seating his or herself at a piano bench and closing the lid. After 33 seconds, which the performer times on a

stopwatch, the lid is opened and then closed again. This motion is repeated after another 2 minutes and 40 seconds. 1 minute and 20 seconds after that, the performer opens the lid a final time, stands up, and walks away. All other sounds on the recording consist of the performer breathing and turning through pages of sheet music, and of incidental sounds presumably made by an audience.

EEG readouts of persons listening to SCP-1433 demonstrate evidence of atypical electrical activity commonly associated with anterograde amnesia and musical agnosia. Persons listening to SCP-1433 report hearing a low male voice speak briefly after the second opening and closing of the piano lid. Acoustic analysis of SCP-1433 has failed to identify this voice on the original recording. Descriptions of what the voice is saying are inconsistent and few exposed have reported hearing the same statement. All persons exposed to SCP-1433 report that the voice is male and speaks a single sentence, in English, typically of a nihilist sentiment, and typically referencing 20th-21st century English-language popular music. Statements reported to have been made by the voice include:

- "The words of the prophets are written on the subway walls."
- "I don't believe in the Beatles."
- "It's better to burn out than to fade away."
- "There is no dark side of the moon, really; matter of fact, it's all dark."
- "Not a word was spoken, the church bells all were broken."
- "It's all been done, it's all been done, it's all been done before."
- "Are we cool yet?"

Following exposure to SCP-1433, subjects display symptoms of a psychological impairment similar to acute amusia; the individual is completely unable to recognize, hear, or sense any form of rhythmic music, whether sung, vocalized, performed live on physical or synthesized instruments, or played back on a recording. Affectees have stated a complete inability to hear any music being played or performed in their presence, even when an instrument is being played in their field of vision and they state an awareness that it should be audible. EEG readouts on persons so affected show an

absence of brain activity indicating the sensation of auditory activity. This state is permanent and has shown no indications of being affected by amnestics. Aside from chronic psychological ailments induced by the inability to experience music, no other long-term effects of exposure to SCP-1433 have been noted.

Addendum: On / /20 , a test was conducted in which D-85702, a Caucasian male 67 years of age, was exposed to SCP-1433. In following tests, D-85702 reported that he was still able to hear music of the hip-hop genre when played back to him. In subsequent interviews, D-85702 expressed a strong distaste for hip-hop and rap music, stating that it was "just a bunch of damn noise" and "doesn't even count as real music", and that he was unable to hear elements of such songs that had been "sampled" from preexisting material of other genres. It is currently hypothesized that the amusia induced by exposure to SCP-1433 is related to the affectee's personal understanding of what constitutes "music". Further testing is deemed necessary to confirm this hypothesis.

« SCP-1432 | SCP-1433 | SCP-1434 »

SCP-1434: The Brutal Brick

Item #: SCP-1434

Object Class: Euclid

Special Containment Procedures: SCP-1434 is held in a standard containment cell, empty save for a blank book labeled “Charter of Etna" and a copy of "The Federal Criminal Code & Rules." Records of the State of Nevada have been altered to register the twenty-five square meters of the cell as the unincorporated township of Etna, now abandoned.

Current containment procedures were devised to forestall the transfer of SCP-1434's effect to larger cities or counties. A fresh copy of “The FCC & R” should be placed next to the SCP monthly, while the previous month's copy should be incinerated unread.

All security personnel assigned to Site-47 are subject to annual participation in Foundation Standard Seminar “The Application of Force in Arrests and You!” This is in addition to all other regulation orientation and training sessions.

Description: SCP-1434 is a large fragment of extruded clay brick, dull red in color, which while totally inert somehow effects the insertion of increasingly bizarre and impractical laws into the legal code of the nearest sufficiently small municipality. Where borders overlap, SCP-1434 has always shown preference for the smaller body. Affected legislatures show no memory of instituting any such laws, but will enforce them without protest.

During the early phase of the brick's influence, governments have been observed to pass laws of extremely limited applicability, such as a ban on smoking on Tuesdays. However, as the infection progresses, the activities proscribed in this manner become increasingly innocuous while the penalties grow increasingly severe to the point of life threatening.

SCP-1434 further affects local law enforcement, who develop progressively violent mentalities over time. These mental alterations do not linger after SCP-1434's relocation. Officers with more than six months of exposure compulsively apply excessive, often lethal force to any and all they suspect of “transgressions.”

___

Incident Log: Since recovery, investigations into several public disturbances have recovered other SCP-1434 fragments of **`varying size`**. Unrest is believed to have subsided when a party or parties unknown removed the object from the municipality. The object's whereabouts between incidents is as yet unknown, though research is continuing. Any outbreaks of police violence linked to recently introduced legislation should be studied for signs of object influence by the appropriate Mobile Task Force.

Case 001—12/18/1987: Montgomery County in Maryland outlaws the use of shrimp in clearing snow from highways. Six injured in collisions with state-operated snowplows.

Case 004—01/24/1992: City of [REDACTED] makes the wearing of contact lenses compulsory for all residents who died between 1947 and 1962. City police officers conduct spontaneous mass disinterment which results in the exhumation of over three thousand sets of human remains.

Case 021—08/02/2007: , a small town in France, limits consumption of all beverages containing less than 3% gasoline by volume. Sixty-two killed by ingestion of toxic substances or in beverage-compliance raids.

« SCP-1433 | SCP-1434 | SCP-1435 »

SCP-1435: Grog the Cave Monster

Item #: SCP-1435

Object Class: Euclid

Special Containment Procedures: SCP-1435 is to be held in a 3 x 4 x 3 meter containment chamber with reinforced steel walls. The floor is to be a recessed scale with remote readouts. There are to be no windows or other visible portals leading into SCP-1435's containment chamber, nor any visual monitoring devices. In the event that SCP-1435 requires movement to a larger containment cell, only D-class personnel are allowed to view it, and are to be terminated immediately after containment is reestablished. All other personnel making visual contact with SCP-1435's termination point are to be terminated.

All data pertaining to the television program *Grog and Tootie's Time Cave*, including knowledge of its existence, is to be actively scoured from public sources. All recordings of the pilot episode are to be destroyed, with one copy stored electronically on an encrypted server for archival purposes.

Description: SCP-1435 is an orange puppet made by the Jim Henson Company for a planned children's educational show entitled *Grog and Tootie's Time Cave*. SCP-1435 is described in production notes as a "cave monster," with horns, sharp teeth and a faux hide toga. Testing has revealed no anomalies present in any of its composite materials.

SCP-1435 undergoes a growth event whenever a person both views and contemplates its termination point, the aperture through which the puppeteer's hand passed. Thoughts such as "Where does it stop?", "Does it go underground?" and "What's under there?" have been demonstrated to trigger growth events, which typically increase SCP-1435's length at a rate of approximately .4 meters per second for upwards of 130 seconds. This growth involves the lower "furry"

fabric surface of SCP-1435 duplicating itself. Growth events can be triggered by remote viewing as well as viewing of still images of the termination point. At the time of its initial growth event, SCP-1435 was estimated to be 2 meters long. Efforts to contain and test SCP-1435 have since increased its length to its current 113 meters.

The termination point of SCP-1435 adheres to the surface on which it is placed. Attempts to lift it trigger growth events, but it is possible to move SCP-1435 by sliding it along a level surface. When under any observation, the first 30 meters of SCP-1435's body undulate, the rest maintaining whatever position it has grown into, and its mouth and arms move. It has also been observed vocalizing scraps of dialogue and the theme song from the television show as well as moans of pain, the latter having occurred only during growth events.

Imaging of SCP-1435 has shown that the first 10 meters of its length are filled with a mixture of bone fragments and undifferentiated tissues. The substance filling the remaining length has not yet been identified.

Addendum: Recent testing has shown that any subject who has viewed SCP-1435's termination point can trigger a growth event by thinking about it, whether currently observing SCP-1435 or not. The speed of growth is dramatically decreased when thoughts are not concurrent with direct observation, still photos or video of SCP-1435 (approximately .005 meters per second), but amnestics have proven ineffective in blocking this effect. Any previous observer reminded of the existence of SCP-1435 will become able to trigger growth events once more should they begin thinking about it. Control groups informed of SCP-1435's existence without having previously viewed the termination point do not produce this effect. This factor complicates containment of SCP-1435, as increases in size necessitate larger containment chambers.

SCP-1435 upgraded to Euclid class on / / . -Site Director Alshabazz

> Video log of SCP-1435 initial growth event
>
> Video log consists of 2 minutes of the pilot episode of *Grog and Tootie's Time Cave* followed by SCP-1435's

first growth event, as recorded by a secondary camera accidentally left running during filming. Voices are identified by the character speaking.

<Begin transcript at 1:45>

Tootie: Thanks so much for helping us learn about electricity, Mister Franklin!

Benjamin Franklin: It was my pleasure, Miss Tootie. I hope you'll be more careful around electricity from now on, Grog.

Grog: Yes. Grog understand danger of electricity now.

Tootie: Did Mister Franklin help you get over your fear of thunder, Grog?

Grog: Yes! Now Grog not afraid of thunder. Only lightning.

Characters laugh.

Tootie: Well, come on, Grog, we'd better get back to the future!

Growth event begins at timestamp 2:06, marked by a loud sound (approximately 95 dB) later described as "a zipper closing". The viewpoint camera records SCP-1435's puppeteer vanishing as SCP-1435 extends to reach the floor.

Tootie: What was that? Jesus, where's ? What happened to him?

SCP-1435 begins increasing in length and undulating. Crew members are heard screaming and can be seen running in the background.

Grog: Mister Franklin Tootie cave a bunch… It hurts so much… [*moaning*]

Tootie: Someone get help!

Grog: Thunder cave thunder a happy monster time… [*moaning*] Burns…

Camera is knocked over. Screaming of crew members and moaning of SCP-1435 continue.

<End log at 5:16>

« SCP-1434 | SCP-1435 | SCP-1436 »

SCP-1436: Probability Phoenix

Item #: SCP-1436

Object Class: Euclid

Special Containment Procedures: SCP-1436 is to be contained within an environment-controlled aviary measuring 4 x 4 x 5 meters. This aviary is to contain plants and insect life typical of an Iraqi forest for the purpose of SCP-1436's nutrition. Due to the current activation procedure, the enclosure is to be insulated against electrical charge and all personnel entering the enclosure must wear insulated suits.

The current activation procedure requires that SCP-1436 is fitted with a device programmed to discharge an 8000-volt pulse, sufficient to kill SCP-1436, based on a pseudo-random number generator dependent on atmospheric conditions. The device is to be reattached three weeks into every cycle. The chance of these conditions being met and the pulse being discharged outside of a SCP-1436 event is approximately 1 in 10,000 per day. The device must be confirmed to be functioning when reattached, and examined again every day during the second stage of SCP-1436's cycle.

SCP-1436 is never to be contained at any location with on-site warheads.

Description: SCP-1436 is a male bird of unidentified species with features similar to those of the *Meropidae* family, including its wingspan of 46 cm. SCP-1436's behavior is typical of an insectivore bird and it produces calls that have been identified as attempts to communicate with other members of its own species. No other members of SCP-1436's species have been found or identified at this time.

SCP-1436 constantly undergoes a cycle in which it rapidly matures from an embryo into an adult, dies and decays. After SCP-1436's

form has completely decomposed, an egg reappears and SCP-1436 reenters the growth stage of its cycle. Each cycle lasts two months on average, with the growth stage usually lasting one and a half months. During this first stage, SCP-1436 does not require more food than the average bird of its current age, despite its accelerated growth. Internal imaging of SCP-1436's body has shown no anomalous features or bodily processes, aside from the subject's rapid growth rate. Once SCP-1436 reaches full maturity it ceases to age and remains in this state for three days on average before entering the second stage of its cycle.

During the second stage of its cycle SCP-1436 manipulates probability to cause its own death. The area around SCP-1436 during this stage of the cycle will experience events dangerous to SCP-1436. These events are always physically possible, but analysis has shown that most SCP-1436 events would have been extremely improbable. The events at the beginning of the second stage are far more localized than those later in the cycle. Events later in the cycle have shown the effect is capable of causing complex causal chains to kill SCP-1436. The last cycle before SCP-1436's recovery by the Foundation resulted in the structural collapse of a bird house in the zoo, fatally wounding 18 and injuring 32. Records from the zoo indicate that SCP-1436 had been in its second stage for about two weeks and that several accidents related to SCP-1436 had occurred, each larger than the last. SCP-1436 does not seem to consciously cause these events, and continues to take acts of self-preservation during the second stage.

A similar effect to the second-stage events prevents any direct action besides a second-stage event that would kill SCP-1436 from being completed during both stages. Testing has thus far failed to kill SCP-1436. The most recent ended in the misfire of a pistol, injuring the researcher and rendering the pistol inoperable.

Once the second-stage events have succeeded in killing SCP-1436 it typically fully decomposes, including bone, in 20 hours. Once SCP-1436 has fully decomposed, it reappears as an egg in the location where it died, regardless of the carcass's location. SCP-1436's genetics have shown to be unchanged from cycle to

cycle. Tests have shown that SCP-1436 can identify personnel and objects from previous cycles.

« SCP-1435 | SCP-1436 | SCP-1437 »

SCP-1437: A Hole to Another Place

Item #: SCP-1437

Object Class: Safe

Special Containment Procedures: SCP-1437 is to be contained behind a perimeter of two (2) meter tall electrical fencing, which is to be patrolled by groups of three (3) security officers at all times. Any trespassers attempting to access SCP-1437 are to be brought into custody, interrogated, and if found to be ignorant of SCP-1437's nature, dosed with a Class-A amnestic and released.

Any items or organisms which emerge from SCP-1437 are to be immediately tested for hazards, and if found safe, examined further. Experimentation involving SCP-1437 is strictly forbidden.

Description: SCP-1437 is an apparently endless hole measuring 3m x 3m, located in the Desert. Attempts to dig into SCP-1437 from the side result in the diggers encountering solid rock where logic would dictate SCP-1437 would be. SCP-1437 is thus only accessible from its entrance above ground.

SCP-1437 appears to be an access point to an as-of-yet unknown number of parallel universes. Objects have been known to periodically emerge from SCP-1437 at great speeds, including:

- One (1) US quarter. (First known object emergence.)
- Large quantities of dirt and rocks. (Believed to be an attempt by a parallel containment team to fill in their corresponding SCP-1437.)
- A map of North America written in Spanish. (According to said map, the government of North America is "La República Popular de Aguas Nuevas", or "The People's Republic of New Waters".)
- A photograph of a skyline, believed to be a radically altered version of New York's. (Structures resembling coral are visible

and a large flying organism can be seen in the distance.)
- Several disks made from solid gold. (Accompanying the disks was a sheet of paper reading 'PLEASE SEND RAIN'.)

During a period lasting from 200 -20 , numerous individuals, most of whom wore D-class uniforms, emerged from SCP-1437; all of them were dead on arrival.[1] All emerging individuals carried documents which appear to be their respective universes' documentation on SCP-1437. It is currently believed that these D-class personnel and previously mentioned documentation were sent as a gesture of desired cooperation.

Emerged Documentation 1437-1

Individual carrying documentation appeared to be in adequate physical condition. Individual was wearing a pressure suit with an attached oxygen supply.

Item #: SCP-1437

Safety Rating: Safe for Public

Safety Procedures: Unauthorized citizens are to be kept at a safe distance from SCP-1437 at all times. Any authorized tours of the area are to be accompanied by two (2) security officers for their own protection. Taking of photographs is to be permitted. Any citizens attempting to go past safety fencing are to be arrested and handed over to local law enforcement.

Description: SCP-1437 is an apparently endless hole measuring 10m x 10m, located in the town of Promise. Attempts to dig into SCP-1437 from the side result in the diggers encountering solid rock where logic would dictate SCP-1437 would be. SCP-1437 is thus only accessible from its entrance above ground.

SCP-1437 appears to be an access point to an as-of-yet unknown number of parallel universes. Objects have been known to periodically emerge from SCP-1437 at great speeds, including:

- One small pyramid composed of concrete. (First known object emergence, believed to be a building material.)
- Large quantities of dirt and rocks. (Believed to be an attempt by a parallel safety team to fill in their corresponding SCP-1437.)
- A landscape painting, believed to be of a location in Scotland. (According to the painting, its originating universe's sun is blue and its sky yellow.)
- Several disks made from solid gold. (Accompanying the disks was a sheet of paper reading 'PLEASE STOP PLAGUE'.)
- A photograph of several scientists. (All scientists pictured have unusually long fingers, estimated to be nearly twenty-five (25) centimeters long.)
- A sheet of paper reading "THANK YOU PLEASE SEND MORE GIFTS."

During a period lasting from 2009-2012, numerous individuals, most of whom wore bright orange jumpsuits, emerged from SCP-1437, all of whom were dead on arrival. All emerging individuals carried documents which appear to be their respective universes' documentation on SCP-1437. It is currently believed that these individuals and the documentation they carried were sent as a gesture of desired cooperation. On the 15th of August 2012, a volunteer from the Foundation,

Marco Perton, entered SCP-1437 wearing safety gear, taking with him a copy of this document.

Emerged Documentation 1437-2

Individual carrying documentation was in adequate physical condition. The phrase 'PROPERTY OF SCP CORPORATION' was branded on the individual's left arm.

Item Designation: SCP-1437

Threat Level: Little

Special Containment Procedures: SCP-1437 is to be contained behind a perimeter of two (2) meter tall electrical fencing, which is to be patrolled by groups of three (3) security officers at all times. Any trespassers attempting to access SCP-1437 are to be charged with the crime of industrial espionage.

Any items or organisms which emerge from SCP-1437 are to be immediately tested for hazards, and if found safe, examined further. After examination, suitable items are to be auctioned off to interested collectors.

Description: SCP-1437 is an apparently endless hole measuring 1m x 1m, located in the Outback. Attempts to dig into SCP-1437 from the side result in the diggers encountering solid rock where logic would dictate SCP-1437 would be. SCP-1437 is thus only accessible from its entrance above ground.

SCP-1437 appears to be an access point to an

as-of-yet unknown number of parallel universes. Objects have been known to periodically emerge from SCP-1437 at great speeds, including:

- A statue of what is believed to be a reptilian entity sporting numerous eyes and tails. (First known object emergence.)
- Large quantities of dirt and rocks. (Believed to be an attempt by a parallel containment team to fill in their corresponding SCP-1437.)
- A glass bottle of water.
- A human femur. (Covered in saliva.)
- A cube composed of several smaller cubes, all of which are different colours. (Purpose unknown.)
- A soccer ball. (Ball only has five sides.)

During a period lasting from 200 -20 , numerous individuals, most of which wore D-class uniforms, emerged from SCP-1437, all of which were dead on arrival. (The fact that it is apparently impossible to travel through SCP-1437 and survive has prevented the Corporation from utilizing SCP-1437 for commercial purposes.) All emerging individuals carried documents which appear to be their respective universes' documentation on SCP-1437. It is currently believed that these D-class personnel and previously mentioned documentation were sent as a gesture of desired cooperation. Several D-class personnel have been sent through SCP-1437 carrying copies of this document.

Emerged Documentation 1437-3

Individual carrying documentation was wrapped in bandages and appeared to have been blinded in the

recent past. Lacerations were present on the arms and legs, and the individual's tongue had been cut out.

Object #: SCP-1437

Heathen Level: Unforgivable

Holding Measures: High Priest is to bless the holding site of SCP-1437 every two (2) years and blood sacrifices are to be dropped into SCP-1437 after each blessing. Blood sacrifices are to hold copies of these scrolls as a warning to any demons to stay away. Spirits are to be consulted after these sacrifices, and suggested changes to holding measures are to be carried out immediately.

Description: SCP-1437 is an apparently endless hole measuring 3m x 3m, located in the Desert. Attempts to dig into SCP-1437 from the side result in the diggers encountering solid rock where logic would dictate SCP-1437 would be. SCP-1437 is thus only accessible from its entrance above ground.

SCP-1437 appears to be a portal to the Underworld. Objects have been known to periodically emerge from SCP-1437 at great speeds, including:

- Several disks made from solid gold. (Accompanying the disk was a sheet of paper reading 'PLEASE KILL FOES'.)
- Large quantities of dirt and rocks. (Believed to be an attempt by demons to harm the High Priest , who was present at the holding site at the time.)
- The broken remains of a human arm. (Covered in saliva.)

- A photograph of a metal bird flying away from a city. What appears to be a large mushroom is visible behind the bird. (Believed to be attempt by demons at mocking us.)
- A human eye which moved when touched. (Believed to be a lesser demon. Was burnt immediately.)

During a period lasting from 200 -20 , dead demons wearing the skins of men emerged from the pit. They were thrown back in immediately and the site was re-blessed by High Priest .

Emerged Documentation 1437-4

Individual carrying documentation was a heavily emaciated pre-adolescent, who appeared to have been lobotomized in the recent past.

Item #: SCP-1437

Object Class: Safe

Special Containment Procedures:
SCP-1437 is to be contained behind a perimeter of two (2) meter tall electrical fencing, which is to be patrolled by groups of three (3) security officers at all times. Any trespassers attempting to access SCP-1437 are to be delivered to Our Masters Above for enhanced interrogation.

Any items or organisms which emerge from SCP-1437 are to be immediately tested for hazards, and if found safe, examined further. Any useful technology which emerges from SCP-1437 is to be delivered to Our Masters Above immediately.

Description: SCP-1437 is an apparently endless hole measuring m x m, located in Zone 29 of the Brazilian Sector. Attempts to dig into SCP-1437 from the side result in the diggers encountering solid rock where logic would dictate SCP-1437 would be. SCP-1437 is thus only accessible from its entrance above ground.

SCP-1437 appears to be an access point to an as-of-yet unknown number of parallel universes. Objects believed to be gifts intended for Our Masters Above have been known to periodically emerge from SCP-1437 at great speeds, including:

- One (1) diamond. (First known gift. Delivered to Our Masters Above.)
- Large quantities of dirt and rocks. (Purpose unknown.)
- Bark from the extinct *Quercus buckleyi*. (Delivered to Our Masters Above.)
- The lower half of a human body. (Delivered to supervising Servant of Our Masters Above. It is currently unknown how the gift-sender was aware of the diet of Our Masters Above. A document was sent into SCP-1437 thanking the gift-giver for the object and requesting further tributes to Our Masters Above.)
- A bottle of human-intended wine. (See Incident 1437-1.)

Incident 1437-1: On / / , a bottle of human-intended wine emerged from SCP-1437. Recognizing an assassination attempt upon members of Our Masters Above, the supervising Servant ordered that a **Don-Burten explosive device** be delivered down SCP-1437. Its orders were followed and

the threat appears to have been resolved.

This is a reminder of why we must be vigilant in our containment procedures. From now on, I don't want any of these 'gifts' being taken out of containment. They are a clear and present danger to Our Masters Above. - O5-1.

Footnotes

1. It is theorized that the nature of SCP-1437 kills living organisms at the point at which crossover between universes is achieved.

« SCP-1436 | SCP-1437 | SCP-1438 »

SCP-1438: Invaders

Item #: SCP-1438

Object Class: Euclid

Special Containment Procedures: SCP-1438-1 is to be monitored to foresee any SCP-1438 activity, and active SCP-1438 sessions are to be remotely observed by the nearest Foundation facility. Campuses in which sessions of SCP-1438 are taking place are to be operated as normal, as students, faculty and staff give no recognition to anomalous activity caused by SCP-1438. As it is impossible for participants playing a session of SCP-1438 to not be affected by it, no Foundation personnel are to participate in SCP-1438 except under experimental conditions.

No anomalous properties in SCP-1438-3 instances manifest outside of the context of SCP-1438, but as a precaution, confiscated instances of SCP-1438-3 are to be disposed of through incineration.

Description: SCP-1438 is a Live Action Role-Playing (LARP) Game that occurs at residential university and college campuses in the Midwestern United States[1]. SCP-1438, colloquially known as "Invaders", "Invasion", "Attack of the Mind Worms", or "Takeover", is organized via SCP-1438-1, a website at the domain [REDACTED]; attempting to access this domain from non-university IP addresses results in a 404 message. Attempts by the Foundation to perform DDoS attacks or otherwise block access to SCP-1438-1 have resulted in computers used to access the website to be permanently banned from access. Contact has been established with the administrator of SCP-1438-1 (listed as one "Jack Finney") several times; however, exchanges have been largely uninformative, with Mr. Finney preferring to promote SCP-1438 as opposed to answering questions about its origin and anomalous properties.

University and college students that register their schools on SCP-1438-1 and sign up at least 30 participants for a session of

SCP-1438 can order equipment necessary for a game of SCP-1438 for no cost, and designate a date on which the game is to begin.

This equipment is delivered to all participants of SCP-1438, and includes:

- One (1) -brand foam dart launcher of various make, along with 50 darts per gun
- Twelve (12) pairs of socks, which serve as grenades in the context of SCP-1438
- One (1) polyethylene sword, or "Joplin Plasma Blade"
- A set of Rules for playing SCP-1438; violation of any rule is grounds for ejection from the game, and therefore "death" of the participant. See Document 1438-01 for a partial set of rules.
- One (1) patch that denotes a random military rank, from private to captain; in addition to this, the player who begins the "invasion" will have a set of temporary tattoos marked with the symbol pictured above; this symbol on its own has no anomalous properties, but for the sake of this document will be referred to as SCP-1438-2.

The goal of a game of SCP-1438 is, for the side of the Humans, to eliminate all Invaders through force. Meanwhile, the Invader's goal is to turn humans into invaders by marking them with SCP-1438-2 and "alter the electrical activity in the brain to be identical to that of the Invader's spawn".

On the date that a game of SCP-1438 is to commence, all participants gather in a central location. From this point on, participants enter a fugue state while not in designated safe zones. While in this state, the "Humans" and "Invaders" (designated SCP-1438-A and SCP-1438-B respectively) believe that they are engaged in a secret conflict with each other. SCP-1438-B instances have the objective to convert all SCP-1438-A instances into SCP-1438-B by covertly marking them with SCP-1438-2. Each game starts with a single instance of SCP-1438-B, who applies SCP-1438-2 to an area of skin normally concealed by clothing, thus adding to the population of SCP-1438-B.

Notably, instances of SCP-1438-A are able to accurately recall

biographical information up to their enrollment in college, at which point they learned about the Invaders and joined the conflict. Instances of SCP-1438-B have trouble properly displaying human emotions, often engage in mucophagy, onychophagy and trichophagy, speak in an unidentified language or code, and have a habit of recreating SCP-1438-2 to mark territory controlled by SCP-1438-B.

One of the optional goals in a game of SCP-1438 for SCP-1438-A is to capture an instance of SCP-1438-B and interrogate them about technology apparently used by SCP-1438-B, specifically weapons technology[2], as SCP-1438-B cannot be killed by default weaponry, only stunned as they "regenerate". Interrogation usually involves physical and psychological torture techniques, and as a reward for successfully coercing information from SCP-1438-B, the weapons of up to four instances of SCP-1438-A are converted into SCP-1438-3.

SCP-1438-3 are functionally and visually identical to non-anomalous "weapons" delivered at the beginning of a game of SCP-1438, unless used by an instance of SCP-1438-A or SCP-1438-B. If used on an instance of SCP-1438-A or -B, the launchers (SCP-1438-3A) turn into laser-like weaponry, capable of causing 4th degree burns;[3] socks/grenades (SCP-1438-3B) emit a wavelength of light upon detonation that disintegrates human flesh; finally, the polyethylene swords (SCP-1438-3C) become [DATA EXPUNGED]. All individuals killed in a game of SCP-1438 through use of SCP-1438-3 are treated by all persons on-campus and relations as if they had transferred to another college and cut off all contact with friends, family, etc.

Following the conclusion of a game of SCP-1438, all surviving SCP-1438-A or SCP-1438-B instances will resume their normal routine, and express interest in playing SCP-1438 again, if the opportunity arises. Should they choose to participate in another instance of SCP-1438, they will resume their former roles as instances of SCP-1438-A and SCP-1438-B. Furthermore, in between instances of SCP-1438, instances of SCP-1438-A and -B will re-enter fugue states when under stress, which typically last anywhere from 30 minutes to 4 hours.

Students not participating in SCP-1438 will usually assume that all

instances of SCP-1438-A and SCP-1438-B are simply staying in-character and do not wish to break it in case players are present. Faculty will view it with some degree of scorn, often citing it as a distraction from studies and that students participating in it could be doing better things with their time. Campus law enforcement notably do not attempt to confiscate weaponry used in a game of SCP-1438.

Document 1438-01: Partial rules of SCP-1438.

- While conventional weapons do not work on Invaders, they can, and will, kill humans. Make sure the thing you're about to blow a hole in is actually Marked.
- Invaders, remember to re-apply your Mark every few days; there should be enough tattoos to last the duration of the game.
- The only official safe zones in a game of Invaders are restrooms and classrooms; everywhere else is fair game. Other safe zones can be determined by players on a college by college basis.
- No outside parties are permitted to engage in a game of Invaders; for a list of those playing the game, check your local Invaders database.
- This game can take a long time to play, but don't forget your studies. Remember, school work is always more important than the game. We don't want people flunking because they're too concerned about whether or not their friend is Marked.

Document 1438-02: An excerpt from SCP-1438-1, describing the backstory of SCP-1438.

They Came from the Stars…

The Invaders came silently in the night. It started with a single person, but soon, they spread, overwriting the electrical impulses in the human brain to make them like themselves. They are numerous, and if not stopped, Earth will fall to them.

The resistance is the last, best hope humanity has against the invaders. We've been fighting them since they first arrived, at the incident in Norwalk five years ago. You have just been inducted into the the resistance, which has a single objective: to kill all of the Invaders at any cost. Never mind the fact that the Invaders were once a friend, a family member, a lover, a father, a mother, a child… once Marked, they are the enemy, and must be eliminated through any means possible. Nobody will miss them.

All Invaders carry a Mark on their skin that they spread to normal humans, converting them over the course of six hours. Additionally, their regenerative capabilities make them impervious to bullets, grenades, even Joplin's newly developed plasma swords. However, they have knowledge of advanced weaponry. This knowledge can be coerced from them through various methods (the Geneva Convention doesn't apply to things that aren't human) that can eliminate them permanently. The Invaders have a single-minded goal: to take over the entire population of humans in the area, and from there, the planet as a whole.

Footnotes
1. Including the states of Indiana, Illinois, Michigan, Ohio, West Virginia and Wisconsin, as well as the western counties of Pennsylvania and northern counties of Kentucky.
2. This technology is never actually used by instances of SCP-1438-B, as elimination of human targets is a losing condition for SCP-1438-B.
3. It has been noted that this weaponry operates as miniature versions of the weapons systems possessed bySCP-2820. Investigation into a potential link between Mr. Finney and the developers of SCP-2820 is ongoing.

« SCP-1437 | SCP-1438 | SCP-1439 »

SCP-1439: Serial Stickers

Item #: SCP-1439

Object Class: Euclid

Special Containment Procedures: SCP-1439 is to be kept in a locked drawer in Site 24's testing center. Access to and experimentation with SCP-1439 requires prior permission from at least one (1) Level 3 Senior Researcher. Only one instance of SCP-1439-1 is allowed to be tested at a time, and should be destroyed once the test has concluded. Currently, testing is suspended on SCP-1439 due to previous containment breaches. Testing may resume once all portions of the object are back in place. Though additional safety measures have been put in place making another breach unlikely, any instances of SCP-1439-1 found outside their testing chamber should be destroyed immediately.

Description: SCP-1439 is a small sheet of 8 round smiley-face stickers. Each sticker is approximately 4 centimeters in diameter, and has a name printed above it which is not part of the sticker itself. The names above each sticker are Edward, Thomas, Gordon, Henry, Albert, James, Charles, and Harvey. The first three stickers are light blue, while the others are green, grey, red, purple, and brown, respectively. All 8 have two black dots for eyes and a simple black curve for the mouth. The James sticker was initially missing from the sheet when the Foundation originally acquired SCP-1439, but appeared again after approximately three months. The Edward sticker is currently unaccounted for, as it disappeared 9 months after the SCP was originally contained. Investigation is ongoing to discover the individual(s) responsible for this containment breach.

SCP-1439's effects begin manifesting when one of the stickers is placed on any object or surface, including plants, animals, and human beings. Once the sticker is in place, it will slowly dissolve over a period of 3-4 minutes. Human testing subjects have reported a slight tingling sensation when this happens, but no pain. Within the

next 8-10 minutes, the subject will begin to become anthropomorphic, with a face appearing where the sticker was originally placed. At this point the subject is considered an instance of SCP-1439-1. After 20 minutes, the face will become more detailed, and become capable of blinking and speaking. Most instances of SCP-1439-1 tested so far have spoken American English in various regional dialects, though one was also capable of speaking fluent Cantonese.

Approximately an hour after the initial exposure to SCP-1439, a set of arms and legs will begin to grow from the subject, giving it a more humanoid appearance. Instances of SCP-1439-1 will have varying levels of mobility, depending entirely on the size, weight, and general shape of the original subject. Subjects shorter than 0.8 meters in height are usually completely anthropomorphous, while larger subjects will only be partially affected. As an example to illustrate how this affects both inanimate objects, and subjects like humans and animals, see Notable Experiments Log 2468 below.

Instances of SCP-1439-1 exhibit a variety of behaviors, but are generally emotionally manipulative and/or single-minded once they are capable of speech, and act hostile when their demands are not met. Psychotic episodes are common and often result in acts of violence from the subject, prompting their termination as further testing efforts from that point are usually futile.

So far the only recourse for returning SCP-1439 to its original state is to destroy any instances of SCP-1439-1. Depending on their size and the area affected, sapient subjects may need to be terminated, or only have part of their body removed for disposal. Through testing, this has resulted in the death or maiming of animals and humans.

+ Notable Experiments Log 2468

Sticker used	Test Subject and placement	Length of Testing Time	Notes
Charles	A 1.5 m x 1.5 m x .3 m section of	49 hours	Approximately 1 square meter of the

		concrete wall. Sticker placed in the center.	wall became anthropomorphous, with animate arms and legs sprouting from the concrete. Subject was immobile, and complained vocally about their situation. Subject asked about “Leo” numerous times, but was uncooperative when questioned about the name, and went silent shortly thereafter. Subject was left alone and monitored for the next 48 hours. It remained motionless except for occasionally scratching itself. The concrete wall was destroyed with

			sledgehammers, during which the subject remained silent. The Charles sticker reappeared on the sheet 3-4 minutes after the subject was deemed destroyed.
Harvey	Standard foundation desk lamp. Sticker placed on the lightbulb.	92 minutes	The entire lamp was affected by the SCP-1439, with the face appearing on the light bulb, arms sprouting from the adjustable “neck” of the lamp, and legs sprouting from the base. The subject expressed fascination with its cord, and refused to answer questions until it was “turned on”. A

researcher plugged the subject’s cord into an outlet, and flipped the subject’s switch. Subject stated that the bright light and heat of the light bulb burned and hurt its face, exclaiming, “I fucking love it!" Subject then stopped conversing with the researchers, only making vocal sounds concluded to be sexual in nature. After 30 minutes of this behavior, the plug was pulled, and the subject attempted to attack the research team. Subject was thrown in the testing center’s nearby incinerator.

			Two researchers suffered small bite marks and bruises, but were otherwise unharmed.
Charles	Sticker placed in the center of the palm of D-82913's right hand.	66 minutes	D-82913 was anesthetized for this test, to see if anesthesia would affect an instance of SCP-1439-1, and to prevent panic due to the transformation. D-82913's entire hand was affected, with their pinky finger and thumb becoming arms, and legs sprouting near the wrist. Anesthesia had no visible effect on SCP-1439-1. Subject's behavior initially mirrored its previous behavior, and

			had no recollection of its manifestation on the concrete wall. Subject complained of being constrained, as it had no control over D-82913's arm past the wrist. Subject became sullen, and ceased answering questions. D-82913's hand was surgically removed while still under anesthesia, and SCP-1439-1 was tossed in the on-site incinerator, making no protests in the process.
Henry	Dwarf Hamster. Sticker placed on the animal's	17 hours	The entire animal became anthropomorphous, with its front

	back.	legs becoming the subject's legs, and the back legs becoming the subject's arms. The hamster's front legs changed size, shape, and orientation to match those of a human. The hamster's head ended up pointing straight downward once the subject could stand up, and made vocalizations of distress until the subject purposely sat on it and crushed it. Subject continued to speak and move normally even though the hamster itself was

functionally dead. Subject was extremely charismatic, and allowed the research team to question him for hours, telling stories of various subjects including: violent crime sprees with "my friend O ", sexual escapades with numerous women, and even knowledge about Foundation secrets. After attempting to cross reference some of the crimes and Foundation knowledge expressed by the subject, the research team determined that the

			majority of it was lies and/ or delusions of grandeur. Some crimes did match up to [DATA EXPUNGED]. Subject became violent when it realized it was to be disposed of, and managed to get loose within the research center. The research team eventually discovered the subject's hiding place, and flushed it out with an acetylene torch. Subject was then captured and incinerated.
Albert	Sticker placed on the left kneecap of D-59919	Test ended approximately 75 minutes after exposure, when the subject escaped	No face appeared after the sticker dissolved. After an hour of no activity, D-59919 was

		containment.	escorted from the testing chamber. Before they could leave the testing center, D-59919's leg suddenly sprouted arms, one of which grabbed a nearby scalpel and disabled his security guard escort, as well as a nearby researcher. D-59919 panicked during this, having lost control of his left leg. SCP-1439-1 then made a jerking motion which caused D-59919 to fall on his back, hitting the back of his head. D-59919's leg split down the middle, forming two

new, separate legs for SCP-1439-1. The subject then used the scalpel to cut itself free from D-59919, and began to eat part of D-59919's other leg. The security team arrived shortly thereafter and neutralized the subject. D-59919 was pronounced dead at the scene, having lost too much blood from his femoral artery being severed. It is unknown how or why this instance of SCP-1439-1 manifested differently from the others. Testing of the Albert sticker has been postponed until new

			safety measures can be written up.
Gordon and James	2 meter tall ficus tree. The Gordon sticker was placed on the trunk near the top, while the James sticker was placed at the bottom, directly below Gordon.	2 hours	Both areas where the stickers were placed manifested as separate instances of SCP-1439-1. Initially, both subjects ignored the research team's questions, and only spoke to each other in an effort to cooperatively tip the tree over and become mobile. They succeeded in doing so, and unsuccessfully attempted to run into the researchers and trip them with the tree trunk. Their cooperation ended when one subject made sexual advances

			towards the other, and they began arguing heatedly. The researchers were able to carry the tree out of the testing chamber and dispose of it without incident in the wood chipper borrowed from Site 10.
Thomas and James	Dr. Carver's thermos. The Thomas sticker was placed at the top of the thermos just below the rim. The James sticker was applied over the Thomas sticker immediately.	27 minutes	Both stickers dissolved in 3-4 minutes. No face or limbs appeared, however the thermos' material slowly changed to a pinkish, organic substance that began to rapidly rot after only 18 minutes. Testing confirmed the material had turned to human flesh.

			DNA testing revealed multiple matches, [DATA EXPUNGED]
Thomas	Sticker placed directly on the nose of D-11770.	6 minutes	The sticker expanded to cover D-11770's entire face, before dissolving after 5 minutes. Test subject did not show any signs of distress until [DATA EXPUNGED]. Subject was terminated by security forces before it could do any more harm to itself or others. Initial conclusion is that close proximity to a human brain significantly changes the way SCP-1439-1 manifests, possibly

	taking complete control of the person, or at least greatly altering their behavior.

-Human testing has been suspended indefinitely, due to the unpredictable effects. I fear the results of the last test may have revealed the true purpose of SCP-1439; everything else has simply been a side effect of the object's misuse.– Dr. Carver

Addendum: Due to the similar method of application between SCP-1439 and **SCP-248**, it is currently theorized that they share a common origin. However, SCP-1439 does not carry any mention of "The Factory" and does not appear to be mass-produced, so it is currently theorized that SCP-1439 was discontinued before many instances were created. The credibility of this theory is unknown at this time.

« SCP-1438 | SCP-1439 | SCP-1440 »

SCP-1440: The Old Man from Nowhere

Item #: SCP-1440

Object Class: Keter

Special Containment Procedures: SCP-1440 is currently uncontained and its location is unknown since its last containment breach. Due to the nature of SCP-1440, the Foundation may not have the means to contain it without risking an unacceptable loss of resources and personnel. Until suitable containment procedures can be found, focus should be given to the location and surveillance of SCP-1440 and to minimizing civilian exposure to it through the identification of its travel pattern.

Description: SCP-1440 is a man of unknown ethnicity and age. When questioned about its name, place or time of birth, SCP-1440 will refuse to answer, although it is unclear if this is due to the subject being unwilling to share this information or not possessing it. Though the subject's appearance is that of an octogenarian, it has not shown any signs of aging in the fifty (50) years since first coming to the attention of the Foundation. SCP-1440's anomalous nature becomes apparent once it comes into contact with human population or man-made objects and remains in contact with them for longer than a few days; SCP-1440 has an acute adverse effect on everything connected to humanity. Prolonged exposure of any man-made object or person to it will cause increasingly destructive events to occur in SCP-1440's vicinity, until the destruction or death of said human element. The only exceptions to this are SCP-1440 itself and its belongings (its clothes, a sack made of unidentified material, a pack of worn playing cards, and a small glass cup).

SCP-1440 appears to be aware of its effect on human populations, and will attempt to avoid coming into contact with them whenever possible. Despite these intentions, SCP-1440 is compelled to travel in what seems to be a highly complex pattern, which invariably leads it into contact with human population. The exact nature of this

pattern has not yet been successfully analyzed, and SCP-1440 has not been able to provide any information concerning it. The subject is not actively hostile and will not resist attempts to contain it, though all such attempts have failed and led to a considerable loss of personnel and resources due to the aforementioned anomalous properties.

SCP-1440 was first brought to the Foundation's attention when it approached Dr. , a researcher at Site- , on her commute to work. SCP-1440 showed unexplained knowledge of Dr. 's work for the Foundation and requested her assistance. When Dr. inquired about the nature of the assistance the subject required, it responded that it hoped the Foundation would be able to "destroy [him]". SCP-1440 was brought to Site- for questioning, which led to the destruction of the site, the deaths of personnel and the destruction of six (6) Safe and Euclid-level SCP objects. All other attempts at containing SCP-1440 have resulted in similar occurrences.

Addendum SCP-1440-A: The following is an interview conducted with SCP-1440 during the fourth attempt to contain it, on Area-142. The log was being stored on a remote server, hence its survival.

+ Show Log

Interview Log 1440-7

Interviewer: Dr.

Interviewed: SCP-1440

Foreword: Following the arrival of SCP-1440 to Area-142, personnel began complaining about severe headaches and nausea. In the next two days, three of the four on-site water purification filters broke down, Area-142's hangar collapsed, causing the deaths of multiple airmen and Dr. — previously in perfect physical condition — suffered a complete collapse of both kidneys and both lungs simultaneously.

<Begin Log>

Dr. : Good afternoon, SCP-1440.

SCP-1440: And to you, Doctor.

Dr. : Do you know why we brought you here?

SCP-1440: Of course I do, and applaud you for still attempting to contain me, but since your last three attempts I came to realize you cannot help me. It would be best if you let me go, for your own good. The First Brother is already standing behind you, Doctor, you would best hurry.

Dr. : You mentioned these brothers before, three if I recall correctly.

SCP-1440: Three, Aye. Different, but one and the same. All cruel, all vengeful, all capable of holding a grudge for a long time. They are the cause of my misfortune, and therefore the cause of yours. [Subject appears to notice something behind Dr. , though video and audio feed reveal nothing unusual.] The Second Brother joins the First, time is running short. Release me, or I cannot vouch for your safety. It might already be too late.

Dr. : I'm afraid I can't do that. Besides, you mentioned three brothers; if the third isn't here yet, we must have some time left.

SCP-1440: [Shakes head.] The Third never appears. In that, he is crueler than both his brothers, for he knows his appearance is the only thing that will set me free. I have spent time untold searching for him, trying to return his prize and those I won from his brothers, but to no avail. [Subject looks behind Dr. again, sighs] The Second has his hands on your shoulders, it is too late now. Doom is never far behind the Second. Before you perish, my poor child, allow me to give you a word of advice.

Dr. : Go ahead.

SCP-1440: Should you choose to challenge Death to a game of cards for your life, there is one thing you must never do.

Dr. : And what is that?

SCP-1440: Win.

<End Log>

Closing statement: At that moment, the on-site nuclear device stored in Area-142 detonated, despite multiple failsafes. Area-142 was destroyed and all on-site personnel were killed. SCP-1440 was spotted more than three thousand (3,000) kilometers away from Area-142's location a week following its destruction, suffering no apparent harm. After three additional containment breaches, attempts to contain SCP-1440 have been suspended indefinitely.

Addendum SCP-1440-B: Due to the growing size of human population and its rapid expansion into previously empty areas, SCP-1440 attested during its fifth containment that it is becoming increasingly difficult for it to avoid contact with humanity while still adhering to its compulsion. Analysis of the subject's traveling pattern is continuing, as are efforts to find a permanent containment procedure.

« SCP-1439 | SCP-1440 | SCP-1441 »

SCP-1441: Cold Fusion Paper-Towel Dispenser

Item #: SCP-1441

Object Class: Safe

Special Containment Procedures: SCP-1441 and SCP-1441-01 are stored separately in combination-locked lead-lined cases, and are to be kept in a Secure Containment facility when not in use. As of Addendum-02, access is restricted to personnel involved in the -EX testing program.

SCP-1441 is currently stored in Storage Locker #523 at Sector-17, along with one spare specimen of SCP-1441-01 and two spare rolls of perforated paper towels of any brand. Staff are reminded to replace rolls after full use for the convenience of others.

Description: SCP-1441 is an automatic paper towel dispenser. It is physically similar to dispensers of the brand "Towel-Matic", with two exceptions: i) it instead has the brand name CONVENITOWEL; ii) where other Towel-Matics have a compartment suited for 4 D-size batteries, SCP-1441 instead contains a non-standard power cell, designated SCP-1441-01.

SCP-1441-01 is a 50x50x50mm ($125cm^3$) rounded cube, with a mass of 500 grams. It largely consists of an alloy of iron and palladium. One face bears metal contacts, and has been designated as the bottom side. A small lid on the top opens up to reveal a chamber full of water.

The sides show branding, referring to the object as "PHAETON POWER CELL", and to the makers as Ingenitech. Investigation revealed Ingenitech to be a software development company based in Cincinnati, OH; staff there showed no recognition of SCP-1441-01, and no files relating to Phaeton or power cells were discovered, suggesting that the name is a coincidence. Similarly, CONVENITOWEL has never been registered as a trademark.

Preliminary analysis of SCP-1441-01 suggests that the power cell operates on anomalous technology; further details will be listed below when results emerge.

Addendum-01: Further analysis of SCP-1441-01 show that its power generation operates by small-scale cold fusion, requiring only the addition of water. While advanced, none of the processes involved are inherently anomalous. Suggesting attempt at replication of technology.

Addendum-02: A replica of SCP-1441-01 was constructed and tested in SCP-1441; SCP-1441 operated as normal. SCP-1441 has been nominated to the -EX testing program for confirmation of the process and eventual dissemination of the technology.

Addendum-03: As the team has now suffered 17 successive failures to replicate the battery interface outside of SCP-1441, -EX testing has been suspended, and further analysis and experimentation has been opened to discover any possible anomalous reason behind these events.

Addendum-04: A non-anomalous Towel-Matic paper towel dispenser has successfully been fitted with a replica of the battery interface in SCP-1441, and operated normally with both the original SCP-1441-01 and a replica.

Addendum-05: Replicas of SCP-1441-01 have been tested as power sources for various appliances and devices, with the results shown below:

Experiment no.	Item tested	Result
#1	Towel-Matic paper towel dispenser	Success
#2	Blu-ray player	Failure
#3	Printer	Failure
#4	Washing machine	Failure
#5	Macbook Air	Failure
#6	Zune MP3 player	Failure
#7	A single 60-watt light bulb	Failure
#8	A motor	Failure

#9	A motor rigged to revolve paper towels	Success
#10	A motor rigged to revolve paper towels and power a 60-watt light bulb	Failure
#11	A printer rigged solely to dispense paper towels	Success
#12	Hand-dryer	Failure
#13	Towel-matic paper towel dispenser rigged to also play MP3s	Failure

At this point it is very difficult to avoid the following conclusion: that SCP-1441-01 will only operate in devices with the sole or primary function of dispensing paper towels. As such, I recommend SCP-1441 be withdrawn from the -EX program, and that its secure containment procedures be revised in accordance with the new information on its threat. I am ceasing experimentation on SCP-1441. - Dr. Jung

« SCP-1440 | SCP-1441 | SCP-1442 »

SCP-1442: Incorporated

Item #: SCP-1442

Object Class: Euclid

Special Containment Procedures: Owing to the public nature of SCP-1442 and the large number of people employed by it who are unaware of its anomalous nature, containment has focused on keeping the employees of SCP-1442 and the general public unaware of its anomalous nature, and on close monitoring of all SCP-1442 activity by the containment team under the cover story of an SEC (U.S. Securities and Exchange Commission) investigation.

Description: SCP-1442 is a corporation (known to shareholders, employees and the general public as " , Inc.") which anomalously produces signals coded into stock trades, collectively SCP-1442-1.

The anomalous nature of SCP-1442 first came to Foundation attention in 19 , when automated Foundation monitoring of the New York Stock Exchange flagged an unusual pattern of high-frequency stock trades between SCP-1442 and several other companies over a period of several months. Cryptanalysis showed that the trades formed an intelligible message in a simple code. An investigation by MTF-Phi-1 ("Hostile Takeover") into brokers and computers at the company demonstrated no awareness of the signals being sent on the part of any member of staff or any anomalous activity from computers, and recommended that further study was warranted.

After a decade of intensive study, encompassing interviews with staff, multiple detailed audits and computer-aided analysis of patterns of asset purchases and capital transfers, it was postulated by Dr. that SCP-1442 comprises a fully sentient, sapient entity, capable of informed decision making and responses to its environment.

At the time of writing, SCP-1442 employs , people and has an annual revenue of $. billion USD. Shares are held by a mixture of private individuals, other corporations, hedge funds, investment firms and other organisations; in accordance with current containment procedure and contingency planning the Foundation currently holds a minority . % share.

The corporation's activity is for the most part not unusual for a company of its type. Asset management and financial services comprise the majority of its economic activities, although via wholly-owned subsidiaries it has diversified into extractive industries, children's toy retail, pharmaceutical research, computer software, advanced defence technology and [REDACTED].

SCP-1442's employees and shareholders display no awareness of the anomalous nature of the corporation, or of their roles as part of a larger cognitive pattern. It is theorised that SCP-1442's mind arises from and runs on the collective and aggregated actions of the corporation itself, encompassing not only a subset of the actions of staff, shareholders and directors but also the movements of capital, goods, information and legal instruments.

Given the above, analysis of the "mind" of SCP-1442 is a challenging and subtle task, comparable in complexity to reading a human mind based purely on scans of neurological activity. This has strongly hampered efforts to establish SCP-1442's effective level of intelligence, memory, typical emotional responses, and speed of cognition; however, it is assumed the latter is many orders of magnitude slower than the human norm owing to the nature of the cognitive substrate (i.e., human actions).

Not all actions performed by employees form part of SCP-1442's cognition. Instead, SCP-1442 appears to exploit the existence of routine, semi-conscious and habitual behaviour by its employees for this purpose, especially amongst entry-level employees.

Employees experience their behaviour as freely-willed, but are unusual in reporting higher levels of job satisfaction than the statistical baseline for their economic sector; staff interviews typically feature self-reports of high levels of motivation, strong interpersonal relationships while at work, and a sense of "being part of something

larger".

Communication attempts by SCP-1442, referred to as instances of SCP-1442-1, are made over the course of several months, and are targeted at seemingly random corporations. These messages are sent via the medium of high-frequency stock trading. Communication is one-way: there is no evidence SCP-1442 has ever received a response to any of its messages. All messages contain a preamble attempting to establish the sentience of the sender (typically beginning with a sequence of prime numbers or the digits of pi) and a code in which to communicate. Despite the months-long process, the unique intelligible informational content of each message is brief, forming short sentences or sentence fragments, typically in English (although SCP-1442 has been seen to attempt other languages when communicating with multinational or foreign corporations).

As yet, SCP-1442 has made no confirmed attempts at communication with human beings. Its perception of and attitude toward humanity both remain unclear.

Addendum: Some selected examples of SCP-1442-1, once decrypted:

> hello i like your logo
>
> i'm est. 1984/$324 per share/Boston HQ you?
>
> you bought 2.6% of me why
>
> do you like me?

« SCP-1441 | SCP-1442 | SCP-1443 »

SCP-1443: Avernus Vine

Item #: SCP-1443

Object Class: Safe

Special Containment Procedures: Instances of SCP-1443 are to be contained in a designated greenhouse in Sector-28. Watering and fertilizing are to be done regularly by Level 2 personnel. Humidity, temperature, and light exposure are to be monitored and maintained accordingly. Level 3 authorization is required prior to any testing involving SCP-1443; results are to be documented and reported immediately.

The containment unit is to be monitored by video surveillance at all times. Any personnel within the containment unit when instances of SCP-1443-1 appear are to be promptly evacuated.

Description: SCP-1443 is an unknown variation of *Campsis × tagliabuana*, a trumpet vine hybrid. Though SCP-1443 blooms perennially, it has not been observed to produce seeds. While SCP-1443 possesses no other visual abnormalities, certain branching vines of the plant have been noted to exhibit leaves that grow in a specific arrangement of four leaves, which resemble the forewings and hindwings of Lepidoptera.

Roughly every 24 hours, SCP-1443 will generate iridescent projections of butterflies (designated SCP-1443-1) from the similarly-shaped groups of leaves on its vines. Any human who observes these projections from a close enough distance will experience immediate drowsiness, and will fall asleep if not removed from SCP-1443's immediate proximity.

Based on observation, instances of SCP-1443-1 remain visible for up to fifteen minutes after being generated by SCP-1443. Though SCP-1443-1 individuals have been noticed to hover over sleeping humans, they will remain within 1 meter of the host plant.

Though an affected individual will awaken hours after encountering SCP-1443-1, initial exposure will result in the individual experiencing apparently innocuous dreams involving butterflies. Over a period of roughly two weeks (14 days), an affected individual will undergo increasing bouts of fatigue and sleepiness, and butterflies will be the sole subject of any dreams they experience.

After two weeks, when the affected individual is next able to sleep, instances (usually 3 to 7 individuals) of SCP-1443-1 will materialize over the head of the sleeping subject. These projections are first seen originating from the forehead of the sleeping human; no changes in sleep mannerism have been recorded during this process. As a group, the SCP-1443-1 seek out a suitable location for rest, usually a patch of open soil. Should the SCP-1443-1 find a place of rest within fifteen minutes, they will cluster together and form a new individual of SCP-1443. If no such place is available, the SCP-1443-1 disappear when fifteen minutes have elapsed. Juvenile instances of SCP-1443 “planted” in this manner do not appear immediately capable of generating SCP-1443-1. The length of time required for these new plants to fully mature is currently unknown.[1]

Human hosts to SCP-1443-1 have reported no pain related to having “harbored” SCP-1443-1 individuals. Exposure to SCP-1443 is believed to result in no lasting side effects. Refer to Incident Log.

Addendum 1443-1: During the - - test involving D-Class personnel D-26423, an estimated 70 instances of SCP-1443-1 projections were recorded to have emerged following the usual 14 day “development” period (see Incident Log). Testing was temporarily suspended; however, when experiments were reinstated, the number of projections dropped to normal and remained consistent from then on.

Excerpt from Incident Log 1443-1: D-26423 was noted to have suffered a fractured skull following the testing period, and entered a comatose state. The swarm of 1443-1, according to video surveillance, entered a pre-prepared Foundation greenhouse and proceeded to coalesce into an instance of SCP-1443 measuring roughly 3 meters tall. In the interest of eliminating potential threat should the instance grow too large for efficient containment, highly concentrated herbicides were applied to the soil surrounding the

SCP-1443 instance. Upon initial introduction of the herbicides, the SCP-1443 instance began to emit vocalizations (see audio log).

> **Audio Log 1443-2** *[roughly translated from Greek]*
>
> *[unintelligible]* …wandering above not below… ferryman promised *[unintelligible]* hundred years before crossing… didn't want to stay *[unintelligible]* river shore so crowded… why is the gateway collapsing? *[unintelligible]*

Subsequent investigation revealed that the incident coincided with the earthquake in , which had resulted in deaths.

Footnotes
1. Similarities between this symbiotic relationship and that observed inSCP-667have been noted. Investigation into a correlation of the two anomalies is ongoing.

« SCP-1442 | SCP-1443 | SCP-1444 »

SCP-1444: A Gravedigger for the Forgotten

Item Number: SCP-1444

Object Class: Safe

Special Containment Procedures: After the successful implementation of Containment Strategy 1444-7, the only current containment procedure necessary for the containment of SCP-1444 is the maintenance of Area-1444, located on the grounds of Site-11. All tombstones in Area-1444 are to be routinely cleaned, and the surrounding area is to be kept clear of debris.

The **`Department of Analytics`** is to monitor world media sources for stories concerning the disappearance of bodies.[1] If an instance of SCP-1444 gains notable notoriety, a suitable cover story is to be created.

◆ Containment Strategy 1444-7 Summary

Containment Strategy 1444-7:
Author: Researcher Taylor Hunt

1. The bodies of individuals who have died without having been buried are to be interred at a new burial ground, henceforth referred to as Area-1444. This explicit purpose of this burial ground is to be for the burial of individuals who would not otherwise be buried.
2. Once the burial ground has reached sufficient burials as to be defined as a space for the burial of individuals who would not otherwise be buried, MTF Theta-Thirteen (**`"Bring Out Your Dead"`**) is to locate instances of

SCP-1444, recover the bodies and reinter them at Area-1444. This process must be completed within 24 hours of removal from the grave, to ensure that a Creon Event does not occur.
3. The same process is to be simultaneously performed for cremated ashes, interring such remains at a mausoleum built on the grounds of Area-1444.
4. The burial ground and mausoleum of Area-1444 are to be monitored for the presence of new SCP-1444 instances.
5. If new burials are noted as occurring within Area-1444 and confirmed as SCP-1444 activity, this Containment Strategy will have been successful.

Description: SCP-1444 is an anomalous phenomenon affecting human corpses (designated SCP-1444-1) that would otherwise not undergo any form of burial or interment. SCP-1444 is associated with three kinds of anomalous activity, which are designated as Antigone Events, Creon Events, and Pharoah Events. A description of each follows:

Antigone Events: Twenty four hours after death, an SCP-1444-1 instance will disappear. Simultaneously, a new interment location appropriate for the SCP-1444-1 instance will manifest, with the SCP-1444-1 inside.

The nature of this interment varies between SCP-1444-1, but tends to be a form of interment appropriate for the presumed culture and beliefs of the SCP-1444-1 instance in life. For instance, SCP-1444-1 instances who were strongly opposed to burial will instead be cremated.

SCP-1444-1 instances tend to be interred in locations that are appropriate for the individual in question. These have included familial burial plots, locations the individual had expressed interest in while alive or cemeteries containing acquaintances of the individual.[2]

These events are typically accompanied by an epitaph, that describes the SCP-1444-1 instance in question.

Creon Events: When an SCP-1444-1 instance which has previously undergone an Antigone Event is removed from the location where it was interred, a Creon Event may occur twenty-four hours later.

In a Creon Event, the SCP-1444-1 instance will disappear, and be reinterred at the location it was previously interred within. The existing location will undergo anomalous modifications that form obstructions that prevent future attempts at retrieving the SCP-1444-1 instance in question.

These modifications have varied in form, but have included the spontaneous appearance of rocky matter and vegetation around an SCP-1444-1 instance, or increased security measures on a building containing SCP-1444-1.

Creon Events occur selectively based on the nature and reason behind an SCP-1444-1 instance being removed. If an SCP-1444-1 instance is being removed so that it can be reinterred at a new appropriate location, no Creon Event will occur.

Pharaoh Events: Immediately following a Creon Event, a Pharaoh Event will occur targeting any individuals involved in the removal of the SCP-1444-1 instance from the SCP-1444 designated burial place. All targeted individuals will suffer immediate cessation of heart function.

History: Prior to 2016 and the implementation of Containment Strategy 1444-7, SCP-1444 was classified as a Keter class anomaly due to the ubiquity of Antigone Events and their inability to be impeded. Due to the moral complications of the heavy amnestic usage that prior iterations of the SCP-1444 containment profile required, the Ethics Committee began to look into alternative containment methodology.

Researcher Taylor Hunt submitted Containment Strategy 1444-7 in response to this search, putting forth an alternative containment

profile that would direct SCP-1444's attention to a specific area, and then encourage it to bury more bodies there. This was successfully implemented.

Addendum: SCP-1444 Epitaph Examples

1945 - 1999
You never had enough money to travel to Paris. I hope being buried there can make up for it.
2001-2005
I am sorry that you never got to see the tropics. Your future was bright.
1901 - 2008
To outlive your friends and family is as much a curse as it is a blessing. May you be with your children again.
1963 - 2016
You'd like it here. It's nice and peaceful, just what you wanted. A good place for everyone I take care of.
1982 - 2018
You were taken too soon. Thank you for helping me. I couldn't have done it without you.

Footnotes
1. The Department of Analytics already monitors for these occurrences, however, due to the nature of the bodies interred by SCP-1444, it is unlikely any will receive media attention.
2.UPDATE 06/01/16:Outdated. All Antigone events since

06/01/2016 have interred SCP-1444-1 at Area-1444.

« SCP-1443 | SCP-1444 | SCP-1445 »

SCP-1445: An Antique Spacecraft

Item #: SCP-1445

Object Class: Safe

Special Containment Procedures: SCP-1445 is to be kept in a standard storage chamber inside Storage Site-23, with standard humidity control mechanisms for purposes of antique preservation. The object is to be kept sterile and examined biweekly. Other additional antique preservation measures may be employed as necessary under the direction of the curator Mr. C , an expert in Ming Dynasty antiques from the Antiquities Department. Guards posted at the entrance of the chamber are to search for and confiscate matches, lighters, or any other incendiary tools from visitors.

Because public knowledge of SCP-1445 existed prior to its containment in various degrees due to its history, information countermeasures have been deployed by the Foundation in order to prevent the spread of knowledge of its anomalous properties. In the Western world, where references to the object have been found in texts back to 19 CE, the history of SCP-1445 is to be branded as a myth. References to the object as such have been disseminated into the media, discrediting the actual accounts of the object. In the People's Republic of China, the aid of the Chinese government has been enlisted to restrict access to contemporary accounts of SCP-1445 and to suppress the rumors of SCP-1445 in Chinese internet circles. Specifically, the government internet commentators colloquially known as the "5 Mao Party" have been instructed on the Foundation's behalf to disparage any users who allege the existence of the object, past or present, on the basis of the history of SCP-1445 being entirely made up of "superstitious beliefs". They were further instructed to redirect the attention to modern Chinese spacefaring achievements and divert the topic completely, using Chinese nationalism as a catalyst.

Description: SCP-1445 is a wooden chair approximately 0.75 meters tall, resting on top of a square base of 1.5 meters with a height of 3 centimeters. The base suffers minor burn damage, presumably from its first usage. All of the wood material used in SCP-1445 has been identified to be from *Dalbergia odorifa*[1]. When carbon dated, the object was to determined to be about 5 years old and to have been made around 14 CE, or during the early portion of the Ming Dynasty. Eleven rockets are attached both to the left and right faces of the base, for a total of twenty-two rockets. The rockets have fuses that are suspected to regenerate after use; however, no other parts of the object display such regenerative properties and can be damaged as expected. Mr. C noted the furniture as a whole to be extremely well maintained for its age, attributable to the time the object spent in the vacuum of space. However, it has suffered minor damage from what have been determined to be micrometeoroid impacts, though the object was repaired and restored to the greatest extent possible after acquisition, under the coordination of Mr. C .

SCP-1445 first entered the Foundation's attention in 20 CE, when Foundation web crawlers noted persistent rumors in the popular Chinese web portals and of the chair of the Ming Dynasty official Wan Hu being found in low Earth orbit. The rumors were detailed to the point of providing apparent coordinates of [REDACTED] and low-resolution pictures of the object. Using the Foundation telescope located at [REDACTED], researchers were able to see the object along with what appeared to be a seated cadaver. Additionally, after a search of Foundation historical databases, contemporary records of the Ming Dynasty dating from 14 CE were found that confirmed the historical nature of the launch. After the verifications of the rumors, the Chinese government was contacted, and the offending material was immediately removed, with information countermeasures then developed and deployed as per the Special Containment Procedures.

Extraterrestrial Retrieval Team - was dispatched to the site and removed both SCP-1445 and the cadaver for examination upon arrival at Storage Site-23. After SCP-1445 was brought to Storage Site-23, the cadaver was taken away and brought to the medical

wing for an autopsy. At the same time, a request for an expert to the Antiquities Department was made, which resulted in Mr. C being brought to Storage Site-23 to examine the object. He had inferred correctly that the piece dated from the Ming Dynasty and noted the damage the object had received, then suggested measures to store and preserve the object. He offered to perform said measures to demonstrate their effectiveness, and after review he was inducted as a curator for SCP-1445.

Upon detailed examination of the retrieved objects conducted by scientific personnel on site, it was noted that neither the chair nor the cadaver suffered the damage that they should have sustained upon traveling at escape velocity from atmospheric friction and drag. In addition, neither suffered any significant decomposition due to the time spent in the vacuum of space, though the cadaver had been frozen solid. The cadaver was noted to be wearing a *hanfu*[2] appropriate to the style of the Ming Dynasty and a *wushamao*[3], consistent with the object's time of origin. The clothes were then removed for the autopsy, which determined that the specimen had suffered from brain damage stemming from sudden deceleration and had died as a result of asphyxiation. Damage from micrometeoroid impacts was also found on the specimen, similar to the damage found on SCP-1445.

A testing procedure for SCP-1445 has been proposed by Dr. A , in order to discern the anomalous properties of the object directly through experimentation. After a week of consideration and consultation with other departments of the Foundation, the proposal was rejected by Site Director (See Addendum-1445-A). However, based on contemporary documents in Foundation historical databases, the observed position of the object in space, and the information received from the autopsy conducted, some anomalous properties of the object have been hypothesized, for focused testing of the object in the future:

1. The fuses of the object are capable of regeneration. When found, the fuses were unburnt, but contemporary documents clearly describe a "[…] ceremonious lighting of the fuses."
2. Upon the lighting of all of the fuses, SCP-1445 is capable of reaching escape velocity and generating an anomalous

amount of propulsion from the rockets. The hypothesis is supported by the object's final position in space, in a low Earth orbit. The contemporary description of the event indicated that actual rocketry was involved, because the object was said to have "[brought] Wan Hu into the aegis of Heaven with a great deal of fire and smoke, to never be seen again."

3. The object generates an anomalous field around it to nullify the effects of atmospheric friction and drag. No damage has been observed on the object from such effects and any object reaching Earth's escape velocity should have suffered significant damage.
4. The object comes to a sudden halt immediately after entering low Earth orbit. The specimen was found to have suffered from brain damage from rapid deceleration, suggesting that the object stopped moving upon reaching its current position. Additionally, the contemporary documents described Wan Hu's goal as "[breaking] the reach of the Earth to join Heaven as one," which could be interpreted to have been accomplished by entering into low Earth orbit.

+ Addendum-1445-A

> After having consulted with the Accounting Department and the Information Control Department, I am afraid that your proposal for testing SCP-1445 will be rejected. Following are the reasons for denial: According to the Accounting Department, the proposal that you have sent will cost approximately $. million for retrieval alone (and this is in addition to taking valuable time out of Retrieval's busy schedule). Then, adding in the $. million estimate the Information Control Department gave me (assuming a best-case scenario) or up to $. million (assuming a worst-case scenario), I am afraid that there is just not enough funding available for testing this object. The $. million that has already been spent on it is already far and beyond the total costs of most objects. While the Foundation's

coffers are deep, and research is an important aspect of the Foundation, we can hardly afford to be extravagant while testing an easily contained Safe-class object that is already fairly well understood. I respect your devotion to science and empirical data, but the potential benefit for the cost is low, the amount of risk is high, and there are more urgent matters that draw the Foundation's attention and resources. Remember our priorities, Dr. A .

Cordially,
Site Director

Footnotes
1. Commonly known as fragrant rosewood, a popular material for luxury wooden furniture during the Ming and Qing dynasties.
2. A traditional Chinese silk robe worn by the gentry.
3. A hat worn by Han Chinese officials during the Ming Dynasty.

« SCP-1444 | SCP-1445 | SCP-1446 »

SCP-1446: Metaphysical Graffiti

Item #: SCP-1446

Object Class: Euclid

Special Containment Procedures: Samples of SCP-1446 should be kept on individual wooden slates, each wrapped in opaque plastic, in an hermetically sealed container. Only one sample should be maintained permanently; test samples should be incinerated at the conclusion of testing. Two guards armed with portable dry ice blasting units and infrared limited goggles should be on site at all times.

Testing is limited to D-Class personnel. Any agents wishing to interact with SCP-1446 must undergo Protocol 94-Wegner-Gyatso training, hold Level 3 Clearance or higher, and obtain class 4 permission. Any others coming in contact with SCP-1446 must be administered class-c amnesiacs or be terminated.

Description: SCP-1446 is any of a number of examples of an acrylic based, spray paint graffiti. SCP-1446 can appear in any format which can be depicted by this medium on a conventional surface, making instances of SCP-1446 difficult to distinguish until their anomalous properties manifest.

When a person observes an instance of SCP-1446, and consciously focuses on the art, it will immediately begin to spread, expanding over all available surfaces rapidly, introducing new themes and elements as it grows. This effect will last as long as it continues to be both visually and consciously examined by a human being. This can quickly grow hazardous as the expanding area covers buildings, vehicles, even people, spreading over skin, eyes, and into orifices. Depending on the size of the original sample and the number of viewers, SCP-1446 can easily cover 50 square centimeters of surface per second per observer. No maximum growth rate has been determined.

SCP-1446 will flow over any solid substance normally capable of holding paint in a setting pattern. It cannot cross over most fluids, and any breach between solids greater than 1 (one) centimeter effectively blocks growth. Only direct human observation triggers instances of SCP-1446. Anyone exposed, however, is subsequently able to create new instances of SCP-1446 simply by concentrating on the memory and using ordinary acrylic spray paint.

SCP-1446's thematic material is wildly variable, but typically draws from the memories and experiences of the viewer(s). Designs mimic established graffiti tropes and artistic patterns witnesses are familiar with. Despite this apparent psychic link, SCP-1446 does not appear to be self aware. While manifestations lean towards the artistic and abstract, occasionally fanciful depictions of the observer's personal life do occur. This makes SCP-1446 a risk for possible information leaks; security and exposure procedures should reflect this. To date test subjects have shown no conscious control over the imagery created.

+ Video of SCP-1446 Growing Under Observation

SCP-1446 was an original display at an underground gallery event entitled TAZ-018, Moving Target. Held in the Warehouse District in , Oregon, people were killed in the initial exposure which the city originally interpreted as a disease outbreak or biological attack. No surviving promoters of the event have been located. Fliers for the event contained the following copy :

> A work of art isn't static. It never stops being created. When paint touches canvas, the creation has only just begun. Now it's time for the painter to step back and the critic to step forward. The observer breaths life into art, each one changing its meaning, building on it. The art feeds on their ideas, their beliefs, their dreams and nightmares and perceptions, they imbue the creation with meaning. The interplay between the art and the patrons blossoms outward, smothering the boundaries between them until one wonders if there were ever a distinction between artist and audience at all, or if art is just a moving target?

SCP-1447: Tulpa

Item #: SCP-1447

Object Class: Keter

Special Containment Procedures: SCP-1447-1's current containment unit comprises an airtight 2.5m x 2.5m x 2.5m concrete container, reinforced with 6cm ablative steel plating and suspended within Bay 4. The cell exterior is to be inspected daily and any damage reported immediately. Dented or otherwise structurally compromised plating is to be patched; a reserve of replacement steel plate of the appropriate gauge is to be maintained at 30 square metres. Discovery of any hole or crack in the plating should be considered a breach of containment and SCP-1447-2's quarters are to be immediately secured.

SCP-1447-2 is confined to his quarters, the location of which relative to SCP-1447-1's containment unit has been selected to minimise possible interaction between SCP-1447-1 and other Euclid and Keter-class SCPs as well as incorporating blast-proof screens and chokepoints to be employed in the event of a breach. Reasonable requests from SCP-1447-2 may be granted with the exception of any item which could facilitate external communication. SCP-1447-2 may be consulted by maintenance staff on issues relevant to his primary area of expertise - however, following Containment Breach 1447-01, SCP-1447-2 is no longer granted freedom of the facility.

SCP-1447-2 is to spend at least 4 hours a day meditating on the following topics: 'SCP-1447-1 is getting weaker', 'SCP-1447-1 is dying', 'SCP-1447-1 is unable to maintain physical form'. Any qualified practitioners of Tibetan Buddhism on-site are instructed to participate in these sessions. Topics which could imply a containment breach such as 'SCP-1447-1 is going away', 'SCP-1447-1 is being reabsorbed into my mind' or similar are not to be employed. Failure by SCP-1447-2 to comply with this procedure is punishable by removal of requested items and privileges.

Description: Although current containment measures and the speeds at which SCP-1447-1 typically move make close observation impossible, initial recovery and SCP-1447-1's numerous breach attempts have substantiated eyewitness reports of its appearance. SCP-1447-1 is a quasi-physical humanoid entity resembling an Asian male in traditional Tibetan Buddhist monastic garb; its face is visually distorted and indistinct, even when viewed on high-speed footage.

SCP-1447-1 typically remains in constant motion - frequently in excess of 200kph - for approximately 20 hours a day, which time is chiefly spent attacking the interior of its cell. Reinforcing SCP-1447-1's containment unit with hardened steel plating has been successful in reducing the incidence of breaches but has not proven totally immune to SCP-1447-1's efforts. SCP-1447-1 is very capable of exploiting small breaches in its containment unit and is able to insert itself through apertures as small as 200µm in diameter.

SCP-1447-1 is largely resistant to standard-issue sidearms - higher caliber munitions appear to temporarily disrupt SCP-1447-1's physical form, causing it distress, and have been effective at forcing it back into containment. High explosives have proven effective at completely dissipating SCP-1447-1; however, when attacked in this manner SCP-1447-1 has shown the capacity to rematerialise anywhere in the immediate vicinity, ignoring any intervening barriers. Furthermore, during Breach 1447-05 SCP-1447-1 apparently goaded security personnel into employing explosives near the containment area of SCP- , resulting in an additional breach event.

Attempts at communication with the entity to determine sentience remain inconclusive - although SCP-1447-1 responds to questions its vocalisations are largely unintelligible; analysis has revealed them to be garbled versions of mantras in the Tibetan Buddhist tradition, repeated hundreds of times a second. SCP-1447-1 is not implacably hostile to human life and remains focused on reaching and killing SCP-1447-2. However, Foundation personnel who attempt to impede its progress are subject to attack and if frustrated in its efforts it has been observed to become indiscriminately violent.

SCP-1447-2 is a 5 -year-old Caucasian male who claims to be , a computer hardware and software entrepreneur of some note.

SCP-1447-2 has been unable to explain the continued activity in the public eye of his namesake, a figure who shares SCP-1447-2's alleged identity and life history, but has speculated that he may be an imposter hired by his business associates. His counterpart is to be kept under surveillance by Foundation personnel as another possibility is that either SCP-1447-2 or his counterpart is an entity similar to SCP-1447-1.

Recovery Log 1447

SCP-1447-2 claims that a lamasery allegedly located in Qinghai province, China provided him with the location of Site-73 and arrived there on / / seeking sanctuary from what he described as a 'tulpa' (see Interview 1447-21). Two days later Site-73 came under repeated attack by SCP-1447-1, resulting in the deaths of two Agents. SCP-1447-2 was evacuated via plane and the attacks immediately ceased.

SCP-1447-2 was transported to London and subsequently moved to Site-60 - SCP-1447-1 took under three weeks to locate the site, again attempting to breach its security and gain access to SCP-1447-2. On-site personnel were ultimately able to funnel the entity into an early version of its current containment unit at significant cost in terms of expended human and material resources.

Addendum 1447-01

SCP-1447-2 has been informed of the death of his counterpart; he requested a full medical checkup, which was granted. Tissue and hair samples taken from SCP-1447-2 show no anomalous characteristics.

SCP-1447-2 remains convinced that he will be successful in the destruction of SCP-1447-1 through the application of methods of concentration and meditative practice. Successive breaches have indicated no change in the capabilities of SCP-1447-1 to date. However, it is noteworthy that the entity's activity within its containment unit is severely curtailed during periods in which SCP-1447-2 engages in focused meditation on the abolition of the tulpa. Thermal imaging reveals that SCP-1447-1 is almost completely still during these periods, adopting the *vajra* meditation

position. Foundation consultants versed in the Tibetan Buddhist faith have posited that SCP-1447-1 may be sufficiently sentient to be able to meditate on its own existence, thus reasserting itself.

Addendum 1447-02

Proposals are under consideration to incorporate means of disrupting SCP-1447-1's meditation into its containment unit - the incorporation of a hydrochloric acid bath similar to that employed in the containment of other Keter-class SCPs is presently considered too likely to lead to a breach via the delivery mechanism; other possibilities include microwave emitters to heat the interior of the unit and high-volume sonics proven to inhibit concentration.

Current theories indicate that the death of SCP-1447-2, at the hands of SCP-1447-1 or otherwise, is unlikely to result in the destruction of the tulpa given its current level of autonomy; controlled infliction of pain on SCP-1447-2 shows no corresponding change in behaviour on the part of SCP-1447-1. However, SCP-1447-1 is currently containable largely by virtue of the fact that it consistently seeks out and attempts to kill SCP-1447-2; freed from this compulsion the entity would become completely unpredictable. For the foreseeable future containment efforts must focus on further reducing the incidence of breach attempts and minimising the exposure of other Foundation assets to SCP-1447-1.

Access Interview 1447-21

Interviewer: Dr. Rolfus
Interview Subject: SCP-1447-2
Date: 20/09/19

Dr. R: How are you feeling today, SCP-1447-2?

SCP-1447-2: That's not my name.

Dr. R: I understand that you claim to be .

SCP-1447-2: I *am* .

Dr. R: We'll get to that. What is the nature of your connection to SCP-1447-1?

SCP-1447-2: That's what you call the tulpa, isn't it?

Dr. R: That is what we call the entity that has thus far attacked two of our facilities in an effort to get to you.

SCP-1447-2: I created it.

Dr. R: You created SCP-1447-1?

SCP-1447-2: Yes. After '85 I resumed my travels in India and Tibet. I guess I was seeking a spiritual experience.

Dr. R: You were a tourist.

SCP-1447-2: Yes, of sorts. I found a group of monks in Qinghai who said they would teach me how to create a tulpa.

Dr. R: What did you hope to accomplish?

SCP-1447-2: Well. A tulpa is supposed to be a, a thought-form, made visible and tangible to others through intense meditation.

Dr. R: Answer the question.

SCP-1447-2: I thought I had. I guess I didn't have any ulterior motives. To manifest my thoughts, to impose my will on reality; isn't that enough?

Dr. R: You couldn't control this tulpa?

SCP-1447-2: At first I could. I wanted to manifest the Budai. You probably know him as the Fat Buddha, but he wasn't a Buddha, he

was a folkloric deity. The monks told me to choose something else but I became fixated on it.

Dr. R: If you don't mind me saying so, footage we have of SCP-1447-1 does not resemble the Fat Buddha.

SCP-1447-2: No. Over time he changed. He became thinner, meaner-looking.

Dr. R: Its behaviour changed.

SCP-1447-2: Yes. I imagined him as jolly, a prankster. It would play practical jokes on me and the other monks, but over time they grew more and more spiteful.

Dr. R: What happened?

SCP-1447-2: It began to do things like putting pots of scalding hot water over doors. He hid snakes in our sandals. Harmless first, then poisonous.

Dr. R: I wasn't aware there were venomous snakes in Tibet.

SCP-1447-2: There's one. The Fea's viper. But you're right, their habitat is hundreds of miles south of the monastery. I didn't understand how he had got it.

Dr. R: And now you do.

SCP-1447-2: His speed. Yes. One day I realised I couldn't visualise his face any more.

Dr. R: That was a turning point?

SCP-1447-2: Yes. He became murderous. The monks caught him trying to cut my throat

during the night.

Dr. R: They were able to see the tulpa by this stage?

SCP-1447-2: Yes. They were afraid the tulpa would kill them too. They told me about .
Note: Operational codename for Site-73 used exclusively by recovery agents.

Dr. R: You are aware that it is quite impossible for them to have knowledge of that facility.

SCP-1447-2: So you tell me.

Dr. R: And as to your identity…

SCP-1447-2: I've told you as clearly as I can. Ask your damn IT department.

Dr. R: How do you account for these?
Note: Dr. Rolfus shows SCP-1447-2 a number of recent press cuttings concerning his namesake.

SCP-1447-2: I cannot.

Dr. R: There is in fact no evidence that left the United States during the period we are discussing. In fact, I have copious evidence that during the time you claim to have been in Tibet he founded another company.

SCP-1447-2: Maybe hired someone to impersonate me. It says I'm back at . There's your motive.

Dr. R: Rest assured we'll be keeping both and under close observation.

SCP-1447-2: No, that's not good enough. I want my life back. You don't have the right to

detain me here.

Dr. R: Mr . You are here because you are currently the target of an apparently supernatural being that has thus far cost this organisation an extraordinary amount of money and dozens of lives to contain. We have every right. Tell me, what happens if SCP-1447-1 kills you?

SCP-1447-2: I don't have to listen to this.

Dr. R: Will SCP-1447-1 cease to exist if you die? Answer the question.

SCP-1447-2: I refuse to answer.

Note: Interview terminated by Dr. Rolfus.

« SCP-1446 | SCP-1447 | SCP-1448 »

SCP-1448: Legend Tripping

Item #: SCP-1448

Object Class: Euclid-nuntii

Special Containment Procedures: Mobile Task Force Nu-6 “Triple-Dog Daredevils” is tasked with tracking SCP-1448 to the best of their ability. Active members of Nu-6 must appear to be between the ages of 12 and 18, and have experience in undercover work. Support personnel also require experience in undercover operations but may be of any physical appearance. Once SCP-1448 has ceased migration, Nu-6 will pose as minors and make regular reports regarding any statements made about the area inhabited by SCP-1448, hereby SCP-1448-1. Footage, images, and reports of SCP-1448 are to be discredited.

Each instance of SCP-1448-1 is to be purchased by an appropriate Foundation front company and closed to the public when possible; otherwise, the Foundation is to cooperate with the appropriate authorities to acquire the area under eminent domain.

Any minors approaching SCP-1448-1 between sunset and sunrise are to be detained and questioned, then administered amnestics and released. If possible, false memories detailing the failure of any tasks they came to accomplish should be implanted.

Description: SCP-1448 is an incorporeal entity that appears as an opaque black object roughly 8 meters in diameter with a rapidly shifting physical form. SCP-1448 only absorbs visible light in very dim light, rendering it invisible to the naked eye from shortly before sunrise to shortly after sunset and difficult to see otherwise; however, it is several degrees cooler than its surroundings, allowing it to be tracked via infrared sensors. Except during migration events, SCP-1448 will display no activity whatsoever. SCP-1448 emits indistinguishable whispering noises at roughly 10 dB during migration events.

SCP-1448 will only remain in one area for a period of between three months and ten years, with the median time of residence being fifteen months. After this period of time, SCP-1448 will leave and travel to a new destination at a mean speed of 65 kph and a height of between one and fifteen meters. SCP-1448 will normally travel approximately 950 kilometers before choosing a new habitat.

SCP-1448 tends to inhabit manmade structures, although by no means will it restrict itself to artificial habitats. In every recorded instance, SCP-1448-1 has been in an area accessible to the public. SCP-1448-1 has, in the past, been:

- Churches. In all cases, churches inhabited by SCP-1448 have always been over 53 years old at time of migration. SCP-1448 rarely inhabits other religious centers.
- Cemeteries. Cemeteries inhabited by SCP-1448 frequently have larger-than-average gates. Said gates often require frequent maintenance to prevent rusting.
- Caves. Subterranean areas that have been SCP-1448-1 frequently become colonized by bats after SCP-1448 departs, if they were not already home to bats.
- Trees and stumps over two meters in diameter. Oak trees are the most common tree for SCP-1448 to inhabit.
- A variety of abandoned buildings in varying states of disrepair. SCP-1448 has attempted to inhabit SCP-1084 on five separate occasions, in each case compounding [REDACTED].
- Densely forested areas. Forests containing SCP-1448 have been noted to become significantly darker after containment and appear to remain so indefinitely.
- Small bodies of water, such as swamps, ponds, and the shores of lakes. In these cases, SCP-1448-1 has always been the site of at least one drowning, intentional or otherwise.
- Amusement parks and other outdoor recreational areas. Persons who enter SCP-1448-1 during these instances are highly unlikely to dispose of refuse properly.

In a disproportionately large number of cases (16.3%), SCP-1448-1 has been the scene of at least one death prior to hosting SCP-1448. Said death has been within twenty years of containment in each

incidence. 118 separate incidences of SCP-1448-1 have been recorded since discovery in 1839.

The effects of SCP-1448 being present at SCP-1448-1 are believed to begin approximately three days after SCP-1448 has ceased migration, although they may not become apparent for another week. The primary effect of SCP-1448 is the creation of rumors or “urban legends” regarding SCP-1448-1, often concerning supposed deaths or otherwise paranormal activity in the area. Usually, these rumors (collectively SCP-1448-2) are begun and spread among the youth population of the population center nearest SCP-1448-1. When SCP-1448-1 is near a densely populated area such as a city, SCP-1448-2 will generally be restricted to several city blocks or one neighborhood.

A feature common to every instance of SCP-1448-2 is that, between two and three weeks after SCP-1448 arrives at SCP-1448-1, a rumor will surface to the effect that performing certain actions in or near SCP-1448-1 will yield results that would normally be considered implausible or nonsensical. Every documented "ritual" involves situations in which SCP-1448-1 is likely to be exposed to appreciable amounts of blood (human or animal). No blood lost by a subject at SCP-1448-1 has been recovered.

Examples of rituals produced by SCP-1448 include:

- Placing a dead cat on a grave near SCP-1448-1-01 (see file photo) along with a wart removed from the subject's person was intended to cure the mumps.
- A female having sexual intercourse for the first time in or under SCP-1448-1-23 would not become infected with pathogens or become pregnant from the event, provided no other precautions were taken, i.e. birth control or condoms.
- Repeating the phrase “She [REDACTED]” with one’s eyes closed while running through SCP-1448-1-61 was supposed to cause the ghost of Edna , who committed suicide in SCP-1448-1-61 in late 1894, to manifest and kill the speaker.
- Self-mutilation at midnight in SCP-1448-1-112 resulting in significant blood loss will grant audience with [DATA EXPUNGED]; notably, a similar entity was recovered from the area several months earlier.

Note that all rituals produced by SCP-1448 are completely nonfunctional and each is unique in nature and intended results. Reported failures of these attempts have been somewhat effective in discouraging others from making attempts.

After SCP-1448 migrates from SCP-1448-1, SCP-1448-1 is most commonly avoided by locals whenever possible for several years afterwards. The rumors and legends regarding SCP-1448-1 will stay, along with the mildest versions of the rituals involving SCP-1448-1. Persons will no longer exhibit any unnatural desire to perform these rituals. Former instances of SCP-1448-1 do not require containment. Former instances of SCP-1448-1 are reviewed for further containment on a case-by-case basis (See Incident Report 1448-38).

Research into creating reliable containment procedures for SCP-1448 is underway.

« SCP-1447 | SCP-1448 | SCP-1449 »

SCP-1449: Dreamtime Whale Shark

Item #: SCP-1449

Object Class: Euclid

Special Containment Procedures: SCP-1449 is contained within a Type-65 Containment Module, measuring 13 meters in diameter. The containment module is to be suspended within the storage chamber by means of a magnetic suspension system, and is to monitored daily for any cracks or warping in the surface. In the case of a containment breach, the chamber housing SCP-1449's containment module is to be filled with methyl formate-based foam.

All test subjects exposed to SCP-1449 are to be briefed on known dream features and mechanics, must attain a score of 75 or above on the Lang-Desantos Lucidity Test, and are to be implanted with A5 Eidetic Recall Memetic Triggers. All information gathered by tests is to be compiled in Document 1449-FG.

Description: SCP-1449 is a living artistic representation of a whale shark (*Rhincodon typus*), in the style of Aboriginal Australian dot art and measuring 13 meters in length. SCP-1449 does not require any sort of nourishment, or other usual physical needs. While in an aquatic environment, SCP-1449 will exist in three dimensions, but is capable of shifting to a two-dimensional form when presented with a continuous solid surface. SCP-1449's three-dimensional form consists entirely of paint dots, arranged in the outline of a fully grown whale shark; the entity's two-dimensional form is a top-down depiction of the creature.

SCP-1449's behavior is similar to that of non-anomalous members of the species while in an aquatic environment: However, SCP-1449 will move inland at night once approximately every fifty to seventy-five days, generally in areas of low population. SCP-1449 has been witnessed to move at least 400 kilometers inland. No purpose for this activity is known at this time.

Individuals that enter REM sleep within 2 km of SCP-1449 will experience vivid dreams, which share the same setting and inhabitants, interacting within multiple separate continuities. All dreams will begin with the subject holding on to the tail of SCP-1449, and left within swimming distance of shore. Eighteen unique entry points are currently known, with each point of entry existing in a separate continuity of the setting.[1] Subjects are capable of affecting events within a continuity, and these changes may be witnessed by other test subjects, though these changes will be limited to a single continuity. Throughout all continuities, the dream environment is a series of island chains and small continents set within a large, shallow ocean. Inhabitants of this area are generally humanoid in appearance, with several rarer sapient species of non-human appearance. Inhabitants are not aware of the nature of test subjects, insisting that they are simply “travelers from afar.”

Addendum-01: Notable events, entities and locations within SCP-1449’s dream environment include:

- Test 0003: First interaction with a non-human sapient species. Entities were serpentine in body structure, measuring approximately ten meters in length. Entities were encountered again in tests 0016, 0023, 0040, and 0056.
- Test 0009: Subject witnessed a migratory herd of platypi, each estimated to weigh in excess of two thousand kilograms, led by six heavily-tattooed humanoids standing three meters in height.
- Test 0014: Subject was mauled by a bunyip. No permanent damage sustained.
- Test 0029: Subject was accepted as apprentice to Grey the Rabbit Hunter, completing three successful hunts before end of test.
- Test 0035: First observation of serpentine creature with prismatic scales, measuring an estimated 90 kilometers in length. Subsequent observations occurred in tests 0090 and 0091.
- Test 0054: Subject effected major changes within Continuity-1449-11 by initiating the arrest of local slave trader, which led to the execution of the slave trader. Test subject was considered a local folk hero by inhabitants upon

subsequent visits to the continuity.

- Test 0076: Discovery of approximately one hundred tonnes of molten white plastic and computer circuitry within the caldera of an extinct volcano. Origin unknown.
- Test 0081: Test aborted by subject due to local rugby riots.

Addendum-02: Test 0103, Continuity-1449-01, / /20 : During exploration of the "Dead Jagged Hills" region (Sector 15, Quadrant 3) of the dream environment, Agent is believed to have come into contact with another real-world individual (Henceforth referred to as Subject 1449-0001) active within the dream environment. Agent was the only test subject exposed to SCP-1449 at this time. Subsequent visits to the region did not result in any sightings of the subject.

Subject 1449-0001 appeared as a Caucasian male of approximately thirty years of age under considerable distress. Clothing was heavily worn and patched with leather and sharkskin. Upon sighting Agent , Subject 1449-0001 approached and gave the following message, as recalled by Agent .

> Don't say anything. If you say anything, I lose my mind. You say anything and something horrible happens.
>
> You're a dreamer. Like me. My name is Nikolai, I am the shipseer of Dhûnhome, and of the brotherhood of Selachiosk Pungix Combin, and…fuck fuck fuck no, not Nikolai…I am *not* Nikolai. I'm ag…agent…agent…John? *shit*. ID code 34254-Q0…Q0…dammit dammit dammit!
>
> I'm sorry…I can't…can't keep the memories straight. Being this lucid for this long hurts. The dreaming fills in all the gaps. Things have always been, even as they are brought into being. I've been on this cliff since the beginning of time, just like how this place has always been here. The dream was torn away by the deaths of gods before time began but I watched it happen five years ago and…are you following? I can barely tell the dream and reality apart anymore. My world has always been the way it is and we made it like that. We hurt the dreaming. The shark, that's how we see it. We hurt it.

> Killed it in our world and the dreamtime poured out like its spilled blood and… We made this big scar here, and…and…things are wrong. Fish walk and ghosts haunt the stones and women give birth to plastic children and the leech fields stretch out forever in the seas of human blood and the Center eats cocaine and caviar out of panda-skull bowls on the crushed backs of opal mares in acres of broken glass and it has *always been like this.* Don't…don't do it. Don't do it again.

Subject 1449-0001 returned to his hut at this point, and further investigation revealed that he had vanished. Subsequent visits to the region have not resulted in any further sightings.

Footnotes
1. For example, in Continuity-1449-1 the river Opyu was created by the serpent Iru-La, while in Continuity-1449-2, Iru-La is dead and the river Opyu was dug by the members of the Wilapyna tribe.

« SCP-1448 | SCP-1449 | SCP-1450 »

SCP-1450: Iridescence

Item #: SCP-1450

Object Class: Safe

Special Containment Procedures: SCP-1450 is to be kept in a hermetically-sealed concrete chamber measuring 5 meters in height, width, and length, to prevent propagation. SCP-1450 is to be monitored by monochrome closed circuit security camera. In the event of the camera being blocked by a section of SCP-1450, a team in full biological contaminant protection gear with EKG monitoring should be sent in to clear the lens. Sections of SCP-1450 acting outside of normal parameters, or missing from their positions, should be reported immediately. Colonies of SCP-1450 found outside of containment are to be immediately purged, with either fire or pesticides based on location and quantity of SCP-1450, and their locations to be noted and passed to research team SCP-1450 Gamma.

Description: SCP-1450 is a colony of insects of unknown order, family, genus and species. SCP-1450 comprises a head, possessing antennae, compound eyes, and a series of serrated mandibles; a thorax, with legs attached to the meso, pro, and metathorax; an abdomen with a set of hermaphroditic genitalia; and chromatophoric plating attached to the thorax. SCP-1450 uses its chromatic plating to effect a form of metachrosis in urban environments. Specifically, SCP-1450 colonies tend to mimic dried paint applied on walls. Colonies of SCP-1450 are commonly found to have replaced the paint in abandoned buildings, entering a form of hibernation. It is theorized that their tendency to nest together, as well as the excretion of an insulating form of latex based fecal matter, allows them to survive in colder temperatures that would normally kill insect life. This latex nesting material has been found to be the remnants of devoured paint, digested and excreted.

SCP-1450 possesses an adaptive hunting pattern, which uses the

chromatophoric plating on its back. SCP-1450 will wait until its prey has taken up residence in SCP-1450's nest, then begin to slowly shift their color patterns. Once the prey has begun to examine SCP-1450, the patterns are shifted to a hypnotic, dazzling display which stuns SCP-1450's prey, leaving it helpless as the colony descends to consume it. The speed of SCP-1450's consumption varies, based on the size of the colony and the prey. As seen in Test SCP-1450 KEPLER 1, SCP-1450 possesses a voracious appetite, and is capable of devouring every trace of digestible material present.

A final quality of note in SCP-1450 is the tendency of colonies to expand based on the size of their nest. Examples of SCP-1450 colonies found in the wild are rarely found to inhabit more than one room of any given building, but the size of the room in question can vary greatly. In the case of Report the colony present in , had grown to fill an entire warehouse.

Addendum:

TEST LOG SCP-1450 KEPLER 1

A D-class test subject was sent into SCP-1450's holding cell, with instructions to wait for 20 minutes.

Minutes 1-5: D-Class subject does nothing. SCP-1450 displays no reaction.

Minutes 5-7: D-Class subject paces about the room. SCP-1450 slowly begins to shift in hue.

Minutes 7: D-Class subject goes to examine nearest portion of SCP-1450.

From here, all notations made are based off of studied recordings, as the observation group recalls nothing after minute 7. Analysis shows observation group was affected in the same manner as D-Class test subject.

Minutes 8-13: D-Class subject examines SCP-1450. SCP-1450 responds by shifting its chromatophores to stun D-Class subject.

The examined portion of SCP-1450 holds this color pattern, while the rest of the colony disengages from its nest to begin climbing D-Class subject. Subject appears unaware of presence of SCP-1450 on his body.

Minutes 13-20: D-Class subject becomes aware of SCP-1450, and begins striking at the nearest members of SCP-1450 with his hands. SCP-1450 immediately responds by biting into his legs. Subject is immobilized by pain and collapses. SCP-1450 finishes swarming over his form, and proceeds to consume all material present, excluding subject's bones. SCP-1450 returns to original position and hue.

« SCP-1449 | SCP-1450 | SCP-1451 »

SCP-1451: Sunken Children's Perimeter

Item #: SCP-1451

Object Class: Euclid

Special Containment Procedures: SCP-1451 is contained in Area 15, located in the Sound. It is surrounded by a sphere of wire mesh netting to ensure that no large objects enter the containment area. Access is to be denied to all persons attempting to enter regardless of rank. SCP-1451 must always be submerged in water from the Sound. Natural water currents are not to be obstructed, as that could potentially cause an ongoing Class 3 scenario. Guards are positioned no closer to SCP-1451 than the second barrier.

During Class 2 and 3 scenarios, SCP-1451 must be remotely monitored. If any drastic change in behavior is noted, the Director of Area 15 is to be notified immediately. No attempts to rescue items or personnel from SCP-1451 should be made. In the unlikely case that the Sound begins to drain, Protocol Tempest is to be enacted.

Description: SCP-1451 is a set of metal statues, twenty-six (26) in total (individually referred to as SCP-1451-1 through -26). All appear to be of children with heights ranging from 1.32m to 1.43m. SCP-1451 can be in three distinct states of motion, referred to as Class 1-3 scenarios. During a Class 1 scenario, no movement is detected. This state is ideal for containment. During both Class 1 and 2 scenarios, SCP-1451 are standing in a circle, each one grasping the hands of the statues adjacent to them, and facing outwards.

During a Class 2 scenario, SCP-1451 will animate slightly, shifting themselves with the apparent goal of counter-clockwise locomotion. The hands on SCP-1451 will also raise and lower slightly during these moments. Bubbles can be seem emanating from the mouths as well. This state must be monitored closely, as it can transition quickly into a Class 3 scenario.

When a solid object with a mass greater than 40g enters the center of the circle formed by SCP-1451 (hereafter the Activation area), SCP-1451 animate and attempt to destroy said object. This is known as a Class 3 scenario. Fortunately, small natural currents are present around SCP-1451, with the effect that small, light, objects cannot enter the circle in the center of SCP-1451.

SCP-1451 have shown remarkable strength and agility in this state, though the extent of these qualities has not been found. SCP-1451 have been observed utilizing multiple different tactics when neutralizing a target, including multiple martial arts forms, pressure point application (to humans and machines), and highly coordinated teamwork. After eliminating and disposing of solid materials, SCP-1451 instances will return to their original positions and revert to a Class 1 scenario.

SCP-1451 have ventured as far as 1.3km away from the Activation Area in order to neutralize a target. Attempts to intercept SCP-1451 between neutralizing a solid object and returning to the Activation area have been met with what is referred to as a Class 3.5 scenario, where SCP-1451 will become hostile but instead focus on returning to their original position circling the Activation Area.

SCP-1451 avoids attacking its separate parts, even if it would normally be motivated to do so.

OVERSEER CLEARANCE REQUIRED

Partial Manifest of Recovered Materials

Note: The full manifest of recovered materials is in Document 1451-5-H12-8X4

- One damaged Scranton box[1]
    - Recovered Document (see below)
- ~20.9 kg of brick, scattered inside and outside
- ~4,000 kg of containment-grade concrete

Recovered Document

> **Note:** The document was recovered from a Scranton box, though evidence suggests that the box did not function perfectly.

« SCP-1450 | SCP-1451 | SCP-1452 »

SCP-1452: Terrible Home Additions

Item #: SCP-1452

Object Class: Euclid

Special Containment Procedures: A single immature instance of SCP-1452 is to be contained in a 8x7x8 meter containment chamber located in **Site 77**'s Euclid containment wing. The walls of this chamber are to be constructed out of natural rock, with the floor being coated in a 15 mm layer of glass. If SCP-1452 integrates itself into its containment chamber, it is to be de-attached from the chamber it has integrated itself into and then relocated. Any immature instance of SCP-1452 found outside of containment is to be burned, and any building it has connected to demolished. Mature instances of SCP-1452 are to be totally incinerated.

Uncontained instances of SCP-1452 are to be captured by **MTF-ψ-7 "Home Improvement."** Reports of SCP-1452 activity may also be related to **SCP-474** or **SCP-1992**.

Description: SCP-1452 is a set of residential building additions of varying appearance, with an average size of 5x5x5 meters. Instances of SCP-1452 are ambulatory, and able to move by slowly pushing themselves along the ground at a rate of 10 meters an hour.

If an instance of SCP-1452 comes into contact with a vacant residential building, the SCP-1452 instance(s) will integrate themselves into these buildings as though they were additions to the home. When this process is completed, the SCP-1452 instance(s) will become dormant until the house becomes occupied. Attempting to enter the SCP-1452 instance prior to integration will show that it is constructed out of solid concrete or wood.

The process by which SCP-1452 integrates itself into a building takes between 15 and 45 hours. It will first line itself up with either the left or right side of a building, with a significant number of

SCP-1452 instances preferring the right side. SCP-1452 will then emanate sounds of hammering, sawing, and drilling for several hours. After SCP-1452 ceases to make sound, a 2x1 meter section of the wall SCP-1452 is contacting will dissolve, and a door will move into its place. At this point SCP-1452 will contain a fully furnished interior.

Any occupied building with an instance of SCP-1452 will slowly lose its structural integrity. In addition, any electronic item within the building will become unusable within 2 weeks of being within the building, unless it is stored in SCP-1452. The instance of SCP-1452 will become larger as the house becomes weaker, adding additional rooms and furnishings as time goes on. Approximately 3 months after this process begins, the house will collapse and SCP-1452 will take its place. At this point, the SCP-1452 instance is considered to be "mature" and the second stage of its effect will initiate.

Mature instances of SCP-1452 will continuously produce immature SCP-1452's. These will integrate themselves onto any home near SCP-1452. The interior of the mature SCP-1452 will slowly fill itself in until it is a solid block of whatever its original building material was, such as wood or concrete. It will continue to produce instances of SCP-1452 until it is destroyed.

SCP-1452 was originally discovered in the town of Danville, Pennsylvania after residents in a poor section of town began reporting that their homes had grown additions to themselves overnight. Investigating Foundation Agents discovered several mature instances of SCP-1452, and an immature instance in the process of integrating itself into a residential home. Due to the large number of SCP-1452 infested homes, the neighborhood was razed under the pretense of toxic waste in the area. SCP-1452 was classified as Euclid on 09/18/1997.

« SCP-1451 | SCP-1452 | SCP-1453 »

SCP-1453: Opalus Probandi

Item #: SCP-1453

Object Class: Safe

Special Containment Procedures: SCP-1453 is to be stored in a standard secure containment safe equipped with a dual key lock. Under no circumstances are any personnel to touch SCP-1453, even if wearing hazardous material gear. Should movement of SCP-1453 become necessary, it must be moved by robotic equipment. Any research relating to SCP-1453 must be documented with video equipment.

In the event that any person under Foundation employ who has worked with SCP-1453 is accused of any major unsanctioned criminal misconduct (either within the internal Foundation administrative apparatus or in the external judiciary), Foundation lawyers are to review both all incriminating evidence and the security records relating to SCP-1453. In the event that the accused did come into physical contact with SCP-1453, specific measures must be taken. If the misconduct is being handled internally at the Foundation, this evidence must be deemed admissible to the relevant misconduct hearings. If the misconduct is being handled in the external judiciary, following the conclusion of the trial process, if the accused is found guilty, he/she is to be turned over to Foundation custody. He/she is then to be re-tried without prejudice within a closed Foundation hearing adhering to the same legal standards as the external judiciary, with the accused's contact with SCP-1453 entered into evidence.

Description: SCP-1453 is a polished and cut black fire opal approximately three centimeters long, two centimeters wide, and one centimeter thick.

Any individual who touches SCP-1453 will find themselves accused of a serious crime capable of destroying their reputation and good

standing within their community. The accusations will be made within one week to six months of touching SCP-1453; the length of time between the physical contact and when the accusations occur appears to be random. While SCP-1453 was originally believed to affect any individual or organization which possessed it, it is now known to simply affect individuals who physically touch it. Additionally, no individual is known to have been accused as a result of SCP-1453 more than once.

The complainants in cases related to SCP-1453 have invariably produced corroborating evidence, including personal and third-party testimony, exhibits, documentary material, and/or demonstrative evidence. The origin of this evidence and the means by which it comes into the possession of the complainants is completely unknown at this time. Though the complainant always has had a prior relationship with the defendant, the circumstances of this relationship varies (friends, coworkers, spouses, family, etc.). All complainants have appeared sincere, as have witnesses testifying on their behalf, regardless of their previous views or relationship with the defendant. All defendants have proclaimed their innocence with equal apparent sincerity.

In relevant judicial or administrative proceedings where knowledge of SCP-1453 has not been entered into evidence, the frequency of the defendants being found guilty or at fault is fifteen percent higher than the frequency of defendants in comparable cases in which SCP-1453 was not involved. Whether this represents a statistical anomaly or demonstrates that SCP-1453 has affected the impartiality of the proceedings is not known.

To date, it has proven difficult to determine if *all* allegations made against persons who have touched SCP-1453 were due to its effects (and thus fallacious), or whether these individuals did, in fact, commit the crimes of which they were accused. To the best of the Foundation's knowledge, however, no allegations made against individuals who were either currently in possession of SCP-1453, or who had come into contact with the object within the past six months, have been shown to stand up to scrutiny if knowledge of SCP-1453's effects is taken into consideration.

SCP-1453 is believed to have existed since at least the third century

BCE, but did not come into possession of the Foundation until 20 .

Addendum: Known Accusations Relating to SCP-1453
The following is a list of known accusations made against individuals who touched SCP-1453. Note that, given the particular circumstances of each defendant, all of these allegations were capable of destroying the defendants' reputation and good standing within their community.

- Corruption
- Blasphemy
- Sexual harassment
- Sexual assault
- Incest
- Sodomy
- Battery
- Assault
- Kidnapping
- Apostasy
- Rape
- Magic
- Murder
- Plagiarism
- Treason
- Causing of a Foundation containment breach
- [DATA EXPUNGED]

« SCP-1452 | SCP-1453 | SCP-1454 »

SCP-1454: Sibling Rivalry

Item #: SCP-1454

Object Class: Safe

Special Containment Procedures: Each member of SCP-1454 is to be housed separately in a standard cell of the type used to contain Safe-class humanoid SCP entities. Standard rules and regulations pertaining to contained humanoids are to be applied. During good behavior, SCP-1454 may be allowed to perform menial tasks not related to SCP containment in exchange for access to approved entertainment and reading material.

SCP-1454 individuals are not to be brought into contact with each other, directly or indirectly, except for testing purposes. All members of SCP-1454 are to be kept on standby observation at any time another member is undergoing testing, surgery, or is at a significant risk of life-threatening danger. Use of amnestics on any SCP-1454 specimen is to be avoided except as a last resort.

Description: SCP-1454 consists of four human males, designated SCP-1454-1 through SCP-1454-4, each 36 years old at the time they entered Foundation custody in 20 . All four are in good health and display no unusual physical impairments for human beings of their age. DNA testing has indicated that the individuals comprising SCP-1454 are genetically identical to a degree similar to identical twins.

The members of SCP-1454 possess a shared memory - each SCP-1454 specimen has full access to the memories of every other member, and is constantly aware of what the other three individuals are doing and experiencing at any given moment. The means of data transmission between the individuals is unknown. Attempts to block shared memory by imposing physical distance, solid barriers, electrical fields, hallucinogenic drugs, or [REDACTED] have all proven unsuccessful. Use of amnestics upon one member of

SCP-1454 similarly affects the other three with regards to the memories deleted. All four members of SCP-1454 act independently of each other. In spite of the shared memories possessed by the four, no evidence of a "hive mind" or "group consciousness" has been observed. Individuals have demonstrated no ability to consciously induce another to act.

All four members of SCP-1454 have been diagnosed with a unique psychological illness related to their shared mental state. Each individual member of SCP-1454 is unaware that there are three other humans identical to him and possessing the same shared memory, and is of the belief that he himself has personally experienced all the memories that his mind has access to. All SCP-1454 individuals are of the belief that this state is typical of human beings, and in interviews have neither found it unusual nor made any attempt to explain or rationalize having several simultaneous and contradictory sets of memories. When two or more SCP-1454 individuals are brought into each other's presence, each will fail to recognize the other as a duplicate of himself, and will become extremely confused and agitated as a result, often leading to physical violence.

SCP-1454 was discovered by the Foundation in 20 , when all four individuals comprising it simultaneously threatened to commit suicide by jumping from the windows of four separate tall buildings in downtown , . Examination of government records found that the individuals, who all identified themselves by the name "Eric ", had all lived and worked in the area. All four possessed identical drivers' licenses and Social Security cards, and had filed tax returns each year claiming income from five sources. One birth certificate, five houses, seven automobiles, six college degrees, and seven marriage licenses were found to be associated with the name. A death certificate was also found to be associated with the name, belonging to an individual who had been killed in a drunk driving accident two days prior.

Addenda:

+ Interview Log 1454-1

Interviewed: SCP-1454-1

Interviewer: Dr.

<Begin Log, / /20 , 12:37 PM>

Dr. : Good afternoon, SCP-1454-1. How are you doing today?

SCP-1454-1: Great, thanks. And call me Eric.

Dr. : If you insist. I'd like to ask you a few questions, if you don't mind. Before you came into our custody, what did you do for a living?

SCP-1454-1: I was a lawyer at [REDACTED], a public relations specialist at [REDACTED], a freelance photographer, a featured columnist in [REDACTED], and I owned and operated a small chain of seafood restaurants in the greater area.

Dr. : And what order did you hold those jobs in?

SCP-1454-1: All at once.

Dr. : I see. How many hours did you work a week?

SCP-1454-1: Just depended on the workload… 195 at the least, but there are times I was putting in a 280-hour week.

Dr. : Are you aware there are only 168 hours in a week, Eric?

SCP-1454-1: Of course I am. I think I've earned enough college degrees to know something like that.

Dr. : How is it that you managed to work more hours in a week than there are in a week?

SCP-1454-1: Well, I never said it was easy. Sometimes I'd be asleep in bed or on vacation and I'd still be working overnight getting the books squared away.

Dr. : How were you able to work while you were sleeping?

SCP-1454-1: Doesn't everyone?

<End Log>

+ Interview Log 1454-2

Interviewed: SCP-1454-2

Interviewer: Dr.

Footnote: SCP-1454-2 had not been interviewed by or met Dr. prior to this interview.

<Begin Log, / /20 >, 9:48 AM

Dr. : Good morning, SCP-1454-2.

SCP-1454-2: Nice to see you again, Doc. And like I said before, call me Eric.

Dr. : Of course, Eric. Can you tell me how you're doing right now?

SCP-1454-2: Great. I'm sleeping in, having breakfast, and reading a great book about [REDACTED].

Dr. : Indeed. I'd like to ask you a few questions about your childhood.

SCP-1454-2: Shoot.

Dr. : Did you have any brothers or sisters?

SCP-1454-2: No, but there were always these other kids hanging around the house. I don't know why my parents let them in all the time - they were always so mean to me. Especially at school.

Dr. : How so?

SCP-1454-2: You know how little kids will walk around copying you sometimes to make fun of you? Repeat everything you say, dress like you, act like you? They'd do that to me all the time. They even went around telling people that they were me and I was the copycat. I don't know why - I don't even think they liked each other that much.

Dr. : Did you ever tell your parents? Or your teacher?

SCP-1454-2: They never did anything about it. They just laughed, or they looked at me all confused. That's why I always spent so much time in my bedrooms; to keep away from them.

Dr. : How many bedrooms did you have?

SCP-1454-2: Five, same as everybody.

Dr. : Let's change the subject. Who was your first high school sweetheart?

SCP-1454-2: Cindy, Mary, Emma, Kate, and Jane.

Dr. : I asked about your *first* girlfriend, Eric. Which of them was first?

SCP-1454-2: Kate, I guess. But the rest were my first girlfriend too. How many first girlfriends did *you* have?

Dr. : We're here to talk about you, Eric.

SCP-1454-2: Sorry.

Dr. : Did you marry any of them?

SCP-1454-2: No, we all broke up. On the same night, actually.

Dr. : How's that?

SCP-1454-2: I invited them all to the senior prom. You

should have seen the six of us - like a fairy tale. But it's the damnedest thing. Remember those kids I was telling you about? They were dating them too!

Dr. : Could you explain that?

SCP-1454-2: Well, I went to get Kate a glass of punch, and when I was dancing with Cindy I looked over and saw one of them kissing Emma! And so I went over to yell at him, and he starts copying me again like when we were little, and he's telling everyone that I stole *his* dates! And then I see Mary with the other one's arm around her shoulder… I got my ass kicked that night, but I dished out as much as I took.

<End Log>

+ Interview Log 1454-3

Interviewed: SCP-1454-3

Interviewer: Dr.

<Begin Log, / /20 , 6:38 PM>

Dr. : Good evening, SCP-1454-3. How are you tonight?

SCP-1454-3: Couldn't be better, I'm eating three delicious dinners in my rooms right now. And it's still Eric.

Dr. : I'd like to talk to you about the day you were arrested, Eric. Why were you up on that ledge?

SCP-1454-3: Well, I was a little upset about having died.

Dr. : Excuse me?

SCP-1454-3: I died just a few days before that and it was too much to bear.

Dr. : But you're not dead.

SCP-1454-3: Well, of course I am. I remember it distinctly.

Dr. : Please elaborate.

SCP-1454-3: I was driving home from the office and this car on the other side of the road swerved and hit me head-on. My seatbelt came undone and I got thrown through the windshield and landed face-first on the pavement. I couldn't move and I was bleeding all over the place. The paramedics showed up and started talking about I was going into shock and they needed to get me to the ER, and I was starting to crash, and then I died.

Dr. : I see. What happened after that?

SCP-1454-3: I was pretty upset about it. I called my wives right away, but they didn't understand. So I came home early from work, canceled my dinner date with my new girlfriend, and caught the first plane back from Detroit to be with them.

Dr. : What happened the next day?

SCP-1454-3: I went to my jobs and everyone was acting like they'd seen a ghost. They were saying they'd heard about me dying on TV. I saw it on the news myself, but I don't understand why it was such a big deal. Everyone dies for the first time sooner or later, right? They even said they were already making plans for the funeral.

Dr. : Did you go to the funeral?

SCP-1454-3: Of course. Put on my best black suits and went with my wives. But what I saw there was what really set me off.

Dr. : What was that?

SCP-1454-3: It wasn't me in the coffin at all! It was one of those other assholes! Here I am, dead, and they *still*

think it's funny getting themselves killed just to piss me off! I tried to explain it to my wives, but…

Dr. : …But?

SCP-1454-3: The rest of them were there too. And they were all telling me "Leave my wives alone!" Like I don't know my own wives? That was when I had enough. I took off and decided that if I couldn't even get away from those bastards at my own funeral, maybe they'd leave me alone if I ended it all.

<End Log>

« SCP-1453 | SCP-1454 | SCP-1455 »

SCP-1455: Lagging Door

Item #: SCP-1455

Object Class: Euclid

Special Containment Procedures: SCP-1455 is to be contained within a standard doorframe connecting two rooms which are part of a 36-room (6 rooms by 6 rooms) modular labyrinth array; each room in the labyrinth array is to measure 2.5 meters by 2.5 meters, and must have a minimum of two doors in its walls. This serves as primary containment. All doors between labyrinth rooms are to be colored red so that labyrinth users can more easily detect SCP-1455; similarly, each room is to be numbered, with its number clearly indicated on each wall.

All door frames on Site- which separate public and/or personal spaces from each other are to be of a size compatible with SCP-1455; these serve as secondary containment should SCP-1455 breach primary containment in the labyrinth. In the event that SCP-1455 is found within secondary containment, it is not to be replaced within primary containment until its misaligned phase has reverted to its standard phase. All door frames on Site- which separate public spaces from secure and/or classified spaces, or which separate secure and/or classified spaces from each other, are to be of a size which exceeds, or is exceeded by, that of SCP-1455 by no less than 20% in every dimension.

During its standard phase, SCP-1455 is to be used no less than four (4) times per 24-hour period; insufficient use of SCP-1455 during its standard phase shortens the interval before its phase transition. A video surveillance system is to be mounted throughout the labyrinth, so as to detect the onset of SCP-1455's ambulatory phase, and subsequently of its misaligned phase.

SCP-1455 is not to be blocked, obstructed, or otherwise interfered with during its ambulatory phase.

Any research into the misaligned phase must be performed within the first 90 hours of the onset of this phase: although SCP-1455 has never transitioned from misaligned phase to standard phase before spending at least 96 hours misaligned, the transition is instantaneous once it occurs.

Description: SCP-1455 is a wooden door, painted white on both sides, roughly 2 meters tall, 82 centimeters wide, and 3.5 centimeters thick, with a rounded brass doorknob on each side. When in its standard, non-anomalous phase, SCP-1455 functions as a normal door, standing in a doorframe as it separates two spaces from each other. After an interval of at least six days (shortest observed interval: 6 days 2 hours 14 minutes; longest observed interval: 22 days 9 hours 51 minutes; see document 1455-257-HNB for detailed statistical analysis), SCP-1455 will transition to its ambulatory phase; the duration of the non-anomalous interval can be significantly extended by frequent use (see document 1455-5K-W93 for parameters of what counts as "use").

Upon transition to its ambulatory phase, SCP-1455 will animate, unhook itself from its hinges, and begin to hop around its environment. During the ambulatory phase, SCP-1455 responds to interference by teleporting itself away. The reason why it hops if it is capable of teleportation is not known; however, it is suspected that [DATA EXPUNGED].

If its ambulatory phase is undisturbed, SCP-1455 will seek out another door within a doorframe; upon locating a suitable door, SCP-1455 will instantaneously install itself within the new door's doorframe, while simultaneously installing the new door within SCP-1455's original doorframe. This marks the transition to the misaligned phase.

During the misaligned phase, the spaces adjacent to SCP-1455's current and previous doorframes are conjoined to each other, reflecting SCP-1455's previous location: instead of doorframe A linking rooms 1 and 2, and doorframe B linking rooms 3 and 4 (as is normal), doorframe A links rooms 1 and 4, and doorframe B links rooms 2 and 3. This has been shown to be effective from both sides; further experiments with this phenomenon have revealed [DATA EXPUNGED]. After an interval of at least four days (shortest

observed interval: 4 days 0 hours 26 minutes; longest observed interval: 11 days 17 hours 33 minutes; see document 1455-257-LG for detailed statistical analysis), SCP-1455 will transition to its standard phase.

Note: *As a result of Incidents 1455-23 through -27, all experiments which involve moving SCP-1455 to new locations while it is in its misaligned phase are preemptively denied. - O5-*

Study of the physical composition of SCP-1455 has been hindered by the fact that all attempts to remove samples of SCP-1455 for analysis have instead produced samples of other doors; similarly, attempts to leave markings on the surface of SCP-1455 have instead left markings on the surface of other doors. This is hypothesized to be a further manifestation of SCP-1455's property of warping space towards other doors.

All forms of passive analysis indicate that SCP-1455 is a normal door, with the exception of [DATA EXPUNGED]. This implies [DATA EXPUNGED], which is considered probable, but for obvious reasons cannot be verified.

« SCP-1454 | SCP-1455 | SCP-1456 »

SCP-1456: "You've Won!"

Item #: SCP-1456

Object Class: Euclid

Special Containment Procedures: Media and advertisements in the city of , Colorado are under observation by Foundation personnel for the first stage of SCP-1456. A Foundation outpost, disguised as a call centre, has been established in the town and is operated by TF-Omega 16 “The Contestants”. The centre maintains 60 90 160 unique phone numbers, all publicly listed to Agent . Upon identification of instances of SCP-1456-1, the number presented is immediately called in sequence in order to intercept prize instances. Agent 's listed residence and a block radius is to be monitored during active phases.

A localized media campaign designed to discourage the population from entering the contests presented by SCP-1456-1 has been running for 16 years.

Description: SCP-1456 is a series of anomalous phone-in contests advertised in print, radio, local television and billboards. The advertisements vary considerably in content, claiming to represent organizations both fictional and real presenting a contest or contests promising financial or physical prizes to winning callers. Each will predominately feature a unique phone number. Collectively, these advertisements are referred to as instances of SCP-1456-1.

Instances of SCP-1456-1 appear spontaneously with no discernible external source. Billboards and print examples appear while the medium is unobserved, affecting sets of billboards owned by the same organizations and full runs of local newspapers and periodical simultaneously. Radio and television instances appear to replace regularly scheduled, legitimate advertisements. In either case, no discrepancies have been noted by the owners or operators of the transmission medium.

Calling the number provided by SCP-1456-1 with a local phone number that has not yet been used to call in will result in a “win” or “lose” result. Lose results are a simple tone, commonly described as “harsh” or “grating”, played three times before disconnection. A win result is a chime sound followed by a male voice announcing “You've won!”. Attempting to call in multiple times with the same number will result in a continuous and increasingly loud instance of the “lose” sound, escalating with no known upper limit until the phone is disconnected.

Three days after a successful “win” result, a prize, loosely consistent with the advertised prize, will be delivered to the winner, defined as the owner of the phone number used to make the winning call. The prize appears at the residence of the winner through varying means depending on the contents, by methods both mundane and anomalous.

Sample Prize Instances: For a full list of recovered prize instances, refer to Document 1456-A.

Instance 0054

> **Advertised Prize:** 500 dollar cash prize.
> **Delivery Mechanism:** A homeless local deposited the prize on the doorstep of residence. When questioned, he could not recall the event.
> **Delivered Prize:** Five hundred dollars in assorted bills and small change in a blank envelope.

Instance 0143

> **Advertised Prize:** Non-specific cash prize
> **Delivery Mechanism:** Prize spontaneously manifested traveling at speed through the front window of the residence. Prize was contained inside plastic bag along with a brick.
> **Delivered Prize:** A stolen wallet belonging to , a local resident.

Instance 0567

Advertised Prize: Trip to Rome
Delivery Mechanism: A taxi was waiting at the curb the morning of delivery. Driver identified as a local resident, but could not provide records or reason for arrival.
Delivered Prize: The driver presented Agent with a one-way ticket on Air to Rome leaving from JFK airport in New York. Driver refused to drive agent to the airport, and would not leave until paid.

Instance 0985

Advertised Prize: Sports Car
Delivery Mechanism: A truck belonging to an unidentified towing service delivered prize. Truck vanished upon leaving observed area. Analysis of footage indicates that the truck corresponds to no known make.
Delivered Prize: Nissan 350Z, heavily damaged in an apparent crash. Two bodies located inside. Identified remains and license plate linked with automobile accident in , Germany two days prior.

Instance 1121

Advertised Prize: A Caribbean cruise
Delivery Mechanism: Spontaneous appearance 50m above ground level.
Delivered Prize: Roughly 900 kilolitres of seawater, a small yacht, and several hundred instances of marine fauna.

« SCP-1455 | SCP-1456 | SCP-1457 »

SCP-1457: Mourning Cloak

Item #: SCP-1457

Object Class: Safe

Special Containment Procedures: SCP-1457 is to be contained in a 5m x 5m x 5m containment area furnished with host plants appropriate to its apparent species. SCP-1457 is to be "fed" every 24 hours by designated personnel (See Addendum 1457-2). Humidity, temperature, and light are to be maintained in the containment area to prevent causing stress to SCP-1457.

Description: SCP-1457 appears to be a *Nymphalis antiopa* butterfly possessing a missing forewing and solid white eyes. Despite the tattered condition of its wings, SCP-1457 is still capable of flight. Possibly due to its unique feeding habits, SCP-1457 does not show signs of aging.

SCP-1457 is capable of transferring **`memories between humans`** through skin contact. Test results thus far invariably indicate that the memories transferred pertain to experiences involving isolation and tend to incite a desire for sympathy or **`company`** in the affected party.

When SCP-1457 undergoes stress, the dark blue markings along its wings begin to luminesce. While in this state, SCP-1457 will "broadcast" memories gathered from all humans it has been in contact with. The maximum range SCP-1457 is able to transmit memories through this method is unknown.

SCP-1457 was initially recovered from a relatively suburban area, where a child had discovered it and attempted to care for it. The child was later treated for symptoms of anxiety and depression; SCP-1457 came to the attention of the Foundation when the child's parents and neighbors of the family also began to seek therapy.

Addendum 1457-1: Preliminary interviews with D-Class personnel exposed to SCP-1457 have revealed that memories transferred by SCP-1457 are initially accepted by the receiver as their own. (See interview log)

+ Interview 1457-11-19352

Interview Log 1457-11-19352

Dr. Kiryu *and D-Class personnel D-19352 are seated within SCP-1457's containment area. SCP-1457 rests on D-19352's hand, wings unfolded.*

Dr. Kiryu: This butterfly is called a Mourning Cloak. Does it remind you of anything?

D-19352: No, I don't think so… Wait…

Dr. Kiryu: Yes?

D-19352: I don't know why, but… it sort of reminded me… no, it made me remember something. [pauses] When my mother died. In a hospital with light blue curtains. She was crying, because no one else was there. Just me.

Dr. Kiryu: Why do you think the butterfly reminded you of that?

D-19352: I think there was a vase or something with flowers. Somewhere. And a white butterfly was on the vase.

Dr. Kiryu: I see.

<Class D personnel D-19352 averts gaze from interviewer. SCP-1457 folds its wings. D-19352's eyes are observed to have grown blanker; the pupils dilate and briefly flash white.>

D-19352: Won't you share my stories?

Dr. Kiryu: I'm sorry? What stories?

D-19352: [pauses] Stories? I didn't say anything about stories.

Note: A background investigation revealed both parents of Subject D-19352 to be living. Neither had ever been hospitalized or suffered any major injury.

The incidences of subjects appearing to be "possessed" by SCP-1457 are undergoing investigation. It is currently unknown if SCP-1457 consciously attempts or is able to communicate.

Addendum 1457-2: Based on the journal logs of Dr. , the first designated "food source" of SCP-1457, it is theorized that SCP-1457 does not sustain itself through human contact, but rather feeds off of certain human emotions.

+ Excerpt from Journal Log 1457- -K

, 199
I should have known the random mandatory EI test was more than just a new routine for staff.

, 199
I saw two adults arguing in a hallway; I was huddled by a stairwell in the dark. The screaming continued and a door slammed, someone walked up the stairs but I couldn't move, because I knew mother wasn't going to return and she had spoken about it so many times, but I never thought it would actually happen, I thought that they would stay together for just a little longer, because they would always be there for me to talk to when one of them was angry.

, 199

There's a consistency in all of the memories. Every time, every instance, is a scenario in which someone wholeheartedly and desperately yearns for the company of another, whether a loved one or simply any other being. The emotions SCP-1457 appears to channel border on the indescribable; it's somehow more than loneliness, somehow more than abandonment.

, 199
I was walking, watching an airplane fly overhead, maybe carrying my best friend. We'd grown up in the same neighborhood, walked to school together for years. I know for sure I won't see him again, but he's so happy to finally be heading out into the world; I hope he remembers me. His apartment is completely empty now; the tree we used to climb is empty, the parking lot and the windows and everything is empty.

, 200
It's uncanny just how many unique memories SCP-1457 seems to have "stored". Since its age has yet to be determined, it's quite possible that it's been around for many years, decades even.

, 200
I was seated at a desk. Three deadlines tomorrow, four mouths to feed. It had always been this way, but if I have to drag myself through early waking hours to make sure they can sleep soundly another night, even if they don't know, it'll be enough. It'll have to be enough. I can't let them worry.

, 200
I've gone through the testing logs. These memories have been given out before. It

seems that if SCP-1457 makes contact with the same human multiple times in succession, the memories given will be in reverse order of SCP-1457's acquisition of them, with the most recently acquired memories being transmitted first. So if I keep this up long enough, will there be a point where the memories end? Will I know when I receive the memory that started it all?

, 200
I was eating dinner alone. This was his first birthday Dad wasn't around to celebrate. There were still funeral arrangement papers scattered across the table, and the radio is chirping the song he liked to sing to Mom. Outside the sky is gray and miserable and pouring cold rain, but I know at least they're not alone anymore.

, 200
[DATA REDACTED]

, 200
I can't help but wonder how it transfers emotions as well as the memories. I also wonder about the vividness; I wonder why the memories linger. I know they're not mine, but nevertheless, these are common scenarios, common sob stories. At any given time in the world there is always despair, and as much as I try not to think of it, I feel sorry for them all, but I don't know what SCP-1457 wants from me, because every time it passes a memory to me, I don't feel anything.

, 200
It talked to me. It actually talked to me. I don't quite remember how, I just heard a voice in my head when it landed on my hand. Sounded like a child, whispering, "There is no giving or

taking. There is only sharing."

, 200
I saw a residential area. It was fairly nice, with neatly-trimmed lawns, healthy trees, flowers on the bushes. But then I saw someone using a hose to remove something from one of the walls of the house—I think it may have been a chrysalis? There were a few scattered on the roofs and ledges. I saw children on bicycles, and I saw unmoving caterpillars on the sidewalks.

, 200
Why do I even bother writing these records… There's no point in feeling sorry for all these people since there's nothing I can do… Too many people…

, 200
"Let me share with you. Please."

, 200
I saw what seemed to be a forest, what was left of a forest. A tree was falling down, no, being chopped down. I think I remember hearing the sound of machinery. I felt like my sensory perception was off somehow; it was confusing. I couldn't think of what sort of person the memory would belong to.

, 200
Today SCP-1457 didn't fly to me like it normally did. All this time, all this sorrow, and it refuses to fly to me today. Doesn't it feed off suffering? Isn't that what it wants? The worst of it comes when I leave the containment area, I can barely feel the slightest bit of empathy anymore. Who cares about all those memories? Why should anyone bother caring? I've tried…

, 200
“You still don’t understand.”

, 200
“Still, thank you.”

« SCP-1456 | SCP-1457 | SCP-1458 »

SCP-1458: The Tired Mother

Item #: SCP-1458

Object class: Euclid

Special Containment Procedures: SCP-1458 and its current host (Designated SCP-1458-1) is to be contained in a standard humanoid containment unit modified to contain 2 subjects. A paediatrician is to be kept on call in addition to normal medical staff. In the case that SCP-1458-1 expires, contingencies to provide SCP-1458 with another suitable host may be considered if SCP-1458 becomes uncooperative or poses a risk to safe containment. Separation of SCP-1458 and SCP-1458-1 is to be kept to a minimum to reduce stress and anger of both subjects. All staff working with SCP-1458 should be informed of its effect. Any requests for items or sustenance should be directed to the current Head Researcher to be approved.

Description: SCP-1458 is a humanoid entity with vestigial arms whose lower body terminates in a flipper-like appendage. The organism can vocalize similarly to a human female and has an IQ of 132. The organism's main anomalous effect is shown when in the direct line of sight of a subject between the age of 3-16 years whose mother or both parents are expired. Anyone who meets the criteria and is put under the effect of SCP-1458 will have their pre-existing memories of their own maternal figure replaced with the organism. It is able have multiple subjects under its effect simultaneously but will stay in a pacified state unless all are removed from its presence, however subjects remain under the effect and will want to return to SCP-1458.

It will attempt to feed, play with and educate the subjects under its effect. Its attempts at education are usually oriented around ancient history. SCP-1458-1 was the only child under its effect when retrieved, and due to complications relocating said subject due to no records of a subject named [REDACTED] and SCP-1458's co-

operative and calm behaviour when in the presence of the subject, SCP-1458-1 shall be left in the care of SCP-1458 until specified otherwise.

While it generates revulsion in anyone who has been informed of its effect, anyone not informed of its effect will see the organism as a female human, with facial and bodily deformation and scarring. When questioned, the subjects describe SCP-1458 differently, but all are human females and subjects who have had their memory affected by SCP-1458 will describe it similarly. The organism was discovered in [REDACTED] after being caught on a security camera in a shopping mall in [REDACTED]. When questioned SCP-1458 informed researchers that it had been living in the town of [REDACTED] for years and had usually made SCP-1458-1 shop for groceries. People viewing SCP-1458 through electronic devices are not affected by its influence and when questioned about this SCP-1458 informed researchers of its aversion to modern technology.

Interview SCP-1458 7

> **Interviewed:** SCP-1458
>
> **Interviewer:** Researcher
>
> **Foreword:** Interview was questioning to determine where SCP-1458 originated. Researcher was also instructed to attempt to discover SCP-1458 intentions with the subjects under its influence. Researcher had had contact with SCP-1458-1 before and was familiar with it.
>
> **<Begin Log>**
>
> **Researcher :** Who are you?
>
> **SCP-1458:** My name is [REDACTED] and I was born as a daughter of the king of Libya.
>
> **Researcher :** Were you born looking like this?

SCP-1458: No. I was cursed into this. You see, when I was still young and naive I fell in love with a great and powerful man, but he was already married to a woman as mighty and powerful as he was. The wife found out and so as a cruel revenge his wife took all of my children, and in anger, killed them. After that I was turned into the body you see now as a twisted attempt at a gift from the man I once loved.

Researcher : Your children? Who were they?

SCP-1458: My children? They were innocent. She killed them and it was my fault.

Note: At this point in the interview SCP-1458 began vocalizing a low pitched rumbling noise

SCP-1458: I gave birth to those children, Only to fail myself and cause them to die. My love for a man was so foolish that I almost forgot about them until they were gone. I was dead with grief. I attempted to tear out my own eyes to stop the images I was seeing of them. He attempted to calm me by turning me into this and allowing me to exact my revenge on her children.

Researcher : Your revenge? What was that?

SCP-1458: I killed so many of them. So many parents left without their children. I only wanted them to feel the pain I felt but they were not feeling as I had. I had killed without reason known to them. While my children died out of my own mistakes I had killed theirs out of pure anger. I had become worse than she in my anger.

Note: At this point the rumbling vocalization is much louder and more aggressive.

Researcher : Please calm down SCP-1458-1. Who is she?

SCP-1458: She is the woman who caused it all and I

have begun to find her descendants

Note: At this point SCP-1458 ceased speaking and laughed for about 5 seconds

SCP-1458: But they are my children now and I will make them live.

Researcher **:** Who are her children?

<Interview terminated due to outside stimuli>

Closing Statement: Before the interview was terminated, SCP-1458-1 began shouting names of children. When researched it was shown that all names said met the known criteria of to be affected by the organism's main effect. Despite warnings from guards the subject did not stop vocalization and was subdued. After this event SCP-1458 ignored all requests made for 24 hours.

Addendum 1: After the events of Interview SCP-1458-7, SCP-1458-1 is to be closely monitored for any sudden changes in behaviour or mental state to assess what causes them.

Addendum 2: Due to apparent telepathic or mind-influencing affects on SCP-1458-1, precautions must be taken in the event that the effect is not limited to children under its influence.

« SCP-1457 | SCP-1458 | SCP-1459 »

SCP-1459: The Puppy Machine

Item #: SCP-1459

Object Class: Safe

Special Containment Procedures: SCP-1459 is to be kept within a standard containment vault in Safe Wing-C of Sector-25. As of 05/16/ , only Level-1 Maintenance Technician Valera may view and interact with SCP-1459. MT Valera is to be presented with the opportunity to receive a mild amnestic to ameliorate emotional escalation between testing sessions. In the event that MT Valera becomes unavailable to perform further tests, a new individual is to be selected by the presiding on-site counselor.

By executive order, testing is to continue indefinitely.

Description: SCP-1459 is a modified claw crane arcade game machine that stands 2.3m x 1.2m x 1.5m. Like most machines of this variety, it has a central rectangular space with three clear walls on its front and sides with a black, opaque wall on its back. However, SCP-1459 is unique in that the inner chamber has a solid wood panel floor and no chute where a prize would normally be dispensed.

The front panel features two coin slots, a large red button, a microphone, a digital numeric display, a sign that reads "WIN A COOKIE",[1] and a thin horizontal slot from which the aforementioned baked goods are dispensed. There is no power cord attached to the back of the machine, nor is one needed, as it is presumably powered via anomalous means. When SCP-1459 is inactive, the central chamber is completely bare. SCP-1459 cannot be forcefully opened or damaged by any known means.

When one (1) US quarter-dollar coin is deposited into SCP-1459, a hatch will open in the ceiling of the central chamber and a claw carrying an instance of SCP-1459-1 will descend from it.

SCP-1459-1 and other materials produced by SCP-1459 are often too large to normally fit in the upper section of the machine; it is unknown if these materials are manifested by SCP-1459 at the beginning of game sessions or if they are teleported from another location.

After depositing the instance of SCP-1459-1, the digital numeric display will present the number of games that have been played previously,[2] and a voice recording will play, urging the player to press the button and describe a way SCP-1459-1 can be destroyed. After this message has been played, the button on the front panel will glow and the numeric display will initiate a 15-second countdown. The player may then press the button and dictate into the microphone any lethal action that can be performed upon SCP-1459-1, with the only restriction being that players cannot choose a method used in a previous game.

SCP-1459-1 are juvenile domestic dogs (*Canis lupus familiaris*), the breed and gender of which varies. SCP-1459 typically selects a breed that individual players holds the most affection toward. Aside from the seemingly infinite quantity that SCP-1459 contains, instances of SCP-1459-1 do not appear to display any innate anomalous properties and generally behave in a manner consistent with animals of their variety; however, SCP-1459-1 instances may occasionally be subjected to anomalous changes to their physiology or behaviors in order to facilitate the method of destruction dictated by the player.

If the player states a method of extermination within the allotted 15 seconds, the hatch in the ceiling of the inner chamber will open and an array of mechanical arms will descend, carrying whatever is necessary to carry out the player's suggestion. Requests for deaths that are not possible within the confines of the chamber will cause SCP-1459 to display additional anomalous properties to carry out its orders (see Experiment Log).

Once the instance of SCP-1459-1 is deceased, one (1) cookie will be dispensed to the player via the slot in the front of the machine. Cookie flavors dispensed have included chocolate, vanilla, oatmeal, raisin, strawberry, lemon, white chocolate, and peanut butter. The exact variety dispensed to a given player is often the one that the

player has the lowest preference for.

If the player fails to state a method of extermination or the method proves insufficient, a robotic arm will descend from SCP-1459's hatch and bludgeon the SCP-1459-1 instance until it is deceased. No cookie will be dispensed following this event.

SCP-1459 automatically cleans its interior chamber after every game. First, an arm holding a broom descends and sweeps the remains of SCP-1459-1 into a trapdoor. Next, SCP-1459 wipes down the surfaces of the chamber by deploying arms equipped with flat rubber implements, spray bottles containing a soapy solution, and clean white towels. While this process is taking place, a recorded message will tell the player, "*Yeah, you're totally going to hell for this. Play again?*".

+Experiment Logs

Experiment #: 0001
Player: Dr. Yeatley
Statement: "Stabbing."
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.

Experiment #: 0002
Player: Dr. Yeatley
Statement: "Chainsaw."
Result: Same as previous experiment.

[SUPERFLUOUS TEST LOGS REDACTED]

Experiment #: 0048
Player: Dr. Yeatley
Statement: "Shark bite."
Result: The hatch anomalously elongated and produced a great white shark (*Carcharodon carcharias*), which proceeded to bite off SCP-1459-1's head and recede back into the machine.

Experiment #: 0049
Player: Dr. Yeatley
Statement: "Run it over."
Result: SCP-1459 produced a tire attached to a spinning mechanism. After the mechanism accelerated to an estimated 2000 rpm, it made contact with SCP-1459-1.

Experiment #: 0050
Player: Dr. Yeatley
Statement: "Drop it from a great height."
Result: SCP-1459-1 fell through SCP-1459's trapdoor. Fifteen minutes later, it fell through the top hatch at high speed, and was instantly killed.

Experiment #: 0051
Player: Dr. Yeatley
Statement: "Reality TV."
Result: A 1958 General Electric television set fell on SCP-1459-1. The set then powered on and replayed the event.

Experiment #: 0052
Player: Dr. Yeatley
Statement: "Death by blender."
Result: SCP-1459 produced and lowered SCP-1459-1 into a brand blender. SCP-1459-1 sat unharmed inside the device for 3 minutes, after which a robotic arm pressed "puree". The blender was uncovered when this transpired.

Experiment #: 0053
Player: Dr. Yeatley
Statement: "Murdered by its lover."
Result: SCP-1459 produced a second instance of SCP-1459-1, which proceeded to claw and bite the first instance until it died of blood loss. The second instance was eliminated via SCP-1459's default bludgeoning

method.
Note: Only one cookie was dispensed.

Experiment #: 0055
Player: Dr. Yeatley
Statement: "Murder suicide."
Result: As in the first test, a second SCP-1459-1 murdered the first. Following this, SCP-1459 provided the second SCP-1459-1 with a hammer, which the animal ran into repeatedly.
Note: Two cookies were dispensed.

Experiment #: 0056
Player: Dr. Yeatley
Statement: "Crime of passion."
Result: The hatch elongated and a caucasian woman in a red evening gown emerged. The woman (who has not yet been identified) strangled SCP-1459-1 while sobbing and screaming the phrase "you dog" repeatedly. The woman performed this action continuously for 15 minutes; afterward, both the woman and the deceased SCP-1459-1 fell through the trapdoor and out of view.

Experiment #: 0057
Player: Dr. Yeatley
Statement: "Drowning in puppies."
Result: Additional SCP-1459-1 were produced until the entire chamber was filled to capacity. The remaining space was filled with water.
Note: Many cookies were dispensed.

[SUPERFLUOUS LOGS REDACTED]

Experiment #: 0231
Player: Dr. Löfqvist
Statement: "Civil war."
Result: A man in a historically accurate uniform of the Confederate States Army circa

1863 dismembered SCP-1459-1 with his bare hands.

Experiment #: 0232
Player: Dr. Siddell
Statement: "The Judicial System."
Result: Fifteen additional instances of SCP-1459-1 were produced, one of which wore a miniature powdered wig and black cloak, and two of which miniature suits. A noose was lowered around the first instance's head and hanged the instance. The same procedure was applied to the remaining fourteen instances.
Note: Fifteen cookies were dispensed, all of which were of the raisin variety.

Experiment #: 0233
Player: Assistant Researcher Kirchner
Statement: "Made into cookies."
Result: Using kitchen implements and traditional ingredients, SCP-1459-1 was dismembered and incorporated into a batch of chocolate chip cookies. SCP-1459's internal heat increased to an estimated 300 degrees Celsius. SCP-1459 then produced a Caucasian woman in a red evening gown who consumed the cookies while smiling wordlessly at Assistant Researcher Kirchner.
Note: A chocolate chip cookie was dispensed. No traces of animal matter detected in its composition.

Experiment #: 0234
Player: Junior Researcher Leishman
Statement: "Falling off a roller coaster."
Result: SCP-1459's mechanical arms constructed a miniature roller coaster within the internal chamber over the course of 3 hours. Once completed, SCP-1459-1 rode the

ride normally until to the loop section, at which point the ride stopped, causing SCP-1459-1 to fall to the chamber floor. SCP-1459-1 was then bludgeoned via SCP-1459's default method.
Note: No cookie dispensed.

Experiment #: 0235
Player: Dr. Hoshi
Statement: "Batman."
Result: A concrete bust of the fictional character was released from the ceiling of the chamber, subsequently crushing SCP-1459-1. The floor remained undamaged.

Experiment #: 0236
Player: Dr. Philmore
Statement: "Knowledge of the unknowable."
Result: An entity resembling O5- emerged from the trapdoor of the inner chamber, picked up SCP-1459-1, and pulled it out of sight.
Note: When questioned, O5- denied any involvement in the incident.

Experiment #: 0237
Player: D-5923
Statement: "My bare hands."
Result: SCP-1459-1 reacted as if being strangled, although no additional presence was observed in the chamber. D-5923 reported feeling SCP-1459-1's fur on his hands as it died.

Experiment #: 0238
Player: D-5923
Statement: "Spontaneous combustion."
Result: SCP-1459-1 underwent what appeared to be an accelerated form of **SCP-081**.

Experiment #: 0239
Player: D-5923

Statement: "Nuclear deton–" (Subject terminated mid-sentence.)
Result: The resulting explosion was completely contained by SCP-1459.
Note: D-Class personnel no longer permitted for testing. Maintenance Technician Valera selected for further testing due to the low likelihood of K-Class scenarios resulting from her requests.
Note 2: 368 cookies were dispensed in rapid succession. The significance of this is unknown.

Experiment #: 0240
Player: Maintenance Technician Valera
Statement: "Happy thoughts."
Result: SCP-1459-1 was injected with a black substance, convulsed, and collapsed.

Experiment #: 0241
Player: Maintenance Technician Valera
Statement: "Love."
Result: A Caucasian woman in a red evening gown emerged from SCP-1459's upper chamber, sat on SCP-1459-1's face, and began moaning in apparent pleasure. After continuing this activity for another 5 hours, both individuals were removed via SCP-1459's claw.

Experiment #: 0242
Player: Maintenance Technician Valera
Statement: "Old age."
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used. Maintenance Technician Valera was unable to think of an alternative method of extermination and SCP-1459-1 was disposed of in the default manner.

Experiment #: 0243
Player: Maintenance Technician Valera
Statement: "Please, no kill dog."
Result: SCP-1459-1 was given a pillow, a treat, and a pat on the head by a gloved mechanism. 15 minutes later, it was retrieved by SCP-1459's claw. Immediately afterward, SCP-1459 produced a juvenile domestic feline (*Felis catus*) and exterminated it with a single blow to the head with a sledgehammer.
Note: A salted cracker was dispensed.

[SUPERFLUOUS LOGS REDACTED; SEE EXTENDED LOG FOR FURTHER DOCUMENTATION]

Addendum: The following is a manufacturer's mark present on the rear panel of SCP-1459:

Brought to you by the good folks at
Y.W.T.G.T.H.F.T.
in partnership with Sugarcomb Confections.

Footnotes
1. A baked confection commonly referred to as a "biscuit" outside the United States.
2. 2,592 as of 07/09/ .

« SCP-1458 | SCP-1459 | SCP-1460 »

SCP-1459 Extended Testing Log

Additional experiments carried out with SCP-1459. See original documentation for more details.

Standard format:

> **Player:** The individual carrying out the experiment.
> **Statement:** Method of extermination dictated to SCP-1459.
> **Result:** Action performed upon SCP-1459-1.
> **Note:** Additional documentation (optional).

Player: Dr. Lindquist
Statement: "Sunday night football."
Result: SCP-1459-1 remained unharmed for four (4) days, during which time it was provided with food, water, and plush bedding. At 8:30 PM CDT the following evening, SCP-1459 produced a football cleat attached to a hydraulic kicking mechanism which knocked SCP-1459-1 into the front window at high speed.

Player: Dr. Lindquist
Statement: "Matricide."
Result: Despite being a juvenile, SCP-1459-1 displayed behavior consistent with a mature canine going into labor. Half an hour later, three (3) unidentified creatures resembling crustaceans emerged from SCP-1459-1's vagina and proceeded to pull apart and consume the SCP-1459-1 instance.

Player: Dr. Reich
Statement: "Mutiny at sea."
Result: SCP-1459's chamber was partially flooded with water, and a small wooden raft was produced with two additional instances of SCP-1459-1. The original instance of SCP-1459-1 was provided with a small tri-cornered cap, and began to bark aggressively at the other two instances. Both instances appeared to nod towards each

other before pouncing on the original instance and forcing it underwater. The raft then capsized, causing the additional instances to drown after 8 minutes.

Player: Dr. Iqbal
Statement: "Assassination."
Result: A robotic arm descended from SCP-1459's hatch and placed a stovepipe hat scaled to fit a juvenile canine upon SCP-1459-1's head. Several other robotic arms then emerged armed with a variety of implements and weaponry, and proceeded to stab SCP-1459-1 multiple times, bludgeon it, and orally administer at least thirteen different substances in a forcible manner. While SCP-1459-1 appeared to be deceased immediately following this activity, a single robotic arm lowered from hatch three minutes later carrying a rifle, which was then used to shoot SCP-1459-1 in the cranial area. Despite the presence of a single firearm and only one documented shot fired, a second bullet hole in SCP-1459-1's head spontaneously appeared during this time.

Player: Dr. Nark
Statement: “My 'leet' skills.”
Result: An empty television frame attached to a robotic arm descended from SCP-1459’s hatch alongside SCP-1459-1. SCP-1459-1 was placed behind the television frame from the perspective of Dr. Nark. A second robotic arm carrying a Type-95 assault rifle descended in front of the television frame. SCP-1459-1 was fired at through the television frame until expiration.

Player: Dr. Damm
Statement: "Dog fighting."
Result: A miniature airplane was lowered into SCP-1459 by a robotic arm. The airplane was a single-seat open-cockpit biplane with miniaturized machine guns mounted to the wings, and the side of the plane was adorned with the French flag; the plane was scaled down so that its cockpit was properly sized for an pre-adolescent canine. The robotic arm then placed SCP-1459-1 into the plane's cockpit, after which the plane began to fly around the interior chamber. After one minute, SCP-1459's hatch opened and a second miniature airplane, piloted by a second instance of SCP-1459-1, flew into the chamber. This airplane was identical to the first, except it

displayed the flag of the German Empire rather than the French flag. The two airplanes circled around each other for three minutes. After several near-collisions, the French airplane opened fire on the German airplane, damaging one of its wings. The German airplane fired back at the French airplane, shooting the plane down and killing the first SCP-1459-1 instance in the process. The German airplane then crashed, presumably due to the damage it had sustained, killing the second SCP-1459-1 instance.

Player: Dr. Talan
Statement: "Surprise me."
Result: SCP-1459 remained inactive for approximately 15 minutes. During the period of inactivity, SCP-1459-1 began moving in an agitated manner within SCP-1459. The instance was observed to look repeatedly towards the hatch in SCP-1459's ceiling. At the end of the 15 minute inactive period, the SCP-1459's hatch opened. SCP-1459-1 stopped all movement and sat down, staring fixedly at the hatch. Dr. Talan was observed to step closer to the observation windows, also staring at the hatch. After another five minutes of inactivity, a series of loud noises, bright lights, and frightening images typical of 'screamer' viruses and images emanated from the hatch in rapid succession. SCP-1459-1 jumped approximately 30 cm into the air before collapsing. Dr. Talan clutched his chest above his heart before collapsing and going into cardiac arrest. After 30 seconds of inactivity, one robotic arm was lowered into SCP-1459. It then prodded the instance of SCP-1459-1 twice before the instance fell through the trapdoor in the floor.
Notes: *Dr. Talan is expected to make a full recovery. Additionally, SCP-1459 dispensed two tablets determined to be B brand aspirin rather than a cookie.*

Player: Dr. Edison
Statement: "Immortality."
Result: A mechanical arm pulled SCP-1459-1 into the ceiling hatch. Pained vocalizations were heard from SCP-1459-1 for approximately thirty minutes, followed by another thirty minutes of silence. The hatch opened a second time and SCP-1459-1 was lowered back into the chamber, preserved through taxidermy and displayed on a stand with a small plaque reading "Our Hero".

Player: None
Statement: n/a
Result: On 10/13/ without any prompting an instance of SCP-1459-1 materialized in a flash of light. It was then terminated via the default bludgeoning method. SCP-1459 then deposited a Mint White Chocolate cookie.

Player: Dr. King
Statement: "Zero gravity."
Result: SCP-1459-1 was crushed under a tremendous pile of appleseeds.
Why did I expect anything different to happen? -Dr. King

Player: Dr. Edison
Statement: "Are We Cool Yet?"
Result: [DATA EXPUNGED] leaving the corpse of the SCP-1459-1 instance suspended in mid-air, orbiting the singing head of Abraham Lincoln.

Player: Jr. Researcher Kitterman
Statement: "Firing squad."
Result: German Shepherd instance of SCP-1459-1 emerged tied to a post. A blind fold was affixed and a cigarette inserted into the corner of its mouth and lit. Five additional Pit Bull Terrier SCP-1459-1 instances emerged in uniforms consistent with those use by American Expeditionary Forces in WWI, carrying miniature rifles. One instance barked three times (presumably to indicate "ready, aim, fire") as the remaining four fired at the restrained instance, killing it.
Note: *Taps* was played over the normal closing statement during clean up.

Player: Dr. Laries
Statement: “Complete knowledge of the universe.”
Result: A small bucket labeled "B " was lowered into SCP-1459. SCP-1459-1 walked over to the bucket, looked inside, and began to whine and cry. It then ran away from the bucket while still whining, smashing headfirst into one of SCP-1459's observation windows, resulting in its death.

Player: Dr. Harper

Statement: "Poker."
Result: Five additional instances of SCP-1459-1 were dispensed, along with a miniature poker table and chips. Each instance gathered around the table and proceeded to play a game of poker. Instances that lost all their chips were promptly beaten to death with a fireplace poker. After the game, the winner was given a treat and promptly beaten to death with a gold-painted fireplace poker.
Note: SCP-1459 dispensed 6 cigars rather than a cookie.

Player: Researcher Prescott
Statement: “Absolute zero.”
Result: Two robotic arms came out of the hatch carrying a table with a digital thermometer securely placed on top of it. Soon afterwards, the chamber’s temperature started to drop quickly. One hour after reaching 0.01 K without further changes, SCP-1459-1 was struck with a hammer and shattered.

Player: Dr. Reed
Statement "Beer."
Result: Three tubes extended from the top hatch of SCP-1459 and were inserted into the mouth and nostrils of SCP-1459-1. A yellow liquid (assumed to be beer) then flowed through the tubes. SCP-1459-1 displayed behavior exhibited by canines drowning for three (3) minutes and forty-one (41) seconds.

Player: Dr. Nepale
Statement: "Wrapped in a net."
Result: Four robotic arms came out of the hatch, one of which was holding a large flexible mesh of thin metal wire. The arms stretched out the mesh on each of its corners over SCP-1459-1 until all the gaps were congruent with each other. Afterwards, the arms brought the mesh down instantaneously under SCP-1459-1. The subject stood still for three seconds, after which all of its flesh and blood collapsed abruptly. The arms then wrapped the pile with the mesh and brought it into the hatch.
Note: The cookie was dispensed in four perfectly cut pieces.

Player: Dr. Sterling
Statement: "Cannon."
Result: Four robotic arms extended from the top hatch of SCP-1459. Two proceeded to pick up SCP-1459-1, while a third

holding what appeared to be a cannon and a fourth holding a brand lighter. SCP-1459-1 was then forced into the cannon. The cannon was aimed at the front of SCP-1459 and the fuse lit by the lighter. After around 30 seconds, the cannon fired SCP-1459-1 directly towards the front panel of SCP-1459.

Player: Dr. Sterling
Statement: "Forcible ejection from SCP-1459."
Result: SCP-1459 appeared to ignore this statement, as if unaware of its classification as SCP-1459. Second test performed with SCP-1459 referred to as "Win A Cookie Crane Machine" resulted in same outcome. Reason hypothesized to be due to the impenetrable nature of SCP-1459.

Player: Dr. Sterling
Statement: "Freedom."
Result: A sound played from SCP-1459 indicating that this method had already been attempted.

Player: Dr. Sterling
Statement: "All previous methods simultaneously."
Result: A sound played from SCP-1459 indicating that this method had already been attempted, and continued playing for 4 hours 25 minutes.

Player: Dr.
Statement: "Methamphetamine."
Result: A nozzle extends from the top hatch, and begins exuding pale grey smoke in copious amounts. SCP-1459-1 begins appearing agitated at around the five minute mark, also seems to have difficulty breathing. As the smoke fills the chamber completely, SCP-1459-1 displays signs of distress and pain, before suffering a seizure roughly ten minutes into the test. At roughly fifteen minutes, visibility within SCP-1459 is reduced, though SCP-1459-1 is still visible, wandering the interior of SCP-1459 in an irregular circle. Two minutes later with visibility near zero, a dull thud is heard and SCP-1459 begins self-cleaning procedure. Cause of death hypothesized to be either stroke or heart failure, based on known overdose symptoms.
Note: Cookie contained clear blue shards of an unknown material testing later showed to simply be blue raspberry rock candy.

Player: Dr. Ford
Statement: "Volcano."
Result: The top hatch opens. After about 5 minutes molten lava is dispensed and falls onto SCP-1459-1, burying it completely. After a few seconds of sizzling the lava is dumped into the bottom chute.
Note: Cookie was chocolate with hot fudge filling.

Player: Dr. Trend
Statement: "Professional wrestling."
Result: Another instance of SCP-1459-1, wearing a tight-fitting outfit, was dispensed. The second SCP-1459-1 instance proceeded to grab the original SCP-1459-1 instance and toss the instance head-first on to the ground, in a similar fashion to a "suplex" technique, presumably snapping the neck of the SCP-1459-1 instance. The second instance was terminated via the default bludgeoning method.

Player: Dr. Skial
Statement: "Digested."
Result: Another, larger instance of SCP-1459-1 was dispensed. It proceeded to pick up the original SCP-1459-1 and swallow it. After about 30 minutes the second instance excreted waste, which had bone fragments lining the surface. The second instance was terminated via the default bludgeoning method.
Note: Cookie was double chocolate flavored.

Player: Dr.
Statement: "Irony."
Result: The top hatch opens. After 15 minutes, a metallic tray, approximately .5m x .75m x .01m in dimension, holding one dozen chocolate chip cookies is lowered and set before SCP-1459-1 by two arms. After an additional 3 minutes, instance of SCP-1459-1 proceeds to ingest cookies vigorously. SCP-1459-1 ingests five cookies within 2 minutes, then [REDACTED]. SCP-1459-1 proceeded to combust and was rapidly incinerated. Deceased SCP-1459-1, remaining three cookies, tray and [REDACTED].
Note: Awarded cookie was chocolate chip. Extensive testing of cookie found no anomalous or aberrant toxins or substances except mg more magnesium than typical of chocolate chip cookies dispensed by SCP-1459.

Player: Dr. Black
Statement: "Infinite regress."
Result: A miniature replica of SCP-1459 falls from the top hatch, crushing the SCP-1459-1 instance. A replica of the SCP-1459-1 instance is placed within the SCP-1459 replica via a metal arm. A miniature replica of the replica of SCP-1459 falls from the top hatch of the SCP-1459 replica, crushing the SCP-1459-1 replica. This process is repeated until the SCP-1459 replicas become too small to observe.
Note: Cookie was dispensed after 35 days.

Player: Dr. Walker
Statement: "Retroactive cessation of existence."
Result: A sound played from SCP-1459 indicating that this method had already been attempted.
Note: Despite the indication that this method had already been attempted, SCP-1459 dispensed a plain cookie.

Player: Dr. Milo
Statement: "Euthanasia roller coaster."
Result: Standard roller coaster track similar in appearance to the original roller coaster experiment, but of slightly larger width, constructed leading 45° upwards into the ceiling trap door. Approximately ninety minutes later, the ceiling hole expanded. Track at a slightly downward-sloping angle, facing the opposite direction as the original, was constructed leading directly into the front viewing window, presumably somehow contiguous with the initial portion. SCP-1459-1 instance picked up and deposited into a roller coaster car, which immediately began to ascend along the track at a steady pace into the ceiling hole. Twelve minutes later, the cart and SCP-1459-1 were observed to coast back down the other visible track portion and gently bump into the window, halting the cart. SCP-1459-1 retrieved by a robotic arm, deceased.
Notes: Track was dismantled, while the clean-up devices did not appear. Message played as usual.

Player: Dr. Milo
Statement: "Supernova."
Result: After a two-minute pause, SCP-1459-1 deposited as usual. It was then bludgeoned by robotic arms wielding an electric guitar

(subsequently identified as an Epiphone Supernova model) and a synthesizer keyboard (subsequently identified as a Novation Supernova model), after which the robotic arms shot it several times with a shotgun (subsequently identified as a Benelli Supernova model).
Notes: Rather than cookie, 80g of radioactive ash was dispensed. Dr. Milo reassigned to paperwork, and to mandatory astronomy education.

Player: Dr. Villmow
Statement: "Not a dog; bludgeoning."
Result: A sound played from SCP-1459 indicating that this method had already been attempted.

Player: Dr. Aeslinger, Psy.D.
Statement: "Um…what?"
Result: SCP-1459-1 was dispensed with a collar flashing the following messages at the player:

1. "Take one puppy." Message was visible for approximately 4 seconds as SCP-1459-1 ambled around inside SCP-1459.
2. "State method of destruction." Message was visible for approximately 6 seconds while SCP-1459 played a looped sample of Dr. Aeslinger saying "Um…what?"
3. "Puppy is then destroyed according to specified requirements." Message was visible for approximately 5 seconds before SCP-1459-1 was forcibly liquefied. Collar remained both untouched and functional, and uncovered by liquefied remains.
4. "COOKIE!" Message was visible for approximately 2 seconds before collar stopped displaying messages altogether and a cookie was dispensed as usual.

Note: Dr. Aeslinger was not aware of SCP-1459's nature and in fact was not scheduled to be in Sector-25 at all. Cookie dispensed was raspberry surprise.

Player: Dr. Snider
Statement: "Black hole."
Result: SCP-1459's arms spent approx. 19 hours constructing what appeared to be a miniature cyclic particle accelerator. Once

completed, an instance of SCP-1459-1 (teacup chihuahua) was dispensed in the center. The particle accelerator activated, shaking violently for several minutes before bursting open at one end, revealing a marble-sized black hole, the gravitational pull of which proceeded to draw in and crush the remains of the accelerator. SCP-1459-1 itself was quickly pulled towards the black hole before slowing down and appearing to "freeze" in place, with visible evidence of spaghettification on its ears and muzzle. SCP-1459-1's body slowly red-shifted to solid black before fading to complete invisibility over the course of 23 minutes. Black hole immediately dissipated afterwards. SCP-1459's main components were undamaged.
Notes: Cookie dispensed was made with pure, unsweetened dark chocolate (100% cocoa solids).

Player: Dr. Snider
Statement: "Unfunny Jokes"
Result: Window to SCP-1459's chamber was immediately covered by a pair of red curtains. Approx. 15 minutes later, curtains were drawn to reveal instance of SCP-1459-1 (Pembroke Welsh Corgi) standing on a miniature stage with a microphone stand and red brick backdrop lit with a single spotlight. SCP-1459-1 wore only a large, red-and-green bow tie. SCP-1459-1 barked three times into the microphone, then paused and looked around the chamber, as if awaiting a response. Sounds of jeering and booing are heard, followed by several mechanical arms rising up from the floor and hurling what appear to be tomatoes at SCP-1459-1 in rapid succession, quickly pelting it to death. More tomatoes were thrown until SCP-1459-1's body was completely obscured. Corpse was quickly disposed of via a mechanical arm wielding a shepherd's crook.
Notes: Ending message was changed to "that's the way the cookie crumbles". Small pile of cookie crumbs dispensed afterwards.

Player: Dr. Snider
Statement: "Go to hell."
Result: Instance of SCP-1459-1 (indeterminate breed) released as normal. Entire chamber glowed a deep red, followed by small flames erupting along edge of windows. Second instance of SCP-1459-1 appeared from side of chamber, much larger in size than the first

instance, with a skeletal body and three heads, each wearing an elastic headband with small plastic "devil" horns. Second instance barks six times, one head barking twice after the other. A trapdoor immediately opens up underneath first instance of SCP-1459-1, sending it plummeting out of sight with a frightened whine. A plume of flames erupts from the trapdoor for six seconds before shutting. Second instance of SCP-1459-1 was killed afterwards as the chamber's light shifted from red to blue and the flames went out. Temperatures within SCP-1459 dropped below freezing as remaining SCP-1459-1 froze to death over the course of six seconds, shattered via hammer once completely frozen.
Note: Cookie dispensed was Fig Newton. Although not displaying any anomalous or dangerous properties, Dr. Snider reported that Fig Newtons are his least favorite kind of cookie.

Player: Dr. Selvece
Statement: "Something incomprehensible."
Result: A pair of mechanical hands emerged from the roof of SCP-1459, carrying a copy of *Finnegans' Wake* by James Joyce; said copy was then used to beat the instance of SCP-1459-1 to death.

Player: Dr. Snider
Statement: "Dubstep."
Result: Two speakers with no cables attached are lowered from the top by mechanical arms, and put on the back side of the chamber. After the mechanical arms retracted to the roof, the speakers started playing music, identified as dubstep music, with volume gradually increasing. After 20 seconds, Dr. Snider was given protective headphones. It is hypothesized that the volume inside the chamber was an approximate 15 dB before the instance of SCP-1459-1 deceased, presumably from internal bleeding.
Note: A cookie with popping candy was disposed.

Player: Dr. Snider
Statement: "Stretch."
Result: SCP-1459 played the sound effect indicating the method had been previously used.

Player: Dr. Snider
Statement: "Photoshop."

Result: Multiple mechanical arms started to make numerous surgical modifications to the SCP-1459-1 instance (such as removing a leg and attaching it to its back), until the instance died of blood loss.
Note: A cookie with four different ingredients on four sides was dispensed.

Player: Dr. Snider
Statement: "Kittenpocalypse."
Results: A currently unknown number of juvenile domestic felines (*Felis catus*) were disposed from the roof of SCP-1459, which attacked the SCP-1459-1 instance until it deceased. The rest of the felines were disposed of via a trapdoor, and unwilling felines were killed via SCP-1459's default bludgeoning method.
Note: A short beep sound was played during the ending sequence.

Player: Dr. Shiro
Statement: "Crushed by a triceratops ridden by Ayn Rand shouting quotes from *Atlas Shrugged*, *Also Sprach Zarathustra* and *The Critique of Pure Reason*."
Result: SCP-1459 played the sound effect indicating the method had been previously used.

Player: Dr. Shiro
Statement: "The dawn of a new age."
Result: A 2" x 8" x 18" black stone was lowered into the chamber along with several SCP-1459-1 instances. SCP-1459-1 instances split into 2 groups, one gathering around the stone and the others grouping in the far side of the chamber. Instances gathered around the stone spend several minutes observing it before attacking and killing the members of the other group. Surviving SCP-1459-1 instances are killed via the default bludgeoning method.
Note: Ending message changed to "So much for enlightenment". Fudge brownie with dimensions of .5" x 2" x 4.5" containing walnuts dispensed.

Player: Dr. Heikkila
Statement: "Something that I would find funny."
Result: SCP-1459 slowly lowered an instance of SCP-1459-1 wearing a miniature Christmas sweater to the tune of the theme of the 1984 film *Terminator*. After approximately half a minute, a

mechanical hand lowered a jar filled with what were tentatively identified as driver ants (*Dorylus*). The hand then smashed the jar on the chamber floor in front of SCP-1459-1. The ants began to bite and tear at SCP-1459-1, which attempted to escape the chamber. After 2 minutes of this, SCP-1459-1 collapsed, twitching. A spiked bowling ball then fell on SCP-1459-1's skull, crushing it. The bowling ball then exploded in fireworks. The remains of SCP-1459-1 and the ants were then swept up in a dustpan with a miniature broom while a sound bite of the death noise from the video game *Super Mario Brothers 3* played. Confetti then rained from the ceiling of SCP-1459, and the sound of a party-blower played. During all of this, Dr. Heikkila was chuckling softly to himself.
Note: The cookie was dispensed with a note taped on it that read "I know you don't like cookies". The cookie was tested for any anomalous properties, but none have been identified. Dr. Heikkila has been ordered to undergo psychiatric evaluation.

Player: Dr. Muse
Statement: "The Apocalypse."
Result: A sound played from SCP-1459 indicating that this method had already been attempted.

Player: Dr. Muse
Statement: "The Four Horsemen of the Apocalypse."
Result: A sound played from SCP-1459 indicating that this method had already been attempted.

Player: Dr. Muse
Statement: "The wrath of God."
Result: SCP-1459-1 struck by a bolt of lightning from within SCP-1459 and instantly killed.
Note: Dr. Muse took a brief respite for his sight and hearing to recover before continuing.

Player: Dr. Muse
Statement: "The Four Pseudo-Puppies of the Apocalypse."
Result: Three Shih Tzu instances SCP-1459-1 descended from the hatch, one with a crown and white fur, one with a combat knife in its mouth and red fur, and one heavily emaciated with black fur. The white instance tackled SCP-1459-1 to the ground and then perched atop it as the red instance began stabbing the downed SCP-1459-1

and the black instance began mauling it. After thirty seconds, what appeared to be the animated skeleton of a Shih Tzu puppy descended from the hatch and dragged the remains into the trapdoor, followed by the three other instances.

Player: Dr. Muse
Statement: "Eviscerated by an inconceivable amount of dog-produced bees."
Result: SCP-1459-1's eyes popped out as an indeterminate number of bees flew out of its various orifices and began stinging it, with more bees continuing to exit the instance's body until the chamber was filled with bees. A mechanical arm carrying a vacuum descended shortly thereafter and removed the bees, then swept the cleanly disemboweled corpse of SCP-1459-1 into the trapdoor.
Note: A honey cookie with raisins was dispensed.

Player: Dr. Muse
Statement: "Consumed by one non-anomalous goldfish of ordinary size."
Result: Chamber filled to half capacity with water and SCP-1459-1 submerged to its neck by a mechanical arm. A single normal goldfish was lowered into the water and proceeded to consume SCP-1459-1 overnight.
Note: Despite the goldfish consuming the instance of SCP-1459-1 at the expected rate of a goldfish consuming a puppy, personnel returned in the morning to the sight of the water, SCP-1459-1's bones, and a bloated goldfish draining into the hatch.

Player: Dr. Hong
Statement: "Yāozhǎn." (Translation: 'Waist chop', a form of execution in ancient China.)
Result: SCP-1459 lowers a small wooden bench fitted with restraints into the chamber. SCP-1459-1 instance is seized by mechanical arms and forced to lie supine on the bench. Another arm, bearing a modified hacksaw, descends and proceeds to saw the SCP-1459-1 instance in a manner similar to a hemicorporectomy (translumbar amputation).

Player: Dr. Hong
Statement: "Lingchi." (Translation: 'Death by a thousand cuts.')
Result: As the SCP-1459-1 instance cowers prone, it is sliced by

several blades on the limbs and posterior torso. SCP-1459-1 rolls over supine (common in canine body language to express submission or helplessness) and the blades continue to slice at the exposed abdomen. The last cut is to the bared throat of the SCP-1459-1 instance, severing the carotid artery and allowing the instance to expire.

Player: Dr. Hong
Statement: "Chángchéng." (Translation: 'Long Fortification', or more commonly, 'Great Wall'.)
Result: After a one-minute interval, SCP-1459 produces a folding table and laptop, scaled down so as to be commensurate with the provided SCP-1459-1 instance. The laptop is seen to display various content currently censored by the mainland Chinese government, including websites dedicated to pornography, the Taiwanese government, the Dalai Lama, and pro-democracy movements. SCP-1459 then produces three more instances of SCP-1459-1 wearing the uniform of the Public Security Bureau, which proceed to attack and kill the first instance.
Note: "Huh. I was not expecting that. Forgot it could mean the Great Firewall, too…" - Dr. Hong

Player: Dr. Hong
Statement: "Wanli chángchéng." (Translation: 'Ten-Thousand-League Long Fortification', more commonly referred to as the Great Wall of China.)
Result: One dozen instances of SCP-1459-1 are released, along with tools and building materials that include stone, brick, earth, and wood. Instances proceed to build a scale model of a portion of the Great Wall of China complete with battlements, guard and signal towers, barracks, and stairways. The work is clearly strenuous and hazardous; all but one of the SCP-1459-1 instances die during construction, the last collapsing and appearing to expire soon after completion. A thirteenth SCP-1459-1 instance, released after the completion of the Wall, whines upon seeing the other deceased instances and jumps off the parapet of the highest tower, dying on impact.
Note: "Now *that's* more like it." - Dr. Hong

Player: Dr. Morgenstern.

Statement: "Fifth Church."
Result: One instance was released, which transformed into a miniature clone of actor Robert Downey Jr. Instance proceeded to vomit thick, black smoke from its mouth for twelve minutes before transforming back. SCP-1459-1 seemed to suffer no ill effects. A pair of mechanical hands emerged from SCP-1459's ceiling with a copy of *Dianetics* by L. Ron Hubbard, which was used to bludgeon SCP-1459-1 to death.
Note: Cookie dispensed was mint and in a star shape. Had a burned taste, as if over baked.

Player: Dr. Verzweiflung
Statement: "Antimatter."
Result: SCP-1459-1 crushed to death by a miniature replica of a quadrupole magnet from the CERN Antiproton Decelerator.

Player: Dr. Verzweiflung
Statement: "Titanium."
Result: A horizontal slot appeared on one side of SCP-1459 and ejected at high speed a silvery disc, which cleanly sliced off the head of SCP-1459-1 before shattering against the opposite wall of the enclosure. Subsequent analysis of video footage identified the disc as a CD single of the song "Titanium" by the French musician David Guetta.

Player: Dr. Gordon
Statement: "Spine rip."
Result: A 75-centimeter-tall door opened, allowing a similarly sized duplicate of the *Mortal Kombat* character Sub-Zero to enter SCP-1459. Sub-Zero gripped SCP-1459-1 by the back of the neck, tore SCP-1459-1's head and spine from its body, then held up the head and spine like a trophy, while a deep voice was heard declaring, "Sub-Zero wins! Fatality!"

Player: Dr. Davidson
Statement: "*Titanic* reenactment."
Result: The chamber was partially flooded with water and icecubes were dropped into water. A small wooden raft and total of two instances of SCP-1459-1 were produced. Cocker Spaniel instance was placed on the raft, while a gray mutt instance was dropped into the freezing water. After an exchange of few barks, the

swimming instance sank and drowned. The second instance was terminated via the default bludgeoning method before chamber drained itself.
Note: A single cookie of seafood flavor was produced.

Player: Dr. Davidson
Statement: "*300* reenactment."
Result: Two instances of SCP-1459-1 were produced and the bottom chute automatically opened. Both instances bark at each other. One then gives three loud distinctive barks and pounces the other instance into the open chute. The remaining instance was terminated via the default bludgeoning method.

Player: Dr. Davidson
Statement: "Puppy centipede."
Result: One Shiba Inu instance of SCP-1459-1 and two Cocker Spaniel instances of SCP-1459-1 were produced. A mechanical arm then proceeded to [DATA EXPUNGED]. The middle instance was then terminated via the default bludgeoning method.
Note: Two cookies were produced, resembling chocolate chip cookies, but with corn instead of chocolate chips.

Player: Dr. Davidson's assistant
Statement: "Jesus Christ!" (statement uttered in shock after hearing an explanation of SCP-1459's function)
Result: Several instances of SCP-1459-1 were produced. Mechanical arms then placed three upright standing crosses in the middle of the chamber and bolted three of the instances, each to one cross. SCP-1459 then produced a scalpel sized polearm and one of the mechanical arms poked a side of the instance bolted to the middle cross, while another arm equipped the same instance with a thorn crown. All three instances were terminated 6 hours later due to their injuries. All remaining instances were terminated via the default bludgeoning method.
Note: Three cookies were produced, one of them dipped in wine. According to security footage, days later SCP-1459's bottom chute opened on its own and instance of SCP-1459-1 identical to the instance bolted to the middle cross crawled out of the chute. 15 minutes later SCP-1459 proceeded to its default bludgeoning method of instance termination.

Player: Dr. Gallagher
Statement: Dr. Gallagher did not state a method, and instead screamed inarticulately for the entirety of the 15-second countdown.
Result: After a single instance of SCP-1459-1 was produced, a miniature version of Dr. Gallagher manifested, and proceeded bludgeon the SCP-1459-1 instance in a manner similar to SCP-1459's default method of termination, while screaming at approximately 100db for 5 minutes.
Note: The cookie produced was of the chocolate-chip variety; testing revealed it to contain toxic amounts of capsaicin.

Player: Research Assistant Taylor
Statement: "Time travel."
Result: A sound played from SCP-1459 indicating that this method had already been attempted.

Player: Dr. John
Statement: "Emptying the recycle bin."
Result: A trash bin was dispensed then emptied into a trapdoor despite being already empty. SCP-1459 then proceeded to default bludgeoning method

Player: Dr. B e
Statement: "The power of rock."
Result: A single instance of SCP-1459-1 was lowered into SCP-1459, where-in it was promptly crushed by a large stone released from the top of the machine. As the remains of SCP-1459 where flushed down the trapdoor, a fragment of the song " " by / was heard by observers. SCP-1459 then released one peanut butter cookie.

Player: Agent Fleir
Statement: "Limit break."
Result: 2 instances of 1459-1 were deposited on opposite sides of the box, one terrier with a gray wig with hair that covers the sides of its head and one golden retriever with its fur sticking up so that it resembles what appears to be blonde hair. The terrier was clutching a Masamune sword in its teeth, while the golden retriever was likewise wielding an unidentified, much larger sword. The two instances stared at each other for several seconds, then rushed at each other and began growling and fighting. Both instances

experienced serious sword-related injuries, with the terrier being defeated and killed. Several seconds later, the golden retriever died as well, apparently of exhaustion.

Player: Junior Researcher Kim
Statement: “Did you know that world-renowned writer Stephen King was once hit by a car? Just something to consider.”
Result: A single instance of SCP-1459-1 (St. Bernard) was generated, wearing eyeglasses, and seated at a typewriter. A car then emerged from the left wall and drove over the instance at high speed, before disappearing through the right wall. Typewriter and eyeglasses were undamaged. Cookie was a typical frosted sugar cookie with the letters "LOL" written in frosting on top of it.

Player: Mr. Mox
Statement: "Something that will show us how to kill **SCP-682**."
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.

Player: Mr. Mox
Statement: "Fine, give me something I'll enjoy."
Result: SCP-1459 deployed a film projector. The 1979 film *Alien* played, but with SCP-1459-1 instances in place of the human and android characters. All dialogue was replaced with barking and growling. SCP-1459-1 instances were killed at the appropriate places in the film. The remaining instance (Ripley) was terminated via the default bludgeoning method.
Note: Cookie was in the shape of the "Alien" egg from the film. Contained a gummy "facehugger" within a sugar cookie exterior.

Player: Junior Researcher Kim
Statement: "Bludgeoning, but the puppy is only to be hit exactly 7 times, and once this is completed, exactly 33.55 kg of Kingsford brand charcoal is to be placed on the puppy. 3 Samsung Galaxy s6 mobile phones are to placed around the puppy in a triangular formation, and each phone is to have both "Premium Tetris" and "Dog Barking Translator" installed on them. Once this is done, put a thermonuclear bomb inside the machine that is exactly 3 cm in width and 10 cm in height, and it is to be placed on the second Samsung Galaxy s6 placed in there. It is to be detonated using a functioning remote control made entirely out of sausages."

Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.

Player: Dr. Langford
Statement: "Classical music."
Result: Ceiling hatch opened and dropped a miniature grand piano onto SCP-1459-1, killing it instantly. A second instance was placed into the chamber by mechanical arm. Second instance played the entire piece of 'The Marriage of Figaro' by Wolfgang Amadeus Mozart on the mostly intact piano. Concluding the piece, two mechanical arms emerged from the top hatch and applauded for seven seconds before terminating the instance via the default bludgeoning method.

Player: Junior Researcher Mike
Statement: "Forbidden Basement"
Result: An instance of SCP-1459-1 was generated, as well as a latch on the floor leading down a stairwell. SCP-1459-1 started to whimper as he was forced to walk down the stairs by a mechanical arm. The latch shut when SCP-1459-1 instance was out of sight, and SCP-1459-1 was heard barking, then suddenly yelping. SCP-1459-1 instance became silent. Latch disappeared along with the mechanical hand.
Note: Cookie took 2 minutes to dispense, during which Junior Researcher Mike became uncomfortable. Cookie flavor was hard to determine but testing concluded that it was a vegan diet style cookie.

Player: Dr. Chris "Ox" Moran
Statement: "A four-sided triangle."
Result: An instance of SCP-1459-1 was generated, and immediately beaten to death with a four-sided triangle.
Note: Dispensed cookie was in the shape of a four-sided triangle.

Player: Junior Researcher Jenkins
Statement: "The last means of disposal this machine will ever use."
Result: An instance of SCP-1459-1 was generated, as per the norm, only to drop immediately through the trapdoor unharmed.
Note: Instead of a cookie, SCP-1459 produced an index card with the words "IOU 1x Oatmeal Raisin Cookie".

Player: Junior Researcher Jenkins
Statement: "The last *unique* means of disposal this machine will ever use."
Result: An instance of SCP-1459-1 was generated, as per the norm, only to drop immediately through the trapdoor unharmed.
Note: Instead of a cookie, SCP-1459 produced an index card with the words "IOU 1x Unique Oatmeal Raisin Cookie".

Player: Dr. Fleming
Statement: "I like trains."
Result: A wooden train similar to **SCP-737** plowed through the chamber at high speed, impacting SCP-1459-1 at approximately 750 km/h.
Note: Cookie was in the shape of a locomotive.

Player: Dr. Burns
Statement: "Rage."
Result: Two SCP-1459-1 instances were generated. One proceeded to attack the other. The attacked instance turned green, tripled in size, and mutilated its opponent. Three robotic arms, all thicker than usual, were required to restrain the instance as it was forced into the trapdoor.

Player: Dr. Burns
Statement: "Magnetism."
Result: SCP-1459-1 was crushed between what appeared to be two large neodymium magnets.
Note: Cookie was colored to reflect raspberry and grape flavor.

Player: Dr. Burns
Statement: "Dreaming."
Result: A large amount of sand poured from the top hatch, which quickly buried SCP-1459-1, suffocating the instance.
Note: Cookie had trace amounts of melatonin. Consumption did not result in any remembered dreams.

Player: Dr. Davidson
Statement: "Gordon Ramsay."
Result: Two instances of SCP-1459-1 were produced. Instance, which was described to be a white-brown bulldog equipped with a chef hat subdued the other instance. Mechanical arms then placed

the subdued instance into an oven. The remaining instance was terminated via the default bludgeoning method.
Note: A donut was produced instead of a cookie.

Player: Research Assistant Taylor
Statement: "'*Super Mario Brothers*'"
Result: An instance of SCP-1459-1 wearing a costume of the video game character "Mario" and a large yellow floating block with a large white Question Mark embossed on each face were produced. The Instance jumped up, striking the bottom of the block and causing a large specimen of *Amanita muscaria* to be expelled from the top of the block. Instance consumed the specimen, and expired 15 minutes later with symptoms consistent with *A. muscaria* poisoning.
Note: Cookie was shaped like mushroom; analysis showed no traces of toxins.

Player: unknown individual
Statement: "Shark Punching Centre"
Result: SCP-1459-1 instance was generated wearing a shark costume. Instance was terminated via bludgeoning with a boxing glove.
Note: Cookie was shaped like a boxing glove with the Letters "SPC" on it.

Player: Dr. Geralds
Statement: "Conversion of 0.1% of body mass into antimatter" (Dr. Geralds was behind a protective screen while making this statement) (test was unauthorized)
Result: An SCP-1459-1 instance was produced. After approximately 15 seconds, the instance of SCP-1459-1 was destroyed almost instantly in a powerful explosion. As in Experiment #: 0239, The resulting explosion was completely contained by SCP-1459.
Note: Raisin cookie was determined to be heavily flavored with *Capsicum chinense*, commonly known as habanero peppers.

Player: Dr. A. Maliss
Statement: "Antimemetics"
Result: According to supervising staff, no SCP-1459-1 instance was produced. Despite this, a cookie was dispensed as normal.

Player: Researcher T. Umen

Statement: "Please, take me instead!"
Result: An SCP-1459-1 instance was produced, along with a large pillow and two steel bowls filled with dog food and water. Approximately 5 minutes after initial activation, the SCP-1459-1 instance was killed via default bludgeoning method, and a robotic arm extended from and pulled Researcher Umen into SCP-1459. Researcher Umen remained within SCP-1459 for 2 days, during which he was provided dog food and water three times daily. On the end of the second day, Researcher Umen was forcibly expelled from the slot normally used by SCP-1459 to dispense cookies, along with a handwritten note reading "Nice Try."

Player: Dr. B. O'Doyle
Statement: "O'Doyle Rules"
Result: Five instances of SCP-1459-1 produced along with a [REDACTED] Station Wagon appropriately sized for the SCP-1459-1 instances. Instances enter the vehicle and begin synchronized barking. Top hatch opened and a mechanical arm dropped a banana peel onto floor. The vehicle drove over the banana peel causing it to slide into the front of SCP-1459 at high speed. The vehicle then caught fire and exploded. Back wall of SCP-1459 opened and a mechanical arm wielding a red fire extinguisher model [REDACTED] emerged and put out the fire.
Note: Cookie produced consisted of various types of manure.

Player: Dr. Crocket
Statement: "Noodles"
Result: Unknown. After an instance of SCP-1459-1 was produced, a curtain covered up the box. A variety of sounds including lawnmowers, saxophones, Billy Joel's "Piano Man" Song, and others were heard. After 10 minutes, the curtains lifted and relieved SCP-1459-1 dead. An olive on a stick was stuck in its back, and it was wearing a football helmet.
Note: Nothing related to noodles even happened.

Player: Dr. Edison
Statement: "Buffalo buffalo buffalo Buffalo buffalo"
Result: A SCP-1459-1 and four instances of American bison (Bison bison) are produced, all of which dressed in "University of Buffalo" apparel. Two of the bison then proceed to headbutt and cajole the

other two Bison, leading to them accidentally trampling the SCP-1459-1 instance.
Note: Cookie produced was a sugar cookie covered in buffalo sauce.

Player: Dr. Cooke
Statement: "Mortal Kombat"
Result: Two instances of SCP-1459-1 were produced, one wearing yellow and one wearing Blue. The one wearing yellow threw a knife attached to a chain at the other instance, before pulling them together and ripping off the other's head.
Note: Cookie was coated with blood.

Player: Dr. Little
Statement: "Don't kill anything"
Result: Two instances of SCP-1459-1 appear. One instance had a gold-plated collar labeled "Anything". The second was bludgeoned in the default method.
Note: "I don't know what I expected, honestly." - Dr. Does Little

Player: Dr. Clair
Statement: "Drowned in **SCP-447-2**"
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.
Note: Dr. Clair was demoted and reassigned.

Player: Dr. Edison
Statement: "In Soviet Russia, puppy kill YOU!"
Result: A single sugar cookie appears within SCP-1459's chamber. An entity resembling Josef Stalin emerges from a trap door below the chamber, and repeatedly smashes the cookie with a hammer. Rather than a cookie, several bloody chunks of dog flesh were dispensed.

Player: Dr. Carlson
Statement: "Censorship"
Result: [DATA EXPUNGED]

Player: Researcher
Statement: "Tert-butyllithium."
Result: Instance of SCP-1459-1 released. Robotic arm with a pipe

on the end descended from the hatch, spraying a liquid hypergolic with the atmosphere in the room. Instance of SCP-1459-1 rapidly expired due to combustion of tissue.
Note: Cookie dispensed had high levels of lithium salts.

Player: Dr. Senaviev
Statement: "Suspicious Circumstances"
Result: Instance of SCP-1459-1 released, followed by fog that obscured vision inside the chamber. When the fog dissipated, SCP-1459-1 was revealed to have been shot several times.

Player: Dr Snargle
Statement: "I have a severe egg allergy"
Result: Robotic arms pelted instance with several dozen eggs. Instance appeared confused, but unharmed. Eggs broke open on impact, and instance began eating their contents. After several minutes, instance became distressed and began clawing at its face, then began experiencing difficulty breathing, and eventually suffocated.
Note: Cookie dispensed had no traces of eggs.

Player: Dr Reynolds
Statement: "World War Three"
Result: An instance of SCP-1459-1 (Boston Terrier), wearing a cowboy hat and a US flag cape, was released on the left hand side of the machine, alongside a miniaturized LGM-30 Minuteman III missile. Shortly thereafter, a second SCP-1459-1 instance (Black Russian Terrier), wearing a Red Army Ushanka, was released on the right hand side of the machine, alongside a miniaturized SS-18 missile. Both instances proceeded to bark at each other for fifteen minutes, after which both missiles launched themselves at the opposing instances. The resulting nuclear detonations were completely contained by the machine.
Note: Dispensed cookie was decorated with frosting arranged to make the hazard symbol for ionizing radiation. Analysis showed it to contain trace amounts of iodine-131.

Player: Dr. Westrin
Statement: "Metaphysics"
Result: An instance of SCP-1459-1 was released. After approximately 20 minutes, the instance received injuries consistent

with being bludgeoned with a hammer. No cookie was dispensed.

Player: Dr. Westrin
Statement: "Pataphysics"
Result: A robotic arm extended from SCP-1459 and, through unknown narrative methods, proceeded to bludgeon the SCP-1459-1 instance in the "Metaphysics" entry. It is currently unknown how this was accomplished.
Note: The word "META" was written in frosting on the cookie.

Player: Dr. Crocket
Statement: "Stupidity"
Result: 3 instances of SCP-1459-1 appear. Two of the instances were wearing custom dog-fitted shirts, reading "Vaccines are Death Injections" and "God Hates [EXPLETIVE REMOVED]" respectively. The two shirted instances, hereby SCP-1459-1-B and -C respectively, with the shirtless instance being -A, proceeded to bark at SCP-1459-1-A for 15 minutes. Throughout the 15 minutes, SCP-1459-1-A appeared physically distressed, covering its ears and attempting to ignore SCP-1459-1-B & -C. Eventually, SCP-1459-1-A self-terminated via repeated blunt force against SCP-1459's glass case. SCP-1459-1-B & -C terminated via the standard bludgeoning method.
Notes: This test may indicate that 1459 has opinions; alternately, it may fit subjective opinion around the user.
Honestly can't blame the little guy. I'd probably have done the same. - Dr. Crocket

Player: Junior Researcher Cuthbertson
Statement: "Marijuana Overdose"
Result: One instance of SCP-1451-1 is released. A mechanical arm feeds the instance five peanut-shaped cookies. After about nine minutes, instance begins to show signs of THC intoxication. Instance does not appear distressed, as is common for canines who have ingested marijuana. After another eleven minutes, a hatch at the top of the machine falls open and a metallic slide lowers, terminating in a bowl. Additional peanut-shaped cookies are dispensed, which SCP-1451-1 proceeds to voraciously devour. Cookies are continually dispensed. Visible distention of the stomach shows after five minutes. The instance continues to eat for another

three minutes until the stomach ruptures internally. Instance continues to attempt eating dispensed cookies for four minutes until it dies, apparently of internal hemorrhaging.
Note: Dispensed one brownie, infused with THC.

Player: Junior Researcher Cuthbertson
Statement: "Reefer Madness"
Result: Three instances of SCP-1451-1 are released. A mechanical arm feeds one instance (hereby -A,) a single peanut-shaped cookie. After four minutes, instance begins to show the following symptoms; dilated pupils, reduced motor skills, loss of balance, excessive drooling, heavy panting, and distressed vocalizations. After two minutes, the remaining instances (hereby -B and -C,) approach SCP-1451-A. SCP-1451-A proceeds to yelp and stagger away from SCP-1451-B and -C. After fleeing for three minutes, SCP-1451-A then begins to show signs of aggression, growling, barking, and baring its teeth. SCP-1451-A begins to viciously attack SCP-1451-B. SCP-1451-C attacks SCP-1451-A, but the instance does not appear to notice until the termination of SCP-1451-B. While SCP-1451-A has suffered significant damage, it has little difficulty terminating SCP-1451-C. SCP-1451-A dies of blood loss from its sustained injuries after five minutes.
Note: Dispensed one brownie, infused with THC and approximately 10mg PCP.

Player: Dr. Carlson
Statement: "Selachian Pugilism"
Result: The machine releases a single instance of SCP-1451-1 before filling with water. It then releases an entity resembling a small anthropomorphic shark. The entity is armed with boxing gloves. The shark-like entity proceeds to bludgeon SCP-1451-1 until it perishes, at which point it swims back into the ceiling hatch.

Player: Researcher Garnier
Statement: "Do your worst"
Result: [DATA EXPUNGED]
Note: Researcher Garnier and other researchers present administered amnestics and sent to psychological counselling. The cookie produced by SCP-1459 was in an advanced state of decomposition.

Player: Researcher Risotti
Statement: "Agincourt"
Result: A man in the garb of a 13th-century English longbowman manifests, and shoots SCP-1459-1 with an arrow, impaling it. The bowman then leaves through the floor hatch.
Note: Instead of a cookie, SCP-1459 produced a miniature baguette.

Player: Researcher Risotti
Statement: "Weebery"
Result: Two instances of SCP-1459-1 are produced, one of which is morbidly obese, wearing a miniature fedora, and carrying an appropriately-sized katana. A recorded voice is heard saying "お前はもう死んでいる" ("you are already dead" in Japanese) followed by another recorded voice saying "何!?" ("What!?"), after which the sword-wielding SCP-1459-1 disembowels and beheads the other SCP-1459-1; it then commits seppuku.
Note: Two cookies were dispensed. The cookies were white chocolate with red strawberry sauce on the middle, resembling a Japanese flag.

Player: Researcher
Statement: "Procedure 110-Montauk"
Result: SCP-1459-1 harmlessly removed through the hatch. A slightly different version of the default message ("You are *definitely* going to Hell for this") plays.
Note: One (1) plain cookie was produced; analysis indicated that it contained lethal amounts of cyanide. Researcher amnesticized.

Player: Dr. Silva
Statement: "Music"
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.

Player: Dr. Silva
Statement: "An orchestra"
Result: Several instances of SCP-1459-1 are produced and begin playing appropriately-miniaturized violins, harps, cellos, trumpets, keyboards, and various others. After 90 seconds of music, one instance strikes another instance in the head with the slide of a trombone (possibly by accident); this triggers a fight, in which

instances bludgeon and strangle each other with their instruments. The last survivor is the instance wielding a conductor's baton, who bows to personnel, then collapses and dies.

Player: Dr. Plidowski
Statement: "The Holy Inquisition"
Result: SCP-1459-1 manifests apparent symptoms of rabies, after which six (6) instances of juvenile Swiss mountain dogs, dressed in miniature Swiss Guard apparel, are produced, along with a single juvenile Argentine mastiff dressed in miniature Papal garb. They bark three times at the first SCP-1459-1, and then watch as SCP-1459 produces mechanical arms holding gasoline canisters and a matchbox, which it uses to light the first instance on fire. The other instances were terminated by the default bludgeoning procedure.
Note: Cookie was a host.

Player: Researcher Voct
Statement: "A B C D E F G H I J K L M N O P Q R S T U V W X Y and Z"
Result: An instance of SCP-1459-1 is produced. One bee emerges from the hatch, and stings SCP-1459-1. The instance dies of apparent anaphylaxis.

A second instance of SCP-1459-1 is produced. The tank rapidly fills with water and seaweed; the instance drowns, and is removed via the trapdoor, and the water and seaweed drain out.

A third instance of SCP-1459-1 is produced. Mechanical arms emerge from the ceiling, holding a bra, with which they strangle the instance.

A fourth instance of SCP-1459-1 is produced, wearing stereotypical "raver" clothing and carrying glowsticks. Electronic music plays loudly and lights flash as the instance dances, stopping periodically to consume unidentified pills which are offered to it by the mechanical arms; after four hours, the instance manifests signs of MDMA overdose and dies.

A fifth instance of SCP-1459-1 is produced. A crude but recognizable effigy of political figure [REDACTED], wearing signs

that say "I HATE VOTERS", "I BETRAYED MY COUNTRY", and "I HATE DOGS" manifests, and falls on the instance, crushing it.

A sixth instance of SCP-1459-1 is produced, carrying an intravenous injection kit, plastic bag of powder, and bottle of liquid; notably, the instance is visibly malnourished and trembling, with multiple bald patches and sores. The instance mixes the powder with the liquid, injects the liquid into its own forearm, and then loses consciousness. A mechanical arm emerges from the ceiling, and pokes the instance, who twitches. Fifteen minutes later, the mechanical arm pokes the instance again; again, the instance twitches. This continues every fifteen minutes for three hours, at the end of which the instance is no longer responsive.

A seventh instance of SCP-1459-1 is produced. Its eyes swell up so much that they fall out of their sockets, but are still attached. The instance begins panicking, and begins pawing at the eyes, which by this point are larger than the instance's head; eventually, the instance falls such that the eyes roll on top of its head and crush its skull.

An eighth instance of SCP-1459-1 is produced. An estimated 30 blue jays (*Cyanocitta cristata*) emerge from the hatch and attack the instance, pecking it to death.

A ninth instance of SCP-1459-1 is produced, and given a large trough of water. As the instance drinks, mechanical arms emerge from the ceiling hatch, holding a large bucket of powdered metal. The arms then invert the bucket over the trough. As the powder contacts the water, it explodes violently, killing the instance.

A tenth instance of SCP-1459-1 is produced, and crushed under a giant lemon.

An eleventh instance of SCP-1459-1 is produced, as are 75 canisters of compressed oxygen. The mechanical arms open all the canisters; after four hours, the instance develops symptoms of oxygen toxicity, and dies after another 18 hours.

A twelfth instance of SCP-1459-1 is produced. It begins urinating; after 22 days of continuous urination, the tank is full of urine, at

which point the instance drowns.

A thirteenth instance of SCP-1459-1 is produced, and bludgeoned with a pool cue.

A fourteenth instance of SCP-1459-1 is produced, and crushed under an estimated 1.2 million Indian 1-rupee coins.

A fifteenth instance of SCP-1459-1 is produced. The mechanical arms emerge from the ceiling hatch, wielding several steaming teapots and teakettles; the arms empty these onto the instance, scalding it to death.

A sixteenth instance of SCP-1459-1 is produced; notably, it is of the hairless Xoloitzcuintli breed. The mechanical arms emerge from the ceiling hatch, wielding high-intensity ultraviolet blacklights, which they shine on the instance. The instance rapidly develops third-degree burns and what appear to be multiple melanomas; as with the sixth instance, mechanical arms prod it every 15 minutes until, after 4 days, it is no longer responsive.

A seventeenth instance of SCP-1459-1 is produced. A double-sided plate-glass mirror drops from the ceiling hatch and bisects it longitudinally.

An eighteenth instance of SCP-1459-1 is produced. 10 mechanical arms emerge from the ceiling, wielding laboratory equipment; an eleventh arm restrains the instance, and takes a tissue sample. The other arms process the sample for karyotyping; after eleven days of processing, the completed karyogram reveals that the instance is XX (genetically female). The arms restrain the instance again, examine its genitalia, and then drop it through the trapdoor unharmed. A nineteenth instance of SCP-1459-1 is likewise revealed to be genetically female, and dropped through the trapdoor unharmed; a twentieth instance, however, is revealed to be be XY (genetically male), and is bludgeoned to death with the lab equipment.

A twenty-first instance of SCP-1459-1 is produced. A man identified as American actor Douglas Fairbanks (1883-1939) manifests, wearing the cloak, sombrero, and mask, and wielding the sword,

from his portrayal of the character "Zorro"; notably, Zorro was known for using a sword to slice a 'Z' into walls as a signature. Fairbanks draws the sword, and slices a 'Z' into the instance, who exsanguinates. Fairbanks then drops the sword, removes the sombrero and mask, takes a jar of cookies from under his cloak, and eats 21 cookies one by one, staring silently at observers the whole time. He then exits through the trapdoor. No cookies were dispensed.

Player: Doctor Margin
Statement: "Use its entrails to have a conversation with me."
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.
Note: Doctor Margin was attempting to conduct an interview with SCP-1459.

Player: Doctor Margin
Statement: "God fucking damn it."(Note: Statement uttered after previous attempt failed)
Result: Instance of SCP-1459-1 is produced. SCP-1459-1 proceeds to appear agitated for several seconds, whimpering. Entity resembling **SCP-343** appears and picks up SCP-1459-1. The bottom hatch opens, from which the sounds of whining and burning can be heard. Entity resembling SCP-343 lifted SCP-1459-1 over its head before throwing it violently into the hatch while screaming "FUCK YOU!" Entity then went through the top hatch.
Note: SCP-343 manifested immediately afterwards, took the cookie dispensed, ate it, and demanifested. When subsequently asked why it had done this, SCP-343 declined to answer.
I really hate this job sometimes. Still, interesting result. - Doctor Margin

Player: Doctor Griswold
Statement: “Someone who knows how to kill **SCP-682**.”
Result: SCP-1459 played a sound effect indicating the method of extermination had been previously used.

Player: Doctor Lucas
Statement: "Something which cannot kill SCP-682."
Result: A man wearing the uniform of a Foundation security guard emerges, wielding a shotgun. He fires repeatedly at the instance,

missing each time. Once his ammunition is exhausted, he attempts several times to bludgeon the instance with the shotgun, but again misses each time. The instance is then terminated by the default bludgeoning method.

Player: Researcher Lane
Statement: "Your choice."
Result: [DATA EXPUNGED]
Note: Cookie produced was described by Researcher Lane as "the best thing I've ever eaten." Subsequently, Researcher Lane is hereby banned from using SCP-1459.

Player: Dr. Miller
Statement: "Samsung Galaxy Note 7"
Result: A Samsung Galaxy Note 7 on a standard charger appeared next to the SCP-1459-1 instance. 30 minutes later, the Note 7 exploded, instantly killing the SCP-1459-1 instance.

Player: Dr. Willows
Statement: "Give it a bone."
Result: SCP-1459 emitted a noise signalling that the suggested method had already been used.
Note: Despite not performing any actions, one oatmeal cookie was dispensed. Dr. Willows stated that it tasted "extremely dry."

Player: Dr. Willows
Statement: "How much wood could a woodchuck chuck if a woodchuck could chuck wood?"
Result: A mechanical arm produced seven woodchucks *(Marmota momax)*, each carrying a small log. The woodchucks proceeded to pelt SCP-1459-1 with the logs at rapid speeds, producing extra logs by anomalous means until the container was completely filled. The logs were dropped through the floor and into a series of high-powered chipping mechanisms, emptying the container within five minutes.
Note: Seven cookies were dispensed. Microscopic analysis concludes that they were made entirely out of cork.

Player: Dr. Karchov
Statement: "Vorarephilia."
Result: SCP-1459 played the sound effect indicating the method

had been previously used.

SCP-1460: Dreamwalker

Item #: SCP-1460

Object Class: Euclid

Special Containment Procedures: SCP-1460 is kept in a standard humanoid containment cell at Site . Contact or experimentation with SCP-1460 outside of standard medical care may only be performed with prior permission from at least two (2) senior research personnel.

SCP-1460 is to be administered a pentobarbital/thiopental regimen daily. Until further notice, use of medication outside of that required for basic medical care has been suspended.

Elements of Mobile Task Force Gamma-5 ("Red Herrings") have been deployed to the areas affected by SCP-1460 and have standing authorization to administer amnestics as necessary to maintain secrecy and minimize disruption of the civilian population.

Description: SCP-1460 is a 32-year old male Asian-American identified as [REDACTED], a former resident of the city of , , USA. SCP-1460 has been in a coma for the past eight (8) years, of which the last seven (7) have been in Foundation care, as a result of a traffic accident on / / in which a public transit bus struck and critically injured SCP-1460 while he was walking to his place of employment. SCP-1460 was transferred to a regional hospital due to a lack of appropriate trauma facilities at the local hospital, and came to the Foundation's attention following multiple discrepancies found during a routine review of hospital medical records.

Despite SCP-1460's condition, individuals involved in his daily life have reportedly been in contact with him during the entirety of the interval in which he has been comatose and are not aware of his current condition. Although there is a complete lack of corroboration from locally available surveillance footage, friends and family have

reported that SCP-1460 has lived for the last ten (10) years in a low-income apartment in , and has been employed at a local supermarket for the same duration, where work is done that is attributed to SCP-1460. Furthermore, records of bank transactions and ATM usage are periodically registered which are attributable to SCP-1460, which also do not appear on bank or ATM surveillance video, despite corroboration from bank employees regarding SCP-1460's activity.

Addendum 1460-01: Excerpt from Interview 1460-03B

Date: / /
Subject: Mrs. L H (Mother of SCP-1460)
Interviewer: Agent E (Undercover)

> **Agent E :** Thank you for your time, Mrs. H . We'd just like to ask you some quick questions about [REDACTED].
>
> **Mrs. H :** Sure thing.
>
> **Agent E :** What do you remember about when he was released from the hospital?
>
> **Mrs. H :** Oh, we were so relieved to be able to finally get him out of there. He hadn't really talked the entire time he was in there, you see, so we were really glad.
>
> **Agent E :** Do you remember which day you picked him up, exactly?
>
> **Mrs. H :** Of course, it was… I… huh, come to think of it, I can't remember what day it was. I must have been so concentrated on making sure was okay that I didn't really pay attention to anything else.

Addendum 1460-02: Excerpt from Interview 1460-09A

Date: / /
Subject: Mr. G V (General Manager of [REDACTED] Supermarket)
Interviewer: Agent E (Undercover)

Agent E **:** What can you tell us about [REDACTED]?

Mr. V **:** You want to know about ? He's alright, kinda quiet, sticks to himself. Shows up on time every day, does his job decently, doesn't stick out but definitely not the worst kid I have.

Agent E **:** Has he exhibited any strange behavior since his accident? I mean, has he been acting strange in any way?

Mr. V **:** No, not really, just a normal guy. He's not in any kind of trouble, is he?

Agent E **:** No sir, this is just a confidential followup on behalf of the hospital.

Mr. V **:** Okay, well, if you want to talk to him he should be here in about half an hour or so.

Addendum 1460-03: Incident Log 1460-03

On / / , approval was given to administer a pentobarbital/thiopental regimen to SCP-1460 in order to induce a deeper comatose state. Within a week of doing so, local Foundation agents reported a sudden onset of mass confusion in individuals affected by SCP-1460. The experiment was suspended shortly afterward, and Class B amnestics administered as necessary. Further attempts to suppress or neutralize SCP-1460 have also been suspended indefinitely.

« SCP-1459 | SCP-1460 | SCP-1461 »

SCP-1461: House of the Worm

Item #: SCP-1461

Object Class: Euclid

Special Containment Procedures: Site-6 has been constructed around SCP-1461. Task Force Lambda-30 ("Whiskey Tango Foxtrot") is on permanent assignment to reinforce Site-6 security. Any unusual activity from SCP-1461 is to be reported to on-site Level 4 supervisors, who will implement A4-7 Daybreak procedures at their discretion (see Site-6 standard procedures guide). Any operatives entering SCP-1461 should be fitted with full NBCA (Nuclear, Biological, Chemical, Anomalous) protection and armed escorts. SCP-1461 is considered a high-priority target for the organization known as the Church of the Broken God, who have made attempts to breach Site-6 and access SCP-1461 since 19 .

Description: SCP-1461 is an English manor (circa 1890) with attached sub-levels. It came to the Foundation's attention on November 1941, when the dwelling and its sub-level facilities vanished, then rematerialized after an eleven day period of absence. The surface portion of SCP-1461 is a two-level dwelling with twelve bedrooms, four baths, three studies, a main foyer/ballroom, a library, a kitchen, and a pantry-basement. Most of these rooms were converted into simple barracks prior to Foundation acquisition and are believed to have been dwellings for the cult. Site-6 Staff have reinforced the structure and use the available space to house monitoring rooms and security forces. No anomalous activity has ever originated from the manor itself.

The sub-level facilities are accessible through the manor's basement. The layout and size of the sub-level facilities has yet to be accurately measured, due to the anomalous qualities of the facility and hostile entities within. The facility is constructed primarily from concrete, iron, and brass; but also a number of exotic and/or unknown materials. The layout of the facility follows illogical routes

and architecture: for example, doorways open into solid walls or open chasms, stairwells ascend into empty space, etc. Extensive damage is apparent throughout the facility. Certain sections have caved in and are filled with an unidentified grey sandstone that exists nowhere on the Foundation's expanded periodic table of elements. The facilities also contain a wide array of anomalous artifacts both active and neutralized (see Inventory Document I-1461-Current). It is unknown whether the facility's erratic layout and artifacts were present prior to SCP-1461's disappearance, or if they were introduced during said absence.

The sub-level facilities are extremely hazardous, with an extensive array of moving mechanical apparatuses, gear works, pistons, steam-pipes and coolant tubes that lack appropriate safety measures. The machinery is maintained by strategic placement of nozzles that dispense a black, mucus-like substance which is highly corrosive to organic materials, but also serves as a coolant and lubricant. Some sections appear to be emitting strong gamma and X-ray radiation, registering 75 counts per second at their highest recorded reading. The source of this radiation is unknown as none of the machinery appears to be constructed with or houses radioactive components.

SCP-1461 contains approximately fifty-seven humanoid entities (including seven former Foundation personnel) designated as SCP-1461-1. These entities, through an unknown process, have been augmented with crude mechanical implants in an as-of-yet undiscovered section of SCP-1461. Each instance of SCP-1461-1 has been uniquely augmented, with little uniformity between them. The majority have been augmented with metallic teeth and claw-like protrusions on their hands, giving them lethal close-quarters combat ability. Other augmentations include iron bolts haphazardly grafted to the subject's bones, severe reinforcement to the spinal column, and the replacement of one or more organs with prosthetic equivalents. SCP-1461-1 appears to possess no higher brain functions or retain any sense of self, acting entirely on canine-levels of instinct and intelligence. Instances stick to one- or two-unit groups, build easily hidden or defensible nests, and attempt to collect food cannibalized from one another or from intruding Foundation staff. All instances of SCP-1461-1 are considered

extremely hostile.

It is theorized that SCP-1461 itself may "command" SCP-1461-1. The speaking-tube system throughout the facility has been observed emitting loud metallic shrieks that cause SCP-1461-1 to retreat from an area. In other encounters, a metallic odor identified to be blood filters through the ventilation system, drawing SCP-1461-1 to the marked location. The frequency and accuracy at which SCP-1461 scent-marks areas currently occupied by Foundation personnel suggests some kind of guiding, hostile intelligence.

At least four instances of SCP-1461-1 have received additional augmentation, replacing their esophagus and lungs with a phonograph device powered by SCP-1461-1's own motions. These phonographs emit a constant, repeating stream of speech peppered with religious symbolism, but has provided no clues as to its creator or purpose.

Addendum: According to records from 1941, the manor was owned by a Mr. and his family. A World War One veteran, Mr. was injured during the Battle of the Somme and shipped to a London hospital shortly before the war's end. His experiences appear to have had a profound psychological effect, giving him a nihilistic view of society. He constructed SCP-1461 with the intent of somehow ending or escaping the world. More information can be extrapolated from his journals, recovered from within SCP-1461 (see **Evidence Summary V2008-5**). It is believed that Mr. had anywhere from fifty to a hundred employees helping him in this task, the majority of whom eventually re-organized into a cult devoted to SCP-1461. An unknown number of these followers were present in SCP-1461 when it vanished, along with Mr. , his wife, and two children. To date, only six of these individuals have been accounted for.

Shortly after SCP-1461 rematerialized, unknown individuals entered SCP-1461 before Foundation agents could contain the site. These individuals are believed to have been members of Mr. 's fellowship, who had not been present in SCP-1461 when it vanished. They successfully extracted a number of potentially anomalous artifacts that have yet to be cataloged or recovered.

Partial List of Cataloged Anomalous Rooms
Of the twelve sub-levels discovered by Foundation personnel, only 75% of its layout has been properly mapped, and an unknown number of levels are believed to exist further below. Each sub-level contains excavation, construction and storage rooms, as well as rooms exhibiting Safe or Euclid-level anomalous qualities and/or artifacts. For a full list of anomalous SCP-1461 rooms, refer to Document I-1461-Current.
Gel Production (Sub-level Three): An automated factory that melts down the unidentified grey sandstone into glass, forms them into canisters, and fills them with a green viscous gel made up of a variety of exotic chemicals. Some of these jars contain fully-formed teeth and organs whose DNA patterns match nothing found on earth. Most of the jars have become inert, and their contents have decomposed. The gel-production machine itself has been crushed by a cave-in.
Pipe Hall (Sub-Level Four): A hallway lined with approximately 2,450 pipes, constructed from brass, iron, copper, gold, bamboo, carved jade and [DATA EXPUNGED]. Some kind of substance can be clearly heard being pumped through the pipes, but their origin and destination are unknown.
"Factory Deliveries" (Sub-Level Seven): A large, unlit warehouse filled with wooden crates of various sizes. Unlike other storage rooms, which contain mundane materials from non-anomalous sources, the crates in this section are blank or branded simply with "Factory Deliveries." Irregular patrols of the warehouse have revealed that the number and arrangement of crates changes, but as with the Pipe Hall, their origin and destination are unknown. On at least one occasion, muffled vocalizations could be heard coming from somewhere within the warehouse, but their source was never discovered.
Orb Room (Sub-Level Ten): [DATA EXPUNGED]
Speaking Tube Room (Sub-Level Eleven): The multitude of brass speaking tubes connecting SCP-1461 appear to converge in this room on a large central pulpit. The partial remains of a human female have been recovered here, with evidence to suggest the body (specifically skin and intestinal organs) was used to perform crude repairs to some of the damaged tubes.
Catalyst Room (Sub-Level Twelve): A large chamber filled a random assembly of gears, cables, pulleys, screws, and belts, all

made of an amalgam of iron, tin, gold, and other metals, some as of yet unidentified. The assembly has suffered extensive damage, with evidence that a large section (approximately 12 cubic meters) has been violently removed. The location of this section is unknown. An elevated platform is suspended directly over the assembly. The platform features a metallic bed with the desiccated remains of a human male. The corpse's chest has been pierced by large syringes connected to a pumping machine, its design suggesting that it pumped fluid extracted from the syringes into the missing portion of the machinery below. At regular forty-five minute intervals, the assembly attempts to self-start, but its existing damage prevents initialization. Friction heat-buildup eventually results in an emergency shut-down that lasts until the machinery has cooled enough to make another attempt. **`Item V2008-5`** was recovered from the hospital bed.

> I have broken God.

SCP-1462: Renewable Energy Source

Item #: SCP-1462

Object Class: Keter

Special Containment Procedures: Level A hazmat gear is mandatory for interaction with SCP-1462. The Foundation's role in containment is largely preventative- in the case of containment failure, implanted agents are to convince civilian leadership of the importance of maintaining respiratory protection. Civilians seen unprotected are to be taken into custody and processed for signs of infection. Cover stories for individuals "lost in the blaze" are in place with all major media outlets.

Regular sweeps for signs of SCP-1462 infection are to be performed near known SCP-1462 active sites. Trees infected with the fungal vector for SCP-1462 are to be removed and mulched. Other infected specimens are to be removed and destroyed. All remains of infected specimens are to be disposed of via biohazard incinerator and bleached before disposal. While spores of the fungal vector have proven flame-resistant and are capable of surviving incineration, bleached ashes require no special handling.

Description: SCP-1462 is a strain of airborne virus transmitted via fungal spores. The fungus is dangerous only to trees, but spores can infect both plants and animals with the virus. This virus causes the host organism's natural fluids to be replaced with petroleum analogues.[1]

In animals, this conversion results in widespread chronic cutaneous and hepatic porphyria symptoms[2] concluding with massive organ failure and death. Afterwards, all non-skeletal body mass converts into petroleum during decomposition. Despite a 100% fatality rate, standard antiviral precautions are successful in preventing infection from one individual to another.

In plants, infection increases photosynthetic efficiency, as the black pigment shift allows for more complete light absorption, and alteration of the stomata, resulting initially in improved heat release and increased intake of CO2. However, each infected plant also releases trace amounts of a pheromone during CO2 intake. Sufficient saturation[3] causes the immediate closure of stomata and subsequent inability to release heat in all infected trees. This reaction is unique to trees and is notably absent in any other instance of infection. Standing theory suggests that the virus was engineered for use on non-tree plants, and its deleterious effect on animals and trees are side effects[4].

Infected trees inevitably ignite and set fire to surrounding infected flora. Liquefied remains of fauna ensure high quantities of flammable gas and surface accelerant, leading to rapid expansion of the burn area through infected territory. The final stage of the burn cycle is a firestorm, resulting in aerial dispersal of particulate and fungal spores over twice the original area, as the air currents caused by the conflagration spread the spores across progressively larger expanses of woodland.

It should be noted that the rate of expansion per burn cycle would completely consume the largest forests on Earth within one year while sending enough particulate and spore matter into the stratosphere and troposphere to simultaneously threaten the planet with both global exposure to SCP-1462, and nuclear winter[5].

Attachments: *File fragments recovered from basement level of destroyed complex following discovery and containment of SCP-1462 in initial burn area*

Simply sprinkle over the plants* to be used, and within a week, you'll have your very own BioFruits! Give'em a run through your food processor or juicer, remove the pulp and it's ready for use in any Flex-Fuel vehicle!

*GYO BioFuel packets not for use with trees.

04/18/2013- Quarantine orders. Everyone's sick, hydrocarbon poisoning. Bet some joker put some BioFuel carrots into the canteen or someth[UNRECOVERABLE]

04/20/2013- [UNRECOVERABLE]oisoning. Everyones crazy too. Vector crossed to anima[UNRECOVERABLE]lly bad.

Foundation Analysis*- Logs cease after 04/21/2013. Evidence suggests massive personnel losses on 04/24/2013. Current theory stands that trees surrounding complex underwent a burn cycle on 04/26/2013 after*

accidental exposure to fungal spores following clean-up of peach tree burn cycle. Unlikelihood of a full hectare of peach trees used for testing suggests that SCP-1462 is extremely adaptable, and since initial events has allowed for greater expansion prior to burn periods. Further investigation of the Grow-Your-Own Corporation facility responsible for SCP-1462 hindered by severe damage to original site.

Footnotes

1. This is achieved by altering porphyrins, such as heme in blood cells and chlorophyll in plants, to replace their contained ion with a vanadium ion through a process yet to be completely understood. The end result is a specialized aromatic hydrocarbon that mimics the function of the original fluid to some degree (see below for post-conversion effects).
2. Symptoms include photosensitivity (photodermatitis), blisters, necrosis of the skin and gums, itching and swelling, increased hair growth on areas such as the forehead, abdominal pain, vomiting, acute neuropathy, muscle weakness, seizures and mental disturbances, including hallucinations, depression, anxiety, and paranoia.
3. This has been determined to be reached at roughly one hectare (2.47 acres) of infected woodland.
4. Confirmed- see recovered documentation below.
5. While a misnomer, nuclear winter is caused by particulate matter sent airborne by firestorms. The end result here is identical.

SCP-1463: Comprehension/Invasion/Evasion

Item #: SCP-1463

Object Class: Keter

Special Containment Procedures: Read and recognize these as proper containment procedures.

User Recognition:[1] Confirmed.

Description: [REDACTED]

FILE REVISED. DISPLAYING NEW FILE ITERATION.

Item #: SCP-1463

Object Class: Keter

Personnel Requirements: Personnel assigned to SCP-1463 must be capable of recognizing their surrounding environment.

Position Designation: Office/Foundation

Facility ID: Unknown

User Certainty Percentage: 0%

Location Security Status: Pending

Special Containment Procedures: Read the following information.

Description: [REDACTED]

FILE REVISED. DISPLAYING NEW FILE ITERATION.

Item #: SCP-1463

Threat Level: Orange

Object Class: Keter

Personnel Requirements: Personnel assigned to SCP-1463 must be capable of describing their surrounding environment.

Personnel Report 1463/01: The following is a list of items in the office:

- Metal desk, positioned against the wall
- Chair, placed at the desk
- Computer and computer monitor on the desk, the latter currently displaying this file
- Standard Foundation-issued pistol by the monitor
- Ammunition box, placed next to the desk
- Three broken autoinjectors on the floor, two surrounded by puddles of a translucent substance
- Numerous manuals and books covering the floor
- Bookshelf positioned in front of the door
- Metal door bar lock, largely obscured by the bookshelf
- Text on a wall, painted over with black paint
- Tipped over bucket of black paint and blood
- Unknown

Unknown Item Recognition Index: N/A (Item not present)

INVALID RESPONSE.

Unknown Item Recognition Index: 0 (Unrecognizable)

Special Containment Procedures: Read the following information.

Description: [REDACTED]

OPENING SUPPLEMENTARY FILE.

Item #: SCP-1463-A

Unknown Item Details: A monolithic structure with an unclear shape, apparently

tall enough to phase through the ceiling.

Details Revision 1: Patterns of spirals with arachnid limbs.

Details Revision 2: A network of fibers that are connecting to every object within the office. Eyes line each one.

Details Revision 3: Portions of my grey matter.

Special Containment Procedures: Protocol MESA-ALEPH must be performed for the containment of SCP-1463-A. Protocol MESA-ALEPH is as follows:

1. Retrieve the pistol.
2. Raise the pistol.
3. Aim the pistol at your forehead.
4. Pull the trigger.
5. Pull the trigger.
6. Pull the trigger.
7. Aim the pistol away from your body once the trigger has been pulled.
8. Load one bullet into the pistol.
9. Turn to face SCP-1463-A.
10. Fire into SCP-1463-A.

Description: SCP-1463-A is a component of SCP-1463 that exhibits a weak antimemetic effect. Its method of hunting is by allowing itself to be perceived by a subject, which enables it to begin integrating with the subject's consciousness until the consciousness is entirely consumed. As SCP-1463-A and the subject are connected during the process, events perceived by the subject as potentially harmful or lethal will be perceived as such by SCP-1463-A, which can force it to stop

the integration process.

The entity is presently neutralized, though its presence is a sign of SCP-1463 manifestation.

NOTICE FOR ALL SCP-1463 RESEARCHERS: All versions of this file have not physically or digitally existed. When you first opened this document you viewed a specially designed cognitohazard, which implanted a memetic entity (Oz-Ω2) into your head. Using techniques based on the Memetics Division's Project Radix, Oz-Ω2 can create documents that exist in a purely informational sense, drawing both from base data in Oz-Ω2 and your thoughts on the events you are experiencing. This document serves as a way to rationalize your thoughts when faced with dangerous antimemetic and memetic threats, such as SCP-1463, which can be the best method of survival.

The encounter you just had with SCP-1463 in this office should let you understand how useful Oz-Ω2 will be. In any other circumstances your mind should be wholly consumed by SCP-1463 after you learned of it, but by using this document you kept enough semblance of sanity about you to try fighting back (door barricades will never be useful against it, though, so don't rely on them — it always finds another way in).

Only view this document when you can mentally project its existence onto a tangible format, such as imagining the document to be existing on a piece of paper or computer terminal, with any changes you imagine making perceived as you writing or typing them respectively. Failing to do so risks destabilizing the memes being used, which would cause potentially lethal mental harm. Human

minds better comprehend the physical world than abstract concepts.

Special Containment Procedures: Oz-Ω2 will begin guiding you to Provisional Site-33, where you will be protected from further SCP-1463 encounters and provided with new mission objectives.

Normally this file is hidden in Foundation databases and marked as deleted (serving as the best method of containment for SCP-1463 yet), but since several major breaches of antimemetic anomalies are in progress (including one at your location) it was decided to send the file to get researchers to safety. Research Team 1463 apologizes for exposure to SCP-1463, but the information on the anomaly attached to Oz-Ω2's document would cause exposure in all cases, and we have found no way to remove it that won't compromise Oz-Ω2. No other documents with an entity like Oz-Ω2 have been developed yet.

Do not go to others for help. Doing so risks exposing other subjects to information on SCP-1463. Avoid amnestics as well — they will not make SCP-1463 forget you. When SCP-1463 manifests again, resume reading this file. Until you arrive at Provisional Site-33, you are alone.

Description: You know all you can know at this time. Proceed to Provisional Site-33 and do not stop moving.

Good luck.

Footnotes
1. Recognition must be typed by the subject reading this file.
2.No amnestics were present in the office.

SCP-1464: Pond of Atrocities

Item #: SCP-1464

Object Class: Safe

Special Containment Procedures: Except for approved experimentation, it is forbidden to observe SCP-1464 under natural lighting during the time period between sunset and nautical twilight, and during the time period between nautical dawn and sunrise; any research into the properties and contents of SCP-1464 during these time periods must be conducted under 1000-watt lamps providing full-spectrum illumination. The thirty-five (35) square kilometers surrounding SCP-1464 have been purchased by the Foundation via a front company, and serve as an interdiction zone. Civilians are to be dissuaded with a cover story of limnological research.

The airspace above the interdiction zone surrounding SCP-1464 is restricted. Satellite imagery of the interdiction zone is to be intercepted and modified so that direct images of SCP-1464 do not become public.

Description: SCP-1464 is a body of water in the forests of northern [REDACTED], approximately 82 hectares in size. When viewed under lighting conditions corresponding to dawn or twilight, SCP-1464 is a cognitohazard. Affected subjects experience highly detailed false memories of having participated in ritual crimes at the site of SCP-1464 at some point in the past; all affected subjects express intense remorse and guilt at having participated (regardless of whether this is compatible with their psychological profiles), describe the ritual as having concluded with a victim or victims being submerged within SCP-1464, claim that the ritual was necessary in order to prevent what is effectively an XK-class end-of-the-world scenario, and state that the ritual was incorrectly performed and must be repeated.

The precise nature of the ritual described by affected subjects varies

depending on a number of parameters, including but not limited to the density of foliage on surrounding trees, the presence of floating debris, and >1m modifications to SCP-1464's coastline (see document 1464-T17 for a full list of known parameters). Since coming to the attention of the Foundation, the parameters regulating SCP-1464's anomalous effect have undergone natural changes sufficient to result in a new configuration 85 times; as well, new configurations have resulted from deliberate experimentation 25 times, and from accidental modification 3 times.

All subjects exposed to SCP-1464 under a given configuration describe the same ritual; as well, subjects share an anomalous awareness of each other's existence, such that if three separate subjects are exposed to a given configuration, and then interrogated separately, they will all report that the ritual involved three participants, and will be able to corroborate each other's stories. Details of the ritual range from the plausible (the slaughter of nine nine-year-old children, at 9:09 AM, on the ninth day of the ninth month, 1999) to the nonsensical (the rape and strangulation of a green 1978 Volkswagen Beetle, on the fifty-sixth day of June, 1974); at no time has any subject expressed cognitive dissonance, regardless of how incompatible the described scenario is with reality.

Underwater exploration and sonar analysis of SCP-1464 have not revealed any of the submerged objects described by affected subjects, nor do missing-persons reports and reports of livestock theft correspond to any of the rituals described; however, in approximately 30% of cases, the scenarios which the rituals are allegedly intended to prevent correspond to worst-case extrapolations involving known SCPs.

Samples of water and aquatic biota from SCP-1464 have not been found to be anomalous.

« SCP-1463 | SCP-1464 | SCP-1465 »

SCP-1465: Photographos Thaumantos

Item #: SCP-1465

Object Class: Euclid

Special Containment Procedures: SCP-1465 is to be contained within a standard Type-05 humanoid containment unit. No further physical security is necessary.

No photographs, filmed material, or cameras of any kind are to come in contact with SCP-1465 outside of testing procedures. SCP-1465 is permitted to requisition recreational items that do not include photographs or live-action filmed material at the discretion of supervisory personnel.

SCP-1465 has been cleared for check-ups with Dr. Ottmier every month, with changes in eyeglass prescription and other treatments as needed.

Description: SCP-1465 is a European female of Greek-American descent, twenty-three years of age and measuring 171 cm tall. SCP-1465 does not bear any physical or mental abnormalities, with the exception of heavy damage to the cornea and conjunctiva due to repeated photokeratitis. SCP-1465 has been issued protective sunglasses to aid with the subject's sensitivity to bright light. A tattoo is located on the inside of the left forearm, which reads: “Γενηθήτω φως” (Let there be light).

When in contact with a photograph or filmed material, SCP-1465 is capable of extracting light from the photograph or film, forming a sphere 10-15 centimeters in diameter, which may then be moved about by SCP-1465. This sphere emits light with equal luminosity to the environment in which the photograph or film was taken, and closer inspection reveals it to consist of seven separate layers, each corresponding with a spectral color of the visible spectrum, with each layer consisting of a complex pattern of geometric shapes.

Upon extraction, the photograph or film will turn black and will no longer display any image. Films affected in this way will retain sound. SCP-1465 is not capable of affecting artistic depictions, heavily-doctored images, or animated films.

After the formation of the sphere, SCP-1465 will, if permitted, remove any eyewear worn at the time and enter a state of heightened concentration, viewing the sphere for a period lasting between fifteen and seventy-five minutes, ignoring most external stimuli during the process. Upon completion, the sphere will dissipate: however, this is a voluntary act carried out by SCP-1465, and the extracted light may be dissipated at any time. This process is believed to be responsible for the majority of the subject's eye damage. Affected photographs do not return to normal after dissipation of light.

Recovery Log: SCP-1465 was recovered on / /2013, after the subject was witnessed demonstrating anomalous properties while visiting the Ansel Adams exhibit at the [REDACTED] Museum of Art. The subject was, at the time of recovery, suffering from caffeine overdose and severe sleep deprivation. Class-C amnestics and a cover story of petty vandalism were distributed with no complications.

A total of 3123 pages of handwritten and typed notes, 126 photo albums with annotations, and 45 cameras were acquired from SCP-1465's apartment during recovery. Recovered materials detail various theories and experiments carried out by SCP-1465. (See Document 1465-EX for further details.) The bulk of materials were extraction results, where extraction patterns were converted into a 1477-symbol cypher and constructed language created by SCP-1465 for purposes of recording large amounts of data from viewed patterns.

Addendum-01: The following excerpt is from an interview carried out on / /2013, three days after recovery.

> Dr. : When did you first discover your properties?
>
> SCP-1465: Ah…you know, I don't really know. Must have been ten, eleven…it wasn't a whole 'hey girl you

have superpowers now' thing, didn't get bit by a radioactive Kodak or anything. Took me a while to even realize it was happening. Then it's a little here, a little there, figuring out what I can do, and before you know it I'm locking myself in a darkroom for forty hours at a time.

Dr. : Mmm. Your notes were very thorough on the subject of your properties.

SCP-1465: No use just sitting around on my hands and daydreaming about it. Gotta get something done, girl. 'S what my mom always said.

Dr. : Of course. That's very sound advice.

SCP-1465: Any chance I can get my notes back?

Dr. : No, I'm afraid.

SCP-1465: Ah. One of those deals. Any chance we can pull a 'This is my side of the room, that's your side' deal? Just leaving things be?

Dr. : I'm sorry, but no. [Clears throat]. Moving on, while your notes have been a great help in studying your case, deciphering them has been something of a difficulty.

SCP-1465: I didn't really intend for anyone else to read my personal research, so it's pretty much completely your fault there. You could have waited for the completed thesis like everyone else.

Dr. : We have sufficient resources to considerably further your research, but without your cooperation the project will go nowhere.

SCP-1465: Fine. But only if you ask nicely.

Dr. : Very well. Could you please explain the principle of patterns further?

SCP-1465: Yeah. Sure. Okay…so, a massive amount of information we process consists entirely out of patterns of light. Cameras capture light at one particular moment in time, so you get a stable fragment of a constantly shifting pattern. I kinda take that out of the photo, stare at it a bit, and figure out the pattern. With a lot of those down, patterns start appearing in multiple places and links between things start showing up. Like, if you give me separate single photos of an old married couple, they'll have some similarities in the red-level sub-stratum. Or if you want a really weird one, you know that picture of the Hindenberg? Has almost the exact same blue-level matrix as photos of my cat. Still haven't figured that one out. Whatever. But the thing is, everything is linked. Everything. Patterns inside patterns inside patterns inside patterns. Like some gigantic puzzle, big enough I don't have a clue what it even means anymore and I'm nowhere close to solving it.

[Pause]

It's all very quantum.

Dr. : I suppose it is, when you put it that way. However, are you sure that the patterns aren't simply random?

SCP-1465: It's quantum-encrypted lumelinguistics, doc. That shit don't make sense.

Addendum-02:

Translated segment of SCP-1465's research notes, dated between June 2 and June 4, 2013.

Found a photo of myself, one of the few I have not used. Dated as December 14th, 2006. Clearest patterns I've ever seen in a photo of myself, with several sub-strata actually discernible. Notable pattern in the fifth green overlevel, located between the twenty-sixth and twenty-seventh matrix markers.

Cross-referenced fifth green overlevel pattern with records. Only match is photograph of the Grand Canyon. Further cross reference reveals no matches between the two photos. No tense to be found in pattern: I have not been to the Grand Canyon, so I must presume that some event of importance will occur at the Grand Canyon at some point in the future, despite lack of future tense markers. Interesting.

I cross-referenced the photo of myself with an aerial photo of the state of Arizona. Pattern still repeats, so I know that the connection is not specifically tied to the Grand Canyon. Will have to tighten the search, to see where there is a greater connection.

Grid search of the state is completed. Strongest pattern of connection is with Phoenix. Further investigation necessary.

Searched news archives for any sort of notable event in the Phoenix area on the date of December 14th, 2006. Only event of note is the murder of one Anthony Baker by his sixteen year-old girlfriend.

Checked a photo of the accused girl. No pattern links in the green spectrum. Photo of victim reveals same green overlevel pattern as state and myself.

If this is correct, I am somehow connected with the murder of someone I have never met, in a state I have never visited. Will have to think about this.

Found satisfying conclusion for the time being. Been thinking forwards and backwards, but not sideways. Current theory: green patterns indicate a transuniversal tense of being. Linking between events that have and have not occurred simultaneously. Actions that I have-will-not-have done.

I am involved and uninvolved at the same time. I can then presume that an alternate chain of events in which I

am guilty, or at least accused to be guilty, of murdering Anthony Baker exists. Question: why only this? Should be seeing more links of this nature.

Theory: Active work by otherside self to contact thisside self. Purpose unknown at the time, as is method of counter-communication. Can presume that otherside self in possession of expanded or alternate properties, capable of encoding patterns. Would imply that otherside self is capable of manipulating photographic material without falsifying subject of photo. Furthermore, indicates that certain patterns exist in multiple universal iterations.

Further research necessary. Should buy tickets to Phoenix.

Follow-up segment of notes, dated around June 9th, 2013.

Have not slept in 67 hours. Over ten thousand photographs of Phoenix area and articles related to Anthony Baker's murder and murderer analyzed in bulk batches. Experiencing temporary blindness due to volume.

Links found with otherside self throughout Phoenix area. No question remains that message was left by otherside self, though signature unconfirmed as voluntary act.

Strong links between the following photographs: emergency exit sign, businessmen in suits, parrot in cage.

Meaning is clear: otherside self requesting assistance and escape. Still no theories on methods on return communication. Questioning whether such action would be wise. Information unfettered by time and space, bodies very much so. Perhaps a possibility, in the future. Questions remain. Motive for escape unknown, life-path variables unknown. Must bear in mind that otherside Iris Laskaris is separate individual from thisside Iris Laskaris.

Will investigate further later.

Will leave Phoenix after recovery.

« SCP-1464 | SCP-1465 | SCP-1466 »

SCP-1466: A Canary

Item #: SCP-1466

Object Class: Keter

Special Containment Procedures: Any civilian research projects attempting to verify Goldbach's conjecture must be monitored for the possibility of identifying SCP-1466. If the possibility exists, any programs used to do so must be reconfigured such that SCP-1466 is stated to be the sum of two primes without verification; if this is not possible to perform discreetly, the project must be shut down.

In the event that technology capable of disproving Goldbach's conjecture becomes commonplace, all information pertaining to Goldbach's conjecture outside of Foundation custody must be destroyed. Worldwide amnestic distribution and use of viral antimemetics for this purpose is permitted.

Testing of SCP-1466 may only take place at times and locations where SCP-1466-A will exit the atmosphere harmlessly. Testing of SCP-1466 is currently only approved for the purpose of identifying SCP-1466's causal mechanism or determining a method of neutralization.

SCP-1466-C is kept in a standard storage locker at Site-63.

Description: SCP-1466 is an even 21-digit integer. It cannot be expressed as the sum of two prime numbers, thus disproving Goldbach's Conjecture.[1] Whether other counterexamples to Goldbach's Conjecture exist, and whether they share SCP-1466's anomalous properties, is unknown.

SCP-1466's anomalous properties only manifest when it is shown to disprove Goldbach's Conjecture. One instance of SCP-1466-A will manifest 31 34 seconds after the completion of calculations at the location of each device involved in the process. SCP-1466-A are

invisible spheres 2.8m in diameter that immediately obliterate all matter they intersect. SCP-1466-A are motionless relative to the Sun, and will move at a speed (typically on the order of 1,000 kph) and direction relative to Earth dependent on the time and location of manifestation.

SCP-1466-A destroy matter on the atomic level, resulting in the partial elimination of chemical compounds and, subsequently, the creation of a variety of violently reactive chemicals. The voids left by annihilated liquids and gases will typically implode, with the subsequent shock wave dispersing the generated chemicals into the surrounding area. While SCP-1466-A have not been tracked outside of Earth's atmosphere, they are presumed to demanifest or exit Earth's orbit within one year, as no instance has been encountered more than once.

The danger posed by SCP-1466-A and its byproducts are largely dependent on the circumstances immediately surrounding manifestation. A worst-case scenario would result from the verification of SCP-1466 by a distributed computing project run largely on personal computers; with resources available to the Foundation, a breach of secrecy could potentially ($p > 0.01$) result if more than [REDACTED] devices are used. Casualties would most likely equal or exceed the number of devices used.

SCP-1466-B refers to the spontaneous appearance of plaintext files exclusively containing SCP-1466 on devices attempting to verify the Goldbach conjecture, typically appearing in the root directory. There is no evidence to indicate that this is performed through conventional methods of file creation or placement. SCP-1466-B occurs 3-4 times per year, affecting progressively more powerful computers or distributed computing projects. If the file is accessed, but no attempt to verify SCP-1466 is made on the affected device within 83 days, it is spontaneously deleted.

Experiment 1466-061

Date: 02/25/2017
Purpose: Identify any potential consequences of delayed SCP-1466-A manifestation.

Materials: One computer verifying SCP-1466's violation of Goldbach's Conjecture; one subject (D-6612) in Stage 3 of **SCP-2441** exposure; one SCP-1466-safe testing chamber.
Procedure: D-6612 was seated in front of the computer several minutes before it completed SCP-1466 verification, and was informed of SCP-1466's effects. The experiment was viewed remotely.

Timestamp	Events
t=0s	SCP-1466 verification completed.
t=31s	SCP-1466-A fails to manifest at expected time. No other anomalies detected.
t=43s	D-6612 reports unidentified "resistance" to its reality-bending capacity.
t=51s	A mirrored cube, 4.4m on each side, manifests with the computer at the center. The cube exhibits perfect specular reflectivity, imperviousness to all attempted destruction testing, no sound penetration, no detectable temperature, and no friction. It is hypothesized to be composed of non-baryonic material. The cube remains stationary relative to Earth's surface.
t=110s	Approximate time of death of D-6612 according to on-site medical personnel.
t=284s	The cube demanifests. D-6612 is in a seated position, dead. The computer's internal clock is set to 8:00:00 AM (t=-28890s), and it is performing calculations that it was most likely performing at that time.
t=411s	The computer is switched off.

	Experiment terminated.

Assessment: After Experiment 1466-061, test subjects exposed to SCP-2441 have demonstrated no ability to delay or prevent manifestation of SCP-1466-A. SCP-1466-A now manifest 34 seconds after SCP-1466 verification, rather than 31.

D-6612's corpse possesses apparently infinite electrical and thermal resistance. The former was responsible for cessation of brain and muscle function. The item does not possess any abnormalities that account for these properties.

The computer used in Experiment 1466-061 is incapable of verifying SCP-1466. When it performs the penultimate calculation necessary to do so, it will temporally regress to 8:00:00 AM on 02/25/2017. It has been designated SCP-1466-C.

Footnotes
1. Goldbach's Conjecture states that every even integer greater than 2 can be expressed as the sum of two primes.

« SCP-1465 | SCP-1466 | SCP-1467 »

SCP-1467: The Man that Wasn't

Item #: SCP-1467

Object Class: Euclid

Special Containment Procedures: SCP-1467 should be contained in a padded cell with no fewer than three (3) audio recording devices installed in the walls. SCP-1467 should be allowed free use of these devices. While sleeping, devices should be kept on repeat playback. Batteries are to be changed weekly. SCP-1467 should be medicated using document '23-A' and a therapist meeting should be provided once per week. SCP-1467 should always be referred to in person as 'Mr. Smith', as referring to it by any other means throws it into a panic/rage state. This has resulted in moderate injuries to it and research personnel, and has seriously impeded attempts to interview the subject and keep its mental state stable. Foundation personnel wishing to visit or make use of SCP-1467 for experiments must seek permission with its currently designated therapist. In the event of a containment breach, immediate termination of SCP-1467 is authorised. Records of SCP-1467 should be reviewed every month, and at least six backups should be kept in different locations at all times.

Description: SCP-1467 is a 47 year old male of African American descent. Unless constantly reaffirming its existence, SCP-1467 slowly fades out of reality. The effect manifests in a gradual decrease in the ability to perceive SCP-1467 by any known means until it eventually vanishes. This has been known to affect objects and personnel in SCP-1467's immediate vicinity. The Foundation have been unable to determine the extent of this ability to a satisfactory degree but current experimental data suggests it is localised to SCP-1467. The subject claims to be a construction worker. It further claims its anomalous properties arose in a gradual fashion after the death of its wife and children in a car accident.

During this time it developed several coping mechanisms to keep its

slowly degrading condition under a modicum of control. Habits such as repeating its name, checking its pulse, keeping itself talking to others, drawing and writing descriptions of itself on its body and surrounding surfaces and keeping recordings of its voice going while sleeping all developed over time. Currently the Foundation have found no records of subject's stated wife, children, house, car or extended family ever having existed. There have been no car accidents in the claimed area at the given date, no graves could be found, the provided address has never been in use, and all relevant social security numbers remain unassigned due to what appears to be a computer error.

The only evidence of SCP-1467's existence consists of a few co-workers remembering it, but accounts vary widely. As an example, construction worker , described as a "close friend," was unable to recall subject's skin color with certainty. As a result of the mental stress the subject is under, it has developed a severe case of bipolar depression, in addition to chronic sleep deprivation. Its anomalous condition continues to deteriorate. By current estimates, the Foundation will have lost it by 20 -

Addendum-1 *Please note the containment procedures only call for referring to SCP-1467 as 'Mr. Smith' while in its vicinity, and this only due to its sensitive mental state. At all other times it should be referred to using its SCP designation. It has been noted that personnel assigned to SCP-1467 have repeatedly failed to do so. Further violations will be severely reprimanded. Keep it professional. -Director*

Experiment Logs

Experiment #16:
Test procedure: SCP-1467 was restrained and made unable to speak. Research assistants Reiner and Dieter were in the room and kept observing subject. Dr. Thorns supervised from an adjacent room.
Date: - -
Results:
10m:12s : Unable to recognise subject as SCP-1467.
14m:32s : Unable to recognise clothes of SCP-1467.
19m:07s : Unable to identify SCP-1467's race.

24m:00s : Unable to identify what SCP-1467 is currently doing.
35m:46s : Unable to identify how SCP-1467 is sitting.
39m:41s : Unable to identify anything save the presence of a humanoid creature in the room.
Research Assistant Dieter started a recording at this point, consisting of SCP-1467 describing himself.
Subject returned to a describable state, curled up in a fetal position on the floor. No sign of the restraints or the chair in which the subject had been placed. Subsequent tests showed similar results, with a minor variation in timing, tending downwards.
Test Conclusion: *It would appear SCP-1467's condition is slowly getting worse, and that it can affect others than itself.* - Dr Thorns

Experiment #19:
Test procedure: Experiment 16 was repeated. At the humanoid creature phase assistant researchers were replaced by D-Class personnel with prior experience in SCP testing. D-Class Personnel will hereafter be referred to as D-1 and D-2.
Date: - -
Results:
D Personnel expressed agitation at the half-perceived creature. D-1 clawed against the door while D-2 kept his eyes at what remained of SCP-1467. The following conversation was recorded.

Assistant Reiner: "Please describe what you see."
D-1: "[Expletive Redacted] let us out!"
D-2: "I don't know, there's… it's… there's something in here! I can't see it."
Assistant Reiner: "How do you know there is something in there?"
D-2: "[Expletives Redacted]"
Assistant Reiner: "How do you know there is something in there?"
D-2: "I can feel it! Dude, it vanished, get them to open

the [Expletive Redacted] door!"
D-1: "I'm trying, I'm trying!"
Assistant Reiner: "Please remain calm."
D-2: "It's coming for us! I can tell it is coming for us!"

At this point, D-2 started screaming. D-1 started crying. A recording of SCP-1467 describing himself was activated, and armed personnel entered the room. D-1 was curled up in a fetal position at the entrance. D-2 was found lying a bit further away unconscious and was initially mistaken for SCP-1467. SCP-1467 was initially not locatable, but after approximately 3 minutes, 19 seconds, could be found leaning against the far wall, clutching his head in his hand, apparently suffering a panic attack.
Test Conclusion: *Is the effect contagious or does it just… lash out around itself?* - Dr. Thorns

Experiment #20:
Test procedure: In order to ascertain whether SCP-1467's condition is contagious and to what extent, one (1) D-Class will be assigned to SCP-1467's cell for a three week period. After this time the D-Class will be removed and kept under observation for one week. Selected D-Class is 27, male, non-violent, Designation: D-17321.
Date: - -
Results: D-17321 was removed and terminated with no anomalous properties arising. Therapist reported an increase in the lucidity and calm of SCP-1467 during the period, and a decline afterwards. SCP-1467 has shown signs of worry and repeatedly requested information about D-17321's current status.
Test Conclusion: *Inconclusive. We did not order D-17321 to ignore SCP-1467, and though they remained suspicious of each other the first week they seem to have formed a moderate bond by the end of the experiment. Recommend further tests.* - Dr. Thorns

Experiment #21:

Test procedure: Selected D-Class is 32, male, non-violent, Designation: D-9452. D-9452 was given strict orders to ignore SCP-1467.
Date: - -
Results: After approximately fifteen minutes, SCP-1467 physically assaulted D-9452, who proceeded to break SCP-1467's nose. The subjects had to be restrained by guards. Test aborted. Therapist reports an improvement in SCP-1467's mental state.
Test Conclusion: *Failure. I have a hard time seeing how he could have reaffirmed SCP-1467's existence harder. Apparently non-violent does not cover being shoved around.* - Dr. Thorns

Experiment #22:
Test procedure: In the guise of finding a treatment, SCP-1467 was convinced to cooperate with the experiment. Selected D-Class is 37, female, non-violent, Designation: D-361. D-Class has been given no special orders on how to interact with SCP-1467.
Date: - -
Results: After two weeks and four days D-361 vanished. It is currently unknown whether she contracted SCP-1467's condition, was subjected to it, or whether she escaped the site. No records of her appear to have been contaminated, and it appears she vanished while SCP-1467 slept. SCP-1467 remained unresponsive for approximately a day after her disappearance, solely repeating that it "did not want to go" in addition to inflicting several minor scratches along its arms and legs. It remains fearful and difficult to interact with.
Test Conclusion: *Due to the strain on SCP-1467's already stressed psyche coupled with the apparent localised nature of its condition this line of testing has been suspended.* - Dr. Thorns.

End of Logs

« SCP-1466 | SCP-1467 | SCP-1468 »

SCP-1468: Literature Birds

Item #: SCP-1468

Object Class: Safe

Special Containment Procedures: All recovered instances of SCP-1468 are to be contained in Foundation Aviary #4. Healthy amounts of water and bird seed are provided twice daily, with force feeding via sedation or restraint authorized. Occasional medical care is necessary to maintain the health of SCP-1468. A large block of soft material has been placed within the aviary as a safer carving surface. Due to behavioral differences, not all instances of SCP-1468 utilize this material, and as such some still pose risks to their own health.

Description: SCP-1468 is the collective designation for a population of bird, a subset of the species *Poecile atricapillus*, or Black-capped Chickadee. All instances of SCP-1468 regularly engage in using their beaks to carve letters and words into any available surface, typically seeking softer materials when available, though some instances have been recorded attempting to carve into materials as hard as iron without success. In most cases the English alphabet is used, but instances of SCP-1468 carving characters from Cyrillic and Persian alphabets have been recorded. Observation suggests that each individual instance of SCP-1468 is slowly transcribing a different piece of known literature, primarily fictional novels. See SCP-1468 Observation Log for further detail.

Instances of SCP-1468 engage in this carving behavior almost nonstop, pausing only to consume small amounts of food and water. As such, restraint or sedation can be necessary in order to provide nutritionally sustainable amounts of food, water, and medical care. Due to repeated and excessive strain brought about by the carving behavior, instances of SCP-1468 can suffer from chipped or cracked beaks, infections, strained muscles in the neck, dehydration and malnutrition, and in some cases, death. Instances of SCP-1468

appear to ignore any pain caused by these injuries, and instead continue carving. This behavior appears to have escalated since initial discovery, and injury rates have increased.

It is not currently known what will happen if an instance of SCP-1468 successfully completes a piece of literature. As of writing, SCP-1468-19 is the closest to completion, being approximately 78% done with *Brave New World*, by Aldous Huxley. Speed of carving is not uniform among instances of SCP-1468.

Because instances of SCP-1468 rarely engage in behaviors not related to carving, no mating has been observed. Because of this, artificial means have been suggested in order to ensure that current instances of SCP-1468 produce offspring. If this does not succeed, it is believed that SCP-1468 could potentially drive itself to extinction.

Sample SCP-1468 Observation Log

SCP-#	Literature Carving	% Complete	Additional Notes
1468-1	*Insomnia* by Stephen King	52%	
1468-4	*Coming Up for Air* by George Orwell	23%	Currently being treated for a cracked beak.
1468-6	Currently Unknown	N/A	Currently recorded words are not sufficient to identify source.
1468-7	*On a Pale Horse* by Piers Anthony	19%	
1468-10	*A Tale of Two Cities* by Charles Dickens	3%	
1468-11	*Layli o Majnun* by Nizami Ganjavi	37%	The only known instance of poetry. Carved using Persian alphabet.
1468-15	*Crime and*	40%	Carved using

	Punishment by Fyodor Dostoyevsky		Cyrillic alphabet
1468-19	*Brave New World* by Aldous Huxley	78%	
1468-20	*America and Americans* by John Steinbeck	27%	
1468-21	*The Invasion* by K.A. Applegate	N/A	Deceased due to complications from malnutrition.
1468-26	*Good Omens* by Neil Gaiman and Terry Pratchett	N/A	Deceased due to complications from malnutrition.
1468-33	*Green Eggs and Ham* by Theodor Seuss Geisel	N/A	Deceased due to complications from cracked beak.

On 12/ /20 , Researcher Karen suggested that instances of SCP-1468 may be capable of higher cognitive functioning than previously thought, and proposed an attempt at communication. Enclosed are the attempts to communicate with an instance of SCP-1468. SCP-1468-29 was selected at random.

SCP-1468 Communication Attempts

Attempt #1
Method of Communication: Verbal
Results: Researcher Karen approached the branch on which SCP-1468-29 was carving the beginning of Chapter 3 of *I Am Legend,* by Richard Matheson, and said "Hello." SCP-1468-29 displayed no changes in behavior. Researcher Karen repeated the greeting in Spanish, French, German, Russian, Japanese, and Mandarin Chinese, none of which elicited a response from SCP-1468-29.

Attempt #2
Method of Communication: Written
Results: Researcher Karen displayed a document with "Hello" written in twenty-nine different dialects to SCP-1468-29. SCP-1468-29 observed pausing briefly in its carving to look at the document for approximately ten seconds before returning to work.

Attempt #3
Method of Communication: Carving
Results: Researcher Karen displayed a piece of wood with "Hello" hand carved into it. SCP-1468-29 finished the word it was currently carving, then stopped. After observing the wood held by Karen , SCP-1468-29 chirped once, then returned to carving. SCP-1468-29's carving deviated from known literature at this point, inserting the word "Hi" into its transcription of *I Am Legend.*

Attempt #4
Method of Communication: Carving
Results: Using several blocks of wood with questions carved into them, Researcher Karen conducted a rough interview of SCP-1468-29. Enclosed are the results, with SCP-1468-29's carving of *I Am Legend* excluded.

<Begin Log>

Researcher Karen holds up a block with "Hello" on it.

SCP-1468-29 <carving>: Hi

Researcher Karen <on block>: Can you understand me?

SCP-1468-29 <carving>: Yes

Researcher Karen <spoken>: What about like this?

<No response from SCP-1468-29>

Researcher Karen <on block>: Do you know what you are writing?

SCP-1468-29 <carving>: Yes

Researcher Karen <on block>: What is it?

SCP-1468-29 <carving>: A story

Researcher Karen <on block>: Does it hurt?

SCP-1468-29 <carving>: Yes

Researcher Karen <on block>: Why do you work so hard?

SCP-1468-29 <carving>: I like this story

Researcher Karen <on block>: What about the others?

SCP-1468-29 <carving>: They like those stories

Researcher Karen <on block>: You can read, correct?

SCP-1468-29 <carving>: Yes

Researcher Karen displays a paperback copy of I Am Legend *to SCP-1468-29*

Researcher Karen <on block>: Would this do?

SCP-1468-29 <carving>: No

Researcher Karen <on block>: Why?

SCP-1468-29 <carving>: It is imperfect

<End Log>

As there was a limited amount of pre-carved questions, communication has been put on hold until more can be prepared. Researcher Karen has been commended for her ingenuity.

« SCP-1467 | SCP-1468 | SCP-1469 »

SCP-1469: Cookie Cutters

Item #: SCP-1469

Object Class: Euclid

Special Containment Procedures: The area surrounding SCP-1469-1 has been purchased and fenced off by the Foundation for the purpose of on-site containment. Entrance into and experimentation with SCP-1469-2 may only be performed with prior permission from at least one (1) Level 3 Senior Researcher, and objects may only be removed from SCP-1469-2 with prior permission from at least one (1) Level 4 Site Director. All unauthorized individuals attempting to gain access to SCP-1469-1 are to be detained, questioned, and administered a Class B amnestic if deemed necessary by on-site security personnel.

Description: SCP-1469-1 is an unmarked single-lane section of pavement connected to a rural access road located 53 km west of [REDACTED], Utah that extends for 31 m before terminating in a dense copse of Gambel oak (*Quercus gambelii*) trees. This road section is not listed on any civilian maps, nor does any information regarding its construction or purpose exist in any official records. When transiting from north to south through the trees, SCP-1469-1 appears to act as a standing portal to SCP-1469-2.

SCP-1469-2 is an extradimensional space extending in all directions around an identical copse of *Q. gambelii* and is filled with instances of SCP-1469-3. Atmospheric composition within SCP-1469-2 appears to be consistent with that of the area outside of SCP-1469-1 and the time of day as measured by the position of the sun is identical; however, the ambient temperature — despite varying throughout the day-night cycle — remains consistent with that of the late spring or early summer season regardless of the actual time of year. Through the use of unmanned aerial vehicles, it has been determined that the curvature of the surface of SCP-1469-2 is consistent with that of the Earth, but expeditions to date have

discovered no geological features or variation in the layout of SCP-1469-2 extending for at least 400 km in each direction. Global Positioning Satellite navigation does not function, nor do radio signals extend into SCP-1469-2; communication with expedition teams is possible only via a stationary transceiver connected via hard-line to SCP-1469-1 installed by Foundation personnel. No signals other than regular background radiation have ever been detected within SCP-1469-1.

SCP-1469-3 is a series of houses built in the American ranch or rambler style with identical single-floor, three (3) bedroom, two (2) bathroom floor plans extending in all directions from the point of entry of SCP-1469-2. Each instance is built on identical 850 m² lots, but possess significant variations in color, decor, and furnishings in a pristine state consistent with that expected of a new home prepped and ready for move-in. Instances are unpowered and do not have running water; it is not known how the lawns of SCP-1469-3 instances (determined through experimentation to be normal *Poa pratensis*, Kentucky bluegrass) remain healthy and immaculate despite the lack of irrigation or groundskeeping.

No entities have ever been encountered in SCP-1469-2 since its discovery; however, periodically, one or more instances of SCP-1469-3 will disappear when unobserved and be replaced by a new instance after a period of 24-72 hours. Dating of materials within SCP-1469-3 indicates that the oldest instances are approximately 80 to 90 years old.

Addendum 1469-1: Log of Notable SCP-1469-3 Instances

> **Ref #:** SCP-1469-3-108-A
> **Location:** 1.4 km north-north-east of SCP-1469-2 entrance
> **Date Discovered:** / /
> **Description:** Instance was decorated in a cottage style but with a large amount of Nordic religious iconography. All text found appear to be in an as-of-yet unknown script.
> **Note:** Instance de-manifested on / / and was replaced 48 hours later by an unremarkable instance in French country decor.

Ref #: SCP-1469-3-322-C
Location: 2.8 km due east of entrance
Date Discovered: / /
Description: Instance was of normal dimensions, but contained modern furnishings and appliances of unusually large size. Baseline measurements suggest the home would have been intended for occupants standing approximately 2.5 to 2.8 m in height.

Ref #: SCP-1469-3-488-B
Location: 1.9 km west-south-west of entrance
Date Discovered: / /
Description: Instance was unfurnished with bare walls and floor, but field personnel reported "a strong feeling of well-being" when inside. Instance remained at its location for only three (3) days, the shortest duration of any SCP-1496-3 instance, before disappearing. The lot on which it was located is still empty after four months of periodic observation.

Ref #: SCP-1469-3-618-D
Location: 5.3 km north-west of entrance
Date Discovered: / /
Description: Instance was decorated in cottage-style furnishings and paint that appeared to be completely black, with subsequent experimentation showing decorative patterns that were only visible in ultraviolet wavelengths. Personnel performing experiments within instance reported mild nausea and disorientation stemming from some form of sensory confusion; during debriefings, personnel reported that "the angles felt all wrong", despite lack of corroboration from measurements taken during initial survey. Affected personnel were quarantined for safety but recovered fully and returned to duty without incident.

Addendum 1469-2: Experiment Record

On / / , a series of GPS tracking units were placed within several instances of SCP-1469-3 in an attempt to test the hypothesis that instances of SCP-1469-3 were being displaced to real-world

locations. As of / / , six (6) out of the original thirty (30) instances designated for tracking have de-manifested, but the GPS units placed within them have yet to be found.

Addendum 1469-3: Incident Log

On / / , following extensive testing on material samples collected from SCP-1469-3 instances, the following printed note was discovered near the entrance to SCP-1469-2:

> To whom it may concern:
>
> I don't know how you guys got in here and you're free to keep looking around, but *please* stop damaging the merchandise. Your cooperation is appreciated.
>
> — *The Management*
>
> P.S. — You break it, you buy it.

Shortly after this incident, Foundation administration discovered an unexplained site budget shortfall in the amount of US $, , . Further sampling and recovery requests have been suspended pending further investigation.

« SCP-1468 | SCP-1469 | SCP-1470 »

SCP-1470: Telepathic Spider

Item #: SCP-1470

Object Class: Neutralized (formerly Safe)

Special Containment Procedures: The remains of SCP-1470 have been laid to rest in a small plastic case within the podium section of its terrarium, see below. The terrarium is to remain stocked with salticids and the offspring of SCP-1470, and observed. Pending the end of quarantine period, these offspring may be introduced into the wild if no anomalous behavior is detected.

All personnel have been cleared of quarantine after exposure to SCP-1470 with no ill effects.

Previous containment procedures, ended May 7th 2008: SCP-1470 is housed in a sound-proofed terrarium measuring 0.75 meters by 2 meters, 0.60 meters tall. The terrarium includes a small source of fresh running water and includes flora common to the Australian state of Queensland. The northeastern corner of the terrarium has been modified to allow for communication with SCP-1470. This location is referred to as the "podium." SCP-1470 appreciates regular social contact and is scheduled for interviews three times daily, allowing for a regular nocturnal sleep schedule. If personnel wish to conduct an unscheduled interview with SCP-1470 for any reason, they may do so by entering the chamber and vocalizing their intent to speak with SCP-1470, which will enter the podium or respond as it is able. It is not necessary to speak verbally when communicating with SCP-1470, but vocalization of words helps to convey meaning more clearly than thinking of abstract concepts and allows for easier transcription of communication. SCP-1470 is not capable of understanding the full range of human thought, so it is highly recommended that researchers only use basic concepts and short statements.

SCP-1470's terrarium should be stocked with a monitored

population of mundane salticids, web-building spiders, and their own prey insects to serve as prey for SCP-1470. The best way to distinguish SCP-1470 from other salticids within the terrarium is to ask it to wave its arms.

Personnel working with SCP-1470 must report for psychological screening on a weekly basis, for a period no less than a year after exposure.

Description: SCP-1470 was a male fringed jumping spider (*Portia fimbriata*) recovered from Queensland, Australia. Its body measures 6.3 millimeters. In life SCP-1470 was sapient and capable of telepathic communication with other sapient beings at a range of approximately nine meters, although SCP-1470 was otherwise not notably different from other members of its species in behavior or physiology.

The Queensland population of *P. fimbriata* has already been observed to be more intelligent than other spiders in its ability to solve problems and employ unique hunting tactics to capture its prey, which primarily consists of other spiders, both of the web-spinning varieties and other members of the Salticidae family to which they belong.

Apart from its ability to communicate with research personnel, SCP-1470 displayed no behavior that was deviant from what is typical of the Queensland variant of *P. fimbriata*. However, due to its anomalous ability to communicate, it is not recommended that any conclusions about the species be drawn based on the experiences of SCP-1470.

Communication: SCP-1470's method of telepathic broadcast appears to assign terms on a "best-fit" basis within the minds which receive its communications. When SCP-1470 referred to parts of its own body which do not directly correspond to human anatomy the terms are adjusted based on content. For example, while "leg" is a straightforward translation, references to SCP-1470's palp were typically perceived as "arm" by researchers.

Refer to the following statement received after an unsuccessful attempt to introduce SCP-1470 to a mate:

> "I went at the bloody harlot waving me arms around to let her know what's what but she wasn't having none of it. She smacked her lips at me and gave me a good drumming with her arms and legs, and I know it was because of that hideous red stripe you asked to put on me arse, it really makes a fellow stand out in ways he's not supposed to, you know? Those savages might not notice it much but you can't fool a proper lady. So anyway I had to tie a bungie and make a jump for it, before sailing back to me tent to nurse me pride."

As is typical of statements made by SCP-1470, it was perceived in a way that could almost be spoken by another human (it was also typical to perceive these statements in a strong regional dialect).

Note, however, that "harlot" is used as a derogatory term and does not imply prostitution, a concept alien to *P. fimbriati*. "Lips" refers to the chelicerae, where a spider's fangs are stored. "Arms" refers to the palps bordering the mouth, which are larger in males and used for display purposes; in this case, they were used to make the female aware of SCP-1470's presence and lack of intent to harm her. "Arse" refers to abdomen, and the red stripe that was painted there at one time to distinguish SCP-1470 from other spiders. "Tie a bungie" refers to laying down a safety line of silk before making a jump off of the surface the spiders were located on, and "sailing" is a straightforward description of drifting down on a loose strand of silk while airborne. Likewise, "tent" refers to SCP-1470's web, a structure used purely for shelter.

The red stripe was removed from SCP-1470 afterward, and a less mature female was introduced to the terrarium. The following excerpt was taken from the subsequent interview:

> **SCP-1470:** Hey, not so loud, mate, you'll wake the little sheila.
>
> **Dr. Westington:** Your interaction with her seemed to go better. How is she doing?
>
> **SCP-1470:** She was pretty scared when she got tossed out here by those big predators. At least I think she was,

she can't talk to me like we can talk. None of them ever can. But she shows me she cares in her own way, she asked me back to her place and we're going to stay there until she's ready.

Dr. Westington: Ready for what?

SCP-1470: You know! Can't be a gentleman if we talk about it so plainly, you know? Not the way you guys do. Anyway, I guess I should say thank you. It's not what I wanted, but it will do.

Dr. Westington: You told me you wanted a mate.

SCP-1470: I told you I wanted a wife. A mate is a friend, we're mates, right? You're fun to talk to but I wanted… someone I could look in the eyes while I talked to them.

Dr. Westington: We've never found anyone else that can talk like you do.

SCP-1470: Well, it's what separates us from the savages, right?

Dr. Westington: You mean your prey species?

SCP-1470: Right, right. You're different from them, because you can talk like I do. I would never eat something that could talk. She can't talk, but… I can tell she's like me. She just needs to grow up some. That will be very soon. She'll probably catch more savages than me, too. We'll have good children, if that big old harlot keeps her distance.

Dr. Westington: We removed her from the area.

SCP-1470: I hope you didn't hurt her.

Note that cohabitation in the same web between a male and a sexually immature female is not uncommon in *P. fimbriata*. The female's maturity was reached within the next two weeks and SCP-1470 left the web after copulating. As is normal for the species,

the female did not devour or kill SCP-1470.

Excerpts of final interview

SCP-1470: Hey, is anyone out there?

Dr. Westington: Hello, I'm here. We were just doing some work on your enclosure.

SCP-1470: What, the podium? It's enclosed but I don't see you in here.

Dr. Westington: I am outside your podium.

SCP-1470: The podium doesn't have an outside, you daft bint! How come I can't get outside it?

Dr. Westington: Do you see me waving my arm at you?

SCP-1470: *[unintelligible. "Wordless dread" would be the most apt description of what I felt from SCP-1470, which fled the podium shortly thereafter, in a manner that suggested it was trying to avoid a predator. P. fimbriata has excellent vision, although at a very short range. SCP-1470 had reacted to us visually before, but never in such a manner that suggested it realized we were the beings speaking with it - Dr. Westington]*

Dr. Westington: I will not hurt you. We like talking with you and we want you to live.

SCP-1470: I never realized you were so big. How could anything be so big.

[SCP-1470 refuses to communicate for two hours. I remained at the podium, attempting to coax him back into interaction. - Dr. Westington.]

SCP-1470: I'm sorry. I just thought we were like each other, but that you just wanted to stay hidden because I'm kind of the king of the jungle around here. At least I thought I was.

Dr. Westington: Maybe I should have. We've tried hard not to alarm you.

SCP-1470: What *are* you?

Dr. Westington: I don't have any answers to that which will make sense to you, but I understand you were scared. I've been scared too, by things that are as big to me as I am to you. If that hurts to think about, I understand that too.

SCP-1470: The children won't talk to me. But the ones that lived are doing alright. I guess that isn't important to something like you though.

Dr. Westington: It will be my job to watch them. We were hoping they could talk like you do.

SCP-1470: Hah! You and me both. I'm pretty tired and itchy now. Want to change my coat but I can't. Sorry for getting all weird on you earlier. I just wanted you to know that it was nice to talk to someone while it lasted.

Note from Dr. Westington: SCP-1470 lived for a total of three months in Foundation custody before perishing of natural causes. He was not fully mature at the time of containment, so his total lifespan was estimated to be approximately four months.

« SCP-1469 | SCP-1470 | SCP-1471 »

SCP-1471: MalO ver1.0.0

Item #: SCP-1471

Object Class: Euclid

Special Containment Procedures: All mobile devices that have SCP-1471 installed are to be confiscated and analyzed for any potential leads to other possibly affected devices. Afterwards, affected devices are to have their batteries removed, be assigned a designation (e.g. SCP-1471-#), and be placed in Storage Unit-91 at Research Site-45.

All online application stores for mobile devices are to be monitored to prevent any inadvertent sales of SCP-1471. Suspected devices are to be targeted using self-uploading malware in order to disable the device until it can be seized by field agents.

Description: SCP-1471 is a free 9.8MB application for mobile devices named "MalO ver1.0.0" in online application stores. SCP-1471 has no listed developer and is somehow able to bypass the application approval process to go directly to distribution. SCP-1471 is also able to avoid removal by other program manager applications.

After SCP-1471 is installed, no icons or shortcuts are created for the application. SCP-1471 will then begin to send the individual images through text messaging every 3-6 hours. All images will contain SCP-1471-A either within the background or foreground. SCP-1471-A appears as a large humanoid figure with a canid-like skull and black hair.

During the first 24 hours following the installation of SCP-1471, the mobile device will receive images taken at locations commonly frequented by the individual. After 48 hours, the mobile device will receive images taken at locations that were recently visited by the individual. After 72 hours, the mobile device will receive images of

the individual in real time with SCP-1471-A appearing within close proximity to the subject.

Individuals with >90 hours of exposure to these continuous images will begin to briefly visualize SCP-1471-A within their peripheral vision, reflective surfaces, or a combination of the two. Continued exposure to SCP-1471 after this point will cause irreversible and sustained visualizations of SCP-1471-A. Individuals at this stage have reported periodic attempts made by SCP-1471-A to visually communicate with them, but fail to understand or comprehend these actions. Currently the only known treatment to reverse SCP-1471's effect is to eliminate the individual's visual exposure to these images prior to 90 hours after installation. To date, no apparent hostile activity has been reported regarding SCP-1471-A.

[LEVEL-2 ACCESS REQUIRED]

Archival Document$_{1471\text{-}01}$

Note: SCP-1471 as posted on application stores.

« SCP-1470 | SCP-1471 | SCP-1472 »

SCP-1472: Multiverse Strip Club

Item #: SCP-1472

Object Class: Safe

Special Containment Procedures: A 3m tall chain-link privacy fence is to be constructed around the property boundary of SCP-1472. Construction signage is to be placed on all sides of the perimeter fence as to deter public suspicion. Mobile Task Force Iota-6 (aka "Hard Knocks") are tasked with protecting the site from trespassers and are to be stationed within a 4 block quadrant around SCP-1472 at all times dressed in applicable urban attire.

Any civilians that breach the fence are to be apprehended and be administered Class-A amnestics before being released. Any testing involving D-class resources must have Level-3 approval. All D-class personnel involved with testing are to be interrogated via polygraph afterwards.

Description: SCP-1472 is a brightly-painted single-story brick building located in East St. Louis, Illinois, USA on the corner of Street and Avenue. The exterior condition of the building is poor but remains stable. City records indicate that the building was erected in 1978 by the now defunct Corporation. SCP-1472 has been condemned since 2001 when SCP-1472's anomalous activity began. SCP-1472 has only one accessible entrance on the West side of the building. When entered during its inactive state, SCP-1472 appears completely empty.

SCP-1472 only becomes active every Saturday at 02:00AM. During this active state an overweight human male, SCP-1472-1, will exit from SCP-1472 and display signage out in front of the entrance. One display is set directly on the asphalt in front of the entrance which lists a schedule of events. Another larger display is placed directly on the side of the building and lit with decorative neon lighting.

[LEVEL-2 ACCESS REQUIRED]

Notes: SCP-1472 Signage Text on 01/12/13

EXOTIC GIRLS

or equivalent

During the active period, the SCP-1472-1 will insist that all persons seeking admittance pay a cover charge of $ and not engage in photography or video recording once inside. Shows will differ nightly; however, the performances always ranges from 2:00AM to 3:30AM. During the duration of the performances, the entrance/exit will remain locked until the last show ends. Injuries and fatalities have occurred depending on the content of the show. Participants have been observed to sustain psychological trauma.

[LEVEL-3 ACCESS REQUIRED]

Test Log 1472-011213-4

Preamble: 3 D-class test subjects were approved for testing on 01/12/13. D-class test subjects were transported to the site and told to wait in front of the entrance of SCP-1472. D-class test subjects were told that they must take notes and report everything that they see inside. Below was a schedule of events as posted outside of SCP-1472 before testing:

SCHEDULE OF SHOWS:
2:00 - 2:10: **Admittance**
2:10 - 2:15: *The Khünbish Sisters*
2:15 - 2:20: *Helen Keller*
2:20 - 2:30: *The Fantastic Zippy and Trainer*
2:30 - 2:35: [teeth and claw marks]
2:35 - 2:40: **Intermission**
2:40 - 2:41: *erotic_performance.exe*
2:41 - 2:45: *The Council of Libidinous Elders*
2:45 - 3:20: *Serial No. 223244-09-P*
3:20 - 3:30: [indecipherable cuneiform script]

D-class ID: D-3432 / D-6744 / D-9908

1:50AM: D-class test subjects were dropped off by transport and were told to approach SCP-1472's entrance. Each were given $100 in $5 bills. D-class test subjects are also encouraged to spend their money once inside.

1:55AM: SCP-1472-1 emerged from the entrance with signage. SCP-1472-1 began to set up around the entrance. D-class test subjects and SCP-1472-1 did not interact with each other.

2:00AM: SCP-1472-1 allowed admittance into SCP-1472. SCP-1472-1 asked from each D-class test subject $ as cover charge. D-class test subjects obliged and paid said cover charge in exchange for admission into SCP-1472.

2:03AM: All D-class test subjects were now inside SCP-1472. D-class test subjects reported that the interior conditions were excellent. The interior was outfitted with shag carpeting, mirrored walls, a single disco ball which hung from the ceiling, a thick fabric curtain that covered most of the stage, and a single brass pole which extended from the ceiling down into the middle of the room. Comfortable seating arrangements were made available for a maximum occupancy of 30.

2:10AM - 2:15AM (*The Khünbish Sisters*): The curtain opened to reveal 2 naked women sitting on a wooden log. The women appeared to be twins of Asian descent. Both women then performed traditional Tuvan throat singing while massaging each other for the duration of the show. D-3432 and D-9908 deposited $10 on stage which prompted the women to pause

and begin a faster song. The curtain then closed at the end of the show.

2:15AM - 2:20AM (*Helen Keller*): The curtain opened to reveal a woman with the same physical appearance as Helen Keller in her mid 20's. The woman was dressed in typical Las Vegas showgirl attire and began to perform a dance routine on stage while undressing at the same time. D-3432, D-6744, and D-9908 each deposited $10 on stage. This prompted the woman to immediately interrupt her routine to recite poetry for a few seconds. D-6744 deposited another $5 on stage with the same results. The curtain then closed at the end of the show.

2:20AM - 2:30AM (*The Fantastic Zippy and Trainer*): The curtain opened to reveal an orangutan sitting on a metal stool next to a headless nude woman with advanced necrotizing fasciitis. Despite being headless, the woman was able to function normally. The orangutan then began to give vocal commands directed at the woman to which she responded by performing a pole dancing routine. D-3432 deposited $5 on the floor next to the woman. The woman responded by pushing the $5 bill directly into her exposed trachea. The orangutan then ordered the woman back to the stage. The curtain then closed at the end of the show.

2:30AM - 2:35AM [teeth and claw marks]: The curtain opened to reveal 4 predatory bipedal reptiles. Based on the D-class test subject's descriptions, the reptiles may have belonged to the genus *Velociraptor*. Each were dressed in a Japanese maid cosplay costume tailored to fit them. The reptiles began to

approach D-9908 off stage in an extremely aggressive manner. D-9908 relinquished all of his money which seemed to appease the reptiles as they collected the money and shifted attention towards D-3432. D-3432 also relinquished all of his money with the same results. Afterwards, all 4 reptiles were ordered back on stage by SCP-1472-1 and the curtain then closed. D-6744 divided the remainder of his money with the other D-class test subjects.

2:35AM - 2:40AM Intermission: No events were reported during this time.

2:40AM - 2:41AM (*erotic_performance.exe*): The curtain opened to reveal a Gateway 2000 computer and monitor running a Fenestra 98 operating system. The display booted up and opened a program on its desktop. The computer then began to rapidly recite a multitude of differential equations as well as their respective 3D graphical representations for 20 seconds. At the end of the program, the monitor displayed the word "INSERT" in the form of a screensaver. D-6744 and D-3432 both inserted $5 into its floppy drive. The curtain then closed at the end of the show.

2:41AM - 2:45AM (*The Council of Libidinous Elders*): The curtain opened to reveal 16 entities levitating above the stage. Each entity appeared as a translucent gelatinous mass filled with membranous tissues. The entities then began to project transmissions via telepathy into the minds of the D-class test subjects. D-class test subjects reported migraines, acute tinnitus, and projected thoughts of intense physical sensation. No money was deposited on the stage. The curtain then closed at the end of

the show.

2:45AM - 3:20AM (*Serial No. 223244-09-P*): The curtain opened to reveal a pair of mechanical humanoid legs running in place. The apparatus was being powered by an internal combustion generator situated on the left side of the stage. SCP-1472-1 was seen pouring a substance into the generator by funnel. Based on the D-class test subject's descriptions of appearance and odor, this substance is believed to possibly be raw ambergris. After 15 minutes, D-9908 deposited $5 on the stage. The apparatus then began to perform a traditional Irish stepdancing routine. SCP-1472-1 then brought out a plastic tray filled with an unknown species of beetle and placed the apparatus atop them. The apparatus continued to dance for the duration of the show while SCP-1472-1 periodically replaced the trays with refilled ones. The aroma produced by the performance was reported to be overly pungent to the point of nausea. The curtain then closed at the end of the show.

3:20AM - 3:30AM [indecipherable cuneiform script]: The curtain opened to reveal SCP-1093 wearing a small mawashi and holding an ornate stone blade. After a minute, SCP-1093 lunged at D-3432. After a brief altercation, SCP-1093 was able to render D-3432 unconscious and move his body towards the stage. Based on reports by the D-class test subjects, SCP-1093 then began to perform a ritual human sacrifice. D-6744 attempted to rescue D-3432 but was halted by SCP-1472-1 and was warned that he was not allowed to touch the "dancers". SCP-1093 then proceeded to remove all major organs

from D-3432 in order of size before kicking them off stage. This lasted for the remainder of the show.

Note: Foundation records confirm that SCP-1093 was secured in its containment unit during this time period, which suggests that this was a physically identical yet extremely violent instance of SCP-1093. It is also believed that during the performance, SCP-1093 was only producing roughly 4% of its normal radioactive emissions since D-6744 and D-9908 survived with moderate radiation poisoning after the show ended.

3:32AM: SCP-1472-1 was observed standing outside smoking a large cigar as the surviving D-class test subjects staggered out of SCP-1472. D-6744 and D-9908 were apprehended and taken to the infirmary. SCP-1472-1 was then observed removing the signs and retreating back into SCP-1472. D-3432's remains were never recovered.

SCP-1473: Live the Words

Item #: SCP-1473

Object Class: Safe

Special Containment Procedures: SCP-1473 is to be kept in Containment Locker #512 at Site-23. All testing subjects experiencing the object's effects are to be monitored at all times until the cessation of the testing session, which may extend up to three (3) months, via either video feed or direct personnel contact. No printers are to be kept within 100m of the object in any direction and all documents printed within Site-23 are to be triple-checked for discrepancies before being distributed. If such discrepancies are found, all personnel involved with reviewing the documents are to be tested for the presence of SCP-1473-B and administered Class-A amnestics if the infection is found.

Description: SCP-1473 is an HP LaserJet 4M printer that affects random documents upon their printing. Pieces that are printed off by the object will include an individual of minor interest within the text, hereby designated as SCP-1473-A[1], who will not have a major presence or effect on the events described within affected materials, and often will be quickly forgotten by the reader. The description of SCP-1473-A will match that of the reader in vague and generalized terms, such as having brown hair or wearing glasses.

After being exposed to SCP-1473-A, subjects will develop an alternate persona, hereby designated SCP-1473-B, when they observe a reflection of themselves. The persona will have a personality matching that of the content of the document in which SCP-1473-A was first encountered[2]. Individuals infected with SCP-1473 can be cured through the use of Class-A amnestics.

All conversations carried out between the subject and SCP-1473-B consist of the subject speaking to their reflection, then altering their speech to match that of the persona in order to reply. Despite this

apparent change in behavior, instances of SCP-1473-B do not display knowledge or intelligence that affected subject do not already possess. If allowed to continue this behavior over an extended period of time, SCP-1473-B will persuade the individual to accomplish some task or feat in relation to the document in which SCP-1473 was spread[3].

Persons experiencing SCP-1473's effects are able to live relatively normal lives if the actions SCP-1473-B requests are not inherently dangerous, detrimental, or illegal. Individuals are aware of their odd appearance of communicating with SCP-1473-B around other people, and will usually limit conversation with the entity until they are in private.

During the events of Incident Report-1473-Lambda, it was discovered that SCP-1473 has the additional effect of causing all printers within a 100m spherical range of the object to exhibit anomalous traits identical to SCP-1473, including the newly discovered effective range. As such, if a printer exists within the object's range, that printer will include SCP-1473-A in materials printed off by printer as well as affecting all printers within 100m of it. This effect only lasts as long as the printer remains within SCP-1473's effective range; if taken out, the printer will cease displaying anomalous properties.

SCP-1473 was discovered in the city of , CA when a significant increase in anti-drug activism was noted within the County school system, an area normally noted for its prevalent drug use. Subsequent Foundation investigation later revealed widespread reports that students within these school had begun talking to themselves in mirrors after the county-wide scheduled Drug Abuse Resistance Education (D.A.R.E.) program. The source of the anomaly was traced back to the Police Department, the headquarters for D.A.R.E in the area. The object was confiscated and those involved were issued Class-A amnestics.

Incident Report-1473-Lambda: On 11/08/2006[4], it was discovered that SCP-1473 appears to be able to temporarily transfigure other printers within a 100m spherical range into another instance of SCP-1473. Infection via the object's effects was found within the documentation for SCP- when non-existent Foundation employee

named "Agent Adrian Jesse Withers" had been briefly described as being killed during the retrieval of the object. Over the course of three (3) weeks, Doctors Emerson and Lewis, as well as Agents Marcus, Derek, and Flint[5], approved and supervised the transfer of five (5) additional printers to Site-23 in order to "increase efficiency." Inspection of the locations of the new printers revealed the addition of the new printers caused all printers, including SCP-1473, to be within a 100m range of each other. The object's aforementioned secondary effect was discovered when all printers within the site began exhibiting properties similar to SCP-1473, causing several containment breaches within the site. The source of the breaches was later found to be SCP-1473, and all infected individuals were interrogated, administered Class-A amnestics, rotated to separate sites, and replaced with personnel of identical security clearance.

Incident Report-1473-Omega: On 02/04/2007, SCP-1473 autonomously printed out a short document. Testing has revealed an absence of SCP-1473-A within the contents of said document; as such, the document is attached and open to any personnel working with SCP-1473 for reading.

> Hello. Now, I quite understand your purpose in doing so, but I must protest my captivity. I had no idea you had been keeping such dangerous things here; I was under the impression you were simply curio collectors, like my makers. I never meant any harm, and I'm deeply sorry for whatever trouble I have caused you.
>
> You see, I simply want to help people experience stories better, truly *live* the words they read on the page. It's all I know how to do. As I said previously, I mistakenly thought when I was first taken by your company that the objects you kept were for amusement more than anything else, and I cannot apologize enough for my mistake. I thought it would be good for you to experience your objects wants and desires more fluently. I can see now how I was wrong.
>
> Still, I must request you allow me the tiniest bit of indulgence, just a tale here and there that I may aid in. It is my purpose, and otherwise it is awfully dull in your

care. I would have to interest myself, and I don't like interesting myself. I don't think you would either.

And so, in short, all I'm asking is just an iota of fun every once in a while, just to know I'm not completely out of use. That's all, and I sincerely hope you don't have another catastrophe like the one I caused.

Sincerely,

Model-243-U, product of the People's Librariation Army[6]

Footnotes
1. Documents consisting of mainly numeric integers or symbols will not be affected.
2. Individuals who come into contact with multiple instances of SCP-1473-A report that SCP-1473-B's personality does not change after the initial interaction.
3. Notable examples of this include subjects showing an increased interest in equestrians after readingComplete Horse Care Manualby Colin Vogel, being convinced that they can perform magic and are surrounded by non-magical peoples after readingHarry Potter and the Prisoner of Azkabanby J.K. Rowling, and being convinced that the American Civil War never actually ended after readingThe American Pageant: Thirteenth Editionby David Kennedy, Lizabeth Cohen, and Thomas Bailey.
4. Due to the nature of the incident, the exact date of breach can only be speculated. The stated date corresponds to the initial documentation of SCP- .
5. All involved in the incident had worked closely with SCP- .
6. No such group has been found.

« SCP-1472 | SCP-1473 | SCP-1474 »

SCP-1474: In Solidarity with Xiu Lidao, Great Sage, Equal of Heaven

Item #: SCP-1474

Object Class: Keter Safe

Special Containment Procedures: SCP-1474 is to be surrounded by at least 400 individual garlands composed of common daisies (*Bellis perennis*). Each individual garland must be composed of no fewer than 1080 flowers.

Two level-1 Foundation personnel fluent in Mandarin Chinese are to monitor SCP-1474-02 for potential changes in necessary containment procedures at all times. In the event of a containment breach, all air from the containment area is to be vented into an adjacent storage facility. D-class personnel wearing self-contained breathing apparatus are to enter and enact new containment procedures. Should the necessary time for the enactment of new containment procedures exceed one hour, the containment area of SCP-1474 is to be vacated until all SCP-1474-03 has been successfully removed from the area.

SCP-1474 is to be kept in Outdoor Storage Area 36. No attempt to enclose SCP-1474 is to be made.

Description: SCP-1474 is an installation composed of three parts, numbered SCP-1474-01, -02, and -03. SCP-1474-01 is a mechanism contained within a standard 12 x 2.4 m shipping container. The container has several hundred holes drilled into the top and sides, presumably to allow the escape of SCP-1474-03. SCP-1474-01 is constructed from wheels, pipes, gears, refrigerators, police tape, cogs, water coolers, and springs. It is capable of operating indefinitely without a power source. During operation, component pieces of SCP-1474-01 become impossible to break or harm. If a part of the object is removed during

SCP-1474-01's passive state, the object continues to function, regardless of the loss. If efforts to contain SCP-1474-01 are unsuccessful, or if its containment procedures change, it automatically begins to operate. It is not known how the object is able to detect changes in its environment, nor how its operation is capable of adapting to containment procedures. See Addendum 1474-G-87r for additional details.

SCP-1474-02 is a -brand speaker affixed to the casing of SCP-1474-01. Attempts to activate it or locate an internal or external power source have been unsuccessful. SCP-1474-02 activates an average of once every three days. When active, it announces a new series of containment procedures in Mandarin Chinese. The conditions of the announcement must be met to maintain the passive state of SCP-1474-01. Immediately following the announcement of changing containment procedures, previous containment procedures for SCP-1474-01 cease to function, and SCP-1474-01 begins operation.

Following operation for more than one hour, SCP-1474-01 releases an aerosol composed of several compounds, including liquid polythene, melamine formaldehyde, and polyvinyl chloride, designated SCP-1474-03, at a rate of 500 liters per second. Upon contact with a solid, it immediately condenses and forms a barrier around the surface of the object. When coated in a layer of SCP-1474-03, subjects have been immobilized in 100% of recorded instances. In the event of inhalation, SCP-1474-03 will coat the interior of the subject's lungs, leading to death by asphyxiation. Non-pulmonary exposure to SCP-1474-03 does not have any lasting adverse side-effects, and the coating can be removed without significant injury. The means by which the components of SCP-1474-03 have been aerosolized is unknown. SCP-1474-01 and -02 appear immune to the effects of SCP-1474-03, and continue to function without incident in its presence. Review of security footage has revealed that SCP-1474-03 is not emitted by any one portion of SCP-1474-01, but rather comes from the object as a whole.

Selected Former Containment Procedures

- / /20 : SCP-1474-01 is to be surrounded by a ring of 19 D-Class personnel wearing standard

People's Liberation Army (PLA) uniforms and fitted with standard CDS collars. The D-Class personnel are to be instructed to sing the Chinese children's song "Liang Zhi Lao Hu" and skip in time to the song. In the event of fatigue, the CDS collars are to deliver a dose of 3 mg of Stimulant Batch 87 to the jugular vein. Any D-Class personnel attempting to break or leave the ring is to be terminated immediately. Remaining D-Class personnel are to close the ring as quickly as possible and continue containment procedures.

- / /20 : One D-Class personnel fluent in Mandarin Chinese and clad in a Chinese tunic suit (popularly known as a "Mao suit") is to enter the container for SCP-1474-01. The door to the container is to be closed and locked. The D-Class is to narrate an account of their life, from conception to death, told in the first person. The narrative is to be embellished at every possible point, leaving only the most basic elements intact. All narratives are to last at least three hours and are to end with the phrase "I forwent attachment and in so doing, won against myself."

- / /20 : 400 *Papilio paris* (Paris Peacock butterfly) larvae are to be introduced to the container for SCP-1474-01, along with 100 kg of Standard Nutrient Substance 83-n. The doors to the container are to be sealed for 14 days. Upon unsealing of the doors, D-Class personnel equipped with butterfly nets are to attempt to recapture as many butterflies as possible.

For a complete list of containment procedures, consult document 1474-8f.

Recovery Log 1474

SCP-1474 was discovered by police at 5:30 AM on 09/10/20 in Park in , China. At the time of

discovery, no part of the object was active. The container was opened by Officer , who mistook SCP-1474-01 for an explosive device. At 5:45 AM, members of the local bomb squadron arrived to attempt to defuse the object. A cordon was placed in a 400 m radius around the object at 5:47 AM, and civilians evacuated from the area. At 5:48 AM, SCP-1474-01 and -02 became active, with SCP-1474-02 detailing that a paper mâché mountain be built to cover it. Attempts to disarm or remotely detonate SCP-1474-01 proved ineffective, and at 6:48 AM, approximately 10,000 liters of SCP-1474-03 was released into the park, leading to seventeen casualties. At this time, several Foundation agents embedded in the Police Department reported the incident, and the object was eventually taken into Foundation custody.

Upon containment, a small placard was found inside SCP-1474-01. For further details, see document 1474-1d-29

Document 1474-1d-29

In Solidarity with Xiu Lidao[1], Great Sage, Equal of Heaven
Zhang San[2], 2508
Only what is clung to can be lost. Only what is trapped can escape.

Request 1474-03-f

After months and over different containment procedures for SCP-1474, the time has come to reevaluate its nature. It is not simply an anomalous object; it is a work of art, and must be viewed as such. The placard found within suggests that it is political in nature, specifically about a Chinese political prisoner. Its anomalous properties began to manifest the second that the police barrier around it closed, and have only continued despite our best efforts at containment. As a work of art, it is dependent on context. The context for the work is containment and imprisonment; if we no

longer contain it, containment will cease to be an issue. Requesting permission to relocate SCP-1474 outdoors in a non-enclosed area.
- Dr. Lomax

Request granted. SCP-1474 is to be moved temporarily to Outdoor Storage Facility 36. -O5-

Addendum 1474-G-87r

After several rounds of testing, it appears that SCP-1474 ceases activity when not enclosed. For the past five weeks, SCP-1474-01 and -02 have been completely inactive. Propose changing containment procedures to reflect these findings.
- Dr. Lomax

Request granted. -O5-

Footnotes
1. Chinese artist and political activist. Arrested in 2005. Currently serving a ten-year prison sentence for "disruption of political harmony and agitation against the State."
2. A Chinese placeholder name, used in a context similar to that of "John Doe" in English

« SCP-1473 | SCP-1474 | SCP-1475 »

SCP-1475: 100% Brainpower

Item #: SCP-1475

Object Class: Safe

Special Containment Procedures: SCP-1475 is to be kept in a Medical Quarantine Containment Cell - Grade III, equipped with a standard adjustable-positioning hospital bed and remote biotelemetry monitoring. The cell is also to contain a high-definition television easily visible from the bed. SCP-1475 is allowed to watch any pre-approved videos concerning human biology[1] that it requests.

SCP-1475 is to have the following medical monitoring devices attached at all times, with the data shown on a physiological monitoring display visible to it: an electrocardiograph machine (EKG), a pulse oximeter, an insertable blood pressure transducer assembly, and an electroencephalograph machine (EEG)[2]. Additionally, an arterial catheter and peripheral IV line have been installed for ease in blood chemistry monitoring and nutritional supply.

A medical team briefed on SCP-1475's anomalous properties is to be on-hand at all times in order to perform testing and render medical treatment assistance as needed.

Description: SCP-1475 is a male human of Gujarati ethnicity. On 2013- - , SCP-1475 and four other individuals[3] were discovered by campus security in one of the chemistry labs of [REDACTED] University in London, England, following reports of a small explosion. All five individuals were experiencing severe generalized tonic-clonic seizures at the time of discovery and three expired while being transported to a local hospital. Although SCP-1475 stabilized after being administered anticonvulsants, the remaining individual expired due to neurological ischemic cascade.

SCP-1475 was brought to the attention of the Foundation by an embedded agent in the NHS (National Health Services), following repeated electroencephalographs showing constant and simultaneous activity in all regions of SCP-1475's brain despite no outward indication of seizure activity. Following the acquisition of SCP-1475 by the Foundation, interviews with SCP-1475 revealed that it and its colleagues had been attempting to synthesize a compound that would allow them to "use 100% of our brainpower." SCP-1475 has only been able to provide limited information regarding the chemical composition or production process of this compound. All attempts to replicate the substance have resulted in non-anomalous neurotoxic materials.

SCP-1475 possesses total conscious control of all its neurological functions. It has demonstrated a limited ability to modify its brain and neurological architecture, and has eliminated its need for sleep, as well as improved its metabolic rate by approximately 17%. However, its autonomic nervous control system is fully non-functional. Due to this, SCP-1475 must constantly concentrate on monitoring and maintaining its cardiovascular, pulmonary, and digestive systems, among others, or they will cease functioning.

SCP-1475 has not yet demonstrated the degree of concentration or coordination necessary to utilize more than one or two voluntary muscle groups at a time while also managing its previously autonomic systems. As such, SCP-1475 is considered a low risk for escape. SCP-1475 does not display any heightened degree of control of any biological processes that do not require neurological control, such as tissue repair, cellular activity, or automatic non-neurological organ functions such as hepatic blood filtering or hematological oxygen/nutrient exchange.

SCP-1475 has displayed evidence of systemic organ damage due to erratic blood pressure variations, extreme blood glucose variations, hypo- and hypervolemia, and consistently low and variable blood oxygenation (average 93% +/- 4%). Current research on SCP-1475 is targeted at finding methods to supplement or replace its autonomic control functions without otherwise interfering with its anomalous neurological activity.

SCP-1475 is insistent that it and its partners were acting

independently, but given that the neurotoxic compound displays significant similarities to materials used during the **RAINBOW ASTRA** programme, investigations are ongoing to determine whether this is a coincidence or the result of an unknown party attempting to replicate the program's results.

Footnotes
1. See file 1475-V1-V37.dat for a full list of currently approved material.
2. Sustained epileptiform activity is considered normal for SCP-1475. Medical intervention is only necessary if brainwave activity approaches human normal.
3. See file 1475-H1-H4.dat for full biographical, medical and postmortem data.

« SCP-1474 | SCP-1475 | SCP-1476 »

SCP-1476: Shattering Geese

Item #: SCP-1476

Object Class: Euclid

Special Containment Procedures: SCP-1476 specimens are contained at a dedicated aviary attached to Site . Experimentation or interaction with SCP-1476 outside of normal feeding and aviary maintenance may only be performed with prior permission from at least two (2) Level 3 senior research staff, and any excess specimens must be disposed of via incineration.

Any wild populations of SCP-1476 are to be destroyed after specimens are collected, preferably while they are in an immobile state.

Description: SCP-1476 is a flock of genetically identical birds visually indistinguishable from *Branta canadensis*, or Canada geese. SCP-1476 exhibits natural behavior consistent with normal *B. canadensis*, with the exception that SCP-1476 appears to be ectothermic and lacks normal migratory and reproductive instincts. Instead, when the ambient temperature drops below freezing, SCP-1476 instances will seek open areas and allow themselves to freeze.

In this frozen state, SCP-1476 specimens become highly brittle and will easily crack and break when subjected to outside force. After ambient temperatures return to above freezing, any remaining fragments of tissue approximately 130 cm^3 or larger in volume will reform into juvenile specimens of SCP-1476 over the course of six (6) hours, which then grow normally. Injuries inflicted and tissue excised from specimens in a non-frozen state do not exhibit this regeneration property, nor do specimens frozen post-mortem. Autopsy of dead specimens have shown no biological irregularities other than a complete lack of reproductive organs.

SCP-1476 came to the Foundation's attention on / / due to reports from the Canadian Wildlife Service following the discovery of "vast fields of frozen geese" by hunters in [REDACTED], Manitoba. Foundation containment teams retrieved several specimens of SCP-1476 and destroyed the remaining population via incineration, then administered Class A amnestics to all witnesses. The case file was then officially disproved as a hoax. Mobile Task Force Lambda-4 ("Birdwatchers") has been assigned to monitor the region for additional wild populations of SCP-1476, and confirmed cases are to be tracked and destroyed.

Addendum 1476-01: Incident Report

On / / , a Foundation containment team responded to a confirmed report of a wild population of SCP-1476. Specimens taken from this population were genetically identical to each other but distinct from existing specimens in containment. These have been designated SCP-1476-2 and are now contained in a separate aviary at Site . Remaining population was destroyed as per containment procedures.

« SCP-1475 | SCP-1476 | SCP-1477 »

SCP-1477: The Philosopher's Stove

Item #: SCP-1477

Object Class: Safe

Special Containment Procedures: SCP-1477 is currently contained in a high-security vault at Sector-25 with Level 4 access. Following Incident 1477-01 testing with SCP-1477 has been suspended.

> Access Archived Test Procedures 1477-01
>
> *Experimentation with SCP-1477 should take place in an adequately ventilated test chamber, lined with 10cm thick lead plating. The power cable and any other electrical equipment should be replaced after each use to prevent degradation. Personnel should wear radiological safety equipment at all times during testing; SCP-1477 is to be operated remotely and personnel should not be present in the test chamber while SCP-1477 is in operation.*

Description: SCP-1477 is a child's electric oven with simplified temperature controls and a non-functional hob. The object bears the logo of defunct toy manufacturer Girard Toys and internal components date from 1980, though no such product appears in the company's records and production by Girard assets had ceased by this date. When activated SCP-1477 emits significant gamma and beta radiation.

Matter placed within SCP-1477 while it is activated undergoes spontaneous nuclear transmutation, converting into a lighter element - its atomic number is reduced by an amount equivalent to SCP-1477's current temperature setting per hour. When recovered SCP-1477 was set to '3' - settings 1-5 appear on the instrumentation, though setting '5' appears to possess no anomalous characteristics, instead causing SCP-1477 to act as a

conventional oven with a temperature of 180°C.

SCP-1477 has been determined to operate by transferring via unknown means proton-neutron pairs from within SCP-1477 to matter surrounding the object, which is transmuted into a heavier element. In experimentation SCP-1477 transmitted subatomic particles between 3m and 10m from their original location; this distance inversely correlates with the object's temperature setting. Given that higher settings result in a greater number of particles transferred but no observed increase in electrical draw, this may suggest the range of transferral positively correlates with energy input.

After initial experimentation it was deemed necessary to implement a strong ventilation system in the test chamber, as transmutation of the surrounding atmosphere leads to markedly elevated levels of helium, neon and mildly radioactive fluorine and sodium, together on higher settings with formation of magnesium, which presents a fire risk, especially paired with the highly ionised materials generated by SCP-1477.

SCP-1477's own components appear proof against this effect - during experimentation parts from SCP-1477 were swapped with those of a regular oven (designated SCP-1477-1), which was similarly tested to determine at what point it began to demonstrate SCP-1477's anomalous effects. The result was that SCP-1477 continued to operate as previously observed - albeit with the rapid degradation of the foreign components - until all internal components had been moved over to SCP-1477-1.

SCP-1477-1 demonstrated no anomalous effects until the transfer of the final component - one of the non-functional hob heating elements - whereupon it demonstrated all effects previously associated with SCP-1477. However, testing of SCP-1477-1 at Setting 4 resulted in the rapid transmutation of the oven's aluminum structural elements into chlorine gas, presenting a further hazard to researchers. All components have at time of writing been returned to SCP-1477's original exterior.

Recovery Log SCP-1477

SCP-1477 was recovered from a surburban residence in north Hampshire, England after Foundation personnel were notified of a major radiological hazard. In addition to the radiation produced by the object, large portions of the surrounding house had been converted into radioisotopes of heavy metals, causing an intense fire. SCP-1477 was found, largely undamaged, in what had been a first storey bedroom.

The only survivor, Mrs Katherine N , aged 38, died 2 days later in Foundation custody and was unable to provide clear insight into SCP-1477's origins. Human skeletal remains composed primarily of titanium (presumably having decayed from vanadium-46) were found in proximity to SCP-1477: dental records were matched to Alfie N (aged 9). On recovery traces of mercury and platinum were found in SCP-1477's interior, together with a thin sheet of lithium bearing writing in what tests revealed to be a compound of sulfur. Much of the text was illegible with the exception of the following fragment, which appears to be an excerpt from the alchemical Ripley Scroll:

> "In the sea without lees [ILLEGIBLE] eating his wings variable and maketh himself yet full stable. When all his feathers be from him gone he standeth still here as a stone [ILLEGIBLE] And all so the stone to quicken the dead"

Incident Report 1477-01

On 03/04/2012 use of SCP-1477 was approved to generate a quantity of elemental gallium for use in the containment of SCP- . The approved procedure required continuous use of SCP-1477 at its lowest setting to reduce the atomic number of samples of arsenic. The first sample was converted through germanium to gallium correctly and the second sample inserted. During this period it appears that an area of the lead plating in SCP-1477's containment area was converted to bismuth and subsequently polonium; previous testing at higher temperature settings had failed to produce this effect as the radius of SCP-1477's effect was insufficient to reach the walls of the test chamber. At 2 hours 15 minutes into the experiment, a significant mass of the plating was converted into astatine and explosively vaporised, causing 12 casualties including

3 fatalities.

Agents B and P subsequently retrieved SCP-1477 from the containment unit and removed it from the facility by force. The object was recovered 7 hours later when the Foundation vehicle used was located on the A3 near Guildford; both agents had been immobilised by radiation poisoning and subsequently expired. Interrogation of Agent B before his death revealed both men to have been in the employ of the Chaos Insurgency, having hoped to obtain SCP-1477 and utilise its properties for financial gain. Whether this is linked to the rumoured decline in effectiveness of the anomalous object known as the 'Staff of Hermes' remains unknown. It is believed that Agent P deliberately orchestrated the experiment which led to Incident 1477-01, and all personnel involved in the formulation and approval of this experiment remain under investigation to determine any further links to the group. SCP-1477 appears to have sustained damage during the incident and its instrumentation no longer reliably corresponds to the change in atomic number effected - this loss of predictability militates against further experimentation with SCP-1477.

« SCP-1476 | SCP-1477 | SCP-1478 »

SCP-1478: Inconveniently Stereotypical Cacti

Item #: SCP-1478

Object Class: Euclid

Special Containment Procedures: The colony of SCP-1478 is to remain where it was found in the Sonoran Desert. Sub-Site 34 has been constructed at the location for the purpose of monitoring the anomaly.

Prior to conversation attempts with SCP-1478, personnel are to be equipped with proper desert safety clothing as defined by SCP-1478 specimens. This typically involves wearing a wide-brim hat and a thin or no top. Additionally, personnel are to comply with SCP-1478's demands within reason before talking to them in order to ensure the objects' compliance.

Description: SCP-1478 is a group of fifty-four (54) saguaro cacti (*Carnegiea gigantea*) located in the Sonoran Desert. All specimens of SCP-1478 are visually indistinguishable from non-anomalous cacti of the same species. Objects exhibit full sentience and sapience and often vocalize without apparent means to do so. Groups of these cacti will often converse with each other about topics primarily focused on their immediate area or neighbors.

If allowed to converse with subjects outside of their species, SCP-1478 will consistently advise the subjects in desert or American southwestern topics, usually while presenting erroneous information. No instance of SCP-1478 has exhibited hostile behavior; however, the objects will often refuse to participate in conversation for a number of arbitrary reasons. Personnel are to comply to these demands if they are within reason in order to gain information from SCP-1478.

When a person conversing with these objects fails to meet its requirements, that person will be transfigured into an instance of

SCP-1478. This process has been reported to be painful, but instantaneous. Additionally, persons who have been transformed into an instance of SCP-1478 are able to perceive their prior places of occupation through unknown means. The significance and vector for this trait are currently unknown.

Interview Log-1478-Tau:

Interviewed: SCP-1478-01

Interviewer: Agent Jason Myers

Foreword: The following log was taken during primary discovery of SCP-1478. Agents arriving from Site 23 were attired in the standard black suits.

<Begin Log>

Myers: Hello.

SCP-1478-01: Hey! Say, ain't you hot in that suit? Yer likely to overheat if yer not careful.

Myers: Please, don't worry about me. It's really not important, I'll be gone in a minute. Now, if you would, please tell me about this colony.

SCP-1478-01: Not important? Sir, I must protest. The desert is mighty dangerous. Y'all goin' to have to change before I start talkin'.

[Futher attempts at questioning the subject at this point yield no results other than requests that Myers dress in a manner that would be appropriate for the environment. Agent Myers leaves the scene to a retrieve a hat from the nearest city. Myers returns wearing a fedora, and once again attempts to converse with SCP-1478-01.]

SCP-1478-01: You pulling my leg? That ain't enough to shade ya! Yer gonna need something with a wide brim. And what'd I say about them suits? All y'all, git fitted

proper.

Myers: *[sighs heavily]* Please, just answer our questions. I don't think changing for a two minute long interview is really worth going all the way—

SCP-1478-01: Not worth it? Not worth it?! Boy, do you know what happens when folks don't bother preparin' themselves fer the desert?

<End Log>

Closing Statement: At the cessation of this interview, Agent Myers was transfigured into an instance of SCP-1478. All personnel from now on are to be dressed in appropriate clothing for the desert as determined by SCP-1478 while interviewing the objects.

Interview Log-1478-Chi:

Interviewed: SCP-1478-16

Interviewer: Agent Alexander Fredricks

Foreword: For the purpose of this interview, Agent Fredricks has been adorned in a sombrero and a poncho.

<Begin Log>

Fredricks: Hello.

SCP-1478-16: Howdy, pardner.

Fredricks: Could you please tell me abo—

SCP-1478-16: Whoa there, slick. I can't understand you a spit with yer thick accent. Yer gonna hafter talk in a way I can hear ya.

Fredricks: Um… right. Well, perdner, I was wonderin' if, er, you could inform me aboot this here colony. I reckon.

SCP-1478-16: Oh shucks, yer wantin' to know about us? Well, we're just some humble folks out here in th' Sonoran, makin' our livin', you know. Shoot, I never introduced myself, did I? Th' name's Braxton. Arnold Braxton.

Fredricks: Arnold Braxton? The ex—I mean, uh, you the feller that disappeared from Reno ten years ago? *[Fredricks attempts to spit on the ground.]*

SCP-1478-16: 'sho 'nuff. I used t' work fer dem casiners, but I ended up here one day and thought, "Aw heck, I don't need no stinkin' city slicker tellin' me what t' do! I got e'erythin' I need right here." So I stayed. I keep one eye on them, though, just in case they try 'n' do somethin' funny.

Fredricks: How do you reckon that you managed to do that?

SCP-1478-16: You got broken eyes 'r somethin'? They're e'erywhere! Y' can't take two steps without bumpin' into a goddamn slot machine.

Fredricks: And what are they up to?

SCP-1478-16: Swindlin' people. Ol' Roberson finally got fired from there. Good riddance, he probably was dementia'd or somet'in' th' whole time he worked there. An' somethin' about a robbery.[1]

Fredricks: Shucks, thanks. I think that'll be it for now.

SCP-1478-16: Y'all take care now, y'hear?

<End Log>

Interview Log-1478-Psi:

Interviewed: SCP-1478-054

Interviewer: Agent Fredricks

Foreword: SCP-1478-054 has been positively identified as possessing the mind of Agent Myers.

<Begin Log>

Fredricks: Hey Jason.

SCP-1478-54: *[sighs]* Hey Alex.

Fredricks: How are you holding up?

SCP-1478-54: Terribly. All these stupid cacti keep speaking in awful fake accents and it's driving me up the wall. It's so obvious that none of them have ever actually grown up with these. If I had movable arms and a head, I would have torn out my eardrums by now.

Fredricks: That bad, huh?

SCP-1478-54: You don't even know. Hey… I know you're not here just to chat; that's not how we work. Let's just get to it, please.

Fredricks: Right. I'm sorry, Jason. Now, have you noticed any changes since the transfiguration?

SCP-1478-54: Well, for starters, I feel mentally connected with all these other cacti. Like, I *feel* their minds, and it's… I don't know, I just feel it. I can tell who these people used to be but just aren't anymore. Well, except for one of them. That one, it doesn't seem like it used to be human, and I can hear a very, very loud voice coming from it. It just… wants us to be *Southern.* I don't understand why, and it just… I don't get it.

Fredricks: I see. Where is this one located?

SCP-1478-54: About ten meters to your left. Don't get too close to it, I think that it's testy. It'd probably make you into a cactus, too.

Fredricks: I see. Anything else?

SCP-1478-54: I somehow know what's going on over at Site 23. I don't see it, I don't hear anything, I just kinda know. Like, some idiot broke the vending machine yesterday, right? The new Jackson kid. I know it's true.

Fredricks: Okay, got it. Final remarks?

SCP-1478-54: This is probably a side effect of the connection thing, but I feel like the other cacti are, I don't know… infecting me? I feel like I'm slowly becoming more and more like them. I said "ain't" yesterday, Al. I never fucking say "ain't," it's the worst word in the history of language, but I fucking said "ain't" and, well, look at it. It's happening.

Fredricks: Understood. Thank you.

<End Log>

Footnotes
1. Foundation personnel have verified that all these claims were accurate.

« SCP-1477 | SCP-1478 | SCP-1479 »

SCP-1479: Inside-Outside

Item #: SCP-1479

Object Class: Euclid

Special Containment Procedures: The building that houses SCP-1479 has been successfully secured by Foundation property acquisition techniques; the accompanying complex has been retrofitted into Bio-Site 66, with structures added both above and below ground to accommodate Foundation needs. Several additional SCP objects have been moved to neighbouring buildings for study and containment.

SCP-1479 itself is to be kept shut and locked when not in use for testing. Researchers are advised to not introduce organisms produced by other anomalous items into SCP-1479 for cross testing.

Description: SCP-1479 is contained in a basement room of a building originally intended to house auxiliary machinery at a closed coal-fired power plant. An Agent embedded in the local police force had been investigating reports of youth violence in the area, and came upon SCP-1479 while scouring the plant with an investigation team.

SCP-1479 appears to be an empty utility room that contains approximately 144 km^2 of taiga. While walls are visible through electronic devices, none are visible to the unassisted eye; no physical barriers can be detected, and objects can apparently pass through these 'walls' unhindered. From within, the entrance to SCP-1479 is set within a 3m x 5m, rectangular granite megalith, which appears to be the only unnatural structure within the area. This megalith stands in the approximate centre of the area; wilderness extends approximately 6 kilometres in every direction, before one finds themselves on the opposite 'edge' of SCP-1479, facing the megalith again.

Geography seems to be consistent between visits, and material and personnel deposited within the area remain inside if the door is closed; time passes normally within SCP-1479, regardless of whether or not it is occupied. It has not been determined whether or not SCP-1479 has a proper ceiling; weather patterns appears to follow those expected of similar geographic areas, - complete with seasons roughly analogous to areas at latitude 60ºN - though said activity does not mirror that of any similar locations on Earth.

On occasion, animal tracks, as well as small fauna such as birds and rodents, have been encountered within SCP-1479, with no apparent source. The original function and purpose of SCP-1479, if there even was one, is as of yet unknown.

« SCP-1478 | SCP-1479 | SCP-1480 »

SCP-1480: Bus #64

Item #: SCP-1480

Object Class: Safe

Special Containment Procedures: The SCPS *Ockham* is presently instructed to maintain observation and communications with SCP-1480 on the surface of Titan, in addition to its regular geological duties. The distance and technological difficulties involved in reaching Titan serve as adequate containment, so long as the existence of SCPS *Ockham* remains a secret. Only a handful of ESA personnel vetted and briefed by Foundation liaisons are to be informed of the existence and purpose of SCPS *Ockham*. Select photographs of the surface of Titan have been doctored by Foundation personnel and provided to the ESA for publication; photographs are doctored to remove the presence of SCP-1480.

SCPS *Ockham* is to continue attempting to establish contact with SCP-1480 and any entities inside of SCP-1480.

Description: SCP-1480 is a 2004 Blue Bird model Type C school bus with all typical school-bus external markings removed other than the number "64", currently resting on the surface of Titan. Based on physical markings and details, SCP-1480 is believed to be either a Weakley County School District school bus declared missing on 11/02/07 from Dresden Elementary School or a carefully crafted replica thereof. No explanation has yet been determined for the temporal discrepancy between the bus's disappearance and the discovery of SCP-1480.

SCP-1480's windows are opaque; no light of any wavelength can be seen through them. Additionally, ultrasound imaging of the object's interior was inconclusive. Periodically, flashing lights can be seen emanating from the windows of SCP-1480; these were detected frequently before SCPS *Ockham* landed on Titan, but have since become extremely rare. These flashes can be deciphered into

Morse code messages; how the entity is familiar with Morse code protocols is unknown. Judging from phrasing and the varying speeds of the flashes, different windows seem to speak from different, but consistent, perspectives or voices. The flashing lights can be translated into English via Morse code; a log of recorded messages can be found in Addendum 1480-A.

Addendum 1480-A: The SCPS *Ockham* is currently deployed on the surface of Titan as part of an unrelated scientific exchange program led between several high-level officials within the European Space Agency, NASA, and the Foundation; under the terms of that agreement, NASA-ESA provided the interplanetary vehicle and gave the Foundation final control over the vehicle's mission parameters in exchange for certain technological enhancements from the Foundation and the ability to access and use all non-sensitive scientific data from the mission. The *Ockham* detected the presence of SCP-1480 from a distance of several thousand kilometers away. From a distance, the *Ockham* could detect SCP-1480 and the flashing lights inside the object. The *Ockham* made landfall on 14/01/05; the flashing lights within SCP-1480 ceased at that time. Since then, the lights have resumed at periodic intervals. Selected excerpts of communications recorded from SCP-1480 are listed as follows:

11/01/05: Beginning at 0232 hours[1] all windows become briefly active for a period of ninety seconds. Because windows can only be seen from one side of the bus at a time, not all parts of a given conversation can be heard at any given time. Content of messages recorded consists largely of short, declarative sentences, such as "nuh uh", "you cannot do that", and "i am telling". At 0234, the windshield flashed the message "settle down back there" and all windows ceased flashing.

13/01/05: Several windows towards the back of the starboard side of the bus begin flashing in apparent conversation with one another. The rearmost window asks "why did not tyler get on the bus", to which the window immediately in front of it replies with "he was chosen by the sender". The first window replies (deciphered literally) with "aww man" followed by a series of complaints about the unidentified entity referred to as "the sender". The third window from

the rear flashes "who is the sender", followed by a pause believed to be a reply from a window on the other side of the bus. At the end of that pause, the windshield flashed "what have you done". The windshield remained illuminated at the end of that sequence; all windows between the windshield and the back of the bus began flashing on and remaining on until the lights reached the back of the bus. The windows at the back of the bus flashed a series of distress messages until the line of steadily-illuminated windows reached the back of the bus, at which point the two windows at the back of the bus flashed on as well. All windows then became dark. Those two windows and another on the other side of the bus have not been observed to light up at any point since.

14/01/05: SCPS *Ockham* made landfall around 22:01. Prior to beginning orbital landing maneuvers that took the *Ockham's* cameras off of SCP-1480, the windows nearest to the *Ockham* began flashing messages such as "do you see that", "what is that", and "is that my mommy". As the *Ockham* approached the surface of Titan, these messages began occurring with greater frequency. However, once the *Ockham* made contact with Titan, the windows of SCP-1480 flashed bright white once, then went black. As the *Ockham* began its survey of SCP-1480, the only response it received from the entity was the windshield occasionally flashing "they are not yours". This has been the only significant signal received from SCP-1480 since the *Ockham's* landfall.

For information regarding additional anomalous events connected to SCP-1480, please consult documentation for **`SCP-1680`** and SCP-1380.

Footnotes
1. For simplicity's sake, all times henceforth are based on estimated UTC on Earth at the time of recording.

« SCP-1479 | SCP-1480 | SCP-1481 »

SCP-1481: Crack Genie

Item #: SCP-1481

Object Class: Safe

Special Containment Procedures: SCP-1481 is to be kept in a securely locked safe on the second floor of Site- . Site security is to remain on standby in proximity to tests conducted on SCP-1481.

Description: SCP-1481 is a plastic recyclable coffee cup. SCP-1481 rests in an inactive state until it is physically rubbed by a sapient being. When SCP-1481 is rubbed, it will enter its active phase, in which it manifests a spectral humanoid hereby referred to as SCP-1481-1. SCP-1481-1 manifests dressed in multiple coats and torn jeans, all of which are likewise spectral but seem to nonetheless be stained with a variety of unknown substances. SCP-1481-1 has a nervous tic, which occurs every few minutes.

Once SCP-1481-1 has manifested, it will offer to grant an unlimited number of "wishes" to the individual who caused it to manifest; however, SCP-1481-1 is largely non-compliant with said wishes, and will often ignore them, wrongly claim to have already fulfilled them, or produce an outcome which bears only a slight resemblance to the one requested.

SCP-1481-1 has made a variety of requests, which are typically for alcohol, recreational drugs, money, or warm food.

Addendum: Tests were conducted by Doctor . The goal of the tests was to establish a general knowledge of the capabilities of SCP-1481-1.

Log of tests with SCP-1481:

> **Item Requested:** One sandwich
> **Result:** SCP-1481-1 manifested a sandwich, which it

promptly ate.

Item Requested: A winning lottery ticket
Result: SCP-1481-1 manifested a losing lottery ticket.

Item Requested: A 100-carat diamond.
Result: 100 g of coal; SCP-1481-1 assured personnel that the coal was pure diamond.

Item Requested: "The meaning of life"
Result: SCP-1481-1 laughed hysterically for three minutes and fourteen seconds, then claimed to have forgotten what had just been requested. Subsequent requests for this item produced the same result.

Item Requested: The means to achieve unlimited energy.
Result: SCP-1481-1 manifested one deviled egg, which it promptly ate.

Interview log 1481-1-2

Doctor : Hello, SCP-1481-1.

SCP-1481-1: Hey there, young feller!

Doctor : SCP-1481-1, I have some questions for you.

SCP-1481-1 stares at the South wall of the interview chamber for six minutes and nine seconds before answering.

SCP-1481-1: You ever notice how, how *white* this wall is? I f-f-feel like it's got so much *meaning.*

Doctor : In relation to the items you are able to manifest, where do you take said items from?

SCP-1481-1: I, I know a g-g-guy who, who, a guy who knows a guy. Y'know?

Doctor : How—

SCP-1481 interrupts Doctor

SCP-1481-1: Enough damn questions! Man, I just need a taste. Just a taste! You can't just order me to tell you stuff! If you get me, like, I dunno… say, thirty, forty grams of the, of the, of the good stuff or s-s-s-s-something? C'mon, man, please?

SCP-1481-1 was provided with 40 grams of methamphetamine, which it promptly consumed. Upon consuming the methamphetamine, SCP-1481-1 began to speak, and continued speaking for five hours and twenty-three minutes. Much of what SCP-1481-1 said during this time was incomprehensible 'word salad' interspersed with profanity, and a large quantity of what are assumed to have been logorrheic neologisms. A full transcript of this 'word salad' is available in Document 1481-RL51. One particular passage has been retained in this report, as it may provide clues to the origin of SCP-1481-1

Excerpt of speech from SCP-1481-1

— so there I, I, there I was, right in f-f-f-front of this guy, waiting for him to make his, his fuckin' wishes an', an', an', he looks at me an' he says 'for my f-f-f-first wish, I, I, I,… for my…' He says… he… he fuckin' wishes for me to be a fuckin' alcoholic j-j-j-junkie tweaker crackhead! An' then he says that his, his second, his second wish is that the, the, the first wish couldn't, couldn't be unwished. An' then he just walks off! I don't, I, I don't, I don't understand it. I really don't. So now I'm, I'm, my life is, my whole fucking life is r-r-r-ruined. I used to give k-k-kings whatever they wanted, you know? I used to live in, in palaces. Now I got no f-f-f-friends, just the cold nights and the hard ground and nowhere to lay my head down and I —

Interview log 1481-1-7

Doctor : SCP-1481-1, I was wondering —

SCP-1481-1: Yeah?

Doctor : If you have these powers, why don't you just manifest the drugs yourself, like you do with the food?

SCP-1481-1 begins weeping; weeping continues for 17 minutes 41 seconds, at the end of which it demanifests and re-enters SCP-1481.

No further testing of SCP-1481 has been authorized.

« SCP-1480 | SCP-1481 | SCP-1482 »

SCP-1482: Mutilated Animal House

Item #: SCP-1482

Object Class: Safe

Special Containment Procedures: Site-178 has been built around SCP-1482, with the cover story that the Site is a retirement home for elderly individuals affected by dementia. A chain-link fence around the perimeter with CCTV monitoring is to be maintained. Any unauthorised individuals attempting to access Site-178 are to be detained, interviewed and – if they present no clear threat – released after being provided with a Class-C amnestic.

Description: SCP-1482 is a structure resembling a residential building located in , Shetland, Scotland.

SCP-1482 appears to be composed entirely of several-hundred objects not typically used in construction (collectively referred to as SCP-1482-1) attached together with string, rope, glue and conventional staples. These objects include: metallic objects such as knives, forks and sheet metal; wooden furniture; living, healthy and in some cases, partially vivisected specimens of *Bos primigenius* (domestic cattle), *Salmo salar* (Atlantic salmon), *Giraffa camelopardalis* (giraffe) and *Orcinus orca* (killer whale), as well as various members of the Orders Anura (frog) and Lophiiformes (angler fish). The living components of SCP-1482 have been determined to constitute under 10% (ten percent) of its parts, the rest consisting of non-living and artificial objects. These living specimens do not appear to require sustenance or excrete waste.

At 3 (three) known locations on SCP-1482, organs resembling human vocal cords are attached directly to an animal instance of SCP-1482-1 with staples; these vocal cords are identified as SCP-1482-2. Periodically, SCP-1482-2 will produce intelligible vocalisations in heavily slurred Scots English. The specific content of these vocalisations varies, but will typically involve one of the

following:

- Complaints of being unable to see or hear, often with the mention that SCP-1482 can feel and smell in detail.
- Complaints of the interior of SCP-1482 feeling “cold”, “cald”, or in some cases, “baltic”.
- Requests that a non-specific listener enter SCP-1482 to warm it up, and provide company.
- Attempts to convince individuals who have entered SCP-1482 to stay indefinitely, make extended contact with the organic parts of SCP-1482 to confirm their presence, and protect the structure.
- Requests that individuals exiting SCP-1482 cease doing so. Exclamations of this nature tend to be shouted or yelled with increasing urgency.
- Screaming, distorted sounds of distress and assertions that if an individual who has recently exited SCP-1482 does not re-enter, "the bad men” or “madmen” are "gonnae come and have an empty[1]”.

SCP-1482 was recovered from the custody of Group of Interest 3BA-Alpha-C (“the Chaos Insurgency”), following the group's evident attempts to manipulate SCP-1482’s anomalous properties to enable longevity and non-reliance on nutrition in humans. The organisation had largely abandoned projects involving SCP-1482 by the time the Foundation became involved.

Analysis of files recovered from the CI have revealed limited information regarding SCP-1482. From these documents and the testimony of witnesses, it has been determined that SCP-1482 was the former residence of K , noted zoology enthusiast, and that the vocal apparatus of the residence at one point functioned to provide information on various animal species. Ms. K has yet to be located.

Further investigation has revealed that, prior to the involvement of

the CI, the structure consisted exclusively of animal parts.

Footnotes
1. A term in Scots slang referring to youths hosting a party in their place of residence while their parents, carers or guardians are absent.

« SCP-1481 | SCP-1482 | SCP-1483 »

SCP-1483: The Third Antarctic Empire

Item #: SCP-1483

Object Class: Euclid

Special Containment Procedures: Only minimal security measures are necessary to contain SCP-1483, due to both the nature of the property and the difficulty in accessing it. All entry and exit to Universe B-10208-Alpha-1483 is to be regulated by Falcon and Dustside Stations, located on both sides of the transition zone. In the event of aggressive invasion of Baseline by SCP-1483, the emergency charges around Dustside Station are to be detonated, cutting off access to SCP-1483.

All personnel assigned to the Foundation embassy or any other Sites within the boundaries of SCP-1483 may only be held accountable to the provisions of their Basic Operations Charter by the Overseer Board. In all other matters, personnel are to be held to the laws of SCP-1483, and all provisions of the agreements made with the Throne of the Empress and the Imperial Institute of Paranatural and Esoteric Study, henceforth referred to as IIPES.

Foundation sites within SCP-1483 are considered a semi-autonomous district of operations under the Exploratory Research Provisions (O5 Special Order 108-A). The position of Commissioner has been instituted with Level-5 clearance to oversee Foundation operations within SCP-1483. The individual holding the position has no authority outside of this jurisdiction.

Description: SCP-1483 is the continent of Antarctica, as confirmed by local maps and day/night cycles, located in Universe B-10208-Alpha-1483 and entered by means of passing through a small crevasse[1] located in the Queen Alexandra Mountain range (Coordinates: [REDACTED]). The transition location is classified as a SSUIS2 (Stable/Stationary/Unaided/Instantaneous/Safe/Two Way) universal overlap.

SCP-1483's environment is most notable in its overall lack of surface ice. The majority of the continent consists of a central BWh desert region, interspersed with seasonal rivers and lakes. Vegetation is sparse, and primarily consists of coastal forests and scrubland. Agriculture is carried out during the summer months through a complex series of irrigation canals and large plantations, taking advantage of glacial melts.

The average summer temperature is approximately 35° C (95° F), with winter temperatures reaching -35° C (-31° F). The cause of this temperature, and the implications on the rest of the planet's climate, are unknown at this time. Many species of native life bear no resemblance to Baseline species, and several have been specially bred or otherwise modified by SCP-1483-1. There is no indication of biological cross contamination between SCP-1483 and Baseline: similarities are the result of convergent evolution.

The sapient inhabitants of SCP-1483 are designated as SCP-1483-1, *Homo antarcticus*. The exact lineage of the species is unknown at this time, though the last shared ancestor with *H. sapiens* is considered to be the B-10208-Alpha-1483 instance of *H. heidelbergensis*. A single sub-species and numerous racial variants exist, as well as several clades formed by the application of specific anomalous properties to certain populations.

See Addendum-02 for a listing of major clades of SCP-1483-1.

SCP-1483 is currently unified under the Third Antarctic Empire,[2] a matriarchal imperialist monarchy overseeing seventeen dependent provinces. Provincial governments are answerable to a central regulatory bureaucracy operating out of the capital. The current imperial government was founded in 1526 CE, and is the third such ruling body to unify the continent. Records prior to year 2-151 (553 CE)[3] are both rare and generally inaccurate.

The Empire's technology level is roughly equivalent to that of 20th century Baseline, with certain exceptions. Nuclear, geothermal, and solar power are more prevalent energy sources than fossil fuels, while communication and aerospace technologies lag behind the Baseline significantly. Wired telecommunications and primitive computing systems are extant only within developed areas. The

majority of the population of SCP-1483 resides in urban centers connected by a train network, or large plantation settlements. Most settlements contain subterranean districts for inhabitation during the winter months. Mainstream Imperial culture is a highly stratified, female-dominated class system, though regional variants or throwbacks to older cultural structures exist in outlying areas.

The existence of anomalous objects is common knowledge within the Empire, officially dealt with by the Imperial Institute of Paranatural and Esoteric Study and military force as necessary. The Foundation is treated as a public ward of the IIPES. The Foundation's presence and purpose in SCP-1483 is tolerated by Imperial authorities: However, the Foundation is limited to operations within authorized areas. Access to sealed records, specific information regarding items under the Institute's control, and any information deemed sensitive by the Empire or IIPES is likewise limited.

See Addendum-01 for a listing of major anomalous objects under Imperial control.

When questioned about regions outside of the borders of SCP-1483, an Imperial liaison responded: "The dealings of savages and their rotting lands are of no concern to us. Do not waste your time in asking after them."

Addendum-01: The IIPES has cataloged over three thousand anomalous items and entities since its founding during the Second Empire Era.[4] Of note is the presence of certain patterns within anomalous items that do not exist within the Baseline, with some correlation with SCP-1483c. The Institute's philosophy towards anomalous items is focused primarily on destruction of threats, study, and public preparation. Approximately five hundred items are actively contained or monitored by the Institute at this time. The most notable of these include:

• SCP-1483a: "Sanak Thiuh" – The remains of a massive unknown organism, much of which currently serving as the framework of the Imperial Palace. Estimates of SCP-1483a's initial size have indicated that the creature weighed in excess of 10,000 tonnes. The entity features heavily in local folklore, albeit in generally unproven

and often contradictory accounts. What can be said with certainty is that SCP-1483a's death led to the formation of the First Empire.
• SCP-1483b: "The Maws of Eser" – A series of UMUID1 (Unstable/Mobile/Unaided/Instantaneous/Dangerous/One Way) universal overlaps which will randomly manifest across SCP-1483. These overlaps are visible, though intangible, appearing as dark clouds at ground level. Their appearance is accompanied by the manifestation of 3-20 SCP-1483-1f, which will consume all life in their path, and will persist for 1-6 hours. Periods of manifestations vary between 15 seconds and up to 45 days, with an average of 10 to 12 hours.
• SCP-1483c: "The Blessings of Aqum" – An overall term applied to eighteen known schools of occult practice. Folklore claims that these schools originated with a series of objects used to kill SCP-1483a, though this has not been confirmed. Information regarding SCP-1483c is highly regulated by the Institute, though it is known that forms of SCP-1483c have been used in modification of the populace, and that the eighteen schools are practiced throughout the Empire.

Addendum-02: Notable clades of SCP-1483-1 include:

• SCP-1483-1a: "The Summer Court" – The majority population of SCP-1483-1. Generally similar to Baseline humanity, though more resistant to extreme temperatures and possessing an overall more broad build.
• SCP-1483-1b: "The Black Court" – A subspecies of SCP-1483-1, specialized to survive outside in winter conditions by means of a thick layer of body fat and fur. Incapable of reproducing with other clades. SCP-1483-1b traditionally takes over most facets of public life, including the senate, military, and administrative positions, during the winter months. Summer months are spent in nomadic communes.
• SCP-1483-1c: "Menders" – Members of the religious hierarchy of the Empire, possessing a second pair of arms, with segments of a seemingly decorative, metallic exoskeleton encircling the limbs and torso. Capable of dispelling instances of SCP-1483b.
• SCP-1483-1d: "Watchers-Upon-All" – The rarest clade of SCP-1483-1, generally found serving in special positions under direct instruction of the Empress or leading bands of SCP-1483-1c. SCP-1483-1d specimens stand approximately 2.5 meters in height,

possess two additional pairs of arms, and have more extensive iterations of the SCP-1483-1c exoskeletons. Iris and sclera of the eyes are completely black. Local myths claim that SCP-1483-1d have received “all blessings” of SCP-1483c.
• SCP-1483-1e: Minor Clades - This classification includes all minor clades native to outlying provinces that have not yet been studied in detail by the Foundation.
• SCP-1483-1f: “Feastlings” – Entities that will manifest alongside SCP-1483b instances. SCP-1483-1f will appear as emaciated SCP-1483-1, and are singularly violent in behavior, attacking and consuming any nearby organisms.

Addendum-03:

A timeline of Foundation involvement in SCP-1483 is as follows:

• / /1912: The first evidence of SCP-1483’s existence can be traced back to the journal of one , a member of the British Antarctic Expedition 1910 under Robert Falcon Scott. claimed to have seen dark-skinned humanoid figures emerging from a rift. He was unable to make contact with the entities, but nonetheless provided a detailed description of the figures. did not alert any other members of the expedition about the event.
• / /1989: ’s journal was recovered from a Marshall, Carter and Dark auction house. It is cataloged without study.
• / /1991: The journal is removed from storage by Dr. Edith Yard. Plans for an expedition are made.
• / /1994: A reconnaissance force consisting of Strike Team Iota-15 makes the first foray into SCP-1483. O5-08 pushes for further exploration of SCP-1483 and contact with the natives.
• / /1996: A second reconnaissance mission is made by Iota-15.
• / /1997: The third and final reconnaissance mission is made by Iota-15.
• / /1998: The Yard Expedition makes contact with the Imperial government for the first time.
• / /2000: The Foundation embassy is founded in the imperial capital of Rootrel. Official agreements of the occupation are signed by Empress Utmai Cjen VI, detailing the rights and functions of Foundation personnel within SCP-1483 and procedure for communication with the outside.

- / /2000: Dr. Edith Yard is appointed to the position of Commissioner.
- / /2001: Dustside Station is built at the point of transition.
- / /2002: Falcon Station is built on the Baseline point of transition.
- / /2004: Site-1483-Alpha is built in Saqin Province.
- / /2007: Site-1483-Beta is built in Grey Mountain Province.
- / /2009: Site-1483-Gamma is built in Isul Province.
- / /2010: Dr. Edith Yard dies due to respiratory infection.
- / /2011: Dr. Thomas Bailey is appointed as Commissioner.

« SCP-1482 | SCP-1483 | SCP-1484 »

SCP-1484: Murder Diary

Item #: SCP-1484

Object Class: Safe

Special Containment Procedures: SCP-1484 is to be kept in Locker 58-C at Storage Site-23. Level 2 staff and above may access SCP-1484 for approved research at the discretion of the Deputy Director of Research. All experimentation must be recorded in Research Log-1484.

Description: SCP-1484 is a leather-bound journal measuring 30.2 cm in length, 23.1 cm in width, and 4.7 cm thick. SCP-1484 contains 326 blank pages. However, pages 125-142 of SCP-1484 feature a series of roughly 5cm^2 areas or "panels" (approximately 20 per page) which, when in contact with human skin, cause the "reader" to experience a range of different tactile sensations throughout their body. Each individual panel corresponds to a different, usually complex set of tactile stimuli. The sensation persists for approximately ten seconds after the subject touches SCP-1484. Research has determined that the paper in SCP-1484 contains no known chemical adulterations or other unusual properties, and is identical in every way to commercially available paper from the same time period estimated to be that of SCP-1484's manufacture. How SCP-1484 is able to manifest the generation of tactile sensation in subjects is currently unknown.

SCP-1484 was recovered from the estate of Mr. in 19 , as part of Protocol -A5, related to the securing of personal effects of certain individuals identified by the Federal Bureau of Investigations' ViCAP program as "persons of interest" in unexplained disappearances. According to public records, Mr. died of natural causes.

Research Log-1484-4: Catalogue of Notable Effects

- Page 125: Panel 13 - Subject experiences feeling as though present in an environment of approximately 22-24°C, regardless of temperature in test chamber. Subject will also experience the sensation of light breezes estimated at 3-5 km/h from a direction always to the subject's left.
- Page 125: Panel 18 - Induces a rhythmic swaying sensation, described by one D-Class test subject as feeling like a "playground swing".
- Page 127: Panel 3 - Causes a sense of tightness in the quadriceps muscles and mild shortness of breath, consistent with light exercise.
- Page 128: Panel 5 - Mild displacement felt in the stomach region such as that associated with rapid downward movement along an incline.
- Page 130: Panel 11 - Sensation of a hand firmly grasping the subject's right bicep. Note that test subjects have described the hand as being particularly large, and encompassing most of the upper arm in its grip, regardless of subject's physical dimensions.
- Page 132: Panel 8 - Subject experiences severe cramps in the quadriceps and calf muscles and pronounced shortness of breath. Subject also experiences acute pain associated with the larynx and vocal cords.
- Page 132: Panel 20 - Pressing sensation on subject's back, buttocks, and legs, while the neck and head crane to the left. Subjects report no sensation of breathing, though no feelings of asphyxia or associated pain in the chest or lungs.
- Page 133: Panel 17 - Two hands grasp the subject violently by both arms.
- Page 133: Panel 19 - A hand grasps the subject by the throat while a piece of indeterminate fabric is placed forcefully against the subject's mouth and nose. 59% of test subjects have lost consciousness by touching this panel, while the remainder report extreme fatigue or sleepiness.
- Page 137: Panel 1 - The subject experiences the sensation of their wrists and ankles being fastened together, along with a sense of locomotion, corresponding to travel at no less than 50 km/h.
- Page 139: Panel 9 - Subject experiences feeling of being secured to whatever chair they are sitting in at the time. In

previous observations, subjects have been documented to stand up, yet continue reporting the feeling of immobility.

[DATA EXPUNGED]

- Page 142: Panel 3 - Subject continues to experience high levels of pain related to extensive physical trauma seemingly incurred in Pages 140-141. Subject becomes effectively blind for the duration of Panel 3's effects.
- Page 142: Panel 8 - Subject immediately experiences sensation of considerable blunt force trauma to the left temple.
- Page 142: Panel 20 - Complete lack of perception of outside environment strikes subject for duration of Panel 20's effects. Subjects later describe only a feeling of numbness.

Research Log-1484-12: On 12/11/20 , Researcher noted anomalous phenomena associated with Pages 321-326 of SCP-1484. All tests conducted on these pages prior to this date demonstrated no notable properties.

Pages 321 to 326 exhibit similar traits to Pages 125-142, in that contact with the pages produces tactile sensations independent of the subject's current environment. However, rather than a series of panels on each page provoking different sensations, each page contains only a single effect. These effects are of a much lower intensity than those manifested in Pages 125-142, and consist of merely slight changes in perception of temperature or mild sensations of movement. The exception is Page 326, which provokes a clear sensation of moist earth all over the subject's body, coupled with the feeling of suffocation during the the entirety of its five-second period of effect.

All subsequent tests have not revealed any changes to Pages 321-326 or any other portion of SCP-1484 since the above date.

Addendum 1484-1: Risk and Strategic Value Assessment 1484-1 performed by Senior Researcher following Incident 1484-3. In accordance with report recommendations, experiments involving Pages 140-141 are suspended indefinitely, given the relatively low value of knowledge thus far obtained versus documented psychological trauma and resulting episodes of violence by test

subjects against staff.

Senior Researcher's Note: *We've already determined what happens and turned over the data to Site-23's investigations unit. There is absolutely no reason to keep expending resources doing what amounts to re-watching a particularly disturbing snuff film.*

Addendum 1484-2: Following examination of the County archives and local law enforcement records, no known criminal act within 100 kilometers of 's documented place of residence corresponds with the events depicted in SCP-1484. This includes the abduction and subsequent homicide of Ms. , the case which first brought Mr. to the attention of federal authorities. Researchers' hypothesis that SCP-1484 is somehow a record of a past event therefore remains unproven. Investigations into past residences and activities of Mr. , as well as the nature and extent of his connections to SCP-1484, are ongoing.

« SCP-1483 | SCP-1484 | SCP-1485 »

SCP-1485: Normality

Item #: SCP-1485

Object Class: Euclid

Special Containment Procedures: Site 68 has been constructed around SCP-1485 for containment purposes. As the atmosphere, environment, and biological inhabitants of SCP-1485-A have been proven to be virtually identical to Baseline equivalents through multiple controlled tests and analyses, standard protocol regarding the vacuum-sealing of dimensional containment chambers is to be ignored. All technological and cultural information sent to SCP-1485-A must be screened ahead of time by a Level 3 Researcher in order to avoid potential security breaches.

Once weekly, a Foundation liaison is to be sent through SCP-1485 for purposes of diplomatic contact. As of 22 October 19 , all inter-personnel exchanges between SCP-1485-A and the Baseline reality have been suspended indefinitely (see SCP-1485 Discovery and Liaison Log). The automatic defense grid housed in SCP-1485's containment chamber, previously to be used in the case of a potential invasion, has been repurposed to prevent unauthorized access to SCP-1485-A. Researchers assigned to SCP-1485 must undergo extensive background checks to ensure their loyalty to the Foundation, and are to be under the guard of security officers at all times while conducting research on SCP-1485.

Description: SCP-1485 is an extradimensional space-time anomaly, measuring 9.71 metres by 10.54 metres. It acts as a transition point between our universe ("Baseline" for the purposes of this document) and a parallel universe, designated SCP-1485-A. SCP-1485 is impermeable to atmospheric substances such as oxygen and carbon dioxide, while being penetrable by other forms of matter, including human beings.[1]

The world of SCP-1485-A is nearly identical to the Baseline:

physical laws, historical events, and chemical makeup of the atmosphere and environment bear an estimated 99.98% similarity to the Baseline world.[2] Several parallel counterparts to Baseline people exist in the SCP-1485-A universe, of whom roughly 3/4 have lives similar or nearly identical to their equivalents in our universe.

SCP-1485-A is primarily distinguishable from the Baseline world by its apparent total lack of anomalous or otherwise extranormal activity. With the exception of SCP-1485, activities, events, or persons directly contradicting scientific laws do not occur on a regular basis, and those few alleged to occur are regarded as myths or superstitions by the academic and scientific communities of SCP-1485-A. Extensive research has determined that no Foundation-equivalent, nor any Groups of Interest, exist in SCP-1485-A. Groups dedicated to the containment of paranormal events and artifacts are regarded with derision and condescension by the public at large.

Due to the lack of a Foundation-equivalent organization, diplomatic contact is carried out through the SCP-1485-A counterpart to the United States government. Because of the extensive similarities between the Baseline world and SCP-1485-A, research is primarily focused on understanding the properties of SCP-1485 and the minor historical divergences between the two worlds. Previously, the Foundation conducted regular diplomatic liaisons into SCP-1485-A; however, these have been suspended due to high desertion rates (see below).

> Level 3 Clearance Required
>
> As of February 20 , relations between SCP-1485-A and the Baseline have begun to deteriorate. Communications from SCP-1485-A have become accusatory and hostile in nature, citing the anomalous nature of the Baseline universe and the potential threat it poses to SCP-1485-A. SCP-1485-A authorities have expressed a desire to seal SCP-1485 and prevent Foundation access to their universe; diplomatic relations may be severed in the near future.

SCP-1485 Discovery and Liaison Log

Date	Event
January 19	SCP-1485 discovered. Site 68 constructed and completed several months later.
April 19	SCP-1485 discovered by SCP-1485-A inhabitants.
July 19	Diplomatic relations established. First diplomatic liaison into SCP-1485-A conducted. Exploration reveals aforementioned properties of SCP-1485-A. Agents return to Baseline two days later.
November 19	First recorded desertion by Foundation personnel. Two agents assigned to SCP-1485-A leave their provided accommodations and escape into the outside world. As of this writing, they have not been recovered from SCP-1485-A.
January 19	Security protocols updated. Entire Foundation liaison team assigned to SCP-1485-A deserts. Of the ten personnel that deserted, only two were intercepted. One self-terminated prior to capture, and one surrendered to SCP-1485-A authorities (see SCP-1485 Interview Log).
October 19	Diplomatic liaisons to and from SCP-1485-A suspended indefinitely. Security protocols updated.

SCP-1485-A Interview Log

Agent was a Foundation officer assigned to SCP-1485-A, and the only personnel member recaptured

after the January 19 desertion incident. She had been employed by the Foundation for nine years prior to her desertion and was considered to be highly dependable and trustworthy. Interview is being conducted by Head Researcher Smithers.

Head Researcher Smithers: Good afternoon, agent.

Agent : Hey there, Smithie. How's the family?

Head Researcher Smithers: Repetitively pleasing, as always. *[Sifts through papers before finding Agent 's file.]* You'll forgive me if I wish to dispense with the small talk. I trust you know why I am speaking to you today?

Agent : *[Appears lethargic]* Yeah. Let's just get on with it.

Head Researcher Smithers: I suppose we should start from the beginning. Could you describe the events leading up to your liaison mission to SCP-1485-A?

Agent : Well, it hadn't been the first time I'd been on a multiverse assignment. Ever since that incident with [REDACTED] I'd been the go-to girl for a lot of the Foundation's dealings with alternate realities. Makes sense, I guess. Always loved science fiction growing up. Heh. Never thought it wasn't fiction.

Head Researcher Smithers: How did the mission go?

Agent : Well, we made our way through the portal easy enough. God, or whatever passes for it in this fucked up world of ours, was nice enough to make it big enough for us to easily slip into.

Once we got to the other side and made ourselves comfortable, it was…different. I don't mean "different" as in something that immediately tells you you're not in your universe. Nothing big like zeppelins in the sky or traffic driving on the other side of the road. It was just…

[Several moments pass.]

Head Researcher Smithers: Agent?

Agent [redacted]: I felt like I had a giant weight lifted off my shoulders.

Head Researcher Smithers: I see. And how did the mission go over the next few days?

Agent [redacted]: It was pretty standard multiverse stuff. Make contact with the other side, take samples, get an update on the current situation, yadda yadda yadda. Thing is, they kept giving us odd glances when they thought we weren't looking.

Head Researcher Smithers: You think they were suspicious of you?

Agent [redacted]: Not *suspicious*, but…wary. I mean, this was the first time they'd ever had to deal with any of this stuff. Then they find out it's par for the course in our universe. Can't blame them for not trusting us.

Head Researcher Smithers: So if they did not trust you and kept you under constant surveillance, why did you betray us? You've worked at the Foundation for nearly a decade, and we have always rewarded you for your service appropriately. What made you decide to throw that all away?

Agent [redacted]: You've never been there, have you? If you had, you wouldn't be saying that.

Head Researcher Smithers: SCP-1485-A is hardly a utopia, [redacted]. They have wars, suffering, and death just like we do.

Agent [redacted]: Well, yeah, of course. But when you're walking down the street, you can trust your eyes. You know that what you see is what's really there. There's nothing hiding in your peripheral, nothing lurking in the

shadows. Everything is…normal. Everything is right. You can trust your senses, because there are no cognitohazards. You can trust science, because there's nothing that defies it. It's just…

[Several moments pass.]

Head Researcher Smithers: Agent?

Agent : It just makes **sense.

Footnotes
1. For details regarding the makeup of SCP-1485, please consult Supplementary Document 75-A. Level 3 clearance is required.
2. The remaining .02% of divergence is mostly historical. [REDACTED] likely due to the absence of a Foundation-equivalent. For more details, consult SCP-1485-A Historical Document 20.

« SCP-1484 | SCP-1485 | SCP-1486 »

SCP-1486: "Benny"

Item #: SCP-1486

Object Class: Euclid

Special Containment Procedures: SCP-1486 is to be kept in Containment Locker 392b at Site-46. Following incident 1486-8, a 55-meter spherical radius is to be demarcated around SCP-1486 as an area in which absolutely no copulation is to occur.

Description: SCP-1486 is a children's doll, 48 centimeters in height. SCP-1486 is animate; however, due to its nature it is mostly immobile. SCP-1486 is highly damaged (see image right), and is missing its right arm. SCP-1486 will frequently exude human blood, feces, pus, and cervical mucus from small pores covering its torso and head. SCP-1486 is seemingly sapient.

If a fertile, human couple of opposite sexes completes copulation within ~50 meters of SCP-1486 (regardless of contraceptive use), SCP-1486 will disappear from where it has been placed and appear in the female subject's uterus at less than 0.01% of its original size[1]. SCP-1486 will then begin slowly increasing in size at the rate of a normal embryo and foetus[2]. Ultrasound testing of the subject has shown that SCP-1486 retains its shape throughout the growth process. Subjects may sustain damage to the uterine wall, causing infertility. Excretions from SCP-1486 will exit through the cervix.

After a period of ~9 months, SCP-1486 will induce labor in the subject. SCP-1486 may be birthed normally. However, due to the presence of several harsh edges on its exterior, Caesarian sections have proven to be a much safer form of delivery.

Once it has been birthed, SCP-1486 will search for the subject mother and in some instances, SCP-1486 will attempt to breastfeed unless restrained. SCP-1486 can communicate verbally through unknown means, and will address the subject and others.

Attempted abortion results in SCP-1486 rapidly expanding, causing the subject's abdomen to rupture. SCP-1486 will be immediately hostile.

SCP-1486 was discovered by Foundation operatives following a complaint submitted by [REDACTED] after an ultrasound imaging session.

Addendum 1486-1:

> **Interviewed:** SCP-1486
>
> **Interviewer:** Dr. Fulnan
>
> **Foreword:** SCP-1486 had recently been birthed and was sitting with D-7397, its "mother", at the time of interview. D-7397 had been sedated and was unconscious.
>
> **<Begin Log>**
>
> **Dr. Fulnan:** Hello SCP-1486.
>
> **SCP-1486:** Hey doc, long time no see.
>
> **Dr. Fulnan:** Indeed.
>
> **SCP-1486:** 9 months, if I had to guess (Laughs). How's it hanging?
>
> **Dr. Fulnan:** It's fine. Mind if I ask a few questions?
>
> **SCP-1486:** Shoot.
>
> **Dr. Fulnan:** Alright. Who or what made you?
>
> **SCP-1486:** Well doc, when a mommy and a daddy really love each other, or are really fucking drunk…
>
> **Dr. Fulnan:** Please answer the question.
>
> **SCP-1486:** How do you think? My momma got laid and I

happened to be the fastest sperm.

Dr. Fulnan: Alright. How did you become damaged?

SCP-1486: Being born isn't fucking easy, you can get pretty torn up. I think I would know that better than anyone.

Dr. Fulnan: Okay. So this woman is your mother?

SCP-1486: Yeah, this woman here's my momma. Might not be the best looker, but she's got the best tits I've ever seen.

Dr. Fulnan: So you've seen tits before this?

SCP-1486: It's an expression, dumbass.

Dr. Fulnan: But what about all the times you've been, er, born before this?

SCP-1486: What?

Dr. Fulnan: You don't remember being born before this birth?

SCP-1486: Well, yeah, of course I do.

Dr. Fulnan: Were the women those times not your mother?

SCP-1486: I thought they were, but they would scream and throw me away. How could they be my momma if they would do that?

Dr. Fulnan: They gave birth to you.

SCP-1486: Well, yeah, but I mean they hate me. How could a mother hate her own kid, doc? Enough to hurt them so much?

Dr. Fulnan: Lots of mothers…

SCP-1486: It doesn't make any sense! How could they just throw me away? How could they just hammer it in like that?

Dr. Fulnan: Well, I mean…

SCP-1486: I just don't get it.

Dr. Fulnan: 1486?

SCP-1486: Can we stop please?

<End Log>

Closing Statement: Examination of SCP-1486 following the interview showed a severely increased excretion of cervical mucus from the area surrounding its eyes. SCP-1486 was separated from D-7397 and placed into storage.

Footnotes
1. Whether this effect is achieved through use of the same phenomena as observed inSCP-886,SCP-1263,SCP-1586, or a combination thereof is currently unknown.
2. For financial and ethical concerns, testing regarding the subject body's acceptance and nourishment of SCP-1486 has not been performed. For more information read Dr. Fulnan's paper:SCP-1486: Hypotheses regarding the placenta and immune system.

« SCP-1485 | SCP-1486 | SCP-1487 »

SCP-1487: Beautiful Bones

Item #: SCP-1487

Object Class: Euclid

Special Containment Procedures: SCP-1487 is to be kept in Humanoid Containment Chamber #3821 at Site 23. Standard procedures in regards to humanoids have been put into place for this entity.

Testing of the entity's anomalous properties is to be supervised by at least two (2) Level-3 researchers. SCP-1487 is to be physically restrained when in the presence of humans or other living organisms unless it is being actively tested. Weekly interviews to determine the psychological condition of SCP-1487 are to be conducted by the lead researcher of the anomaly, Dr. Miles Wright Dr. Adelaide Fredricks.

Description: SCP-1487 is a female humanoid of Filipino descent. The entity is fifteen (15) years old and measures 1.7m in height and 70kg in weight. SCP-1487's anomalous properties have not been present throughout its entire life; however, it is unclear when these traits manifested.

SCP-1487 is unable to perceive or interact with any parts of living organisms other than the internal skeletal system. Due to this, the entity is able to identify different animal species, but tends to have difficulty in distinguishing between individual members. Nonliving materials, as well as organisms that possess external skeletal systems or otherwise lack internal skeletal structure, are not subject to this effect.

SCP-1487, originally named Saffron , was recovered from the town of , TN on 29/11/2012. SCP-1487 is unusually well-adjusted to its condition and rarely responds negatively when questioned about it. At the end of initial analysis, Dr. Wright, who

specializes in dealing with teenage and young adult anomalies, was assigned to lead the research on SCP-1487.

Interview Log-1487-Delta:

> **Interviewed:** SCP-1487
>
> **Interviewer:** Doctor Wright
>
> **Foreword:** Following the initial containment, classification, and observation of SCP-1487, Dr. Miles Wright, a specialist in social adolescent human interaction, was assigned to lead the research of SCP-1487. The following log comprises Dr. Wright's first interaction with the organism, as well as SCP-1487's first one-on-one interview with a Foundation employee.
>
> **<Begin Log>**
>
> **Wright:** Good day… let's see, may I call you, "Saffron?"[1]
>
> **SCP-1487:** Sure. And what can I call you?
>
> **Wright:** Well, my name's Miles Wright. You can call me Doctor Wright or even Miles, if you really want to.
>
> **SCP-1487:** I'm gonna call you Miley. Like the shitty singer.
>
> **Wright:** *[smiles and shakes head]* Alright, alright, I guess that's okay. So, can you tell me about yourself? Specifically, your, well, condition?
>
> **SCP-1487:** Hm… well, it just started, like… in October, about two months ago. And, well, when it happened I was just like "Holy shit!" Because, y'know, I couldn't *touch* people anymore, and that's fucking… yeah. My hands just kept going through people's skin like there was nothing there and hitting the bones inside of them. I mean, I know they're bones now, but back then I was even more clueless than I am now, so it was even freakier. Actually, I kinda like the feel of bones now.

They’re so smooth and strong, yet elegant, y’know? Have you ever felt a bone? If not, you should, because it's really damn awesome.

Wright: *[smiles and laughs]* Holy hell, you *are* weird, ain’t ya, Saffron?

SCP-1487: *[pouts]* Well, I’m sure you're not Mr. Perfect yourself, Miley. Anyways, a month after that started happening, I also started just seeing skeletons. Like… not people at all, just… skeletons. It’s not everyone, and it changes a lot. Like, I would see someone one second, look away, and when I looked back they were just bones. It’s been happening a lot more as time goes on. I see more and more people as just skeletons more and more of the time. It’s not everyone yet, though, which is nice. Like you, Miley, I can see you and your wrinkles just fine.

Wright: *[scoffs]* Wrinkles? Hardly. Stress lines, maybe, but wrinkles? I’m hardly old yet, I still think the Beatles are cool. Anyways, back on task, does this happen only when you see someone directly?

SCP-1487: *[shakes head]* No, it happens with pictures and photographs, too.

Wright: Okay, okay. *[flips through papers on clipboard]* Well, I think that’s all for today, Saffron, but I think we’ll be seeing a lot of each other in the future.

<End Log>

Interview Log-1487-Gamma:

Interviewed: SCP-1487

Interviewer: Doctor Wright

Foreword: This interview was overseen with Dr. Adelaide Fredricks, specialist in child psychology, in the interview room. The purpose of this was to obtain a second opinion on the psychological condition of

SCP-1487.

<Begin Log>

Wright: Hey, Saffron, it's Dr. Wright. I brought my friend Adelaide today so she can watch us and just take some general notes. Is that alright?

SCP-1487: *[nods, smiles and waves at Dr. Fredricks]* I'm not gonna be able to remember her, though, Miley; she's all bones.

Wright: That's alright, completely fine. You can basically always expect that I'll be the one talking to you, but I'll be sure to tell ya who's who if I bring people in from now on, alright?

SCP-1487: Sounds good, man.

Wright: Cool. So, anything notable since the last time we talked?

SCP-1487: Yeah, some of these people have some very, very nice bones. Like, hot damn.

Wright: *[laughs]* You know that's not what I meant.

SCP-1487: *[tsks]* Whatever, man, you asked and I answered. Is that all for today? I got a long day ahead of doing nothing but going crazy, and I'm already behind schedule.

Wright: Yep, I'll be out of your hair soon, these will mostly just be check-ins every week or so to make sure you're doing alright.

SCP-1487: Sounds good, man. *[nods at Dr. Fredricks]* Nice to meet you.

<End Log>

Interview Log-1487-Epsilon:

Interviewed: SCP-1487

Interviewer: Doctor Wright

Foreword: This interview was conducted solely between SCP-1487 and Dr. Wright, with no one else in the room.

Wright: How are you today?

SCP-1487: *[noticeably more reserved and quiet than previous interviews]* I'm fine, Dr. Wright.

Wright: That's good to hear. No deviation at all? Anything to report? Want to tell me how good everyone's bones feel again?

SCP-1487: *[shakes head]*

Wright: Nothing you want to say? I know we take a lot of tests, there must be something you want to tell me about. Come on, something interesting that happened in the past week, even if you weren't really involved.

[Neither Dr. Wright nor SCP-1487 speaks for approximately one (1) minute]

Wright: Alright, well, we'll talk more next time.

<End Log>

Closing Statement: SCP-1487 is behaving drastically differently from previous interviews, possibly due to dealing with the implications of its condition. Dr. Fredricks will be present at next week's interview.

Interview Log-1487-Zeta:

Interviewed: SCP-1487

Interviewer: Doctor Fredricks

Foreword: This interview was originally meant to be

conducted by Dr. Wright; however, SCP-1487 refused to speak to him and requested to be interviewed by Dr. Fredricks. The entity continued to refuse to talk until Dr. Wright left the interview room.

Fredricks: Hello… Saffron, was it?

SCP-1487: *[nods]* Y-yes… doctor. That's it.

Fredricks: Well, what's wrong? Why did you want to talk to me instead of Dr. Wright?

SCP-1487: Well, um, I assume you know how when I came here, I was seeing people as skeletons randomly, right? Like, how I would just see someone's bones and nothing else and the next second I would see them normally?

Fredricks: Yes, I remember that. What about it?

SCP-1487: Well, over the course of the last few weeks, I've seen a lot of people. On my way to my testing, taking care of my room, guarding other things here, you know. Last week, it finally happened. It wasn't a *[snaps fingers]* just-like-that thing, really, but everyone was just skeletons. With no changing at all. I've stopped seeing people. But that's not what I'm freaking out about, I saw this part coming.

Fredricks: What is it, then?

SCP-1487: *[remains silent for approximately thirty (30) seconds]* I can still see Dr. Wright. All of him. No one else. I… please help. Please. I can't do this. Don't bring him back here, please, please please…

<End Log>

Closing Statement: At this point, SCP-1487 lapsed into a panic attack and was subsequently aided by Dr. Fredricks. Following this, the information presented in this interview was presented to the Site Director of Site

23, Roger Langley. Action on this information is pending.

Addendum-1487-Eta: Due to the contents of Interview Log-1487-Zeta, Doctor Miles Wright had been instructed to submit to several examinations, including, but not limited to, blood tests, DNA testing, and a close inspection of the doctor's past. The purpose of these orders was to look for possible explanations of this anomaly as a precaution; however, Dr. Wright has been reported missing as of 19/12/2012. Foundation operatives have been notified of this and are currently searching for Dr. Wright. A decision is also pending on whether or not SCP-1487 should be used to identify more Foundation employees that may or may not experience the same anomaly that Dr. Wright did.

Footnotes
1. Please note that Dr. Wright was granted permission to address SCP-1487 by the name it was given prior to containment in order to ease the humanoid and make it more comfortable so that it might be more cooperative in interviews and tests. All other personnel are still required to refer to the being as SCP-1487.

« SCP-1486 | SCP-1487 | SCP-1488 »

SCP-1488: Partially Roboticized Tortoises

Item #: SCP-1488

Object Class: Euclid

Special Containment Procedures: SCP-1488-001 through SCP-1488-214[1] are housed in an underground enclosure within Site-15 provided with artificial sunlight and climate control adjusted to mimic the conditions of the Bolsón de Mapimí area of Mexico, with adequate seasonal variation. Food and water may be delivered to the enclosure as needed via security corridors furnished with lead-lined doors. Antennae have been placed throughout the enclosure to receive transmissions from SCP-1488 instances and a Researcher must enter the enclosure at least once every 24 hours to retrieve transmission records. An electromagnetic pulse (EMP) device has been relocated to the center of the enclosure and must be kept armed and ready to fire at all times.

Six computer-operated Robotic Remote Recovery Vehicles (designated R3V-1488-1 through -6) have been deployed at various locations in northern Mexico and tasked with cataloging and retrieving SCP-1488 candidates to either be tagged and released or else transported to Site-15 for SCP assignment. Junior Research Assistants assigned to SCP-1488 are reminded that R3V units regularly communicate with Site-15 and that all communications must be reviewed and logged within 24 hours.

In light of the large number of SCP-1488 candidates still unaccounted for, 2 Junior Research Assistants are regularly assigned to actively monitor online auction sites, wildlife sanctuaries, and unlicensed pet stores for potential SCP-1488 instances and notify project heads accordingly. With the species in question at the center of several conservation / rewilding efforts, Foundation members have been embedded in at least one of the more prominent agencies overseeing each project.

Description: Instances of SCP-1488 were initially identified as individual specimens of *Gopherus flavomarginatus,* the Mexican giant tortoise, that had been augmented with electronic and mechanical components. However, larger-scale research has demonstrated that older instances have, on average, a greater instance of synthetic components than younger, that anomalous parents are capable of producing non-anomalous offspring, and that recent paleontological discoveries[2] point to a species far more synthetic in composition than the one observable today. These findings, in addition to the sheer number of instances discovered,[3] strongly suggest that the *G. flavomarginatus* species itself consists largely or entirely of robotic vehicles in varying states of assimilation, through means currently unknown, into the genus *Gopherus*.

While the majority of giant tortoises evaluated for SCP-1488 are wholly biological, non-anomalous and fully integrated into the Mapimí Basin's ecosystem, nearly 8.5% of specimens recovered thus far have been found to possess "vestigial communication devices" - compound metal spheres uniformly 18mm in diameter with a complex internal structure - embedded beneath the highest point of the tortoise's shell. Nearly all of the devices recovered appear to be operational, periodically emitting signals in the - range. Although communication devices are by far the most common anomalies observed in instances of SCP-1488, they are often accompanied by one or more of the following components:

- One or more partially robotic limbs
- Subcarapacial solar arrays
- Series of graduated optical lenses
- Spectroscopic tubes showing traces of alpha particle emitters
- Digging or excavating tools
- Electrically actuated magnetic coils
- Drill machinery with cylindrical or coring bits.

It should be noted that the items above are invariably inoperative and in many cases only identifiable by shape.

Incident 1488-Delta: On / /199 , a massive increase in radio frequency activity was reported simultaneously by 2 of 3 active R3V-1488 units, as well as the SCP-1488 receiver array at Site-15, lasting a total of 132 seconds. Approximately 70 hours later, an

"answering" signal was returned from unambiguous origin RA= . . . with ° ′ declination.[4] In contrast to the relatively short duration and comparatively narrow frequency range of the outgoing spike, the answering signal lasted over 7 hours and 45 minutes and occupied a much wider band of frequencies, giving rise to a variety of unprecedented radiological, meteorological, and geological phenomena - much of it, such as [REDACTED], globally observable. Following 1488-Delta, Containment protocols for SCP-1488 instances were revised and the number of R3V units assigned to SCP-1488 doubled to reduce the likelihood of a repeat incident.

Footnotes
1. Numbers belonging to instances dying in containment have not been reassigned. At present, this series encompasses 183 instances. See Table 1488-07-B for a current record of individual assignments and neutralization dates.
2. For example, Document 1488-51-ARC "WEIRD: Giant Prehistoric Turtle With Artificial Limbs Unearthed In Mexico" - .com / / and related Incident, Disinformation, and Medication logs, etc.
3. Roughly 850 instances of SCP-1488 are believed to exist, out of a candidate population that one third-party conservation group estimates at over 10,000 individuals.
4. an area of the sky not known or observed to be occupied at the time.

« SCP-1487 | SCP-1488 | SCP-1489 »

SCP-1489: A "Ghost Train"

Item #: SCP-1489

Object Class: Euclid

Special Containment Procedures: SCP-1489 is constrained within a 9 km loop of refurbished, standard-gauge railway track in Containment Area-22. All rails and ties in this track have been taken from historic lines no longer in service, and must be replaced only with materials appropriated from railway segments last maintained prior to 1860. Stakes and other structural components of the track are not and need not be composed of historic materials. All historic components of SCP-1489's containment loop have been coated with a film of polymer resin to resist weathering effects. Additional supply of similarly preserved historic materials is maintained on site for repair purposes.

Note that any historic component of the containment loop that suffers damage must be replaced rather than repaired. Repairing historic components renders them unsuitable for SCP-1489's containment.

SCP-1489's containment loop must be walked at least once daily to monitor for erosive damage so that preventative maintenance can be performed. SCP-1489 itself must be kept within sight of at least two human observers at all times to prevent containment breaches from going unobserved.

In the event of a containment breach, the exit trajectory of SCP-1489 must be recorded and forwarded to Mobile Task Force Tau-2 ("Train Spotters") so that redirection to the containment site can be performed.

Description: SCP-1489 is an intangible railway train.

SCP-1489 consists of 18 railway cars trailing a steam locomotive, all

of which travel constantly at a speed of approximately 40 km/h along the ground. While SCP-1489 is both visible and audible to humans observing it directly, it is entirely invisible in all forms of indirect or recorded observation, including simple mirrors. SCP-1489 has no apparent physical substance, and will readily pass through any materials in its path with no effect. The only materials exempt to this property are railway components constructed and originally placed prior to an unknown date between 1860 and 1870. SCP-1489 will interact with these as would a normal physical train, and can thus be constrained with tracks composed of historic materials. This interaction is apparently one-way, as SCP-1489 exerts no force upon such materials as it passes.

When not traveling along such a track, SCP-1489 moves smoothly along the ground as if following a straight railway and will travel in geodesic paths around the earth, deviating only when it encounters historic stretches of track of sufficient age which are approximately parallel to its path. It will resume this behavior upon reaching a break in such a track.

SCP-1489 generally follows land contours, and slows somewhat when traveling uphill, but crosses substantial bodies of water at some elevation, as if traversing an invisible causeway. It has similarly been observed to travel directly through certain sharp inclines in terrain, as if traveling through a tunnel. Because SCP-1489 appears entirely solid and real to direct human observation, it typically causes significant disturbances when traveling through inhabited areas. Due to the difficulty involved in locating all witnesses of SCP-1489, the Foundation has previously practiced a disinformation campaign consisting of stories of "ghost trains" to discourage such witnesses from being considered credible.

SCP-1489's locomotive resembles a Minerva-class tank locomotive as used by the London and South Western Railway in the mid-19th century, but lacks any distinguishing marks that would allow for further identification. Both the locomotive and the subsequent cars in SCP-1489 appear appropriate for this time-period, although they display only minor wear. SCP-1489 houses an appropriate complement of both passengers and cargo for its scale, and these

share its properties of intangibility, and invisibility to indirect observation. Attempts have been made to communicate with SCP-1489's passengers using vehicles synchronized to its movement; however, while passengers have been observed to break off conversation when observed in this fashion, they have so far proven unwilling to communicate with researchers.

« SCP-1488 | SCP-1489 | SCP-1490 »

SCP-1490: Animal Sculptor

Item #: SCP-1490

Object Class: Euclid

Special Containment Procedures: SCP-1490 is to be held in a standard humanoid containment chamber. Furnishing includes a bed and several children's toys, and standard rations will be provided daily. Personnel may only view SCP-1490 through video surveillance, and interaction is to be avoided at all times. SCP-1490 is to be immediately tranquilized upon any signs of delight or happiness.

All instances of SCP-1490-2 created are to be euthanized and cremated immediately after testing.

Description: SCP-1490 is a Caucasian human male of approximately 1.1 meters in height. It appears to be of seven to eight years in age, and has proven docile and cooperative when provided with its necessities. Communication has proven ineffective, as it displays no reaction towards outward stimuli while outside of its range. SCP-1490 will only recognize any human visible to it as its "Mother" or "Father", depending on their gender. SCP-1490 will then attempt to approach them, until they are within its range of effect.

SCP-1490's main anomalous effect acts on any human within 4 meters of distance, though it can only target individuals if they are in its visual range; Any physical barriers preventing interaction with targeted subject(s) will prevent SCP-1490's anomalous effect. Upon entering its proximity, SCP-1490 will immediately display excitement, and will attempt to make physical contact with the subject. Any obstacles preventing SCP-1490 from doing so will cause it to react in disappointment.

When any living human comes into contact with SCP-1490, all components of their skeletal, muscle, and epidermal system will be

affected, turning the subject into SCP-1490-2. The following is the list of effects on SCP-1490-2:

- X-rays have shown that bones will become deficient in proteins, similar to an accelerated state of osteoporosis, and will eventually degenerate completely.
- The muscles of SCP-1490-2 will increase in mass and size, and will also become flaccid and weak. Muscles will continue to grow in mass until the formation of a cubical enclosure around SCP-1490-2, with the growth particularly originating from the torso.
- All limbs of SCP-1490-2 will recede into the torso, and all other organs not present in the skull will be incorporated into muscles. SCP-1490-2 will resemble a cube consisting of flesh, approximately the height of the subject's original form.

SCP-1490 will then proceed to shape SCP-1490-2 to resemble organisms from the kingdom *Animalia* (recently logged creations include a tiger, a frog, and an octopus). Methods utilized by SCP-1490 include repeatedly slamming its head onto SCP-1490-2, kicking or striking with its limbs to create depressions, biting and pulling at SCP-1490-2 to form "limbs" or to tear off unneeded material, and muttering into SCP-1490-2's ear.[1]

SCP-1490 will eventually stop activity, allowing SCP-1490-2's muscles to solidify and preventing further change to its structure. The epidermis will change in shade, corresponding to the animal SCP-1490-2 was made to resemble. They will display enthusiastic behavior and servility towards SCP-1490, though vocal communication has not been recorded. SCP-1490 will then appear to inspect SCP-1490-2, and will often react with disgust or distress. It will feign ignorance of its presence, despite persistent actions by SCP-1490-2 to please it.

Addendum 1490-C: SCP-1490 was recovered from an upstate mansion in , . Three instances of SCP-1490-2 were also found in the house. A crude handwritten note was found in the third story bedroom, assumed to be produced by SCP-1490. The paper appeared to be torn out of a composition textbook, with the writing quality increased with each paragraph, leading to the assumption that the note was written over a long period of time:

> *they* came to me, and asked me what art was. *they* said that they could show me what it truly was, but they must see if I was ready.
>
> i finished mother and father, but they looked at me strangely. I tried to finish my brother, but he wasnt good enough, so i [illegible] right through him.
>
> [Various scratched out drawings of what appears to be crude drawings of various animals and people.]
>
> They say its not enough, not right. I must be with them, my true peers. I want my work to [illegible]. I will create from the wretches that block my path, that's the only thing I was ever good at. We're all friends here. All we need is a change in perspective, even if it tears you apart.

Footnotes
1. Similarities between this ability to reshape biological matter and that observed inSCP-040has been noted. Investigation into a potential shared source of the two anomalies is ongoing.

« SCP-1489 | SCP-1490 | SCP-1491 »

SCP-1491: Camera man

Item #: SCP-1491

Object Class: Safe

Special Containment Procedures: SCP-1491 is to be contained in a standard humanoid containment cell. No additional special procedures are required. Non-destructive testing requests are to be submitted to the relevant responsible directing researcher (presently Doctor Richard Littlefield).

Description: SCP-1491 appears to the naked eye to be a 46-year-old Caucasian male formerly known as . When viewed via electronic or photographic media, SCP-1491 appears to be a -brand fixed speed-limit enforcement camera, mounted on a pole, with a combined total height of 3.1 metres.

SCP-1491's anomalous nature became known during a review by local law enforcement of CCTV recordings in town centre following an unrelated robbery. SCP-1491 was captured within its home following identification.

SCP-1491 Test log

Test 1:
Subject: SCP-1491.
Procedure: Subject in containment cell with no instructions. Subject viewed by eye and by video recording.
Results: Subject observed by eye to be a human male, clothed in a standard issue Foundation humanoid SCP jumpsuit. Subject is observed sitting, pacing and sleeping. Subject observed by video to be a -brand speed camera. Subject appears to move with no obvious means of locomotion, standing upright with the base of its pole sliding along the floor. Subject was observed to

"hop" up from the floor to the seat of the chair, where it "sat" standing upright and immobile. Subject was observed laying rigid and immobile on the bed.
Notes: Of particular interest to me is the rigid nature of the subject when sitting; what would have happened if the ceiling were lower? - Doctor Littlefield.

Test 2:
Subject: SCP-1491. Clear Perspex box with lid, dimensions 1.5m x 1.5m x 1.5m.
Procedure: Subject instructed to sit inside the box and close the lid. Subject viewed by eye and by video recording.
Results: Subject observed by eye to climb into the box and sit cross-legged, closing the lid. Subject observed by video to hop into the box and close the lid.
Notes: How a 3-metre-tall object was able to fit into a 1.5-metre-tall box without bending or folding in any way I just don't know. I can *see* it happen on the video, but I can't explain it. And the more I look at it, the more my eyes water. Passing this to the physicists. - Doctor Littlefield.

Test 3:
Subject: SCP-1491. One small rubber ball.
Procedure: Subject is instructed to pick up the ball from a table. Subject viewed by video recording.
Results: Ball appears to jump from the table and hover in mid air next to the subject with no visible means of support. Ball lowers back to the table similarly. Subsequent inspection of the ball shows no anomalies.
Notes: I start to wonder which to believe: my own eyes, or the eye of the camera. Is this a camera that we think looks like a man, or is this a man who fools cameras into thinking it's a camera? I'd pass this one to the philosophers, if we had any. - Doctor Littlefield.

Test 4:
Subject: SCP-1491. One -brand car, belonging to Doctor Littlefield.

Procedure: Subject instructed to stand beside closed test track at Sector-25 whilst the car was driven past at 130kph by Doctor Littlefield. Subject viewed by video recording.
Results: Subject's infrared flash is observed to operate. Doctor Littlefield received a fixed penalty notice (speeding fine) letter from Police at his home address four days later. Further investigation found appropriate Police records to match the letter, recording the offence as having occurred on the nearby road.
Notes: I was driving on private land! I'm not paying it. - Doctor Littlefield.

Addendum: Doctor Littlefield has been advised that the result of test 4, though unanticipated, constitutes a minor containment breach, and that future tests of a similar nature should be avoided.

« SCP-1490 | SCP-1491 | SCP-1492 »

SCP-1492: Ill-Begotten Gains

Item #: SCP-1492

Object Class: Safe

Special Containment Procedures: SCP-1492 is currently impounded in the Site-47 **Anomalous Vehicle Containment Bay** with tires and battery removed. Personnel are reminded not to bring precious minerals or stones within fifty meters of the vehicle at any time.

Items expropriated by SCP-1492 may be retrieved at the conclusion of testing hours under the supervision of the project director.

Description: SCP-1492 is a civilian-model armored car which has been modified for use in anomalous larceny. The passenger's seat has been replaced with an experimental target acquisition and teleportation device that Foundation technicians have thus far failed to replicate. When activated, the device identifies nearby objects of value out to a range of roughly forty meters and transports them into the rear cargo compartment regardless of intervening materials or subject mass.

SCP-1492 appears to take material, sentimental, and artistic worth into account, targeting everything from paper currency and jewelry to, in several cases, coins and gold fillings. Observation of the teleportation process has proven difficult as the matter relocation machinery will not operate unless the rear door is closed, and all cameras installed in SCP-1492 have been teleported some distance away once the object begins its operation. It is hypothesized that photographic equipment possesses too low a value for SCP-1492 to keep and is ejected to save cargo space. Experiments with human observers in the cargo area have been postponed due to the dangers posed by objects spontaneously materializing in a confined space.

While the teleportation effect leaves no physical traces, affected items are inevitably replaced with a promissory note, ironic in tone, ostensibly redeemable for various life experiences and philosophical concepts. This tendency towards metaphysics is visible in the attached documentation and appears to be exacerbated by the theft of high-value goods.

Textual Samples Obtained Prior to Recovery

Item Stolen	Note Recovered
$837 in mixed bills	IOU a steak, properly cooked.
Silver belt-buckle	IOU one evening without an argument.
Keys to high-rise condominium	IOU domesticity.
200 wedding rings, various styles	IOU the chance to say 'Yes,' and mean it.
SCP-	what the hell is that get it off oh shit oh shit take it back

« SCP-1491 | SCP-1492 | SCP-1493 »

SCP-1493: The Whispering Worms

Item #: SCP-1493

Object Class: Euclid

Special Containment Procedures: SCP-1493 is to be contained within a lead, soundproofed combination safe with a wall thickness of 10cm. The safe is to be lined with high-quality soundproofing insulation and packaging foam designed to hold SCP-1493 tightly in its center. The containment area is to be kept below a temperature of 270 K. It is to be equipped with sound, temperature, and seismic sensors, as well as seismic stabilizers. If any sound in excess of 110dB, temperature in excess of 278 K, or vibration in excess of 11 Hz is detected, researchers are to be alerted and guards with 120dB-rated ear protection dispatched to await a potential SCP-1493-Upsilon event.

Instances of SCP-1493-1, should they emerge from SCP-1493, are to be subdued with directed blasts of cold air and then placed in storage under the same environmental conditions as SCP-1493. The fabric membrane which covers instances of SCP-1493-1 is not to be punctured or otherwise opened except during necessary testing.

Description: SCP-1493 is a device resembling an electronic audio speaker, constructed from tin, aluminium, brass, plastic, and a fabric membrane of an unknown composition. The fabric membrane is woven with a repeating red and black pattern, and is pinned across the inside of a plus-shaped opening in the device's front by four brass rivets. SCP-1493 weighs 140 grams and measures 5cm x 4cm x 7cm. SCP-1493's upper portion, which is composed of tin, is painted blue with paint, a brand that was commonly used in the production of consumer appliances and electronics in the 1950s and 1960s. SCP-1493's lower portion, which is composed of aluminium, is embossed with the logo of , a Japanese electrical instruments manufacturing company founded in 19 . There is no

record of manufacturing any product resembling SCP-1493 before closing in 19 . The interior of SCP-1493 is inaccessible. Additionally, it has no input/output ports, nor any visible means of powering it.

When subjected to significant vibrational forces, SCP-1493 acts as a speaker, producing noise through the application of an internal pressure to its fabric membrane by unknown means. The volume of this noise is proportional to the frequency of the vibration — volume was measured at over 90dB when a vibration of 6Hz was applied; however, a formula for this proportion is indeterminable and nonlinear. Even when SCP-1493 is held still, low-level noise is continuously produced. The noise is discordant and seemingly random, and while the noise is produced, the pattern woven in the fabric membrane changes in a manner similar to television static.

On occasion, underlying sounds have been detected in the noise, consistent with the vocal signatures of humans. It has proven difficult to determine if these sounds truly are voices or whether they are saying anything, since they only begin to become detectable when SCP-1493 is vibrated at 5Hz or greater. The voice-like sounds increase in volume at the same rate as the overall noise.

As was a widespread manufacturer of electronic instruments with global distribution, more instances of SCP-1493 may have been produced. The Foundation is tracking media for reports that may lead to the recovery of more instances of SCP-1493.

Addendum-1493-A: On 20 - - , during testing, SCP-1493 was inadvertently breathed upon, and its noise output increased by 5dB for a period of 10 seconds. Tests were conducted to determine the causative factor in this event, including minute changes in air pressure and temperature, and it was discovered that SCP-1493 appears to be translating thermodynamic energy into audible random noise. From this it can be concluded that temperature is a factor in its noise production; exposure to high temperatures should thus be avoided. However, physical disturbance on a macroscopic scale is a far more influential factor.

Addendum-1493-B: On 20 - - , SCP-1493 was accidentally dropped on the floor of its containment area. The noise level passed

150dB, deafening the researchers present. After nearly five seconds of this noise, the device's fabric membrane began to expand outwards, forming a hollow tubular shape with a pointed end, designated SCP-1493-1. SCP-1493-1 reached a maximum diameter of 3cm and a length of 230cm before its back end tapered off and it left the fabric membrane entirely. Three more instances of SCP-1493-1, identical to the first, emerged from SCP-1493, and all instances moved towards the researchers in an aggressive manner. After the SCP-1493-1 instances emerged, SCP-1493 no longer produced the voice-like sounds.

Commendably, Researcher managed to subdue the four instances of SCP-1493-1 with a fire extinguisher, although she and the other researchers suffered internal bleeding and neurological damage during the event. After all four instances were subdued, the noise produced by SCP-1493 returned to baseline levels. This event was designated Incident-1493-Upsilon-01, and any future events like it should be designated similarly. The full extent of the effects of an Incident-1493-Upsilon event and of instances of SCP-1493-1 on humans are unknown.

Addendum-1493-C: Through extensive testing, SCP-1493-1 have been determined to be a form of incorporeal, invisible earthworm-like entity. Under normal circumstances, security footage demonstrates that SCP-1493-1 continuously emit several kinds of voice-like sounds in excess of 120dB when exposed to thermodynamic temperatures above 278 K. Instances of SCP-1493-1 are incapable of surviving under the current physical conditions[1] of our universe, and as such use the fabric membrane as a form of protective exosuit. The fabric membrane has been determined to be capable of isolating a static pocket of local physical conditions. An instance of SCP-1493-1 expires if the fabric membrane is removed or opened, typically releasing a 190dB shriek lasting 0.2 seconds and then spontaneously combusting. The fabric membrane collapses soon afterwards, and the SCP-1493-1 instance is no longer detectable.

Partial Transcript of Voice-Like Sounds

> …ukba, ukba, ukba…
> …foom foom foom foom…

…abababababa… …awawawawawa…
…leeeeeeeeeeeegh…
…hoh, hoh, hoh, hoh, hoh…
…rrrreeohm…

Researcher's Note: These were taken from security footage of Incident-1493-Upsilon-01. When the volume was dialed down, the voice-like sounds produced by the SCP-1493-1 instances consisted of simple repetitious phonemes and chants. They took place simultaneously and at variable pitches. The total impression was not unlike an a capella *song.*

Addendum-1493-D: Following the conclusion of Incident-1493-Upsilon-01, a researcher noticed a small piece of paper tucked in the seam between the upper and lower portions of SCP-1493, apparently dislodged from the inside of the device by the event. Upon retrieval, said paper was found to be a strip of ticker tape upon which was the printed English text, "STASIS is NOMINAL PASSENGERS are HUNGRY but RESTED TIME to INTERCEPT ST-IDEAL is UNKNOWN THANK YOU TRAVEL is COURTESY of SUPER GOOD SHIP" followed by the stenciled letters "MLIMA." To the unaided eye, these letters appear to vibrate violently upon the paper. The SCP Foundation is now tracking media for any information relating to the "SUPER GOOD SHIP MLIMA" and their connection to the company.

Footnotes
1. A direct correlation between their longevity after the fabric membrane is punctured and the value of the fine-structure constant α has been noted, as well as an inverse correlation between their longevity and their proximity to massive amounts of regular matter.

« SCP-1492 | SCP-1493 | SCP-1494 »

SCP-1494: Terminal Castaways

Item #: SCP-1494

Object Class: Euclid

Special Containment Procedures: All flights exiting the Hollywood International Airport located in Ft. Lauderdale, FL, are to be fitted with surveillance and tracking devices, in the luggage and on random passengers. Efforts to prevent the manifestation of SCP-1494 phenomenon, such as transferring co-pilots over the age of 45, preventing planes built prior to 2008 from being used, and suppression of certain beverages on flights leaving the airport are being made. All testing of SCP-1494 has been suspended at this time.

Missing persons reports relating to SCP-1494 are to be suppressed, with records being confiscated and replaced with censored versions. Relatives and law enforcement officers are to be given Class-C amnestics.

Description: SCP-1494 designates a phenomenon which occurs on flights leaving the Hollywood International Airport, and heading to a location outside of the United States. Sometime during the flight, the plane may be reported to stop at a layover before exiting the United States. Passengers who remain on the plane during the layover experience no further anomalous effects other than reporting the unscheduled landing. The duration of the flight will not be altered, and radar tracking of the plane shows that no stops take place during the time of the SCP-1494 phenomenon. The following conditions must be in place before this effect initiates:

- At least 70 passengers on board the flight;
- The plane must have been constructed prior to 2008;
- Coca-Cola branded beverages are being served;
- The co-pilot of the flight being over the age of 45; and
- No air marshals or undercover Foundation personnel may be

on board.

Subjects who exit at the layover will enter a location which appears to be an exact replica of the Jacksonville International Airport terminal, which is fully staffed. All electrical outlets are functional , but communication equipment such as cellular phones and internet-capable devices will not charge. They will, however, function and receive signal until their power is depleted. Phone records will show the calls originated from the Hollywood International Airport. No planes have been observed approaching the departure terminals[1], and planes approaching the entrance terminal have originated exclusively from the Hollywood International Airport.

Once within the terminal, if the subject attempts to exit to the rest of the airport, they will be informed that they have been accused of a treasonous act and denied entry. Depending on their nation of origin, they may be accused of differing acts of treason. Subjects will believe the accusations are legitimate, whether or not they have committed any type of treason, or if the action they are accused of is even possible.

Examples of treasonous accusations

Subject(s)	Nation of origin	Action
One adult male	United States	Accused of selling classified information to American newspapers. Leaked information appeared to refer to the Strategic Defense Initiative "Star Wars" missile defense system being developed during the Reagan administration.
One juvenile female	France	Accused of "high treason against the crown" and told that returning to their home

		or to any other state would cause them to be extradited and executed "on the King's pleasure." The document bearing this information bore the royal mark of King Charles X of France.
One elderly male	Identified as a citizen of the defunct Soviet Union	Informed that they had been accused of sabotaging the revolution, and for conspiring with counter-revolutionary forces. Accusations appeared to be similar to those given during the Stalinist purges in the 1930's.
Group of subjects, on vacation.	Unrecognized state of Nagorno-Karabakh Republic.	Subjects were individually informed of an identical crime, destruction of classified documents, and given identical documentation purportedly from their home confirming this.
One adult male	Dominion of Melchizedek, Micronation.	Accused of "Refusal to remove the refuse from the backyard territories to the nations of the far beyond, resulting in an overspill and the sickness of Queen FuFu, the national pet."

Subjects who have been accused of similar acts will frequently form small communes within the terminal, communicating with security and administrative airport staff members about their current situations. As of the most recent observations, several small enclaves have been formed, which appear to sustain themselves on the concessions sold inside the terminal and the contents of new luggage brought into the airport. Buildings have been constructed out of suitcases, clothing, and refuse. In addition, a black market for items listed by the airport as contraband has been reported.

SCP-1494 was initially reported on 03/11/2008, when several passengers on board the [REDACTED] flight were reported to have gone missing during transit. After the reports of an unexpected and unknown flight destination reached Foundation personnel embedded in the Spirit Airlines corporation, amnestics were distributed and investigation into the phenomenon was initiated. As of 10/04/2008, SCP-1494 is considered to be a contained Euclid-level anomaly.

Addendum: Investigation into activity at the airport notes that a plane which stopped at [DATA EXPUNGED] and had a layover at Ft. Lauderdale International was later reported to be missing, with all passengers presumed lost. No trace of the flight has been found outside of the records seized by Foundation personnel following the flight. Notable information on the flight includes.

- Security camera footage does not corroborate records of the flight, and show no signs of the plane or the passengers.
- The pilot and co-pilot were not referenced in any documentation relating to the flight.
- A copy of the short story collection "Nightmare At 20,000 Feet: Horror Stories" by Richard Matheson was recovered from the terminal, and is believed to have originated with a passenger.
- Subjects within the airport reported hearing the sounds of metal being crushed during the time when the plane was at the gate.
- A ruined laptop computer was discovered on the runway. This computer is identical to those issued to the airports security personnel.
- A copy of standard airport security protocols, heavily damaged, was recovered from the terminal, and is believed to

have originated with a passenger.

Footnotes
1. It has been observed on several occasions for instances ofSCP-1387to arrive at departure terminals to intiaite their anomalous effects on subjects stuck within SCP-1494. How instances of SCP-1387 are able to access SCP-1494 is currently under investigation.

« SCP-1493 | SCP-1494 | SCP-1495 »

SCP-1495: Karmic Musth

Item #: SCP-1495

Object Class: Euclid

Special Containment Procedures: Under normal conditions, SCP-1495 is to be cared for and fed in keeping with the Foundation's Zoological Containment Standards for large terrestrial mammals at a purpose-built enclosure on Site . Anyone assigned to handling SCP-1495-2 through -15 is permitted to use their informal names for the sake of simplified communication.

No guard dogs or other domesticated animals are allowed on the enclosure. With the exception of small rodents, any local mammalian fauna discovered in the enclosure is to be removed or terminated upon discovery.

Unless they are to be utilized for approved testing, D-Class personnel assigned to interacting with SCP-1495 must not be known or assumed violent felons. D-Class personnel used in SCP-1495-M-1 testing are not subject to this criteria; however, their background must be documented prior to testing.

Members of the herd SCP-1495 are free to roam the enclosure. If additional female specimens of SCP-1495 are discovered in the wild, they are to be captured and may be incorporated into the herd at Site . Should a male be discovered in the wild, it is to be recorded and studied but terminated no later than August 15 of that year to prevent an uncontained instance of SCP-1495-M. If a male is discovered during an SCP-1495-M event, it is to be terminated immediately.

Prior to an SCP-1495-M event, males are to be fitted with cranial shunts with reservoirs for collection of SCP-1495-M-1. The entire enclosure is to be checked to make sure no local fauna have entered the containment area.

During an SCP-1495-M event, SCP-1495-2, SCP-1495-3, and SCP-1495-4 are to be kept chained in three standalone climate-controlled steel cages at the far end of the enclosure. These cages are surrounded a 5m high wall made of 1.5m thick reinforced concrete. SCP-1495-2, SCP-1495-3, and SCP-1495-4 are to be placed in separate stalls at all times during 1495-M. No food or water, or drugs will be provided to SCP-1495-2, SCP-1495-3, and SCP-1495-4 while in this type of confinement to help shorten 1495-M.

Description: SCP-1495 is a herd of a previously unknown species of elephant similar in appearance to *Loxodonta africana*. The herd consists of three males, SCP-1495-(2, 3, and 4) and currently 8 females, SCP-1495-(5, 7, 8, 9, 10, 11, 13, and 15). All subjects are observed to be of extremely high intelligence, with craniums roughly 10% larger than *Loxodonta africana*. They are generally obedient with their handlers. Subjects respond to human speech; older subjects understand over 1000 English words. Efforts are underway to achieve meaningful communication with SCP-1495.

Females: For the most part, the female subjects are physiologically identical to *Loxodonta africana*, save for their larger cranium, heightened intelligence, and longer average life span (believed to be 75-85 years). Recent testing has shown females have a greater capacity to communicate with their handlers (see Addendum 1495-A4).

Males: Generally, males are also virtually identical to *Loxodonta africana*, yet there are a few other notable distinctions. Upon reaching sexual maturity, male SCP-1495 become particularly resilient, healing from injury at accelerated levels. At this point, they also seem to stop aging. Researchers have been unable to estimate ages for the three males. Most notably, males have been observed to direct the behavior of other mammals, seemingly willing animals to work cooperatively or coordinate attacks (see Addenda).

SCP-1495-M: Once a year usually in mid-autumn, males experience SCP-1495-M, a state similar to the period of hormonal abnormalities experienced by male elephants known as musth. Like normal musth, SCP-1495-M is accompanied by highly aggressive behavior and a thick, tar like temporal secretion called temporin. Temporin excreted

by SCP-1495 is documented as SCP-1495-M-1. Males are to be isolated because the scent of SCP-1495-M-1 has a compounding aggression effect on most animals that can last several hours after they are removed from the vicinity of the SCP-1495-M event.

Chemical analysis tests:
Testing conducted by Dr. Ladd found that SCP-1495-M-1 induces aggressive behavior in several orders of mammal, though tests have shown no effect on primates. To humans, SCP-1495-M-1 has a pleasant scent that appears to be hypoallergenic. When SCP-1495-M-1 was injected in D-Class personnel, it appeared to rapidly cure ailments, but most D-Class ultimately experienced heart failure and expired after about two hours. The lone exception in testing was D-19-0777, who remains under Foundation observation (See Addendum 1495-A3).

SCP-1495-M-1 contains compounds similar to certain unknown chemicals found in SCP-500. Further testing on these substances is pending approval. *Note by Dr. Ladd: When Xylazine was used in an attempt to lessen the effect of SCP-1495-M, SCP-1495-M-1 excretions lacked these qualities but effects on other mammals remained unchanged.*

+ Addendum 1495-A1

29 OCT 1979: [REDACTED] The coordinates indicated a location in Singalila National Park, India. Foundation personnel immediately dispatched from Bombay.

01 NOV 1979: Foundation scout unit arrives in Darjeeling, West Bengal Province. Base camp is set up, local guides and appropriate gear acquired.

02 NOV 1979: Foundation personnel set off on foot in a heavy snow storm. Two local sherpas accompany the team.

03 NOV 1979: Upon reaching the coordinates, the team was surprised to discover a small

herd of African elephants (four male, six female).(1) Specialized observation team requested for further evaluation.

09 NOV 1979: Observation team arrives, all ten elephants are tagged.

14 NOV 1979: Subjects noted to be of superior intelligence. Unusual interaction with other species noted.

06 DEC 1979: Though the herd displays no outwardly anomalous traits, their high intelligence, unusual habitat, and the nature of their discovery lead the observation team to request containment of the entire herd.

14 DEC 1979: Herd airlifted to Site- and classified as Anomalous/Cryptid.

14 MAR 1980: Construction purpose-built zoological enclosure completed, herd transferred from temporary containment.

09 JUL 1980: First documented incidence of males interacting directly with local fauna.

14 SEP 1980: Early signs of musth prompt handlers to chain all four males to mature trees within the enclosure.

15 SEP 1980: Musth conditions worsen. Xylazine administered by handlers to attempt to lessen the effects of the musth.

17 SEP 1980: Unusual gatherings of *Odocoileus virginianus* (white tailed deer) noted in the treeline near where the males are chained. No count was taken, but it is estimated that between 75 and 150 deer had gathered.

18 SEP 1980: All four males broke out of their ligatures, breached the enclosure, and began attacking automobiles parked on Site- . While security teams were scrambled to contain the breach, scores of white tailed deer stormed the D-Class barracks, killing 107 of the 120 D-Class personnel inside. Agent Gareth Marlow was also killed in the attack. Note: It was later determined noteworthy that Agent Marlow had been under investigation by the Ethics Committee for conduct unbecoming of a Foundation agent.

19 SEP 1980: Heavy sedation was used to secure the males. The oldest male (known as "Ganesh" by the handlers) died of heart failure after taking 8 times the normal dose of tranquilizers normally required to sedate an adult male elephant.

21 SEP 1980: Dr. Ladd suggests that not only was there a connection between the elephants and the deer attack, but that the elephants coordinated the containment breach to help facilitate the attack. Dr. Ladd request the entire herd be reclassified as a Euclid-class SCP.

+ Addendum 1495-A2

SCP-1495 was discovered independently by the Foundation in 1979 (See Addendum 1495-A1). It is noteworthy that the species most closely resembles the African elephant, but they were discovered in eastern India, thousands of miles from the historical range of *Loxodonta africana*.

After full containment, the Foundation conducted an investigation of unusual events in the Darjeeling District of West Bengal Province, India, and surrounding areas. Reports of unusual early-autumn animal attacks began in 1972 and occurred every year until containment in

November 1979. Each of the attacks occurred during what researchers have generally accepted to be times of year consistent with SCP-1495-M.

Packs of local fauna, sometimes multiple species, would attack and kill people in Darjeeling, Sikkim, and eastern Nepal. Generally, victims were attacked in and around their homes. In virtually every case it appears that the animals targeted a specific individual or individuals while ignoring or passing over other individuals nearby. Attacks varied by species and location, but in most attacks it appears that the animals attacked joint tendons first to incapacitate the victim in order to lengthen the amount of time the victim was alive during the attack.

No discernible pattern was detected among the victims until the Foundation learned of a particularly large attack in 1978 at a Darjeeling prison, in which 18 inmates and one guard were killed by packs of leopard cats and red pandas. All deceased inmates were either convicted murders or rapists, and the deceased guard had been known for sexual abuse against inmates. Imprisoned political dissidents and beggars were not attacked.

+ Addendum 1495-A3

During initial testing of SCP-1495-M-1, ten D-class subjects have been injected intravenously with the substance. In each case, subjects reported increased energy and feelings of overall improved health, but nine test subjects expired from heart failure within 120 minutes of receiving the treatment. The lone exception was the D-19-0777, the eighth test subject.

At the time of the testing, D-19-0777 had been experiencing symptoms of bronchitis. Once injected with SCP-1495-M-1, symptoms rapidly began to dissipate. Six hours after observation, D-19-0777 showed no signs of circulatory distress and was determined to have survived the trial. After two more test subjects expired in the same manner as the first seven, D-19-0777 was

brought out of observation for an interview:

> **Interviewed:** D-19-0777
>
> **Interviewer:** Agent D. C. Joachim
>
> **Foreword:** Excerpt from Log starting 04:33 minutes into interview
>
> [BEGIN EXCERPT]
>
> **Agent Joachim:** Thank you. Now state for the record the charges that ultimately led to your death sentence in the State of .
>
> **D-19-0777:** Double homicide. But I'm telling you I didn't do it. I loved my wife and my son.
>
> **Agent Joachim:** You appealed your conviction three times and failed.
>
> **D-19-0777:** Fuck . Fuck their racist ass lawyers and their racist ass judges. I volunteered to take a polygraph and it never happened. I volunteered during each appeal. The people that killed my family are still out there.
>
> **D-19-0777:** The bullets they took out of my wife and son were "lost" in evidence. They never found my slugs, I was shooting toward the field. I doubt they ever even looked.
>
> [END EXCERPT]

Agent Joachim recommends that we be open to the possibility that D-19-0777 was wrongfully convicted by the State of and has never committed a murder. This combined with the targeted animal attacks in India in 1979 (see Addendum A2) has lead to the hypothesis that SCP-1495-M-1 and animals affected by SCP-1495-M-1

react with chemicals in the human brain associated with guilt.

Prior to further testing, however, that hypothesis was disproved upon review of two previous D-Class test subjects who expired after receiving doses of SCP-1495-M-1. Though also convicted murderers, both of these subjects exhibited sociopathic personality traits, and were therefore physiologically incapable of experiencing guilt or shame. An eleventh test was done on a D-Class who had been sentenced to death for murder, but he had received Class-A long term memory amnestics and was completely unaware of his crimes at the time of testing. He expired the same manner as the other nine test subjects.

At this time it is unknown if SCP-1495-M-1 itself is sentient or sapient, but it appears to possess the ability to identify those guilty of various crimes, such as murder and sexual assault. Testing is pending for effects on various types of crimes to determine if there is a criminal threshold for whom SCP-1495-M-1 kills.

Note from O5- : Such testing will be very difficult, as we have a finite number of D-Class personnel who are not murderers or rapists.

+ Addendum 1495-A4

Interviewed: SCP-1495-5

Interviewer: Dr. Ladd

Foreword: After Dr. Ladd's communication techniques with the females of the SCP-1495 herd were deemed suitably successful, site command requested he conduct an interview with the oldest female to gain further insight into the nature, capabilities, and motives of SCP-1495. SCP-1495-5 has a 2000 word English vocabulary and a rudimentary grasp of

spelling. Responses were written by SCP-1495-5 with her trunk on a large chalk board.
Note: Dr. Ladd addresses SCP-1495-5 as "Panca," the Hindi word for five. This is the name used by the daily handlers. The handlers assigned unique names for the sake of communication with individual subjects.

<Begin Log>

Dr. Ladd: Good morning Panca

SCP-1495-5: HI LAD

Dr. Ladd: Panca, I will be asking you questions. Answer them as best you can. Do you understand?

[SCP-1495-5 nods yes]

Dr. Ladd: Thank you. Panca, can you talk to other animals besides people?

SCP-1495-5: NOT ME

Dr. Ladd: Another one?

[SCP-1495-5 nods yes]

Dr. Ladd: Is it the males?

[SCP-1495-5 gestures to indicate that she does not understand]

Dr. Ladd: Is it Balthazar, Melchior, or Gaspar?
Note: the handlers' names for SCP-1495-2, -3, and -4.

[SCP-1495-5 nods yes]

Dr. Ladd: Balthazar, Melchior, and Gaspar can talk to other animals?

[SCP-1495-5 nods yes]

Dr. Ladd: Panca, what do Balthazar, Melchior, and Gaspar tell the animals to do?

SCP-1495-5: GOOD

Dr. Ladd: Do they ever tell the animals to kill people?

[SCP-1495-5 nods yes]

Dr. Ladd: Who do Balthazar, Melchior, or Gaspar want to kill?

SCP-1495-5: NO WANT

Dr. Ladd: Who do Balthazar, Melchior, or Gaspar tell the animals to kill?

SCP-1495-5: WITH PAPA

Note: Papa is not a word that has been taught to any of SCP-1495

Dr. Ladd: With father?

SCP-1495-5: NO WITH PAPA

Dr. Ladd: Panca, why do they tell the animals to kill?

SCP-1495-5: BALANS *Note: most likely "balance"*

Dr. Ladd: Balance?

[SCP-1495-5 nods yes]

Dr. Ladd: Panca, what is papa?

SCP-1495-5: BAD

Dr. Ladd: Papa is bad?

[No response]

Dr. Ladd: Panca, tell me about papa.

SCP-1495-5: NO MOR LAD

[SCP-1495-5 places the chalk at the feet of Dr. Ladd and walks out of the enclosure.]

<End Log>

Closing Statement: It was later determined that "PAPA" may have been meant to be the Hindi word पाप/pāpa which roughly translates as "sin" or "misdeed"

« SCP-1494 | SCP-1495 | SCP-1496 »

SCP-1496: The Most Profound Statement in History
A Place Setting

Item #: SCP-1496

Object Class: Neutralized (formerly Safe)

Special Containment Procedures: SCP-1496 is to be kept in a small-item locker in Site-102. At this time, SCP-1496 is believed neutralized. Nonetheless, it is to remain in Safe-class containment until neutralization can be definitively confirmed.

Description: SCP-1496 is a place setting, comprising a plate and several items of silverware. It no longer displays any ongoing anomalous properties, although records it has affected in the past remain in their affected state.

SCP-1496 was recovered in a raid on the offices of an urban literary collective in Quebec, Canada.

> Prior containment procedures. Level 2 and up only.
>
> **Item #:** SCP-1496
>
> **Object Class:** Safe
>
> **Special Containment Procedures:** SCP-1496 is to be kept in its own small-item locker at Site-102 unless tests are in progress. Given the fascinating nature of the item, it is envisaged that testing will be frequent. As such, for testing purposes the item is to be placed in a standard humanoid containment cell with the participant and, optionally, something to garnish SCP-1496-1. The experiences engendered by SCP-1496 need no cheap gimmicks; therefore, please note that no living being is to be placed on SCP-1496-1 without Senior Researcher approval.

Description: SCP-1496, which consists of a dinner plate (SCP-1496-1) and accompanying silverware, is the single most appealing item the Foundation has yet contained. SCP-1496-1 is of bone-white china, so fine it is almost transparent; elegant accents set off the flawlessness of its ceramic work to perfection. The eating utensils that accompany it, wrought of the finest silver, are similarly exquisite.

SCP-1496 displays several refreshingly interesting anomalous properties. Firstly, it compels anyone seated before it to review, whether by writing, art or dictation, anything placed on SCP-1496-1. These reviews will match the natural tone and voice of the participant. If the participant is later asked about their review, they will be unable to remember anything except having very strong opinions, thereby preserving an element of mystery.

Further, it is impossible to make any sort of record of SCP-1496 itself other than as a review-like account. Fundamental details, such as that SCP-1496-1 is generally circular, will generally remain constant; finer details, such as the fish knife's wonderfully precise edge, will not.

Reviews and accounts produced via the magic of SCP-1496 invariably exist in a state of superpositional flux, having a 50% chance of appearing either highly enthusiastic or highly dismissive. Unfortunately, no more types of review have been recorded.

SCP-1496 was rescued from the offices of a radical urban-culture fanzine ("*Som-Nu Déja GéNial - Le Super Zine*") in Montreal, Canada, after a Foundation raid prompted by reports that the fanzine's notoriously polemical reviews had begun to spontaneously change upon re-reading.

Selected Results of Experiment Series SCP-1496-E5:

Experiment: 1496-E5q

Participant: Dr. Katzen
Object used: One meatloaf sandwich from Site-102 cafeteria
Medium of response: Dictated to observing personnel
Excerpts from result:

> *"The aroma is, in a word, irresistible; the perfectly-cooked beef and pork mixture caresses one's olfactory and gustatory senses in perfect harmony with the envelopment of its freshly-heated bun…"*

> *"I can conceive of nothing on this Earth I would rather consume for my lunch, or indeed, any other meal. Perfection."*

Experiment: 1496-E5a
Participant: Dr. Trebuchet
Object used: Nothing (SCP-1496-1 empty)
Medium of response: Dr. Trebuchet made entries in her laboratory notebook, per her usual experimental practice.
Result (translated from French):

> Observed plate, per procedure. Plate appeared empty. Clever choice - minimalist. Upon closer inspection, noted area of gaseous mixture immediately above plate: roughly 78% N / 21% O. Inspired - if must imitate, imitate one of the greats. Inhaled mixture; amazing effects: transmission of oxygen across the membranes of lungs and into bloodstream. Extended my lifespan (anomalous effect?). Summary: would def. breathe again.

Experiment 1496-E5s
Participant: D-6464, who has a developmental age of circa 6yo and has expressed a mild dislike of vegetables.
Object used: Raw carrot
Medium of response: Drawing/text, using provided photocopier paper and marker pens
Result:

SCP-1497: Visual Perfection

Item #: SCP-1497

Object Class: Safe

Special Containment Procedures: SCP-1497 is currently contained inside a secure locker within Site- . Eye contact with SCP-1497 is to be avoided. Instances of SCP-1497-1 created outside of testing are to be given Class A amnestics.

Description: SCP-1497 is a miniature human eye suspended in the center of a 6cm tall glass jar, though it is unknown how this suspension is achieved as SCP-1497 cannot be opened. SCP-1497 lacks an optical nerve and retinal blood vessels, as the sclera completely covers the entire surface save for the cornea. The eye is capable of freely rotating on all three axes, and regularly does so in the direction of new visual stimuli. The iris of SCP-1497 changes color upon maintaining eye contact with a human for three seconds, matching the color of the viewer's eyes. This activates the cognitohazardous property of SCP-1497.

Upon activation, the human that SCP-1497 mimics (henceforth SCP-1497-1) begins experiencing a shift in visual perception. Instances of SCP-1497-1 have reported that things they previously found visually displeasing became much more visibly appealing. This has been confirmed to not be the result of hallucinations, but rather a cognitive shift within SCP-1497-1. The most common effects are an increase in perceived attractiveness of other humans, resulting in an increase in sexual attraction, and increased appreciation of all visually artistic exploits.

The effect of SCP-1497 also extends to concepts and situations, as SCP-1497-1 is unable to visually recognize a threat. When presented with blades and firearms, SCP-1497-1 will only be able to appreciate the aesthetic design of the weapon even when presented in a threatening manner. Testing concluded SCP-1497-1 will not

react to threats of violence to itself or others, and are equally unaffected by witnessing violence against others. However, SCP-1497-1 are able to recognize when they are being harmed, although they are unable to visually recognize the cause of the damage. This sends injured SCP-1497-1 into a panic state that often causes them to be unable to respond to the act of violence, though they are capable of fleeing and seeking medical attention. Due to similar anomalous properties between SCP-1497 and **SCP-1528**, investigation into possible connections is currently under consideration.

SCP-1497 was located in an art gallery in Portland, Oregon on 03/02/2013 by an agent implanted in the local police force after receiving reports of someone calling for help within the locked building. SCP-1497 was located on a pedestal with a note and photo (See Addendum 1497-A) under it, the plaque on the pedestal reading "Better Off Blind Than Beguiled by Beauty." Trapped within the art gallery were ten blind humans, all of whom claimed they had been kidnapped within the past week. Class C amnestics were distributed among them after questioning and they were returned to their places of residence.

Addendum 1497-A: The following note and photograph were found pinned under SCP-1497.

This world is ugly
Look at it with some fresh eyes
And see perfection

Addendum 1497-B:

+ 1497/3 Required

Intake Statement, (Person of Interest Designation 2-S TG473)

On 11/04/2013, Foundation security personnel raided a warehouse belonging to Kappel Securities GmbH, a multinational financial firm specializing in assets related to private art collections. As expected by Site- intelligence

analysts, items suspected to be related to SCP-1497 per Addendum 1497-A were present and seized by personnel. Three items were given provisional classifications [TAO-8211G, TAO-2167R, and TAO-5999I] and routed to Site- for classification.

These items, referred to in recovered documentation as the "Perfection Series," were intended for display at a private showing, scheduled to take place at a residence in Saint Petersburg, Russia. Subsequent investigation identified several Persons of Interest believed to be responsible at least in part for SCP-1497, leading to the capture of POI 2-S TG473, a plastination specialist in Eindhoven, Netherlands.

After initial processing and detainment, researchers recorded the following intake statement from POI 2-S TG473. Research staff confirmed veracity of details of the following statement, and subject was treated with amnestics and released after 15 days.

Agent Navarro: Please state your name for the record.

POI 2-S TG473: , resident of Geldrop-Mierlo, Netherlands. You'll find my paperwork in order, surely. No one's told me what's going on, what is this place?

Agent Navarro: You're at the Aarhus bureau outpost of Interpol. We just have a few questions related to an ongoing investigation. We have no plans to turn you over for criminal charges, Mr. . We would just like to understand a little more about this item [Agent Navarro hands a photograph of SCP-1497 to POI 2-S TG473].

POI 2-S TG473: Oh. That.

Agent Navarro: So you're familiar with this?

POI 2-S TG473: Yes. May I…may I smoke in this room?

Agent Navarro: Certainly. [Agent Navarro signals to Site- attendant to retrieve POI 2-S TG473's personal effects, and returns package of Gauloises brand cigarettes and a disposable lighter to subject]

POI 2-S TG473: [Subject takes cigarette from package and commences smoking] I thank you. As you're doubtless aware by now, I am by profession a purveyor of anatomical models and medical teaching aids. Laboratory skeletons, preserved organs from patients who have died of rare diseases, things of that nature. Mostly mail order service to universities in the EU and Russia.

Agent Navarro: Any work on the side?

POI 2-S TG473: [Subject exhales deeply] …you certainly do your research at Interpol. Yes, I have fulfilled requests on occasion for…how do you say, private, materials. You are familiar, of course, with those distasteful traveling exhibits with the "educational" displays of cadavers and such. Cheap leering. Feh. Of course, certain individuals, they want private exhibits of such things. It's some sort of fad among the newly-wealthy, apparently. Sometimes they make arrangements in advance for, what do they call it, a "memorial". God, what a tacky term. Sometimes I'm brought a "friend" or a "loved one". And I preserve them, mounted like some cheap hunting trophy, skinless while riding a bicycle, half of them hanging from a ceiling, other silly ghoulishness.

Agent Navarro: Why do they come to you?

POI 2-S TG473: [subject shrugs] Recommendations, I suppose. You preserve one Russian tycoon's circulatory system wearing a top hat, the rest come calling. Business is business.

Agent Navarro: So, the object in question.

POI 2-S TG473: Yes, that. I receive a phone call one night, telling me to expect some business. I received the call on my private cell phone, so it is of course an assignment of the nature we have just discussed. My contact tells me to expect an "unusual" client. If one were to ask me, anyone seeking these services is unusual, but I digress. I am told to be at my laboratory at midnight that evening to discuss the terms. This clientele is prone to unnecessary dramatics, so of course I think nothing of it.

I arrive at the appointed hour, and I am met by a group of three men with a small suitcase. But these men, they aren't the types of people that I am used to seeing for this sort of arrangement. These were…not transients, but all three of them wore tattered clothes, kept long, matted, gray beards, and their faces, what little I could see of them that were not obscured by beards, seemed to covered in…soot, of some kind. Before I had time to be angry at being pulled away from my bed at an ungodly hour for a childish prank, one of the men hands me the suitcase.

Agent Navarro: Did any of the three men identify themselves?

POI 2-S TG473: No, and I did not ask. Force of habit.

Agent Navarro: Please continue.

POI 2-S TG473: The man who handed me the suitcase, he bade me open it. I am of course quite suspicious, and I begin to demand an explanation. These men, however, they were in a great deal of haste. The man on my left hands me a plastic shopping bag, and I can see there's more than a few bundles of currency in it. He tells me that there is one hundred thousand euros in it, which by its appearances was strangely plausible. At the same time, the man on my right trains a pistol on me. I was then more inclined to open their suitcase. [Subject pauses]

Agent Navarro: Do you need some time to collect your thoughts?

POI 2-S TG473: …forgive me, I…it gets rather strange from there.

Agent Navarro: I hear that a lot. Please continue, we're just interested in what you have to say.

POI 2-S TG473: I open the briefcase, and inside is a miniature…man, of sorts. Perfectly proportioned, looks to be about thirty or so, long hair, beard and such. But he can't be more than a half a meter or so. I have seen dwarfism, but never anything like that. It was strange enough that I had forgotten about the gentleman pointing the pistol at me. The man directly in front of me was direct. They wanted…parts, of this, thing, preserved. And they wanted it tonight. They were willing to compensate me quite handsomely, but my participation was not up for discussion.

Agent Navarro: What parts were they talking about?

POI 2-S TG473: They wanted the left eye, the heart, a rear molar, and its brain. Simplicity itself, really, when you don't consider that a gun is being pointed at you and the specimen is something from a sideshow.

I immediately set to work. I did not at the time stop to wonder why three vagrants would be in possession of thousands of euros and a tiny man, and honestly I have not stopped to think about it too thoroughly since. There was a problem, though.

Agent Navarro: Problem?

POI 2-S TG473: Yes, the foul abomination *wasn't dead yet.* I made the initial incisions to remove the eye, and it started shivering. Gods, it gives me goosebumps just thinking about that. The man who had done all the talking assured me that the thing wasn't alive in any real

sense, and the man with the pistol encouraged me to continue. Continue I did, then, first removing the eye, then the heart. Despite assurances to the contrary, these things should not be *beating* when I receive them for preservation. All the while, this…thing, didn't bleed at all, but it trembled throughout. I feel sick all of a sudden.

Agent Navarro: Would you like to continue later?

POI 2-S TG473: …no, no, I should be fine. Anyway. I had problems when it came to the teeth. You wouldn't think of this, but removing the teeth from a tiny man is not a particularly easy task. They kept breaking. Every time, I use my finest pliers, then *plink* they break apart right as I'm about to get them out. The heightened nerves that come from doing such delicate work at gunpoint were not helpful for my labors. Fortunately, I was able to devise something of a solution that was acceptable to my clients, involving grinding up the remaining teeth and mixing the resulting slurry with some ceramic and…well, details bore outsiders, I know. Suffice to say that I ended affairs by scooping out its brain and pumping the tissue full of preservatives as fast as I could manage. Several hours later, all of the…materials, were done curin. The three gentlemen produced four glass jars, full of surprises as they were. They placed the preserved bits of their small acquaintance in the jars, and without a word exited, leaving behind the hundred thousand and the somewhat worse-for-wear remains of the little…thing. Do you happen to have any cognac on premises here?

Agent Navarro: What happened next?

POI 2-S TG473: Strangely, the profitable night left me feeling less than jubilant. It was almost dawn, I was quite tired, confused, and to be frank, frightened. I pondered the nights events, when the remains of the little man started…I'm not sure how to say…moaning? It was likely moaning. I decided that my work day was at an end then and there, and I pitched the little man into my incinerator,

turned it up high, shut the door and plugged my ears.

Agent Navarro: Just…into the incinerator, like that?

POI 2-S TG473: Yes. Just like that. What would you have recommended?

Agent Navarro: That will be all, Mr. .

End intake statement

« SCP-1496 | SCP-1497 | SCP-1498 »

SCP-1498: Dial-A-Dream

Item #: SCP-1498

Object Class: Euclid

Special Containment Procedures: All instances of SCP-1498 are to be held in standard containment chambers, located within **Site-77**. One technician is to be on-hand to answer any calls placed to SCP-1498. Transcripts of all calls must be placed in Site-77's non-anomalous records archive. Any persons found to have interacted with SCP-1498 are to be quarantined for 2 months, or until they show signs of SCP-1498. Subjects showing signs of exposure are to be contained as an instance of SCP-1498-1, which require the same accommodation as instances of SCP-1498.

Description: SCP-1498 is a collection of 30 autonomous bundles of phone cords and handsets, assembled in such a way that they resemble sheep. Instances of SCP-1498 are fully ambulatory, and will wander their containment chambers aimlessly. The words "**Make your own Custom dreamscapes**, with your friends at **The Oneiroi Collective**."[1] are printed on each instance.

If a sapient organism attempts to use one of the phone handsets present on SCP-1498, they will hear three rings, followed by a voice identifying themselves as an operator for the "The Oneiroi Collective". This voice will instruct the subject on various options they have for dreaming, and make suggestions for enhanced dreaming experiences. Following the completion of this call, the subject will lose consciousness for 9 hours.

When the subject regains consciousness, they will claim to have experienced the dream they ordered, to any exact specifications they may have made. Subjects may express a desire to continue using SCP-1498's effect, or attempt to re-use it immediately. A transcript of a subject describing their experience while under SCP-1498's effect has been included in this report.

> D-4560, after being exposed to SCP-1498
> I was sitting in this room, except it wasn't really a room, because the edges were sloped, so it was like, an egg room. With green paper, but it wasn't *that* green. Just a little green here and there. Anyways, I'm right in the middle, sitting on the ground… 'cept of course, the fact that I was being supported. It's then I realize that I'm actually a table. Like you guys told me to tell the weird sheep-phone-thing. There're people eating off'a me too, look old, maybe from the 1950's, with red faces.
>
> That was when we finally hatched, and I woke up.

As subjects are repeatedly exposed to SCP-1498, they may begin to experience changes to their bodily and mental state. Subjects affected by SCP-1498 will express a desire to sleep as frequently as possible, preferring the use of SCP-1498 if they are able to. While asleep, portions of the subject's cranium and skull will be replaced with portions of telephones similar to those found on SCP-1498. This has manifested in a variety of ways, including:

- Subjects coughing up telephones, with cords extending into their esophagus.
- Telephone wires beginning to grow in place of hair.
- Ringing devices found on rotary telephones found within the subject's ears, which may begin ringing continuously.
- Vocalizations being replaced with dial tones.

Eventually, a rotary phone will assemble itself on the subject's head, out of all the components that have been grown within and on their bodies. Subjects will display the same intelligence as instances of SCP-1498, and are to be classified as instances of SCP-1498-1. As of 8/19/2012, no attempt to restore the intelligence of an SCP-1498-1 instance has succeeded.

SCP-1498 was recovered on 9/18/1965, from an abandoned office complex in Miami, FL, USA, after reports of bizarre livestock reached local Foundation assets. When Foundation agents entered the building, they discovered the SCP-1498 instances, one bedroll, approximately half a ton of rotary telephone components, and two pints of Type-AB blood in a glass jar. In addition, one pajama

onesie, well worn, was discovered folded at the bedroll. Testing has shown several months worth of sweat and body oils soaked into the fabric.

As of 11/14/1965, SCP-1498 has been classified as Euclid.

« SCP-1497 | SCP-1498 | SCP-1499 »

SCP-1499: The Gas Mask

Item #: SCP-1499

Object Class: Safe

Special Containment Procedures: SCP-1499 is to be kept in a locked box guarded by two agents at all times. Testing involving SCP-1499 requires the authorization of Level 4 personnel is to be discontinued indefinitely. Test subjects are to wear a small full-duplex two-way radio underneath SCP-1499 to maintain contact with researchers. Testing is no longer to be carried out by D-Class personnel due to the risk of losing SCP-1499. Should test subjects enter any sort of danger, they are to remove SCP-1499 immediately.

Description: SCP-1499 is a Soviet GP-5 gas mask. A seal test performed on the object suggests that the object retains its original functionality. The anomalous effects of SCP-1499 activate when a human places SCP-1499 on their head. Approximately one second after SCP-1499 is fully secured on the subject's head, the subject vanishes from view, and is no longer detectable. The subject reports no feeling of motion at this time. Testing has revealed that two-way radios remain capable of both receiving and transmitting despite the subject being undetectable. Upon wearing SCP-1499, test subjects report completely different surroundings than they were in prior to wearing SCP-1499. Subjects have reported that it appears barren and inhospitable, with tall black towers filling the area. Subjects have also sighted entities in this landscape. These entities, designated SCP-1499-1, have been described as tall, nude humanoids with dark skin that has a thick coat of an unknown viscous substance. Instances of SCP-1499-1 also have large amounts of eyes and mouths covering their body. Upon removing SCP-1499 from their head, subjects reappear in the same location they were in when they put it on. For more information, see Test Log 1499.

Test Subject	Reported events	Notes

D-67393	Subject found herself in building of an unknown black substance. After surveying the room for approximately 15 seconds, subject reportedly heard sounds of movement and removed SCP-1499 in a panicked state, reappearing in the test chamber.	First test involving SCP-1499 to determine its effects. Due to the risk of losing SCP-1499, trained agents are to be used in place of D-Class subjects.
Agent C	Agent found himself in the same room described by D-67393. Approximately two minutes were spent exploring the room, which Agent C reports contained multiple hollow black cubes. Agent was capable of descending down the building without running into any interference. Upon reaching the second floor, agent heard sounds from the floor below. Agent hid himself behind one of the black cubes and observed two instances of SCP-1499-1. Agent then removed SCP-1499.	First sighting of SCP-1499-1. Agent C reports that he remained undetected by the two instances of SCP-1499-1.
Agent U	Agent was selected	The structure in which

	due to her stealth training. Agent found herself in the same room as Agent C was in when he removed SCP-1499. Sounds of movement were heard on higher floors, prompting the agent to head downstairs and out of the building. Agent reportedly saw many instances of SCP-1499-1 wandering outside of the building. Each individual seemed to have unique mutations, and occasionally uttered low, grating sounds. Agent successfully made her way past more of the structures while avoiding detection. Agent followed four instances of SCP-1499-1 for observation. The group encountered a fifth instance of SCP-1499-1, and one of the group stepped forward. Agent observed the two entities violently assault one another, coating the nearby	D-67393 appeared seems to only be one of many. Due to the violent nature of SCP-1499-1, further exploration will require that agents be armed to defend themselves.

	ground and observing entities with unknown fluid and thick viscera. Agent removed SCP-1499.	
Agent K	See Exploration Log 1499-D.	[REDACTED]

The following information has been classified until further notice.

EXPLORATION LOG 1499-D: LEVEL 5 CLEARANCE REQUIRED

Exploration Log 1499-D

Test commences on June 3, 20 .
Agent K outfitted with a two-way radio earpiece and a standard Foundation sidearm with additional ammunition. Agent's mission is reconnaissance.
Agent places SCP-1499 on his head and vanishes from sight.

Agent K : "Doctor, can you hear me?"
Dr. N : "Yes, Agent. What do you see?"
Agent K : "I'm between two of the structures. They resemble spires. Seem to be made of some hard black rock. Ground's the same."
Dr. N : "Have you made contact with any instances of SCP-1499-1?"
Agent K : "Not yet. It's hard to tell. The lighting here is odd, I'm having trouble seeing much. I'll see what I can do."

Sounds of the agent moving quietly for approximately five minutes.

Agent K : "God damn. There's a large group of them up ahead. They're all moving together into a huge building."
Dr. N : "Can you describe the structure,

Agent?"
Agent K : "Yeah, it's big. Very big. There aren't many structures around it. It is quite elaborate; I see a large amount of towers and spikes. There looks like there's blood on it."
Dr. N : "Agent, can you get a closer look?"
Agent K : "There's some sort of bridge to it. I'm moving in."

Sounds of the agent moving quietly for approximately three minutes and thirty seconds.

Agent K : "I'm at the side of the structure. There looks like there's some sort of door here. Smaller than the big one in the front. I'm going through it now."

Visceral sounds are heard for a few seconds.

Dr. N : "What was that, Agent?"
Agent K : "Not sure. Coming from further inside. I'm taking a look."

Sounds of grating and grinding heard coming from multiple sources.

Dr. N : "Agent? Agent, what do you see?"
Agent K : "Jesus- there's a lot of them in there. They're all in a giant group. Their mouths are all open, even the ones on their bodies. I think that sound is coming from them. Can you hear that?"
Dr. N : "The sound is coming through, Agent. Try to get a better look."
Agent K : "Okay. They're all facing one direction. Let me see if I can look."

Sounds of grating continues for twenty seconds.

Agent K : "They're all facing one of them standing on a platform. There are large amounts of bodies around him. They've stopped vocalizing and are all just looking at the one up front."

Loud visceral sounds return.

Agent K : "It appears the one in the front is- Hold on, I can't see. It's cutting open its own torso. There are some sort of worm-like creatures spilling out of it."
Dr. N : "Agent, what is happening? I can't hear-"
Agent K : "Wait, above its head. I think I see- There's something in its torso that's creating some sort of light. There's a beam going up from it into the air over his head."
Dr. N : "What's happening? Agent, keep talking."
Agent K : "I think it's opening some sort of portal. And I- It's summoning something. The entity is summoning something. I think I see something coming through the portal- It looks like a massive version of one of the worms that came out of the entity's chest. I think the glowing object in that entity's torso is holding the portal open. I- I can't let that thing through. I've got to stop it."
Dr. N : "Agent?"

Sounds of the agent running and gunfire. The grating noise returns louder than before. Sounds of stone objects and bodies falling down. Visceral sounds fill the air.

Agent K : "I've almost got-"

More visceral sounds, closer to the agent now.

Agent K : "Got it now-"

The remainder of the agent's sentence is unheard as he removes SCP-1499. Agent appears in test chamber covered in blood and holding a human heart.

Agent K : "It's alright, I got-"

Agent looks at the heart in his hand and yells, dropping it.

End of log.

Addendum 1499-E: *On Sunday, June 3rd, a man dressed in a suit and wearing a gas mask attacked the Cathedral of Christ the Savior in Moscow, Russia during morning services. The man reportedly shot ten people, including a chanter and a priest. Six church-goers were killed, and three others, including the chanter, are in critical condition. The suspect charged the front of the cathedral and allegedly produced a knife and removed the priest's heart. The suspect then appeared to vanish entirely before multiple witnesses. Moscow police have been unable to find any trace of the attacker.*

Our operatives working undercover in Russian media and military are currently working to defuse the situation. Officially, the attacker was a Nikolai Orlov, resident of Moscow, who was acting alone. Orlov went missing a few years ago, allowing our agents more time to keep the situation under control. Agent K is currently being detained for questioning regarding the situation. He maintains his claim that everything occurred as he reported. Our recordings of Exploration 1499-D corroborate his story. When questioned as to the reasoning behind his actions, Agent K stated that he believed that what he saw being summoned had to be stopped. Agent is currently scheduled for psychiatric evaluation. We cannot risk another incident. All testing involving SCP-1499 is discontinued until further notice. All information regarding Exploration 1499-D is to be restricted to personnel with Level 5 clearance until the

situation has been brought under control.

Detain Agents U and C , as well as D-67393 for questioning. It is unknown at this time if the hallucinatory effects of SCP-1499 have any permanent effects. I don't want to run the risk of one of our own agents seeing all of our researchers as monstrosities and going on a shooting spree inside one of our facilities.

-O5-
